SGT Tech Tips

XTOOL - FORD/MAZDA 8C PASSCODE READING

The purpose of this month's tech tip is to explain how the XTOOL can read the 8 digit passcode through the OBD port on the following vehicles;

- **FORD RANGER PJ/PK Series 2006-2011**
- **MAZDA BT-50 UN Series 2006-2011**

This New feature will mean that the ECU will No longer have to be disassembled to retrieve the EEPROM data or passcodes will need to be sourced from the dealership.
The Passcode is needed to Program keys into the vehicles immobiliser system however the procedure to program keys is Manual- Not Diagnostic.
Transponders must be 8C pre-coded for FORD/MAZDA to be introduced into the vehicle. Cloning transponders will not work unless you pre-code them with special software.

Reading the Passcode:
To Read the Passcode for both Mazda & Ford use the following Pathway: AUS FORD \ AUS FORD \ RANGER PK \ READ PIN
The XTOOL will now calculate the passcode and display it on the screen.
If you select Program keys on XTOOL it will automatically insert the passcode into the Manual procedure to assist with the steps (see below).

Entering Programming Mode
There are 2x ways to enter programming mode see below;
Type 1.
Open the driver's door & Insert the key into the steering lock and hold for at least 1 second.
(Ensure you can hear the key reminder beeping)
Remove and insert the key fully 5x or more times at no more than 1 second intervals until the security light begins to Flash rapidly. Once this happens leave the Key in the Ignition in the OFF position.
Type 2.
Open the driver's door & Insert the key into the steering lock and hold for at least 1 second.
(Ensure you can hear the key reminder beeping)
Turn the key ON and OFF 5x or more times at no more than 1 second intervals until the security light begins to Flash rapidly. Once this happens leave the Key in the Ignition in the OFF position
After 5 minutes the immobiliser light will begin to flash slower & the Passcode can now be entered.

How to enter the Passcode
Turn the KEY ON whilst the Light is OFF to enter the digits from the passcode – Count the amount of Flashes to the value of the Digit from the passcode and turn the key OFF whilst the light is OFF to register it.
(Always Turn the key ON and OFF between flashes, not while the light is lit)

when the immobiliser light starts flashing slower:
Turn key ON and count the flashes equal to the 1st digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 2nd digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 3rd digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 4th digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 5th digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 6th digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 7th digit of the code (X) then turn key OFF.
let the light flash up to 3x between entering the next digit.
Turn key ON and count the flashes equal to the 8th digit of the code (X) then turn key OFF.
If the Passcode was entered correctly the light will stop flashing and remains on solid.
If the light continues to flash at this point, the code was entered incorrectly. (procedure needs to be started again)
Start the vehicle with each Key to be programmed (minimum 2) Wait for the security light to extinguish on each before starting with the Next Key.
