1. Brief introduction

This series machines adopt sliding type take~up lever mechanism, compound feed with needle feed, bottom feed and alternating presser feet and link type feeding mechanism. Driven by timing belt and extra large hook is installed to form seam #301. These machines have the large working space and high lifting height of presser foot so it's suitable for sewing large products. Suitable for stitching tents, canvas, rubber products, heavy leather and furniture

2. Main specifications

Model	744R30	745R30	744R20	745R20	744R10	745R10
Applications	Extra heavy weight materials					
Max Sewing Speed	800spm		1000spm			
Max Stitch length	10mm					
Presser foot lift height	20mm					
Needle	DYX3 #25					
Bobbin	φ 37×13mm					
Working space	762mm×153mm		508mm×153mm		305mm×153mm	
Bed size	1100mm×230mm		846mm×230mm		643mm×230mm	
Motor power	550W, 4P					
Needle gauge	1/4"、1/2"、3/4"、1"、1¼"、1½"、1¾"、2"、7/8" (Standard1/4")					

3. Installation and operation preparation(Fig.1)

1. Before test and operation, the places need to lubricated must be oiled, during the testing time, the lubrication should be more frequently.
2. The turn direction of the hand wheel must face to the operator.
3. Please don't run at the max. speed for a new machine, the 90% of the max. speed is acceptable.
4. Before install the machine on the table, please first uninstall the two support rods

4. Needle(Fig.2)

1. The standard needle type is DY×3(24#~26#)
The right need should be choosed according to the thread and materials to be sewn
2. Install the needle: turn the hand wheel to lift the needle bar to its highest position, loosen the needle set screw, fully insert the needle shank up to the bottom of needle bar (single needle) or needle clamp(double needle),for single needle machine, keep the long groove leftward; for double needle machine, keep the long grooves of the two needles opposite with each other, then tighten the needle set screw.

3

5.Lubrication(Fig.3)

- 1.Add 1-2 drops of oil in the places indicated by the arrows.
- 2.Put the oil indicator A out from the hook saddle, and fill oil in it until to the upper reference line.
- 3.Please lubricate at least twice every day if sewing continuously.

4

6.Thread(Fig.4)

Usually, the needle thread should be left twisted, but for double needle machine, the left needle thread should be right twisted.

Left twist

Right twist

5

7.Winding the bobbin thread(Fig.5)

- 1.Drawing the bobbin thread through ① ② ③ ④, Wind thread several circles around bobbin and insert the bobbin into the shaft of bobbin winder ⑤.
- 2.put the winder lever ⑥ onto bobbin shown by arrow, then it can be automatic wound when sewing.

8. Installing the bobbin(Fig.6)

1. Open the slide plate ① and hook latch ②, then put the bobbin in the hook
2. Draw the bobbin thread ③ through hook lace ④ about 4-5cm, then lock the hook latch.
3. Close the slide plate.

9. Threading the needle thread(Fig.7)

1. Passing the needle thread through thread guide pin ①, thread guide ②, thread tension ③, thread tension ④, lower thread guide rod ⑤, thread controller spring, upper thread guide ⑦, thread take-up lever ⑧, upper thread guide ⑦, lower thread guide ⑨, needle bar ⑩, and needle ⑪.
2. Hold the tip of needle thread by hand; turn the hand wheel to lower the needle bar, then lift it to its highest position, pull the needle thread and the bobbin thread will be drawn up accordingly, inally put the tip of needle thread and bobbin thread toward front under the presser foot.

10. Adjusting the tension of needle thread and bobbin thread(Fig.8)

1. The tension of needle thread is controlled by the thread tension nut ①.
2. The tension of bobbin thread is adjusted by the Screw. Turn the screw clockwise to increase the tension and turn the screw counter-clockwise to decrease the tension

11.Adjusting the stitch length (Fig.9)

Put the stitch length button ① on the feed eccentric cam,press the button and turn the hand wheel ② slowly to adjust the stitch length.

Turn the hand wheel face to the operator to increase the length, on the contrary, to decrease the length. When the required stitch length is obtained, release the button, and then begin to operate the machine

12.Adjusting the presser foot pressure (Fig.10)

Please turn the pressure regulating screw ① clockwise to increase the presser foot pressure, on the contrary, to decrease the pressure.

13.Reverse stitching (Fig.11)

Connect the reverse pedal with the block ①, when step on the pedal, the reverse stitching will be run.

14.Adjusting the feeding(Fig.12)

- 1.Adjust the feed eccentric cam to make the stititch length zero, at this position, the distance between vibrating presser bar ① and presser bar ② is 15.5mm(single needle) or 14.5mm(double needle). To adjust the stitch length by crank screw ③.
- 2.Usually, the position between feed dog and needle is: the needle should drop in the center of needle hole of feed dog. To adjust the position by screw ④.
- 3.After adjustment, please tighten the screws.
- 4.To adjust the eccentric cam ⑤ to control the max. stitch length.

15.Adjusting the feed dog(Fig.13)

The maximum height of feed dog over the surface of needle plate is 1.3mm, To adjust the height by screw ①.

16.Adjusting the timing between needle and hook(Fig.14)

Set the feed eccentric with the button at no feeding position, and confirm the distance between vibrating presser bar and presser bar should be 15.5mm.

- 1.If the needle bar and hook are correctly timed, the point of the hook will be at the center of the needle when the needle raised 3.8 ± 0.5 mm from the lowest point.

For the adjustment of timing, loosen the two screws ① for the hook driving gear, and tap this gear to the right or left in clearance of 2mm on the hook driving shaft until the point of the hook is at the center of the needle.

Tapping to the right gives on earlier hook timing, and to the left gives later hook timing.

Wxcept the above case, to adjust in changing gear condition between hook driving gear ② and hook shaft gear ③.

Securely tington the two screws for hook driving gear after finishing adjustment.

- 2.Normally, the clearance between hook point and scarf of needle is 0.02~0.1mm

a.Loosen screw ④⑤;

b.Move the hook saddle right or left until the hook point is as close to needle as possible, but without striking it;

c.Tighten the two screws;

d.Before adjustment, please be sure that the needle doesn't bend.

17. Adjusting the height of needle bar (Fig.15)

Normally, the clearance between top of the eye of needle and hook point is 2.2mm. In case the needle bar is incorrectly set, loose the needle bar set screw ① and place the needle bar in correct position as required, and then tighten the screw ①.

18. Adjusting the bobbin case opener (Fig.16)

1. Turn the hand wheel until the top of the opener ② is located at the distance from the needle plate;
2. In this position, adjust it so that the clearance between the inside edge of the opener and the top of the hook is about 0.3~0.8mm;
3. After adjustment, tighten the screw ①.

19. Adjusting the height of presser foot (Fig.17)

The distance between the surface of the needle plate (A) and the presser foot at stopped position is 19mm. When step on the lifting pedal, the stop lever (C) will be released by the lifting lever (B).

1. To change the relative lift of the presser feet, loosen the screw ① at the above condition.
2. The height of lift of the presser feet is adjustable by moving the screw of presser bar lifting bracket.
3. Normally, the distance between presser bar position guide bracket ③ and presser bar position guide ④ is 7mm.

Position of the vibrating presser foot to shift in left and right is to be adjusted by the screw ② for presser bar lifting bracket and the screw for presser bar position guide bracket.

20. Adjusting the timing of vibrating presser foot(Fig.18)

The amount of lift of the presser feet should be regulated according to the thickness of materials to be sewn.

The feet should lift just enough to clear the materials.

As a rule, the walking foot and presser foot should lift at the same height, but some grades of work may require that they lift an unequal height.

To change the relative lift of the presser feet, loosen the screw (A) for lifting rock shaft crank and move the vibrating presser bar upward or downward as required, then tighten the screw (A).

21. Adjusting the presser foot movement amount(Fig.19)

The lifting amount of presser foot and walking foot can be adjusted by the lifting bell crank link screw stud ①. To decrease the movement in setting the stud ① at the upper position, and to increase the movement in setting the stud ① at the lower position, after setting, tighten the stud ① with nut ②.

The clearance for the presser foot and walking foot are being adjusted at maximum, so that the clearance of them should be adjusted according to the materials to be sewn.

The timing position for the presser feet should be regulated by Fig.18.

22. Adjusting the thread controller spring(Fig.20)

1. For more or less controller spring ① action on the thread, loosen the screw ② and turn the stop plate ③ to increase or decrease the action.

2. Adjusting the tension of controller spring: loosen the nut ④ and screw ⑤, turn the spring stud screw leftward with a screwdriver to increase the tension, or turn the stud screw rightward to decrease the tension, finally, tighten the screw ⑤.

21

23.Replacing the timing belt(Fig.21)

A. When the timing belt removed from the pulley for adjustment and/or replacing spare parts, it should be replaced by the following processes:

1. Turn the hand wheel to lift the thread take-up lever to its highest position;
2. Turn the hook shaft with the fingers until the arrow mark on the hook driving shaft bush collar ② and the red point mark on the hook driving shaft bush ① are directly in line, then replace the belt over the upper and lower pulley.

B.Replacement of the timing belt when damaged

1. Remove the upper arm plate and oil reservoir ③
2. Loosen the hand wheel set screw ④ and other Two screw ⑤, then remove the hand wheel ⑥;
3. Loosen the three screws ⑦ in the upper shaft bush and remove the bush ⑧;
4. Lift the belt up through the arm cap hole after removed the bush as far as possible and draw it out through the space normally occupied by the bush.
5. Replace the timing belt as opposite processes as above for removing it
6. Tighten all of the screws, so as to fit the upper shaft, free from looseness.

22

24.Safety clutch mechanism(Fig.22)

The safety clutch located on the right side of the lower timing pulley, it can prevent damage in the event of thread jamming in the hook by releasing the locking lever in the pulley.

1. Take out jammed thread from the hook;
2. To re-engage the clutch, press down the lock stud(A) by left hand, and turn the hand wheel backward slowly by right hand, then the safety clutch will be released.
3. In case easily releasing the safety clutch, adjust the pressure by the screw(B) after removed the timing belt(C). Turn the screw (B) clockwise to increase the pressure, and turn the screw (B) counter-clockwise to decrease the pressure

25.Adjusting the bobbin thread winder(Fig.23)

Adjust the volume of winding thread to the bobbin by the adjustment screw ①

Remove the plate ② on the front of the arm and adjust the slippage of the shaft for the winder by the winder driving gear ③ in the upper shaft to shifting right or left.

26.Adjusting the hook oil amount(Fig.24)

Loosen the screw ③ for the oil adjustment dial ② and adjust oil supply by truning the oil adjustment dial. When the point mark ① on the hook saddle is in line with the center line o the dial ②,the oil supply will be at the maximum level, when the point mark is at the vertical position of the center line of the dial, the oil supply will stop.

27.Adjusting the pedal(fig.25)

Construct the pedal set complete as shown in the Fig.25

8.-AL(N) components

No .	Part Number	Description	Qty	Notes
1	700-1401	Cylinder	1	ACQ50X60
2	700-1402	Screw	2	APH6-02
3	700-1403	Joint	2	
4	700-1404	Support	1	
5	700-1198	Fixed pin	2	
6	700-1405	Screw	3	GB/T70.1 M5X14
7	700-1406	Washer	3	GB93.5
8	700-1407	Screw	2	GB/T70.1 M8X25
9	700-1408	Washer	2	GB93 8
10	700-1409	Switch wire	3	L=140MM
11	700-1410	Fixed plate	1	
12	700-1411	Button	1	
13	700-1412	Cover	2	
14	700-1413	Plug	2	
15	700-1414	Cover (1)	1	
16	700-1415	3191 pin	2	MAL25X50
17	700-1416	Cover	2	
18	700-1417	Cylinder	1	
19	700-1418	Plate	1	
20	700-1419	Joint	2	
21	700-1420	Bracket	1	GB/T70.1-2000 M8X80
22	700-1421	Screw	2	
23	700-1408	Washer	2	
24	700-1422	Washer	2	
25	700-1423	Nut	2	
26	700-1424	Plate	1	GB100 3X16
27	700-1425	Screw	2	
28	700-1426	Bracket	1	
29	700-1427	Electric valve	2	
30	700-1428	Joint	4	
31	700-1429	Closed joint	3	G1/4
32	700-1430	Silence	2	GB/T818 M4X30
33	700-1431	Screw	4	
34	700-1432	Nut	4	
35	700-1433	Air regulator	1	
36	700-1434	Handle adjusting valve	1	
37	700-1435	Joint	1	APC8-02
38	700-1436	Joint	1	L=950mm
39	700-1437	Wire	1	
40	700-1438	Air pipe	2	
41	700-1439	Air pipe	2	PU6X4 L1300mm
42	700-1440	Cover (2)	1	
43	700-1441	3191 pin	2	
44	700-1414	Cover	1	
45	700-1442	3191 pin	4	
46	700-1443	Cover	1	GB/T6170 M10
47	700-1414	Cover	1	
48	700-1444	3191 pin	2	
49	700-1445	Cover	1	
50	700-1446	Nut	1	
51	200-1377	Joint	1	SM9/64"X40X12
52	100-1112	Washer	1	
53	700-1448	Screw	1	
54	700-1449	Screw	6	
55	700-1450	Wire clamp	6	
56	700-1451	Support	1	SM15/64"X28
57	700-1452	Nut	2	
58	700-1453	Chain	1	
59	700-1454	Button	1
