

PARTS AND SERVICE MANUAL

LIGHTNING

STRAIGHT KNIFE CUTTING MACHINES

This manual contains parts & service information for the following models:

- LIGHTOMATIC
- PLASTAMATIC
- POWERGLIDE
- POWERMATIC

Third Edition
Published
JUNE 2004

IMPORTANT

Before operating this machine, familiarize yourself or the operator with the safety features, all functions and adjustments for this machine.

Serial Number for your LIGHTNING

LIGHTNING INTERNATIONAL N.A., INC.

5570 CREEK ROAD • CINCINNATI, OH 45242
PHONE: 513-791-4932 • FAX 513-791-5969 • TOLL FREE 1-800-385-BOLT

Operating Instructions

WARNING

THIS IS A HAZARDOUS TYPE OF MACHINERY AND SHOULD BE USED WITH CARE:

- Always disconnect electrical connector before attempting to work on machine.

For operator safety...

- Keep the Presser Foot down when machine is not in use, and keep Presser Foot resting on top of the lay or as close to the material as possible when cutting material or machine is on.
- Never place hands between Presser Foot Rod and Knife or in the path of the Sharpener mechanism while the machine is running.
- Never use a machine with a broken or improper guard.
- Operator should remove all loose fitting jewelry, do not wear loose or baggy fitting clothing and persons with long hair should cover or pull it back.
- For additional safety we also recommend the use of steel gloves.

The purchaser must instruct all operators on the proper use of this machine. Such training should be documented. All standard and industrial safety measures, devices, and equipment should be provided to protect the operator. All operators must be warned that incorrect use of this machine can cause bodily injury. If you do not have qualified personnel to instruct new operators, contact your Lightning sales representative or call, write or fax Lightning direct. Help can be arranged.

WARNING

- The blade provided with a new machine is factory sharpened and ready to use. To avoid injury handle with extreme care.
- Use only the handles provided to lift, carry and operate the machine.

PUTTING YOUR LIGHTNING INTO SERVICE.

- When your Lightning is first put into service/operation, allow the machine to come to room temperature.
- Make sure a Knife is installed. If no blade is installed, damage may occur to sharpener system.
- Before the machine is plugged in, make sure the motor rotates freely and the knife is properly

set. To do this turn the Knurled Rotor Knob (part #2900328) at the rear of the machine. The knife should not strike the Toeplate or the table when knob is rotated.

BEFORE STARTING: CAUTION

- Add oil to machine. Put oil in Oil Housing Assembly, see #2900180, page 3. Use Oil (#2901102) or good grade 20-30 non-detergent oil. Fill until housing is to 1/2 capacity. Full capacity is to RED line and will last for eight hours of operation.
NOTE: To avoid oil leakage, fill oil reservoir only with the amount of oil needed to complete the shift. Never over fill or leave oil in reservoir over night.
- Lightning motors are Repulsion Induction Motors, requiring 110 or 220/230 volt **single phase** only. Be sure electric supply, machine plug and connector are properly installed.
- Make sure sharpener assembly is in locked position. If not, raise Trip Lock Lever (A) up, then press Sharpener Release Lever (B) half way down and move sharpener up into locked position. Turn knurled knob at rear of motor a few revolutions by hand to make sure knife moves easily.

STARTING MACHINE:

- Read all above information first.
- Make sure motor switch is in "OFF" position.
- Make sure a blade is in machine.
- Make sure sharpener is in locked position.
- Turn Knurled Knob at rear of motor over a few revolutions by hand to see if Knife moves freely.
- Connect electrical plug
- Switch power "ON".

CHANGING THE BLADE:

- Switch off the machine and disconnect the power supply.
- When the old blade is removed, clean care fully with the Knife Slot Cleaning Tool so that all lint is removed. The machine must not be turned on without the blade correctly in place.
- To ensure the blade is correctly in place before restarting the machine, turn the black Knurled Rotor Knob at the rear of the motor one revolution by hand. If the blade is not in the correct position, it will hit the Toeplate and the blade changing operation must be recommenced.

IMPORTANT:

- For the first week or two, or after the machine has been idle for any length of time, the motor should be turned on and off a few times (flash starting) before allowing it to run continuously. This permits the oil to warm up and flow easily into the moving parts.

WHEN MACHINE IS NOT IN SERVICE STORE SAFELY IN A WARM AREA ON A FIRM AND LEVEL SURFACE. EXTRA CAUTION SHOULD BE EXERCISED WITH TALLER MODELS.

LUBRICATION OF YOUR LIGHTNING CUTTER

WEEKLY

2 Drops - Oil only in Small Tubes
(2901152, 2901154, 2901156 & 2901158)

AMPS

	110V	220V
PGD	8.5	5.4
PMT	8.5	4.3
LMT	6.5	2.5
PLT	8.5	3.5

DAILY

4 Drops -
Oil only in
Idler Gear hole
(for Idler Gear 2900692)

DAILY

12 Drops - Oil only in
Oiler Housing before
commencing work.
DO NOT put Oil in
Oiler Housing more
frequently than once
in 24 hour period.

MONTHLY

4 Drops - Oil
only at base of
LH & RH
Square Drive
Shafts,
(2901452-2901464;
2901472-2901484)

WEEKLY

2 Drops - Oil only in both
Rear Belt Pulleys
(2901068, 2901072)

20 YEAR GUARANTEE

ON OUR REPULSION INDUCTION MOTORS

We guarantee the motor of our "LightoMatic", PowerMatic", and "PowerGlide" cutting machines (excluding Switch, Brushes and Switch Gear) for a period TWENTY YEARS, against burning out; provided it has not been dismantled by anyone other than Lightning International or one of our authorized representatives. In case of our representative dismantling, we would require the part to be returned to us for inspection. The machine itself carries a guarantee of twelve months.

Lightning machines can be supplied with your choice of motor and knife size...you can practically build one to order. For example, you can have a light motor on a large machine to cut light, bulky material or a powerful motor on a small machine for tough, heavy fabrics. To ensure long life this machine is also equipped with hardened and ground gears throughout the sharpening mechanism.

WARNING! The use of any other than genuine "Lightning" blades and/or parts WILL CAUSE DAMAGE to this cutting machine and such use will be considered outside the scope of this guarantee.

IMPORTANT

REMEMBER TO PLEASE RETURN YOUR WARRANTY CARD.
