

## **Additional User Manual Statement**

### **Federal Communications Rules for operation in USA**

**Applicable to 3.6-3.7 GHz TDD SCRT, FCC ID: O2J-365T, operating in the 3650-3700 MHz Band.**

The correct setting of the following Base Station parameters in Netspan, are critical to the correct operation of equipment in compliance with the rules detailed in 47CFR90 subpart Z (Wireless Broadband Services in the 3650–3700 MHz Band):

- Carrier Sense Threshold
- Carrier Sense Backoff Frames

Any attempt to alter these parameters outside those permitted by the Netspan software or the operator license could be a violation of that license

In addition, operators are advised that, if necessary, the Federal Communications Commission may require different values for some parameters in the field to permit equitable sharing of the spectrum.
