INTRODUCTION

Thank you for purchasing this Amped Wireless product. At Amped Wireless we strive to provide you with the highest quality products through innovation and advanced technology. We pride ourselves on delivering products that outperform the competition and go beyond your expectations. If you have any questions please feel free to contact us. We'd love to hear from you and thank you for your support!

Email: sales@ampedwireless.com

GETTING STARTED

Package Contents

Check to make sure you have all the contents within your package:

- High Power Touch Screen AC1750 Wi-Fi Range Extender
- Stylus
- Detachable High Gain Antenna
- Power Adapter
- Setup Guide
- CD: User's Guide & Installation Video
- Product Stand

Product Description

1. **LCD Screen:** 4" LCD touch screen. Displays the user interface for configuring the Router as well as the status.
2. **Stylus:** Input tool that assists in navigating the LCD touch screen Menu.
3. **Antenna Connector (ANT):** RJ-SMA antenna connector. Compatible with all antennas that have RP-SMA connectors.
4. **USB Port:** Attach USB storage devices, such as a USB flash drive or external hard drive, for file sharing.
5. **Power Switch:** Toggle the Range Extender on or off using the power switch.
6. **Stand/Cable Organizer:** Attach and fasten to the mounting holes on the back of the Router.
7. **Power (PWR):** Power adapter port. DC 12V 2A.
8. **Wired Ports:** 5 x Gigabit RJ-45 ports for connecting wired computers or network devices.
9. **Reset:** Button used to reset device. Push down once to reboot, hold down for 5-10 seconds to reset to factory default settings.

SETUP GUIDE (TOUCH SCREEN)

Find a Setup Location

The location of where you install the Range Extender is important to how it will function. The optimal setup location should be somewhere no more than halfway between your Wi-Fi router and your Wi-Fi dead zone.

IMPORTANT:

RECOMMENDED SIGNAL STRENGTH

>70%

PLACE THE **RANGE EXTENDER** IN A LOCATION WHERE IT CAN RECEIVE A STRONG SIGNAL FROM YOUR WIRELESS ROUTER.

This can be done before or after setup is complete. The Range Extender will save your settings.

Power On the Range Extender

- a. Attach the included antenna and product stand.
- b. Attach the Power Adapter to the Range Extender's PWR Port and plug it into an available power outlet. (On the right panel, make sure the power switch is on.)
- c. The Amped Wireless logo will appear as the unit boots up, then the Dashboard screen will appear. This process may take up to 2 minutes.

The included product stand also doubles as a cable organizer.

Navigating the Touch Screen Menu

Before we begin, here are a few tips on how to navigate the Touch Screen Menu:

Language Selection: Tap the Globe icon, found on the bottom of the Settings screen, to change the language of the menu.

Back Arrow: Tap the Left Arrow, found on the upper left corner of many screens, to navigate back to the previous page.

Home Button: Tap the Home icon, found on the bottom of many screens, to return to the Dashboard at any time.

Navigation Button: Tap the Left or Right Arrow to navigate between multiple pages for one screen. The dots in this example indicate there are 3 pages to see.

Keyboards/Keypads: Tap on a Blank Field to access a keyboard or keypad for entering in information such as your Network ID and Security Key.

Welcome to the Dashboard

The Dashboard will provide you with the current status of the Range Extender.

Tap **SCAN** to find an available network to extend.

During the setup process, the wizard will refer to the *Home Network* and the *Extended Network*:

The *Home Network* is the network you are trying to extend.

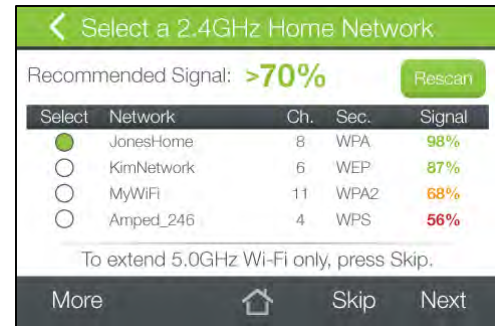

The *Extended Network* is the network that is rebroadcasted and extended by the Range Extender.

Select a 2.4GHz Home Network to Extend

The Range Extender can extend a single 2.4GHz network, a single 5GHz network or both (2.4GHz and 5GHz) simultaneously. The wizard will walk you through the setup of the 2.4GHz network first, and then the 5GHz network.

Select the Wi-Fi network that you wish to extend. Check that your Wi-Fi Network has a signal strength of 70% or greater. If you wish to only extend a 5GHz network and not a 2.4GHz network, tap Skip to move on to the 5GHz network selection. Otherwise, tap **Next** to continue.

If you fail to find any Wi-Fi networks, or your signal strength is below 70%, the Range Extender may be placed too far from the Wi-Fi network that you are trying to extend. Move your Range Extender closer to the Wi-Fi network that you are trying to extend and tap **Rescan** to scan again.

The Scan results page will display information regarding the name of the network (SSID), the channel which the Wi-Fi network is operating on and the security type of the network. The results page will also display what the signal strength is of every network detected.

Connecting to a Secure Network (2.4GHz)

If the 2.4GHz Wi-Fi network you are trying to extend has Wi-Fi security enabled, you will be prompted to enter a Security Key. If you did not select a secure network, you will not see this page.

Enter the security key in the space provided. You do not need to select what type of security it is, just simply type in the key and tap **Next**.

The Wizard will automatically detect your home network's security settings. If you do not know the key to the network you are trying to extend, then tap the Back arrow to select another network.

Select a 5GHz Home Network to Extend (5GHz)

Select the 5GHz Wi-Fi network that you wish to extend. Check that your Wi-Fi Network has a signal strength of 70% or greater.

If you have already selected a 2.4GHz network and do not wish to select a 5GHz network, tap Skip to continue. Otherwise, tap **Next** to continue.

If you fail to find any Wi-Fi networks, or your signal strength is below 70%, the Range Extender may be placed too far from the Wi-Fi network that you are trying to extend. Move your Range Extender closer to the Wi-Fi network that you are trying to extend and tap **Rescan** to scan again.

The Scan results page will display information regarding the name of the network (SSID), the channel which the Wi-Fi network is operating on and the security type of the network. The results page will also display what the signal strength is of every network detected.

Connecting to a Secure Network (5GHz)

If the 5GHz Wi-Fi network you are trying to extend has Wi-Fi security enabled, you will be prompted to enter a Security Key. If you did not select a secure network, you will not see this page.

Enter the security key in the space provided. You do not need to select what type of security it is, just simply type in the key and tap **Next**.

The Wizard will automatically detect your home network's security settings. If you do not know the key to the network you are trying to extend, then tap the Back arrow to select another network.

Extended Network Settings

The Range Extender features both a 2.4GHz and 5GHz Extended Network. The wizard will walk you through the setup of your 2.4GHz extended network first, and then the 5GHz extended network.

The default SSID of the Range Extender's Extended Network is "Amped TAPEX3_2.4".

If you choose to **Clone** the settings from your Home Network, the wizard will copy the SSID and Security Key of your Home Network.

The SSID of the Extended Network will have a "_RE" at the end of its name. For example: Home_Network_RE.

You can also manually enter a new network ID and security key. The new security key must be at least 8 characters long.

Tap **Next** to apply the settings and repeat these steps for your 5GHz extended network.

The default SSID of the Range Extender's Extended Network is "Amped_TAPEX3_5.0".

If you choose to **Clone** the settings from your Home Network, the wizard will copy the SSID and Security Key of your Home Network.

The SSID of the Extended Network will have a "_RE" at the end of its name. For example: Home_Network_RE.

You can also manually enter a new network ID and security key. The new security key must be at least 8 characters long.

Tap **Next** to apply the settings.

Applying Settings

DO NOT LEAVE THIS SCREEN.

Allow the progress bar to complete and the Wizard will automatically redirect you to the next step.

Setup Summary

Congratulations, the Range Extender is now successfully configured! Your settings are now saved.

At this point you can connect your Wi-Fi devices to you Extended Network using the Wi-Fi network name and password on the screen.

If you haven't already positioned your Range Extender in an optimal location, you may do so now. All Range Extender settings are saved and the unit can be safely powered off for relocation.

You may also attach any wired network devices to the wired ports on the side of the Range Extender at this time.

If you experience any problems during this process, please contact our Amped Wireless Elite Support at 888-573-8820 or 909-217-3168.

If the Extended Network connection fails try the following...

The failed connection page will provide you with information on why the connection failed. Read the instructions carefully and retry your connection. The tips below will help to solve common issues:

- a. Check to make sure your Home Network security settings are correct.
- b. On the SCAN page, check that your Home Network is showing a signal of 70% or greater. If not, move the Range Extender closer to your Home Network router and try again. If you are connecting to a dual band router, ensure that both the 2.4GHz and 5GHz networks show a signal strength of 70% or greater.
- c. Check that your Home Network router's DHCP server is enabled.
- d. Try changing the channel of the Home Network router to a higher channel number and run the Setup Wizard again.
- e. Check the internet connection on your Home Network wireless router. Connect directly to your router and attempt to access the web. If this fails, the problem is with your internet connection. Contact your broadband provider to fix this issue first before configuring the Range Extender.
- f. Try to reboot (unplug the power from the Range Extender and plug it back in) the Range Extender and check to see if the connection is established (some networks may be very slow and take longer than the allotted time for the Range Extender to successfully connect).

MORE SETTINGS (TOUCH SCREEN)

The Range Extender's Touch Screen Menu provides a host of features that you can easily configure with the touch of your finger. To access the main Settings Menu tap **Settings** from the Dashboard. From there you can access additional Wi-Fi Settings or Management Settings.

Note: For more advanced features and detailed options, please access the web menu through web browser: <http://setup.ampedwireless.com>

2.4GHz WI-FI SETTINGS (TOUCH SCREEN)

2.4GHz Wi-Fi Settings (Touch): Home Network Settings

Home Network Settings allow you to adjust settings for your Range Extender's connection with your Home Network router. Should you choose to skip the Setup Wizard and manually configure your Range Extender, this is the menu you use to do so.

Home Network SSID: Manually enter the Identification name of the Home Network you wish to connect to.

Security Key: Enter the Security Key of the Home Network. This is the password that you normally use when connecting directly to your home Wi-Fi connection.

Security Type: Select the encryption method used by your Home Network.

Channel Number: Enter the Channel number of the Home Network.

If the Settings entered here do not match the Settings of your home router, a connection between the router and the Range Extender will not be established.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

2.4GHz Home Network

Home Network SSID:

Security Key:

Hide Security Key: On

Channel: Security Type:

Apply

2.4GHz Wi-Fi Settings (Touch): Extended Network Settings

The Extended Network Settings page allows you to adjust settings for your Extended Network.

Extended Network SSID: This is the Identification name of the repeated/extended network.

Security Key: Enter the security key of the Extended Network. This is the password that your network devices will use to connect to the Extended Network.

Security Type: Select the encryption method used by the Home Network. This setting must match the Security Type setting of your Home Network router.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

2.4GHz Extended Network

Extended Network SSID:

Security Key:

Hide Security Key: Yes

Security Type:

Apply

2.4GHz Wi-Fi Settings (Touch): Guest Network

Guest Networks provide a separate Wi-Fi network, with unique settings for users to connect to. Select one of the four available Guest Networks.

Toggle the selected Guest Network to **On** to enable the Guest Network.

Guest Network SSID: This is the Identification name of your new Guest Network.

Security Key: Enter the security key of the Guest Network. This is the password that your network devices will use to connect your new Guest Network.

Security Type: Select the encryption method used by the Home Network. This setting must match the Security Type setting of your Home Network router.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

2.4GHz Wi-Fi Settings (Touch): Connected Devices

Connected Devices displays all users currently connected to the Range Extender's Extended Network. It provides a list of MAC Addresses for each connected device and the sent and received data for each.

The screenshot shows a mobile application interface for '2.4GHz Connected Devices'. It features a green header with a back arrow and the title '2.4GHz Connected Devices'. Below the header is a table with three columns: 'MAC Address', 'Data Sent', and 'Data Received'. The table lists four entries with their respective MAC addresses and data statistics. At the bottom of the screen, there is a dark grey bar with a home icon and the text 'More'.

MAC Address	Data Sent	Data Received
1a:1b:2a:2b:3a:3b	566298	618644
2c:2d:3c:3d:4a:4b	122682	101985
5a:5b:6a:6b:7d:7e	758631	681643
8g:8h:9s:9t:0m:0n	187394	888873

2.4GHz Wi-Fi Settings (Touch): Wi-Fi Coverage Controls

Adjust the output power of the Range Extender to control the coverage distance of your Extended Wi-Fi Network. For a smaller coverage area you can select a lower output power. For the maximum Wi-Fi coverage select the **100%** selection. Note that if you select a lower output power, your connection to your Home Network will also decrease in range. So be careful and test your signal strength after each adjustment.

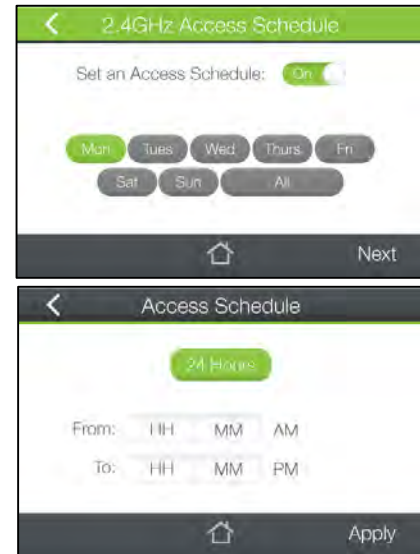

2.4GHz Wi-Fi Settings (Touch): Access Schedule

You can set a schedule for when your Wi-Fi is enabled or disabled (both Home Network and the Extended Network) through the Access Schedule menu. To do so:

- Toggle the Access Schedule to **On**.
- Select which days you wish for your Wi-Fi to be available, one day at a time. Select the first day and tap **Next**.
- Then select the time frame during that day that you wish for Wi-Fi to be available. Tap **Apply** to save your settings.
- Tap the next day that you wish to schedule and then repeat steps a-c.

Your Access Schedule will also control the Internet access for wired connections. For more detailed settings, access <http://setup.ampedwireless.com>.

Note: Make sure you have already configured your System Clock in order for your schedule to work correctly. Time Zone Settings can be adjusted from the Settings menu under Management > Clock / Date.

2.4GHz Wi-Fi Settings (Touch): Wi-Fi Protected Setup (WPS)

WPS is a Wi-Fi feature created to make Wi-Fi setup simple and easy. Some Wi-Fi routers and adapters support this feature with varying names (i.e. One Touch Setup or WPS).

You may enable WPS setup here by tapping **Start WPS PBC**.

Follow the steps on the Range Extender to complete WPS setup.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

2.4GHz Wi-Fi Settings (Touch): User Access

User Access allows you to deny access or allow access to specific users that are connecting wirelessly to the Extended Network. Each Wi-Fi device has a unique address called a MAC address (a 12 digit hex number).

By inputting the MAC address into the field, you can define whether that device is allowed to connect to your network or not allowed.

Tap **Select from Connected Devices** to conveniently alter the access of devices that are already connected to the Extended Network.

5GHz WI-FI SETTINGS (TOUCH SCREEN)

5GHz Wi-Fi Settings (Touch): Home Network Settings

Home Network Settings allow you to adjust settings for your Range Extender's connection with your Home Network router. Should you choose to skip the Setup Wizard and manually configure your Range Extender, this is the menu you use to do so.

Home Network SSID: Manually enter the Identification name of the Home Network you wish to connect to.

Security Key: Enter the Security Key of the Home Network. This is the password that you normally use when connecting directly to your home Wi-Fi connection.

Security Type: Select the encryption method used by your Home Network.

Channel Number: Enter the Channel number of the Home Network.

If the Settings entered here do not match the Settings of your home router, a connection between the router and the Range Extender will not be established.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

5.0GHz Home Network

Home Network SSID:

Security Key:

Hide Security Key: On

Channel: 10 Security Type: WPA / WPA2

Apply

5GHz Wi-Fi Settings (Touch): Extended Network Settings

The Extended Network Settings page allows you to adjust settings for your Extended Network.

Extended Network SSID: This is the Identification name of the repeated/extended network.

Security Key: Enter the security key of the Extended Network. This is the password that your network devices will use to connect to the Extended Network.

Security Type: Select the encryption method used by the Home Network. This setting must match the Security Type setting of your Home Network router.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

5.0GHz Extended Network

Extended Network SSID:

Security Key:

Hide Security Key: Yes

Security Type:

Apply

5GHz Wi-Fi Settings (Touch): Guest Network

Guest Networks provide a separate Wi-Fi network, with unique settings for users to connect to. Select one of the four available Guest Networks.

Toggle the selected Guest Network to **On** to enable the Guest Network.

Guest Network SSID: This is the Identification name of your new Guest Network.

Security Key: Enter the security key of the Guest Network. This is the password that your network devices will use to connect your new Guest Network.

Security Type: Select the encryption method used by the Home Network. This setting must match the Security Type setting of your Home Network router.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

5GHz Wi-Fi Settings (Touch): Connected Devices

Connected Devices displays all users currently connected to the Range Extender's Extended Network. It provides a list of MAC Addresses for each connected device and the sent and received data for each.

The screenshot shows a mobile application interface titled "5.0GHz Connected Devices". It features a table with three columns: "MAC Address", "Data Sent", and "Data Received". The table lists four entries with their respective MAC addresses and data transfer statistics. At the bottom of the screen, there is a home icon and a "More" button.

MAC Address	Data Sent	Data Received
1a:1b:2a:2b:3a:3b	566298	618644
2c:2d:3c:3d:4a:4b	122682	101985
5a:5b:6a:6b:7d:7e	758631	681643
8g:8h:9s:9t:0m:0n	187394	888873

5GHz Wi-Fi Settings (Touch): Wi-Fi Coverage Controls

Adjust the output power of the Range Extender to control the coverage distance of your Extended Wi-Fi Network. For a smaller coverage area you can select a lower output power. For the maximum Wi-Fi coverage select the **100%** selection. Note that if you select a lower output power, your connection to your Home Network will also decrease in range. So be careful and test your signal strength after each adjustment.

5GHz Wi-Fi Settings (Touch): Access Schedule

You can set a schedule for when your Wi-Fi is enabled or disabled (both Home Network and the Extended Network) through the Access Schedule menu. To do so:

- Toggle the Access Schedule to **On**.
- Select which days you wish for your Wi-Fi to be available, one day at a time. Select the first day and tap **Next**.
- Then select the time frame during that day that you wish for Wi-Fi to be available. Tap **Apply** to save your settings.
- Tap the next day that you wish to schedule and then repeat steps a-c.

Your Access Schedule will also control the Internet access for wired connections. For more detailed settings, access <http://setup.ampedwireless.com>.

Note: Make sure you have already configured your System Clock in order for your schedule to work correctly. Time Zone Settings can be adjusted from the Settings menu under Management > Clock / Date.

5GHz Wi-Fi Settings (Touch): Wi-Fi Protected Setup (WPS)

WPS is a Wi-Fi feature created to make Wi-Fi setup simple and easy. Some Wi-Fi routers and adapters support this feature with varying names (i.e. One Touch Setup or WPS).

You may enable WPS setup here by tapping **Start WPS PBC**.

Follow the steps on the Range Extender to complete WPS setup.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

5GHz Wi-Fi Settings (Touch): User Access

User Access allows you to deny access or allow access to specific users that are connecting wirelessly to the Extended Network. Each Wi-Fi device has a unique address called a MAC address (a 12 digit hex number).

By inputting the MAC address into the field, you can define whether that device is allowed to connect to your network or not allowed.

Tap **Select from Connected Devices** to conveniently alter the access of devices that are already connected to the Extended Network.

BOOSTBAND TECHNOLOGY (TOUCH)

BoostBand Technology (Touch): Screen Settings

BoostBand Technology is a feature that increases the overall speed and performance of the Range Extender by streamlining dual band network traffic through a single Wi-Fi frequency band between the Router and Range Extender. Doing so optimizes network traffic through the fastest available frequency band.

BoostBand Technology can only be enabled when the Range Extender is connected to a dual band connection. By default BoostBand Technology will use the faster, 5GHz band. If the 5GHz band is not available or becomes too weak, BoostBand Technology will automatically switch over to the 2.4GHz band.

While BoostBand Technology is enabled, Wi-Fi devices will still be able to connect to the Range Extender using 2.4GHz and 5GHz connections.

NETWORK SETTINGS (TOUCH)

Network Settings (Touch): IP Settings

IP Address: The IP address of the Range Extender.

Subnet Mask: The subnet of the Range Extender.

Default Gateway: The access point to another network, normally the Range Extender or your router.

DHCP: The Range Extender includes a feature to help manage the IP addresses within your Extended Network and with your Home Network automatically. When connected to a Home Network, the Range Extender will obtain an IP address from your Home Network's router and act as a DHCP Client. However, when there is no connection available, the Range Extender will act as a DHCP Server. You may also manually control the IP settings of the Range Extender by choosing Client, Server or Disabled from the DHCP drop down menu. This is only for advanced users.

DHCP Client Range: The range of IP addresses the Range Extender's DHCP server will assign to users and devices connecting to the Range Extender.

Network Settings (Touch): Wired Port Routing

If the Range Extender is connected to a dual band router, the Range Extender will automatically route the traffic from the device connected to the Range Extender's wired port through the 5GHz Home Network to access the web with the fastest speeds. If you choose, you may adjust this setting so that all wired traffic is routed through the 2.4GHz Home Network connection instead.

If the Range Extender is only connected to a single Home Network, it will automatically route all wired traffic through the Home Network connection that is active.

MANAGEMENT SETTINGS (TOUCH)

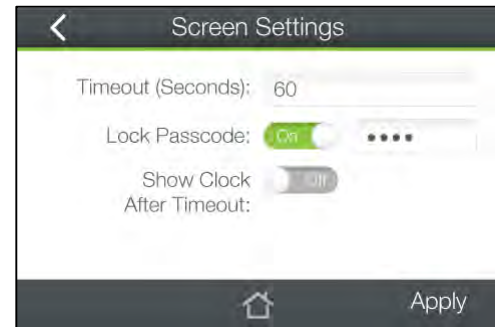

Management (Touch): Screen Settings

Manage the behavior and security of the LCD screen:

Timeout: When the touch screen is inactive past the duration of the Timeout time (in seconds), it will turn off to conserve power.

Lock Passcode: You can turn on a screen that has turned off simply by touching the screen. The Lock Passcode is a 4 digit security code used to secure access to the screen. If the Passcode is incorrect, the Touch Screen Menu will not appear. (Note: If you forget your passcode, simply reset the Range Extender back to default settings by holding down the reset button on the back of the Range Extender for 5-10 seconds)

Show Clock After Timeout: The Range Extender can automatically display the time and date after the timeout time has elapsed instead of turning the screen off.

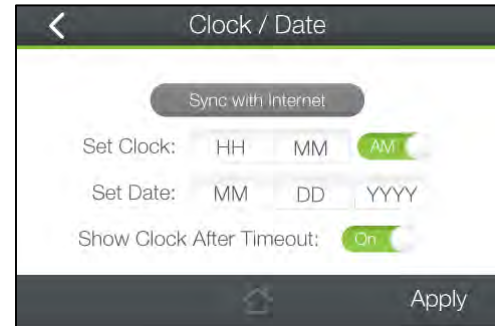

Management (Touch): Clock / Date

Maintain the internal clock for the Range Extender by syncing with the Internet.

Your clock and date settings need to be accurate in order for Logs and Wi-Fi Access Schedules to work correctly.

If you wish for the Clock to show on your screen when the Range Extender is timed-out, toggle this to **On**.

Be sure to **Apply** settings to save them.

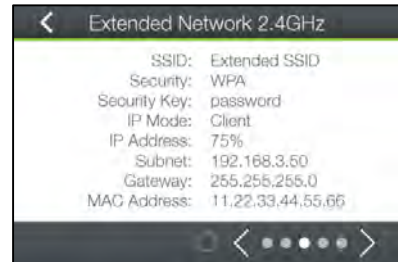

Management (Touch): System Details

The Device Status provides you with a snapshot of your Range Extender's current connections and settings.

Home Wi-Fi Network Settings: This section displays the current status of the connection between the Range Extender and your 2.4GHz or 5GHz Home Network. When viewing this section, it is important to check that your Home Network SSID is correct and the channel number matches your Home Network's channel number settings.

Connection Status: The Connection State will say "Connected" when there are no problems with the connection to your Home Network.

Extended Wi-Fi Network Settings: This shows the current settings for your 2.4GHz or 5GHz Extended Wi-Fi Network. The IP settings for your Range Extender will change as you connect and disconnect from your Home Network. When connected to your Home Network, the network IP settings will be assigned by your Home Network. When not connected, the Range Extender will use its own default network IP settings.

Device Details: This section provides you with information on the version and build time of your firmware. This is used to help our support department determine what firmware version your device is running.

The **Current Date / Time** is the setting for the System Clock. If this time is off, go to the System Clock section and configure your system time.

Management (Touch): Statistics

These statistics show the data activity for your 2.4GHz or 5GHz connections.

Home Network: These statistics show the data activity for all upload and download data between the Home Network and the Range Extender.

Extended Wi-Fi Network: These statistics show all data activity for all users connected wirelessly to the Range Extender.

Wired Network: The Wired Connection statistics show all data activity for all users physically connected to the wired ports on the Range Extender.

Management (Touch): USB Storage

Share a USB storage device with computers on both the Home Network and the Extended Network of the Range Extender.

Insert a USB storage device, such as a flash drive or external hard drive, to the USB port on the side of the Range Extender and follow the directions below for your operating system. The computer must be connected to your Home Network or Extended Network in order to access the storage device. You may also want to Map the Network Drive so it shows up as a standard drive on your computer for easier access.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

Windows 7 & Vista

To access the drive from your Windows desktop:

Note: If the USB drive does not appear automatically under your Networked devices (Windows 7, Vista or Mac OS X), you will need to Map the Network Drive.

- a. Click the **Start** button
- b. Click **Computer**
- c. On the Computer page, the drive should appear on the left hand column under Network as **AMPED_RE_USB**

To Map the Network Drive:

- a. Click the **Start** button
- b. Click **Computer**
- c. Click **Map Network Drive** from the top bar
- d. Select a drive letter (any), then enter in the folder field:
\\AMPED_RE_USB\public or **\\Range Extender's LAN IP address\public**
- e. If the drive fails to open, click **browse** and locate **AMPED_RE_USB** under Network

Windows XP

To access the drive from your Windows desktop:

Note: If the USB drive does not appear automatically under your Networked devices (Windows 7, Vista or Mac OS X), you will need to Map the Network Drive.

- a. Click the **Start** button
- b. Click **My Computer**
- c. Click on **My Network Places** and locate the drive named **AMPED_RE_USB**

To Map the network drive:

- a. Click the **Start** button
- b. Right Click **My Computer** and select **Map Network Drive**
- c. Select a drive letter (any), then enter in the folder field:
\\AMPED_RE_USB\public or **\\Range Extender's LAN IP address\public**
- d. If the drive fails to open, click **browse** and locate **AMPED_RE_USB** under Network

Mac OS X

To access the drive from your Mac desktop:

Note: If the USB drive does not appear automatically under your Networked devices, you will need to Map your Network Drive (Instructions below).

- a. Open **Finder**
- b. On the left hand menu, under Shared, click **AMPED_RE_USB**

To Map the network drive:

- a. Open **Finder**
- b. From the menu on the top of the desktop, select **Go**
- c. Select **Connect To Server** from the drop down menu
- d. Enter the address of the network drive:
smb://AMPED_RE_USB/public or **smb://Range Extender's LAN ip address/public**
- e. Then click **Connect**

If the network drive does not appear on your Mac desktop, follow these steps:

- a. Open **Finder**
- b. Select **Preferences** from the drop down menu
- c. Check show **Connected Servers**
- d. The drive should now appear on your desktop

Management (Touch): System Logs

System Logs are useful for viewing the activity and history of the Range Extender. The System Logs are also used by Amped Wireless techs to help troubleshoot your Range Extender when needed.

It is recommended that you enable all logs in the event that troubleshooting is required. All log entries are deleted each time the Range Extender reboots or is powered off.

More detailed log information can be found by accessing the web menu, <http://setup.ampedwireless.com>.

Management (Touch): Upgrade Firmware

Amped Wireless continuously updates the firmware for all products in an effort to constantly improve our products and their user experiences. When connected to an active connection with Internet access, the Range Extender can automatically check for new firmware updates that are available by tapping **Check for Updates**. Follow the prompts to complete the upgrade process.

Before upgrading the firmware, remember to always save your current settings first by going to Save/Reload Settings via the web menu. The firmware upgrade process will reset the settings of the Range Extender to default settings.

More detailed settings can be found by accessing the web menu, <http://setup.ampedwireless.com>.

Management (Touch): Reset Settings

Reset the Range Extender's settings to factory settings by pressing Reset. By resetting the Range Extender will lose all previous configurations and will need to run the Setup Wizard again to configure the Range Extender's Settings.

ACCESSING THE WEB MENU

The Range Extender can be configured via the simple to use Touch Screen Menu or via a web browser with the Web Menu. The Web Menu features a more advanced, more detailed interface with additional configuration options that may not be found on the Touch Screen Menu. To access the Web Menu, simply connect your computer, tablet, or smartphone to the Wi-Fi network or the wired network port of the Range Extender.

- a. Open your web browser
- b. Type <http://setup.ampedwireless.com> into the web address bar
- c. If the web menu fails to open, type in the following IP address into your web address bar:
<http://192.168.1.240>

<http://setup.ampedwireless.com>

NOTE: IF YOU HAVE PROBLEMS ACCESSING THE WEB MENU

- a. Disconnect your PC from all Wi-Fi networks
- b. Attach an Ethernet cable between the PC and the Range Extender
- c. Open your web browser and go to <http://setup.ampedwireless.com> again

SETUP GUIDE (WEB MENU)

Find a Setup Location

The location of where you install the Range Extender is very important to how it will function. The optimal setup location should be somewhere no more than halfway between your Wi-Fi router and your Wi-Fi dead zone.

Connect your PC, Tablet, or Smartphone to the Range Extender

- a. Attach the included antenna and product stand.
- b. Attach the Power Adapter to the Range Extender's PWR Port and an available power outlet.
(Check that the power toggle on the right side of the Extender is switched to ON)
- c. The Range Extender should boot up with the Amped Wireless logo and then the Dashboard screen should appear. This process may take up to 2 minutes.
- d. Connect your PC, Tablet, or Smartphone to the Range Extender's Wi-Fi network: [Amped_TAPEX3_2.4](#) or [Amped_TAPEX3_5.0](#).

Open your Web Browser to Access the Setup Wizard

- a. Open your web browser
- b. Type <http://setup.ampedwireless.com> into the web address bar
- c. If the web menu fails to open, type in the following IP address into your web address bar: <http://192.168.1.240>

**NOTE: IF YOU HAVE PROBLEMS ACCESSING THE WEB MENU**

- a. Disconnect your PC from all Wi-Fi networks
- b. Attach an Ethernet cable between the PC and the Range Extender
- c. Open your web browser and go to <http://setup.ampedwireless.com> again

Welcome to the Dashboard

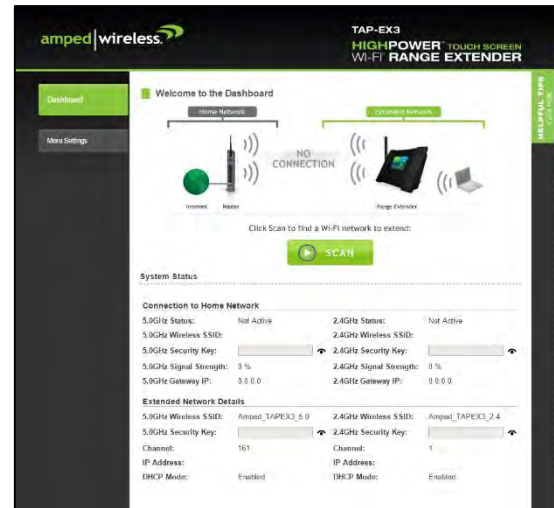

The Dashboard will provide you with the current status of the Range Extender.

Click **SCAN** to find an available network to extend.

The diagram on this page displays the terms used to describe:

- 1) The network you are trying to extend (Home Network).
- 2) The network that is rebroadcasted and extended (Extended Network).

Study this diagram carefully as the terms used in the following instructions will refer to these names.

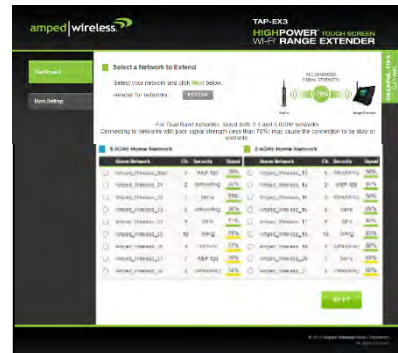

Scan for a Home Network to Extend

The Scan result will list all available 2.4GHz and 5GHz wireless networks detected by the Range Extender – including each network name (SSID), the operating channel, the type of security and the signal strength.

If you are extending a dual band router, you will need to select the SSID of your 2.4GHz network and the SSID of your 5GHz network.

The signal strength indicates the wireless connection between that network and the Range Extender. It is important to choose networks that are greater than 70%. A wireless network with a signal strength of less than 70% may create a poor connection which results in slower throughput and frequent dropped connections. If you fail to find any wireless networks, or your signal strength is below 70%, try moving the Range Extender closer to the wireless network that you are trying to repeat and click SCAN again.

Once you have selected your wireless network(s), click **Next** to continue. If you are only connecting to one network, simply select that 2.4 or 5GHz network and click Next to continue.

Connecting to a Secure Network

If the wireless network(s) you are trying to repeat has wireless security enabled, you will be prompted to enter a security key. If you are repeating a dual band router, you will need to enter the security key for both the 2.4GHz and 5GHz network. If either network does not have security, leave the field blank.

After you have entered the security key(s), click **Next** to continue.

If you do not know the key to the network you are trying to repeat, then click **Back** and select another network.

Extended Network Settings (SSID and Security)

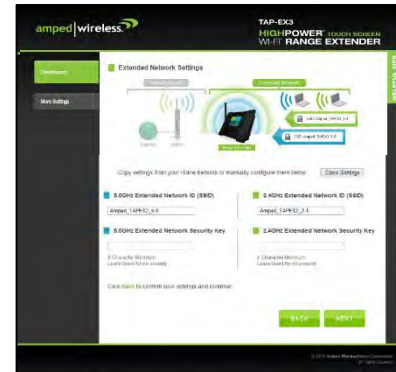

The default SSID of the Range Extender is “Amped_TAPEX3_2.4” and “Amped_TAPEX3_5.0”.

If you choose to "Clone" the settings from your Home Network, the wizard will copy the SSID and security key of your Home Network.

The SSID of the Extended Network will have a "_RE" at the end of its name. For example: Home_Network_RE.

You can also manually enter a new network ID and security key. The new security key must be at least 8 characters long.

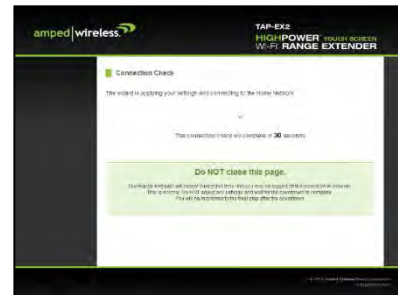

Click **Next** to apply the settings.

Connection Check

DO NOT LEAVE OR REFRESH THIS PAGE.

Allow the countdown to complete and the Wizard will automatically redirect you to the next step.

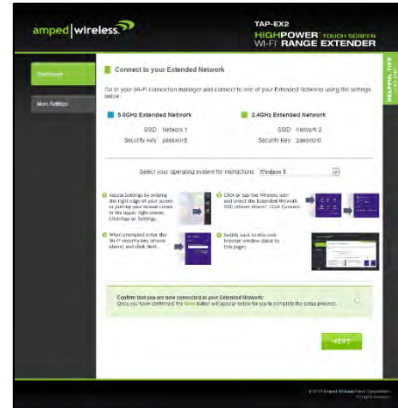

Connect to the new Extended Network

During the countdown process, the Range Extender will reboot and disconnect the Wi-Fi connection. At this point, you will need to reconnect your PC or tablet to the new Extended Network. Follow the instructions on the screen to connect to the Extended Network.

Once you have connected, click the check box to confirm. The **Next** button will appear allowing you to complete the setup process.

If there are problems with your configuration, the Wizard will inform you to rescan for a network to extend.

If there are no problems, you will see the Setup Summary on the following page.

Wired Port Routing

The Setup Wizard automatically selects the Home Network (2.4GHz or 5GHz) your wired devices will be routed through to connect to the Internet. If you wish to change this setting you may do so from the web menu by accessing [Network Settings > Wired Port Routing](#).

If the Home/Office Network connection fails try the following...

The failed connection page will provide you with information on why the connection failed. Read the instructions carefully and retry your connection. The tips below will help to solve common issues:

- a. Check to make sure your Home Network security settings are correct.
- b. On the SCAN page, check that your Home Network is showing a signal of 70% or greater. If not, move the Range Extender closer to your Home Network router and try again. If you are connecting to a dual band router, ensure that both the 2.4GHz and 5GHz networks show a signal strength of 70% or greater.
- c. Check that your Home Network router's DHCP server is enabled.
- d. Try changing the channel of the Home Network router to a higher channel number and run the Setup Wizard again.
- e. Check the internet connection on your Home Network wireless router. Connect directly to your router and attempt to access the web. If this fails, the problem is with your internet connection. Contact your broadband provider to fix this issue first before configuring the Range Extender.
- f. Try to reboot (unplug the power from the Range Extender and plug it back in) the Range Extender and check to see if the connection is established (some networks may be very slow and take longer than the allotted time for the Range Extender to successfully connect).

5GHz WI-FI SETTINGS

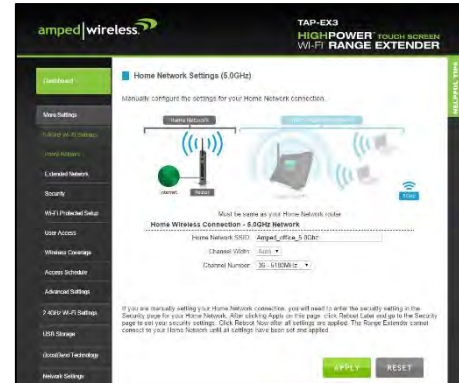

5GHz Wi-Fi Settings: Home Network Settings (5GHz)

The Home Network Settings (5GHz) page allows you to adjust settings for your 5GHz Home Network connection. These settings are for adjusting the Range Extender's Home Network connection after you have already gone through the Setup Wizard and wish to adjust your current configurations.

Home Network SSID (5GHz): Manually enter the Identification name of the existing 5GHz Home Network you wish to connect to.

Channel Number: Enter the channel number of the Home Network. If the channel number does not match, a connection will not be established.

Channel Width: Wi-Fi operates in two separate channel widths, 20Hz and 40Hz. 40Hz allows for faster speeds. Each Channel Width will have a different selection of wireless channels to choose from. Select the channel width you wish to use for your network. **This setting must match that of your Home Network for a successful connection.**

5GHz Wi-Fi Settings: Extended Network Settings (5GHz)

The Extended Network Settings page allows you to adjust settings for your Extended Network.

SSID of Extended Network: The name used to identify your Extended Network. This is the name that appears when a user scans for available Wi-Fi networks.

5.0GHz Extended Wireless Network Settings

Disable 5.0GHz Wireless Connections:

Band: 5 GHz (A+N+AC)

Broadcast SSID: Enabled

SSID of Extended Network: Jamped_TAPEX2_5.0

Channel Number: 40 (same as Home Network)

WMM: Enabled

Associated Clients:

Band: Allows you to setup access under a specific combination of Wi-Fi speed standards.

Broadcast SSID: Selecting Disable Broadcast SSID will hide the visibility of the Range Extender's SSID. Users must manually enter the SSID to connect.

Guest Networks (5GHz)

Click “Enable” to create a Guest Network. Guest Networks provide a separate wireless network, with unique settings for users to connect to.

Band: Restrict the Wi-Fi protocol and speed used for the specific Guest Network.

SSID: This is the name of your Guest Network.

Data Rate: Restrict access to the Guest Network by setting a lower bandwidth by changing the data rate.

Broadcast SSID: Disable to hide your SSID from public view. Users will need to manually enter the SSID into their wireless software interface to connect.

Associated Clients: View all computers and network devices that are connected to your Guest Network wirelessly.

To set security settings for the Guest Network go to: [5GHz Wi-Fi Settings > Security](#).

No.	Enable	Band	SSID	Data Rate	Broadcast SSID	WPA2	Action Client List
Guest Network 1	<input type="checkbox"/>	5.8 GHz (80MHz)	Ampep_TAPEX3_5.8_Guest_1	Auto	<input type="checkbox"/>	<input type="checkbox"/>	Show
Guest Network 2	<input type="checkbox"/>	5.8 GHz (80MHz)	Ampep_TAPEX3_5.8_Guest_2	Auto	<input type="checkbox"/>	<input type="checkbox"/>	Show
Guest Network 3	<input type="checkbox"/>	5.8 GHz (80MHz)	Ampep_TAPEX3_5.8_Guest_3	Auto	<input type="checkbox"/>	<input type="checkbox"/>	Show
Guest Network 4	<input type="checkbox"/>	5.8 GHz (80MHz)	Ampep_TAPEX3_5.8_Guest_4	Auto	<input type="checkbox"/>	<input type="checkbox"/>	Show

5GHz Wi-Fi Settings: Security

Wireless security allows you to change the type of wireless security settings for your 5GHz Extended Network, Home Network or Guest Networks.

Note: If you adjust the security of your Home Network and it is incorrect, the Range Extender will no longer have a successful connection to your Home Network.

Using the drop down menu, you can select which network you wish to configure and may adjust the security settings below.

If you are using the Guest Network feature, you will be able to adjust the security settings for those additional network SSIDs here as well.

For more information on the differences between the types of Wi-Fi security available, please visit the Learning Center on the Amped Wireless website:

www.ampedwireless.com

The screenshot shows a web interface for configuring wireless security. At the top, there is a dropdown menu labeled "Select a Wireless Network:" with the selected option "Extended Network - Amped_REC15A_5.0". To the right of the dropdown are two buttons: "APPLY" (green) and "RESET" (grey). Below this, the "Encryption:" section has a dropdown menu set to "WPA". The "Authentication Mode:" section has two radio buttons: "Enterprise (RADIUS)" (unselected) and "Personal (Pre-Shared Key)" (selected). The "WPA Cipher Suite:" section has two checkboxes: "TKIP" (unchecked) and "AES" (checked). The "Pre-Shared Key Format:" section has a dropdown menu set to "Passphrase". The "Pre-Shared Key:" section has a text input field and a small circular icon to its right.

5GHz Wi-Fi Settings: Wi-Fi Protected Setup – WPS

WPS is a Wi-Fi feature created to make Wi-Fi setup simple and easy. Some wireless routers and adapters support this feature with varying names (i.e. one touch setup or WPS).

You may enable WPS setup here by selecting the type of WPS setup you wish to use. The Range Extender supports all types of WPS setup:

Enable Wi-Fi Protected Setup

Option A: If your wireless user has a Wi-Fi Protected Setup button, click or press the WPS PBC (Push Button Configuration) button here.

Option B: If your wireless user asks for the Range Extender's PIN number, use this number on the user's device: 88888888

Option C: If your wireless user has a Wi-Fi Protected Setup PIN number, enter that number here:

and then click

Option A: Push button: You may push the WPS button on the web menu or use the physical button on the back of the Range Extender.

Option B: PIN: Some wireless devices use a PIN number to access wireless network. If your wireless device requests for a PIN number, then use the PIN code located here.

Option C: Enter PIN: Some wireless devices require that you use a PIN number to add them to the wireless network. If your wireless device has a PIN number, then locate the number and enter in the field, then press Start Pin.

5GHz Wi-Fi Settings: User Access

User Access allows you to deny access or allow access to specific users connecting to the network. Each networking device has a unique address called a MAC address (a 12 digit hex number).

By inputting the MAC address into the field, you can define whether that device is allowed into your network or not allowed.

A MAC Address may sometimes be referred to as a Physical Address. Most networking devices have their MAC Address located on a label on the actual device.

For Windows computers with internal networking adapters, the MAC Address can be found by viewing the Network Connection Details of the network adapter. The MAC Address will be listed as the Physical Address.

Be sure to enter the MAC Address without any symbols. For example, a MAC Address of 78-DD-78-AA-78-BB would be entered as 78DD78AA78BB.

User Access Control (5.0GHz)

Allow or deny wireless access to specific users by entering the MAC address of the device below. The MAC address of a networking device is a 12 digit hex number normally found on a label on the bottom of the device (e.g. 1A2B3C4F5A6D).

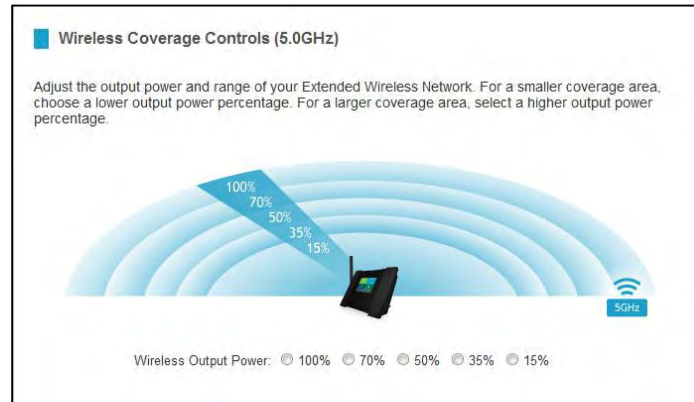

Wireless Access Control Mode:

MAC Address:

Comment:

5GHz Wi-Fi Settings: Wireless Coverage Controls

Adjust the output power of the Range Extender to control the coverage distance of your 5GHz Extended Wireless Network. For a smaller coverage area you can select a lower output power. For the maximum wireless coverage select the 100% selection. Note that if you select a lower output power, your connection to your 5GHz Home Network will also decrease in range. It is recommended that you test your signal strength after each adjustment.

5GHz Wi-Fi Settings: Access Schedule

Access Schedules will enable or disable your 5GHz wireless access at a set time based on your predefined schedule. This feature is often used for restricting access to all users (such as children, employees, guests) during specific times of the day for parental control or security reasons.

- Enable Access Schedule.
- Select which days you wish for your Wi-Fi to be available.
- Select the time frame during that day that you wish for Wi-Fi to be available.
- Apply Changes.

Access Schedule (5.0GHz)

Define a schedule for when Wi-Fi is enabled or disabled on the High Power Range Extender. Please be sure that your time zone settings have been configured before using this feature.

Note: When Wi-Fi is disabled, wired users will no longer have access to the Internet.

Enable Access Schedule (5.0GHz)

Enable	Day	From	To
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)
<input type="checkbox"/>	Sunday	00 (hour) 00 (min)	00 (hour) 00 (min)

Enabling Access Schedule will also disable internet access for wired connections on specified days.

Note: Make sure you have already configured your System Clock in order for your schedule to work correctly. Time Zone Settings can be adjusted from the web menu under Management > Time Zone Settings.

5GHz Wi-Fi Settings: Advanced Settings

Advanced Wireless Settings should only be adjusted by technically advanced users. It is not recommended that novice users adjust these settings to avoid degrading wireless performance. Here are a few definitions on some settings.

Fragment Threshold: The Default and Recommended setting is at 2346, meaning the High Power Range Extender will never fragment any frames that it sends to wireless users.

RTS Threshold: Adjusts the size of RTS data packets. Lower values reduce throughput, but allow the system to recover quicker from interference/collisions. Higher values provide the fastest throughput.

Beacon Interval: Indicates the frequency interval of the beacon. A beacon is a packet broadcast by the Range Extender to sync the wireless network.

Preamble Type: Defines the length of the Cyclic Redundancy Check for communication between the Range Extender and roaming wireless users.

Advanced Settings (5.0GHz)

Advanced wireless settings are for technically advanced users. It is recommended that these settings not be changed unless it is understood what the effects will be on your local wireless network.

Fragment Threshold: (256-2346)

RTS Threshold: (0-2347)

Beacon Interval: (20-1024 ms)

Preamble Type: Long Preamble Short Preamble

IAPP: Enabled Disabled

Protection: Enabled Disabled

Aggregation: Enabled Disabled

Short GI: Enabled Disabled

WLAN Partition: Enabled Disabled

STBC: Enabled Disabled

20/40MHz Coexist: Enabled Disabled

IAPP: Inter-Access Point Protocol

STBC: Space Time Block Coding improves reception by coding the data stream in blocks.

2.4GHz WI-FI SETTINGS

2.4GHz Wi-Fi Settings: Home Network Settings

The Home Network Settings (2.4GHz) page allows you to adjust settings for your 2.4GHz Home Network connection. These settings are for adjusting the Range Extender's Home Network connection after you have already gone through the Setup Wizard and wish to adjust your current configurations.

Home Network SSID (2.4GHz): Manually enter the Identification name of the existing 2.4GHz Home Network you wish to connect to.

Channel Number: Enter the channel number of the Home Network. If the channel number does not match, a connection will not be established.

Channel Width: Wi-Fi operates in two separate channel widths, 20Hz and 40Hz. 20Hz allows operation on channels 1-11, while 40Hz is 5-11. 40Hz allows for faster speeds. Select the channel width you wish to use for your network. **This setting must match that of your Home Network for a successful connection.**

2.4GHz Wi-Fi Settings: Extended Network Settings

The Extended Network Settings page allows you to adjust settings for your Extended Network.

SSID of Extended Network: The name used to identify your Extended Network. This is the name that appears when a user scans for available Wi-Fi networks.

Band: Allows you to setup access under a specific combination of Wi-Fi speed standards.

Broadcast SSID: Selecting Disable Broadcast SSID will hide the visibility of the Range Extender's SSID. Users must manually enter the SSID to connect.

The screenshot shows the '2.4GHz Extended Wireless Network Settings' interface. It includes the following elements:

- Disable 2.4GHz Wireless Connections:** A checkbox that is currently unchecked.
- Band:** A dropdown menu set to '2.4 GHz (B+G+N)'.
- Broadcast SSID:** A dropdown menu set to 'Enabled'.
- SSID of Extended Network:** A text input field containing 'Amped_TAPEX2_2.4' and a 'Guest Networks' button to its right.
- Channel Number:** A text input field containing '11 (same as Home Network)'.
- WMM:** A dropdown menu set to 'Enabled'.
- Associated Clients:** A 'Show Active Clients' button.

2.4GHz Wi-Fi Settings: Guest Networks

Click “Enable” to create a Guest Network. Guest Networks provide a separate wireless network, with unique settings for users to connect to.

Band: Restrict the Wi-Fi protocol and speed used for the specific Guest Network.

SSID: This is the name of your Guest Network.

Data Rate: Restrict access to the Guest Network by setting a lower bandwidth by changing the data rate.

Broadcast SSID: Disable to hide your SSID from public view. Users will need to manually enter the SSID into their wireless software interface to connect.

Associated Clients: View all computers and network devices that are connected to your Guest Network wirelessly.

To set security settings for the Guest Network go to: [2.4GHz Wi-Fi Settings > Security](#).

Guest Networks

Configure the settings for additional Guest Networks. Each Guest Network may have its own specific settings.

Name	Enable	Band	SSID	Data Rate	Broadcast SSID	WMM	Action Client List
Guest Network 1	<input type="checkbox"/>	2.4 GHz (80+160)	Ampex_TAPEX3_2.4_Guest_1	Auto	Enabled	Enabled	Show
Guest Network 2	<input type="checkbox"/>	2.4 GHz (80+160)	Ampex_TAPEX3_2.4_Guest_2	Auto	Enabled	Enabled	Show
Guest Network 3	<input type="checkbox"/>	2.4 GHz (80+160)	Ampex_TAPEX3_2.4_Guest_3	Auto	Enabled	Enabled	Show
Guest Network 4	<input type="checkbox"/>	2.4 GHz (80+160)	Ampex_TAPEX3_2.4_Guest_4	Auto	Enabled	Enabled	Show

2.4GHz Wi-Fi Settings: Security

Wireless security allows you to change the type of wireless security settings for your 2.4GHz Extended Network, Home Network or Guest Networks.

Note: If you adjust the security of your Home Network and it is incorrect, the Range Extender will no longer have a successful connection to your Home Network.

Using the drop down menu, you can select which network you wish to configure and may adjust the security settings below.

If you are using the Guest Network feature, you will be able to adjust the security settings for those additional network SSIDs here as well.

For more information on the differences between the types of Wi-Fi security available, please visit the Learning Center on the Amped Wireless website:

www.ampedwireless.com

The screenshot shows a web interface for configuring wireless security. At the top, there is a dropdown menu labeled "Select a Wireless Network:" with the selected option "Extended Network - Amped_REC15A_2.4". To the right of the dropdown are two buttons: "APPLY" (green) and "RESET" (grey). Below this, the "Encryption:" field is set to "WPA". The "Authentication Mode:" section has two radio buttons: "Enterprise (RADIUS)" and "Personal (Pre-Shared Key)", with "Personal (Pre-Shared Key)" selected. The "WPA Cipher Suite:" section has two checkboxes: "TKIP" (unchecked) and "AES" (checked). The "Pre-Shared Key Format:" dropdown is set to "Passphrase". The "Pre-Shared Key:" field is empty and has a small circular icon to its right.

2.4GHz Wi-Fi Settings: Wi-Fi Protected Setup – WPS

WPS is a Wi-Fi feature created to make Wi-Fi setup simple and easy. Some wireless routers and adapters support this feature with varying names (i.e. one touch setup or WPS).

You may enable WPS setup here by selecting the type of WPS setup you wish to use. The Range Extender supports all types of WPS setup:

Enable Wi-Fi Protected Setup

Option A: If your wireless user has a Wi-Fi Protected Setup button, click or press the WPS PBC (Push Button Configuration) button here.

Option B: If your wireless user asks for the Range Extender's PIN number, use this number on the user's device: 88888888

Option C: If your wireless user has a Wi-Fi Protected Setup PIN number, enter that number here:

and then click

Option A: Push button: You may push the WPS button on the web menu or use the physical button on the back of the Range Extender.

Option B: PIN: Some wireless devices use a PIN number to access wireless network. If your wireless device requests for a PIN number, then use the PIN code located here.

Option C: Enter PIN: Some wireless devices require that you use a PIN number to add them to the wireless network. If your wireless device has a PIN number, then locate the number and enter in the field, then press Start Pin.

2.4GHz Wi-Fi Settings: User Access

User Access allows you to deny access or allow access to specific users connecting to the network. Each networking device has a unique address called a MAC address (a 12 digit hex number).

By inputting the MAC address into the field, you can define whether that device is allowed into your network or not allowed.

A MAC Address may sometimes be referred to as a Physical Address. Most networking devices have their MAC Address located on a label on the actual device.

For Windows computers with internal networking adapters, the MAC Address can be found by viewing the Network Connection Details of the network adapter. The MAC Address will be listed as the Physical Address.

Be sure to enter the MAC Address without any symbols. For example, a MAC Address of 78-DD-78-AA-78-BB would be entered as 78DD78AA78BB.

User Access Control (2.4GHz)

Allow or deny wireless access to specific users by entering the MAC address of the device below. The MAC address of a networking device is a 12 digit hex number normally found on a label on the bottom of the device (e.g. 1A2B3C4F5A6D).

Advanced wireless settings are for technically advanced users. It is recommended that these settings not be changed unless it is understood what the effects will be on your local wireless network.

Fragment Threshold: 2346 (256-2346)

RTS Threshold: 2347 (0-2347)

APPLY RESET

IAPP: Inter-Access Point Protocol

STBC: Space Time Block Coding improves reception by coding the data stream in blocks.

BOOSTBAND™ TECHNOLOGY

BoostBand Technology is a feature that increases the overall speed and performance of the Range Extender by streamlining dual band network traffic through a single Wi-Fi frequency band between the Router and Range Extender. Doing so optimizes network traffic through the fastest available frequency band.

BoostBand Technology can only be enabled when the Range Extender is connected to a dual band connection. By default BoostBand Technology will use the faster, 5GHz band. If the 5GHz band is not available or becomes too weak, BoostBand Technology will automatically switch over to the 2.4GHz band.

While BoostBand Technology is enabled, Wi-Fi devices will still be able to connect to the Range Extender using 2.4GHz and 5GHz connections.

NETWORK SETTINGS

Network Settings: IP Settings

IP Address: The IP address of the Range Extender.

Subnet Mask: The subnet of the Range Extender.

Default Gateway: The access point to another network, normally the Range Extender or your router.

DHCP: The Range Extender includes a feature to help manage the IP addresses within your Extended Network and with your Home Network automatically. When connected to a Home Network, the Range Extender will obtain an IP address from your Home Network's router and act as a DHCP Client.

However, when there is no connection available, the Range Extender will act as a DHCP Server. You may also manually control the IP settings of the Range Extender by choosing Client, Server or Disabled from the DHCP drop down menu. This is only for advanced users.

The screenshot shows the IP Settings configuration page for the Range Extender. The fields are as follows:

- IP Address: 192.168.1.240
- Subnet Mask: 255.255.255.0
- Default Gateway: 0.0.0.0
- DHCP: Auto (dropdown menu)
- DHCP Client Range: 192.168.1.100 - 192.168.1.200 (with a "Show Closed" button)
- Static DHCP: Static DHCP
- Auto-Load Menu (Auto-DNS): Enabled Disabled
- Domain Name: ampedwireless
- 802.1d Spanning Type: Disabled (dropdown menu)
- Clone MAC Address: 000000000000

At the bottom right, there are two buttons: "APPLY" and "RESET".

DHCP Client Range: The range of IP addresses the Range Extender's DHCP server will assign to users and devices connecting to the Range Extender.

Static DHCP: You may set a static IP address within your DHCP network. The Range Extender will track the device via its MAC address and assign it a pre-defined IP address each time the device logs into the network. Obtain IP settings from the Home router or manually enter your IP settings.

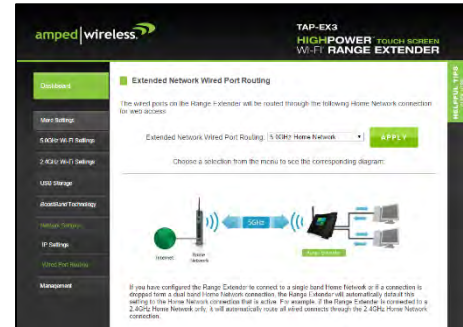

Auto-Load Menu (Auto-DNS): When the Range Extender loses connection to your Home Network it will automatically redirect your web browser to the web menu. To turn this feature off, you can disable Auto-DNS. **Note:** Disabling Auto-DNS will require that you access the web menu using the IP address of this device. It is recommended that you note your IP address before changing this mode. If you are no longer able to access the web menu, you will need to perform a hardware reset.

Domain Name: The Domain Name allows you to change the URL which is used to access the Setup Menu for the Range Extender. For example, entering <http://setup.ampedwireless.com> into your web browser while connected to the Range Extender, will guide you to the Web menu for the Range Extender. By changing the Domain Name, you will change the URL entered to access the Web menu. If you forget the Domain Name you entered and can no longer access the Web menu, then you will need to reset your Range Extender to default settings by holding down the reset button on the back panel for 5-10 seconds.

Network Settings: Wired Port Routing

If the Range Extender is connected to a dual band router, the Range Extender will automatically route the traffic from the device connected to the Range Extender's wired port through the 5GHz Home Network to access the web with the fastest speeds. If you choose, you may adjust this setting so that all wired traffic is routed through the 2.4GHz Home Network connection instead.

If the Range Extender is only connected to a single Home Network, it will automatically route all wired traffic through the Home Network connection that is active.

MANAGEMENT FEATURES

The Management features on the Range Extender allow you to view the status of your Range Extender and adjust other settings such as your System Clock, Passwords, and Firmware Upgrades among other administrative functions.

Management: Device Status

The System Status provides you with a snapshot of your Range Extender's current connections and settings.

System Information: This section provides you with information on the version and build time of your firmware. This is used to help our support department determine what firmware version your device is running.

The Current Date / Time will display the current clock settings of the Range Extender. If this time is off, go to the System Clock section and configure your system time.

The **Wired Ports Routing** shows the active Home Network used for transferring data to and from the wired ports.

Home Wireless Network Settings: This section displays the current status of the connection between the High Power Range Extender and your Home Network (2.4GHz or 5GHz). When viewing this section it is important to check that your Home Network SSID is correct, that the channel number matches your Home Network's channel number settings.

Connection State: The Connection State will say "Connected" when there are no problems with the connection to your Home Network.

If the Connection State shows "Waiting for Keys" then the WPA/WPA2 security key you entered is incorrect.

If the Connection State shows "Scanning" the Range Extender may be too far away from your home/office router.

The Signal Strength display can be updated by refreshing the page and is a good tool to use for finding the optimal installation location. A signal strength of 70% or greater is recommended for stable operation of the High Power Range Extender.

Extended Wireless Network Settings: Shows the current settings for your Extended Wireless Network (2.4GHz or 5GHz).

IP Settings: The network IP settings for your Range Extender will change as you connect and disconnect from your 2.4 or 5GHz Home Network. When connected to your Home Network, the network IP settings will be assigned by your Home Network. When not connected, the High Power Range Extender will use its own default network IP settings. These IPs are assigned to the 2.4 and 5GHz networks individually.

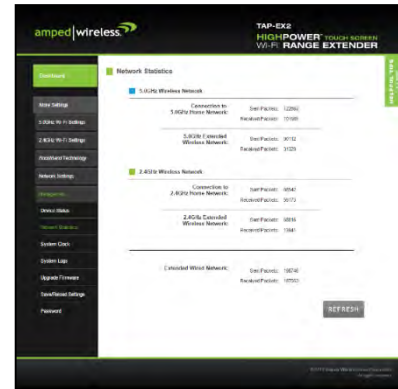

Management: Network Statistics

These statistics show the data activity for each network connection.

Connection to Home Network: This statistics shows the data activity for all upload and download data between the Home Network and the Range Extender.

Extended Wireless Network: These statistics shows all data activity for all users connected wirelessly to the Range Extender.

Extended Wired Network: The Wired Connection statistics shows all data activity for all users physically connected to the wired ports on the Range Extender.

Management: System Clock

Maintain the internal clock for the Range Extender by syncing with your computer's time. Your system clock settings need to be accurate in order for logs and wireless access schedules to work correctly.

System Clock

Maintain the system clock settings by syncing the system time with the time on your computer. The Range Extender's clock is used to make sure your Access Schedules and logs function correctly and on time.

Current Time: Month Day Year
 Hour Minute Sec

Sync with your computer:

Management: System Logs

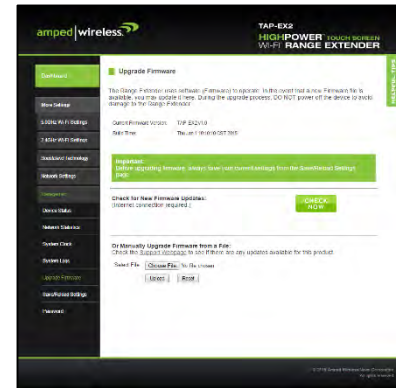

System Logs are useful for viewing the activity and history of the Range Extender. The System Logs are also used by Amped Wireless Elite Support Concierges to help troubleshoot your Range Extender when needed.

It is recommended that you enable all logs in the event that troubleshooting is required. All log entries are deleted each time the Range Extender reboots or is powered off.

Management: Upgrade Firmware

Amped Wireless continuously updates the firmware for all products in an effort to constantly improve our products and their user experiences. When connected to an active connection with Internet access, the Range Extender can automatically check for new firmware updates that are available by pressing **Check Now**. Follow the prompts to complete the upgrade process.

Before upgrading the firmware, remember to always save your current settings first by going to the **Save/Reload Settings** page. The firmware upgrade process will reset the settings of the Range Extender to default settings.

Manual Firmware Upgrade: In the case that the Range Extender does not have access to the Internet, you can manually upgrade the firmware by downloading the firmware file from the Amped Wireless Elite Support website. The firmware update is downloaded as a zip file and you will need to have an unzipping program to open the file. Inside the file will be a text document with details on the current firmware release and instructions on how to upgrade the firmware.

To manually upgrade your firmware:

- a. Download the file from www.ampedwireless.com/support and remember the location where you saved it. Firmware files may also be provided by Amped Wireless Elite Support Concierges.
- b. Click **Choose File** and locate the file.
- c. Click **Upload** to begin upgrading.

Note: Firmware files normally have a **.bin** file extension.

Management: Save/Reload Settings

Saving your current settings allows you to back-up your current settings which may be reloaded at a later time. This feature may be useful for testing new features and settings without having to worry about returning to a stable platform.

To save current settings:

- a. Click Save
- b. Select a file name and location

To load previously saved settings:

- a. Click Browse
- b. Locate the previously saved settings file
- c. Click Upload to restore the settings to the saved file

You may also reset the Range Extender's settings to factory settings by pressing Reset. By resetting the Range Extender you will lose all previous configurations and will need to run the Setup Wizard again to reconnect to a Home Network.

Management: Password Settings

By default, the Range Extender does not require a password to log on to the web menu. If you wish to enable a password to protect unauthorized access to the web menu and Setup Wizard, you may enter one here.

Password

Prevent unauthorized access to your Range Extender's web-based configuration menu by providing a login and password. If no protection is necessary, leave these fields blank and you will not be prompted for a login and password when accessing this web menu.

New Login:

New Password:

Confirmed Password:

TECHNICAL SPECIFICATIONS

Wireless Standard: 802.11a/b/g/n/ac

Frequency Band: 2.4 GHz, 5.0GHz

Wireless Speed: 2.4GHz: 450Mbps (Tx/Rx)
5.0GHz: 1300Mbps (Tx/Rx)

Amplifier: 3 x 2.4GHz Amplifiers
3 x 5.0GHz Amplifiers
6 x Low Noise Amplifiers

Wireless Output Power: Up to 29dBm

Wireless Security:

- WEP, WPA, WPA2, WPA Mixed, WPS

Wireless Coverage Control:

- 15% - 100% Output Power

Antennas:

- 1 x Detachable High Gain Dual Band Antenna
- 2 x Internal High Gain Antennas
- 1 x Reverse SMA Connector

Ports:

- 5 x RJ-45 10/100/1000M LAN ports
- USB 2.0 Port for Storage Devices

Mounting:

- Wall, Stand or Desktop

Warranty: 1 Year

Setup Requirements:

- Wireless Network

DEFAULT SETTINGS

The default settings for your Range Extender are listed here. If for some reason you need to return your Range Extender back to default settings, hold down the Reset button on the back panel for 10 seconds. The Range Extender will reset back to factory settings as listed below:

IP Address: 192.168.1.240

Web Menu Access: <http://setup.ampedwireless.com>

2.4GHz Extended Network SSID: Amped_TAPEX3_2.4

5GHz Extended Network SSID: Amped_TAPEX3_5.0

TROUBLESHOOTING & SUPPORT INFORMATION

We are here to help. If you have any issues with your Range Extender please contact us.

To contact Amped Wireless' Technical Support use one of the following methods:

Phone: 888-573-8820 or 909-217-3168

Email: techsupport@ampedwireless.com

Web: www.ampedwireless.com/support

Troubleshooting

The tips in this guide are listed in order of relevance. Try solution (a) before trying solution (b), etc.

Troubleshooting: Home Network Connection Issues

I cannot connect to my Home Network. I received an error when running the Setup Wizard.

- a. Your Home Network may be secured. Double check that you have the correct security key to connect to the Home Network.
- b. Your Range Extender may be located too far from your Home Network. Run through the Setup Wizard again. On the SCAN page, your Home Network should show a signal strength of 70% or greater. If it does not, move the Range Extender closer to your Home Network and try again.
- c. If you are connecting to a dual band router, both networks (2.4GHz and 5GHz) should have a signal strength of 70% or greater.
- d. Check that the antenna is connected securely to the antenna connector.
- e. Check to see that your Home Network router's DHCP server is enabled. The Range Extender needs to obtain an IP from your Home Network router.

I cannot find my Home Network when scanning for Wi-Fi networks in the Setup Wizard.

- a. The Range Extender may be out of range. Move the Range Extender closer to the Wi-Fi router and try the Setup Wizard again from the Touch Screen Menu. It is recommended that your Home Network shows a signal strength of 70% or greater in the Wizard SCAN results.
- b. From the touch screen Dashboard, go to Settings then the Wi-Fi Settings menu to access Wireless Coverage settings. Make sure the setting is at 100% and try again.
- c. Make sure that your Home Network's Wi-Fi SSID is broadcasting and not hidden. If your Home Network SSID is hidden, you will need to manually setup the Range Extender through the Wi-Fi Settings > Home Network Settings menu.

My Range Extender was working fine previously, but now I can no longer access the Internet through the Range Extender. Or, I had a **POWER OUTAGE and now the Range Extender no longer works.**

The Range Extender should automatically heal itself and reconnect to your wireless network. However, in the event that it does not and you are not able to access the Internet or your home network please try the following options:

- a. The connection to your Home Network has been dropped. This can be caused by several events to your home Wi-Fi connection. When this occurs, simply run the Setup Wizard again from the Touch Screen Menu and reconfigure the Range Extender.
- b. Reboot the Range Extender, wait 3 minutes for the Range Extender to reconnect to your network and try to access the Internet.
- c. The Range Extender automatically reconfigures itself in the event of a channel change on your router. However, in the case that it does not, check to see that your home Wi-Fi router settings have not changed. Any changes to the SSID, security, or channel number from the original settings will disconnect the Range Extender's connection to the home network. **A power outage can cause a change in the channel of your router.** To solve this simply run the Setup Wizard again from the Touch Screen Menu and reconfigure your Home Network connection. You can also set a static channel number on your router to prevent this from happening again in the future.

- d. Check to see that your home Wi-Fi router is still on. If it has been turned off please turn it back on. The Range Extender should automatically reconnect to your Home Network within 10 minutes.
- e. If the range extender does not automatically reconnect, try rebooting the Range Extender by unplugging the power cable and plugging it back in.

I have a dual-band router and I cannot extend it.

- a. The Range Extender will repeat the 2.4GHz signal and the 5GHz signal from your router simultaneously. Both wireless networks must have a signal strength of 70% or greater with the Range Extender for a reliable connection. Make sure that your dual band router is close enough to the Range Extender to receive a strong signal.
- b. Check to make sure that you have the correct security key for both the 2.4GHz and 5GHz network of your dual band router. These keys may sometimes be different from each other.
- c. Check that the antenna is connected securely to the antenna connector.
- d. Ensure that your dual band router does not have any security features enabled, such as MAC address filtering. If it does, disable it and try again.

I cannot find any Wi-Fi networks (Home Networks) to extend.

- a. The Range Extender may be out of range. Move the Range Extender closer towards the Wi-Fi router and try the Setup Wizard again from the Touch Screen Menu.
- b. The antenna on your Range Extender may be loose. Tighten the antenna connection and try again.
- c. Check that the antenna is connected securely to the antenna connector.
- d. The wireless Home Network may not be a compatible wireless network (802.11a/b/g/n/ac).

I am connected to a Home Network, however, I do not have Internet Access.

- a. The Home Network itself may not have Internet access. Check to see that you have internet access by connecting directly to the Home Network first. If you are able to go online then this is not a problem. If you cannot go online, then the Home Network's Internet connection must first be resolved.
- b. You may have a DNS issue and the Range Extender is not obtaining the IP settings from your Home Network. Try to reboot the Range Extender and then access a website. If that fails, then reboot the Home Router to see if that fixes it.
- c. There may be an IP conflict with your Home Network and your Extended Network. Try to adjust the IP Settings of your Extended Network using IP values that are different from your Home Network.

I can no longer connect to the Range Extender wirelessly.

- a. Power on and off the Range Extender and try again.
- b. The connection to the Home Network may be down. Run through the Setup Wizard again. After you have successfully reset the Home Network connection, try connecting wirelessly again.

The connection to the Home Network seems slow. File transfers take a long time to transfer.

- a. You may be too far away from your Home Network. The closer the Range Extender is to your Home Network, the better its connection will be. The Range Extender must have a strong signal in order to extend the signal with fast speeds and further range. Move the Range Extender closer to your Home Network and try again.
- b. Check that the antenna is connected securely to the antenna connector.
- c. You may be downloading from the Internet and not within your Home Network or Extended Network. Files transferred through the Internet are limited by your ISP speed and the data download speeds from the website that you are downloading from.
- d. Your computer may be using an older Wi-Fi adapter with lower speed limits and range capabilities (802.11b/g/n).

Network devices connected to the wired ports of the Range Extender do not have Internet access.

- a. The Wired Port Routing on the Range Extender may not be defined correctly. While connected to the Range Extender, open your web browser and access <http://setup.ampedwireless.com>. From the web menu, go to **More Settings > Network Settings > Wired Port Configuration**. Check that the wired port is routed through an active Home Network connection. If the Range Extender is connected to a 2.4GHz network only, adjust the routing so that all wired ports traffic routes through the 2.4GHz Home Network.

Troubleshooting: Touch Screen Issues**I forgot the touch screen passcode for the Range Extender and can no longer access the Touch Screen Menu.**

- a. Once you have exhausted all attempts at recovering your passcode, reset the Range Extender to default settings by holding the reset button, located on the back of the Range Extender, for 5 to 10 seconds. The Range Extender will reboot and erase all current settings. You will need to reconfigure the Range Extender.

The touch screen turns off too quickly.

- a. From the Dashboard screen, tap on Settings. Tap on Management Settings and then Screen Settings. This screen will allow you to adjust the timeout time for the screen to turn off when there is an interval of no activity.

Troubleshooting: Wireless Issues**I am only getting 3 or 4 wireless signal bars on my wireless computer and I am within 10 feet of the Range Extender.**

- a. Step back at least 10 feet from the Range Extender and check your signal again. The Range Extender emits high power, long range Wi-Fi signals that may confuse your wireless adapter signal reading at close range. The speed and signal are at 100%, however your readout may not be displaying the data correctly.
- b. Check that your antenna is fastened tightly to the antenna connector.
- c. The wireless channel that your network is running on may be congested. Change the wireless channel on your home Router and reconnect the Range Extender.

The range from the Range Extender seems low.

- a. Check to see that your Wi-Fi output settings are at 100%. From the Dashboard, go to Settings, then to the Wi-Fi Settings menu and access the Wireless Coverage settings. Make sure the output power is at 100%.
- b. Your Range Extender may be installed in a poor location. Avoid setting up your Range Extender in areas with high interference, such as, near fridges, microwaves, metallic objects and low surfaces. Install the Range Extender in a higher location if possible.
- c. Check the connections of the Antennas to the Range Extender. Tighten them if necessary.
- d. Adjust the Antenna of the Range Extender in different angles.
- e. The wireless channel that your network is using may be congested. Change the channel for your router's 2.4GHz network or 5GHz network. The Range Extender should automatically reconnect to your networks new settings, however if it does not, simply reconfigure the Range Extender to your network.
- f. The network adapter that you are using may have poor range, older technology with slower speeds or may need a driver update.
- g. Your computer may be using an older Wi-Fi adapter with lower speed limits and range capabilities (802.11b/g/n).
- h. To achieve 802.11ac Wi-Fi speeds for your extended network, it is necessary to extend an 802.11ac Wi-Fi router. Check that your home router is an 802.11ac router. Extending a router with slower Wi-Fi speeds, such as 802.11b/g/n will result in slower Wi-Fi speeds for your extended network.

Troubleshooting: Web Menu Access Issues

I entered <http://setup.ampedwireless.com> and it failed to open the Web Menu.

- a. Make sure your computer is connected to the Range Extender's Wi-Fi network: Amped_TAPEX3_2.4 or Amped_TAPEX3_5.0
- b. Try to use a different web browser. We recommend the Google Chrome web browser.
- c. Try to open your web browser to the default IP address by putting this number into your web browser instead: 192.168.1.240
- d. Power off (unplug from the power outlet) the Range Extender and power it back on. Try again.
- e. Reset your Range Extender to default settings by holding the Reset Button (located on the back of the Extender) for ten (10) seconds and try again.
- f. If steps (a) thru (e) fail, disconnect your PC from all Wi-Fi networks. Attach an Ethernet cable between the Range Extender and your PC. Try to access <http://setup.ampedwireless.com> again.

I could NEVER log onto the Range Extender wirelessly.

- a. Check that your wireless adapter supports WPA2 or WPA wireless security. If it does not then you will need to change the wireless security on the Range Extender. Go to the Web Menu, select Wireless Settings and then Wireless Security. Select the Extended Network from the drop down menu and either disable security or downgrade the security to WEP. Try connecting again.
- b. The connection to the Home Network may be down. Use an Ethernet cable and connect directly to the Range Extender. Access <http://setup.ampedwireless.com> and run through the Setup Wizard again. After you have successfully reset the Home Network connection, try connecting wirelessly again.

I can no longer access the Web Menu or the Range Extender no longer responds.

- a. Connect to your Range Extender and try to access <http://setup.ampedwireless.com> using your web browser.
- b. If you are advanced in networking troubleshooting, log onto your home router's web interface. Look for the DHCP client list and try to find the IP address of your Range Extender assigned by your home router. Once you have it, connect to the Range Extender using an Ethernet cable. Open your web browser and enter the IP address into the address bar.
- c. Reset the Range Extender back to default settings and try the Wizard again. To reset the Range Extender back to default settings, push the Reset Button (on the back of the Extender) for five (5) to ten (10)

seconds then let go. After the Range Extender has fully reset, use an Ethernet cable (not included) and connect to the Range Extender. Login to the Web Menu at <http://setup.ampedwireless.com> and run through the Wizard.

Troubleshooting: USB Storage & Other Miscellaneous Issues

I cannot access my USB storage device after I plug it into the Range Extender.

Follow the instructions below for your operating system.

Windows 7 & Vista

To access the drive from your Windows desktop:

Note: If the USB drive does not appear automatically under your Networked devices (Windows 7, Vista or Mac OS X), you will need to Map the Network Drive.

- a. Click the **Start** button.
- b. Click **Computer**.
- c. On the **Computer** page, the drive should appear on the left hand column under **Network** as **AMPED_RE_USB**.

To Map the Network Drive:

- a. Click the **Start** button.
- b. Click **Computer**.
- c. Click **Map Network Drive** from the top bar.
- d. Select a drive letter (any), then enter in the folder field:
`\\AMPED_RE_USB` or `\\shared disk IP address`
- e. If the drive fails to open, click **browse** and locate **AMPED_RE_USB** under **Network**.

Windows XP

To access the drive from your Windows desktop:

Note: If the USB drive does not appear automatically under your Networked devices (Windows 7, Vista or Mac OS X), you will need to Map the Network Drive.

- a. Click the **Start** button.
- b. Click **My Computer**.
- c. Click on **My Network Places** and locate the drive named **AMPED_RE_USB**.

To Map the network drive:

- a. Click the **Start** button.
- b. Right click **My Computer** and select **Map Network Drive**.
- c. Select a drive letter (any), then enter in the folder field:
`\\AMPED_RE_USB` or `\\shareddisk IP address`
- d. If the drive fails to open, click **browse** and locate **AMPED_RE_USB** under **Network**.

Mac OS X

To access the drive from your Mac desktop:

Note: If the USB drive does not appear automatically under your Networked devices (Windows 7, Vista or Mac OS X), you will need to Map the Network Drive.

- a. Open **Finder**.
- b. On the left hand menu, under **Shared**, click **Amped USB**.

To Map the network drive:

- a. Open **Finder**.
- b. From the menu on the top of the desktop, select **Go**.
- c. Select **Connect To Server** from the drop down menu.
- d. Enter the address of the network drive: `AMPED_RE_USB` or *shared disk IP address*, then click **Connect**.

The Range Extender freezes or I cannot access the web when a USB storage device is connected.

- a. Remove the USB storage device from the Range Extender and reboot it by unplugging the power adapter. Once rebooted, try inserting the USB storage device again.
- b. Make sure your USB storage device is not corrupted and is working properly and try again.

Additional USB Storage troubleshooting tips may be available online at the Amped Wireless Elite Support Center. Please check the Elite Support Center for the latest updates and features for USB Storage support.

My Wi-Fi Access Schedule is being erratic and not working at the correct times.

- a. You need to adjust your Clock / Date settings from the Management Settings screen.

Wi-Fi Protected Setup (WPS) is not working. Push button configuration does not detect the connection.

- a. The Range Extender supports WPS connections however some companies may use proprietary code for their own push button configurations. Try connecting using the Windows wireless utility or Mac wireless utility instead.

WARRANTY AND REGULATORY INFORMATION

The Amped Wireless (A division of Newo Corporation, Inc.) Limited Warranty

Warranty Period: The Amped Wireless Limited Warranty is for one (1) year from the date of purchase for new products. Refurbished products carry the Limited Warranty for thirty (30) days after the date of purchase.

Guarantee: Amped Wireless warrants to the original purchaser that the hardware of this Amped Wireless product shall be free of defects in design, assembly, material, or workmanship.

Conditions: The Amped Wireless Limited Warranty is for repair or replacement only at the sole discretion of Amped Wireless. Amped Wireless does not issue any refunds for purchased product. In the event that Amped Wireless is unable to repair or replace a product (i.e. discontinued product), Amped Wireless will offer a credit toward the purchase of a similar product of equal or lesser value direct from Amped Wireless. Any repaired or replacement products will be warranted for the remainder of the original Warranty Period or thirty (30) days, whichever is longer. Amped Wireless reserves the right to discontinue any of its products without notice, and disclaims any limited warranty to repair or replace any such discontinued product. Amped Wireless reserves the right to revise or make changes to this product, its documentation, packaging, specifications, hardware, and software without notice. If any portion of the Amped Wireless Limited Warranty is found to be unenforceable, its remaining provisions shall remain in effect. All costs of shipping the product to Amped Wireless shall be borne solely by the purchaser.

Limitations: IN NO EVENT SHALL AMPED WIRELESS' (NEWO CORPORATION'S) LIABILITY EXCEED THE AMOUNT PAID BY YOU FOR THE PRODUCT FROM DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM THE USE OF THE PRODUCT, ITS ACCOMPANYING SOFTWARE, ACCESSORIES OR ITS DOCUMENTATION. The Amped Wireless Limited Warranty does not apply if: (a) the product assembly has been opened or damaged, (b) the product or its software or firmware has been altered or modified, (c) the product has not been used and installed in accordance to Amped Wireless' instructions, (d) the product has been subjected to misuse, or negligence. Amped Wireless does not guarantee the continued availability of a third party's service for which this product's use or operation may require. The Amped Wireless Limited Warranty does not protect against acts of God, vandalism, theft, normal wear and tear, obsolescence and environmental damages such as, but not limited to, weather and electrical disturbances. The Amped Wireless Limited Warranty is the sole warranty for this product. There are no other warranties, expressed or, except required by law, implied, including the implied warranty or condition of quality, performance merchantability, or fitness for any particular purpose.

How to Claim Warranty: In the event that you have a problem with this product, please go to www.ampedwireless.com/support to find help on solving your problem. In the event that you cannot and need to file a warranty claim, please call Amped Wireless' Elite Support or visit <http://www.ampedwireless.com/support/center.html#rma> to obtain a Support Ticket Number (obtained from Technical Support Reps), fill out a Return Authorization (RMA) form and obtain a Return Authorization (RMA) number. A dated proof of original purchase and the RMA number is required to process warranty claims. You are responsible for properly packaging and shipping the product at your cost and risk to Amped Wireless. The bearer of cost related to shipping repaired or replaced product back to the purchaser will be at the sole

discretion of Amped Wireless and determined based on the details of each RMA case. Customers outside of the United States of America are responsible for all shipping and handling costs including custom duties, taxes and all other related charges.

Technical Support: The Amped Wireless Limited Warranty is not related to the terms, conditions and policies of Amped Wireless Elite Support offerings. For questions regarding support, please contact techsupport@ampedwireless.com

Regulatory Information**FCC Statement and Declaration:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

This device is restricted for indoor use.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator & your body.

Industry Canada Statement: This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

Pour les produits disponibles aux États-Unis / Canada du marché, seul le canal 1 à 11 peuvent être exploités. Sélection d'autres canaux n'est pas possible.

This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with IC multi-transmitter product procedures.

Cet appareil et son antenne (s) ne doit pas être co-localisés ou fonctionner en association avec une autre antenne ou transmetteur.

The device for operation in the band 5150–5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems.

les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux.

The maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the E.I.R.P.. limits specified for point-to-point and non-point-to-point operation as appropriate.

le gain maximal d'antenne permis (pour les dispositifs utilisant la bande 5725-5850 MHz) doit se conformer à la limite de p.i.r.e. spécifiée pour l'exploitation point à point et non point à point, selon le cas.

IC Radiation Exposure Statement:

This equipment complies with IC RSS-102 radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator & your body.

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

TAP-EX3 USER'S GUIDE

This radio transmitter (TAP-EX3) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (TAP-EX3) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

Antenna List :

Ant.	Brand Holder	Model Name	Antenna Type	Connector	Antenna Gain	
					2.4GHz	5GHz
1	Master Wave Technology Co., Ltd.	98619PRSX009	Dipole Antenna	RP SMA Plug	3.48	3.49
2	INPAQ Technology Co., LTD	ACM3-5036-A1-CC-S	Chip Antenna	N/A	3	3.3
3	INPAQ Technology Co., LTD	ACM3-5036-A1-CC-S	Chip Antenna	N/A	3	3.3

All non-Amped Wireless trademarks, logos, brands and products are trademarks or registered trademarks of their respective owners. Amped Wireless does not claim any relation. Mention of non-Amped Wireless products and brands are for information purposes only and does not constitute an endorsement or affiliation.

Amped Wireless authorizes you to copy materials published by Amped Wireless solely for non-commercial use within your organization in support of Amped Wireless products. No other use of this information is authorized. Any copy of these materials which you make shall retain all copyright and other proprietary notices in the same form and manner as on the original. Except as specified above, nothing contained herein shall be construed as conferring by implication, estoppel or otherwise any license or right under any patent, trademark or copyright of Amped Wireless or any third party.

All contents of this product, including Software, are protected by copyright, except as permitted herein. No portion of the information may be reproduced without prior written permission from Amped Wireless. The distribution, modification, publication and transmission of any content of this product for public or commercial

purposes is strictly prohibited.

The Amped Wireless logo requires permission for use. For use of the Amped Wireless logo, please email legal@ampedwireless.com. Use of Amped Wireless' trademarks requires the use of the proper trademark symbol in all usage cases.

The guidelines for trademark usage apply to all Amped Wireless customers, employees, vendors, consultants, licensees and any other third party.

Disclaimers

Amped Wireless makes all attempts in providing accurate information on all media. However, Amped Wireless makes no warranty as to the accuracy of the information, including representations and warranties about the accuracy of product specifications, marketing material, product availability, new product launch dates and all other content herein. Amped Wireless reserves the right to update and change information without prior notice. All information provided is provided "AS IS" with all faults without warranty of any kind. Either expressed or implied. Amped Wireless and its suppliers disclaim all warranties, expressed or implied including, without limitation. Amped Wireless and its suppliers shall not be liable for any indirect, special, consequential, or incidental damages including, without limitation, lost profits or revenues, cost of replacement goods, loss or

damage to data arising out of the use or inability to use any Amped Wireless product, damages resulting from use of or reliance on information present, even with prior notice to Amped Wireless.

All non-Amped Wireless trademarks, logos, brands and products are trademarks or registered trademarks of their respective owners. Amped Wireless does not claim any relation. Mention of non-Amped Wireless products and brands are for information purposes only and does not constitute an endorsement or affiliation.

Product wireless range specifications are based on performance test results. Actual performance may vary due to differences in operating environments, building materials and wireless obstructions. Performance may increase or decrease over the stated specification. Wireless coverage claims are used only as a reference and are not guaranteed as each wireless network is uniquely different.

Maximum wireless signal rates are derived from IEEE 802.11 standard specifications. Actual data throughput may vary as a result of network conditions and environmental factors.

Wi-Fi Range Extenders may not work with non-standard Wi-Fi routers or routers with altered firmware or proprietary firmware, such as those from third party sources or some Internet service providers. May not work with routers that do not comply with IEEE or Wi-Fi standards.

Software Licenses / Disclaimers

This product contains Software (including firmware), licensed to you, the purchaser, by Amped Wireless. This also includes Software downloaded from an authorized website, such as www.ampedwireless.com or from an authorized application market such as Google Play or Apple's App Store.

This license allows you to operate the Software in the manner described in the user's manual for the purchased product. You can make as many copies of the Software as needed for your personal use. Modifying or tampering of the Software, including but not limited to any Open Source Software, is solely at your own risk. Amped Wireless is not responsible for any such modification or tampering. Amped Wireless will not support or warrant any product in which you have or have attempted to modify the Software provided by Amped Wireless. You may not lease, sublicense, resell, redistribute or otherwise transfer the Software without written consent from Amped Wireless.

The Software is provided to you "as is" with all faults and without warranties of any kind. In particular, Amped Wireless does not guarantee that the Software will be error-free or that the Software will be free from system threats or attacks from viruses. Amped Wireless does not warrant that the Software will meet your expectations or that the software will be suitable for your particular situation. Amped Wireless warrants that any media (such as an included CD) on which the Software is provided to be free from defects. If you have an eligible warranty claim for defective media, Amped Wireless will replace the Software media.

IT IS YOUR RESPONSIBILITY TO BACK UP YOUR SYSTEM INCLUDING, WITHOUT LIMITATION, ANY DATA THAT YOU MAY USE OR POSSESS IN CONNECTION WITH THE PRODUCT. ANY MATERIAL, INFORMATION OR DATA DOWNLOADED OR OTHERWISE OBTAINED IS ACCESSED AT YOUR OWN DISCRETION AND RISK, AND YOU WILL BE RESPONSIBLE FOR ANY DAMAGE TO YOUR COMPUTER SYSTEM OR PRODUCT, OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF SUCH MATERIAL, INFORMATION OR DATA.

AMPED WIRELESS IS NOT RESPONSIBLE FOR ANY DAMAGE TO THE PURCHASER'S COMPUTER SYSTEM OR DATA.

All title and copyrights in and to the Software and any copies thereof are owned by Amped Wireless or its partners/suppliers. All title and intellectual property rights in and to the content which may be accessed through use of the Software is the property of the respective content owner and may be protected by applicable copyright or other intellectual property laws and treaties. This license grants you no rights to use such content. You may not delete any copyright, trademark or other proprietary notices from the Software or documentation.

Dispute Resolution / Arbitration

This section describes how you agree to resolve any disputes with Amped Wireless regarding these Terms of Use or your purchase of any product from Amped Wireless and your use of that product. You and Amped Wireless agree to the following resolution process.

To begin with, you agree that any claim that you might have against us regarding these Terms of Use or your purchase of any Amped Wireless product or use of that product must be resolved through binding arbitration before the American Arbitration Association using its Commercial Arbitration Rules. The arbitrator shall have exclusive authority to the extent permitted by law to resolve all disputes arising out of or relating to the interpretation, applicability, enforceability, or formation of our agreement, including, but not limited to, any claim that all or part of this agreement is void or voidable. The arbitrator shall also have exclusive authority to the extent permitted by law to decide the arbitrability of any claim or dispute between you and Amped Wireless.

Because we prefer to resolve our issues with you directly, you agree to arbitrate with Amped Wireless only in your individual capacity, not as a representative or member of a class. As such, your claims may not be joined with any other claims and there shall be no authority for any dispute to be arbitrated on a class-action basis or brought by a purported class representative.

It is important that you understand that the arbitrator's decision will be binding and may be entered as a judgment in any court of competent jurisdiction. If the arbitrator rules against Amped Wireless, in addition to accepting whatever responsibility is ordered by the arbitrator, we will reimburse your reasonable attorneys' fees and costs.

It's important to us that we address any issues you might have promptly. To help us do that, you agree to begin any arbitration within one year after your claim arose; otherwise, your claim is waived.

Unless you and Amped Wireless agree otherwise, any arbitration hearings will take place in the county where you reside. If your claim is for \$10,000 or less, you may choose whether the arbitration will be conducted solely on the basis of documents submitted to the arbitrator, through a telephonic hearing, or by an in-person hearing as established by the AAA Rules. If your claim exceeds \$10,000, the right to a hearing will be determined by the AAA Rules.

If your claim against Amped Wireless is for less than \$10,000, Amped Wireless will pay all arbitration fees. If your claim against Amped Wireless is for \$10,000 or more, you are responsible for paying your own portion of the fees set forth in the AAA's fee schedule for consumer disputes, and Amped Wireless will pay all remaining arbitration fees. If you believe you cannot afford the AAA's fee, you may apply to the AAA for a waiver.

As an exception to this arbitration agreement, Amped Wireless is happy to give you the right to pursue in small claims court any claim that is within that court's jurisdiction as long as you proceed only on an individual basis.

We would hope that our customer service agents could resolve any disputes you have with us without resorting to arbitration. Before initiating any arbitration proceeding, you agree to first discuss the matter informally with Amped Wireless for at least 30 days. To do that, please send your full name and contact information, your concern and your proposed solution by mail to us at: 13089 Peyton Dr. #C307, Chino Hills, CA 91709; Attn: Legal Department.

This Agreement and the rights of the parties hereunder shall be governed by and construed in accordance with the laws of the State of California, exclusive of conflict or choice of law rules.

The parties acknowledge that this Agreement evidences a transaction involving interstate commerce. Notwithstanding the provision in the preceding paragraph with respect to applicable substantive law, any arbitration conducted pursuant to the terms of this Agreement shall be governed by the Federal Arbitration Act (9 U.S.C., Secs. 1-16).
