	Rapidly flashing blue	Smart Plug is connecting to a Wi-Fi network.
	Solid blue	Smart Plug is connected to a Wi-Fi network.

What You Need for Wi-Fi Setup

- Your Smart Plug
- A device you want to control
- A smartphone or tablet
- A wireless router

Using Your Smart Plug

1 Plug Smart Plug into a power outlet.

2 Plug a device into Smart Plug.
3 Control the plugged-in device with the EufyHome app or voice control through Amazon Alexa.

- Smart Plug only supports electrical devices that are turned on using a mechanical switch.
- Devices controlled by an electronic or infrared remote control are not supported.
- To wirelessly control your device, make sure the device is turned on.
- There are three ways to turn the connected device on or off: 1) press the Power Button on Smart Plug; 2) use the EufyHome app; 3) control the device with your voice using Amazon Alexa.

Downloading the EufyHome App

What you need:
- A Wi-Fi router supporting the 2.4 GHz and 802.11 b/g/n bands; the 5 GHz band is not supported;
- A smartphone or tablet connected to a Wi-Fi network;
- A smartphone or tablet running iOS 8.0 (or above) or Android 4.3 (or above).

Download on the App Store

GET IT ON Google Play
Download the EufyHome app from the App Store (iOS devices) or Google Play (Android devices).

Connecting to a Wi-Fi Network

1 In the EufyHome app, tap the "**+**" icon on the top right to add "Smart Plug" to your EufyHome account.

2 Follow the on-screen instructions to complete Wi-Fi setup.
> The instructions in this manual are for your reference only. The app will be updated from time to time. Always follow the instructions in the app to complete Wi-Fi setup.

Controlling Your Plugged-in Devices with the EufyHome App

|	
	Turn Smart Plug on or off.
	Control plugged-in devices remotely.
	Set schedules for plugged-in devices. Create an event to determine when plugged-in devices will automatically turn on or off.
	Set a countdown timer: Plugged-in devices will automatically turn on or off after a preset amount of time.
	Enable Away Mode: Plugged-in devices will randomly turn on and off during the set period of time, giving the impression that someone is home.
	Monitor energy usage: Track the power consumption of your plugged-in devices and get a summary of the energy fee after the device is used for one day/week/month/quarter/year.

Controlling Your Plugged-in Devices with Amazon Alexa (Optional)

What you need:

• Your Smart Plug connected to a Wi-Fi network;
• An Alexa-enabled device (sold separately) such as Eufy Genie, Amazon Echo, Amazon Echo Dot and Amazon Tap;
• An existing Amazon account;
• The Alexa app installed on your smart device.

1 Open the Alexa app and select "Skills" from the menu in the top left corner of the homepage.

2 On the Skills screen, search for "EufyHome".

3 Once you have found the "EufyHome" skill, tap **Enable**.

4 Login with your EufyHome account to authorize Alexa to access your account.

5 Discover new smart devices via the "Smart Home" menu in the Alexa app or Alexa voice control.

➤ Once the device is connected, you can control the plugged-in device with your voice.

6 Say simple commands to Alexa.

(**Note:** You can modify the name of a device in the EufyHome app.)

Alexa, turn on my lamp.

Alexa, turn off my lamp.
> - The Amazon Alexa service is currently available in English only. More languages may be available later with the update of the service.

Troubleshooting

1. Cannot connect to your Wi-Fi network.

• Check whether you have entered the correct Wi-Fi password.
• Check whether there are any Internet connection problems. If the Wi-Fi signal is too weak, reset your Wi-Fi router and try again.
• If the LED Indicator is solid blue, indicating Smart Plug is connected to a Wi-Fi network, refresh or restart the EufyHome app and try again.
• If you still have trouble, press and hold the Power Button for 5 seconds to reset the Wi-Fi connection.

2. How to reset the Wi-Fi connection.

• Press and hold the Power Button for 5 seconds to reset the Wi-Fi connection. The LED Indicator will start flashing and alternate between amber and blue, indicating Smart Plug is ready for Wi-Fi setup.

3. No response when using the devices with the EufyHome app.

• Check whether Smart Plug is powered on.
• Check whether there are any Internet problems. If necessary, reset your Wi-Fi router and try again.
• If your smart device uses a 3G or 4G mobile network, check whether the network signal is abnormal. Try again when the signal becomes stable.
• If you still have trouble, reset the Wi-Fi connection and restart the Wi-Fi setup.

4. Cannot control the connected devices with Alexa voice control.

• Check whether there are any Internet connection problems.
• Check whether you have installed the Alexa app onto your smart device and enabled the "EufyHome" Skill in the Alexa app. For details, refer to the **Controlling Your Plugged-in Devices with Amazon Alexa (Optional)** section of this manual.
• Check whether you are using the proper commands when talking to Alexa. When making your request, first say the wake word "Alexa".
• Repeat your question. Speak naturally and clearly to Alexa in English.

• Check whether you have modified the name of Smart Plug in the EufyHome app. If yes, you need to rediscover the device through the Alexa app or Alexa voice control.

5. What should you do if Smart Plug automatically turns off?

• Smart Plug only supports devices whose power is no more than 1800W. Unplug the connected device and check whether the power exceeds 1800W.
