## 1. SYSTEM OVERVIEW

Gateway is an embedded computer that provides interfacing capability among a variety of wired and wireless networks. It implements WAN designs, with the additions of Bluetooth, WIFI, 433-MHz radio, and Satcom interfaces.

## 2. PURPOSE

This Installation Manual is intended to inform installers and users of the proper placement, configuration and distances between system components.

## 3. GENERAL INFORMATION

### 3.1. SPECIAL TOOLS REQUIRED

In addition to SAE standard and/or metric wrenches, sockets, and screw drivers, the following tool are required:

- 1) Torque Wrench (in-lbs)
- 2) Wrench set

### 3.2. INSTALLATION INSTRUCTIONS OVERVIEW

System installation is accomplished in the following steps:

- 1) Installation of Gateway into the tractor cab headliner
  - a. Torque the antenna terminations to Gateway RF SMA connectors with a torque spec of 7-10 in-lbs +/- 0.5 in-lbs. Mount the Gateway enclosure to the cab with  $\frac{1}{4}$ " or 6-mm fasteners and a torque of 30 in-lbs.
- 2) Installation of Antennas
  - a. Find a location on the equipment such that the following distances are the minimum spacing between system components.

**Table 1 System Component Minimum Spacing**

|  | Operator                          | Gateway |
|--|-----------------------------------|---------|
| <b>Antenna Hub 1</b><br><br>(Recommended minimum spacing between antenna hubs is 7.5 cm) | 40 cm (USA)<br><br>60 cm (Canada) | 20 cm   |
| <b>Antenna Hub 2</b>   | 40 cm (USA)<br><br>60 cm (Canada) | 20 cm   |
| <b>Gateway</b>   | 20 cm                             | N/A     |

- b. Ensure the antennas have a ground place of 300 x 300 mm around them.
- c. Torque the antenna mounting nut (M14x1) to 30 +/- 0.5 in-lbs.

### 3.3. PARTS LIST FOR INSTALLATION

The following parts are required for the installation of Gateway.

**Table 2 Parts List for Installation**

| Parts List for Installation |               |               |     |
|-----------------------------|---------------|---------------|-----|
| Item                        | Nomenclature  | Part Number   | QTY |
| 1                           | Gateway       | 153510-000003 | 1   |
| 2                           | Antenna Hub 1 | NA            | 1   |
| 3                           | Antenna Hub 2 | NA            | 1   |

## 3.4. HARDWARE COMPONENTS BACKGROUND

### 3.4.1. Electrical Characteristics

Input Power Requirements: 9-16 VDC  
Current Draw at 14VDC: 250mA (nominal)

### 3.4.2. Weight and Balance Information

The total weight of the Garrison and antenna is listed below.

**Table 3 Weight and Balance Information**

| Component                         | Weight (oz) | Weight (lbs) |
|-----------------------------------|-------------|--------------|
| Gateway                           | 70.544      | 4.409        |
| Antenna Hub 1 (HCEL-S2-0164A-01 ) | 26.624      | 1.664        |
| Antenna Hub 2 (HIRD-S2-0146A-01)  | 26.624      | 1.664        |

### 3.4.3. Equipment Dimensions

Equipment dimensions are outlined in the table below for all required components in Gateway. All figures given are representative of maximum equipment dimensions (where applicable).

**Table 4 Equipment Dimensions**

| Component                         | Length (mm) | Width (mm) | Height (mm) |
|-----------------------------------|-------------|------------|-------------|
| Gateway                           | 165         | 159        | 54          |
| Antenna Hub 1 (HCEL-S2-0164A-01 ) | 124.3       | 80.3       | 80.3        |
| Antenna Hub 2 (HIRD-S2-0146A-01)  | 124.3       | 80.3       | 80.3        |

### 3.4.4. Conditions for FCC 15.231 (a-d) operation

#### **IMPORTANT NOTICE!!!!**

This device can be configured to transmit on the 433 MHz frequency following the requirements of 47 CFR 15.231. Failure to adhere to this requirement void's the authority to operate the equipment!

The developer configuring Gateway's control signal for the user application is responsible for ensuring compliance to FCC 15.231(a-d).

In the event where the specific application in which the installed Gateway will be used, will not ensure that a control signal will always be sent as the purpose of the transmission, then the installer must set the Gateway to only operate in 15.231(e) mode (i.e., "periodic operation").

To set the device to transmit in FCC Part 15.231(e) mode, use the API command string as indicated below in quotes ("").

```
"iLPD433.send("MyMessage",9,  
FCC_PERIODIC_15_231_E,suggestedRetryIntervalMS,100,actualSentPowerDBM);"
```

Otherwise in the above command, replace the argument "FCC\_PERIODIC\_15\_231\_E" with "FCC\_APERIODIC\_15\_231\_AD" for 15.231(a-d) mode with the appropriate control message setup.

## 4. CONFIGURATION

With equipment installed, final configuration must meet the minimum separation distance in Table 5 and Section 4.2.

### 4.1. GATEWAY SYSTEM SEPARATION DISTANCES

|   | Operator                          | Gateway |
|---|-----------------------------------|---------|
| <b>Antenna Hub 1, 2</b><br><br>(Recommended minimum spacing between antenna hubs is 7.5 cm) | 40 cm (USA)<br><br>60 cm (Canada) | 20 cm   |
| <b>Gateway</b>  | 20 cm                             | N/A     |

Table 5 Separation Distance

## 4.2. GATEWAY SYSTEM SEPARATION DISTANCE ILLUSTRATION

Gateway and the following components must follow the distances in the following illustration to comply with FCC part 1.310.

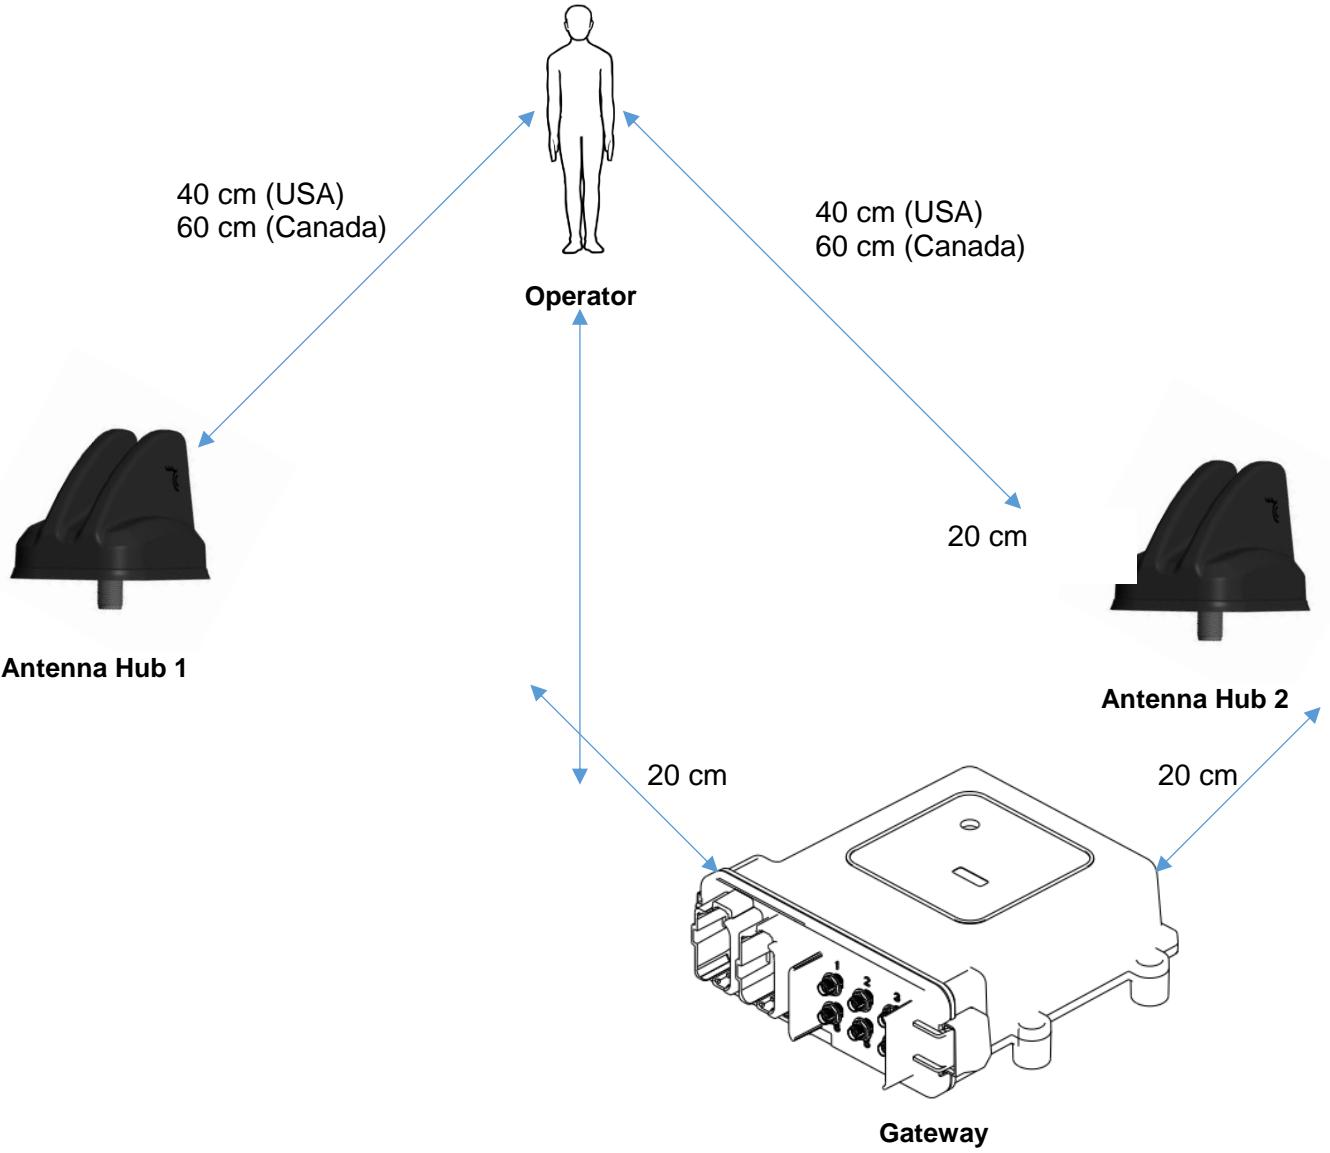

Figure 1 Separation Distance
