- Please use the power adapter and battery designated by the manufacture, it will cause danger if use other power supply.

- For the phone function upgrade continuously, it may be some discrepancy with specification during the actual use, sorry.

- SAR: The device complies with RF specifications when the device used at 15mm far from your body.

2. Brief introduction

- Applicable to 850 MHZ /900 MHZ / 1800 MHZ /1900 MHZ public mobile communication network
- Single SIM single standby.
- Quick dial.
- Redial function.
- Phone book function.
- Hands-free function.
- Hand shank/Hands free volume digital control.
- 12ringtones/alarms.
- 10message ringtones & mute.
- Send & receive message, 200 message instore.
- 100 phone book
- LCD of date, time, signal strength and battery capacity.
- Instore, search, delete and callback 10 incoming calls and outgoing calls and missed call log.

3. Technical Conditions

- Environmental temperature: -10^0C — 55^0C
- Relative humidity (RH): ≤ 90%
- Atmospheric pressure: 86～106Kpa
- Operating frequency: GSM 850\ EGSM900\ DCS1800\PCS1900 MHz
- Operating voltage: AC220V，50Hz，DC 5V 700mA
- Standby battery:chargable battery
- Stand-by time:more than 50 hours
- Continuous talking time:around 3 hours

P.S.: stand-by time, continous talking time is determined by the local network condition.

4、Definition of keybord function:

1. MENU/OK key: In standby state, press this button to enter the main menu interface. In the menu operation mode, press this button execute the function on lower right corner of the screen function on the left lower screen.

9. FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy

and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

—- Reorient or relocate the receiving antenna.

—- Increase the separation between the equipment and receiver.

—- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

—- Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

SAR:

The radiated output power of this device is below the FCC radio frequency exposure limits. Nevertheless, the device should be used in such a manner that the potential

for human contact is minimized during normal operation.

The exposure standard for wireless devices employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/Kg. Tests for SAR are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the device is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

To avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna should be minimized.

Important safety information regarding radio frequency radiation (RF) exposure:To ensure compliance with RF exposure guidelines the phone must be installed and operated with a minimum of **15 mm** separation from the your body. Failure to observe these instructions could result in your RF exposure exceeding the relevant guideline limits.
