Before powering on for the first time

- Charge the battery with the adapter coming with your Chromebook until the charging indicator turns from red to green.
- Make sure there is a wireless network available for you to connect your Chromebook.

> **Note**: If the only available network is a wired one, you need to acquire separately a USB internet adapter that supports Linux systems.)

Getting started

Step1: Turn on your Chromebook for the first time

Press the power button.

For the first time you power

on your Chromebook, a

dialog will appear as shown below.

chromium

Welcome!

Select your language: English (United States)   ▼

Select your keyboard: US   ▼

Select a network   No Network   ▼

Accessibility   Continue
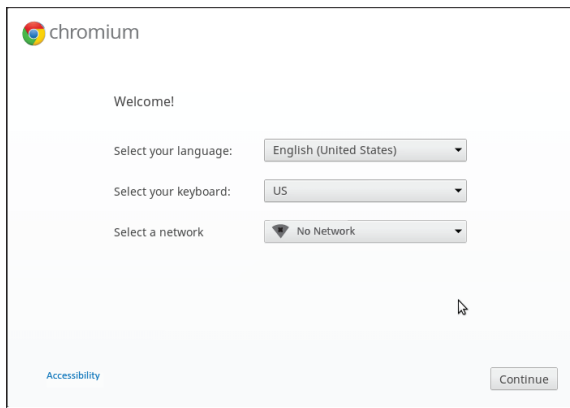

Step.2: Select your language settings

If there is more than one way to type in your language,

you may be prompted to select a keyboard input method

as well.

Step3: Connect to a network

Select a wireless network from the "Select a network"

list to connect to the Internet.

If your selected network is a protected one, you will be

prompted to enter your password to connect to it.

Step 4: Accept the Terms of Service
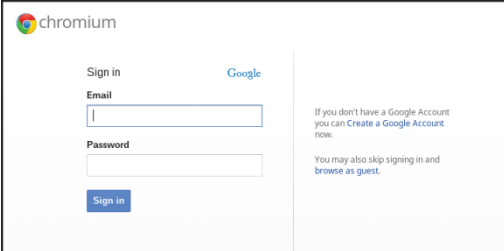

Once connected to a network, accept the Terms of

Service. Your Chromebook will then automatically

download any available system updates to get the latest

Chrome OS features.

Step 5: Create your Google Account

> **Note**: The first account signed in here will be set as the owner account and is the only account that will be allowed to change Chrome settings.

When you reach this step, the dialog shown below will appear on your screen.

If you already have a Google Account, enter your username and password in the sign-in box and click on the Sign-in button.

If you don't have one, click "Create a Google Account" on the right to set up a new account.

Step 6: Set your account picture

You can use the Chromebook's built-in webcam to take a photo of yourself, or just choose an icon instead and change it later.

The desktop will be open as shown below, and you can start using your Chromebook.

Specifications

Processor	• Rockchip RK3288 Cortex-A17 Quad Core
