Set UART

Select SIM1 or SIM2 as per your need.

Restore factory settings

Use this function to restore factory settings. Note: The initial phone lock code is 1122.

FCC Regulations:

◆ This mobile phone has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiated radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference

will not occur in a particular installation If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

◆
◆ -Reorient or relocate the receiving antenna.
◆ -Increase the separation between the equipment and receiver.
◆ -Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
◆ -Consult the dealer or an experienced radio/TV technician for help.
◆ Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

▶RF Exposure Information (SAR)

◆ This mobile phone meets the government's requirements for exposure to radio waves.
◆ This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.
◆
◆ The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR.   The SAR limit set by the FCC is 1.6W/kg.   *Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands.   Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value.   This is because the phone is designed to operate at multiple power levels so as to use only the poser required to reach the network.   In general, the closer you are to a wireless base station antenna, the lower the power output.
◆
◆ The highest SAR value for the model phone as reported to the FCC when tested for use at the ear is

0.869 W/kg and when worn on the body, as described in this user guide, is 0.332 W/kg (Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements.)

◆

◆ While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement.

◆

◆ The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines.   SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: YHLBLUCLICKLITE.

◆

◆ For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines for use with an accessory that contains no metal and the positions the handset a minimum of 1.5 cm from the body.   Use of other accessories may not ensure compliance with FCC RF exposure guidelines.   If you do not use a body-worn accessory and are not holding the phone at the ear, position the handset a minimum of 1.5 cm from your body when the phone is switched on.

◆
