10.1.4 Custom calendar settings

Open calendar， press ,and press “settings”

10.2 Using clock

Clock can display time and date .You can also set alarm clock.

10.2.1 Open clock

press > clock

10.2.2 Open alarm clock

In the clock interface， press ， and then open the alarm clock.

Add alarm clock

1. In the clock interface， press “add alarm”

2. Set alarm information， press “OK”.

Set the alarm clock

1. In the clock interface， Click on the screen to display an alarm event.

2. Click on the time ,set alarm time.

3. Click repetition， select clock repetition time

4. Click ringing and select the clock ringing.

5. Click on the vibration box ,you can set vibration when ringing.

6. Click on the tag ,input clock event name.

7. Press ”OK”

Custom alarm clock settings

In the alarm list， press ， and then press “settings”

10. 3 Use calculator

10.3.1 Open calculator

Press > calculator

10.3.2 Switch to senior panel

Open the calculator，left or right sliding screen，switch between senior panel and the base panel.

10.4 Use notes

1. Press > Notes
2. Press” **+”**
3. Editorial content， press the return key to save.

11. Manage the mobile phone

press >settings， You can set up a detailed on mobile phone.

11.1 Set data and time

※If you use network-provided time ,you will set data、time、time zone.

1. In set interface， press “date and time”.

2. Cancel select “Automatic date and time” and “Automatic time zone”.

3. Press “set date”， and then press or to adjust date， after completion ,click “Set”

4. Press “set time”， and then press or to adjust time， after completion ,click “set”.

5. Press “set time zone”， and then select time zone .Scroll down the list to view more time zone.

6. Cancel or select “Use 24-hour format”， Switch between “24-hour format” and “12-hour format”.

7. Press “Select date format”, Then select the display format in the mobile phone.

11.2 Display settings

11.2.1 Adjust screen brightness

1. In set interface， press “display” > “brightness”.

※To manually adjust screen brightness ,need to cancel “automatic brightness” check box.

2. Left drag to reduce the brightness of the screen .or right drag to increase the brightness of the screen

3. Click “OK “, save settings.

11.2.2 Set screen standby time

You can set the screen standby time.

1. In set interface， press “display” > “sleep”.

2. Click your selection of standby time， complete “set”.

11.3 Sound settings

11.3.1 Open the silent mode

1. In set interface， press “sound”.

2. Select “silent mode”, In addition to the media and alarm clock ,all sounds are mute.

11.3.2 Set volume

You can in the main screen or the majority of the application screen and adjust the volume， For example ,in a call or play music , video , press the volume keys to adjust the volume.

You can also use the following method to adjust the volume.

1. In set interface， press “sound” > “volumes”.

2. Left drag the volume slider to lower the volume, or right drag to increase volume.

3. Click “OK “, save settings.

11.3.3 Change mobile phone ringtones

1. In set interface， Press “sound”> “phone ringtone”

2. Choose the ringtone you need ， When selected will be playing tones.

3. Click “OK”.

11.3.4 Set notification tones

1. On the main screen， press > Messaging.

2. In the message list， press >settings > “default notification”.

3. Choose the ringtone you need ， When selected will be playing tones.

4. Click “OK”.

11.4 Mobile phone service settings

11.4.1 Call settings

You can set up voice mail 、call transfer、call waiting and other function .If you want to know the detailed service information , please contact your internet service provider.

On the main screen， press > “phone”， and then press > “settings”.

11.4.2 Data roaming

1. In set interface， press “More…”> Mobile networks.

2. Select “Data roaming”

※when roaming data service may produce additional cost .Specific roaming charges please consult your network service provider.

11.4.3 Closing data service

1. In set interface， press “more…”> mobile networks.

2. Cancel select “Data enabled”

11.5 Set text to speech

Set text to speech settings, you can configure the Android text-to-speech synthesizer, so that the application can use this function.

11.5.1 Regulate the speed of the voice

1. In the set interface， press “language and input” > “Text-to-speech output”> “speed rate”.

2. Set the text playing speed.

11.6 Security settings

11.6.1 Set up SIM card lock

1. In set interface， press “security” > “set up SIM card lock”

2. Select “Lock SIM card”

3. Use the keyboard to enter the SIM PIN code, and select “OK”.

11.6.2 Set up pattern lock

You can set up pattern lock，When the screen is locked，You need draw pattern to lock screen.

1. In set interface， press “security” > “screen lock” > “pattern”.

2. Draw pattern according the prompt.

3. The next

4. Draw the pattern again，Select “OK”.

11.6.3 Set up PIN lock

You can set up PIN lock to lock your screen.

1. In set interface， press “security” > “screen lock”> PIN.

2. You need enter at least 4 digitals.

3. The next

4. Enter the same digital again, and select ”OK”.

If you want to change PIN, press “security” > “Screen lock” > PIN.

11.7 Manage applications

11.7.1 View installed applications

1. In set interface， Press “Apps” > “ALL”.
2. You can proceed as follows：
   - Press ， press “sort by size”， Then click on an application to view details.
   - click on an application to view details.

11.7.2 Uninstall applications

※You can not uninstall the application that belongs to system .

1. In the set interface， Press “APPS”.
2. Click the applications that you want to uninstall， click “uninstall”， press the screen prompt to complete unloading.

11.7.3 Application shift to SD card

Application program is stored in the mobile phone USB storage device or the SD card (According to the mobile phone models), rather than the internal storage space .Some applications may change storage location.

1. In set interface, press “APPS”.
2. Click on the application list， and then click to the SD card ,the application will remove from the mobile phone’s internal storage space.

On the application of the detailed interface, storage list will show the detail data of the storage space that occupied by the application .If the application can be moved, you can use the button. Click to mobile phone memory, applications can be moved back to the mobile phone internal memory space.

11.7.4 Release the mobile phone memory

- Move file and email attachments to the SD card.
- In the browser, clear all cached page content and browsing m history information.
- Uninstall the applications that will no longer used
- Restore factory settings

11.8 Restore settings

11.8.1 Restore factory settings

Restore factory settings will delete your personal data stored in the mobile phone ,including mail accounts、system settings、your applications settings and installed applications ,but does not remove the system updating . The set includes a check box ,if you tick him ,will delete all stored in the SD card or mobile phone card data .these data may include your download pr backup music or photos.

1. In set interface， press “backup and reset” > “factory data reset”.

11.9 Online upgrade

Your mobile phone has been preset software online upgrade function. When a software update is required, the system will automatically prompt you to upgrade software .You can also press “settings” > “about phone” > Online check for if have new software can be used.

Specific Absorption Rate

Specific Absorption Rate (SAR) is the unit of measurement for the amount of radio frequency energy absorbed by the body when using a device. The SAR value is determined at the highest certified power level in laboratory conditions, but the actual SAR level of the device while being operated can be well below the value. This is because the device is designed to use the minimum power required to reach the network. Before a device model is available for sale to the public, it must be tested and certified by the Federal Communications Commission (FCC), ensuring that it does not exceed the limit established by the government-adopted requirement for safe exposure. The tests are performed in positions and locations (that is, at the ear and worn on the body) as required by the FCC for each model. For body worn operation, this device has been tested and meets FCC RF exposure guidelines when the handset is positioned a minimum of 5 mm from the body with an accessory that contains no metal part. Use of other accessories may not ensure compliance with FCC RF exposure guidelines. The SAR limit adopted by USA and Canada is 1.6

watts/kilogram (W/kg) averaged over one gram of tissue. The highest SAR value reported to the FCC and IC for this device type when tested for use at the ear is 0.566W/kg, and when properly worn on the body is 1.078W/kg. The SAR limit adopted by the CNIRP is 2.0 W/kg over one gram of tissue. The value guarantees a safe distance to protect device users and the difference caused by measurement errors. Under different test requirements and frequency, the value varies. Statement This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. These limits are designed to provide reasonable protection against harmful interference in a residential installation. The operation is subject to the condition that this device does not cause harmful interface. This equipment guarantee, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. There is no guarantee, however, that interference does not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: Reorient or relocate the receiving antenna. Increase the separation between the equipment and receiver. Connect the equipment into an outlet on a circuit

different from that to which the receiver is connected. □ Consult the dealer or an experienced radio/TV technician for help.

Warning: Changes or modifications made to this equipment not expressly approved by manufacturer may void the FCC authorization to operate this equipment.
