1 Get started

1.1 SIM card information

When you subscribe to a cellular network, you receive a plug-in SIM (Subscriber Identity Module) card loaded with your subscription details, such as your PIN, and available optional services.

1.2 Install and charge the phone

- Remove the battery cover and the battery
- If the phone is already on, first turn it off by pressing and holding on/off key.
- Insert the SIM card.
- Make sure that the gold-colored contacts on the card are face down
- Install the battery.
- Replace the battery cover.
- Plug the charger into the phone
- Plug the charger into a standard AC wall outlet.
- When the phone is completely charged (the battery icon becomes still), unplug the charger from the power outlet.

- Remove the charger from the phone.
- Switch the Phone On/Off.
- Enter Your Pin (Access Codes is 1234) if it is necessary.
- Dial the Phone Number Required.

1.3 For Your Safety

Please read these safety guidelines before using your mobile phone to assure the safe and proper use of the phone.

- Switch off the phone when refueling.
- Switch off in an aircraft.
- Keep your phone dry.
- Keep your phone away from small children and pets.

- Do not store the phone in hot areas.
- Do not store the phone in cold areas.
- Do not drop, knock or shake the phone.
- Do not put the phone in or on heating devices, such as a microwave oven, stove or radiator. The phone may explode when overheated.
- If your phone has a flash or light, do not use it too close to the eyes.
- Use only the supplied or an approved replacement antenna.
- Do not attempt to open the phone's casing.
- If the phone or any of its accessories are not working properly, take them to your nearest qualified service center.
- Using the earpieces or stereo headset for extended time can cause a serious damage to your hearing.

- Do not use the phone while charging the phone.
- Extreme heat or cold : Avoid temperatures below -10 °C/14 °F or above 40 °C/104 °F.

1.4 Technical specifications

Phone

Dimensions (W×D×H):102.3×57×11.5

Weight: 80g

Lithium battery

Rated capacity: 800mAh

Continuous standby duration: 150-200H (Relates to network status) 130h

Continuous conversation duration: 2.7H (Relates to network status) 3h

Please refer to their labels for other data related to the battery and the charger.

2 Function Menu

Phone overview

*The picture is for reference only, please make the object by the standard.

2.1 Messages

2.1.1 Write message

Use this menu to create and send a message (SMS or MMS). The SMS/MMS function is dependent on the network service and your network may or may not support the service. Please confirm in writing short message has been properly set before the information centre number.

2.1.2 Inbox

Inbox deposit received all text messaging and MMS.

2.1.3 Drafts

After editing of information, information will select save to draft box location.

2.1.4 Outbox

In sending messages, select save and send when after the failure, and transmit information will be stored in boxes.

2.1.5 Sent messages

In sending messages, select save and send and the news will save to transmit information.

2.1.6 Archive

You can move the message from Inbox to Archive to archive.

2.1.7 Delete messages

You can choose delete inbox, draft, out boxes, already issued information, folders and all the information for the corresponding delete action.

2.1.8 Broadcast message

This network service allows you to receive the broadcast messages on various topics such as weather, traffic, local district code, local hospitals, taxis or pharmacies in your area. For more information about broadcast message topics, please contact your service provider.

2.1.9 Templates

Information list that phrase for the selected edit, delete, template create new short message from template operation.

2.1.10 Message settings

Text message setting

Within the message settings sub-menu, you can define default values on common parameters for mobile-originated messages.

Multimedia Message settings

Within the message settings sub-menu, you can define default values on common parameters for mobile-originated messages.

Service Message

- **Enable push:** According to **Enable** choose **accept all, accept authenticated or trusted, Disable**.

technology; and you may establish wireless connection with compatible PC, in addition to establish communication via the connected compatible Bluetooth earphone.

2.24.4 STK

Press the **left soft key** to enter the “**STK**” main menu. Here you can use the value-added services provided by your network operator.

3 FCC Regulations:

● This mobile phone complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received,

including interference that may cause undesired operation.

● This mobile phone has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
 - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
 - Consult the dealer or an experienced radio/TV technician for help.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

► RF Exposure Information (SAR)

This mobile phone meets the government's requirements for exposure to radio waves.

This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg. *Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer

you are to a wireless base station, the lower the power output.

The highest SAR value for the model phone as reported to the FCC when tested for use at the ear is 0.447 W/kg and when worn on the body, as described in this user guide, is 0.842 W/kg (Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements.)

While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure

guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: YHLBLUDECOXT.

For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines for use with an accessory that contains no metal and the positions the handset a minimum of 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines. If you do not use a body-worn accessory and are not holding the phone at the ear, position the handset a minimum of 1.5 cm from your body when the phone is switched on.
