Release Notes

2011. 3. 24th: Add description for functions:

1. WOL (Wakeup Over LAN) at "Networks" → "LAN";
2. SMS control (reboot/show status) at "Service" → "SMS";
3. "User+X.509" mode for OpenVPN client;

Add Notice:

1. WAN/LAN settings: don't set the WAN/LAN IP as 192.168.3.1 (the default IP of DMZ port);

2011.8.21st: Add description for functions:

1. "Double Dialup", set backup parameters for PPP dialup at "Networks" → "Dialup";
2. "Double IPSec", set backup IPSec tunnel at "VPN" → "IPSec Tunnels";
3. "DHCP Relay" at "Service" → "DHCP Relay";
4. "DNS Relay" at "Service" → "DNS Relay";
5. Enable "SSH configuration";
6. Disable "Multi Manager" function at "System" → "Admin Access";
7. "Loopback" at "Networks" → "Loopback";
8. "Port Mirror" at "Networks" → "Port Mirror";

Introduction to InRouter 700 Series

- ◆ Overview
- ◆ Product Models
- ◆ Product Features & Specifications
- ◆ Package Checklist

1.1 Overview

InRouter 700 series industrial grade routers provide users with stable and high speed connection between remote devices and customer's center via 2.5G/3G networks. They allow wide voltage power supply (9-48V DC), large range operating temperature from -25°C to 55°C (-10 ~ 131°F)/ humidity: 95% RH, and fully satisfy various EMC verifications, which ensure stability and reliability under harsh industrial conditions. The InRouter 700 can be placed on a desktop or DIN-mounted.

InRouter 700 series products support VPN (IPSec/PPTP/ L2TP/GRE/SSL VPN), which create high-security links between remote equipment and customer's center.

In Addition, InRouter 700 series products support the Device Manager remote device manage platform, which realizes remote operation including remote control, remote monitor, parameters configure, firmware upgrade, log/alarm management, information statistics/display, batch configuration/update and etc.

Important Safety Information

This product is not intended for use in the following circumstances

- Area(s) where radio transmission equipment (such as cell phone) are not permitted.
- Hospitals, health care facilities and area(s) where cell phones are restricted by law.
- Gas stations, fuel storage and places where chemical are stored.
- Chemical plants or places with potential explosion hazard.
- Any metal surface that may weaken the radio signal level.

RF safety distance

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

(c) The provisions of paragraphs (a) and (b) do not apply to digital devices exempted from the technical standards under the provisions of Section 15.103.

(d) For systems incorporating several digital devices, the statement shown in paragraph (a) or (b) needs to be contained only in the instruction manual for the main control unit.

(e) In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form. RF exposure warning This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provide with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance

Warning

This is a class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

WEEE Notice

The Directive on Waste Electrical and Electronic Equipment (WEEE), which entered into force as European law on 13th February 2003, resulted in a major change in the treatment of electrical equipment at end-of-life.

The purpose of this Directive is, as a first priority, the prevention of WEEE, and in addition, to promote the reuse, recycling and other forms of recovery of such wastes so as to reduce disposal.

The WEEE logo (shown at the left) on the product or on its box indicates that this product must not be disposed of or dumped with your other household waste. You are liable to dispose of all your electronic or electrical waste equipment by relocating over to the specified collection point for recycling of such hazardous waste. Isolated collection and proper recovery of your electronic and electrical waste equipment at the time of disposal will allow us to help conserving natural resources. Moreover, proper recycling of the electronic and electrical waste equipment will ensure safety of human health and environment.

For more information about electronic and electrical waste equipment disposal, recovery, and collection points, please contact your local city centre, household waste disposal service, shop from where you purchased the equipment, or manufacturer of the equipment.

1.2 Package Checklist

We put each InRouter 700 cellular router in a box with standard accessories. Additionally, there're optional accessories can be ordered. When you receive our package, please check carefully, and if there're items missing or appearing to be damaged, please contact with your InHand Networks sales representative.

Items in package include:

Standard Accessories:

Accessories	Description
InRouter 700 Serials Wireless Router	1
Cable	1 Cross line,CAT-5,1.5M
Document and Software CD	1
Antenna	5m Cellular Antenna
Power Supply	
	Power Adapter, 100-265V AC in, 12V DC out (included in IR7xx)

	Power plug, American Standard (included in IR7xx)
---	--

Optional Antennas:

Picture	Type	Description
	GSM/GPRS Cellular Antennas	HSUPA /HSDPA/WCDMA: 850/900/1800/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900MHz
	UMTS/HSDPA/WCDMA Cellular Antennas	HSUPA /HSDPA/WCDMA: 850/900/1800/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900MHz
	Anti-thief antenna	HSUPA /HSDPA/WCDMA: 850/900/1800/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900MHz
	Stick antenna	HSUPA /HSDPA/WCDMA: 850/900/1800/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900MHz

1.3 Product Features

1.3.1 Interfaces

WAN

Cellular WAN:

Band Options:

HSUPA /HSDPA/WCDMA

850/900/1900/2100MHz

GSM/GPRS/EDGE

850/900/1800/1900MHz

Ethernet WAN:

Ethernet: 10/100 Mbps, RJ45 connector, Auto MDI/MDIX

Magnetic Isolation Protection: 1.5 KV built-in

LAN

IR701/711/791:

Number of Ports: 1

Ethernet: 10/100 Mbps, RJ45 connector, Auto MDI/MDIX

Magnetic Isolation Protection: 1.5 KV built-in

IR704/714/794:

Number of Ports: 4

Ethernet: 10/100 Mbps, RJ45 connector, auto MDI/MDIX

Magnetic Isolation Protection: 1.5 KV built-in

Serial

A. Serial Type: RS232/485

B. Data bit: 5/6/7/8

C. Stop bit: 1/2

D. Check bit: N/O/D

E. Baud rate: 1,200bit/s~ 115,200bit/s

SIM Interface

SIM Control: 3 V

1.3.2 Functions

PPP

Supported VPDN/APN, fast access to virtual private dial-up network (VPDN) provided by mobile operator, ensure high-security data transmission.

Support PPPoE (Point to Point Protocol over Ethernet) Protocol.

Support CHAP/PAP/MS-CHAP/MS-CHAP V2 authorization

Support Connection Detection, auto-recovery, auto-link, ensure reliable communication.

Support On-demand connection, SMS Activity

Dynamic IP

Support DHCP, applied as Server/Client

Dynamic DNS

Support Dynamic DNS-IP Binding

Flux Management

Support rate limiting,

Firewall Function

Package filtering

Port Mapping

Virtual Address Mapping

DMZ zone

MAC addresses binding.

Route function

Support Static Routing Table

VPN (not available for IR701/704)

IPSec VPN

L2TP VPN

PPTP VPN

GRE

SSL VPN (for IR791/794 only)

Link Backup**VRRP**

Support VRRP protocols, realizing immediate link backup

Hot Link Backup (for IR704/714/794 only)

Support Wireless Hot Link Backup for cable link via only one device

DNS Forwarding

Support DNS Forwarding, support DNS record

Network tools

Support Ping, Trace Route and Telnet

Wakeup Over LAN (WOL)

Support Wakeup over LAN, to wakeup industrial PC over Eth. after receives SMS.

RSSI + Cell ID Display

1.3.3 Environmental Limits

Operating Temperature: -25 to 55°C (-10 to 158°F)

Operating Humidity: 5 to 95% RH

Storage Temperature: -40 to 85°C (-40 to 167°F)

1.3.4 Power Requirements

Power Inputs: 1 terminal block, including power jack and serial.

Input Voltage: 9 -48 VDC

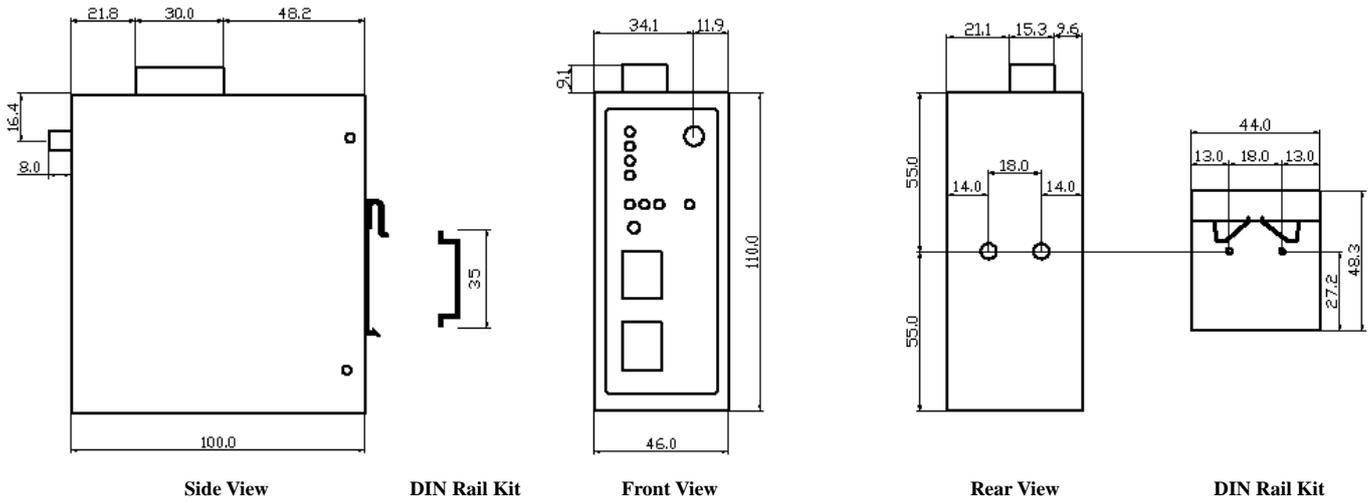

1.3.5 Physical Characteristics

Housing: Steel, providing IP30 protection

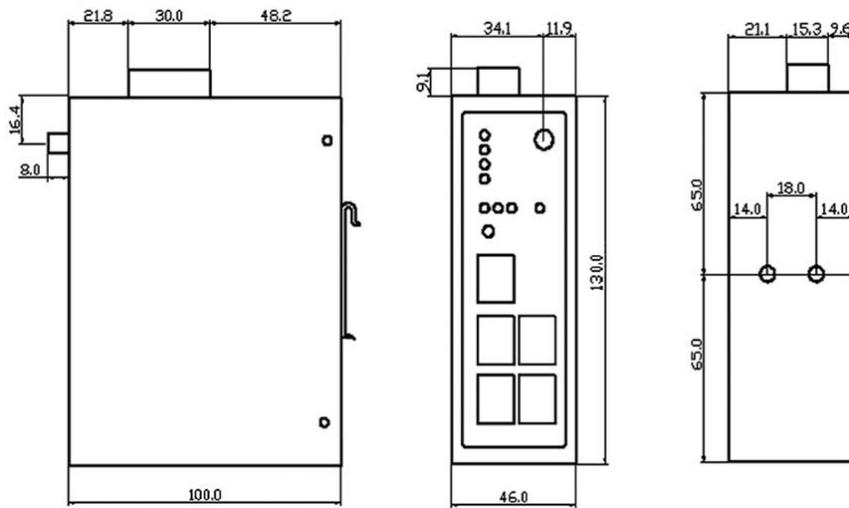

Weight: 490g

Dimensions (mm)

IR701/711/791:

IR704/714/794:

RF Electromagnetic Field Immunity: EN61000-4-3, Level 3

RF conducted interference: EN61000-4-6, Level 3

Damped oscillation Immunity: EN61000-4-12, Level 3

Power-frequency electromagnetic fields Immunity: EN61000-4-8, Level 5

Anti-shock: IEC60068-2-27

Drop: IEC60068-2-32

Vibration: IEC60068-2-6

1.3.7 Device Management Software

Device Manager:

Centralized management solution for InHand Networks Devices

1.3.8 Warranty

Warranty Period: 3 year (Optional service for 5 years)

1.4 Product Models

The current models of InRouter 700 Series include: InRouter 701/711/791GS55, InRouter 701/711/791WH01, InRouter 704/714/794WH01.

The models are classified according to main difference including cellular network, VPN support and interface for device.

Model	Serial	LAN	Cellular WAN	Ethernet WAN	VPN	CA X.509 base64
GPRS Models						
IR701GS55	RS232/485 Optional	1 RJ45	GSM/GPRS 850/ 900/1800/1900 MHz	N/A	N/A	N/A
IR711GS55		1 RJ45		N/A	IPSec/PPTP/L2TP/GRE	N/A
IR791GS55		1 RJ45		N/A	IPSec/PPTP/L2TP/GRE/SSL	Support
IR704GS55		1 RJ45		ADSL/DHCP/ PPPoE/Static IP	N/A	N/A

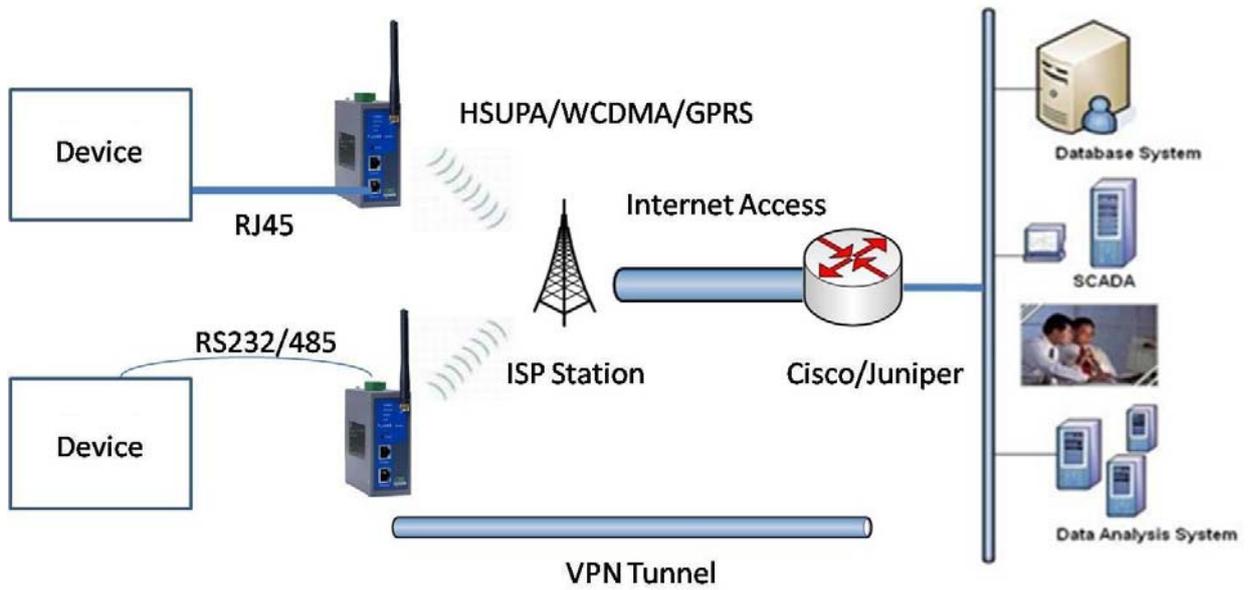

IR714GS55		1 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE	N/A
IR794GS55		1 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE/SSL	Support
UMTS Models						
IR701WH01		1 RJ45		N/A	N/A	N/A
IR711WH01	RS232/485	1 RJ45	HSUPA /HSDPA/WCDMA: 850/900/1800/1900/2100 MHz	N/A	IPSec/PPTP/L2TP/GRE	N/A
IR791WH01	Optional	1 RJ45	GSM/GPRS/EDGE: , 850/900/1800/1900MHz	N/A	IPSec/PPTP/L2TP/GRE/SSL	Support
IR704WH01		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	N/A	N/A
IR714WH01		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE	N/A
IR794WH01		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE/SSL	Support
EVDO 450MHz Models						
IR701VC80		1 RJ45		N/A	N/A	N/A
IR711VC80	RS232/485	1 RJ45		N/A	IPSec/PPTP/L2TP/GRE	N/A
IR791VC80	Optional	1 RJ45	EVDO 450MHz Rev.A CDMA 450MHz	N/A	IPSec/PPTP/L2TP/GRE/SSL	Support
IR704VC80		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	N/A	N/A
IR714VC80		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE	N/A
IR794VC80		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE/SSL	Support
USB Models						
IR701UE		1 RJ45		N/A	N/A	N/A
IR711UE	RS232/485	1 RJ45		N/A	IPSec/PPTP/L2TP/GRE	N/A
IR791UE	Optional	1 RJ45	USB Modem	N/A	IPSec/PPTP/L2TP/GRE/SSL	Support
IR704UE		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	N/A	N/A
IR714UE		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE	N/A
IR794UE		4 RJ45		ADSL/DHCP/ PPPoE/Static IP	IPSec/PPTP/L2TP/GRE/SSL	Support

II

Quick Installation Guide

- ◆ Typical Application
- ◆ Panel Layout
- ◆ Quick Connect to Internet
- ◆ Quick IPSec VPN Configuration
- ◆ Reset to Factory Defaults

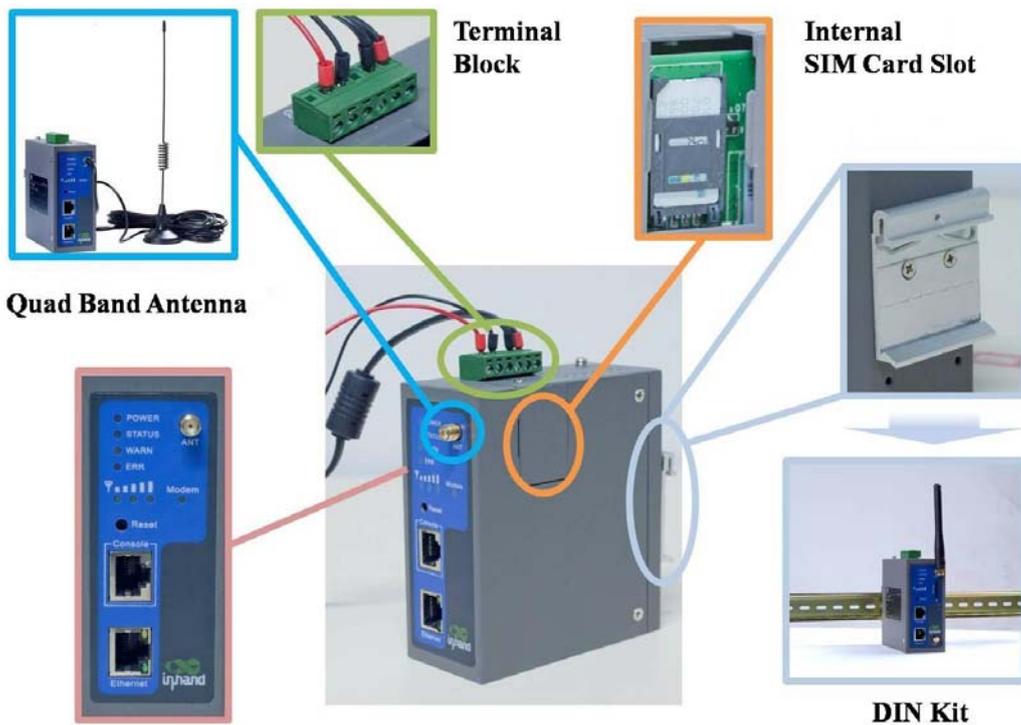

2.1 Typical Application

InRouter 700 series can be used to connect your device (with RS232/485/Ethernet Interface) to internet via GPRS/HSUPA cellular. Meanwhile, to ensure the security and access, InRouter 700 series support VPN, enabling remote access and secure data transmission through internet.

2.2 Panel Layout

IR701/711/791:

IR704/714/794:

Interface	Description
Power Interface	Access 9-48 V DC Power Supply
Serial	Access to the serial line, realizing
Ethernet Ports	One 10/100Base-TX RJ45 Port (IR701/711/791GS55, IR701/711/791WH01, IR701/711/791UE) Four 10/100Base-TX RJ45 Ports, (IR704/714/794UE, IR704/714/794WH01)
ANTENNA	2.5G/3G antenna
SIM Card Connector	Put SIM card

Description of LED

Legend: On--● Off--○ Blink--⚡

Power on

Start to run firmware

Begin dial to Internet

Connect to internet

Upgrading firmware

Restore factory default

Signal Status LED Description

● ○ ○ ----- Signal: 1-9 (bad signal level, route cannot work, please check the antenna and local signal level)

● ● ○ ----- Signal: 10-19 (Router work normally under this signal level)

● ● ● ----- Signal: 20-31 (Perfect signal level)

2.3 Quick Connection to Internet

2.3.1 Insert SIM Card

Open InRouter SIM/UIM card case at the button, insert the SIM card and close the case.

For the external USB modem type, insert the USB card into the USB port.

2.3.2 Antenna Installation

After install the IR7X1GS55, connect the interface of enhanced antenna and the interface of skin antenna and screw closely. Put the amplifier of enhanced antenna to where there receives good signal. Max allowed antenna gain is 0.5dBi.

Attention: The position and angle may influence the quality of signal.

2.3.3 Power Supply

Link the power supply in the product package with InRouter, watch where the InRouter Power LED on the panel is light up. If not, please connect with InHand for technical supports.

You can configure IR7X1GS55 after the Power LED lights up.

2.3.4 Connect

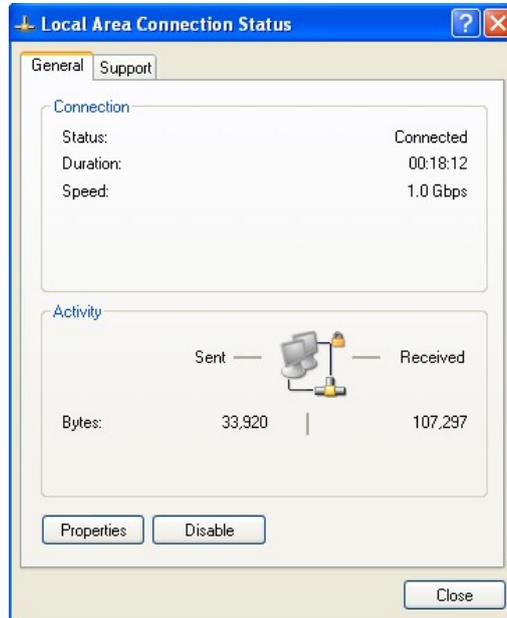

Link the IR7X1GS55 with PC:

- (1) Using the cable to link IR7X1GS55 with PC;
- (2) After the connection, you can see one LED of RJ45 Interface turns green and the other flashes.

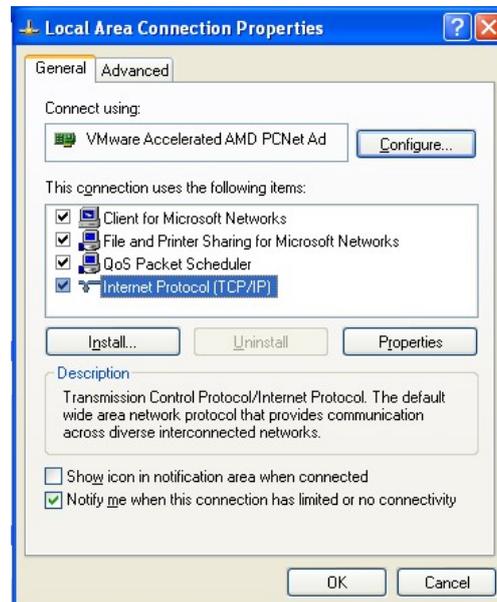

2.3.5 First Connect InRouter with Your PC

IR7X1GS55 Router can auto-distribute IP address for PC. Please set the PC to automatically obtain IP address via DHCP. (Based on the Windows operation system):

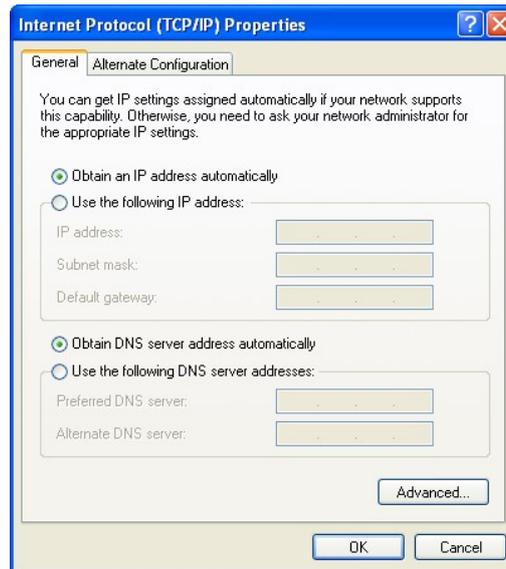

- 1) Open "Control Panel", double click "Network Connections" icon, and enter "Network Connections" Screen.
- 2) Double click "Local Area Connection", enter "Local Area Connection Status" screen:

- 3) Click "Properties", enter "Local Area Connection Properties" screen

Choose "Internet Protocol (TCP/IP)", click "properties" button, ensure your PC can obtain IP and DNS address automatically. (Or you can set your PC in the subnet: 192.168.2.0/24, for example, set IP: 192.168.2.10, Net Mask: 255.255.255.0, Default Gateway: 192.168.2.1)

Click “OK”, InRouter will allocate an IP address: 192.168.2.X, and a gateway: 192.168.2.1 (the default address of IR7X1GS55).

After configuring TCP/IP protocols, you can use the ping command to check whether the link between PC and Router is built correctly. There is an example to execute the Ping command under Windows XP as below:

Ping 192.168.2.1

If the screen shows:

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\inhand>ping 192.168.2.1

Pinging 192.168.2.1 with 32 bytes of data:

Reply from 192.168.2.1: bytes=32 time=1ms TTL=128
Reply from 192.168.2.1: bytes=32 time=1ms TTL=128
Reply from 192.168.2.1: bytes=32 time=1ms TTL=128
Reply from 192.168.2.1: bytes=32 time<1ms TTL=128

Ping statistics for 192.168.2.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 1ms, Average = 0ms

C:\Documents and Settings\inhand>ping 192.168.2.1
```

Then the link between the PC and Router is correctly connected. Else if it shows:

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings\inhand>ping 192.168.2.1

Pinging 192.168.2.1 with 32 bytes of data:

Request timed out.
Request timed out.
Request timed out.
Request timed out.

Ping statistics for 192.168.2.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

C:\Documents and Settings\inhand>
```

Then the connection seems not to build, and you need to check thoroughly following the former instructions.

2.3.6 Start to configure your InRouter 700(Optional)

After you have finished the former steps, you can configure the Router:

- 1) Open IE browser, input the default IP address of the Router: <http://192.168.2.1>, you can see the login web below:

Router Login

Username

Password

Input "username" (default: adm) and the "password" (default: 123456), and then click "login" to enter the operation screen.

- 2) Change the IP configuration:

Attention: After configuration, please click "apply" to activate your configuration.

If you want to set your own IP of InRouter 700, please follow the instructions below:

System	Network	Services	Firewall	QoS	VPN	Tools	Status
System Status							
Name	Router						
Model	IR711VZ30						
Serial Number	RZ7110911116349						
Description	www.inhand.com.cn						
Current Version	1.3.0.r1729(test)						
Current Bootloader Version	1.1.6.r1572						
Router Time	2010-04-06 16:47:16						
PC Time	2010-04-06 16:47:59 <input type="button" value="Sync Time"/>						
Up time	0 day, 00:03:10						
CPU Load (1 / 5 / 15 mins)	0.01 / 0.00 / 0.00						
Memory consumption Total/Free	13.35MB / 3,860.00KB (28.24%)						
							3 Seconds <input type="button" value="Stop"/>

Click "Network"=>"LAN", change the IP address to 192.168.1.254:

System	Network	Services	Firewall	QoS
MAC Address	<input type="text" value="00:18:05:00:45:C6"/> <input type="button" value="Default"/>			
IP Address	<input type="text" value="192.168.1.254"/>			
Netmask	<input type="text" value="255.255.255.0"/>			
MTU	Default <input type="text" value="1500"/>			
Detection host	<input type="text" value="0.0.0.0"/>			
LAN Mode	Auto Negotiation <input type="text"/>			

- 3) Click "Apply", then you will see:

Now the IP address of IR7X1GS55 has been reset, and in order to enter the configuration web, you need set your PC in the same subnet, for example: 192.168.1.10/24 then input the changed IP address (192.168.1.254) in your IE Browser.

2.3.7 Connect InRouter with Internet

Following the configuration steps below to enable IR7X1GS55 to connect with the internet.
Click “Network”=>“Dialup”, enter dialup configuration web:

InHand Networks

System Network Services Firewall QoS VPN Tools Status

Dialup

Enable

Time schedule ALL

Shared Connection(NAT)

Network Provider (ISP) Custom

APN uninet

Access Number *99**1#

Username gprs

Password ****

Primary Profile Retries 0 (0: always)

Network Select Type Auto

Band ALL

Static IP

Connection Mode Always Online

Redial Interval 30 Seconds

Show Advanced Options

Apply Cancel

Please check the APN, Dialup Number, Username and Password:

Dialup Number, Username and Password are provided by local mobile operator. You can contact them for more details.

The following example shows parameters provided by China Mobile, Vodafone and Cingular. Please contact with local operator for details.

1: China Mobile

APN: CMNET

Phone Number: *99#

User Name: [web](#)

Password: web

2: Vodafone

APN: internet

Phone Number: *99#

User Name: [web](#)

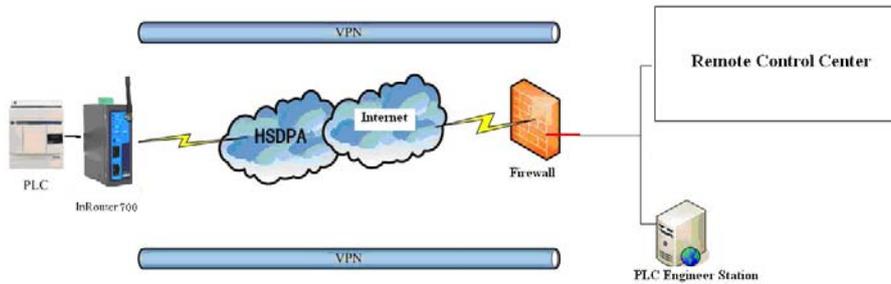

Password: web

After correct configuration, InRouter 700 can now connect with Internet. Open IE Browser, input www.google.com, you can see the Google web as below:

2.4 Quick IPsec VPN Configuration

If you need to build a VPN tunnel to realize access to your PLC far away through internet or you need ensure the security by using VPN. Here's a quick configuration guide of IPsec for InRouter 700 Series.

Connect PC with Router to enter router configuration web, select “VPN” => “IPsec setting”:

System	Network	Services	Firewall	QoS	VPN
--------	---------	----------	----------	-----	-----

IPsec Settings

Enable NAT-Traversal (NATT)

Keep alive time interval of NATT Seconds

Enable Compression

Debug

Force NATT

Enable NAT-Traversal (NATT): select enable.

Keep alive time interval of NATT: set the “Keep alive time interval of NATT”, default is 60 seconds.

Enable Compression: select enable.

Please change the parameters according to concrete situation.

Click “Apply” to finish configuration.

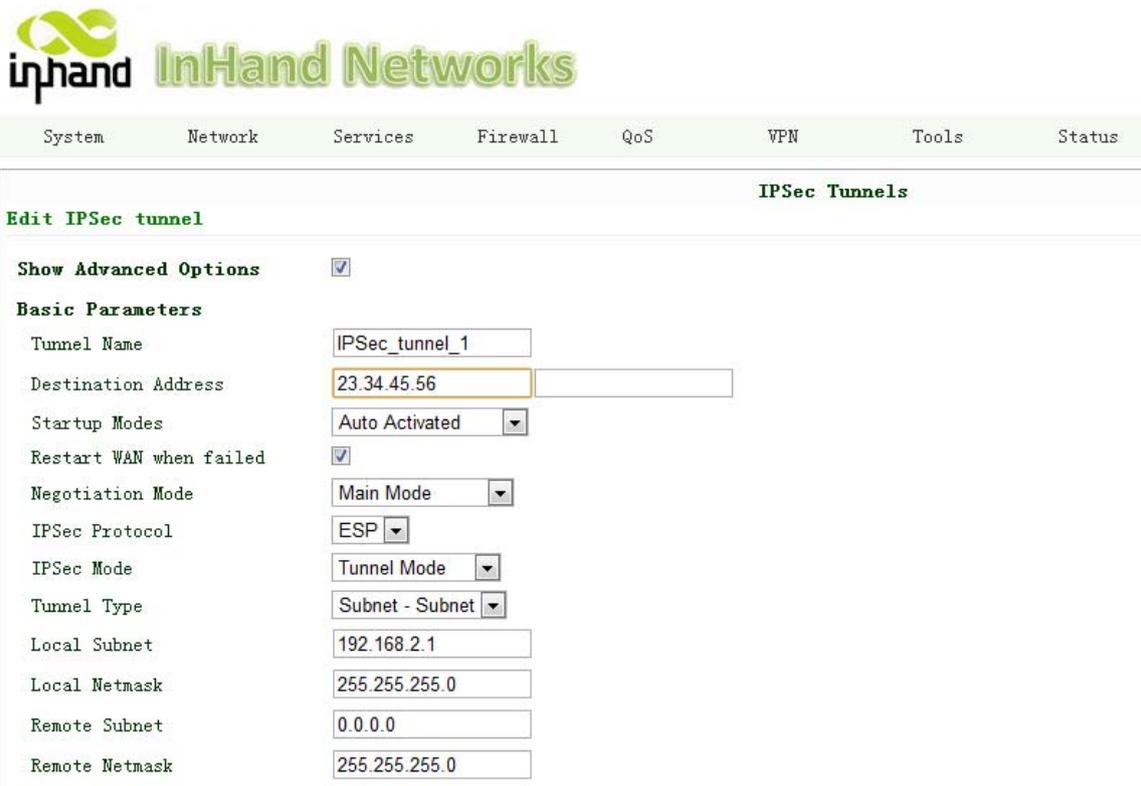

1) Select “VPN”=> “IPsec Tunnels” to check or modify parameters of IPsec Tunnels.

System	Network	Services	Firewall	QoS	VPN	Tools	Status
--------	---------	----------	----------	-----	-----	-------	--------

IPsec Tunnels

Name	Tunnel Description	Phase 1 Parameters	Phase 2 Parameters	Link Detection Parameters
<input type="button" value="Add"/>	<input type="button" value="Show Detail Status"/>			

Click "Add" to add a new IPsec Tunnel:

Edit IPsec tunnel

Show Advanced Options

Basic Parameters

Tunnel Name: IPSec_tunnel_1

Destination Address: 23.34.45.56

Startup Modes: Auto Activated

Restart WAN when failed:

Negotiation Mode: Main Mode

IPsec Protocol: ESP

IPsec Mode: Tunnel Mode

Tunnel Type: Subnet - Subnet

Local Subnet: 192.168.2.1

Local Netmask: 255.255.255.0

Remote Subnet: 0.0.0.0

Remote Netmask: 255.255.255.0

Basic Parameters: set basic parameters of IPsec tunnel.

Tunnel Name: name IPsec tunnel, the default is IPSec_tunnel_1.

Destination Address: set to VPN server IP/domain, e.g.: the domain provided by GJJ is gjj-ovdp.3322.org.

Startup Modes: select Auto Activated.

Negotiation Mode: optional between Main Mode and Aggressive Mode. Generally, select Main Mode.

IPsec Protocols: optional among ESP, AH. Generally, select ESP.

IPsec Mode: optional between Tunnel Mode and Transport Mode. Generally, select Tunnel Mode.

Tunnel Type: optional among Host-Host, Host-Subnet, Subnet-Host and Subnet-Subnet.

Local Subnet: IPsec local subnet protected. E.g.: 172.16.16.0.

Local Net Mask: IPsec local Net Mask protected. E.g.: 255.255.255.252.

Remote Subnet: IPsec remote subnet protected. E.g.: 172.16.0.0.

Remote Net Mask: IPsec remote Net Mask protected. E.g.: 255.240.0.0.

Phase 1 Parameters: configure parameters during the Phase 1 of IPsec negotiation.

IKE Policy: optional between 3DES-MD5-96 and AES-MD5-96, suggest selecting 3DES-MD5-96.

IKE Lifetime: the default is 86400 seconds.

Local ID Type: optional among FQDN, USERFQDN, IP address, suggest selecting IP address.

Remote ID Type: optional among FQDN, USERFQDN, IP address, suggest selecting IP address.

Authentication Type: optional between Shared Key and Certificate, generally choose Shared Key.

Key: set IPsec VPN negotiating key.

Phase 2 Parameters: configure parameters during the Phase 2 of IPsec negotiation.

IPsec Policy: optional between 3DES-MD5-96 and AES-MD5-96, suggest selecting 3DES-MD5-96.

IPsec Lifetime: the default is 3600 seconds.

Perfect Forward Encryption: Optional among None, GROUP1, GROUP2 and GROUP5. This parameter should match with the server, generally, select "None".

Click "Save" to finish adding IPsec Tunnel:

IPSec Tunnels					
Name	Tunnel Description	Phase 1 Parameters	Phase 2 Parameters	Link Detection Parameters	
IPSec_tunnel_1	192.168.2.1/255.255.255.0===router...0.0.0.0===0.0.0/255.255.255.0 ESP, Tunnel Mode, Main Mode, Auto Activated	Authentication Type: Shared Key Policy: 3des-md5-modp1024 Lifetime: 86400Seconds Disabled Perfect Forward Secrecy(PFS)	Policy: 3des-md5-96 Lifetime: 3600Seconds	Enable DPD, Interval: 60Seconds, Timeout: 180Seconds Disabled ICMP Detection	
<input type="button" value="Add"/> <input type="button" value="Show Detail Status"/>					

5 Seconds

You can click “Show Detail Status” to observe the specific connection details, or click “Add” to add a new tunnel. Now you succeed to build a high-security IPSec tunnel, here’s an example:

We set an IPSec Tunnel from subnet: 192.168.220.0/24 to subnet: 192.168.123.0/24, when it succeeds, the web will show:

IPSec Tunnels					
Name	Tunnel Description	Phase 1 Parameters	Phase 2 Parameters	Link Detection Parameters	
IPSec_tunnel_1	192.168.220.0/255.255.255.0===router...===192.168.123.0/255.255.255.0 ESP, Tunnel Mode, Aggressive Mode, Auto Activated 500 STATE_QUICK_I2 (sent QID, IPsec SA established): EVENT_SA_REPLACE in 2494s; newest IPSEC: eroute owner: isalmp#1; idle: import.admin initiate esp: f37d11b0... esp: dc8a9687010.5.1.40 tun.0010.5.1.40 refid: refid=0294901751 500 STATE_AOPR_I2 (sent AID, ISAKMP SA established): EVENT_SA_REPLACE in 85293s; newest ISAKMP: lastdpd=60s(seq in:19415 out:0); idle: import.admin initiate	Authentication Type: Shared Key Policy: 3des-md5-modp1024 Lifetime: 86400Seconds Enable Perfect Forward Secrecy(PFS): Group 1	Policy: 3des-md5-96 Lifetime: 3600Seconds	Enable DPD, Interval: 60Seconds, Timeout: 180Seconds Disabled ICMP Detection	
<input type="button" value="Add"/> <input type="button" value="Show Detail Status"/>					

And the PC in IPSec client subnet can get access to the server’s subnet. Open command in your PC, then ping a PC in the server’s subnet:

```
C:\Documents and Settings\Jason Hu>ping 192.168.123.250

Pinging 192.168.123.250 with 32 bytes of data:

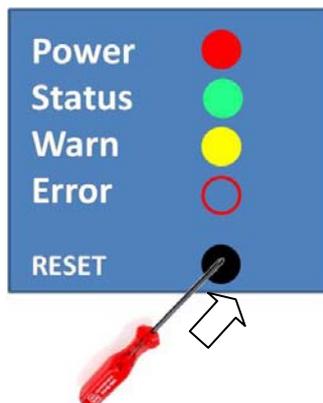

Reply from 192.168.123.250: bytes=32 time=428ms TTL=63
Reply from 192.168.123.250: bytes=32 time=395ms TTL=63
Reply from 192.168.123.250: bytes=32 time=397ms TTL=63
Reply from 192.168.123.250: bytes=32 time=393ms TTL=63
```

2.5 Reset to Factory Defaults

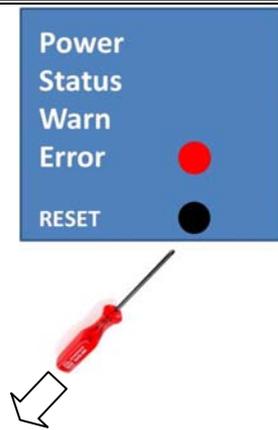

2.5.1 Hardware Method

Legend: On--● Off--○ Blink--⚡

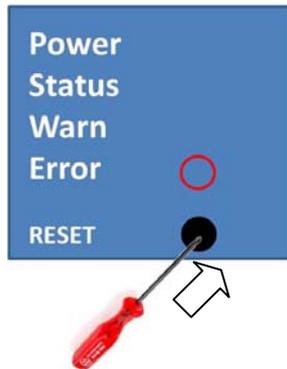

1) Push RESET button while powering on IR7X1GS55:

2) When you see ERROR LED turns on (about 10 seconds after powering on), stop push RESET button:

3) After a few seconds, the ERROR LED then turns off, now push RESET button again:

4) Then you will see ERROR and STATUS blinking, which means reset to factory defaults successfully!

Factory default settings:

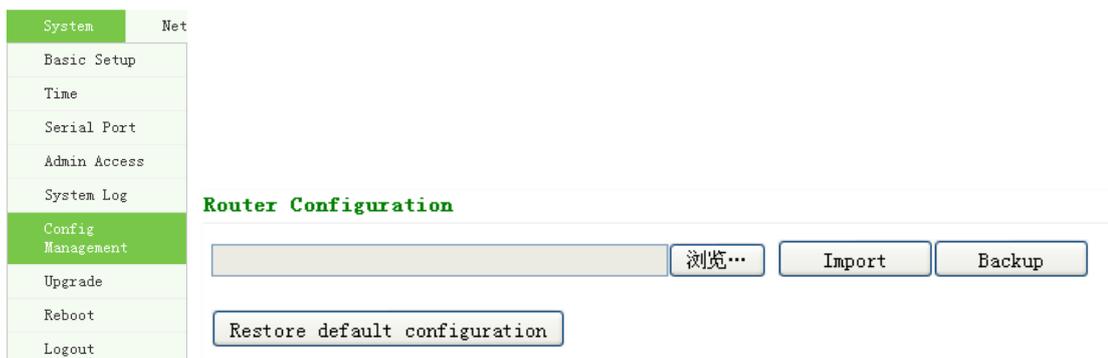

IP: 192.168.2.1

Net Mask: 255.255.255.0

Serial parameter: 19200-8-N-1

2.5.2 Web Method

1) Login the web interface of IR7X1GS55, select “System”→”Config Management”:

2) Click “Restore default configuration” to Reset IR7X1GS55.

III

Advanced Configuration

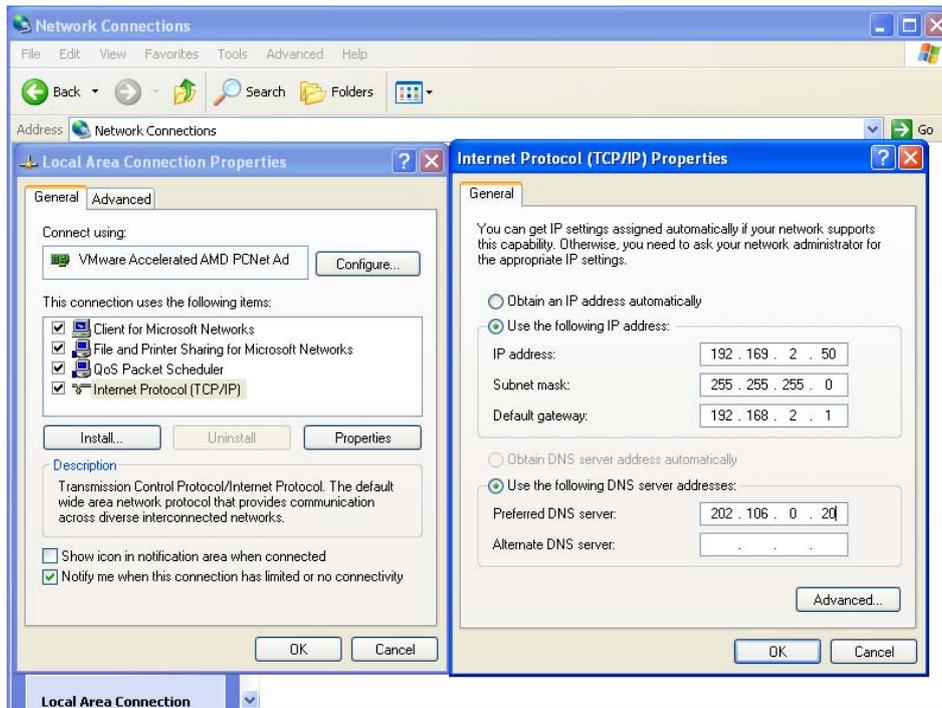

- ◆ Configuration on Web

3.1 Configuration on Web

InRouter must be correctly configured before use. This Chapter will show you how to configure via Web.

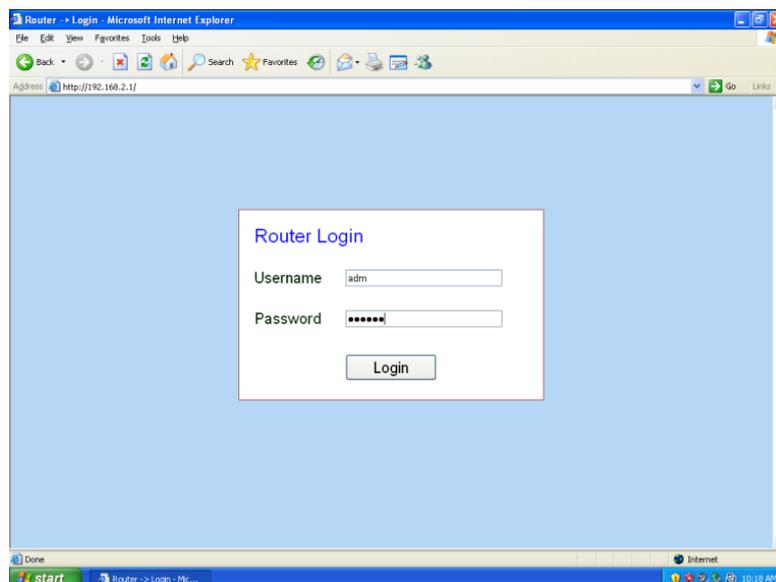

3.1.1 Preparation

Firstly, connect your devices with IR7X1GS55 by cable or HUB (switch), then set the IP of PC and IR7X1GS55 in the same subnet, for example: Set PC IP to 192.168.2.50, net mask: 255.255.255.0, gateway (default IP of IR7X1GS55: 192.168.2.1):

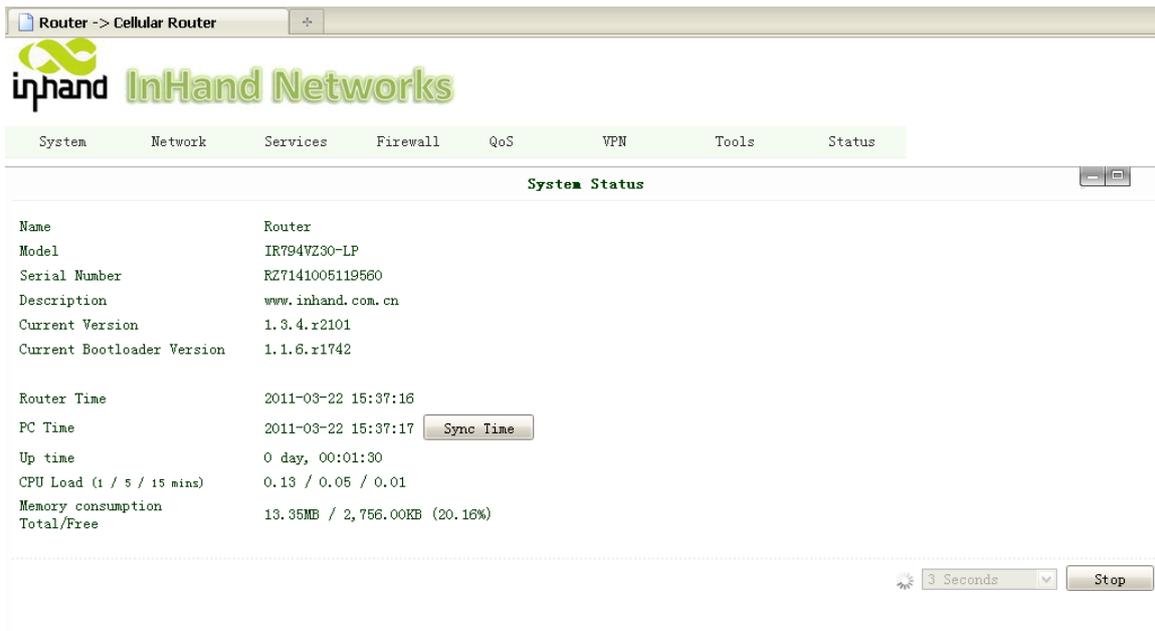

Open IE browser, input the IP address of IR7X1GS55: <http://192.168.2.1> (default IP of IR7X1GS55).

Then you'll see the Login Web below, you need to login as Administrator. Input the username and password (default: adm/123456).

Click "Login" to enter configure web:

3.1.2 System

System settings include the 9 settings: Basic Setup, Time, Serial Port, Admin Access, System Log, Config Management, Update, Reboot and Logout.

(1) Basic Setup

Parameters Name	Description	Default	Example
Language	Choose language of configuration web	Chinese	English
Router Name	Set name of InRouter	Router	My InRouter
Host Name	Name the device/PC linked with IR7X1GS55	Router	My InRouter

(2) Time

System Network Services Firewall QoS VPN Tools Status

Time

Router Time 2010-04-12 10:55:23

PC Time 2010-04-12 10:55:22

Timezone Custom

Custom TZ String CST-8

Auto Update Time On startup

NTP Time Servers 114.80.81.1
pool.ntp.org

Name	Description	Default
Router Time	Display router time	1970-1-1 8:00:00
PC Time	Display PC time (or the time of device linked with router)	
Time Zone	Set time zone	Custom
Custom TZ string	Set the string of time zone of Router	CST-8
Auto Update Time	Time Update Interval	Disabled
NTP Time Servers (after enable the Auto Update Time)	Setting for NTP Time server. (Three at the most)	pool.ntp.org

(3) Serial Port

System Network Services Firewall QoS VPN Tools Status

Serial Port

Baudrate 19200

Data Bits 8

Parity None

Stop Bit 1

Hardware Flow Control

Software Flow Control

Name	Description	Default
Baud Rate	Serial baud rate	19200
Data Bit	Serial data bits	8
Parity	Set parity bit of serial data.	None
Stop Bit	Set stop bit of serial data.	1
Hardware Flow Control	Enable Hardware Flow Control	Disable
Software Flow Control	Enable Software Flow Control	Disable

(4) Admin Access

Admin Access

Username / Password

Username

Old Password

New Password

Confirm New Password

Management

Enable	Service Type	Service Port	Local access	Remote access	Allowed addresses from WAN (Optional)	Description
<input checked="" type="checkbox"/>	HTTP	<input type="text" value="80"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text"/>	
<input type="checkbox"/>	HTTPS	<input type="text" value="443"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text"/>	
<input checked="" type="checkbox"/>	TELNET	<input type="text" value="23"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text"/>	
<input type="checkbox"/>	SSHD	<input type="text" value="22"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text"/>	
<input checked="" type="checkbox"/>	Console					

Non-privileged users

Username	Password
<input type="text"/>	<input type="text"/>

Name	Description	Default
Username/Password		
Username	Username for configuration web login	adm
Old Password	To change the password, you need to input the old one	123456
New Password	Input new password	
Confirm New Password	Input the new password again	
Management		
HTTP/HTTPS/TELNET/SSHD/Console		
Enable	Select to enable	Enable
Service Type	HTTP/HTTPS/TELNET/SSHD/Console	80/443/23/22/Blank
Local Access	Enable—allow manage Router by LAN(e.g.: HTTP) Disable—forbid manage Router by LAN.	Enable
Remote Access	Enable—allow to manage IR7X1GS55 by WAN. (e.g.: HTTP) Disable—forbid to manage IR7X1GS55 by WAN. (e.g.: HTTP)	Enable
Allowed Access from WAN (Optional)	Set the range of allowed IP address for WAN (HTTP/HTTPS/TELNET/SSHD)	Control services server can be set at this time, for example 192.168.2.1/30 or 192.168.2.1-192.168.2.10
Description	Describe the parameters of management (non-influence to IR7X1GS55)	
Other Parameters		
Log Timeout	Set the Log Timeout, configuration web will be disconnected after timeout	500 seconds

(5) System Log

System	Network	Services	Firewall	QoS	VPN	Tools	Status
--------	---------	----------	----------	-----	-----	-------	--------

System Log

Log to Remote System

IP Address / Port(UDP)

Name	Description	Default
Log to Remote System	Enable remote log server	Disable
IP address/Port (UDP)	Set the IP and Port of remote log server	Port: 514

(6) Config Management

System	Network	Services	Firewall	QoS	VPN	Tools	Status
--------	---------	----------	----------	-----	-----	-------	--------

Config Management

Router Configuration

Network Provider (ISP)

Name	Description
Router Configuration	Import/Backup configuration file
Restore default configuration	Click to reset IR7X1GS55 (to enable RESET, you need to reboot IR7X1GS55)
Network Provider (ISP)	Used to configure the APN, username, password and other parameters of major operators

(7) System Upgrade

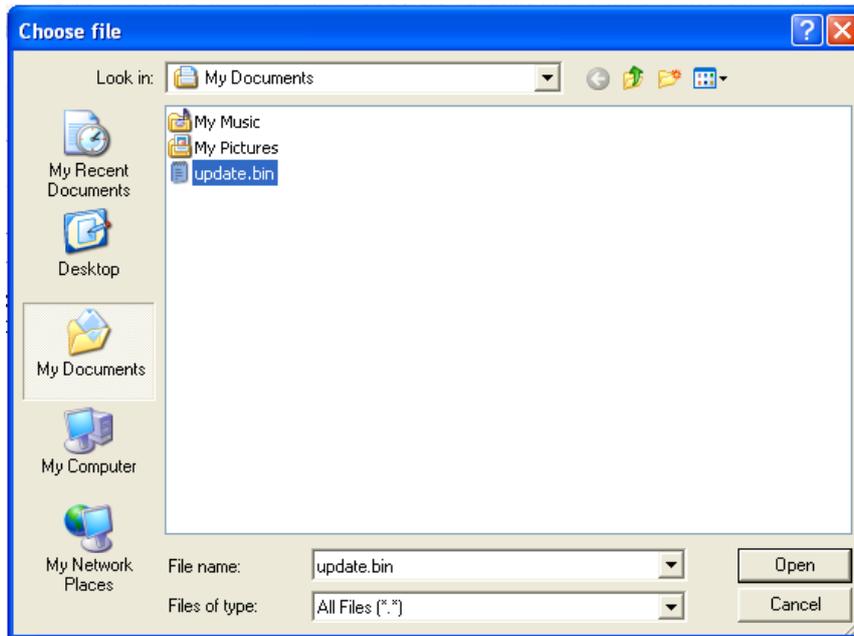

System	Network	Services	Firewall	QoS	VPN	Tools	Status
--------	---------	----------	----------	-----	-----	-------	--------

Upgrade

Select the file to use:

Current Version : 1.3.0.r1733
 Current Bootloader Version : 1.1.6.r1624

If need to upgrade system, click “System”=>”System upgrade” to enter update page, then follow the steps below:
 Click “Browse”, choose the upgrade file;

Click “update”, and then click “sure” to begin update as it shows below.

⌚ 0:01

Upgrading system...
It will take about 1-5 minutes depending on network. Please wait and don't interrupt!

Upgrade firmware succeed, and click “reboot” to restart IR7X1GS55.

(8) Reboot

If you need to reboot system, please click ”System”=>”Reboot”, Then click ”OK” to restart system.

(9) Logout

If you need to logout system, click “System”=>”Logout”, and then click “OK”.

3.1.3 Network

Network settings include configurations of Dialup, LAN, DNS, DDNS, Static Route, and etc.

(1) Dialup

Name	Description	Default
Enable	Enable PPP dialup	Enable
Time Schedule	Set time for online and offline	ALL
SHARED	Enabled—device linked with Router Can access to internet. Disable—device Can NOT access to internet via Router.	Enable
ISP	Select local ISP, if not listed here, please select "Customer"	Customer
Network Select Type	Choose mobile network type	HSDPA (or GPRS)
APN	APN parameters provided by Local ISP, you can set TWO different group of dialup parameters (APN/Username/Password) and set one as backup	cmnet/uninet

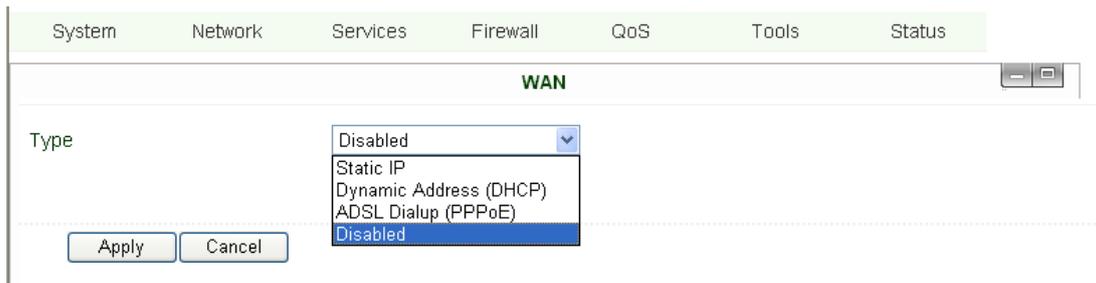

Access Number	Dialup parameters provided by Local ISP	“*99#”“*99***1#” or #777
Username	Dialup parameters provided by Local ISP	“gprs” or “CDMA”
Password	Dialup parameters provided by Local ISP	“gprs” or “CDMA”
Primary Profile Retries	After retries and dialup still failed, router will try backup dialup parameters (if you have set two IPSec tunnels and one as backup, router will also stop the main one and try another, more details please see at “VPN” → “IPSec”)	0 (always use main parameters and never use backup)
Static IP	Enable Static IP if your SIM card can get static IP address	Disable
Connection Mode	Optional Always Online,	Always Online
Redial Interval	When Dial fails, InRouter will redial after the interval	30 seconds
Show Advanced Options	Enable configure advanced options	Disabled
Initial Commands	Used for advanced parameters	Blank
Dial Timeout	Set dial timeout (IR7X1GS55 will reboot after timeout)	120 seconds
MTU	Set max transmit unit	1500
MRU	Set max receive unit	1500
TX Queue Length	Set length of transmit queue	3
Enable IP header compression	Enable IP header compression	Disabled
Use default asyncmap	Enable default asyncmap, PPP advanced option	Disabled
Using Peer DNS	Click Enable to accept the peer DNS	Enabled
Link Detection Interval	Set Link Detection Interval, you need to disable	30 seconds
Link Detection Max Retries	Set the max retries if link detection failed	3
Debug	Enable debug mode	Enable
Expert Option	Provide extra PPP parameters, normally user needn’t set this.	Blank
ICMP Detection Server	Set ICMP Detection Server, blank represents none	Blank
ICMP Detection Interval	Set ICMP Detection Interval	30 seconds
ICMP Detection Timeout	Set ICMP Detection Timeout (IR7X1GS55 will reboot if ICMP time out)	5 seconds
ICMP Detection Max Retries	Set the max number of retries if ICMP failed	5

Dialup----Time Schedule Management:

Name	Description	Default
Name	Name the schedule	schedule 1
Sunday		Blank
Monday		Enable
Tuesday		Enable
Wednesday		Enable
Thursday		Enable
Friday		Enable
Saturday		Blank
Time Range 1	Set Time Range 1	9:00-12:00
Time Range 2	Set Time Range 2	14:00-18:00
Time Range 3	Set Time Range 3	0:00-0:00
Description	Describe configuration	Blank

(2) WAN (for InRouter704/714/794 only)

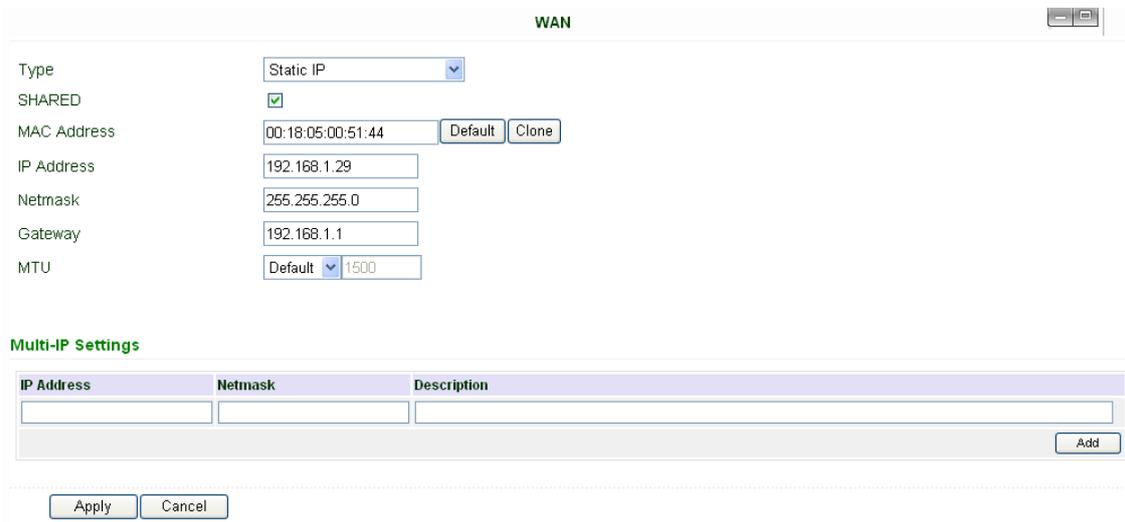

This page is to set the type of WAN port:

Name	Description	Default
Type	Static IP; Dynamic Address(DHCP); ADSL Dialup(PPPoE); Disabled	Disabled

Attention: There can only be one WAN type at one time, enabling one type WAN will disabled another.

WAN—Static IP

Notice: please **DO NOT** set WAN address as: 192.168.3.x (an IP for DMZ port).

Name	Description	Default
Type	Static IP	
SHARED	Enabled—the local device linked with Router can get access to internet. Disable—the local device can't get access to internet via Router.	Enable
MAC Address	Set MAC Address	
IP Address	Set WAN port IP	192.168.1.29
Net Mask	Set WAN port Net Mask	255.255.255.0
Gateway	Set WAN Gateway	192.168.1.1
MTU	Set Max Transmission Unit, optional between default and manual	1500
Multi-IP Settings(can set 8 additional IP address at the most)		
IP address	Set the additional IP address of LAN	Blank
Net Mask	Set Net Mask	Blank
Description	Describe the settings	Blank

3.1.4 Service

Service settings include DHCP Service, DNS Forwarding, VRRP and other related parameters.

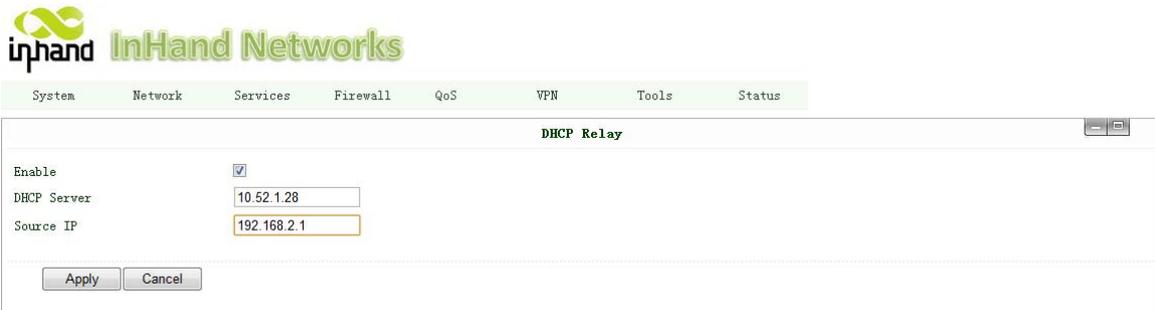

(1) DHCP Service

Name	Description	Default
Enable DHCP	Click to enable DHCP	Enable
IP Pool Starting Address	Set the starting IP address of DHCP pool	192.168.2.2
IP Pool Ending Address	Set the ending IP address of DHCP pool	192.168.2.100
Lease	Set the valid time lease of IP address obtained by DHCP	60 minutes
DNS	Set DNS Server	192.168.2.1
Windows Name Server (WINS)	Set WINS	Blank
Static DHCP (can set 20 designated IP address at the most)		
MAC Address	Set the MAC address of a designated IP address	Blank
IP address	Set the static IP address	192.168.2.2
Host	Set the hostname	Blank

(2) DNS Relay

Name	Description	Default
Enable DNS Relay	Click to enable DNS Relay	Disabled
Designate IP address<=>DNS couples (20 at the most)		
IP Address	Set IP address <=> DNS couples	Blank
Host	Set the name of IP address <=> DNS couples	Blank
Description	Describe IP address <=> DNS couples	Blank

(3) DHCP Relay

This function can realize DHCP relay and send relay packages to LAN interface of router.

Name	Description	Default
Enable DHCP Relay	Click to enable DHCP Relay	Enable (after enable DHCP)
DHCP Server	Set the DHCP Server's address, always you need ensure DHCP server is in the same LAN or VPN subnet as IR7X1GS55's LAN	Blank
Source IP	The interface IR7X1GS55 will forward the DHCP acknowledge packages (always set the LAN IP of IR7X1GS55)	Blank

(4) VRRP

Name	Description	Default
Enable	Select to enable VRRP	Disable
Group ID	Select group id of routers (range 1-255)	1
Priority	Select priority for router (range 1—254)	10 (bigger number stands for higher priority)
Advertisement Interval	Set ad interval	60 sec
Virtual IP	Set Virtual IP	Blank
Authentication Type	Optional: None/Password type	None

(5) Device Manager

Name	Description	Default
Mode	Disabled/Only SMS/SMS+IP	Disable

Name	Description	Default
Mode	Only SMS	
Query SMS Interval	Set how long to check SMS	24 hours
Trust Phone List	Add trust Cell Phone List	

Name	Description	Default
Mode	SMS+IP Mode	
Vendor	Set Vendor Name	Default
Device ID	Set Device ID	
Server	Set Device Manager Server IP	
Port	Set Port For DM	9000
Login Retries	Set login retries	3
Heartbeat Interval	Set interval of heartbeat	120
Packet Receiving Timeout	Set packet receiving timeout	30

Packet Transmit Retries	Set packet transmit retries	3
Query SMS Interval	Set how long to check SMS	24
Trust phone list	Set trust cell phone list	

(6) DTU

Name	Description	Default
Enable	Click to enable DTU	Disable
DTU Protocol	Set DTU protocol, Please see more in related Quick Guide	Transparent
Protocol	Optional between TCP/UDP	UDP
Work Mode	Set DTU as client or server	Client
DTU ID	Set ID of DTU	Blank
Multi Server	Set the IP address and Port of server to receive data.	Blank

(7) SMS

Name	Description	Default
Enable	Click to enable SMS control	Disable
Status Query	Set Status Query SMS, and you can see status of router by send SMS (e.g.: show status).	
Reboot	Let the router reboot	
SMS Access Control		
Default Policy	Block or Accept control SMS from certain Phone	Block

Phone List	Include phone numbers accepted or blocked to send SMS to router	
------------	---	--

Notice: before using this function, please notice you have a SIM card with SMS function in the router, else, please contact local mobile operator.

SMS you will get in your mobile phone:

Host: (SN);

Uptime: (the uptime of router for this time of reboot);

State: (Online/Offline) (Cellular WAN IP)

LAN: (Up) (LAN IP)

(8) LLDP (Link Layer Discovery Protocol)

Name	Description	Default
Enable	Click to enable LLDP	Disable
Tx Interval	Set DTU protocol	Transparent

3.1.5 Firewall

This page is to set parameters concerned with firewall.

(1) Basic Configuration

Name	Description	Default
Default Filter Policy	Optional between Accept /Refused	Accept
Block Anonymous WAN Request (ping)	Click to enable filer ping request	Disable
Filter Multicast	Click to enable filter multicast	Enable
Defend DoS Attack	Click to enable Defend DoS Attack	Enable

(2) Filtering

Name	Description	Default
------	-------------	---------

Enable	Click to enable filtering	Blank
Protocol	Optional among TCP/UDP/ICMP	All
Source IP address	Set Source IP address	Blank
Source Port	Set Source Port	Blank
Destination IP	Set destination IP	Blank
Destination Port	Set destination port	Blank
Action	Accept/Deny	Accept
Log	Click to enable login	Disable
Description	Describe your configuration	Blank

(3) Port Mapping

Name	Description	Default
Enable	Click Enable Port Mapping	Disable
Source	To fill with source IP	0.0.0.0/0
Service Port	Fill the port of service	8080
Internal Address	Set the internal IP for mapping	Blank
Internal Port	Set the Port mapping to internal	8080
Log	Click to enable log about port mapping.	Disable
Description	Describe meanings of each mapping	Blank

(4) Virtual IP Mapping

An internal PC's IP can match to a virtual IP, and external network can access to internal PC via this virtual IP address.

Name	Description	Default
Virtual IP for Router	Set Virtual IP for Router	Blank
Source IP Range	Set range of source IP address	Blank
Virtual IP	Set virtual IP	Blank
Real IP	Set real IP	Blank

Log	Enable logging concerned with virtual IP	Disable
Description	Describe this configuration	Blank

(5) DMZ (All Port Mapping)

Mapping all the ports and then external PC can get access to all the ports of internal device behind IR7X1GS55.

Attention: this function cannot help to map the admin port of IR7X1GS55 (e.g.: 80 TCP) to the device's port.

Name	Description	Default
Enable DMZ	Click to Enable DMZ	Disable
DMZ Host	Set host IP of DMZ	Blank
Source Address Range	Set IP address with restrict IP access	Blank

(6) MAC-IP Bundling

When firewall denies all access to the external network, only PC with MAC-IP Bundling can access to external network

Name	Description	Default
MAC Address	Set Bundling Mac address	Blank
IP Address	Set Bundling IP address	192.168.2.2
Description	Describe this configuration	Blank

3.1.6 QoS

Name	Description	Default
Enable	Click to enable	Disable
Outbound Limit Max Bandwidth	Set the limit speed of out- bound bandwidth	100000kbit/s
Inbound Limit Max Bandwidth	Set the limit speed of inbound bandwidth	100000kbit/s

3.1.7 VPN

This page introduces the parameters set in InRouter 700's Web.

(1) IPSec Settings (For IR711/791/714/794 only)

To build an IPSec VPN Tunnel, you need first set IPSec properties in this page, then turn to IPSec Tunnels to add your VPN:

IPSec Settings

Enable NAT-Traversal (NATT)

Keep alive time interval of NATT Seconds

Enable Compression

Debug

Force NATT

Apply Cancel

IPSec Settings

Description: 1. Select to Enable or Disable NATT, normally we need to enable, unless you ensure there is no NAT routers in the network.

2. Select to enable Compression Mode or Debug

Name	Description	Default
Enable NAT Transversal (NATT)	Click to enable NATT	Enable
Keep alive time interval of NATT	Set live time for NATT	60 sec
Enable Compression	Click to enable	Enable
Enable Debug	Click to enable	Disable
Force NATT	Click to enable	Disable

(2) IPSec Tunnels (For IR711/791/714/794 only)

IPSec Tunnels

Name	Tunnel Description	Phase 1 Parameters	Phase 2 Parameters	Link Detection Parameters
<input type="button" value="Add"/>	<input type="button" value="Show Detail Status"/>			

5 Seconds

Click "Add" and enter the configuration web:

IPSec Tunnels

Edit IPSec tunnel

Show Advanced Options

Basic Parameters

Tunnel Name:

Destination Address:

Startup Modes:

Restart WAN when failed:

Negotiation Mode:

IPSec Protocol:

IPSec Mode:

Tunnel Type:

Local Subnet:

Local Netmask:

Remote Subnet:

Remote Netmask:

Phase 1 Parameters

IKE Policy:

IKE Lifetime: Seconds

Local ID Type:

Remote ID Type:

Authentication Type:

Key:

Phase 2 Parameters

IPSec Policy:

IPSec Lifetime: Seconds

Perfect Forward Serecy(PFS):

Link Detection Parameters

DPD Time Interval: Seconds(0: disable)

DPD Timeout: Seconds

ICMP Detection Server:

ICMP Detection Local IP:

ICMP Detection Interval: Seconds

ICMP Detection Timeout: Seconds

ICMP Detection Max Retries:

Name	Description	Default
Show Advanced Options	Click to enable advanced options	Disable
Basic Parameters		
Tunnel Name	To name the tunnel	IPSec_tunnel_1
Destination Address	Set the destination address of IPSec VPN Server	Blank
Startup Mode	Auto Activate/Triggered by Data/Passive/Manually Activated	Enable
Negotiation Mode	Optional: Main Mode or Aggressive Mode	Main Mode
IPSec Mode (Enable Advanced options)	Optional: ESP or AH	ESP
IPSec Mode	Optional: Tunnel Mode or Transport Mode	Tunnel Mode

(Enable Advanced options)		
Tunnel Type	Optional: Host——Host, Host——Subnet, Subnet——Host, Subnet——Subnet	Subnet——Subnet Mode
Local Subnet	Set IPSec Local Protected Subnet	192.168.2.1
Local Subnet Net Mask	Set IPSec Local Protected Subnet Net Mask	255.255.255.0
Remote Subnet Address	Set IPSec Remote Protected Subnet	Blank
Remote Subnet Net Mask	Set IPSec Remote Protected Subnet Net Mask	255.255.255.0
Phase 1 Parameters		
IKE Policy	Optional: 3DES-MD5-96 or AES-MD5-96	3DES-MD5-96
IKE Lifetime	Set IKE 的 Lifetime	86400 sec
Local ID Type	Optional: FQDN, USERFQDN, or IP Address	IP Address
Local ID (Only for FQDN 和 USERFQDN)	Set the ID according to ID type	Blank
Remote ID Type	Optional: FQDN, USERFQDN, or IP Address	IP Address
Remote ID (Only for FQDN and USERFQDN)	Set the ID according to ID type	Blank
Authentication Type	Optional: Shared Key or Certificate	Shared Key
Key (While choosing Shared Key Authentication Type)	Set IPSec VPN Negotiation Key	Blank
Phase 2 Parameters		
IPSec Policy	Optional: 3DES-MD5-96 or AES-MD5-96	3DES-MD5-96
IPSec Lifetime	Set IPSec Lifetime	3600sec
Perfect Forward Secrecy (PFS)	Optional: Disable, GROUP1, GROUP2, GROUP5	Disable ((Enable Advanced options)
Link Detection Parameters (Enable Advanced options)		
DPD Time Interval	Set DPD Time Interval	60sec
DPD Timeout	Set DPD Timeout	180sec
ICMP Detection Server	Set ICMP Detection Server	Blank
ICMP Detection Local IP	Set ICMP Detection Local IP	
ICMP Detection Interval	Set ICMP Detection Interval	30sec
ICMP Detection Timeout	Set ICMP Detection Interval	5sec
ICMP Detection Max Retries	Set ICMP Detection Max Retries	3

(3) GRE Tunnels (For IR711/791/714/794 only)

System Network Services Firewall QoS VPN Tools Status

GRE Tunnels

Enable	Name	Local virtual IP	Peer Address	Remote virtual IP	Remote Subnet	Remote Netmask	Key	NAT	Advanced Route	Description
<input checked="" type="checkbox"/>	tun0	0.0.0.0	0.0.0.0	0.0.0.0	0.0.0.0	255.255.255.0		<input type="checkbox"/>		

GRE Tunnels		
Name	Description	Default

Enable	Click Enable	Enable
Tunnel Name	Set GRE Tunnel Name	tun0
Local Virtual IP	Set Local Virtual IP	0.0.0.0
Remote Address	Set Remote Address	0.0.0.0
Remote Virtual IP	Set Remote Virtual IP	0.0.0.0
Remote Subnet Address	Set Remote Subnet Address	0.0.0.0
Remote Subnet Net Mask	Set Remote Subnet Net Mask	255.255.255.0
Key	Set Tunnel Key	Blank
NAT	Click Enable NAT Function	Disable
Description	Add Description	Blank

(4) L2TP Clients (For IR711/791/714/794 only)

L2TP Clients

Edit L2TP Tunnel

Enable

Tunnel name

L2TP Server

MRU

Enable Debug

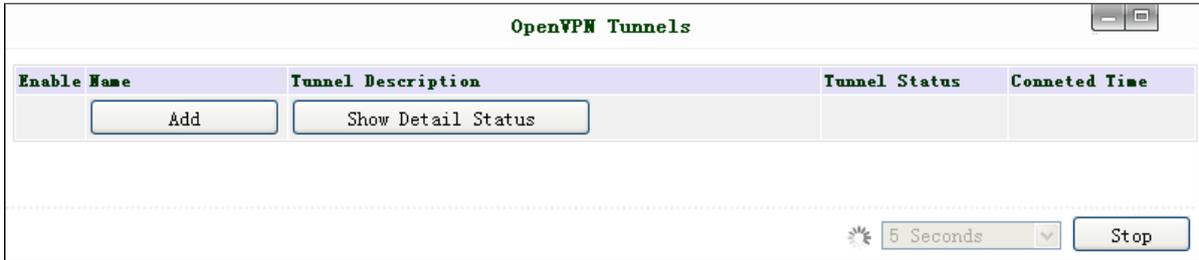

Expert Options (Expert Only)

Name	Description	Default
Enable	Click Enable	Enable
Tunnel Name	Set Tunnel Name	PPTP_TUNNEL_1
PPTP Server	Set PPTP Server Address	Blank
Username	Set Server Username	Blank
Password	Set Server's Password	Blank
Startup Mode:	Set Startup Modes: Auto Activated, Triggered by Data, Manually Activated	Auto Activated
Authentication Type	Set Authentication Type: CHAP, PAP, MS-CHAPv1, MS-CHAPv2	Auto
Local IP Address	Set Local IP Address	Blank
Remote IP Address	Set Remote IP Address	Blank
Remote Subnet	Set Remote Subnet	Blank
Remote Subnet Net Mask	Set Remote Subnet Net Mask	255.255.255.0
Link Detection Interval	Set Link Detection Interval	60
Max Retries for Link Detection	Set Max Retries for Link Detection	5
Enable NAT	Click Enable NAT	Blank
Enable MPPE	Click Enable MPPE	Blank
Enable MPPC	Click Enable MPPC	Blank
MTU	Set MTU parameters	1500

MRU	Set MRU parameters	1500
Enable Debug Mode	Click Enable Debug Mode	Blank
Expert Options	For InHand R&D only	Blank

(6) Open VPN Tunnels (for IR791/794 only)

In the configuration WEB of 700, select “VPN”=> “Open VPN Tunnels” as below:

Click “Add” to add a new Open VPN tunnel:

OpenVPN Tunnels

Edit OPENVPN Tunnel

Tunnel name:

Enable:

Mode:

Protocol:

Port:

OPENVPN Server:

Authentication Type:

Username:

Password:

Pre-shared Key:

Remote Subnet:

Remote Netmask:

Link Detection Interval: Seconds

Link Detection Timeout: Seconds

Renegotiate Interval: Seconds

Enable NAT:

Enable LZO:

Encryption Algorithms:

MTU:

Max Fragment Size:

Debug Level:

Expert Options(Expert Only):

Name	Description
Tunnel name	Can't be set
Enable	Enable this configuration
Mode	Client or Server
Protocol	UDP or TCP

Port	Import or Export Certificate (CRL)
OPEN VPN Server	OPEN VPN Server's IP or DNS
Authentication Type	<p>(1) None ----- for host to host connection (not available when 700 as server)</p> <p>(2) Pre-shared Key ----- for host to host connection (not available when 700 as server)</p> <p>(3) User/Password ----- For multi users to access CA needed: Client: root CA (ca.crt) Server: root CA (ca.crt), public key (pub.crt), private key (pri.key)</p> <p>(4) X.509 Cert (multi-client) ----- CA mode for multi users to access CA needed: Client: root CA (ca.crt), public key (pub.crt), private key (pri.key) Server: root CA (ca.crt), public key (pub.crt), private key (pri.key)</p> <p>(5) X.509 Cert -----CA mode for host to host tunnel CA needed: Client: root CA (ca.crt), public key (pub.crt), private key (pri.key) Server: root CA (ca.crt), public key (pub.crt), private key (pri.key)</p> <p>(6) User+X.509 mode-----username + password + CA certificate CA needed: Client: root CA (ca.crt), public key (pub.crt), private key (pri.key) Server: root CA (ca.crt), public key (pub.crt), private key (pri.key)</p>
Pre-shared Key	Set shared key or TLS-AUTH static password
Remote Subnet, Remote Net mask	Set the static route of the router, always towards the subnet of its peer
Link Detection Interval, Link Detection Timeout	Always use default
Renegotiate Interval	Always use default
Enable NAT	Set NAT mode, meanwhile it will disable route mode
Enable MPPE	Enable MPPE, always set in server
Enable LZO	Enable LZO compression
Encryption Algorithms	Set encryption algorithms, must match with the server
MTU, Max Fragment Size	Always use default

(7) Open VPN Advanced (for IR791/794 only)

This configuration page is only used for the Open VPN Server.

OpenVPN Advanced ⊞ ⊞

Enable Client-to-Client (Server Mode Only)

Client Management

Enable	Tunnel name	Username/CommonName	Password	Client IP (4th byte must be 4nt1)	Local Static Route	Remote Static Route
<input checked="" type="checkbox"/>	OpenVPN_T_	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Name	Description
Enable Client-to-Client	Enable client access to other clients
Client Management	
Tunnel Name	Tunnel Name of the Client
Username/Common Name	Username (using Username/password mode) or Common Name in CA (CA mode)

Local Static Route	The client subnet
Remote Static Route	The server subnet

Attention: CA can only be produced by customer's PC; InRouter 700 cannot produce CA.

(8) Certificate Management (for IR791/794 only)

Name	Description	Default
Enable SCEP (Simple Certificate Enrollment Protocol)	Click Enable	
Certificate Protected Key	Set Certificate Protected Key	Blank
Certificate Protected Key Confirm	Confirm Certificate Protected Key	Blank
Import/Export CA Certificate	Import or Export (CA) Certificate	Blank
Import/Export Certificate (CRL)	Import or Export Certificate (CRL)	Blank
Import/Export Public Key Certificate	Import or Export Public Key Certificate	Blank
Import/Export Private Key Certificate	Import or Export Private Certificate	Blank

3.1.8 Tools

Tools contain PING Detection, Route Trace, Link Speed Test and etc.

(1) PING

Name	Description	Default
Host	Destination for PING	Blank
Ping Count	Set PING Counts	4 times
Packet Size	Set PING Packet Size	32 Bytes
Expert Options	Advanced parameters	Blank

(2) Trace Route

Name	Description	Default
Host	Destination for Trace Route	Blank
Max Hops	Set Max Hops	20
Time Out	Set Time Out	3 sec
Protocol	Optional: ICMP/UDP	UDP
Expert Options	Advanced parameters	Blank

(3) Link Speed Test

Test link speed via unload or download

3.1.9 Status

Status contains System, Modem, Network Connections, Route Table, Device List and Log.

(1) System Status

This page shows the status of system, including Name, Model Type, Current Version and etc.

(2) Modem Status

System	Network	Services	Firewall	QoS	VPN	Tools	Status
Modem							
Dialup							
Modem Type	Auto detect						
Status	unknown						
Manufacturer							
Product							
Signal Level	- (0)						
Register Status	no registered						
IMEI Code							
IMSI Code							
Network Type							
							3 Seconds

This page shows the status of Modem, including the signal level.

(3) Network Connections

Network Connections	
WAN	
MAC Address	00:18:05:00:56:10
Connection Type	Static IP
IP Address	203.86.43.190
Netmask	255.255.255.0
Gateway	203.86.43.185
DNS	
MTU	1500
Status	Connected
Connection time	0 day, 17:26:19
Dialup	
Connection Type	Disabled
IP Address	0.0.0.0
Netmask	0.0.0.0
Gateway	0.0.0.0
DNS	0.0.0.0
MTU	1500
Status	Disconnected

This page shows the network connections via WAN or LAN

(4) Route Table

System	Network	Services	Firewall	QoS	VPN	Tools	Status
Route Table							
Destination	Netmask	Gateway	Metric	Interface			
10.8.0.2	255.255.255.255	0.0.0.0	0	tun0			
192.168.5.0	255.255.255.0	0.0.0.0	0	lan0			
192.168.3.0	255.255.255.0	10.8.0.2	0	tun0			
203.86.43.0	255.255.255.0	0.0.0.0	0	wan0			
10.8.0.0	255.255.255.0	10.8.0.2	0	tun0			
192.168.9.0	255.255.255.0	10.8.0.2	0	tun0			
127.0.0.0	255.0.0.0	0.0.0.0	0	lo			
default	0.0.0.0	203.86.43.185	0	wan0			
							Manual Refresh
							Refresh

This page shows the route table of IR7X1GS55.

(5) Device List

System	Network	Services	Firewall	QoS	VPN	Tools	Status
Device List							
Interface	MAC Address	IP Address	Host	Lease			
wan0	00:16:46:B7:CD:FF	203.86.43.185					

3 Seconds

This page shows the devices linked with IR7X1GS55.

(6) Log
