Subject: TRAILER ABS SUB-ASSEMBLIES

Genuine Bendix® brake components are now available through sub-assembled and tested modules through Pre-Pro Assembly. Pre-Pro is a valued Bendix customer and offers a wide range of sub-assemblies for different full and semi-trailer applications. Featuring Bendix ABS, these modules offer trailer manufacturers a time and cost effective source of axles, air tanks, brakes and airlines – all assembled and ready to install.

Pre-Pro offers customization based on customer input concerning trailer specifications. They offer an on-line “Systemizer” for customer configuration. Trailer types include dollies, lead semi-trailer, pull trailers, and full trailers. Systems offered include gladhands, spring brake valves, ABS, air tanks, air lines and more. Pre-Pro rigorously tests each system out prior to shipping, ensuring a fully functional sub-assembly, ready for installation. ABS units from basic 2S/1M to the 2S/2M and 4S/2M -- for increased control and improved prevention of tire flatspotting -- are available.

Pre-Pro offers two locations.
