4. Answer a call: Short press the answer call button in cuff badge, the motor will vibrate when a call comes in.
5. Reject a call: Press and hold the answer button for 2seconds.
6. Redial last number: In the standby mode, double click the answer button to redial the last outgoing number.
7. Voice dial: In standby mode, short press the answer call button to make a voice call. (this feature must be available on the mobile phone).
8. Re-connection: Turn on the Bluetooth glove, it automatically connects with the last paired device(such as a mobile phone)
9. Three-party call: If a new call comes in during answering the call, long press the answer button to enter the wait mode, re-press the answer button to pick up the new call and make old call in waiting mode.
10. Battery charge: To recharge the battery, plug in the USB charging cable to a USB device (computer, laptop, USB-AC charger). When connected to charge, the red LED will be on when charging. The red LED will turn off once charging is complete. A full charge normally takes 2-3 hours.

Bluetooth Pairing

Bluetooth pairing is a professional terms on the use of Bluetooth products : establish a wireless connection between Bluetooth-enabled devices through a simple operation.

Pairing steps:

1. Ensure the Bluetooth glove is off.
2. Press and hold the power button for 6~10 seconds until the red and blue LED flash alternately.
3. Refer to the User manual of your phone to turn on the your phone' bluetooth function and search for Bluetooth device.

Usually this can be found in the phone's Setting Menu. the phone will search for all available Bluetooth devices within range.

4. Once the phone finds the Bluetooth glove BP-ST126, press it to connect. The motor will vibrate for 7seconds if pairing succeed.

About battery

- The Bluetooth glove is powered by a rechargeable battery.

- A new battery achieves the best performance only after two or three complete charge and discharge cycles.
- The battery can be charged and discharged hundreds of times, but it will eventually wear.
- Do not leave a fully charged battery connected to a charging circuit since overcharging may shorten the battery life.
- If a fully charged battery is left unused, the battery itself will be discharged after a period of time.
- If placed in hot or cold places, such as a closed car in summer or winter, it will reduce the battery's capacity and lifetime.
- Battery temperature should be maintained between 15-25 centigrade.
- Battery performance is particularly limited in temperatures well below freezing.
- Do not dispose of batteries in a fire in order to avoid battery explosion.
