70
years

**Visionary innovation
for more than 70 years!**

BODUM®'s history dates back to 1944, when Peter Bodum launched the company in Copenhagen, Denmark. Renowned for its iconic French Press coffeemaker and signature Scandinavian design aesthetic, BODUM® has grown into a global housewares brand, with distribution in more than 55 countries. Headquartered in Switzerland, the company continues to develop all products in-house under its core principle that good design should be both functional and affordable. The range of products extends from coffee, tea and glassware to kitchen electrics and gadgets. A family-owned company, the brand is directed today by the founder's son, Jørgen Bodum.

This year marks 70 years since BODUM® was founded in 1944 by my Father, Peter Bodum. He was born in 1910, in a small Danish town called Haderslev. Occupied since 1864, there was no way for him to know if his town would remain occupied for the rest of his days as it was for many of his family members. Lucky for him, he was fortunate enough to obtain an import license. He had little money and also discovered that there was scarce availability of products. He imported everything he could get hold of from the UK, Germany and surrounding countries.

Due to this lack of availability, he soon decided to produce items on his own. The first of which was the vacuum coffee maker, MOCCA, in 3 sizes. The second was the SANTOS (now renamed PEBO in his honour) which is still a celebrated item in our collection today. PEBO is the product that not only changed the company but the way every Scandinavian household drank coffee. The PEBO was wildly popular and soon became a common fixture in most households. BODUM® continued to produce various vacuum coffee maker models throughout the 1950's and up until his untimely death in 1966. Britta Bodum, my Mother, then took over running the company herself until I took over in 1974.

Since then, BODUM®, together with its' design team, has developed many products. At our core, we will always remain focused on coffee and have since also expanded our range into a broad kitchen collection which includes our award winning e-BODUM® electric collection. e-BODUM® offers the must have items such as energy efficient water kettles and grinders to complete your coffee brewing process and well as other well designed small kitchen appliances. What you will not find in the collection is a capsule or any type of 'ready-made conveniences.' For me, that is like cooking in a microwave. Sure it's quick and easy but far from a fresh cup of coffee or tea. We have always remained committed to our roots and core values. This is why we are so heavily focused on manufacturing more and more products ourselves. We explain more about our BODUM® factory on p. 8. BODUM® Portuguesa allows us to control our entire product development cycle and make certain that not only is our product quality top notch but so are conditions for both the factory workers as well as our environment. I am very proud of our accomplishments in running such a socially and environmentally friendly facility.

In honour of our 70th year anniversary, we have re-introduced many of our original designs in anniversary colors and are offering at their original prices! And as always, we hope you also enjoy the new additions to the assortment this year. We hope you find them to be simple, user-friendly and well designed.

A handwritten signature in black ink, appearing to read 'Jürgen Rodt', is positioned at the bottom left of the page.

1944 Peter Bodum starts a new company in Copenhagen, Denmark following World War II, and establishes the brand's core philosophy that form should follow function.

1958 BODUM® introduces its first product, the SANTOS Vacuum Coffee Maker. Internationally acclaimed for its unique design, it remains one of the most popular coffee makers.

70 years of Visionary Innovation

BODUM® Timeline

1991 The ASSAM Teapot is developed for the British Tea Council. With the ASSAM, BODUM® reinvented tea brewing by applying the same principles from the French press coffee maker.

1992 BODUM® enters the field of electrical household products. The IBIS Water Kettle was the first in a line of simple, sophisticated electrical kitchen tools including juicers, coffee grinders, and more.

2002 BODUM® premieres its line of double wall glasses. The inventive design and timeless style made them an instant classic.

1974 Jørgen Bodum, the founder's son, takes over as CEO of the company. In the same year he introduced BODUM's first French press coffee maker, the BISTRO.

1978 The company home service and design center is relocated to Switzerland.

1980 BODUM's design unit, Pi-Design AG is established. This in-house team of designers, engineers, graphic designers, and architects, develops all of BODUM's products; focusing on functionality, quality and innovation.

2010 BODUM® introduces e-BODUM®, a line of electric kitchen tools. Available in a variety of colors, e-BODUM® products make a modern, decorative statement in any kitchen.

2011 BODUM® opens first "lab" shop in Paris featuring product demonstrations and multi-media presentations to give shoppers hands-on time with BODUM's growing product assortment.

Today Since 1974, BODUM® has produced more than 120 million of French press coffee makers and 30 million teapots, and the company continues to broaden its collection of beautifully designed products.

BODUM®'s Portuguesa

Since the beginning of BODUM® Portuguesa, environment has been a driving force and a major concern in our activity. During almost 30 years of production, BODUM® Portuguesa assumed a responsible position towards the surrounding environment but also to the internal working conditions and safety and well-being of the workers.

By having production processes that are majorly focused in transforming metal and applying surface treatments to metals, a lot of “environment unfriendly” unitary processes are used and required such as stamping or welding, but the most concerning are those connected to the plating line and degreasing processes.

These production processes consume natural resources, BODUM® works to minimize the impacts in:

- Emission of greenhouse gases
- Emission of other pollutant air streams
- Emission of pollutants in water
- Emission of pollutants in soils
- Risk of industrial accidents
- Workers safety, health and well-being

This was done by adopting the best available techniques (BAT) as preventive at the source of the pollution emission:

- Training to workers in operating, control and contain processes.
- Reducing the number or quantity of hazardous and dangerous materials.
- Equipment and process good-keeping by internal maintenance procedures.
- Optimization of operational conditions and control of processes.
- Reduction of re-processing needs.
- Project and built processes and facilities prevent and contain pollution in its source.
- Good storage of materials to prevent accidents with environmental impact.
- Good storage of materials and production parts to prevent its deterioration.
- Installing containment tanks and isolated floors in risk areas.
- Saving energy in power sources and make the processes energy efficient.
- Introduction of thermal isolation in the whole building and process tank walls to avoid heat loss.
- Isolation of equipments to avoid the noise propagation.
- Saving water.

Saving water

- Recycling water – only 20% of the total consume is fresh water.
- Consume control by introducing automatic valves and volume controllers.
- Reducing drag-outs and introduce cascade rinsing between processes.
- Extend the liquid baths life and processes to prevent the treatment need by using filtration, evaporation, ionic exchange techniques.

Because it is impossible to contain all pollutant in its sources, BODUM® Portuguesa has installed end processes to treat, reduce or eliminate the pollution charge in its effluents and wastes. On these, we can highlight:

1 – Waste Water Treatment Plant

- All liquid effluents are separated according to their characteristics and treated as in batches
- All pre-treatments and final treatments are permanently monitored until the admissible values of discharge are achieved.
- The discharge of BODUM® lines are connected to a municipal waste water treatment plant that complements the final treatment.
- The sludge generated in the water treatment are de-watered by using recycled air of the pressed air equipments.

2 – Waste Classification and Separation

- All wastes generated in the plant are submitted to a proper separation, classification, handling and storage until there are sent to the destination.
- All waste management is outsourced to licensed entities, meaning the proper destination has as priority the recyclability of the wastes. Only two of the wastes generated at Bodum must be eliminated because the recycling limitations in the market.

3 – Air Aspiration System

- The air aspiration system is connected to all the pollution sources avoiding the pollutants spread inside the plant.
- These systems filter the air before its release to the atmosphere.
- In the plating line, besides the filtration, all the air is washed with water in scrubbers.

In 2008, BODUM® Portuguesa had its recognition for all the efforts made and processes developed and implemented along the last decades, by having the Environmental Permit issued by the Portuguese Environment Ministry.

The permit is mandatory and directly comes from the EC Directive 2008/1/EC of January 15 (IPPC).

According to this permit, BODUM® must have a permanent monitoring of the environmental indicators and values so; it is the guarantee of the legislation fulfilling, good practices and procedures.

ORIGINAL

ANTOS

BODUM® was founded in 1944 by Peter Bodum. Launching a new business during the war wasn't easy, and jobs were scarce, but my father sensed it was time to venture out on his own. He was incredibly fortunate to be granted an import license, and by the late 1940s he had achieved great success. As he looked to grow the business, he found new interest in coffee makers. The company's first vacuum coffee maker, MOCCA, was introduced in the early fifties, but it wasn't until 1958 with the production of the SANTOS Vacuum Coffee maker that BODUM® became a household name for quality coffee products, and coffee has been the major product group for BODUM® ever since.

In the 1970s we introduced the now iconic French press, which continues to be BODUM®'s most popular item. Today, the majority of BODUM® coffee makers are produced at our factory in Portugal, where producing the highest quality products as well as environmental responsibility and safe working conditions are of the utmost importance.

In the years to come we are focused on expanding BODUM®'s factory in Portugal and moving more and more BODUM® products there, this move will make the entire process from design to manufacturing a family operation. Another important part of the BODUM® line is our collection of electric products that have been introduced over the past few years. Centered around coffee, from boiling water to grinding beans to the perfect automatic brew produced by our BISTRO b.Over, the collection encompasses everything the modern kitchen might need.

But no matter how much we grow, we will always reflect on our core value that form should follow function.

Coffee Brewing Methods

The French Press

The French press coffee maker is the simplest of all brewing systems, where coarsely ground beans meet hot water right off the boil. The right temperature (92–96 °C, 195–205 °F) brings the optimal extraction power for the essential oils in the beans to develop their full flavor profile in just four minutes. An easy press on the plunger locks the grinds at the bottom of the glass carafe and stops the brewing process.

Note: For the French press brewing method, BODUM® recommends a coarse grind.

STEP 1 – Coffee

Add 1 scoop (0.25 oz/7 gr) of BODUM® coarse ground coffee per cup (4 oz/0.12l) of water. Always use coarse ground coffee when using a BODUM® French press coffee maker.

STEP 2 – Water

To reach the perfect temperature of 195–205°F/ 90–96°C, bring the water to a full boil and then allow it to rest for 30 seconds before pouring. Use a wooden or plastic utensil to carefully stir the coffee once you have added the water. Make sure that all of the grounds are submerged.

STEP 3 – Press

Let the coffee brew for 4 minutes. Place the lid on the pot with the plunger in the raised position. Do not push the plunger down yet.

STEP 4 – Enjoy!

Press the plunger using your fingertips. Before pressing, make sure that the safety lid is turned into the “safe” position, so no splashing occurs. Pressing down on the rod separates the grounds from the water and stops the brewing process. Voilà! Your perfect cup of coffee, brewed “the BODUM® way,” is ready to be served.

Tip: Quality cold brewed coffee can be made using essentially the same steps. Instead of hot water, add filtered water at room temperature and stir. Place the lid on the carafe and let brew for 6–12 hours at room temperature or in your refrigerator. Press and enjoy!

The Pour Over

The BODUM® Pour Over brew method features a fine titanium plated filter that eliminates need for paper filters. Paper filters actually absorb the coffee's essential oils hence robbing coffee of true flavor, plus no paper filter means no waste!

Note: For the pour over brewing method, BODUM® recommends a medium grind.

The Vacuum

The vacuum brew method has fascinated generations of coffee drinkers with its theatrical technique. Water heats in the lower chamber, creating vapor pressure that forces the boiling water up to mix with coffee grounds. The coffee maker is then removed from the heat and vacuum pressure draws the brewed coffee downward through a strainer, and into the bottom chamber for serving.

Note: For the vacuum brewing method, BODUM® recommends a grind between coarse and medium.

Coffee-House Style Drinks

Double wall glasses are the perfect vessel for showcasing the beauty of your coffeehouse style drinks at home. Plus the double wall glass construction will keep your drinks hot longer!

Espresso

PAVINA, p. 78

Espresso

An espresso is about 1 to 1.5oz of espresso coffee. It fills about $\frac{1}{3}$ to $\frac{2}{3}$ of a demitasse. Espresso is made in an espresso machine by quickly forcing steam and boiling water through finely ground coffee.

Americano

ASSAM, p. 79

Water

Coffee

Americano is a style of coffee that is prepared by adding hot water to black coffee which result in a similar strength to traditional drip.

Cappuccino

PILATUS, p. 81

Frothed milk

Coffee

Milk

In Italy cappuccino is served in a 6 oz cup. The coffee is topped by a dense froth (half foam, half steamed milk) in a ratio of 3:1. Usually the drink is dusted with unsweetened cocoa.

Latte Macchiato

PAVINA, p. 78

The coffee is slowly poured into an 8 oz glass filled with hot, frothed milk. The coffee “stains” the milk and creates a darker layer over the milk. Then it all gets topped off with pure white foam – making a perfect latte macchiato, a three-layer drink.

Caffe Mocha

PAVINA, p. 78

Caffe mocha has been served in Italian-American cafes since the 1950s. It's a combination of equal amounts of coffee, hot chocolate and hot frothed milk. Today the hot chocolate is oftentimes substituted with chocolate syrup. For the ultimate sinners it is topped off with whipped cream.

Caffe Latte

ASSAM, p. 79

Latte is made with coffee and steamed milk in a ratio of 5:1. The coffee is topped with steamed milk then finished with steamed milk foam.

BODUM® COLUMBIA

Double Wall Coffee Makers

Durable, double wall stainless steel construction provides greater heat retention.

The BODUM® COLUMBIA Coffee Makers are made of double wall stainless steel which means that your coffee stays hot much longer. The air in between the two walls provides a highly effective layer of insulation. The COLUMBIA is not just any nice looking coffee pot: It is a coffee press. After all, you would not want to compromise taste for beauty. And it works just like any of our coffee presses.

BRAZIL, CREMA & KENYA

Coffee Makers

The CREMA Coffee Maker is a playful mix between tradition and modernity! CREMA offers the best way of enjoying a cup of coffee: Easy and quick to use, it is THE method if you want to brew coffee right. You will extract the most essential oils of freshly ground coffee, leaving least sediment in your cup! Simply add ground coffee, pour well tempered water, stir, wait 3-4 minutes and by gently depressing the plunger you stop the brewing.

Parts of The French Press Coffee Maker

Plunger – The bar of the plunger is made of stainless steel. After the 4 minutes recommended brewing time, you simply depress the plunger with the tip of your finger. The knob is made of heat-resistant plastic.

Safety lid – BODUM®'s safety lid prevents the splashing of liquids. Line the safety lid so that it is in the closed position in line with the pour spout. After the brewing has stopped, turn the safety lid back and enjoy your coffee!

Spiral plate – The spiral plate keeps the filter mesh in place and makes sure that water goes through but no ground coffee. The flexible spiral provides a universal fit taking into account the manufacturing tolerances of glass jugs.

Mesh – The filter mesh is a key component to the BODUM® Coffee Makers. It separates the ground coffee beans from the water after the brewing has stopped.

Cross plate – The cross plate holds the mesh in place together with the spiral plate.

Glass beaker – French press coffee makers feature a durable borosilicate beaker. Borosilicate glass is an outstanding material: It is ultra-light and strong, has great heat resistant properties, and will not get cloudy in the dishwasher.

Metal frame – The original CHAMBORD Coffee Maker features a frame made of chrome-plated, durable stainless steel that protects the glass beaker from cracks and scratches, as well as protecting surfaces from heat damage.

Handle – The plastic handle provides heat-resistance and durability. In other words, it keeps your fingers from getting burnt.

TRAVEL MUG

Mugs

Today's on-the-go lifestyle makes us miss out on our comforting daily routines far too often. Well, enjoying our favorite drink wherever we go is no longer on the list. The TRAVEL MUG Collection goes where you go – in just the right size and just the right color and material for all your endeavors. The mugs are absolutely spill-proof once the opening is closed all the way. The flow of fluids can be adjusted with an easy turn of the screw within the lid.

TRAVEL PRESS

Coffee Makers

Enjoy a single-serving of French press coffee or loose leaf tea on the go with the TRAVEL PRESS Coffee Maker. Brew and drink or use in the place of a traditional 3 cup French Press. Add 3–4 tablespoons coarse ground coffee, preferred milk and sweetener, and hot water to the mug. Stir contents, replace lid with plunger up, and go. After 4 minutes press down the plunger and enjoy! The stainless steel double wall design with a vacuum seal maintains heat for hours while remaining cool to the touch.

No wonder tea has been the most popular drink after water for centuries. Black teas, white teas, green teas, herbal teas, fruit teas, rooibos teas – the options for pleasure and delight are simply limitless. We have the right tea maker for all of your tea preferences, including iced tea.

Tea brewing doesn't get any purer than with the BODUM® tea presses. With this unique system your tea is brewed precisely to your desired strength and aroma. We developed the tea press in collaboration with the English Tea Council over 30 years ago and we've been perfecting it ever since.

BODUM® tea presses are made of the highest quality borosilicate glass – a material that doesn't stain and is absolutely neutral in taste. The glass allows you to observe the brewing process and stop it when it's exactly right. It's just fascinating to see all the beautiful tea colors come to life. The BODUM® tea presses are as much a pleasure for your eyes as they are for your taste buds.

Our collection of various infusers are the perfect match when brewing green teas, rooibos teas and herbal teas which have become more and more popular. Here, the brewing process does not necessarily need interruption and the leaves can be left to swirl freely in the infuser to develop their full flavor. The filter with the tea leaves inside can be removed to stop the brewing process and used again to re-infuse quality loose leaf tea a second time. Green tea for example can be reused for up to four times, taken that it is a high quality loose leaf tea.

Tea Brewing Methods

The Tea Press

The tea press utilizes the same brewing system as the French press to allow for full control of the tea steeping process. Once your preferred coloring and strength is reached, you simply press down the plunger and seal the tea leaves into the bottom part of the filter that has no holes. This makes the brewing process stop with one easy push and you can discard or re-use the tea leaves after you have enjoyed your beverage. Silicone rim secures filter firmly into the teapot and stays cool to the touch for safe removal.

Note: All loose leaf teas are suitable for the BODUM® tea press. The tea press works best with fruit teas and black tea because it interrupts the brewing process – avoiding bitterness.

Tea

The Tea Infuser

Tea leaves can be left to swirl freely in the infuser to develop their full flavor, and can be left to brew without interruption. The filter, along with the tea leaves, can be removed at any time to stop the brewing process and can even be used a second time to re-infuse quality loose leaf tea. The highest quality green tea, for example, can be reused up to four times.

Note: The tea infuser is ideal for green, rooibos and herbal teas, allowing you to view the tea as it brews. The lid keeps tea warm while brewing and it doubles as a trivet to protect surfaces from drips.

Parts of The Tea Press

Lid – During the brewing process, place the lid with the plunger on top of the tea filter to retain heat during and after the tea brewing process. The lid is attached to the plunger and made of high-polished stainless steel.

Plunger – To stop the brewing process, simply press down the plunger made of stainless steel with the tip of your finger. The knob is made of a heat-resistant plastic and will keep your fingers from getting burnt.

Silicone rim – The coronated, elastic silicone rim improves the combined benefits of a glass pot with a stainless steel filter. It provides a universal fit between teapot and tea filter and it keeps your fingers from getting burnt and the tea filter from falling out when pouring hot beverages.

Plunger – Depressing the plunger keeps the hot water away from the tea in order to stop the brewing process entirely. It is made of heat-resistant plastic and silicone. The silicone gasket ensures a clean performance.

Perforated strainer – The perforated strainer ensures that leaves and kernels remain within the strainer while brewing. The filter basket is made of stainless steel.

Glass Pot – Most of BODUM® tea presses feature a durable borosilicate pot. Borosilicate glass is an outstanding material: It is ultra-light and strong, has great heat resistant properties, and will not get cloudy in the dishwasher.

Varieties of Tea

Black Tea

PAVINA, p. 78

90–96 °C
195–205 °F
2–3 min

One of the most known varieties of tea is black tea. It is made from the teaplant *camellia sinensis/assamica* and amongst the most popular in Europe and North America. After harvest, the tea leaves are allowed to oxidize to the fullest, so that the freshly plucked leaves slowly turn brownish and darker. The flavour is usually stronger, than other types of tea, but can also vary from light and floral himalayan first flush to strong and malty assam teas.

Green Tea

BISTRO, p. 82

70–80 °C
158–175 °F
1–2 min

The freshly plucked leaves of the tea plant *camellia sinensis* must be heating directly after harvest, to prevent the leaves from oxidization and becoming black tea. Traditionally heating in iron pans in China, the Japanese have developed a hot water steam heating to prevent the tea from burning. Both methods create a distinct flavour for each region, that can vary from light, floral, sweet to full bodied and slightly toasted.

White Tea

BODUM® CANTEEN, p. 80

70–80 °C
158–175 °F
4–6 min

Coming from the same plant as green or black tea, white tea is the one with the least human effect during production. Only the youngest and most fragile buds are harvested by hand and left to dry under the sun. No oxidization or heating is done to preserve the full natural character of the white tea. The name derives from the fuzzy white appearance of the young tea leaves.

Oolong Tea

SKÅL, p. 84

90°C
195°F
3 min

Somewhere in between black and green tea production lies the truth about oolong tea, which is a partly-oxidized tea. Whereas the green tea is not oxidized at all and the black tea is fully oxidized, the oolong tea varies from very light oxidation (closer related to green tea), up to heavy oxidation and characteristics of a black tea. Oolong tea is commonly used to prepare multiple infusions and a traditional part of the Chinese tea ceremony.

Rooibos Tea

PAVINA, p. 78

90–96°C
195–205°F
5–6 min

Only a very limited area in the Cedar mountains, in the heart of South Africa is capable of providing the right soil and climate to grow rooibos. Being used for centuries by the local people, the rooibos cultivation and processing started only a few hundred years ago. Now the bush is treated nearly the same way, as it has been for decades. The bush is allowed to ferment after harvest, giving the tea its distinctive sweet and red cup.

Fruit Tea

TITLIS, p. 83

90–96°C
195–205°F
5–6 min

Commonly used in Europe, dried fruit pieces and other parts of suitable plants have been brewed with hot water into fruit tea – or tisane – for thousands of years. The basic fruit tea consists of apple, orange, hibiscus and rosehip and is given a special twist with whatever exotic fruits and ingredients is added to it. Fruit teas are naturally caffeine free and make the perfect iced teas for children!

BODUM® COLUMBIA & EILEEN

Tea Presses

BODUM® COLUMBIA pairs utility with timeless elegance. Highly polished stainless steel and classic design make this the perfect choice for entertaining and gifting. The French press brewing system allows for full control over the tea steeping process. The silicone plunger locks the tea leaves into bottom of the filter once brewing is complete, cutting off access of water to the tea leaves. This allows tea to be used multiple times.

ASSAM

Tea Presses

The ASSAM Tea Press is the icon among the wide variety of BODUM® Tea Presses. Its classic round shape and borosilicate glass let all teas shine in their best light. Contrary to non-transparent pots, the glass pot allows the distinct color palates to be viewed as they are a big part of any tea lover's delight. There is also a very practical reason for making glass the preferred staging ground for your teas: You have precise control over the extraction and strength of the tea as the color's intensity indicates how far along in the brewing process.

BODUM® premiered its line of double wall glasses in 2002. The inventive design coupled with timeliness style made these glasses an instant classic. Over the past ten years, the collection has earned numerous awards and expanded to include a variety of styles and sizes. Made of heat-resistant borosilicate glass, and individually mouth-blown by expert artisans, the double wall construction creates a highly effective layer of insulation. Hot drinks stay hot longer, while the glass remains cool to the touch, and cold drinks stay cold without producing messy condensation. The result is endless serving possibilities.

The patent pending hydrophobic silicone vent at the bottom of each glass equalizes pressure within the walls of the glass with the outside air pressure. The glass will self-adjust to any temperature liquid, and the vent is only permeable to air, not water, so whether your beverage is hot or cold it will never allow fluids into the interior of the glass layers.

Double wall thermo-glasses are made of heat resistant, mouth-blown borosilicate glass. The double walls create a highly effective layer of insulation that keeps hot drinks hot without burning your fingers and cold drinks cold without that messy condensation.

The BODUM® Double Wall Glasses have won the following awards:

reddot design award
winner 2006

reddot design award
winner 2005

Every Double Wall Glass is mouth-blown by expert artisans, and therefore each may have slight differences in height, thickness, and weight. To preserve the longevity of the glass, please follow recommended usage & care instructions.

Double Wall Glasses that Breathe!

A silicone vent at the base of each of BODUM®'s Double Wall Glasses equalizes the air pressure between the two layers of glass when either hot or cold liquids are added. Permeable only to air, never water, the vent enhances durability and will never allow liquids to enter between the two layers.

Usage & Care

Dishwasher safe

Withstand washing without clouding! Do not place glasses into a crowded dishwasher.

Microwave and oven safe

Up to 350 °F/180 °C.

Fragile

Avoid the use of metal spoons to prevent the inner layer from fracturing.

Ice

Add ice after the liquid and avoid the use of automatic ice dispensers.

Discard if broken

If fracturing of glass occurs, discard immediately to prevent injury.

GROW GREEN
Sprout Jar

The GROWN GREEN Sprout Jar is perfect for harvesting your favorite seedling at home. Disassembles into five parts for easy cleaning and dishwasher safe.

STEP 1
Soak

Add 1-3 tbsp of seeds to the glass jar. Add enough cold water to completely submerge the seeds. Leave the seeds to soak of a minimum of 8 hours.

STEP 2
Rinse

After soaking, place the lid with fitted sleeve insert on the glass jar and pour the water out. To empty the glass hold it at a slight angle. Rinse the seeds until the water runs clear. Rinse seeds twice daily to prevent the formation of mold.

GROW GREEN **Sprout Jar**
1.0l, 34 oz 11486-01

STEP 3

Sprout

Place the sprouting jar in a warm, bright place away from direct sunlight. Move the seeds around in the sprouting glass frequently to keep them loose. Place the sprouting jar upside-down on a drip tray to allow the remaining water to run out of the sleeve insert.

STEP 4

Enjoy!

The seedlings will be ready to harvest after just a few days (allow roughly 3–5 days). Wash the seedlings prior to consumption, and store them in the refrigerator for a maximum of 3 days. Enjoy in salads, soups or sandwiches!

BISTRO

Cookware Accessories

Cooking, serving and storage in one: It can't possibly get any easier than this. The HOT POTS are made from heat-resistant borosilicate glass – perfect for the oven. Their lines are of classic simplicity – perfect for the table. Put the silicone lid on top – and they're perfect for the fridge or the freezer. The silicone lid is heat resistant up to 220°C/428°F.

Napkin & Paper Roll Holders

Kitchen

BISTRO Napkin Holder 11231-913

Made from rubber-coated plastic, stainless steel, and silicone. It comes with a weight that keeps your napkins in place.

BISTRO Paper Roll Holder 11232-913

The stainless steel arm is grounded in a silicone base and keeps up the pressure down to the last sheet of paper – it even works for various size paper rolls.

BODUM®'s first FYRKAT Grill was introduced in 1961 with the launch of the FYRKAT Cone Grill. Since then, we have refined our offering to focus on compact grilling. We saw a real need to bring good design to the aesthetics of BBQ and created our Charcoal Picnic Grill. The Picnic Grill is perfect for urban grilling and easily transportable for spontaneous beach parties.

FYRKAT

Charcoal Grill

Grill on the go with the sleek, portable FYRKAT Charcoal Grill. Ideal for picnics in the park or small space living but large enough to fit 4 burgers or small filets. The sleek chrome-plated finish adds strength and durability to the steel body and legs. The silicone handle stays cool to the touch and adjusts air flow into the grill while in use. The clips lock lid into place for easy and safe transport. Removable cooking rack easily transports to the sink or dishwasher for cleaning. Metal bowl captures grease while controlling heat for safe use on most outdoor surfaces.

b.over Coffee Maker

The b.over Coffee Maker sets new standards in coffee making: Excellent, full-bodied taste without capsules or paper filters!

- The water gets quickly funneled through a tempered glass tube from the water tank to the shower head, consequently preventing heat loss and conserving the ideal water temperature.
- A large shower head replaces the traditional drip system: The water spreads evenly over the ground beans and evenly extracts, resulting in a balanced, flavorful cup.
- The coffee brews at its ideal temperature as a result of the powerful heating element.
- The permanent, titanium-plated filter is fine-meshed for ultimate aroma delivery – no more paper filters that hold back the essential oils needed for a full-bodied aroma.
- Very quiet and quick – your coffee is ready in less than 6 min.

⊗ No paper filter! ⊗ No capsule!

Capacity 10 cup, 1.2l, 41oz

Measurements 220 × 310 × 400 mm

Material Plastic, rubber, stainless steel, steel, stainless steel titanium plated, tempered glass, die-cast, aluminium non-stick coated, silicone

Revolutionary silicone head uniformly showers the water onto the ground coffee and thus avoids too strong central flow. It brings consistent extraction for a balanced flavor.

The handles are covered in rubber, for better grip and cool touch.

Special lid keeps the jug closed tight.

The fine titanium-plated filter allows the slow release of all the aroma.

Tempered glass tubing maintains heat without affecting flavor of coffee as plastic does.

Clean and safe. Smart lock under the filter prevents hot coffee from dripping when the jug is removed.

Powerful spiral heating element. Die-cast aluminium with non-stick coating.

Double wall stainless steel carafe 1.2l keeps coffee hot without need for warming plate. Coffee stays hot without getting bitter.

BISTRO

Electric Coffee Dripper

This coffee maker combines the BODUM® way of making coffee that is the French press with the ease-of-use of an electric coffee machine: Indulge in a full-bodied flavorful cup of coffee.

- The jug's lid comes with a bayonet cap with a silicone washer for even better insulation and leakage prevention.
- The jug is made of taste-neutral and robust borosilicate glass held by a plastic frame which protects the glass. The jug is dishwasher safe.
- Automatically brews up to 4 cups of French press coffee from start to finish.
- Water travels from the tank on the right and is distributed over ground coffee in the carafe on the left. Once brewing process is complete, use the plunger to trap grounds at base, pour and enjoy.
- Power switch control with auto shut-off.
- Gentle warming plate keeps coffee hot.

⊗ No paper filter! ⊗ No capsule!

Capacity 4 cup, 0.5l, 17 oz

Measurements 110 × 222 × 210 mm

Material Plastic, silicone, stainless steel, borosilicate glass

Rating Europe 450–550 W,
220–240 V, 50/60 Hz

Burr Coffee Grinder

Grinder crushes beans between stainless steel conical burrs rather than slicing them which preserves bean's intrinsic flavor and aroma.

- This space-saving grinder holds an amazing 220gr of coffee and therefore allows for larger quantities in one go.
- 12 settings allow you to grind from a coarse French press to a fine espresso with the ability to micro-adjust between settings.
- Programmable time function for even easier handling.
- The cone-shaped grinder allows for quick and even grinding.
- The wide open funnel prevents spilling of the beans.
- Tightly fitting plastic lid keeps the grounds from spilling.
- Equipped with a friction clutch, preventing damage to the grinding gear by the presence of small stones.

Measurements 120x156x275 mm
