

Network and manage remote digital signs from anywhere.

Easily change what's being displayed on your digital sign without having to physically go to the controller with BrightSign Network Manager. This hosted networking service makes delivering remote content to one or one hundred units a breeze. It uses secure Web-based technologies and includes a straightforward interface with tools to create presentations, schedule updates, create and manage networking groups, and review reports. BrightSign Network Manager also offers network health monitoring, as well as fail-safe features to ensure BrightSign controllers stay up and running even under the worst circumstances. This complete network hosted service is scalable from small to large networks, and is affordable enough to implement. Take advantage of the convenience and piece of mind that networked digital signage provides with BrightSign Network Manager.

Benefits

- Connects a few or many BrightSign units with a simple Internet connection
