

FCC Statements

The radiated output power of Dell wireless WLAN card devices is far below the FCC radio frequency exposure limits. Nevertheless, the device should be used in such a manner that the potential for human contact during normal operation is minimized. To avoid the possibility of exceeding the FCC radio frequency exposure limits, you should keep a distance of at least 20 cm between you (or any other person in the vicinity) and the antenna that is built into the device.

To determine the location of the antenna within your portable computer, check the information

- posted on the general Dell support site at <http://support.dell.com/>.

These devices have also been evaluated and shown to comply with the FCC RF exposure limits under portable exposure conditions (antennas are within 20 cm of a person's body) when installed in certain specific OEM configurations. Details of the authorized configurations can be found at

- <http://www.fcc.gov/oet/ea> by entering the FCC ID number on the device.

5 GHz Statements

These devices are restricted to indoor use because they operate in the 5.15 to 5.25-GHz frequency range. The FCC requires such products to be used indoors for the frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference to co-channel Mobile Satellite systems.

- High-power radars are allocated as primary users of the 5.25 to 5.35-GHz and 5.65 to 5.85-GHz bands.
- These radar stations can cause interference with or damage to these devices, or both.
