

FCC Statements

The radiated output power of Dell wireless WLAN card devices is far below the FCC radio frequency exposure limits. Nevertheless, the device should be used in such a manner that the potential for human contact during normal operation is minimized. To avoid the possibility of exceeding the FCC radio frequency exposure limits, you should keep a distance of at least 20 cm between you (or any other person in the vicinity) and the antenna that is built into the device.

- To determine the location of the antenna within your portable computer, check the
- information posted on the general Dell support site at <http://support.dell.com/>.

- These devices have also been evaluated and shown to comply with the FCC RF exposure limits under portable exposure conditions (antennas are within 20 cm of a person's body) when installed in certain specific OEM configurations. Details of the authorized configurations can be found at <http://www.fcc.gov/oet/eq> by entering
- the FCC ID number on the device.

5 GHz Statements

- These devices are restricted to indoor use because they operate in the 5.15 to 5.25-GHz frequency range. The FCC requires such products to be used indoors for the frequency range 5.15 GHz to 5.25 GHz to reduce the potential for harmful interference
- to co-channel Mobile Satellite systems.

- High-power radars are allocated as primary users of the 5.25 to 5.35-GHz and 5.65 to 5.85-GHz bands. These radar stations can cause interference with or damage to these
- devices, or both.
