Memory cards or a USB Flash memory drive folder structure

To avoid errors, remember the following points:

- The image file extension must be .JPG (Other image file extensions like .JPEG, .TIF, .GIF and so on will not be recognized).
- Walk-up PhotoCapture Center® printing must be performed separately from PhotoCapture Center® operations using the PC. (Simultaneous operation is not available.)
- IBM Microdrive™ is not compatible with the machine.
- The machine can read up to 999 files on a memory card or USB Flash memory drive.
- CompactFlash® Type II is not supported.
- This product supports xD-Picture Card™ Type M / Type H (Large Capacity).
- The DPOF file on the memory cards must be in a valid format. (See *DPOF printing* on page 103.)

Please be aware of the following:

- When printing the INDEX or IMAGE, the PhotoCapture Center® will print all the valid images, even if one or more images have been corrupted. The corrupted image will not be printed.
- (memory card users)
Your machine is designed to read memory cards that have been formatted by a digital camera.

When a digital camera formats a memory card it creates a special folder into which it copies image data. If you need to modify the image data stored on a memory card with your PC, we recommend that you do not modify the folder structure created by the digital camera. When saving new or modified image files to the memory card we also recommend you use the same folder your digital camera uses. If the data is not saved to the same folder, the machine may not be able to read the file or print the image.

This machine supports USB Flash memory drives that has been formatted by Windows®.

If your digital camera supports DPOF printing, you will be able to choose on the digital camera display the images and number of copies you want to print.
