

Electronic Keyboard

USER MANUAL

**Please read this instruction
manual carefully before use**

Safety Precautions

Sign

For your proper use of this musical instrument and prevent any physical injury and property loss to the user and other people, the manual and musical instrument have some safety signs. The signs and their implications are as follows:

Danger

The sign indicates that if the user ignores the sign and operates the instrument improperly, it may result in death or badly injury.

Warning

The sign indicates that if the user ignores the sign and operates the instrument improperly, accidents of death or physical injury may occur.

Notes

The sign indicates that if the user ignores the sign and operates the instrument improperly, accidents of physical injury or other property loss may occur.

Examples of these signs

This triangle mark (△) indicates the precautions for the user. (The sign on the left means "Be Caution against the Electric Power".)

The sign of a circle with oblique crosses (⊘) indicates something for forbiddance. The graph within the sign or beside the sign means the specific forbiddance. (The sign on the left means "Prohibited Disassembly".)

Black dot (●) indicates something for observance. The graph within the sign means the specific observance. (The sign on the left means that the power plug must be pulled out from the plug.)

Fingered Chord List

Danger

Alkaline battery

In case that the battery electrolyte leaked from the alkaline battery drop into the eyes, please follow the instructions below immediately.

1. Do not rub your eyes! Wash your eyes with clean water at once.
 2. Consult a doctor immediately.
- If not clean out, the battery electrolyte in your eyes may result in blind.

Warning

Smoke emission, peculiar smell and overheating

When the electronic organ emits smoke, let out peculiar smell or overheat, continuous use of the electronic organ may lead to fire accident or electric shock. If these accidents occur, please follow the instructions below immediately.

1. Turn off the power.
2. If the power is supplied by the alternating current transformer, pull out the plug from the wall socket at once.
3. Contact your sales agency.

Alternating Current Transformer

- Improper use of the alternating current transformer may result in fire accident or electric shock. Please follow the instructions below strictly.
- Use the alternating current power supply within the range of output voltage and rating voltage in the alternating current transformer.
- Do not overload any power sockets and extension cord sets to overload.

● Improper use of power cord of the alternating current transformer may result in its damage or fracture, which may lead to fire accidents and electric shocks. Please follow the instruction below.

- Do not put any heavy objects on top of the power cord or exposure to heat.
- Do not attempt to alter or over bend the power cord.
- Do not wrest or pull the power cord.
- If the power cord or plug is damaged, please change it with the same specifications.
- Do not touch the alternating current transformer with a wet hand, or it may result in electric shocks.
- Please use the alternating current transformer and avoid spraying water on it. Any water may result in fire accidents and electric shocks.
- Do not put a vase or vessel that filled with water on top of the alternating current transformer. Any water may result in fire accidents and electric shocks.

Battery

Improper use of the battery may result in liquid leakage, which will corrode the components around the battery or blast. It may result in fire accidents and physical injury. Please follow the instructions below strictly.

- Do not attempt to dismantle or make it short circuit.
- Do not expose it to fire source or cast it away in the fire.
- Do not mix old and new batteries.
- Do not mix alkaline, standard (carbonzinc) or rechargeable (nickel cadmium) batteries.
- Do not charge the batteries.
- Put the anode (+) and cathode (-) ends of the batteries correctly.

Safety Precautions

Do not cast it away in the fire, or it may result in blast and fire accidents and physical injury.

Water and other extraneous substances

Water, other liquid or sheet metal enter into the products may result into fire accidents and electric shock. If these accidents occur, please follow instructions below immediately.

1. Turn off the power.

2. If the power is supplied by the alternating current transformer, pull out the plug from the wall socket at once.

3. Contact your sales agency.

Dismantle and Alteration

Do not dismantle or alter the product by any means. otherwise, the electric shock, scald or physical injury may occur. Consign all the internal inspection, modulation and process of maintenance to your sales agency.

Dropping off or impact

If the product is damaged by dropping or intensive impact continuous use may result in fire accidents and electric shock. If these accidents occur, please follow instructions below immediately.

1. Turn off the power.

2. If the power is supplied by the alternating current transformer, pull out the plug from the wall socket at once.

3. Contact your sales agency.

Plastic bag

Do not place the bag on head or put it into mouth, or it may result in choke. Family with children should pay extra attention.

Keep a space from the product and the stand

Climbing the electronic organ or its brackets may overturn or damage it. Family with children should pay extra attention.

Location

Avoid placing the product on the unstable bracket, on uneven surface or any other unstable place. If not, it may cause the product to topple and may result in injury.

Note

Alternating Current Transformer

● Improper use of the alternating current transformer may cause fire accidents and electric shock. The instruction below should be followed strictly.

● Do not put the power cord near an oven or other heat sources.

● When removing from the wall socket, grasp the main adaptor body, do not pull the cord.

● Improper use of the alternating current transformer may cause fire accidents and electric shock. The instruction below should be followed strictly.

● The alternating current transformer plug must insert to the power socket fully.

● Remove the adaptor from the wall socket during storms, before travel or when leaving for long periods.

● Remove the adaptor from the wall socket at least once per year and clean any accumulated dirt from around the connecting pins.

Removal of the product

Before removing the product, pull out the plug of the alternating current transformer from the wall socket. disconnect all the electric cable and connecting wires. Otherwise it may result in the damage of the wire and cause fire accidents and electric shock.

Cleaning

Before cleaning the product, pull out the plug of the alternating current transformer from the wall socket. Otherwise it may result in the damage of the wire and cause fire accidents and electric shock.

Battery

Improper use of the battery may cause fluid leakage, corrosion to surrounding parts, explosion or may result in fire accidents and physical injury. Please follow the instructions below strictly.
● Put the anode (+) and cathode (-) ends of the batteries correctly.
● Remove the battery if unused for a long time.

Interface

The interface of this product should only connect the designated equipment or device. Otherwise, it may cause fire accidents and electric shock.

Location

Avoid placing the product in the following places. Otherwise, it may cause fire accidents and electric shock.
● High temperature or dusty places.
● Kitchen or other places with oily smoke.
● Adjacent to an air conditioner, electric blanket, direct sunlight, in a vehicle in the sun, or any other location that may cause the keyboard to heat up.

Display Screen

● Do not press or impact intensively on the LCD panel, otherwise, the glass on the LCD board will be broken and cause injury.
● Once the LCD board is found broken or fractured, do not touch the fluid. It may cause inflammation.
● In case the liquid of the LCD board enter your mouth, rinse out the mouth with clean water and look for a doctor immediately.
● In case the liquid of the LCD board enter your eyes or skin, clean your eyes or skin for at least 15 minutes and look for a doctor immediately.

Volume

Do not play music at maximum volume for a long time. Pay special attention when using earphone. High volume may damage hearing.

Precautions for health

Although extremely infrequent, some people may suffer muscle malady, lose consciousness or other physically disabled when being exposed on the strong light or flashing light suddenly.
● If you suspect that you may suffer the above symptoms, do consult the doctor before using the product.
● Please use the product in a well-ventilated area.
● Stop using the product and medical attention if you feel the above symptoms.

Safety Precautions

Heavy Objects

Do not put any heavy objects on top of the product and overloaded, which will overturn the product and the object above will drop off. It may cause physical injury.

Correct assembly of the keyboard stand.

Incorrect assembly method may overturn the product, which may cause physical injury.

Therefore, for installing the stand correctly follow the keyboard stand assembly instructions.

Important!

- If any the following situations occur when using batteries,replace the batteries immediately or use the AC power Supply.
- The power light is dim.
 - Unable to turn on the power of the electronic organ.
 - The display screen is dim, hard to read the words.
 - The volume of the loud speaker/earphone is low.
 - Voice output distorts
 - When playing in high volume, it is interrupted sometimes.
 - When playing in high volume, the power is cut down abruptly.
 - When playing in high volume, the display screen is dim.
 - After loosening the piano keyboard, the tone has still echo.
 - The tone is completely different.
 - The rhythm and demonstration songs are play abnormally.
 - The volume of microphone is particularly low.
 - Microphone output distorts.
 - When using microphone, the power light is dim.
 - When using microphone, the power is cut down abruptly.
 - When performing the materials received from the computer, the power is cut down abruptly, the sound distorts or the volume is too low.

State Setting

State Memory

State memory function can record the tone, rhythm, tempo you need to change and the related parameter setting when playing, which enables you to change directly when using.

Store / transfer memory parameter

- ① Press "MEMORY" button while "M1" or "M2" is pressed at the same time, and you can store the current setting in the corresponding position.
- ② Then once you press "M1" or "M2", the setting that is stored in the memory state will be transferred to take the place of the current state.

Notice !

- The state memory will be cleared automatically after turning off power.

Function Features

- LCD Multifunctional Display
- 61 Standard Velocity Keys
- 200 Rhythms
- 160 Tones
- Music Library With 36 Demos
- 61 Keyboard Drums
- Numerical Coding/ Data Wheel Selection Function
- Volume / Tempo Control
- Note Recording / Playing
- Rhythm Programming
- Single / Fingered / Full Accompaniment Chord
- Introduction/postlude/interlude Auto Accompaniment Function
- Fade In / Fade Out
- Rhythm/chord Accompaniment Synchro
- 2 Lesson Modes
- Velocity Control
- Sustain / Vibrato
- State Memory/one-touch Setting
- Pitch Wheel
- Sustain Pedal
- Usb Interface
- Mike/earphone/stereo Dual-channel Output Interface
- AC/ DC Power Supply

Using Keyboard Velocity Sense Function

This keyboard is velocity sensory, when "TOUCH" function is on, the relative volume of the electronic output sound shall be in accordance with the velocity of the keys pressed, so that you can play music of various volume and feelings.

① Press "TOUCH" button, and start the velocity sense function.

② Press "TOUCH" button again, and close the sense function.

- When the electronic keyboard is on, the velocity sense function is started automatically.

Sustain Effect Control

Press "SUSTAIN" button, and then the sound of playing one the keyboard contains obvious sustain effect. Once pressing "SUSTAIN" button again, the sustain effect function will be closed.

- The sustain function is only available for the instruments with longer tone.

Vibrato Effect Control

Press "VIBRATION" button, and then the sound playing on the keyboard contains obvious waving effect. Press "VIBRATION" button again, and the vibrato effect function will be closed.

- Vibrato function is very important when playing the stringed tone demos such as erhu, guitar, and violin. The vibrato effect produced makes the instrument tone more vivid.

Using Pitch Wheel

Using pitch wheel can obtain glissando with turning up and down. When moving it, you will find that its pitch adjustment is gradual-changing pattern, and it can almost show every tiny tune between the original pitch and final pitch. The changing range is + - 2 semitones. When you release the pitch wheel, the pitch will return to normal.

- You can use pitch wheel to imitate the glissando effect of guitar, violin, sax, erhu, suona etc. making your play more vivid.

Transposing Effect Control

This function enables you to regulate the range of the whole keyboard with semitone as a unit without changing performance.

- Press " TRANSPOSE -" or " TRANSPOSE +" to regulate the pitch of the keyboard. The range is 12 semitones.
- This range is also available for keyboard and auto chord accompaniment.

Setting

Using Note Recording / Playing

- ① Press "RECORD" button, and enter note recording mode, while producing the sound of metronome . The default tempo is 120, then you can start recording notes after pressing any key on the keyboard.
- ② Play demo on the keyboard as your will and record, and 150 notes can be recorded at most.
 - The complexity and length influence the number of the notes recorded.
- ③ Press "R-PLAY" button and play the notes recorded.
 - In note recording mode, it can produce sound to key drum in, but only the notes other than the drum are recorded.
 - Every time when pressing "RECORD" button, the last memory will be deleted and enter the recording mode again.
 - When playing the recorded notes, you can press "START/STOP" button to stop producing sound and clear record, and close the mode at the same time.

Using Rhythm Programming / Playing

- ① Press "PROG" button, and enter the rhythm programming mode, while producing the sound of metronome.
- ② Edit the percussion on the keyboard as your will.
- ③ After editing, press "P-PLAY" button and the percussion edited is played.
 - Under rhythm programming mode, it can produce sound to key scales in, but only the percussions other than the scales are recorded.
 - Every time when pressing "PROG" button, the last record will be deleted and enter the rhythm programming mode again.
 - When playing the edited percussion, you can press "START / STOP" button to stop sound, delete records and close this mode.

Using Keyboard Percussion Function

Press "DRUM" button to convert the keyboard into drum keyboard. Press "DRUM" button again to close the function.

Lesson Mode

The lesson mode shows you learning to play demos on the electronic keyboard through the following two steps.

Lesson A- mastering time

During the lesson, press any key on the keyboard and you can have the right notes, so that you can focus on mastering right time, without worrying about searching. The counter melody (obbligato) will wait for you and do not go for next until pressing key.

- ① Select the demo to be used in the music library.
- ② Press "LESSON A" button to start playing.
- ③ Press any key of the keyboard to play the melody.
 - The accompaniment will wait for you pressing any key and playing notes and then go on next.
 - When several keys are pressed synchronously, they are considered as only one melody note. When pressing a key after another one is pressed at the same time, they are considered as two melody notes.
- ④ After playing, or when you press "LESSON A" button again, mastering time function is closed.

Lesson B- mastering melody

During this lesson, you can know fingers to be used according to the information on the screen, so that you can learn following your own path.

- ① Select the demo to be used in the music library
- ② Press "LESSON B" button to start playing.
- ③ Follow the information on the screen, and press the corresponding keys to play the melody.

Music Library

Using Music Library

The built-in music library of the electronic keyboard includes 36 demos. The built-in demos can be used for playing, and auto accompaniment playing. You can select a demo, excluding its melody part, adopt learning function to follow the rhythm and play on the keyboard. The rhythm and accompaniment fingering will be showed on the screen of the electronic keyboard.

Notice !

- Every time you open the electronic keyboard power, the initial demo in the music library is that numbered 00.

Play the demo in the music library.

- ① Find out the demo to be played in the list of the music library and record its number.
- ② Press "SONG " button to start selecting the demo.
- ③ Input the demo to be played by "NUMERICAL CODING" buttons or rotating the "DATA WHEEL", the screen will display the number and name of the selected demo.
 - Pressing "+ -" buttons can also add or subtract the number of the displaying demo.
- ④ Press "DEMO" button to start playing the demo.
- ⑤ Press "START / STOP" button or "DEMO" button to stop playing the demo.

Installation Of Music Stand

Auto Accompaniment

Introduction / Postlude / Interlude Pattern

Introduction / postlude / interlude can provide some interesting changes for your performance. The following operation steps show you how to use.

How to fill in interlude

- ① Pressing "START / STOP" button to start playing the rhythm.
- ② Press interlude "FILL-IN" button and then you can fill in interlude pattern into the rhythm in use.

How to fill in introduce / postlude

- ① Press "RHYTHM" button firstly and enter rhythm selection mode. Then input the selected rhythm with "NUMERICAL CODING" button, or "data wheel".
- ② Pressing "INTRO / END" button to fill in introduction pattern for the rhythm.
- ③ When playing the rhythm, press "INTRO / END" button and you can fill in finishing postlude pattern into the rhythm in use and leave a great ending.

Using Synchro Start

You can set the electronic keyboard to start playing the rhythm synchronously while you are playing the accompaniment on the keyboard. The following steps introduce how to use synchro start function. You shall select the rhythm to be used, set tempo value and select chord accompaniment mode before starting.

How to use synchro start function

- ① Under the situation of chording, press "SYNC" button so that the electronic keyboard stands by for synchro start, and the screen will display as "SYNC".
- ② Play the chord, and the interlude pattern will be played automatically.
- ③ It is available to cancel synchro after pressing "START / STOP" button.

Auto Accompaniment

Adjusting Tempo

BPM (beats per minute) can be set in a range from 30 to 240, and the tempo value you set will be used for playing rhythm, rhythm program and chord.

How to adjust tempo

Please use "TEMPO" button to set tempo, and the default is "120 BPM"

- △: Turn up tempo value
- ▽: Turn down tempo value

TEMPO= 120

Using Chord Accompaniment

This electronic keyboard includes single finger accompaniment chord / fingered accompaniment chord / full accompaniment chord playing systems, the following steps introduce how to use the chord function of electronic keyboard. You shall select the rhythm to be used and set the tempo value before starting.

How to use single finger / finger chord accompaniment

- ① Pressing "START / STOP" button to start playing the rhythm selected currently.

- ② Press "SINGLE" button or "FINGER" button to start chord, and the screen will display the current chord type.
- ③ Play chord
 - Playing on the accompaniment keyboard (1-19 keys from the left) according to different fingerings.
- ④ Press "CHORD OFF" button to stop chord.

Auto accompaniment keyboard

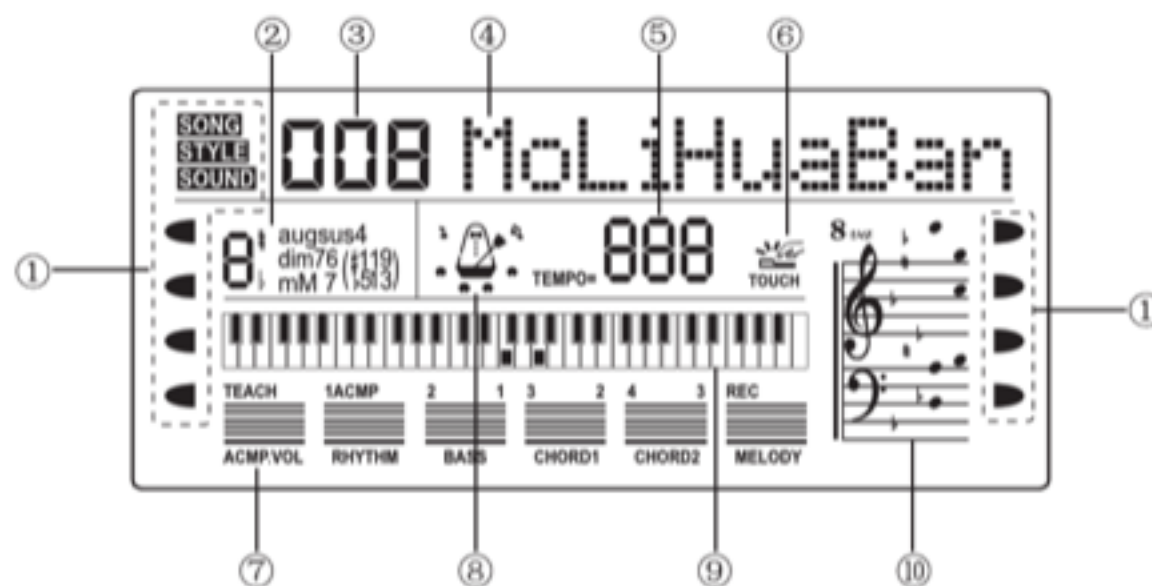

- Accompaniment keyboard is used only to play chord. If you attempt to play sole melody notes, no sound will be produced.

How to use full chord accompaniment

- ① Pressing "START / STOP" button to start playing the rhythm selected currently.
- ② Press "FULL CHORD" button to start chord, and the screen will display the current chord type.
- ③ Play chord
 - Playing on the accompaniment keyboard (including all keys) according to different fingerings.
- ④ Press "CHORD OFF" button to stop chord.

Screen Indication

- ① Dynamic indicator running currently
- ② Chord indicator
- ③ Number of tone / rhythm / demo
- ④ Name of tone / rhythm / demo / mode / keyboard
- ⑤ Tempo of rhythm / auto accompaniment / demo in music library
- ⑥ Velocity sense indicator
- ⑦ Rhythm / auto accompaniment / volume value / audio output value
- ⑧ Tempo of rhythm / auto accompaniment / demo in music library
- ⑨ Graphic keyboard that shows the note and chord that played on the keyboard or demo in music library plays
- ⑩ Display the staff of notes and chords you play on the keyboard

NOTICE !

- The screen samples in the illustrations of this user manual are only used for demonstration, the actual characters and values showed on the screen may differ from samples of this user manual.

Power

The power of the electronic organ can be supplied by the wall sockets for standard indoor (alternating current transformer with the same specification parameter) or batteries. If the electronic organ is not used, please turn off the power.

Using Battery

Before fitting of changing the batteries, make sure to turn off the power of the electronic organ.

How to fit the batteries

A Take off the cover of the batteries.

B Put six D type batteries in the battery tray.

- Fit the batteries in the right direction.

C Insert the battery tray into the initial place and cover the battery cover.

The built-in functions are tremendous and they often fail to response. Or if you fix or change the batteries while the power is ON, the electronic organ may not work properly. In this case, you have to turn off the power of the electronic organ for regular work.

Important Precautions for Using the Batteries

□ The following states mean the battery is low. If any of the states it shows, please change the batteries as soon as possible.

- The power light is dim.
- Unable to turn on the power of the electronic organ.

- The display screen is dim, hard to read the words.
- The volume of the loud speaker/earphone is low.
- Voice output distorts.
- When playing in high volume, it is interrupted sometimes.
- When playing in high volume, the power cut down abruptly.
- When playing in high volume, the display screen is dim.
- After loosening the piano keyboard, the tone has still echo.
- The tone is completely different.
- The rhythm and demonstration songs are play abnormally.
- The volume of microphone is particularly low.
- Microphone output distorts.
- When using microphone, the power light is faint.
- When using microphone, the power is cut down abruptly.
- When performing the materials received from the computer, the power is cut down abruptly, the sound distorts or the volume is too low.

Warning

Improper use of the battery may result in liquid leakage, which will rust the components around the battery or blast. It may result in fire accidents and physical injury. Please follow the instructions below strictly.

- Do not attempt to tear open the battery or make it short circuit.
- Do not exposure it to fire source or cast it away in the fire.
- Do not mix use the fresh and worn batteries
- Do not mix use the batteries in different specifications.
- Do not charge the batteries.
- Put the anode (+) and cathode (-) ends of the batteries correctly.
- Release the battery if unused for a long time.

Auto Accompaniment

Selecting Rhythm

This electronic keyboard has 200 built-in rhythms, please select the rhythms you need according to the following steps

How to select rhythm

- ① Find out the rhythm you need in the rhythm list of the electronic keyboard and record the rhythm number.
- ② Press "RHYTHM" button, and turn to the rhythms selecting mode.

STYLE 00 8Bt_PoP1

- ③ The "NUMERICAL CODING" buttons can be used to select double-digit rhythms, or you can rotate "DATA WHEEL" to select rhythms. The screen will display the number and name of the rhythm selected.
 - To select three-figure rhythms, you need to press the "RHYTHM" button again, then the number on the screen will display as "1 - -", it will be available after pressing the last two numbers
 - It is available to add or subtract the rhythm number by pressing "+ -" buttons
- ④ Press "START / STOP" button to start playing the rhythm selected.
- ⑤ To stop playing is ok after pressing "START / STOP" button.

Rhythm volume Adjustment

Use "RHYTHM VOL" buttons to control the rhythm volume.

- △: Turn up the volume
- ▽: Turn down the volume

Using Fade In/Out

- ① When the rhythm stops, you press "FADE IN/OUT" button and then start the rhythm, the rhythm volume will be turned up gradually from low to high. When it reach the normal volume, "FADE IN/OUT" function will be closed automatically.
- ② When the rhythm is being played, you press "FADE IN/OUT" button and then the rhythm volume will be turned down from high to low gradually. When it reaches silence, "FADE IN/OUT" function will be closed automatically.

Basic Operation

Playing The Electronic Keyboard

This section will introduce you the basic operation of electronic keyboard

How to play the electronic keyboard

- ① Turn the "POWER" switch on, then the indicator light is on, the screen will display all functions of the electronic keyboard for 5 seconds, and only after that 5 seconds can you play normally.
- ② Set the volume in a proper position by the "VOLUME" rotary buttons
Clockwise: Turn up the volume
Anti-clockwise: Turn down the volume
- ③ Play music on the keyboard

Selecting Tone

This electronic keyboard has 160 built-in tones, please select the tone you need according to the following steps.

How to select the tone

- ① Find out the tone you need in the tone list of the electronic keyboard and record the tone number.

- ② Press the "TONE" button, and turn to the tone selection mode.
- ③ The "NUMERICAL CODING" buttons can be used to select double-digit tones, or you can rotate "DATA WHEEL" to select tones. The screen will display the number and name of the tone selected.
 - To select three-figure tones, you need to press the "TONE" button again, then the number on the screen will display as "1 - -", it will be available after pressing the last two numbers
 - It is available to add or subtract the tone number by pressing "+ -" buttons

Notice !

- Every time you open the electronic keyboard power, the initial tone is number 00 "Piano"

Power

Using AC Transformer

Please use the correct parameter of the alternating current transformer authorized by this electric piano. Its parameter: 12V 800mA

【rear face contact bar】

Please pay attention to the warning and the note when using the alternating current transformer.

Warning

Improper use of the alternating current transformer may result in fire accident or electric shock. Please follow the instructions below strictly.

- Adjust the alternating current power supply within the range of output voltage and rating voltage in the alternating current transformer.
- Do not use any power sockets and extension cord sets to overload.
- Do not put any heavy objects on top of the power cord or exposure to heat.
- Do not attempt to alter or over bend the power cord.
- If the power cord or plug is damaged, please change it with the same specifications.
- Do not touch the alternating current transformer with a wet hand, or it may result in electric shocks.
- Please use the alternating current transformer and avoid spraying water on it. Any water may result in fire accidents and electric shocks.
- Do not put a vase or vessel that fills with water on top of the alternating current transformer. Any water may result in fire accidents and electric shocks.
- Do not put a vase or vessel that fills with water on top of the alternating current transformer. Any water may result in fire accidents and electric shocks.

Note

Improper use of the alternating current transformer may result in fire accident or electric shock. Please follow the instructions below strictly.

- Do not put the power cord near an oven or other heat sources.
- When pulling off the power socket, one must not drag the power cord. The user must hold the body of the alternating current transformer.
- The power socket must insert the alternating current transformer fully.
- When thunder storm days or leaving for a long time, the alternating current transformer should be pulled off the power socket from the wall.
- Pull the power socket from the alternating current transformer, clean the dust around the plug at least once every year.

Important!

- Make sure to turn off the power of the electronic organ when connecting or cut off the alternating current transformer.
- The alternating current transformer will get hot when using for a long time. It is a normal phenomenon but not a failure.
- The built-in functions are tremendous and they often fail to response. Please turn off the power and turn on again and it will work properly.

Connection

Earphone/ Output Terminal

Before connecting with the earphone, make sure to lower the volume of the electric piano. After connecting successfully, you can adjust the volume to your taste.

When connecting the earphone, it will cut off the built-in loudspeaker output of the electronic organ. Therefore, it won't interrupt others when you play the music in midnight.

Audio Output Terminal

Before connecting with the audio amplifier, make sure to lower the volume of the electric piano. After connecting successfully, you can adjust the volume to your taste.

Audio connecting wire is available at the market, whose two ends have need-le shape plugs (i.e. VCD audio connecting wire) that connect the right & left sound channels with the amplifier of the musical instrument.

Note

When connecting an amplifier of other musical instrument, please adjust the volume lower and use the controller of the amplifier for the output of the volume.

Ch-15

Microphone Faucet

Insert microphone into MIC jack and you can sing songs with the built-in music of the music gallery and play while you sing.

Important!

- If not used, the power should be turned off and pull it off the electronic organ.

Squeaking Sound (Psophometric Noise)

The following cases may lead to squeaking sound (Psophometric noise).

- Cover the head of the microphone by hand.
- Put the microphone near the loud speaker.

When it utters squeaking sounds, please try to withdraw your hand to its bottom and take it far away from any loud speakers.

Connection

Sustain Terminal

Connect the Portamento pedal to ASSIGNABLE JACK Terminal, step the pedal to extend the voice.

USB MIDI Faucet

MIDI is short for Musical Instrument Digital Interface. MIDI is the standard connecting system for the communication between the electronic keyboard and musical instruments equipped with MIDI.

USB MIDI interface of this electronic keyboard can be used to connect with musical instruments and computers with MIDI. Play the electronic keyboard for the operation of playing, composing, editing, storage and so on, through the preinstalled musical softwares on the computer. The edited melodies and the built-in accompaniments of the musical softwares can be played or performed according with accompaniment melodies on the electronic keyboard connected with softwares.

- Connect the computer with the USB data line sold in markets, and start the power
- Install a musical editing software sold in markets, such as cakewalk, for the computer, and start the software. This electronic keyboard will be added into the hardware list of the musical software, and shall be set as default, therefore you can connect the electronic keyboard and the computer.
