In order to prevent unauthorized user from using your mobile phone, you can set a password to protect your mobile phone. If you select this function, you need to input the password every time when starting up your phone. Otherwise, you cannot unlock your phone, and cannot dial or answer phone calls. Also, your can deactivate this password.

In the case of you forgetting your password, you must contact your retailer or local authorized service center to unlock the password of your mobile phone.

4 Quick Use Guide

4.1 Call functions

In any country using digital GSM network, so long as you are in network covering range (to know it by examining the indication bar of the network signal intensity at upper left corner of the screen), you may use the emergency call function. If your network service provider offers no roaming service in this region, the screen will display "EMERGENCY CALLS ONLY", reminding you of making this kind of call. If you are in the network covering range, you may make emergent call without SIM card.

4.1.1 Make a call

The information scales displayed on the upper left screen indicate the intensity of network signal (of which 4 scales appeared indicating the strongest signal). The calling quality will be largely affected by the barriers, so the movement within small extension can improve the intensity of signal effectively.

Ways to enter into the call screen:

Dialing numbers:

In standby mode, please input the numbers in the cursor input box, and dial the number by pressing the dial key. The Mobile Phone support dual SIM cards, so you can press dial key to dial the selected number from SIM1 card and press left soft key to dial the appropriate number directly from SIM2 card.

• Dialing numbers in phonebook:

In standby mode, press right soft key to go to the phonebook menu. After find the contact, dial the number by pressing the dial key. 6 FAQ and Solutions

Before contacting your after-sales services provider, please conduct some simple inspections as below. In this way, you may save unnecessary maintenance time and costs.

FAQ	Causes and solutions
Unable to boot up	 Ensure you have pressed and held the Start key for at least 1 second; Check the battery for proper connection. Dissemble and reinstall the battery, and then try to restart the phone; Check whether the battery power has been used up. Please re-charge your battery.
Display information during startup	 Check the SIM card to see if the SIM card is correctly installed; Automatic lock function is checked. Enter the phone lock password before use; The PIN code is displayed. The PIN function has been checked. Enter the PIN code each time when the phone is started up; (For the first use, enter the PIN code provided with the

	 SIM card) Enter PUK code: If wrong PIN codes are entered for three times consecutively, the mobile phone will be locked. In this case, input the PUK code provided by the network
	service provider.
Poor voice quality	 Please check whether the volume control is suitable; When the phone is used in places with poor telecommunications, such as high rises or basement, the radio wave cannot be transmitted efficiently; When you use the phone in the rush hour of calls, line congestion will disable calls.
Shorter standby time	 The standby time is associated with the network system setup. In this case, you are possibly in place with poor communication. When the signal is not available, the phone will continue to search for the base station. This will consume a lot of battery power, making standby time much shorter. To continue to use, move to a place with strong signal, or shut down the phone temporarily Replace the battery with a new battery;

SIM card error	 If the metal surface of the SIM card is dirty, clean the metal contact with a clean piece of cloth; SIM card has not been properly installed; If SIM card is damaged, contact your network service provider.
Unable to make calls	 Check whether the Dial key is depressed after the number is inputted; Check whether your calls have been barred due to insufficient mobile phone fee; Check whether the SIM card is effective; Check whether the call barring function has been set; Check whether the fixed dialing function has been set;
Your caller is unable to access to you	 Check that your phone has been started up and accessed to the network; Check whether your phone has been restricted because of insufficient mobile phone fee; Check whether the SIM card is valid; Check whether the call barring function has been set; Check whether the fixed dialing function has been set;

Unable to re-charge the battery	 Not well connected. Check whether the plug is properly connected; Charge the battery under 10 °C or above 55 °C. Please change to another environment; The battery or battery charge is damaged. If necessary, change it.
Unable to set up some functions	 Operation errors; The network service provider doesn't support this function, or you have not applied for this function.

This Model wireless phone meets the government's requirements for exposure to radio waves.

Your Mobile phone is a radio transmitter and receiver. It is designed and manufactured to exceed limits for exposure to radio frequency (RF) energy set by the Federal Communication Commission (FCC) of the U.S Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR, The SAR limit set by the FCC is 1.6 W/Kg. Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the power output. FCC Caution:

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-Consult the dealer or an experienced radio/TV technician for help.
