### **Section One - Introduction**

This new series of modems represents a new generation of PC communication peripheral devices, combining high speed Data, Fax, Voice\*, Full-Duplex Speakerphone\* and SVD\* (Simultaneous Voice and Data) functions into a single device. \*\*56000 modem can even make your download speed from central ISP (Internat Service Provider) upto 56000bps. This high performance modem connects your computer to all popular modems and fax machines in use today.

This manual provides installation and operation instructions for your modem. Also included in this manual are lists and descriptions of the standard AT command set, S-registers, and troubleshooting tips. Be certain to read **Section Two - Installing The Modem** thoroughly before performing the actual installation.

---

#### **1.1 Modem Features and Compatibility**

Your modem is compatible with the following standards.

- \*\*K56flex™(56Kbps down stream only)
- V.34 (33600 bps)
- V.32 (9600 bps)
- V.22 (1200 bps)
- Bell 103 (300 bps)
- V.29 (9600 bps FAX)
- V.21 Channel-2 (300 bps FAX)
- V.42 (error correction)
- MNP 2-4 (error correction)
- TIA/EIA 578 Class 1 Fax Command set
- TIA/EIA 578 Class 1.0 Fax Command set
- V.80 (Video Ready Mode)
- V.32bis (14400 bps)
- V.22bis (2400 bps)
- Bell 212A (1200 bps)
- V.17 (14400 bps FAX)
- V.27ter (4800 bps FAX)
- V.42bis (data compression)
- MNP 5 (data compression)
- EIA/TIA 602 AT Command set

*Notes: \* Voice, Speakerphone, SVD and PnP are optional features which may not be available on your modem. \*\* 56,000 download feature is for 56000 modem only. If your modem doesn't support those features, please disregard the relative section of the manual. The speed of 56Kbps limits to download from an ISP, while upload remains 33.6Kbps. Current FCC regulations, however, limit download speeds to 53Kbps. For peer-to-peer communication, the speed remains at 33.6Kbps.*

---

---

- 
- (COMx; x=1,2,3... on IBM and compatible PCs).
4. Plug the telephone cable into the connector marked **LINE** on the back of the modem.
  5. Plug the other end of the telephone cable into a telephone wall jack.
  6. Make sure to verify the modem power switch is in the off position (located on the front panel). Plug the AC adapter's power cord into the connector marked **POWER** on the back of the modem.

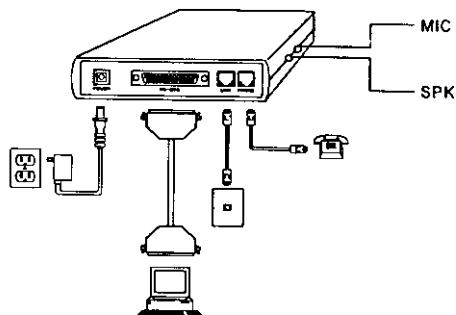

Figure 2-1 External Modem

7. Plug the transformer end of the AC adapter into a standard AC wall outlet
8. Optionally connect : (1) your telephone to the modem's **PHONE** connector. Lift the handset and listen for a dial tone to check for a working connection.(2) a speaker to the modem's **SPK** connector, and (3) a microphone to the modem's **MIC** connector.
9. Turn on the modem. The modem should perform a self-test, and then be ready for use. You may now turn on your computer.

Note: The **SPK** and **MIC** jacks are optional feature which may not be available on your modem.

- 
- 
- 
- 
6. Carefully insert the modem into the selected slot. Apply even pressure until the modem is firmly seated.
  7. Secure the bracket with the screw saved earlier. Store the slot cover for future use.
  8. Replace the computer cover and plug in your computer. Reconnect all cables.
  9. Connect the telephone cable into the modem's **LINE** connector. Attach the other end into the telephone wall jack (see Figure 2-2).
  10. Optionally connect: (1) your telephone to the modem's **PHONE** connector. Lift the handset and listen for a dial tone to check for a working connection. (2) a speaker to the modem's **SPK** connector, and (3) a microphone to the modem's **MIC** connector.

This completes the internal modem installation.

---

#### **2.2.1 COM (COMmunication) Port and Interrupt Settings (Internal Modem Only)**

The modem requires a COM port to communicate with the computer system. Most computers are equipped with one or more COM ports on the rear panel. Your modem does not connect to these COM ports, but connects to the internal expansion bus on your computer. The internal modem will therefore be assigned its own COM port number. The COM port assignment is selected via jumpers located on your modem (\*see Figure 2-3 to Figure 2-5 for jumper location). Note that the internal modem **can not** be assigned a COM port number that is already in use by another device in your computer. Since most PCs contain 2 built-in COM ports, we suggest that you assign your internal modem as either COM4 or COM 3. Your modem is factory configured to use COM4.

An IRQ (interrupt request) is a signal generated by an I/O device (e.g., modem) that notifies the computer of incoming data. Your modem is capable of generating IRQs 3, 4, and 5 (selected via jumpers on non-Plug and Play models). **I/O devices in your computer can share an IRQ with another device as long as the two devices are not functioning simultaneously.** Example: a mouse may be connected to COM1 using IRQ4 while COM3 is a modem using the same IRQ.

The following diagrams and charts are to be used when the COM port or IRQ settings need to be changed from the factory default setting.

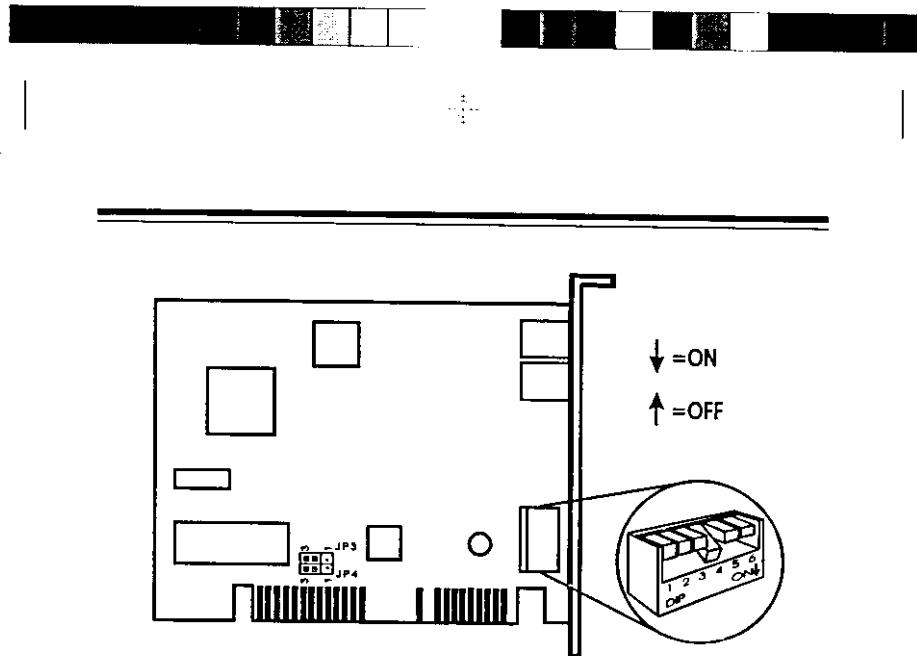

Figure 2-3 COM/IRQ Jumper Location  
for Model# WS-5614JS3(G)

	COM Port (address)	IRQ	DIP1	DIP2	DIP3	DIP4	DIP5	DIP6	JP3	JP4
PnP Mode	1 (03F8)	4	ON	ON	OFF	OFF	ON	OFF	2-3 short	2-3 short
	2 (02F8)	3	OFF	ON	OFF	ON	OFF	OFF		
	3 (03E8)	5	ON	OFF	OFF	OFF	OFF	ON		
	4*	ON	OFF	OFF	OFF	OFF	ON	OFF		
	4* (02E8)	2	OFF	OFF	ON	OFF	OFF	OFF

PnP mode		OFF	OFF	OFF	OFF	OFF	OFF	OFF	1-2 short	1-2 short

Table 2-1 COM/IRQ Jumper Settings  
for Model# WS-5614JS3(G)

---

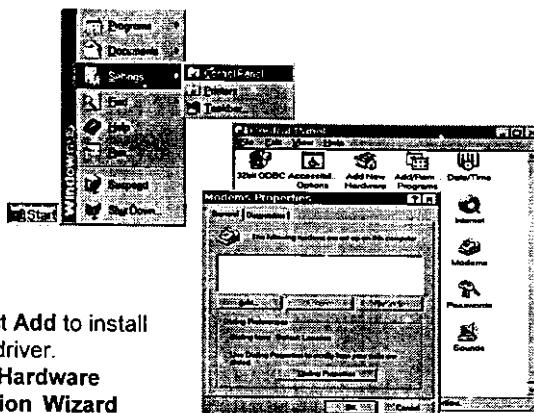

### 3.2 Using the modem with Win95

For PnP models, when the computer is first turned on after the installation of the new modem, the system will ask for the driver diskette. Insert the provided disk and follow system instructions to complete the installation. **Win95 should recognize the internal modem after installation.** Please consult Section 5 should you encounter any difficulties.

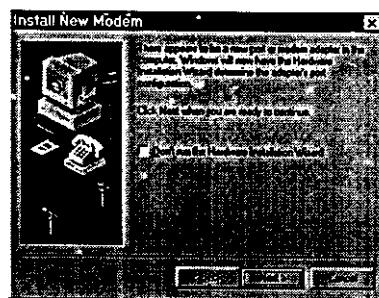

---

#### 3.2.1 Non-PnP Modems in Win95

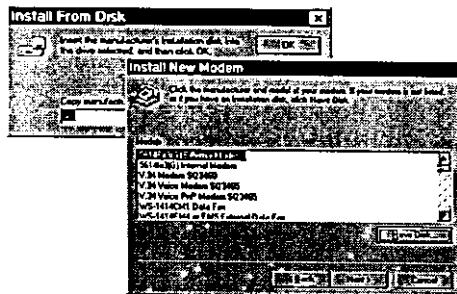

1. Click Modem icon in Control Panel.

2. Select Add to install modem driver.
3. Run Hardware Installation Wizard and follow the instructions. Autodetect hardware and modem by Wizard are recommended.

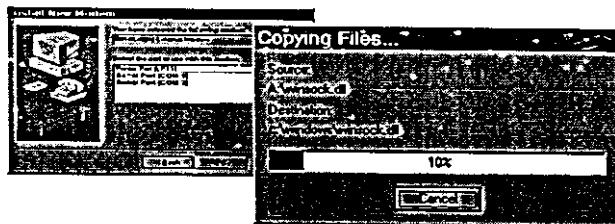

5. Select the appropriate model number for proper driver (see table 2-4). The Model number is showed on the little white tag on your internal modem or on the bottom of your external modem showed WS-XXXX.

Model Number	Device
WS-5614Ex3(G)	5614Ex3(G) External Modem
WS-5614Jx3(G)	5614Jx3(G) Internal Modem
WS-5614PM3(G)	WS-5614PM3 Fax Data
M1-5614PM3(G)	M1-5614PM3 Fax Data
WS-5614PS3(G)	WS-5614PS3 Voice Fax Data FDSP

Table 2-4

*data transmission and  
voice conversation at  
anytime*

**Example 2:**

Local Modem DTE	Remote Modem DCE	Comments
		<i>User have establish voice conversation and both handsets are off hook</i>
AT&F OK	AT&F OK	<i>reset modems</i>
AT-SMS=2 OK	AT-SMS=2 OK	<i>Enables SVD function</i>
ATD		<i>Local modem start data negotiation</i>
	RING	<i>Remote modem response to RING by answering</i>
ATA		
CONNECT28800	CONNECT28800	

*SVD connection is  
established and user  
can resume voice  
conversation*

**Note :** The handset will be silenced during the negotiation period

user friendly interface for all common modem functions and should be sufficient for all of your communication needs.

## **Section Five - Troubleshooting**

Your modem is designed to provide reliable and trouble-free functionality. However, should you experience any difficulty, the information contained in this section will assist you in determining and resolving the source of the problem. If you can not resolve your situation after reading this chapter, contact your dealer or vendor for assistance.

### **5.1 Modem does not respond to commands.**

1. Make sure the modem is not configured with a conflicting COM port and IRQ setting (see Section 2.2.1). Your modem can not be configured as COM4 (recommended) if another device in your system is also configured as COM4. Similarly, IRQ settings may not overlap.
2. Make sure the communication software is configured with the correct COM and IRQ settings (same COM port and IRQ as the modem). Your communication software will not be able to send or receive any data if it is not configured to match the COM and IRQ settings for the modem.
3. Make sure the modem is properly initialized by the communication software. Your modem may have been improperly initialized by the software because you have selected an incorrect modem type. You may also be prompted to enter an initialization string<sup>®</sup> by the software. Use AT&F as your initialization string.
4. If you are running Microsoft Windows 3.1, make sure that the modem is properly configured in Windows (see Section 3)

### **5.2 Modem dials but does not connect.**

1. Make sure the IRQ setting is identical on both the modem AND the software.
2. Make sure the phone line is working properly. A noisy line will prevent proper modem operation.

### **5.3 Modem makes a connection but no data appears on your screen.**

1. Make sure all communication parameters (baud rate, data, stop, and parity bits) are properly configured and are identical on both sides. Be certain hardware flow control (RTS/CTS - default) is enabled in both the modem and the communication software.
2. Press the ENTER key several times. The remote system may be waiting to receive your data before it begins.

specifying the same command with a parameter of "0".

Example: **ATL[ENTER]**

This command causes your modem to lower its speaker volume.

### 6.3 ATCommands

*Note: The default value of some AT Commands listed below could vary with country.*

All default settings are printed in **bold** text.

#### 6.3.1 Basic AT commands

Command	Function	Command	Function
A	Answer incoming call	L3	High speaker volume
A/	Repeat Last command. Do not preceed A/ with AT or follow with ENTER	M0	Speaker always off
Dn	0 - 9, A-D, # and *	M1	Speaker on until carrier detected
	L Redial last number	M2	Speaker always on
	P Pulse dial	M3	Speaker off during dialing, on until carrier detected
	T Tone dial	O0	Return to Data Mode
	W Wait fo second dial tone	O1	Initiate a retrain and return to Data Mode
	: Pause	P	Pulse dial
	@ waitfor5seconds of silence	Q0	Result code enabled
	! flash	Q1	Result code disabled
	; return to command mode afterdialing	Sr?	Read S-register r. Refer to Chapter 7 for details
	& wait for AT&T bong tone	Sr=n	Set S-register r to value n. Refer to Chapter 7 for details
E0	Command echo disabled	T	Tone dial
E1	Command echo enabled	V0	Numeric responses
+++	Escape characters - switch from Data Mode to Command Mode	V1	Text responses
H0	Modem on-hook (hang-up)	X0	Enables CONNECT result code only. Dial tone and busy detection are disabled
H1	Modem off-hook (make busy)	X1	Same as X0 plus all CONNECT responses/blind dialing
In	Report identification information (n=0-7)	X2	Enables all CONNECT <speed> result code. Dial tone
L0	Speaker OFF		
L1	Low speaker volume		
L2	Medium speaker volume		

Command	Function	Command	Function
	lowest transmit speed for connection. Parameter d specifies the highest transmit speed for connection.		mode 2= LAPM or MNP mode 3= LAPM mode only 4= MNP mode only
	Parameter e specifies the lowest receive speed for connection.		Parameter c specifies the acceptable fallback mode when modem answers a call or specifies V.80 synchronous access mode where 1= Normal mode 2= LAPM,MNP or normal mode
	Parameter f specifies the highest receive speed for connection. The default is +MS= K56, 1,75,33600,75,56000		4= LAPM or MNP mode 5= LAPM mode only 6= MNP mode only 8= answer call with V.80 synchronous access mode
+MR=0	Modulation connection reporting disabled	+ER=0	The default is +ES=3,0,2
+MR=1	Modulation connection reporting enabled	+ER=1	Error control reporting disabled
+ES=a,b,c	Select error control and synchronous access mode Parameter a specifies the initial requested mode when modem originates a call, where 0= initiate call with direct mode 1= initiate call with normal mode 2= initiate call with V.42 without detection phase 3= initiate call with V.42 with detection phase 4= initiate call with MNP mode 6= initiate call with V.80 synchronous access mode Parameter b specifies the acceptable fallback mode when modem originates a call, where 0= LAPM,MNP or normal	+DS=a,b,c,d	Error control reporting enabled
			Select data compression parameter Parameter a specifies the desired direction of data compression, where 0= data compression disabled 1= both direction data compression enabled
			Parameter b specifies whether or not the modem should continue to operate if the result is not obtained, where 0=don't disconnect
			Parameter c specifies the maximum number of dictionary entries.

NODIALTONE	6	BUSY	7
NOANSWER	8	CONNECT xxxx*	1
DELAYED	24	BLACKLISTED	32
FAX	33	DATA	35
+FCERROR	+F4		

Note: \* For x1, x2, x3 and x4 the modem send this result code when the DTE speed is xxxx bps

### **Section Nine - Support and Service**

If after consulting Section 2.2.1 and trying the recommended troubleshooting tips you are still unable to isolate or resolve a problem, you should immediately: (1) consult with your dealer, (2) contact Technical Support Center at the number provided in the Warranty Card. To obtain service for this product, follow the Return Merchandise Authorization Procedure as outlined in the Warranty Card.

### **Section Ten - Specifications**

Modulation std.:	K56flex™, V.34, V.32bis, V.32, V.29, V.27ter, V.22bis, V.23, V.22, V.21, V.17, Bell212/103
Compression:	V.42bis, MNP Class 5
Error Correction:	V.42, MNP Class 2-4
Host Interface:	ISA 16 bit bus
COM ports:	1, 2, 3, 4
IRQ lines:	2, 3, 4, 5, 7*, 10*, 11*, 12*
FAX Group:	Group III
FAX Command:	EIA/TIA 578 class 1
VOICE Command:	Rockwell (Optional)
Transmit level:	-10 dBm +/- 1 dB (Vary with country)
Sensitivity:	-43 dBm
UART:	16550 compatible
Power:	.75 W max
Temperature:	0 to 55 degrees C, operating; -20 to 80 degrees C, non-operating

Note: \* IRQ7, IRQ10, IRQ11 and IRQ 12 are support for Plug and Play model only

- Consult the dealer or an experienced radio / TV technician for help

**Notice:** 1) Shielded cables, if any, must be used in order to comply with the emission limits. 2) Any change or modification not expressly approved by the Grantee of the equipment authorization could void the user's authority to operate the equipment.

### **11.3 DOC Compliance Information**

**NOTICE:** The Canadian Department of Communications label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational and safety requirements. The Department does not guarantee the equipment will operate to the user's satisfaction.

Before installing this equipment, users ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be made by an authorized Canadian maintenance facility designated by the supplier. Any repairs or alterations made by the user to this equipment, or equipment malfunctions, may give the telecommunications company cause to request the user to disconnect the equipment.

Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

**CAUTION:** Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority, or electrician, as appropriate.

**NOTICE:** The Load Number (LN) assigned to each terminal device denotes the percentage of the total load to be connected to a telephone loop which is used by the device, to prevent overloading. The termination on a loop may consist of any combination of devices subject only to the requirement that the sum of the Load Numbers of all the devices does not exceed 100.

- 
- Automatic calling/Automatic answering
  - Tone detection
  - Operation in the absence of secondary proceed in dication
  - Loudspeaking facility.

This modem is NOT suitable for use as an extension to a payphone.

This modem is not approved for connection to UK private speechband services.

This modem does not support automatic redial function.

Any other usage will invalidate the approval of your modem, if, as a result, it then ceases to conform to the standards against which approval was granted.

The approval of this modem is INVALIDATED if the apparatus is subject to modification in any material way not authorised by the BABT or if it is used with, or connected to external software that has not been formally accepted by BABT.

---

#### 11.7 Storage of Numbers

It is advisable to check the telephone numbers stored in your modem immediately after programming.

In order to prevent the mis-direction of calls and network interference, please ensure that all manually programmed telephone numbers are correctly entered.

The number you enter to dial may optionally contain a PAUSE character to allow this modem to operate with a PABX. This takes the form:

**ACCESS DIGIT+PAUSE CHARACTER+ NUMBER TO BEDIALLED**  
where the access digit is the number you have to dial to get an outside line, the pause character for this modem is a "," (comma). The pause character inserts a 2 second delay.

#### Safety Notices

##### External Model

This modem is approved for use with an external class II power supply with an input rating of 240Vac/50HZ and an output rating of 12Vac/1.23A.

It is supplied with an A.C. Adapter which Meets the above specification. You must ensure that it is installed correctly and powered on before you

**AUSTEL PERMIT EXTENDED MICROPHONE TO THE MIC PORT.**  
**FOR SAFETY REASONS, ONLY CONNECT AUSTEL APPROVED/**  
**WARRANTY**

Safety warning.  
 Failure to set the modem (and any associated communications software) to the above settings may result in the modem being non compliant with Austel standards. Under these circumstances a permit would no longer be valid, with the user subject to significant penalties under the telecommunications Act.  
 This card must be used with the PC screw covers lid. Telecommunications networks volages exist inside the PC and telecommunications line connection must be removed before opening the PC.

A total of 3 call attempts are allowed to a telephone number, with a minimum period between calls of 2 seconds. If the call does not connect after 3 attempts, 30 minutes must expire before automatic redialling may be initiated.

AT&P1 (33/66 pulse dial make/break ratio)  
 AT&S0=0 or AT&S0>1 (no answer or answer greater than 1 ring)  
 AT&S6=n (blind dial delay-acceptable range 2-5 seconds)  
 ATS1=95 (DTMF period between 70-255ms)

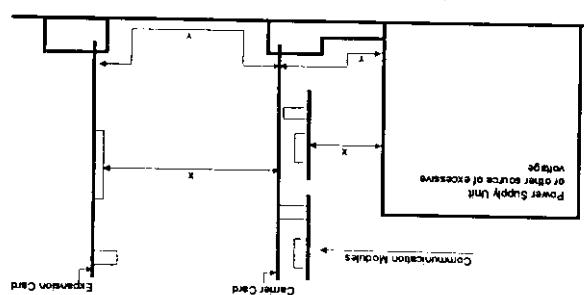

## ATB0 (ITU/CITT operation)

All telecommunications devices are required to hold Austel permits, ensuring their safety and interoperability with the Australian telecommunications network. To provide compliance with the Australian telecommunications standards, please ensure the following AT commands are maintained:

**11.10 AUSTRALIAN Compliance Information**

- (f) The analogue telecommunications interface is intended to be connected to telecommunications voltages. The telephone cord(s) shall remain disconnected from the telecommunications system until the card has been installed within a host which provides the necessary protection of the network voltages.
- (e) If in doubt the user must obtain advice from a competent telecommunications safety engineer.
- (d) For a host or other expansion cards fitted in the host using a generic voltage greater than 250V (rms or dc), advice from a competent telecommunications safety engineer must be obtained before installation of the relevant equipment.
- (c) If in doubt the user must obtain advice from a competent telecommunications safety engineer.
- (b) The analogues telecommunications interface is intended to be connected to telecommunications voltages which may carry dangerous voltages. The telephone cord(s) shall remain disconnected from the telecommunications system until the card has been installed within a host which provides the necessary protection of the network voltages.

met within the host is subject to conductive pollution or dry non-conductive pollution which could become conductive due to condensation.

- (c) The protective barrier must not be removed before installation to the computer. The Relays and Equipment must be installed such that the connection of the host bus connector, a distance of 2.0 mm and a creepage distance of 2.4 mm is maintained between the Relays and a creepage distance of 0.2 mm is maintained between the Relays and all other parts of the host board.
- (Maximum power consumption) +5V/380mA, -5V/40mA
- (Voltage tolerances) 5V±5%, -5V±5%
- (b) The power requirements of this modem card are:
- The approval of the internal modem card is conditional on the following:
- (a) The power required by the computer should not exceed the power specification as stated in the Technical Reference Manual of the PC when all internal cards are installed.

#### 11.9 Requirements for PC cards

It is a condition of approval that this modem is not installed in Personal Computers which have installed in them other adapters which either generate or make use of voltages in excess of the SELV limits above.

The interface to the host computer uses Safe Extra Low Voltages (SELV) only. SELV is a voltage that does not exceed 42.4V peak AC or 60V DC. You are advised to ensure that this modem is installed only in host equipment which has a similar SELV interface. If in doubt, please consult a qualified engineer before installation.

It is a condition of approval that this modem is not installed in Personal Computers which have installed in them other adapters which either generate or make use of voltages in excess of the SELV limits above.

(a) The power requirements of this modem card are:

(b) The power requirements of this modem card are:

(c) The power requirements of this modem card are:

#### 11.8 Internal "AT" Bus Model

The interfaces for the connection of other equipment, including the external power supply, use Safe Extra Low Voltages (SELV) only. SELV is a voltage that does not exceed 42.4V peak AC or 60V DC. You are advised to ensure that this modem is not installed with a similar SELV interface to this modem. If in doubt, please consult a qualified engineer before connecting other equipment to this modem.

Connect the telephone line cord to the network.

Detection of initial proceed indication

mixed code.

Storage of telephone numbers for retrieval by a predetermined code.

This modem is only approved for use of the following facilities:

**11.6 Approved Usage**

REN is a guide to the maximum number of apparatus that can be simultaneously connected to one telephone line. The REN value of each apparatus is added together and should not exceed 4. Unless otherwise marked, a telephone can be assumed to have a REN of 1.

The number equivalence number of this modem is 1.

**11.5 Ringer Equivalence Number**

Some network operators require that intended users of their network request permission to connect and for the installation of an appropriate socket.

There is no guarantee of correct working in all circumstances. Any difficulties should be referred to your supplier.

PTSN via the telephone line interface supplied with it. Connection of a PSTN to the telephone line will invalidate the approval.

Users of this modem are advised that the approval is for connection to the Disconnection or Multi-Frequency Dialling facilities.

This modem is suitable for use only on telephone lines provided with Loop-Made by another person. And that period of notice has expired.

Trainee has been given 14 days written notice that the connection is to be or by the authorized maintainer of the PBX unless the user has made a BT connection of the modem to the PBX can only be carried out by BT; or by the authorized maintainer of the PBX unless the user has made a BT connection of the modem to the PBX which has extension wiring owned

If this modem is to be used with a PBX which has extension wiring owned

Exchanges(PABX's) which return secondary proceed indication.

This modem is also suitable for connection to Private Automatic Branch

Trunk operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

Switched telephone network run by certain licensed public telecommunications operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

This modem is approved by the Secretary of State at the Department of Trade and Industry for connection to a single exchange line of the public

Trade and Industry for connection to a single exchange line of the public

Trunk operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

This modem is also suitable for connection to Private Automatic Branch

Trunk operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

This modem is also suitable for connection to Private Automatic Branch

This modem is also suitable for connection to Private Automatic Branch

Trunk operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

This modem is also suitable for connection to Private Automatic Branch

Trunk operators or systems connected there to. (Direct exchange lines only, not shared service or 1-1 carrier systems.)

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

#### **11.2 FCC Class B Statement**

In the event that this equipment should fail to operate properly, disconnect the equipment from the phone line to determine if it is causing the problem. If the problem is with the equipment, discontinue use and contact your dealer or vendor.

The FCC prohibits this equipment to be connected to party lines or coin-telephone service.

Your telephone company may make changes in its facilities, equipment, operations, or procedures that could affect proper operation of your equipment. If they do, you will be notified in advance to give you an opportunity to maintain uninterrupted telephone service.

If your telephone equipment causes harm to the telephone network, a complaint with the FCC.

Telophone Company may disconnect your service temporarily. If possible, they will notify in advance. But, if advance notice isn't practical, you will be notified as soon as possible. You will be informed of your right to file a complaint with the FCC.

This equipment complies with Part 68 of the FCC Rules. On this equipment is a label that contains, among other information, the FCC registration number and Ringer Equivalence Number (REN) for this equipment. You must, upon request, provide this information to your telephone company.

#### **Section Eleven - Telecom Notices**

##### **11.1 FCC Compliance**

Registers      Function      Range/units

Note: The default value and range of some S-registers listed below could vary with country.

Section 6 for information on how to use the AT commands to manipulate the S-registers. The operation characteristics specified in its non-volatile memory. Refer to effect until you turn off or reset your modem. Your modem then reverts to you use a command to change a register value, the command remains in values. Some registers can have their values changed by commands. If Table 7-1 shows the registers, their functions, and their default

### Section Seven - S Register Summary

Command	Function	Command	Function	
Parameter specifies the maximum length to be negotiated	+DR=0 Data compression	+DR=1 Data compression	+DS=3, 0, 2048, 32 reporting enabled	
reporting disabled	negotiates the default	negotiates the default		

Command	Function	6.3.2 V.25ter AT commands
X3	Enables/CONNECT <speed>	detection is disabled, but busy detection is enabled.
X4	Enables all CONNECT	result code. Dial tone detection is disabled, but busy detection is enabled.
+GMI	Report manufacturer ID	+GMI Report mode ID
+GMR	Report revision ID	+GMR Report revision ID
+GSN	Report product serial number	+GSN Report product serial number
X4	Enables all CONNECT <speed>	<speed> result code. Dial tone and busy detection are both enabled.
+GCI	Report global object ID	+GCI Report complete capability list
Z	Reset and recall configuration	Z Reset and recall configuration
8C0	Cameradetectways ON	+IFC=a,b Set DTE modem local flow control
8C1	Turn on CD when remote carrier is present	Parameter specifies the local flow control from DTE, where modem to DTE, where 0=Disabled
8D0	DRsignaling ignored	Parameter specifies the local flow control from DTE, where modem to DTE, where 0=Disabled
8D1	Modem return to Command Mode after DR toggle	Modem return to Command Mode after DR toggle
8D2	Modem hangs up and return to Command Mode after DR toggle	Modem hangs up and return to Command Mode after DR toggle
8E0	Guard tone disabled	Guard tone disabled
8F0	Configuration profile	Load factory default
8F1	DR toggle	DR toggle from DTE
8G0	Guard tone disable	Configuration profile to modem, where 0=Disabled
8G1	Guard tone disable	Configuration profile to modem, where 0=Disabled
8G2	1800Hz guard tone enable	1=Enables XON/XOFF 2=Enables CTS
8P0	Set pulse dial to 39%/61%	The default is +IFC=2,2 +ILR=0 Local port rate reporting
8P1	Set pulse dial to 33%/67%	+ILR=1 Local port rate reporting
8P2	Set pulse dial to 39%/67%	+MS=a,b,c,d,e,f
8P3	Set pulse dial to 33%/67%	+MS=a,b,c,d,e,f
8V	Report current configuration	Report current configuration @ 10 pps
8W	Store current configuration	Store current configuration and stored profile
%E1	Line quality monitor disabled	Line quality monitor disabled, where parameter b specifies the automation operation, where 0=autoode disabled, 1=automode operation, where 0=disabled
%L	Display line signal level	Display line signal level
%Q	Display line signal quality	Display line signal quality

All commands must begin with the AT prefix, followed by the command word. All commands issued without any parameters is considered as not mixed. A command issued without any parameters is considered as executable. All commands may be typed in either upper or lower case, but command line readability but are ignored by the modem during command execution. Letter and ended with the ENTER key. All default settings are printed in bold text. Spaces are allowed in the command string to increase letter and end with the AT prefix, followed by the command word.

## 6.2 AT Commands & Format

This modem is designed to operate at common DTE speeds ranging from 115.2 Kbps to 300 bps. All commands and data must be issued to the modem using one of the valid DTE speeds. This modem is designed to operate at common DTE speeds ranging from 115.2 Kbps to 300 bps. All commands and data must be issued to the modem using one of the valid DTE speeds.

Your modem is in Command Mode upon power-on and is ready to receive and execute "AT" commands. The modem remains in Command Mode until it makes a connection with a remote modem. Commands may be sent to the modem from an attached terminal or a PC running a communication program.

## 6.1 Executing Commands

### Section Six - AT Command Set

1. Make sure the correct modem type is selected in the Voice/FAX software.
2. Make sure your computer is fast enough to handle voice operations (38.4 Kbps). Voice operations are CPU intensive and require a 386/33 or better CPU when running under MS Windows.

## 5.5 Modem exhibits poor voice record or playback.

1. Make sure Call Waiting is turned off.
2. Make sure RTS/CTS hardware flow control is enabled (do not use XON/XOFF software flow control when transmitting binary files).
3. Make sure the data speed is not faster than your computer's capability. Most IBM compatibles are capable of 19,200 bps under DOS and Windows 3.x. Operating at higher speeds under Windows requires a faster CPU (386 or better).

## 5.4 Modem experiences errors while on-line with a remote modem

3. Make sure the correct emulation mode is being used in the software (refer to software manual).

The modem may also perform basic communication functions (such as dialing) via the AT commands. A list and description of all AT commands appear in *Section Six*. Since the communication software is designed to shield the user from the difficult and cumbersome AT commands, we strongly suggest that all modem operations be performed via the software.

Common modem functions (i.e. dialing, file transfer, faxing) are performed by using communication software in conjunction with the modem

#### 4.2 Using Your Modem

Many types of voice software support recording and playback of voice files. To recorder playback voice with your modem, attach a telephone to the modem, or, optionally, attach a speaker and microphone to your modem's SPKR and MIC connectors. Follow the instructions provided with your voice software to record and play back voice files.

The Fax, Voice, Speakerphone and DSVF functions of your modem are application driven and are accessed only through application software. Consult your software manual regarding procedures on using these features.

The AT commands used by the modem are compatible with the command set used by Intel modems. Select a Rockwell modem type if prompted by your data communications software. Select Generic Class or Rockwell mode type when prompted by your FAX or Voice software.

The AT commands used by the modem are compatible with the command set used by Intel modems. Select a Rockwell modem type if prompted by your data communications software. Select Generic Class or Rockwell mode type when prompted by your FAX or Voice software.

You may be prompted by the software to configure certain communication parameters. We suggest the following settings:

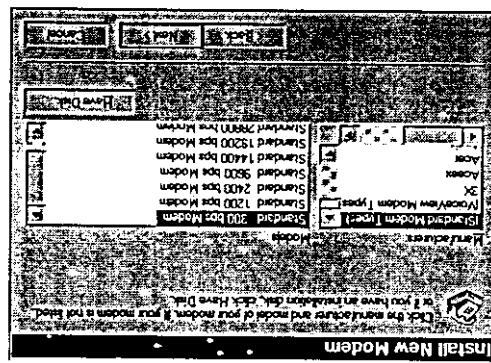

Initialization string: AT&F  
Flow Control: RTS/CTS  
Parity: None  
Stop bit: 1  
Baud Rate: 57,600 bps  
Data bits: 8

You may be prompted by the same COM port and IRQ line used by the modem.

Install the communication software according to the software user's manual. Be certain that your software is configured to communicate with the modem on the same COM port and IRQ line used by the modem.

Section Four - Installing and Configuring Communication Software

3.3 Using SVD function	
6. The file will then be accessed, and the name should now appear on the list of choices.	If you have difficulties getting your modem to work, read <a href="#">Section 2.2.1</a> and <a href="#">Section 5</a> to find information on COM ports and IRQ's, as well as answers to frequently asked questions.
6. The file will then be accessed, and the name should now appear on the list of choices.	If you have difficulties getting your modem to work, read <a href="#">Section 2.2.1</a> and <a href="#">Section 5</a> to find information on COM ports and IRQ's, as well as answers to frequently asked questions.
6. The file will then be accessed, and the name should now appear on the list of choices.	To operate in SVD mode, both the local modem and remote modem must be enabled to support SVD mode. A handset or microphone/speaker must be attached to the modem connection in addition to the phone line. Please refer to the modem connectors in <a href="#">Section 2.2.1</a> for more information.
6. The file will then be accessed, and the name should now appear on the list of choices.	Local Modem Remote Modem Comments DTE DCE DTE DCE AT&F OK Reset madeems AT&VLS=0 AT#VLS=0 Select telephone handset OK (or AT#VLS=6) (or AT#VLS=6) for microphone/speaker OK AT-SMS=2 AT-SMS=2 Enables SVD function OK ATDxxxx OK Dial remote modem to make SVD connection ATA RING Remote modem response to RING by answering CONNNECT28800 CONNECT28800 SVR connections estabilshed user can start

4. Insert the provided driver diskette click **Have Disk** when the wizard is asking to choose model number.

*This very important step you configure Windows 3.1 to recognize the internal modem after installation or when the modem's COM/IRQ settings have been changed. Your internal modem has been designed to provide flexible hardware configurations to satisfy different systems requirements. For example you may change the modem's operating settings from COM4/IRQ3 (default) to COM3/IRQ5 to avoid hardware conflicts with other serial devices in your system. After installation or running changes, make sure Windows is properly configured before setting other serial devices in your system.*

### 3.1 Using The Internal Modem With Microsoft Windows 3.1

#### Section Three - Software Installation

Common modem functions (i.e. dialing, file transfer, faxing) are performed by using communication software in conjunction with the modem. The communication software included with your modem provides a user friendly interface for all common modem functions and should be sufficient for all of your communication needs. The modem may also perform basic communication functions (such as dialing) via the AT commands. A list and description of all AT commands appears in Section 6. Since the communication software is designed to shield the user from the difficult and cumbersome AT commands, we strongly suggest that all modem operations be performed via the software.

### 2.4 Using Your Modem

To confirm that the modem is working properly after installation, run a modem communication program and set the software for the correct modem COM port (internal modem factory defaults to COM4). At the software's terminal mode prompt, type AT followed by the ENTER key. The modem should respond by displaying an OK (or 0). The OK (or 0) response indicates that the modem is working properly. If the modem does not return the proper response, refer to Section 2.2.1 for information on COM Ports and IRQ settings for Section 5 for troubleshooting information.

### 2.3 Testing Your Modem

Note: \* Your model number showed on the little white tag on your internal  
modem which showed WS-56(3)14xx3, xx represents different mod-  
els. You can refer to the Figures and Tables with your model number.

For Plug and Play (PnP) models, the Com port and IRQ settings are  
automatically assigned by the operating system. As an option, some  
models will allow for the cards to be configured manually, via jumpers.  
Please see \*Table 2-1 to Table 2-3 for jumper configuration. All default  
settings are printed in **bold text**.

- 2.1.1. Indicator Lights**
- Your modem (external model only) features LED indicators on the front panel that report modem status:
- |    |                  |  |
|----|------------------|--|
| MR | Modem Ready      | On when modem is ready to work                     |
| SD | Send Data        | On when DTR signal is active                       |
| RD | Receive Data     | On when modem is transmitting data to remote modem |
| OH | Off Hook         | On when modem is receiving data from remote modem  |
| CD | Request to Send  | On when RTS signal is active                       |
| RS | Clear to Send    | On whenCTS signal is active                        |
| CS | Cameras Detected | On when remote camera has been detected            |
| DS | Or Hook          | On when modem is off hook                          |
| RD | Receive Data     | On when modem is transmitting data to remote modem |
| SD | Send Data        | On when DTR signal is active                       |
| MR | Modem Ready      | On when modem is ready to work                     |
- This completes the external modem installation. Proceed to **Section 3** for information on installing and configuring your communication software.
- 2.2. Internal Modem Installation**
- The following steps provide instructions for installing your internal modem.
- Caution:** Before removing the cover from your computer, turn off and unplug the computer and all attached external peripherals. Prior to removing the modem from its antistatic bag, discharge any static electricity from your body by touching any metal surface.
- Turn off the computer and unplug it from the AC outlet.
  - Remove the computer's cover, in accordance to its owner's manual.
  - Select any available ISA bus slot.
  - The modem will work in either 8 or 16 bit slots.
  - Set the screw side for later use.
  - For non-PNP installation, please refer to **Section 2.2**. To set the proper COM port and IRQ, follow the steps outlined below.
  - Read throughout **Section 2.2**, to see if the proper COM port and IRQ are available.
  - Unscrew and remove the slot cover.
  - Set the screw side for later use.
  - For PNP mode, please set the short caps to PNP mode. Refer to Table 2-1-2-3).
- Figure 2-2**
-

- The following steps provide instructions for installing your external modem. You will also need a RS232 serial cable to make the connection to your computer. For IBM compatible computers equipped with a 25-pin serial port, you will need a standard 25-pin "straight-through" serial cable. If you have a 9-pin serial port on your PC, use a 9-pin to 25-speed Macintosh serial cable, which supports hardware flow control signals.
1. Turn off the computer.
  2. Plug the male (25 pins) end of the serial cable into the connector marked RS-232 on the back of the modem (see Figure 2-1).
  3. Plug the other end of the serial cable into your computer's serial port

## 2.1 External Modem Installation

### Section Two - Installing The Modem

If you have an external modem, proceed to [Section 2.1](#) for installation instructions. If installing an internal modem, proceed to [Section 2.2](#). You may also use any other communication software commercially available. Many years of trouble-free modem operation. Additionally, you provide many functions. Understanding how the software works will help to mon modem functions. Understanding how the software works will help to software. The software manual includes detailed information on all com- familiar with the functions and features provided by the communication software. We recommend thoroughly reading the software manual to become references when needed.

[2.2.1 and Section 4](#) to find information on COM ports and IRQ's, as well as answers to frequently asked questions. [Section 5 through 10](#) contain material such as AT commands, S-register, and Result-codes to use as references when needed.

If you have difficulties getting your modem to work, read [Section 1.3 Where To Go Here](#)

### 1.3 Where To Go Here

Notes: Please contact the place of purchase if any of the listed items are missing from your package.

- Warranty Registration Card
- One AC power adapter (external modem only)
- One software manual
- One telephone cable
- One modem
- Communication software diskette(s)

## 1.2 Contents of Your Package

Notes: Please contact the place of purchase if any of the listed items are missing from your package.

- One modem
- One software manual
- One telephone cable
- One AC power adapter (external modem only)
- One warranty registration card

ATTN : Please be advised that this equipment is only certified for use by the Federal Communications Commission for the FCC ID : 4AOWS-5614PS3 in the model of internal Modem without speakerphone function.

The user should disregard any information in the users manual about any other models.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Shielded interface cables must be used in order to comply with emission limits.

Consult the dealer or an experienced radio/TV technician for help.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Increase the separation between the equipment and receiver.

Reorient or relocate the receiving antenna.

Correct the interference by one or more of the following measures:

determined by turning the equipment off and on, the user is encouraged to try to determine harmful interference to radio or television reception, which can be caused by harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio communications, it is the responsibility of the user to correct the interference.

#### NOTE

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
