- Please draw the pin out of socket before clean and maintenance.
- Please hold the charger to draw pin out to escape from damage of wire, electric shock or fire.

## 1.7 Cleaning and Maintenance

- Please keep mobile phone, battery and charger away from high humid and rain when in use.
- Please tidy the mobile phone, battery and charger with soft and dry cloth.
- Please don't cleanse mobile phone with alcohol, thinner or benzene.
- Please wipe the bilge in the socket to prevent from loosen contact, electricity dropping and

failure of charge.

## 1.8 General Precautions

● Mobile phone:

Please use mobile phone under the situation with temperature range from $-10^0C\sim50^0C$ and humid from 35% to 85%.

In order not to weaken the effect of these equipment and mobile phone, you'd deep a little far away from common telephone, TV, radio and automatic office equipment.

● Battery:

Please keep battery away from direct exposure and sunlight, locate it in the ventilated places.

Please replace the appointed battery when fast in vain after charging for many times, because the working period will gradually shorten after frequent charge, finally to the end.

● Please don't throw worn battery into trash, Just do it under the relative regulations.

*CAUTION: Risk of explosion if battery is replaced by an incorrect type. Please dispose of used batteries according to the instructions.*

● Charger:

Please don't charge at the places detailed as follow: direct exposure to sunlight, temperature lower than $5^0C$ or higher than $40^0C$, humid, dirty, heavy vibrancy (induce fault), near TV, radio and some other appliances. (Affect image and sound).

# Chapter2 Before Use

## 2.1 SIM card

● In order to use the mobile phone, you should insert the valid SIM card, which is the key to enter the GSM network.

● All the information related to the creation of the connection to the network and initial call records will be recorded in the metal plane area of the SIM card as well as the names, telephone numbers and SMS stored in the phone book on the SIM card. The SIM card can be taken out from your mobile phone and can be placed in any one of the GSM mobile phones for use (the new mobile phone will read the SIM card automatically).

● To prevent losing and damaging of the information in the SIM card, please don't touch the metal plane area and the SIM card should be kept far away from electromagnetism. Once the SIM card is damaged, you can not enter into the GSM network.

*Note: Please do power off your mobile phone before pulling out the SIM card. It is forbidden to insert or pull out the SIM card with the mobile phone connected to the external power supply; otherwise, the SIM card is most likely to be damaged.*

## 2.1.1 Insert and pull out the SIM card

- Power off your mobile phone and then remove the battery and other external power supply.
- Insert the SIM card into the SIM card slot; make sure the SIM is fixed accurately.
- When you need to pull out your SIM card, please power off your mobile phone firstly, then remove the battery, and pull out your SIM card.

## 2.2 Battery

The battery can run immediately after taken apart for it has charged for about 50% volume; In order to reach the optimum operation, please make use under the situation of fully charging after complete consumption. The new battery should be charged at least for 14 hours. Only when the initial battery is exhausted thoroughly (the electricity quantity runs out and the mobile phone can not power on) can the battery be fully recharged for use, so does the second time charging. Only when recycled for three times in this way, the battery works in the best condition easily.

## 2.2.1 Charge the Battery

Connect the charger to the power supply.

Insert the connector of the charger to the USB port, the indicator at the right-up will bicker circularly; the symbol of charging also will occur to show charging just in execution under power off state.

The symbol of charging will occur after a while if the phone is overspent when it is in serious lack.

Charging has been finished when the indicating symbol at the right-up corner is in full state and without twinkling. The picture will display in the screen when charging completed if charging under power off state. This process usually takes about 3-4 hours. It's normal if battery, mobile phone and charger get hot during charging.

Cut off the power supply and make mobile phone and charger disconnected when charging completed.

*Notes:*

*Please charge with the charger supplied by manufacturer. The use of non-ratified charger will induce both danger and disobey of certification and repair guaranteed terms.*

*Please charge promptly when mobile phone automatically powers off or shows the warning "charge warning".*

*The standby and talk time provided by manufacturer is based on ideal situation. Practical working time will change with network status, operation environment and operation manner.*

*The right installation of battery should be insured before charging, in which it can't be drawn out.*

*The charger must be disconnected from mobile phone and power supply after charging completely.*

*Charging will re-start when the volume has consumed to some extent after about 5 to 8 hours if charger doesn't disconnect from phone and power supply. We strongly advice you not to*

*do so for the performance and life span of your battery.*

## 2.3 Switch on/off

Press the End key for a while to switch on the mobile phone. Then the mobile phone will automatically examine SIM card after inserting SIM card.

Then cues will occur on the screen ordinal detailed as follows:

——Input mobile phone password if phone unlock password has been set.

——Input PIN1 if SIM card password has been set.

Then the phone will search network until finding available network.

The phone supports dual SIM cards mode, after connected a network, the network name will be display on screen in two rows, the first is name of SIM1network; the second is SIM2's.

If you want to switch off the phone, you should press the end key in standby interface for a while.

*\*Notice: If the screen displays "Emergency", it means you are out of the scope of service, but you can dial Emergency Number.*

## 2.4 Unlock phone

To protect against unlawful usage, you can use the Phone Lock. If you choose this option, then every time you switch on your phone, you must enter the phone lock code to unlock the phone before you use it. The user may turn off the lock code protection. Under such circumstances you cannot prevent the unlawful use of your phone.

Enter the Phone Lock Number. Use Clear key to delete mistakes. Press the left soft key "OK" to finish. For example, if your phone lock code is set as 1122, then enter the following: **1122**. If you forget your phone lock code, please contact your retailer or authorized service center to unlock the phone lock code.

*\*NOTES: The initial phone lock password locally as 1122.*

## 2.5 Unlock SIM card

In order to protect against unlawful usage, the SIM card uses a PIN (Personal Identification Number) number.

Every time you turn on your phone, you must enter the PIN number so as to unlock the SIM card before you use the mobile phone.

Long time press the hang up key to switch on the phone, input PIN code, press "clear" to delete mistakes, press left soft key "OK" to finish. For example, if your PIN code is set as 1234, and then input the following: **1234**.

If an incorrect PIN number is entered three times consecutively, your SIM card will be blocked by the network and now the mobile phone will ask for the PUK number.

# Chapter3 Basic Description

## 3.1 About the Keypads

Following is the introduction of the basic key:

——SIM1/SIM2 incoming call: You could set more tones for the incoming call.

——Ringtone volume: You could set the size of the ringtone volume.

——SIM1/SIM2 message: You could set more tones for the message.

——Message volume: You could set the size of the message volume.

——Keypad: You could set the keypad tone into Click or Tone.

——Key-tone volume: You could set the size of the key-tone volume.

——Power on/off: You could set more tones for the power on/off.

——cover open/close: You could set more tones for the cover open/close

——System alert: You could open or close the system alert.

## 4.13 Settings

### 4.13.1 Dual SIM settings

You can choose Dual SIM open, Only SIM1 open, Only SIM2 open.

### 4.13.2 Phone Settings

● Time and date

  You can set up the date and time on the phone.

● Schedule power on/off

  Set the auto power on or off.

● Language

  You can select phone language.

● Pref. input methods

● Display

  You can set wallpaper, screen saver, power on/off display and so on.

● Auto update time

● Effect light

● Flight mode

  Select this mode if you are by plane.

● UART settings

● Misc. settings

  Set the LCD Brightness.

### 4.13.3 Network settings

You may set the network searching mode or change the preferential network menu for SIM 1 or SIM 2. The option is related to your network provider. Please get in contact with the network provider for that.

## 4.13.4 Security settings

You may set up the security status of the mobile phone under the menu so as to avoid illegal usage of the phone or SIM cards.

● PIN

PIN code can protect you're the unlawful use of SIM card.

Please choose 'on' to start your PIN code protection if it is 'off' at present, and the PIN code is needed to power on your phone next, Please choose 'off' to switch off if it is 'on' at present; And please choose change PIN code to modify it, input old one and new one then repeat according to clew.

*Note: If you input invalid PIN code for three times continuously, the SIM card is locked and you need the PUK code to unlock the SIM card. The PIN code and PUK code may be provided together with SIM card. Please contact your network operator if not. The default PIN code is 1234. Please change it into your own private password as soon as possible.*

● PIN2

*Note: The PIN2 code is used for special functions. If you input invalid PIN2 code for three times continuously, the PIN2 card is locked and you need the PUK2 code to unlock the PIN2 code .Please contact your network operator if not.*

● Phone security

*Attention: The default password is 1122 for phone security.*

## 4.13.5 Connectivity

● Data connection SIM
● Data account

You could add PS account which you need.

## 4.13.6 Restore factory settings

To restore factory settings, please input the initial password: **1122**

## 4.13.7 Sound effects

Chang the audio's sound effects

# Chapter5 Input method

This mobile phone provides you English, French, Spanish, and Portuguese.

You can press # key to switch these input methods in editing interface. And press the direction key to select the characters you need.

If you want to input the punctuations, you can press "*" key.

# Chapter6 Common problems and solutions

## 6.1 When the mobile phone displays "Insert SIM"?

1. Contact between SIM card and mobile phone is bad or the SIM card is not inserted.
2. Change the SIM card and try again. The SIM card may have fault if the mobile phone operates normally. Please contact your network operator.
3. If there is oxidation on the surface of SIM card or SIM card slot of the mobile phone, please wipe with alcohol or clean cloth.
4. Please contact Sales Service Center or Maintenance Department if the above methods are invalid.

## 6.2 Checking and precautions of PIN, PIN2, PUK, PUK2 and password

1. Please consult local network operator.
2. The SIM card is locked if you input invalid PIN code for three times continuously.
3. Please consult SIM card operator for PUK code.

## 6.3 Network connection fails

1. The signals in your local place are weak or have shielding. Please move to other places and try again.
2. Please contact Sales Service Center or Maintenance Department to do phone test.

## 6.4 You can't be heard

1. Make sure whether it is network problem and try again.
2. The communication lines in some places are bad. Please move to other places and try again.
3. The trunk line of network operator is bad.
4. Please contact Sales Service Center or Maintenance Department if the above methods are invalid.

## 6.5 Can't charge the battery

1. The contact between charger and mobile phone is bad. Make sure whether the installation is proper.
2. Check whether the battery is valid. The battery performance drops after several years.

## 6.6 Weak signal

1. If the local network signals are unstable, the signals of the mobile phone receives won't be stable. Please move to other places and try again.

2. Please contact Sales Service Center or Maintenance Department if the above method is invalid.

## 6.7 Can't make a call

1. The local network signals are weak and please move to places with strong signals and try again.

2. Local network operator is busy. Please try again later.

3. Check whether Hide ID is enabled. You can't make a call if the local network operator doesn't support this function and you have enabled it.

4. Please contact Sales Service Center or Maintenance Department if the above methods are invalid.

## 6.8 Standby time becomes short

1. The standby duration depends on the intensity of local network signal.

2. It is affected by environment temperature, base station distance, etc.

**FCC RF EXPOSURE INFORMATION:**
WARNING!! Read this information before using your phone
In August 1986 the Federal Communications Commission (FCC) of the United States with its action in Report and Outer FCC 96-326 adopted an updated safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by both U.S. and international standards bodies. The design of this phone complies with the FCC guidelines and these international standards. Use only the supplied or an approved antenna. Unauthorized antennas modifications, or attachments could impair call quality, damage the phone, or result in violation of FCC regulations. Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Please contact your local dealer for replacement antenna.

**BODY-WORN OPERATION:**
This device was tested for typical body-worn operations with the back of the phone kept 0.5cm from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 0.5cm must be maintained between the user's body

and the back of the phone, including the antenna, whether extended or retracted. Third-party belt-clips, holsters and similar accessories containing metallic components shall not be used. Body-worn accessories
that cannot maintain 0.5cm separation distance between the user's body and the back of the phone, and have not been tested for typical body-worn operations may not comply with FCC RF exposure limits and should be avoided.
For more information about RF exposure, please visit the FCC website at www.fcc.gov

Your wireless handheld portable telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radio frequency (RF) signals. In August, 1996, the Federal Communications Commissions (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

<ANSIC95.1> (1992) / <NCRP Report 86> (1986) / <ICIMIRP> (1996)

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1). Nevertheless, we recommend that you use a hands-free kit with your phone (such as an earpiece or headset) to avoid potential exposure to RF energy. The design of your phone complies with the FCC guidelines (and those standards).

Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

**NORMAL POSITION:**
Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

**TIPS ON EFFICIENT OPERATION:**
For your phone to operate most efficiently:
• Extend your antenna fully.
• Do not touch the antenna unnecessarily when the phone is in use. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than otherwise needed.

RF Exposure Information:
FCC RF Exposure requirements: The highest SAR value reported under this standard during product certification for use next to the body with the minimum separation

distance of 0.5cm is 0.738W/kg; next to the head is 0.793W/kg. This transmitter must not be collocated or operating in conjunction with any other antenna or transmitter.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.
NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-Consult the dealer or an experienced radio/TV technician for help

   Do not use the device with the environment which below minimum -10℃ or over maximum 50℃, the device may not work.

      Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
