Getting started

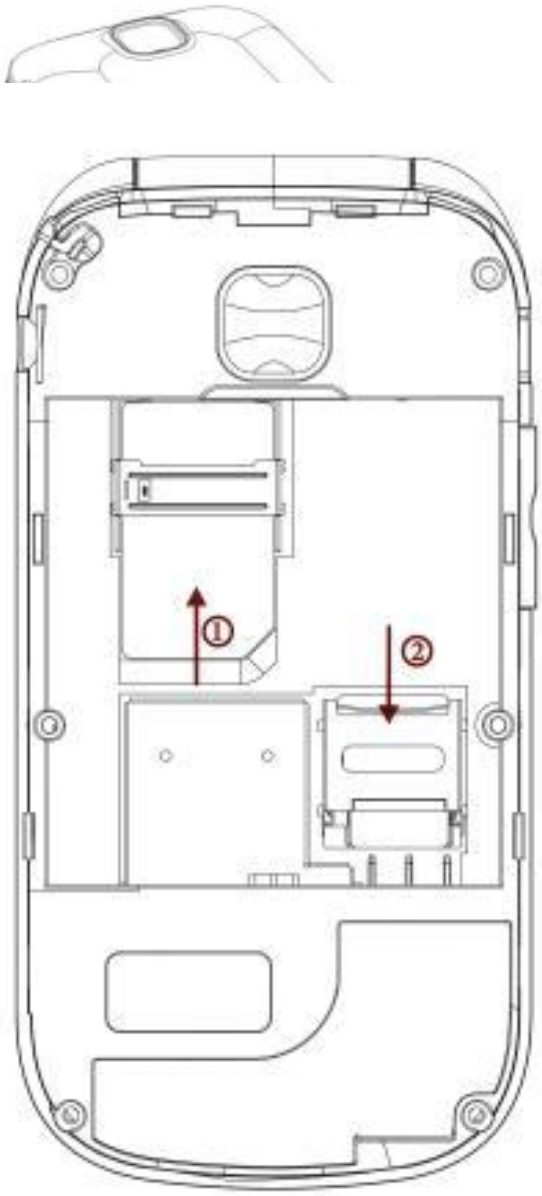
What is a SIM card?

Every mobile phone has a SIM card (Subscriber Identity Module). This is a micro-chip that holds your personal information such as names and phone numbers. Your phone won’t work without it.

Keep the SIM card away from children. The SIM card can easily be damaged or bent. You should therefore handle the SIM card with care during installation and/or removal.

Insert the SIM card and Micro SD card

1 Make sure that the phone is switched off and the charger is disconnected from the phone.
2 Turn the phone over and remove the battery cover.
3 If the battery is already inside, remove it.



1 Plug the charger into the charger connector.

2 Plug the other end into an electrical outlet.

3 The phone may need several hours for reaching a full charge.
When your phone is power off, it might take a few seconds to show charging display and it shows charge complete when finished.
When your phone is power on, the battery icon flickers when it starting

charging and become still with full bars in battery icon when finished.

4 The battery is fully charged when the red LED is off. Disconnect the charger from the phone and the AC outlet.

Note: Charge the battery for at least 12 hours before using the phone for the first time.

Switching the telephone on or off

Make sure that you SIM card is in your mobile phone and that the battery is charged.

1 Press the *red key* to switch the phone on.

2 If prompted, choose your language and press *OK.*

3 If you have entered a PIN-code before, the phone will ask for the code now. Enter the PIN-code and confirm by pressing *OK.*

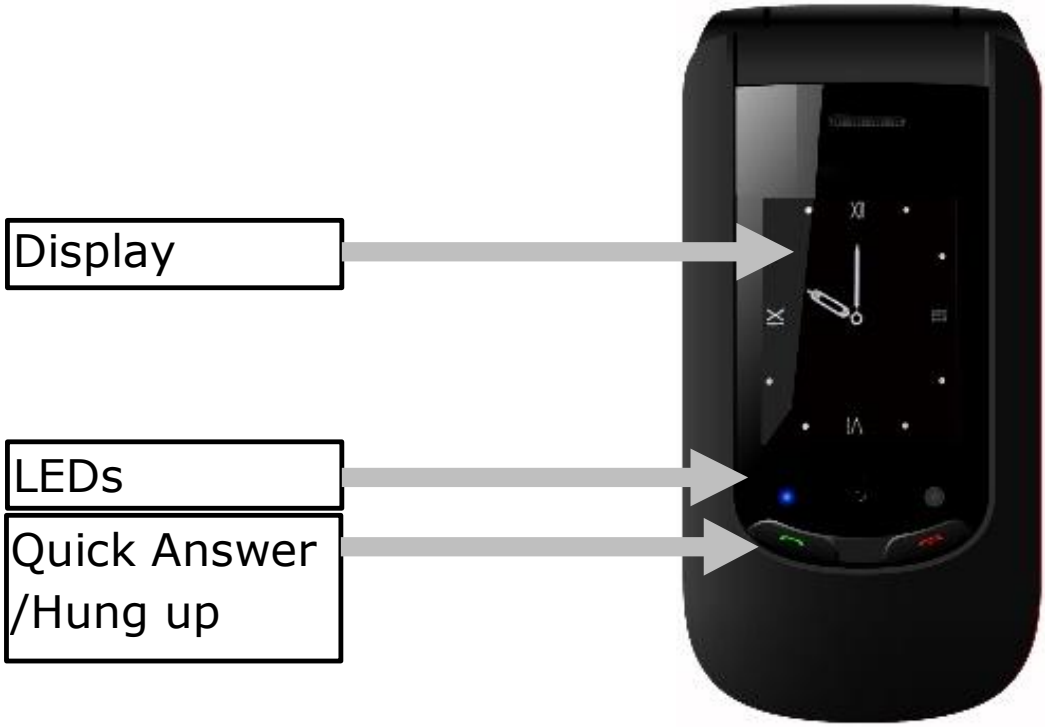
4 To turn off your phone, press and hold the *red key* for two seconds.

If you don't insert a SIM card, your phone will show *Insert SIM*. None of the functions related to SIM card can be used. You can make an emergency call only

LED Description

Green LED	Incoming call, missed call or unread message

Red LED	Battery low （flash）, Battery charging （light）
White LED	Torch



Screen icons:

	Signal Strength *The vertical bars show the network connection strength.*
	New messages *This icon shows when you receive a new message.* SIM Card has an unread message *The inbox is full. This icon flickers when the inbox is full and you need to delete messages to receive new messages.*
	Earphone *This icon shows when you plug the earphone in. Sound will be heard from the*

	earphones.
	Missed Calls *This icon shows when you have missed a call.*
	Alert Type *Ring* *Silent mode on and Vibration only* *Vibrate and ring*
	Call Divert *This icon shows when you divert all calls unconditionally.*
	GPRS *This icon shows when the GPRS connection is available or active.*

	Turn alarm on *This icon shows when you turn alarm on.*
	Roaming *This icon shows when your phone is in roaming state.*
	Bluetooth *This icon shows when the Bluetooth is active.*
	Battery capacity *This icon colour changes according to the status of battery capacity:* 
Menu Operation

Menu lists are used for set up and operation.

The left and right menu keys initially are *Menu* ( ) and *Phonebook* ( ).

Note: symbols not displayed if the analogue style clock is set for idle mode.

Press *Menu* ( ) and the display changes and the soft keys become *OK* and *Back*. Use *Up* or *Down* to move up or down menu lists, and *OK* or *Back* for the next or previous display.

Torch

Press and hold on the side volume keys of the phone to switch the built-in torch on/off.

Connect an optional headset

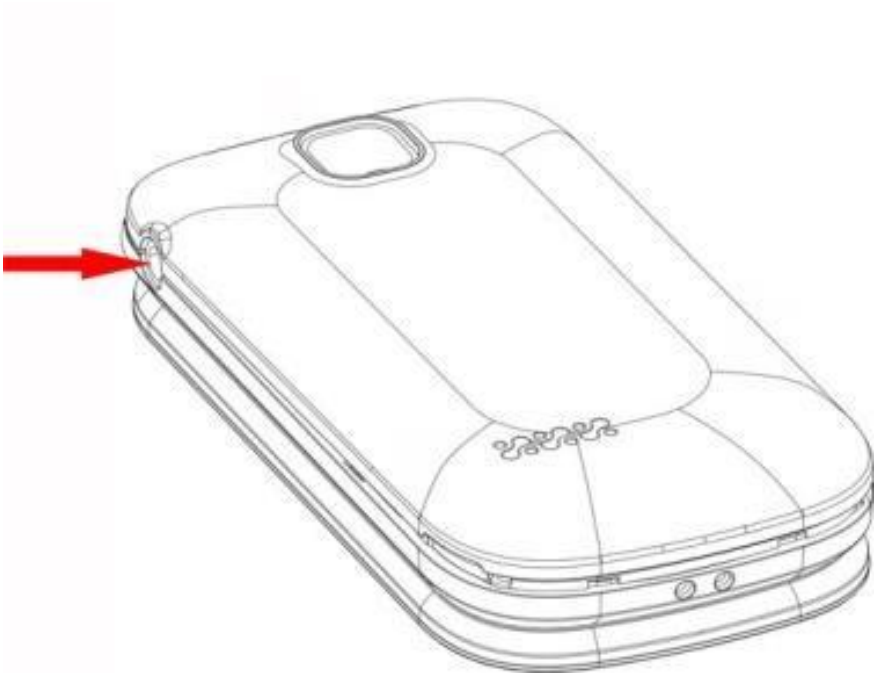
You can use a headset (not supplied) with the 3.5 mm type, plugged into the Headset socket on the top side of the handset.

When using headsets, pay attention to volume levels and read its user guide for safety instructions. Do not connect incompatible products.

When correctly inserted the headset icon is shown.

Headset Connector:

Plug in headset accessory for headset use.



（3,5mm Audio Jack）

Call function

Make a call

1 To make a call, enter the phone number with the prefix and press the *green key*. For international calls, enter '+' by pressing for 2 sec. Then enter the country code followed by the telephone number, in which the 0 of the prefix must be dropped.

2 If you have entered a wrong number, press the soft key 'right' *Clear* to remove the number to the left of the blinking cursor.

3 Press the *green key* to call the number.

4 Press the *red key* to end the call or to cancel the call attempt.

Make a call using the phone book

If you have saved a name and number in the phone book, you can also use the phonebook to make a call.

In standby mode, press the soft key 'right' to go to *Phonebook*.

1 Scroll with the up and down arrow key to the name you want to call.

2 Press the *green key* to call the number.

3 Press the *red key* to end the call or to cancel the call attempt.

Answering a call

When there is an incoming call, the phone rings and/or vibrates and shows the number or the corresponding name.

1 Press the *green key* or *Answer* if you would like to answer a call.

2 Press the *red key* or *silent* if you would like to reject a call, or for ending the connection after the call.

Earphone/Bluetooth Mode: When plugging the earphone (including Bluetooth earphone), you can answer a call by pressing the key on the earphone.

7 You have the option to take a picture directly with the camera (from Camera with Photo size: “Photo call settings”) or to select an already saved photo (from a folder) using the file manager.

8 Add the photo and press “*Back*” (*right menu key*)

After you have finished editing the contact, to save it press “*Back*”

Call Blocking

The CS900 is pre-loaded with CPR’s

nuisance robocall lists so from the start you will see a reduction of unwanted calls.

How to block calls:

The quickest way to block calls is by using the big red **BLOCK NOW** button on the telephone keypad. This will disconnect the call and add that caller to the Black List.

Call Blocking Menu:

1. Select Menu, Call Blocking and press OK

2. Scroll to Black List to setup blocking specific numbers from calling you, here you can add/remove up to 900 numbers.

3. To turn the Black List function ON/OFF, scroll to Black List and then scroll to Turn ON/OFF.

4. To quickly add numbers that have called you to the Black List press Green Answer key scroll to the number you wish to block and press Options then scroll to Add to Black List.

5. To quickly add SMS Text message numbers to the Black list navigate to the SMS message press Options then

View then Options and scroll to Add to Black List..

6. Scroll to White List to setup blocking all calls apart from those added into your white list, here you can add/remove up to 900 numbers.

7. To turn the White List function ON/OFF scroll to Block List and press Turn ON/OFF. The phone password is 1122

Messages

Write messages:

1 Select *Menu*, *Messages* and press *OK*

2 Press *Write message*

3 Select *SMS* or *MMS* and press *OK*

In this menu, you can compose messages.

Activate: Activate the profile mode.

Customize: Customize the profile mode as following:

Alert type, *Ring type*, *Ring tone*, *Ringtone volume*, *Message tone*, *Message volume*, *Alarm tone*, *Alarm volume*, *Keypad tone*, *Keypad volume*, *Power on*, *Power off*, *Cover open*, *Cover Close* and *System alert.*

Reset: Reset the setting to the default.

Silent mode

Silent is a fixed profile with ring tone, keypad tone and message tone disabled. The alarm signals even if the phone is set to silent. Press and hold # to activate/deactivate Silent mode.

SOS Emergency Assist settings

The SOS function is a simple function which can save lives at the deciding moment. In all, you can save 5 SOS numbers (relatives, neighbours, friends and rescue). These numbers, previously saved in order of sequence, will be automatically dialled in an SOS by pressing the *SOS button* on the back of the mobile phone. During the SOS call, a warning tone sounds so the person that you rang knows that it is an

emergency! If you cannot get through on the first number, the second number will be called automatically. If you cannot get through on the second number, the third number will be called etc.

If no emergency number is saved or your phone card has run out, or you are not allowed under a foreign network (e.g. Roaming not activated), you can dial 112 or another emergency number on the numerical keypad.

SOS description

Press the *SOS button* on the back of the mobile phone for 3 seconds. If you want to stop or cancel the SOS call, press the *SOS button* again.

Functionality:

By pressing the *SOS button*, the phone will send an SOS SMS person （in case mobile number or telephones with SMS function is available for emergency contact） to the emergency numbers you have previously saved and will be automatically dialled in the given sequence.（The emergency button also functions when the phone is closed）. The mobile phone switches on the hands free function at full volume and at the same time, if the SOS call is not answered within 25 seconds the next number is dialled etc.

Note:

- If you want to stop or cancel the SOS call, press the *right menu key* or *SOS Key*.
- As a rule, the international emergency call 112 can still be called outside of the regional network of your network operator.

- When changing a phone card: Always make sure that there is sufficient credit on your phone card because private emergency numbers cannot be dialled without sufficient credit.

Attention: If the SOS call is forwarded to the voicemail, the SOS mode will end.

Attention: If you want to save SOS numbers such as the ambulance service, the police, fire brigade etc. as an SOS number, you must gain permission from each of these institutions beforehand. There will be no liability for possible costs arising from calling them by accident.

SOS settings

Set SOS:

Set *On* or *Off* the SOS alarm tone function.

Set SOS numbers:

There you can edit and save at most five SOS number in your phone.

SOS message:

Edit the content of the SOS message which will be sent out automatically when the SOS function is using.

LED Mode:

On:

Set LED model for open, when there is a missed call and unread message, mobile phone green tip LED lights flashing. The red light glows when connecting the charger is connected the charger is charging tips.

Off:

The LED function is off

Night mode:

Night mode for activating / deactivating the operation of the LED of the front cover. When set to "Night mode", light time is from 8.00 till 20.00.

LCD backlight:

LCD backlight for setting up the duration (sec) of backlight and brightness.

Call settings:

Depending on network operator support and subscription, you can choose the following options:

Caller ID:

Set the function of caller ID

Call waiting:

When this network service is activated, the network notifies you of a new incoming call while you have a call in progress. Press *OK* to answer the waiting call. The first call is put on hold or press the *red key* to reject the call.

Call divert:

To divert your incoming calls to your voice mailbox or some other phone number (network service). Select the divert option you want. Several divert options may be active at the same time.

Call barring:

With this network service you can restrict the making and receiving of calls with your phone.

Call time reminder:

Choose to remind you *Periodic* (30-60 seconds) or select *Single* (1-3000 Seconds) or select *Off*.

Answer Mode:

Cover answer:

Open the phone to answer the incoming call.

Any Key:

You can press any key to answer a call.

Auto answer when headset mode

The phone answer the call automatically.

Network settings:

This menu has connection with the network suppliers, so please get in touch with them when you use this function. If you want to get into one network which doesn't have the roaming protocol with the original network you have been in, the phone will display the content that you can make an emergency call.

Network selection:

Depending on network operator support, you can choose the following options:

Selection mode

Set *automatic* or *manual mode*

GPRS connection

When needed and

always.

GPRS transfer pref.

You can select data prefer or call prefer.

Security settings:

You can choose the following options:

SIM security: To turn your SIM PIN code *On* or *Off*, *change PIN* and *change PIN2.*

Phone security: To lock your phone with a password. The default password is: *0000.*

Change password: Here you can change your password of: *Phone password*.

Connectivity:

You can connect wirelessly to other Bluetooth compatible devices.

Bluetooth:

In standby mode: Press the down arrow key to go directly to Bluetooth.

You can choose the following options:

Power:

Here you can choose to turn Bluetooth *On* or *Off*.

Visibility:

You can set the visibility *on* or *off*.

My device:

List of saved devices and enables you to add new devices; *Search new device*.

Search audio device:

Search for available Bluetooth audio devices. If Bluetooth is not enabled you can enable it now by pressing *Yes*.

Search audio device description:

1 Press *OK*, the phone is going to search for new devices.

2 Select the devices you want to connect with and press *Pair.*

3 When connecting with another Bluetooth device you need a shared passcode. Enter the passcode and press *OK.*

4 Select the device from the list and press *Option*. Can choose the following options: *Connect*, *Rename*, *Delete* and *Delete all*.

My Name:

Here you can set the Bluetooth device Name.

Advanced:

Here you can set your: *Audio path*, *Storage* and check the *my address.*

Data Account:

In order to be able to use the MMS function, you must create a data account. The configuration of a data account is dependent on the data of your network operator.

Restore factory settings:

To reset some of the menu settings to their original values. The password is: *0000*

Basic Specifications:

Network–Dual Band	GSM 900/DCS1800
Dimension :	101x50.5x19.5mm
Battery :	Li-ion 3.7V - 1000mAh

Standby time:	up to 350 hours*
Talk time:	Up to 500 minutes*

**Variation in operation times may occur depending on SIM card, network, and usage settings, usage style and environments.*

FAQ's

If your phone appears the questions frequently, please refer to the answers as follows. After that, you cannot solve the

questions, please contact with the mobile phone dealers or network operator.

Can't turn the phone on:

- Check battery installation, please install battery correctly.
- Check if battery level is low, change a battery or charge the battery.
- Check if entered incorrect PIN code 3 times in a row.

  If yes, the phone is locked, then you should enter your PUK code (please contact your network operator for your PUK code).

SIM error:

- Is the SIM card dirty? Please clean it.
- Try and reinstall the SIM card.
- Is the SIM card damaged? Please contact your network operator.

Weak signal or no signal:

- You may be in a location where the reception is bad, such as tunnel or cellar, please relocate and try again.
- You can try turning around slightly or get near the window if you are in a room.
- Please contact your network operator, if you still have a weak signal or no signal.

Bad talking quality:

- Weak signal? See: Weak signal or no signal.
- Check if battery if battery is low. Charge the battery or change the battery.
- Use the up volume key to adjust the microphone volume during a call.

Can't make a call:

- Check if you enter the correct number and press *green key*.
- Check if you set call barring, if yes, please cancel it.
- Check if the SIM card is registered in the network.
- If your SIM card is a prepaid card, please make sure there is enough money on the card.

Can't receive calls:

- Is the SIM card registered in the network?
- Check if your phone is turned on. Check if screens show no signal, if yes, see: Weak signal or no signal.
- Check if you set call barring, if yes, please cancel it.

Screen is dark:

- Check if battery if battery is low. Charge the battery or change the battery.
- Adjust the wallpaper.
- Your phone may be affected with damp, keep it dries.

PIN locked:

- Check if entered incorrect PIN code 3 times in a row.

If yes, the phone is locked, then you should enter your PUK code （please contact your network operator for your PUK code）.

Battery

- Your phone is powered by a rechargeable battery.
- Note that a new battery's full performance is achieved only after two or three complete charge and discharge cycles！ The battery can be charged and discharged hundreds of times but it will eventually wear out.

- When the operating time (talk-time and standby time) is noticeably shorter than normal, it is time to buy a new battery. Use only batteries approved by the phone manufacturer and recharge your battery only with the chargers approved by the manufacturer.
- Unplug the charger when not in use. Do not leave the battery connected to a charger for longer than 10 days, since overcharging may shorten its lifetime. If left unused a fully charged battery will discharge itself over time.
- Temperature extremes can affect the ability of your battery to charge.
- Use the battery only for its intended purpose.

- Never use any charger or battery which is damaged.
- Do not short-circuit the battery. Accidental short-circuiting can occur when a metallic object (coin, clip or pen) causes direct connection of the + and - terminals of the battery (metal strips on the battery) for example when you carry a spare battery in your pocket or purse. Short-circuiting the terminals may damage the battery or the connecting object.
- Leaving the battery in hot or cold places, such as in a closed car in summer or winter conditions, will reduce the capacity and lifetime of the battery. Always try to keep the battery between 15°C and 25°C. A

phone with a hot or cold battery may temporarily not work, even when the battery is fully charged. Batteries performance is particularly limited in temperatures well below freezing.

- Do not dispose of batteries in a fire!
- Dispose of batteries according to local regulations (e.g. recycling).
- Do not dispose as household waste.
- Do not charge your mobile phone if the battery is not installed.

Phone

- Your phone is a product of superior design and craftsmanship and should be treated with care.
- The suggestions below will help you to fulfil any warranty obligations and to enjoy this product for many years.
- Keep the phone and all its parts and accessories out of the reach of small children.
- Keep the phone dry. Precipitation, humidity and all types of liquids or moisture can contain minerals that will corrode electronic circuits.

- Do not use or store the phone in dusty, dirty areas. Its moving parts can be damaged.
- Do not store the phone in hot areas. High temperatures can shorten the life of electronic devices, damage batteries, and warp or melt certain plastics.
- Do not store the phone in cold areas. When it warms up (to its normal temperature), moisture can form inside, which may damage electronic circuit boards.
- Do not attempt to open the phone. Non-expert handling may damage it.
- Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.

- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean the phone. Do not paint the phone. Paint can clog the moving parts and prevent proper operation.
- Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications or
- Attachments could damage the

Phone and may violate regulations governing radio devices.

All of the above suggestions apply equally to your phone, battery, charger or any accessory. If any of them is not working properly, take it to your nearest qualified service facility.

For your safety

Read these simple guidelines. Breaking the rules may be dangerous or illegal. Do not switch on the phone when wireless phone use is prohibited or when it may cause interference or danger.

Road safety comes first

Do not use a hand-held phone while driving.

Switch off in aircraft

Wireless devices can cause interference in aircraft.

Switch off in hospitals

Follow any regulations or rules. Switch the phone off near medical equipment.

Switch off when refuelling

Do not use the phone at a refuelling point. Do not use near fuel or chemicals.

Traffic Safety:

Do not use a hand-held telephone while driving a vehicle. Always secure the phone in its holder; do not place the phone on the passenger seat or where it can break loose in a collision or sudden stop. Remember road safety always comes first!

Operating environment:

Remember to follow any special regulations in force in any area and always switch off your phone whenever

it is forbidden to use it, or when it may cause interference or danger.

Use the phone only in its normal operating positions.

Parts of the phone are magnetic. Metallic materials may be attracted to the phone, and persons with a hearing aid should not hold the phone to the ear with the hearing aid.

Always secure the phone in its holder, because metallic materials may be attracted by the earpiece.

Do not place credit cards or other magnetic storage media near the phone, because information stored on them may be erased.

Electronic devices:

Most modern electronic equipment is shielded from radio frequency （RF） signals. However, certain electronic equipment may not be shielded against the RF signals from your wireless phone.

Pacemakers:

Pacemaker manufacturers recommend that a minimum separation of 20 cm （6 inches） be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research.

Persons with pacemakers:

- Should always keep the phone more than 20 cm (6 inches) from their pacemaker when the phone is switched on.
- Should not carry the phone in a breast pocket.
- Should use the ear opposite the pacemaker to minimize the potential for interference.
- If you have any reason to suspect that interference is taking place, switch off your phone immediately.

Hearing aids:

Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you

may want to consult your network.

Other medical devices:

Operation of any radio transmitting equipment, including cellular phones, may interfere with the functionality of inadequately protected medical devices. Consult a physician or the manufacturer of the medical device to determine if they are adequately shielded from external RF energy or if you have any questions. Switch off your phone in health care facilities when any regulations posted in these areas instruct you to do so. Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.

Posted facilities:

Switch your phone off in any facility where posted notices so require.

Potentially explosive atmospheres:

Switch off your phone when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Users are advised to switch off the phone when at a refuelling point (service station). Users are reminded of the need to observe restrictions on the use of radio equipment in fuel depots (fuel storage and distribution areas), chemical plants or where blasting operations are in progress.

Areas with a potentially explosive atmosphere are often but not always clearly marked. They include below deck on boats; chemical transfer or storage facilities; vehicles using liquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or particles, such as grain, dust or metal powders; and any other area where you would normally be advised to turn off your vehicle engine.

Vehicles:

RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles (e.g. electronic fuel injection systems, electronic

anti-skid (anti-lock) braking systems, electronic speed control systems, air bag systems). Check with the manufacturer or its representative regarding your vehicle. You should also consult the manufacturer of any equipment that has been added to your vehicle.

Certification information (SAR):

This model phone meets the EU and US requirements for exposure to radio waves.

The exposure standard for mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit recommended by The Council of the European Union is 2.0 W/kg. Tests for SAR have been conducted using standard

operating positions with the phone transmitting at its highest certified power level in all tested frequency bands.

The highest SAR value for this device when tested at the ear was **0,972W/Kg**.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the EU requirements for RF exposure.

FCC Warning:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment

off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifi cations to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Specific Absorption Rate (SAR) information:

This MOBILE PHONE meets the government's requirements for exposure to radio waves. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health. FCC RF Exposure Information and Statement the SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types: Mobile Phone (FCC ID: 2AQ2D-CS900) has also been tested against this SAR limit. This device was tested for typical body-worn operations with the back of the phone kept 10mm from the

body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 10mm separation distance between the user's body and the back of the phone. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.
