# PROFESSIONAL CAMCORDERS

PRODUCT GUIDE

# *Image. Flexibility. Control.*

Canon professional camcorders deliver performance where it counts—in the field, in the studio, wherever and whenever the solution requires maximum image quality and creative control. Embodying decades of Canon leadership and know-how in the design and manufacture of cameras and lenses, Canon pro camcorders provide not only outstanding HD and SD capture quality but also the operability, flexibility, reliability and connectivity that professionals demand. You won't find more capable tools for the capture of creative, powerful video content. Put them to work.

# Canon Technologies Raise the Standard of Image Quality.

XH G1S

## Genuine Canon Video Lens

HD Video Lens

Image quality starts with optics, and only Canon professional camcorders deliver the many benefits of Canon's world-renowned lens technologies. Genuine Canon Professional L-series camcorder lenses incorporate Fluorite and Ultra-Low-Dispersion elements plus SR multi-coating to ensure outstanding resolution and contrast with minimal chromatic aberration. The choice of professionals the world over, Canon L-series lenses deliver a level of image quality throughout the entire zoom range unmatched by conventional optics. The standard 20x zoom covers an exceptionally wide and useful range of focal lengths, perfect for a wide range of shooting situations.

## Fast, Responsive Zoom Control

With an ergonomically designed ring shape and increased speed, the zoom control on Canon professional camcorders starts and stops with exceptional smoothness and provides a comprehensive array of options. The zoom can be controlled in 3 different

ways—the lens zoom ring, grip zoom lever or handle zoom lever (for low-angle shots). Select from among 3 basic zoom speed ranges and fine-tune the zooming with 16 levels of speed control. With the Genuine Canon 20x HD Video

Zoom Lens, zooms from wide to tele range can be varied in speed from 5 minutes to an astounding 1.2 seconds at the fastest setting. Variable zoom speed operation with 16 levels of speed control is also possible through the pressure-sensitive zoom lever

SLOW	Approx. 4.3 sec. (speed: 16x) to approx. 5 min. (speed: 1x)
NORMAL	Approx. 2.0 sec. (speed: 16x) to approx. 3 min. (speed: 1x)
FAST	Approx. 1.2 sec. (speed: 16x) to approx. 60 sec. (speed: 1x)

Zoom speed can be set to NORMAL, SLOW or FAST via C.Fn-02

(rocker). Or choose from one of the 16 levels and preset it to perform constant pace zooms. Starting and stopping of zoom movement is always ramped to avoid “zoom shock” and provide more natural, pleasing look to your footage.

## Precise, Flexible Focus Control

HD capture demands precise focus. The highly responsive, independently functioning focus ring (with selectable operational direction) enables the videographer to focus manually even while zooming—in both Manual Focus and AF modes. There are 4 selectable preset focus speeds along with 3 sensitivity settings for the focus ring, making it possible to fine-adjust

responsiveness as desired. Push AF control enables temporary manual override to quickly find critical focus, while a Focus Limit function can be

engaged to limit the focusing range of the lens, for example, for macro shooting. Dedicated Peaking and Magnifying controls are available to further assist in focusing.

For Peaking, frequency (edge thickness) and gain (edge density) levels are adjustable. 2 settings can be stored and recalled quickly with a touch of a button. Furthermore, by using the included external component video monitor cable, the operator can also use peaking and magnifying controls to check manual focus on a larger screen, instead of viewing the image through the viewfinder.

## Canon Interchangeable XL Lens Mount

The XL H1S and XL H1A feature the XL mount system that boosts shooting range and flexibility through the use of optional interchangeable lenses. The wide-angle Canon 6x HD Video Zoom XL 3.4–20.4mm L lens (equivalent to 24.5–147mm in 35mm still photography), for example, is ideal for applications requiring a wider field-of-view. This L-series lens incorporates legendary Canon optical superiority and captures

Canon 6x HD Video Zoom XL 3.4–20.4mm L lens

images with exceptional color and resolution, providing full HD clarity and detail. The XL lens mount also enables the use of the Extender XL 1.6x, which increases the focal length by 1.6x. Moreover, the EF Adapter XL enables users to attach a wide array of superb Canon EF lenses (L-series lenses recommended), designed for the renowned EOS SLR photography system, for specialized image capture.

Extender XL 1.6x

EF Adapter XL

## SuperRange Optical Image Stabilizer

Proven Canon Optical Image Stabilizer technology ensures steadier images. The system uses a gyro sensor to detect camera movement and activate a

with SuperRange Optical Image Stabilizer

without SuperRange Optical Image Stabilizer

Vari-Angle Prism to continuously compensate for shake and jitter. The Canon 20x HD Video Zoom Lens, moreover, effectively corrects over a wide vibration range through the use of the latest Canon SuperRange Optical Image Stabilizer technology. It further improves low-frequency vibration detection by analyzing the image at the CCD sensor. The result is extraordinary camera shake correction, even at long focal lengths.

## Three 1/3" Native 16:9 3CCD (1440 x 1080)

A sophisticated 3CCD design employs separate native 16:9 sensors for each primary color. The high pixel count—approximately

1.67 million (1440 x 1080) per sensor—ensures detailed HD capture (equal to about 800 TV lines of horizontal resolution). Color is rendered with exceptional accuracy with wide dynamic range and virtually no chroma noise.

## DIGIC DV II Image Processor

Engineered and manufactured exclusively by Canon, specifically for HD, the latest-generation

DIGIC DV II Image Processor uses proprietary algorithms and architectures to deliver optimal image quality. The DIGIC DV II Image Processor is optimized for HD video, operating at 1440 x 1080 pixels with 4:2:2 color sampling. Color reproduction is remarkably natural, especially in skin tone areas and with dark and light scenes. A hybrid noise reduction system employs dual processes to ensure brilliantly clear HD images.

## Sophisticated Audio Control

Canon professional camcorders provide the videographer with advanced control over all aspects of audio during recording. The cameras are equipped with 2 XLR inputs with individual sensitivity settings. Sensitivity for the XLR line input in manual mode has been increased, and the audio line output level can be switched between 1 Vrms and 2 Vrms at full scale for wider compatibility

in post-production environments. Maximum audio output is +6 dBV with audio recorded at the standard +4 dBu input setting. XLR and microphone sensitivity selections include +12 dB, +6 dB, 0 dB, -6 dB and -12 dB. 2-channel recording is possible via simultaneous use of the supplied microphone and the XLR inputs. Automatic level control settings for the XLR inputs provide the choice of linked or independent 2-channel operation. The camcorder is also equipped with a 3.5mm stereo mini-jack for a camera microphone and a rugged headphone

terminal with level control. Additional audio controls include an audio limiter function (in manual recording mode) to prevent distortion caused by sudden loud sounds, a 1 kHz Reference Tone (selectable to

### 2 Channel Recording via supplied microphone and XLR inputs

XLR input sensitivity can be set for Channel 1/2 individually

Use the supplied microphone and XLR input at the same time

-12 dB, -18 dB or -20 dB) and monitor output selections of LR/LL/RR/monaural.

## HD-SDI, Genlock and Time Code Connection Terminals (XL H1S and XH G1S only)

The XL H1S and XH G1S are ready for any professional application with **HD-SDI**, **Genlock** and **Time Code Connections (BNC)**. SDI outputs conform to industry standards HD-SDI (SMPTE 299M) or SD-SDI (SMPTE 272M). Audio and Time Code are both embedded. The HD-SDI output provides

an uncompressed 1.485 Gbps 60i signal at 1920 x 1080 resolution with 4:2:2 color sampling. The 4:2:2 color space ensures better color accuracy for compositing or “green screen” work, and because a single industry standard connection carries video, audio and SMPTE (LTC) Time Code, cable complexity is significantly reduced. This enables longer cable runs, improves the operator’s mobility and simplifies the cabling process. **Genlock input** enables synchronization of multiple cameras, whether in a live-switched production environment in the studio or on location. When shooting HD, it can accept either an SD (blackburst) or HD (tri-level) sync signal. Additionally, the camcorders feature **SMPTE Time Code Input and Output** terminals to better accommodate time code requirements in multi-camera shoots or when synching with other devices. The XH G1S also features flags for 24F 2:3 pull-down information. Added to the video outputted through HD-SDI, which normally outputs 60i,

BNC style HD-SDI, Genlock, Time Code input and output terminals (XH G1S)

these reference markers ensure that the extra frames removed can be located by compatible hardware or software. Using flags ensures that the cadence of the 24F video is accurate for professional editing.

## Superior Connectivity

Additional standard connectors include a resilient 6-pin IEEE 1394 terminal, which provides a robust connection to external hardware. Also provided are component analog video output (1080/60i or

480/60i connection), S-Video input/output, composite video output and LANC terminal. Canon professional camcorders are also equipped with flash accessory shoes for use with Canon EX-series Speedlites.

## Unrivaled Customization Capability

These camcorders provide an extraordinary range of user customization options, making them unmatched in versatility and flexibility. 23 image adjustments, 22 display options (with 40 sub-items) and 21 custom function settings (with 33 sub-items) can be used to fine-tune the cameras’ performance and operating characteristics for different environments, different users or different jobs. Organizations that use many cameras can take advantage of this feature to easily match up multiple units. Sets of adjustments can be recorded and transferred to ensure superior camera-to-camera uniformity.

## Image Enhancements

Videographers can achieve virtually any look desired, thanks to an extensive range of independent adjustments. **Gamma:** The NORMAL gamma curve is ideal for viewing footage on TV monitors. The camcorders also offer CINE 1 to create images with the quality and appearance of film for TV viewing. For images that are

intended to be transferred to film, the CINE 2 setting provides an appropriate gamma curve.

**Knee:** 4 settings (AUTO, HIGH, MIDDLE, LOW) that fine-tune dynamic range (knee point) adjustments in highlight areas control overexposure when shooting high-brightness subjects. HIGH enables high-key shooting, while LOW protects the image from overexposure.

**Black:** Adjustments to dynamic range in the dark areas of the image are covered with 3 settings (STRETCH, MIDDLE, PRESS). STRETCH expands the range, providing greater shadow detail. PRESS narrows the range, increasing the deep black content of the image.

**Master Pedestal:** Adjustments in steps from -9 to +9 set the video reference black. Higher values brighten the darker areas of the image to reduce overall contrast.

**Setup Level:** Black level can be adjusted from -9 to +9.

**Sharpness:** Control the sharpness of the image in steps from -9 to +9.

**Horizontal Detail:** High, Middle and Low settings adjust the horizontal detail center frequency.

**Horizontal/Vertical Detail Balance:** Settings from -9 to +9 adjust the horizontal/vertical proportion of the detail correction.

**Coring:** Subtle noise components can be adjusted in steps from -9 to +9.

**Noise Reduction 1/Noise Reduction 2:** With Off, High, Middle and Low options for each, these settings deliver a variety of noise reduction methods and levels to assure the best image quality across numerous shooting situations.

**Color Matrix:** Correct color matrices are provided for NORMAL (images to be viewed on a TV monitor), CINE 1 (images with the quality and appearance of film as viewed on TV) and CINE 2 (images intended to be transferred to film).

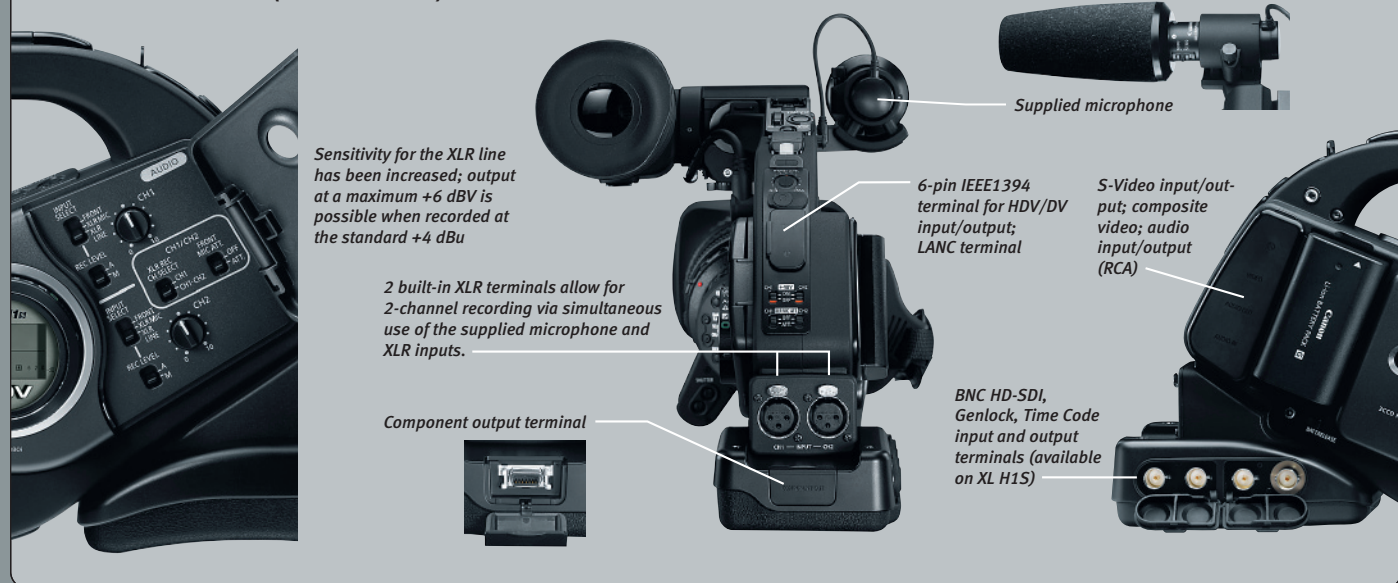

**Color Gain/Hue:** Color Gain and Hue are adjustable from -50 to +50 and -9 to +9 respectively.

**Master Red, Blue and Green Gain:** Each setting is independently adjustable from -50 to +50 to provide precise control over color balance.

**6 Color Matrixes:** By altering 2 of the 3 primary colors, color matrixes including RG, RB, GR, GB, BR and BG (each independently adjustable from -50 to +50) provide extremely fine color control.

### Audio and Connections (XL H1S / XL H1A)

## Custom Display Adjustments

The operating menu on Canon professional camcorders can be customized to suit individual user preferences, maximizing convenience and efficiency.

Custom Function No.	Description
C.Fn-00	Recording Mode Icon
C.Fn-01	Camera Data 1 (F/stop and Shutter Speed)
C.Fn-02	Camera Data 2 (Exposure, White Balance, Gain)
C.Fn-03	Zoom Indicator
C.Fn-04	Focus Distance Display
C.Fn-05	ND Filter Displays
C.Fn-06	Image Effects
C.Fn-07	Focusing Assist Functions (Peaking and Magnification)
C.Fn-08	Customized Functions (Custom Function and Custom Preset)
C.Fn-09	Video Recording Standard Definition
C.Fn-10	DV Recording Mode
C.Fn-11	Frame Rate Display
C.Fn-12	Tape-Related Icons and Displays (Operation Mode, Time Code, DV Control)
C.Fn-13	Remaining Time on the Tape (Normal, Warning, Off)
C.Fn-14	Tape/Card-Related Displays (Ext. Control, Image Stabilization, Image Size/Quality)
C.Fn-15	Light Metering-Related Displays (Spot AE Point and Light Metering)
C.Fn-16	Still Images-Related Icons (Drive Mode, Flash)
C.Fn-17	Remaining Still Images on the Memory Card (Normal and Warning)
C.Fn-18	Audio-Related Displays (Mic Mode, XLR and DV Audio)
C.Fn-19	Condensation Warning Icon
C.Fn-20	Battery-Related Displays (Off, Normal, Warning)
C.Fn-21	Wireless Remote Display (Off, Normal, Warning)

### Custom Functions for XL H1S and XL H1A

Custom Function No.	Function	Description
C.Fn-00	Shockless WB/Gain	Softens transitions when changing white balance or gain
C.Fn-01	Zoom Ring Control	Changes Zoom Ring responsiveness
C.Fn-02	Zoom Speed	Changes Zoom key speed
C.Fn-03	Focus Ring Control	Sets the sensitivity of the Focus Ring control
C.Fn-04	Buttons OPER.1	Changes the responsiveness of the buttons (Magnification and White Balance Set)
C.Fn-05	Buttons OPER.2	Changes the responsiveness of the buttons (Record Review, Bars, Fade, End Search, and Gain Set)
C.Fn-06	Rings Direction	The directional response of the Zoom, Focus, and Iris rings can be set
C.Fn-07	OPER. Direction	Changes the operation of the cursor and shutter
C.Fn-08	Iris Limit	Sets the diffraction limit (On/Off)
C.Fn-09	Photo Button	Selects function for Photo + CP Data, Photo, Magnifying and OFF
C.Fn-10	Marker Level	Intensity level of the frame overlays and markers on screen can be set—40% (gray) or 100% (white)
C.Fn-11	Focus Assist B/W Mode	Selects whether to change the display to black-and-white when Focus Assist is activated
C.Fn-12	Object Distance Units Display	Selects whether distance to object is displayed in feet or meters
C.Fn-13	Zoom Indicator	Selects whether the zoom indicator is a graphic bar or a numeric display
C.Fn-14	Color Bars	Selects EBU SD (Type 1) or ARIB Multiformat HDTV (Type 2) color bars
C.Fn-15	1kHz Tone	Selects the level of the reference audio tone—OFF, -12 dB, or -20 dB
C.Fn-16	Wireless Remote	Selects whether or not the camcorder will respond to wireless controller commands
C.Fn-17	LANC AE Shift	Exposure control selection using Canon ZR-2000 Zoom Remote Controller
C.Fn-18	Tally Lamp	Controls the function of the Tally Lamp—ON, Blink, or OFF by wireless control
C.Fn-19	LED	Selects whether and which set of LED indicators on the camcorder will be active.
C.Fn-20	Custom REC	Sets custom recording mode for character record and magnifying

## Custom Functions

Camcorder operation can be further fine-tuned through the use of Custom Functions. With a wide array of customizable options, camera functions can be optimized to maximize shooting efficiency and uniformity of capture.

## Custom Presets

Store up to **9 custom presets** (sets of custom image adjustments) for instant access as needed. Custom presets can be stored on memory cards (SD/SDHC or MMC)—along with custom functions, display settings and photos—and shared with other Canon professional camcorders. This feature can be used to ensure uniform camera setup across multiple camcorders. The 3 custom preset channels (CP7–CP9) are presets designed by Canon and factory-loaded: CP7 optimizes images for viewing on consumer-use TV monitors by minimizing noise in dark areas and improving contrast; CP8 settings yield movie-like images when viewed on TV; CP9 settings are ideal for images that will be turned into film. Each of these channels can be reset as desired.

Custom Presets Adjustable Items	
Gamma Curve*	Color Gain
Knee Point Adjustment	Color Phase
Black Stretch/Black Press	R Gain
Master Pedestal*	G Gain
Setup Level*	B Gain
Sharpness	R-G Matrix
Horizontal Detail Frequency	R-B Matrix
Horizontal/Vertical Detail Balance	G-R Matrix
Coring	G-B Matrix
Noise Reduction 1*	B-R Matrix
Noise Reduction 2*	B-G Matrix
Color Matrix*	

*\*Only for video recording*

## Frame Rates

Shoot using any combination of frame rates in **1080 HD** or **SD** (16:9 or 4:3 aspect ratio) formats. Selectable frame rates include **60i**, **30F** or **24F** as well as an optional upgrade to add 50i/25F frame rates (performed by a Canon Factory Service Center).

## Operational and Image Enhancement Control

Canon professional camcorders incorporate numerous features that deliver superb control over operation and image enhancement. **Skin Tone Detail:** This feature minimizes imperfections in skin areas without removing other details. Fine adjustments in Hue,

Chroma, Area and Y level, plus a level adjustment for softening skin tones, enable the operator to achieve the most natural results. **Iris:** The Iris Limit function can be set from OFF to f/9.5. With the Canon 20x HD Video Zoom Lens, the multi-level iris control becomes available beyond the iris diffraction f-number (f/9.5) all the way up to closed (Iris Limit set to OFF). It can also be controlled using LANC with the optional Canon ZR-2000.

settings are available. The gain limit can also be set during AGC, so that levels can be judiciously adjusted, for example, when shooting in the dark. While selecting a WB or Gain setting, a new function ensures shockless transitions.

**Color Correction:** Color Correction enables the user to control R or B gain (-6 to +6) in 16 areas as well as selected colors set at the Hue, Chroma, Area, Y level while shooting. Selective Noise Reduction lets the user apply noise reduction to targeted color areas. The Menu selection bar uses numbers to simplify EVF Setup, Skin Detail and Color Correction.

**White Balance:** The camera's high-precision, through-the-lens, 128-segment white balance features an increased adjustment range of 2,000–15,000° Kelvin. White subjects are captured white, even in difficult lighting situations, such as candle light. Several automatic modes also deliver accurate color in a variety of shooting situations. **Auto** — The camera accurately and automatically adjusts white balance. **Outdoor** — White balance is adjusted for bright sunlight (5,600° Kelvin). **Indoor** — White balance is optimized for

incandescent lighting (3,200° Kelvin). **Color Temperature** — White balance can be selected in 100° Kelvin intervals in a range of 2,000–15,000° Kelvin.

## Program AE Modes

The camcorder's 7 pre-programmed **Auto Exposure modes** cover a wide variety of shooting situations. Ideal settings produce top-quality results quickly and easily. To simplify operation, Manual Mode is located next to OFF on the Power Dial. **Full Auto:** The camera takes over for point-and-shoot simplicity, setting focus, shutter speed, aperture, gain, white balance and AE program shift to achieve ideal results. **Auto:** This mode offers all the convenience of Easy Recording, but allows the operator the option of manually changing the settings. **Shutter Priority:** The user selects the shutter speed and the camera automatically selects the proper aperture for correct exposure. **Aperture Priority:** The user selects the lens aperture, and the camera automatically sets the proper shutter speed for correct exposure. **Manual:** This mode allows the user to select aperture and shutter speed in any combination. The viewfinder indicates the relation of selected combinations to the exposure as metered by the camera.

**Spotlight:** Perfect for an automatic solution to a typically tricky situation: when the subject is illuminated by a concentrated light source (such as a spotlight) and the background is relatively dark, this mode automatically adjusts exposure to compensate. **Night:** As ambient light levels begin to fall, the camera uses slower shutter speeds to achieve optimal image quality.

## Viewfinder

The XL H1S and XL H1A are equipped with a 2.4-inch widescreen combination EVF/LCD monitor (approx. 215,000 dots) for a clear, high-resolution image. The XH G1S

and XH A1S provide both an EVF (approx, 269,000 dots) and a separate flip-out 2.8-inch LCD monitor (approx. 207,000 dots). Numerous viewing functions are provided to maximize convenience and boost the quality of capture. Aspect guides provide industry-standard picture formats, while Histogram and EXIF displays offer real-time brightness information for highly accurate adjustments. The operator can choose to display up to 8 characters of the Custom Preset name and the SDI bit map display may be turned on or off. All viewfinder display information can be removed to leave a clear, unobstructed viewing area. A Magnifying function (operable with the Photo button) enlarges the viewfinder image, making it easier to perform fine image adjustments. Remaining memory is displayed when using Focus Enhancements External Hard Disk Recorders.

## Enhanced Operation

Versatility and convenience are hallmarks of Canon professional camcorders. Still images can be “grabbed” from footage either while shooting or during playback. These images can be saved on the memory card for subsequent transfer. The camera's power LED illuminates green when the camera is powered up and ready. Playback mode preserves the letter-box format, allowing an accurately proportioned view of captured footage. A default write and protect function prevents accidental erasures. Marker colors may be specified at the user's discretion. The camcorders also support 9 languages: German, English, Spanish, French, Italian, Polish, Russian, Chinese (simplified) and Japanese.

## Exceptional Image Quality... Definitive Control... Professional Functionality

- Genuine Canon 20x High Definition L-series Video Zoom Lens III
- Three 1/3" Native 16:9 CCD Image Sensors with 1.67 Megapixels (1440 x 1080)
- XL H1S only: HD-SDI (SMPTE 299M) /SD-SDI (SMPTE 272M) Output with embedded audio and time code, Genlock Input, SMPTE Time Code Input and Output
- Independent Focus, Zoom and Iris rings
- True 1080 HD Capture with a choice of 60i, 30F Progressive or 24F Progressive frame rates
- Canon DIGIC DV II Image Processor delivers the highest image quality
- Canon Interchangeable XL Lens Mount
- SuperRange Optical Image Stabilizer can correct a wide range of movements without image degradation
- Complete Customization with 23 image adjustments, 22 display options and 21 custom function settings
- 2 Built-in XLR Terminals with independent audio level control

BNC style HD-SDI, Genlock, Time Code input and output terminals (available on XL H1S only)

For more than a decade, Canon has brought industry-leading optics and image processing expertise to the professional video market with the XL-series camcorders. Today, leading videographers rely on these remarkable camcorders for superior image quality and ultimate creative control, ensured by advanced Canon technologies and open architecture system design. The latest in that line are the XL H1S and XL H1A HD camcorders. They bring to the XL-series the finest in high-definition capture capability, ensuring that they will continue to be favorites among independent filmmakers, corporate and event shooters and broadcast and news market professionals.

External Sensor for Instant AF

Professionals who require a smaller, lighter weight HD camcorder, but who refuse to sacrifice capability and performance, will find the Canon XH G1S and XH A1S to be ideal solutions. The latest in a family of high quality HDV camcorders, they deliver the advanced features and extraordinary image control capabilities videographers need to make their visions reality in high definition. Even the most demanding users will find uncommon flexibility, versatility and capability in the extensive array of features and optional accessories. They will meet and exceed the highest expectations.

## Open Up a World of Possibilities

- Genuine Canon 20x Professional L-series Fluorite Lens
- Three 1/3" Progressive Scan CCD Image Sensors with 16:9 and 4:3 aspect ratio shooting formats
- Variable frame rates: 60i, 30p and 24p
- XL Mount Interchangeable Lens System with ability to change lenses from the XL-series lenses or Canon's photographic lenses
- SuperRange Optical Image Stabilizer corrects camera shake instantly while maintaining the integrity of the image

Canon L-series Lenses,  
EF Adapter XL and  
Extender XL 1.6x

The Canon XL2 enables video capture closer to the finished product than ever before. Work that previously was limited to post-production can be simply and effectively accomplished in the field, in the camcorder. The XL2 offers performance found only in much more expensive camcorders. Total Image Control and the solid foundation of Genuine Canon Optics, interchangeable lens capability and superb Canon image processing quality are united in the XL2. It brings a unique level of performance and convenience to this class of camcorder.

- Battery Pack BP-930\*
- Shoulder Strap SS-1000
- Stereo Video Cable STV-150\*
- S-Video Cable S-150\*
- Microphone
- Adapter Holder Plate

\* Also available as an optional accessory.

## Create Your Vision

- Genuine Canon 20x Professional L-series Fluorite Lens
- Three 1/4" CCD Image Sensors
- Optical Image Stabilizer corrects camera shake instantly while maintaining the integrity of the image
- 1.7 Megapixel Still Images
- Digital Video Format and IEEE 1394 (DV In/Out Terminal)
- MultiMediaCard/SD Memory Card Capability

Genuine Canon 20x  
Professional L-series  
Fluorite Lens with Optical  
Image Stabilizer

With the GL2, Canon has created a camcorder with a wealth of features, each selected to further elevate the standard by which camcorders are judged. The camera's excellence begins with its outstanding Canon L-series Fluorite lens and includes pro-level capture control features found in Canon's higher-end camcorders. Incorporating precision optics, superior digital processing and a sleek innovative design, the Canon GL2 offers reliable professional performance. Offering exceptional control, the camcorder is ideal for the serious videographer seeking a compact solution that opens the door to creative excellence.

System Chart

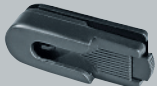

Specifications

	XL2	GL2
Signal System	NTSC and DV	
Recording Media	MiniDV	
Image Sensor	1/3-in. 3CCD (horizontal pixel shift), approx. 680,000 total pixels 16:9 and 4:3 switchable	1/4-in. 3CCD (horizontal pixel shift), approx. 410,000 total pixels
Lens	XL Lens System 20x Zoom XL 5.4–108mm L IS Lens	20x Zoom 4.2–84mm f/1.6–2.9
Image Stabilizer	SuperRange Optical Image Stabilizer (Vari-Angle Prism), 20x Zoom XL 5.4–108mm L IS installed	Optical Image Stabilizer (Vari-Angle Prism)
AF System	TTL autofocus, manual focusing possible, 20x Zoom XL 5.4–108mm L IS installed	TTL autofocus, manual focusing possible
Minimum Illumination	Approx. 5.5 lux (20x Zoom XL 5.4–108mm L IS installed, auto mode, 60i frame rate, 4:3 aspect ratio, shutter speed 1/60)	Approx. 0.37 lux (shutter speed 1/8)
Zoom	Manual/Power zoom: 16 fixed speed level settings	–
Video Recording System	Two rotary heads, helical scan azimuth recording	
Audio Recording System	PCM digital recording: 16-bit (48 kHz) 2CH, 12-bit (32 kHz) 4CH	
Recording Speed	[SP mode] 18.81mm/s [LP mode] 12.56mm/s	
Maximum Recording Time	[SP mode] 80 min. [LP mode] 120 min.	
Viewfinder	2.0-in. TFT color, approx. 200,000 dots	0.44-in. TFT color, approx. 180,000 dots
LCD Screen	Flip-up Viewfinder	2.5-in. TFT color, approx. 200,000 dots
Microphone	Stereo electret condenser microphone	
Video Terminals	S-Video (input/output) RCA terminal (output)	
Audio Terminals	RCA (input/output), MIC: 3.5 mm stereo mini-jack (unbalanced); XLR: 2 systems	
HDV/DV Terminal	[DV] Compliant with IEEE 1394 protocol	
Headphone Terminal	ø 3.5mm stereo mini-jack	
Power Supply	7.2V DC (battery pack)	
Dimensions (W x H x D)	8.9 x 8.7 x 19.5 in./225 x 220 x 496mm	4.6 x 5.4 x 12 in./118 x 136 x 306mm
Weight	5.3 lbs./2.4kg (body only) 7.8 lbs./3.5kg (with lens and battery)	2.5 lbs./1.1kg
