Please check the keypad batteries before use. If icon  shows on LCD, it indicates the battery is low. Please change new CR2032 batteries.

3-System Connection

No network connection is required in the conference hall;
The projector and screen are prepared by users.

4.1.1-System Settings : Keypad Match-Match Mode

【 Why to Match 】 Keypad match is to create communication between keypads and base station, and make sure your system is isolated from other similar systems. Match mode is set by default from factory.

【 How to Match 】 Please run **SunVote ARS Tool Kit** , go to **Keypad Match** and click **“Start”** after the base is connected.

SunVote ARS Tool Kit V2.0.1.5

Base Station | Keypad | **Keypad Match** | Base Backup | Language: English

Matched Keypad Count: 1

	Time	Keypad ID	Keypad SN
▶	2016-02-26 13:53:35 700	60	111601028260

List the information of matched keypads

Start | Stop | Clear

【Keypad Match】Click “Start” and then input the password (or press combination key,i.e. “.,” and“-” buttons for M52Plus)on keypad to start matching and click “Stop” once completed.

EA1000 Base Station 1 Connected Channel:12 Base SN:B614010113

Press **【.】** and **【-】** at the same time for 3 seconds

Keypad shows “-Channel-” and “OK”, the buzzer beeps 3 times shortly, to indicate successful match

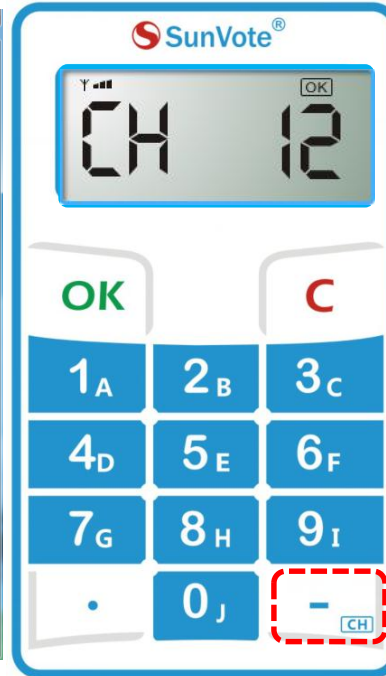

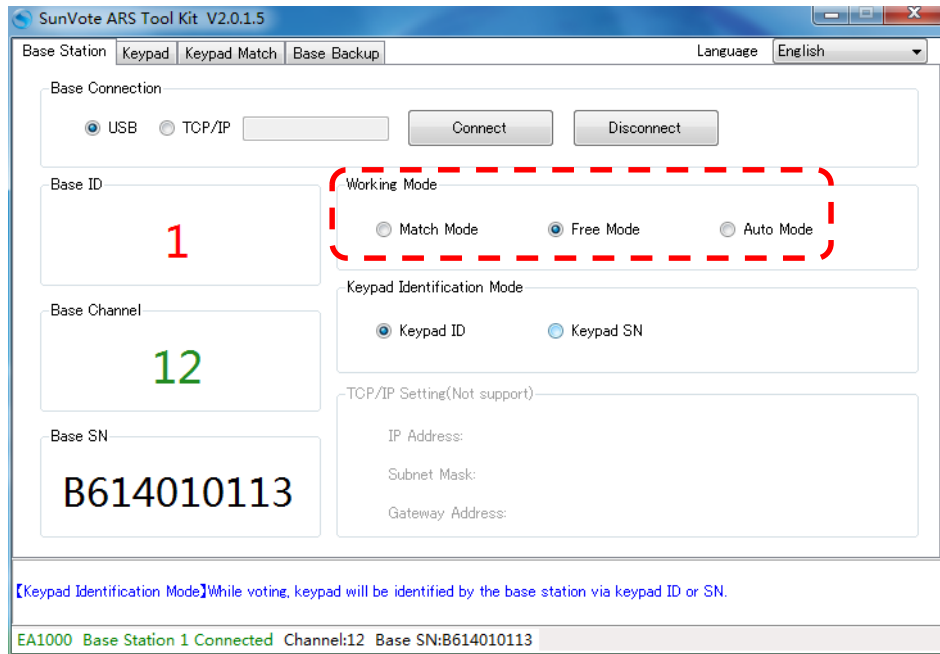

If failed, keypad will return to the last matched channel.

For end-user, the keypads and base station are matched before delivery.

4.1.2-System Settings : Keypad Match-Free Mode

【 Free Mode】 Keypad is able to communicate with any base station freely by inputting the appropriate channel of the base.

【 How to Set】 Free mode is controlled by base station. However the base is set as **match mode** from factory, we may change it to **free mode** in SunVote ARS Tool Kit as shown on the bottom left.

When the free mode base is connected, follow the steps as below :

Long press **[-]** for 3 seconds, and input the correct channel when "CH" appears on the screen , press **OK** to connect.

Keypad shows "Channel" and "OK", the buzzer beeps 3 times shortly, to indicate successful match

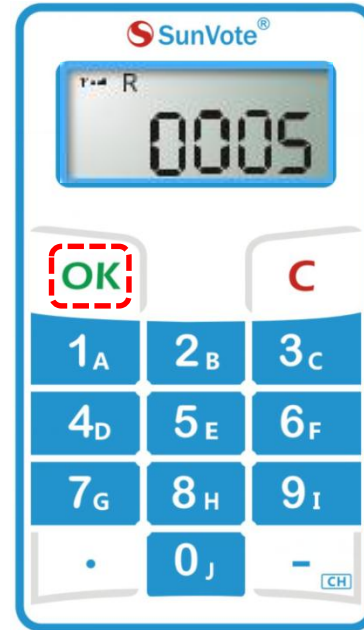

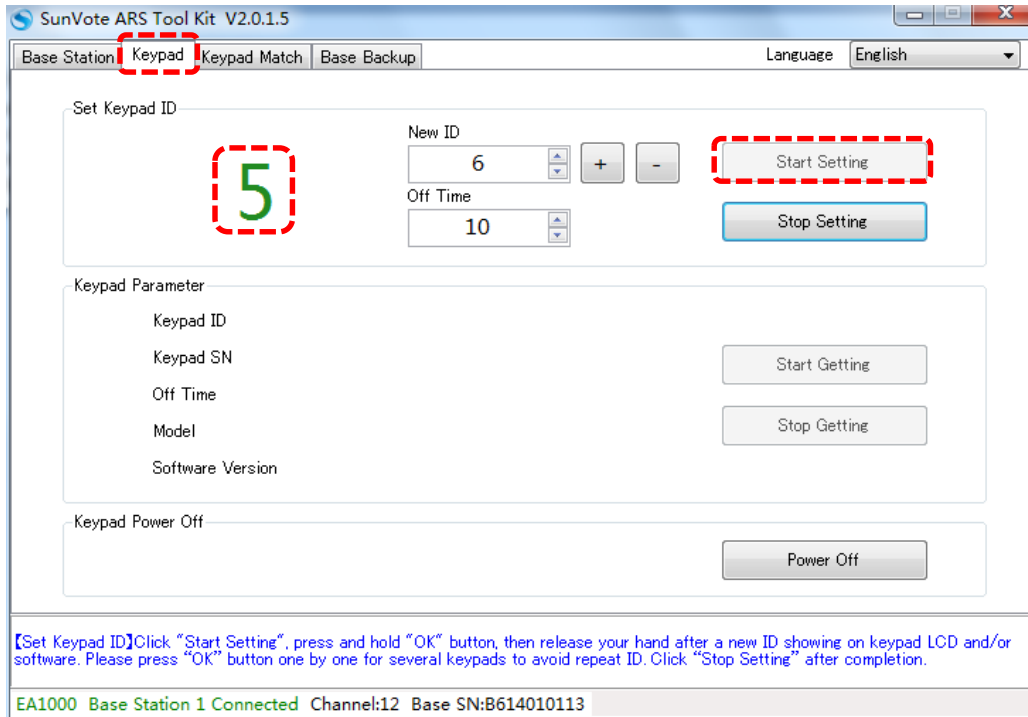

If failed, keypad will return to the last matched channel.

For end-user, the keypads and base station are matched before delivery.

4.2- System Settings: Set Keypad ID

【 Why to Set ID 】 Keypad ID is convenient for device management, test and troubleshooting. ID should be unique.

【 How to Set ID 】 Run **SunVote ARS Tool Kit** , go to **Keypad** and click **Start Setting**. **Now** press and hold 【OK】 button on keypad, and release your hand after a new ID showing on keypad and toolkit. **New ID** in **ARS Tool kit** will add 1 automatically, so please press another keypad to set its ID in ascending order.

For end-user, ID is set before delivery.

4.3-System Settings: Management

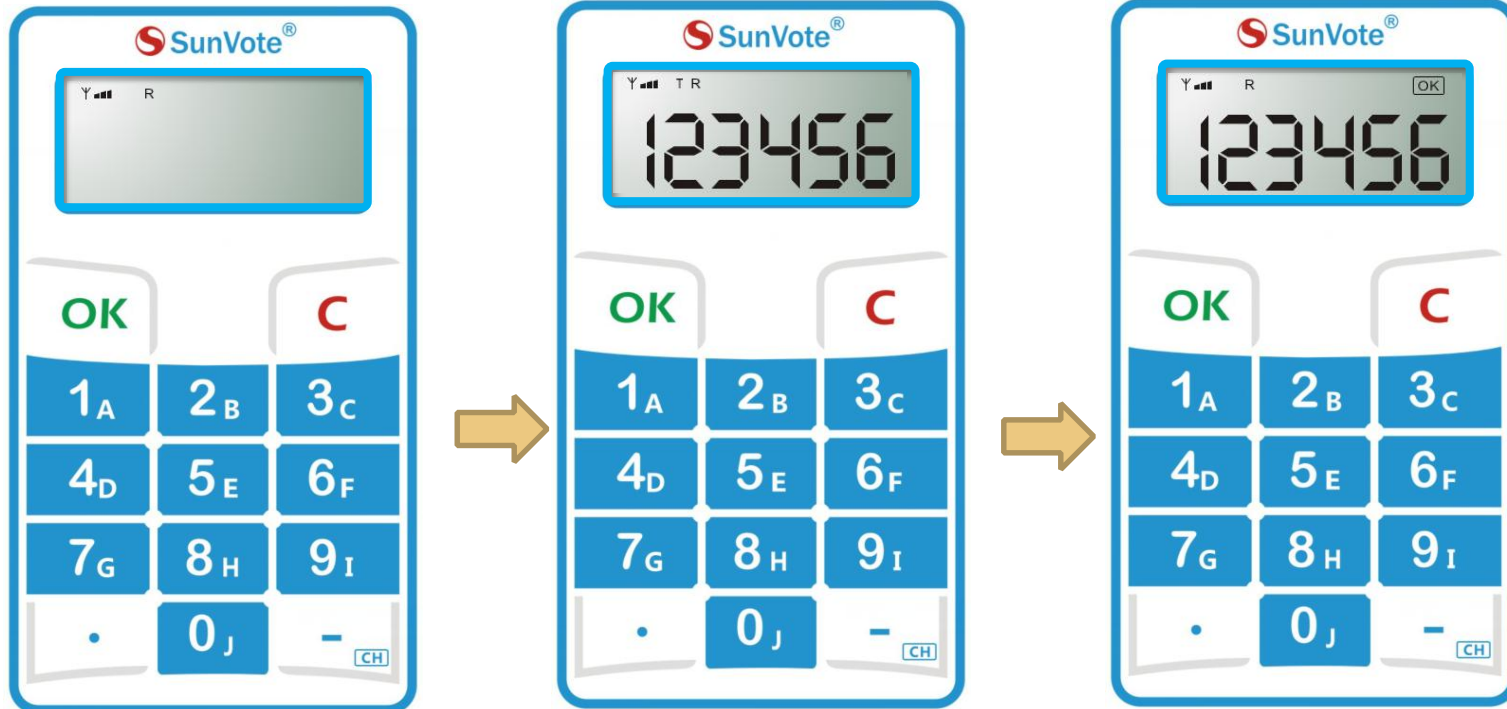

- 1. Modification Mode :** Use software to allow or not allow to modify the answer. Press **【C】** to modify after submitting under modifiable mode. Press the appropriate functional buttons to resubmit directly for single choice/judge and vote;
- 2. Confidential Mode :** Use software to enable or disable the confidential mode . Once enabled, LCD will only show “OK” without the exact voting value (i.e.. A/B/C) for confidence.
- 3. Submitting Mode :** Use software to allow or not allow to submit less than the selectable options. E.g.: if the answer of a multiple choice is ABC, you may submit AC if it’s allowed; otherwise, only the answer with 3 options like BCD is acceptable.
- 4. Identification Mode:** Each keypad has a unique and inalterable 12-digit serial number. Set it in software or SunVote ARS Tool Kit to identify keypad by SN/ID. If set as SN mode, the keypad SN will show in software when polling.

5.1- Voting functions : Sign in

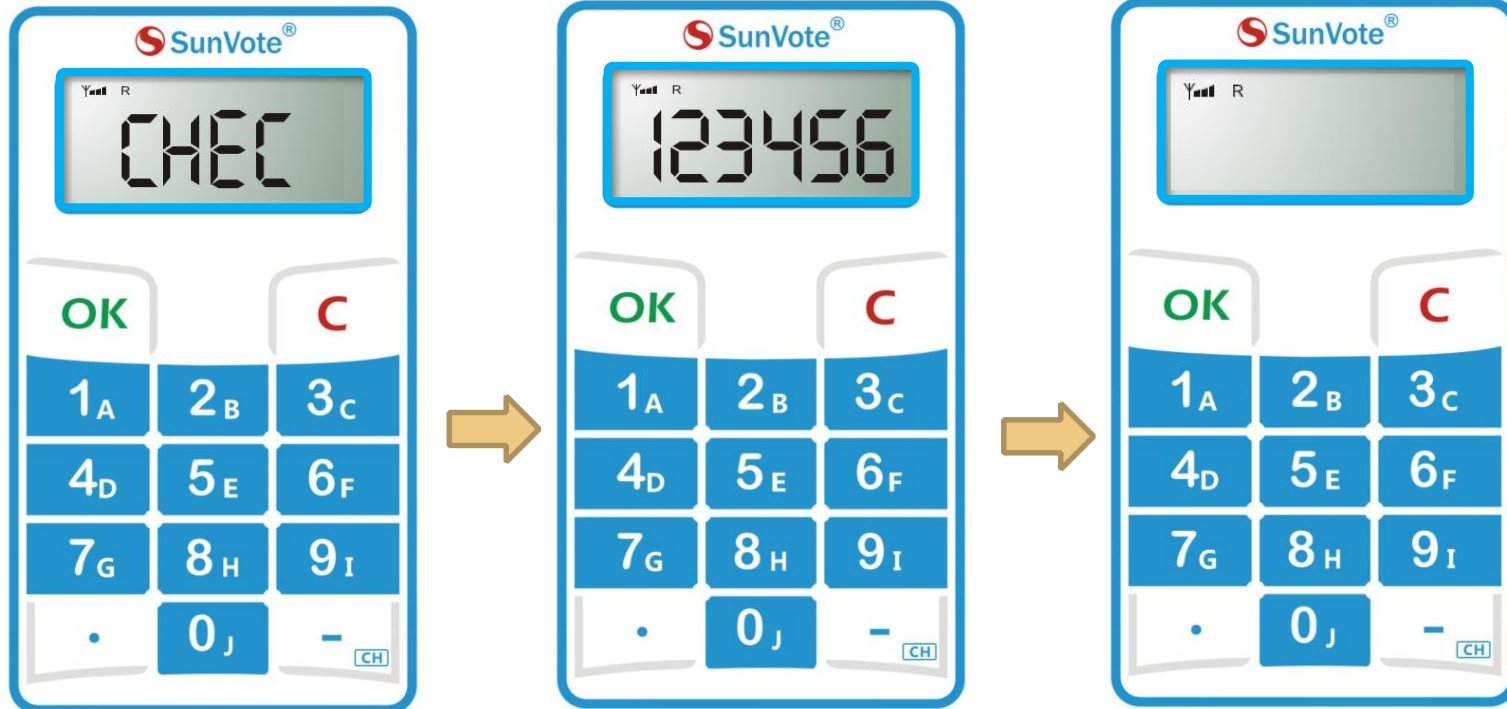

When start **Sign in**, press **【OK】** to sign in according to the indication on keypad and “OK” will be displayed after successfully submitting.

5.2- Voting functions : User-ID

When start **Sign in**, input numbers according to the indication on keypad and press **【OK】** to sign in. "OK" will be displayed after successfully submitting. Max support 16 numeric characters;
User-ID is a group of specific numbers to bond the randomly distributed keypad with the user, such as student ID or Staff ID.

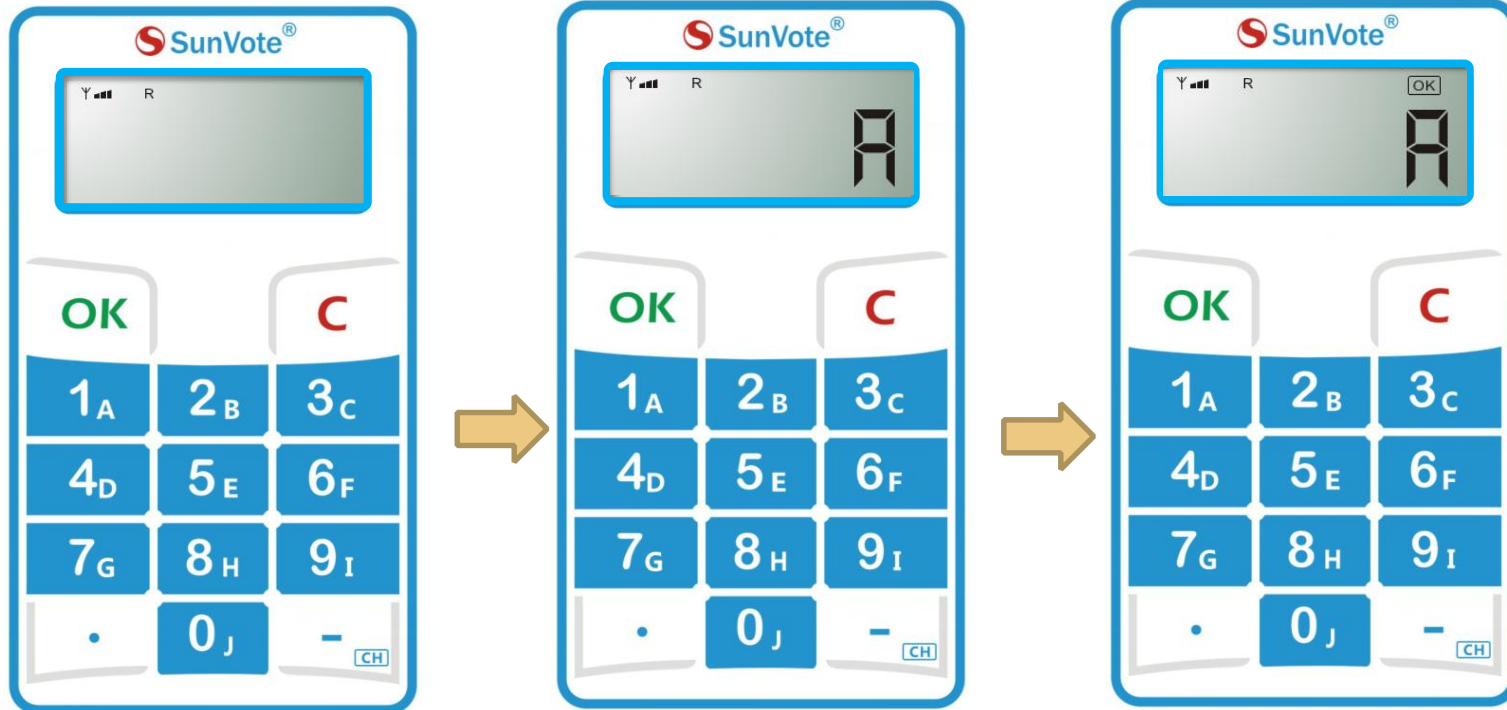

5.3- Voting functions : Back-Stage Signin

Start **Signin** by software, then input numbers while keypad shows “CHEC” and press **【OK】** to sign in. LCD says “OK” after successfully submitting and goes to response interface. If input a wrong code, keypad will say “Err”, and now input a new code. Max support 16 numbers for ID mode and 12 numbers for SN mode;

Back-Stage Signin means “Signin” mode is no need to close during polling, and latecomer may join the response and bond the randomly distributed keypad with him/or her by inputting a group of specific numbers , such as student ID or Staff ID.

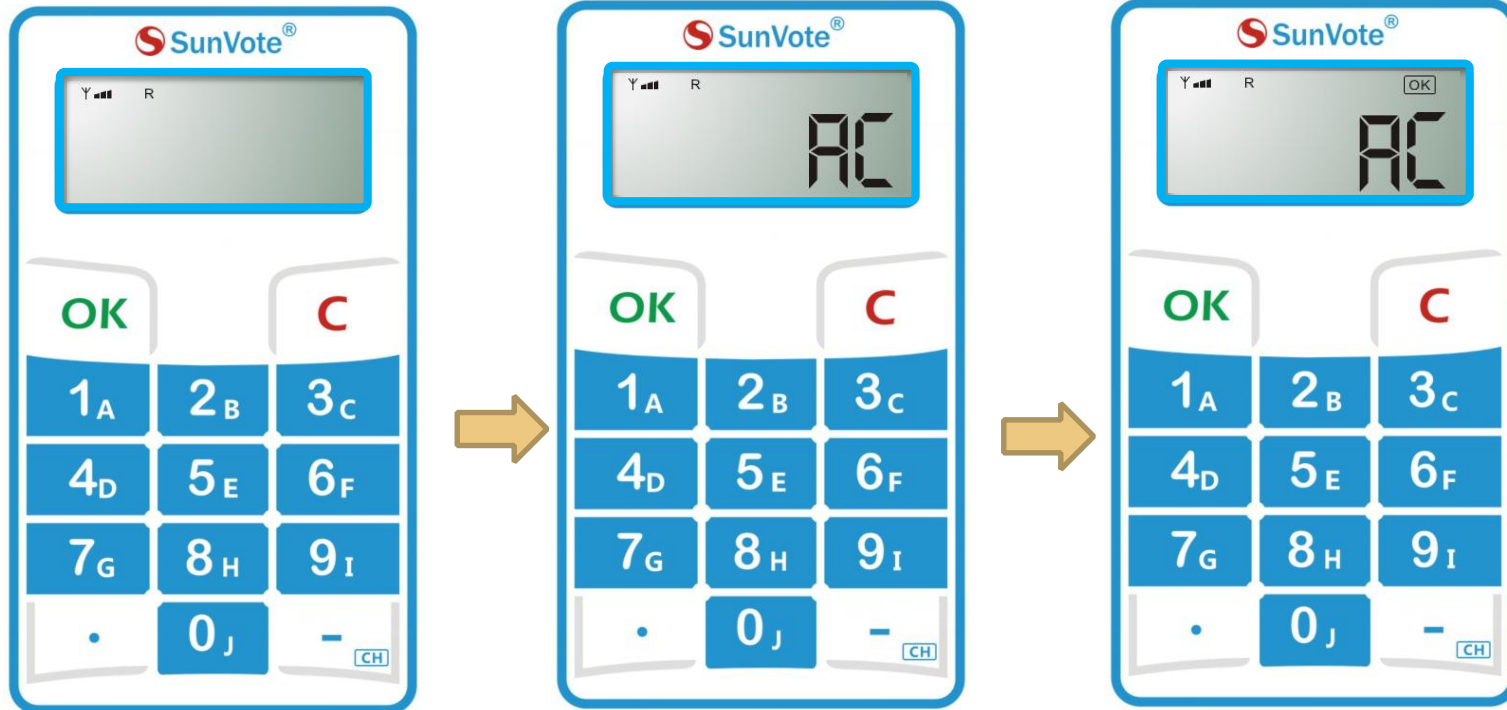

5.4- Voting functions: Single Choice

When start **response**, press alphanumeric keys to submit according to the indication on keypad, and “OK” will be displayed after successfully submitting.

Set the confidential mode in software, and support 1 out of 10 options.

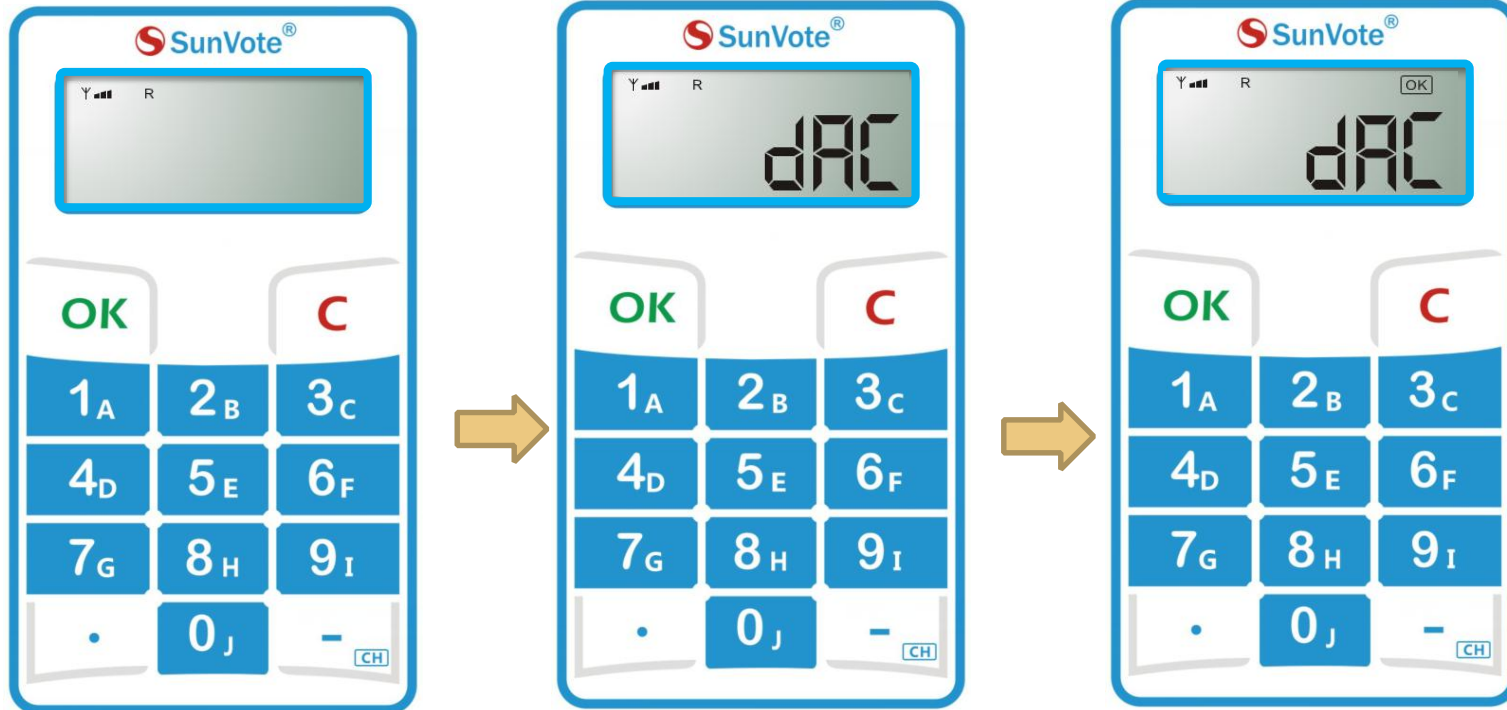

5.5- Voting functions: Multiple Choice

When start **response**, press alphanumeric keys to input your answer and press **【OK】** to submit according to the indication on keypad, and **“OK”** will be displayed after successfully submitting.

Set the confidential mode in software, and support maximum 10 out of 10 options, and display the last 6 letters only.

5.6- Voting functions: Sequence

When start **response**, press alphanumeric keys to input your answer and press **【OK】** to submit according to the indication on keypad, and “**OK**” will be displayed after successfully submitting.

Set the confidential mode in software, and support maximum 10 out of 10 ranking options, and display the last 6 letters only.

Set submitting mode in software , such as repeated selection (i.e. AABC).

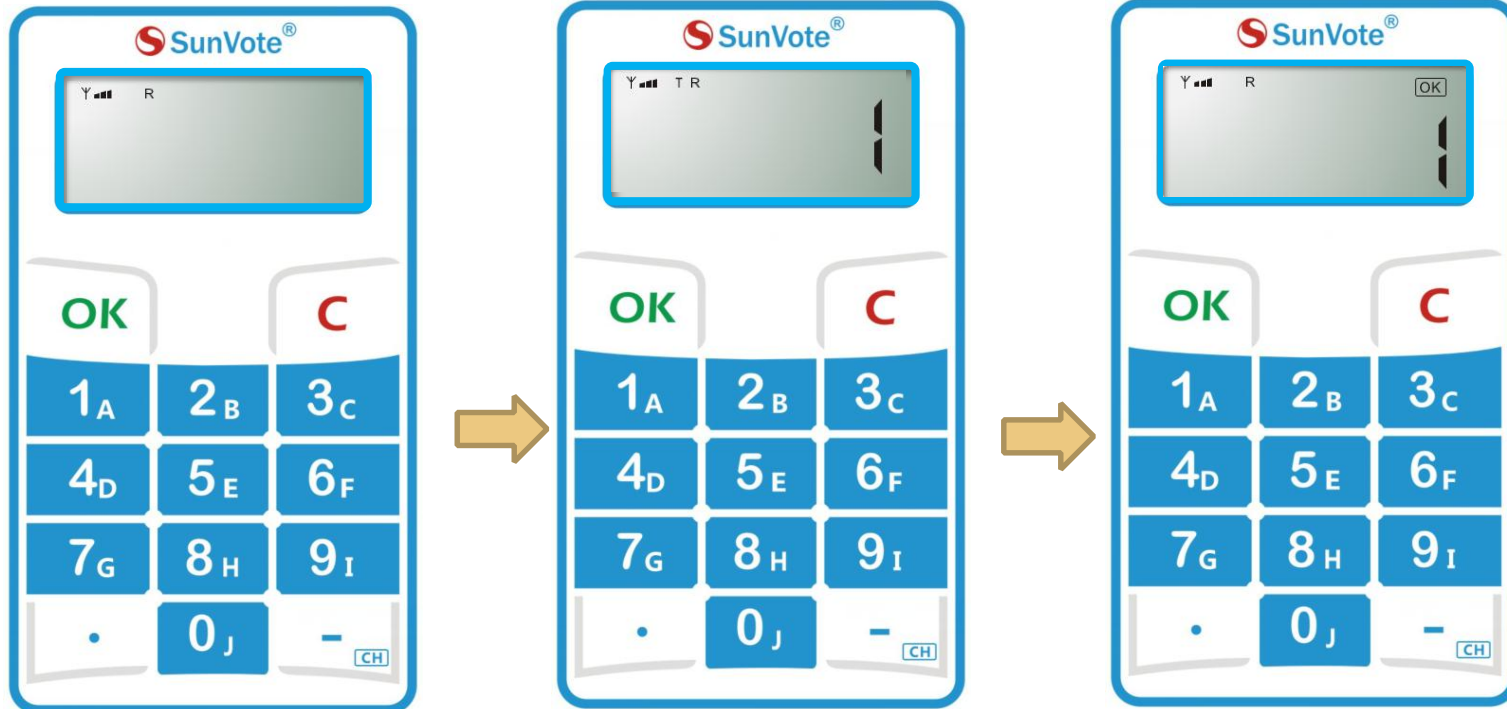

5.7- Voting functions : Judge

When start **Vote**, press **【1】** / **【2】** for **Yes/No (True/False)** to vote according to the indication on keypad, and **“OK”** will be displayed after successfully submitting.

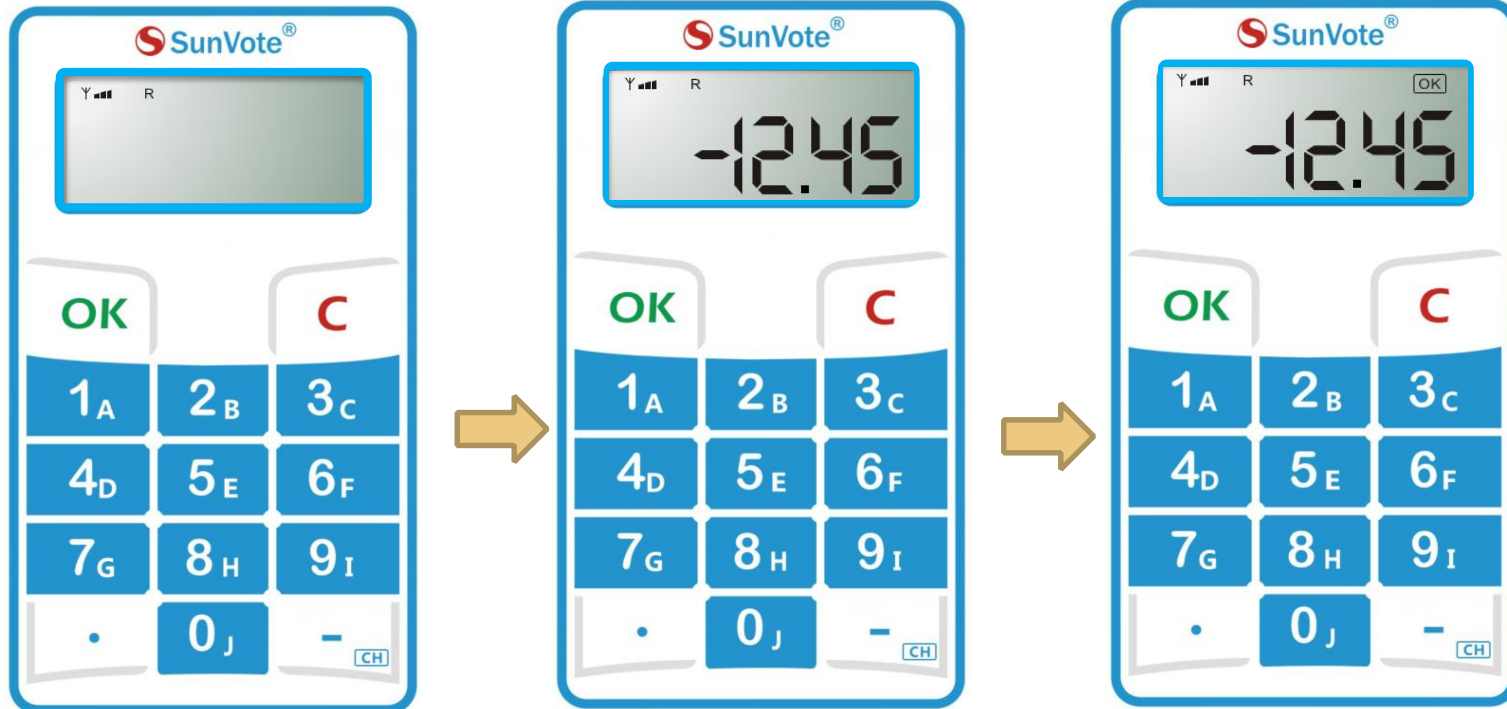

Set the confidential mode in software, and support two modes: True/False & Yes/No

5.8- Voting functions : Vote

When start **Vote**, press **【1】 【2】 【3】** (Yes/No/Abstain) to vote according to the indication on keypad, and **“OK”** will be displayed after successfully submitting.
Set the confidential mode in software.

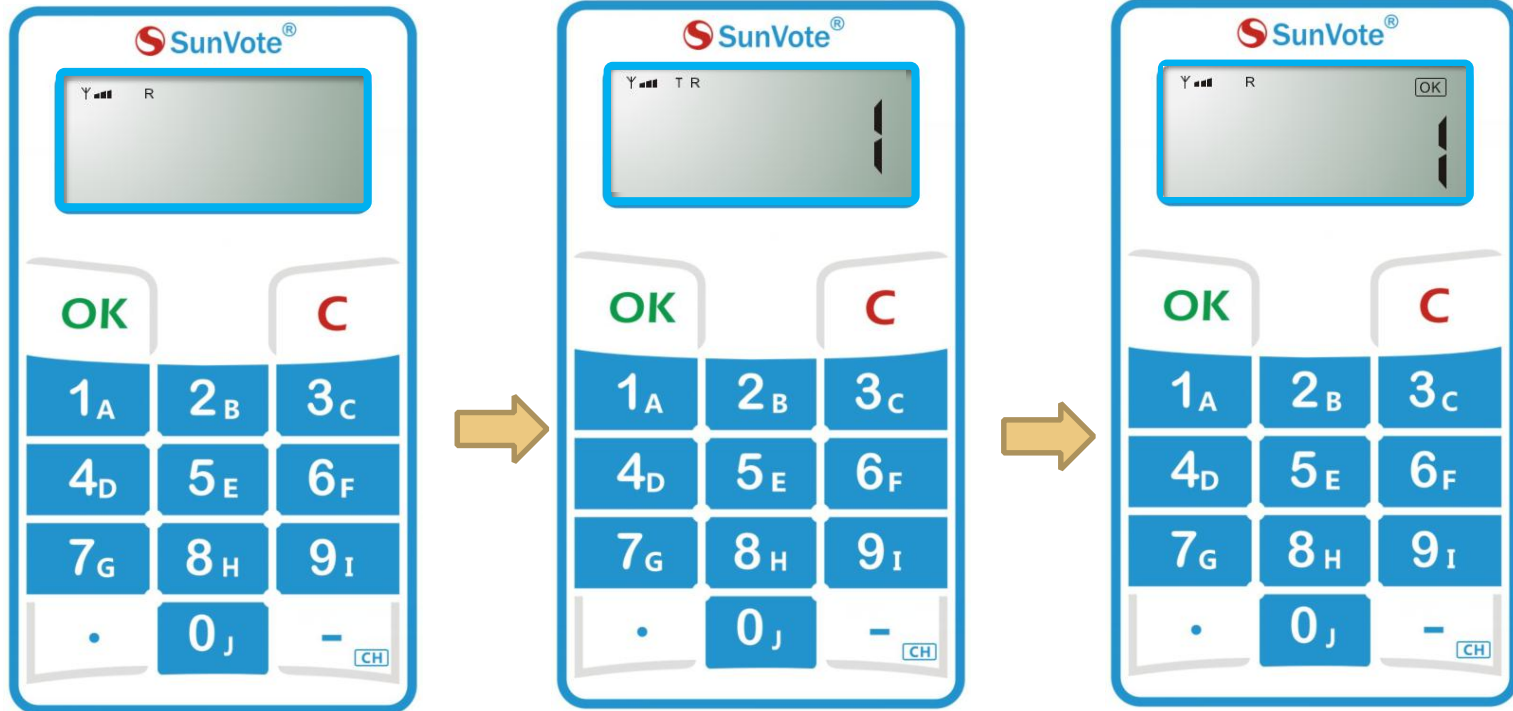

5.9- Voting functions: Numeric

When start **response**, press alphanumeric keys to input your answer and press **【OK】** to submit according to the indication on keypad, and “**OK**” will be displayed after successfully submitting.

Set the confidential mode in software, and support maximum 16 characters including decimal point and minus, and display the last 6 digits only.

5.10- Voting functions: Rush Answer

When start **response**, press **【OK】** for fastest response, and “OK” will be displayed after successfully submitting.
