Safety

Read carefully the following important safety and regulations before you use the phone. Failure of obeying these instructions may lead to suspension of mobile telephone services, or broke the law. Most of all, it will cause your personal in danger. Always adhere to the following:

Traffic Safety

Avoid using a hand-held phone while driving. For your safety, you should park the vehicle before making or answering a call. Using a hand-free car kit or earpiece is recommended.

Do Not Use in Hospitals

The use of mobile telephones may interfere with the functionality of some medical devices in the hospital. Check the law and regulations or posted notices. To avoid electromagnetic interference (EMI) with medical devices, please power off your phone when it is necessary.

Do Not Use in Airplanes

The use of mobile phones in an aircraft may disrupt radio transmissions and signals. This, therefore, can be dangerous to the operation of the aircraft. Be sure to turn off your mobile phone when on board an aircraft. It is recommended to detach the battery pack from the handset to prevent accidentally turning on the phone by miss-touching the power key.

Do Not Use in Gasoline Stations

It is advisable that users switch off their mobile phones when refueling is in process. It is dangerous that any spark may cause an explosion or fire.

Do Not Use in Explosive Sites

The use of mobile phones should be restricted in potential explosive atmosphere sites such as chemical plants, fuel storage, or the area where blasting operations are in process.

Operating Environment

Mobile radio transmitting equipment, including mobile phones, may be subject to interference and may cause danger. Therefore, it is recommended that you follow any special regulations in any area. Switch off your mobile phone whenever the use is forbidden.

Standard Usage

For the satisfactory operation of the mobile phone, it should be used in a normal operating position. Do not touch the antenna while making a call.

Accessories

This phone can only be connected to approved accessories and batteries. Do not connect the phone to incompatible products.

Appropriate Maintenance

Only qualified and authorized personnel should service the mobile phone. Faulty installation or repair may be hazardous.

Emergency Calls (SOS)

An emergency call “112” can be made from the mobile phone under any circumstances, and even the phone is locked. When making an emergency call, you must be sure to give all the necessary information, such as your name, your mobile phone number, the location and the crisis situation, as accurately as

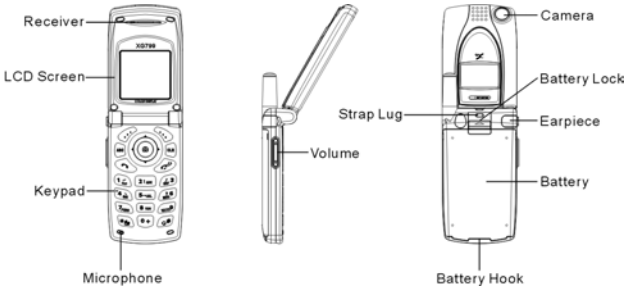
possible. In order to deliver the sufficient information to a rescue institute, do not disconnect your phone immediately.

Use with proper care to reduce electromagnetic interference (EMI)

This product has passed the inspection of the Directorate-General of Telecommunications, Ministry of Transportation and Communication. The highest reported SAR values which are: Head 1.15 W/kg; Body-worn 0.211 W/kg are lower than the standard value at 1.6 W/kg, maximum.

Getting Started

Phone Overview

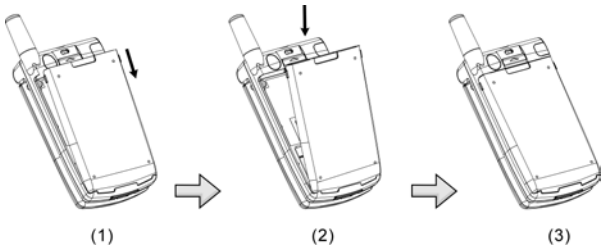


⚠ **Warning:** Please do not detach any parts and only use manufacturer original component to keep the quality call phone.

Installation & Removing

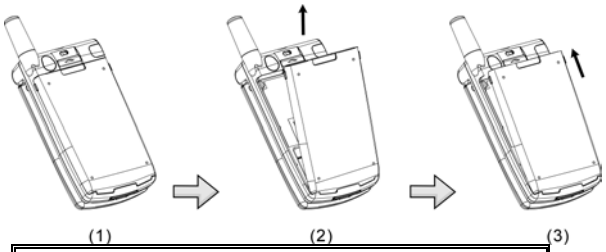
Installing the battery

1. Press the lock on the bottom and then slide the battery cover backward and lift up battery cover.
2. Hold the battery and wedge it under two up corners and press the battery pack into place. Make sure that golden connector are facing the connector on the phone.
3. Place the cover into the track and slide it forward and lock with cover latch.



Removing the battery

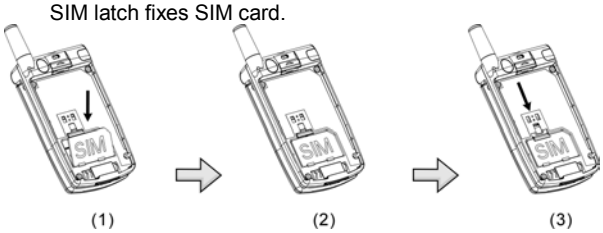
1. Turn phone off and repeat the above item 1 to open the battery cover.
2. Lift up the bottom of the battery pack and pull battery by sliding backward to detach the battery from phone.
3. Repeat above item 3 to recover the battery cover.



Important! : Risk of explosion if battery is replaced by an incorrect type.

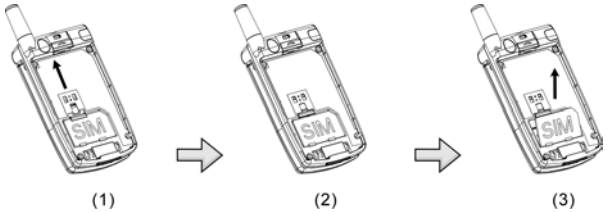
Installing the SIM Card

1. Power off the phone and remove the battery. Make the SIM card golden contact points face downward and the oblique-angle edge align to up left.
2. Hold the SIM around 30° into SIM card slot and slight push the SIM card bottom into the SIM card holder. Place the card inside the SIM holder completely and make sure the SIM latch fixes SIM card.



Removing the SIM Card

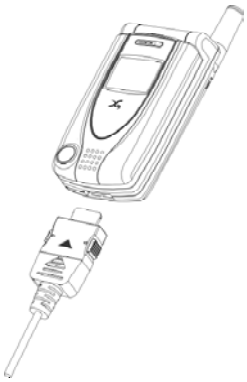
Power off the phone and remove the battery. Press down the SIM latch and slide SIM upward to remove SIM from holder and slot as shown in the figure.



(1) (2) (3)

Connecting the Charger

To connect the travel charger to the mobile phone, you should install the battery first. Follow the travel charger instruction, and plug the connector with the ∩ sigh upside into mobile phone. See below figure.



Note:

1. Do not remove your battery or SIM card while charging.
2. Use a compatible or appropriate charger for the phone.
3. Manipulate the charger carefully, the connector might be damage easy.

Removing the Charger

When removing the charger from battery, disconnect the plug from the electrical outlet. Press the release buttons on two sides of the connector simultaneously and pull out the connector from mobile phone.

Keypad Description

5. After releasing the button and wait for a second, the cursor will move to next spot for new input.
6. If there are any differences between the character sets listed in the table and on the phone, please refer to the displayed characters on the phone.

Display Indicators.

Indicator	Description
	The battery level indicator. The more the battery cell is, the stronger the battery is charged. The battery cell flashes right and left when charging, until it is full.
	The earpiece has been inserted and used.
	Indicates that the phone is using a roaming network.
	The vibration function is on.
	The mute function is activated. (with blue color)
	Both mute and vibration functions are activated.
	Alarm is activated.
	New message is in mailbox.
	Messages are full of inbox.
	Shows the signal strength of network connection at your current location. The more the bar is, the stronger the signal is received. (The total is four cell.)
	Shows that the data transmission cord has been inserted.
	CSD Connection is on.
	WAP browsing is in connection.

Basic Operation

Making a Call

1. Power off the phone and install your SIM card.
2. If the battery is out of power, you can still connect to your travel charger and use the phone normally.
3. Press to turn on. If the display indicates “Enter PIN ”, key in the PIN number of your SIM card, (please refer to the Manual provided by the telecommunication company for details) and press .
4. Key in the area code and telephone number, and press to dial the number.

The SIM Card

Your telecommunication company provides the SIM card. Please use a small SIM card to fit the design of this phone. For the SIM installation, please refer to page 22. This phone can be used only with legally issued SIM cards and can receive or send the calls only within the SIM network service range.

Battery and Charger

The Li-ion battery that comes with this phone is rechargeable. Please use the charger and the battery provided by the original manufacturer to ensure a long lifetime for the cellular phone.

1. Plug the charger into an appropriate outlet that meets the requirements of this phone. The other end is connected to the phone. While the phone is recharging, the screen will automatically display the current power recharge status of the battery via a flashing signal. The phone can still function normally if it is turned on while being recharged. Once the recharging process is finished, the flashing signal will stop.
2. Once the recharging process is completed, the charger can

be disconnected from the phone and electrical outlet.

3. Use only chargers certified by the original mobile phone manufacturer. This is an international charger (Model: KWS05C is subject to change in different countries). Read instructions on the charger label before use.
4. A 'battery low' message will be displayed on the screen to alert you of battery low condition. The mobile phone will automatically shut down when the battery is exceptionally low.
5. If the battery is totally out of power, the battery requires to be recharged at least ten minutes. Otherwise, it might have difficulty to turn on.

Turning on the Phone

To turn the phone on, hold the key for about 2~3 seconds. If the message "Enter PIN:" shows on the screen, the preset "PIN:" code of the SIM card must be keyed in (please refer to the Manual provided by the telecommunication company for details). Then, press the key.

PIN and PIN2 (4 to 8 digits)

A PIN (Personal Identification Number) code is stored in your SIM card and is supplied by your SIM card network provider. To prevent unauthorized use, your PIN1 code will be required every time while you turn on your phone. Key-in the correct PIN1 code and press .

Important! :

1. **If a wrong PIN code is entered three consecutive times, the phone becomes locked or disabled. You must ask for your network provider to use the PUK code to unlock or enable the phone again.**
2. **PIN2 code is for other functions, such as certain number dialing and barring.**

PUK1 and PUK2 (8 digits)

To enable a locked PIN code, the PUK (Personal Unblocking Key) code is required. Check with your network provider for the code. After getting the PUK1 code and unlocking the PIN1, you can reset your PIN1.

Calling

Enter the area code and phone number, the press button to dial out a call.

Dialing Emergency Numbers

1. Please turn the power on first. Enter an emergency number 112; and press to dial out.
2. Most networks allow users to make emergency calls without inserting a SIM card. In the case of no SIM card, you'll see the

indicator on the down-left corner after turning on your phone.
3. In the case of SIM card inserted, SOS sign will be displayed on the down-left corner and without enter 112 number, press or keys to dial out.

Changing an Entry

Pressing the

will delete the last letter or number keyed which you entered.

Answering a Call

Your phone rings or/and vibrates when receiving a call. Press or to answer the call. Press to end the call. If you are using an earpiece, you can press the button of the earpiece to answer or terminate the call.

Recent Calls

The phone will record all the recent calls in which you received, dial out, and unanswered calls. After pressing to enter menu and to select submenu “Call List”, you can find out all recent calls. The recent calls can accommodate up to 30 numbers. Press either button to browse numbers and select a number to dial out by pressing button. There are five choices you can select. They are “Call”, “Edit Phonebook” and “Remove”.

Speed Dial

You may quickly search a number stored in SIM card by entering the address (SIM Card: depend on SIM card capacity, Phone memory address: 2001~2250) of a certain phone. Every phone number comes with an address number in phone book. Under standby mode, you can press button to get a “#” sign on the screen and type in the address of the phone number which you want to dial after the “#” sign. Then, press button to dial a call.

Holding a Call

Pressing allows you to put the on-line call on hold while you make another call. When the second call is connected, pressing allows you to switch between these two calls.

Multi-party Calls

1. If, while talking to a party, you would like a third party to join the conversation, press the key and dial the number of the third party. Once the call goes through, press 3 and to conduct a three-party call.
2. If you would like to talk to a fourth party, repeat step one to conduct a four-party call. (This system allows a maximum 6-party call.)
3. If you want to end the connection with any one of the parties during a multi-party call, you can follow the steps as below:

   (1). Press 1

   (2). Press the sequence number in which the party joined the conversation. (For example, the sequence number of the first call is 1 and the one of the second call is 2)

   (3). After pressing , the party now can leave this multi-party conversation.

Important! :
Before you make a multi-party call, make sure you do not have a call on hold.

Voice-activated Dialing

Steps for using voice-activated dialing：

1. Store phone data in the phone book.
2. To set up voice calling function:
   In the phone book menu, select the number and enter Edit mode. Use key to switch each field. In the voice-dial filed, press  right key to create a new

record of voice. The message “Say Name After Beep” prompts up on the screen. Follow the instructions and voice the name, in which you want to save, to microphone. After first time input, the system will play back it for you to recognize the voice. With your confirmation, the system will request you to input the second time. If the voice-activated name is already used in the phone book, then repeat the above procedure and recreate it. After done, press  right key to Modify, Play and Delete.

3. Using the voice dialing :
   (1). Press and hold key for two seconds or when the screen is on.
   (2). After the beep, voice the name for the number you want to call, into the phone.
   (3). The mobile phone will play the sample first. After your confirmation, the number will be dialed.

Method of Input

Only under edit mode, you can input the content by various methods. This mobile phone has ten fields for edit; that is; name field of Phonebook and name search, content of Message, rename file name of tone edit, note making in the calendar, notes for alarm, rename of voice memo files, power on greeting, WAP file name, rename file name of customer in the Profile, and the rename of audio and image file names in File Manager. After enter these items, press to enter edit mode. According to the setup of language, you can have default setting of input method in your own language.

However, if you want to change to other methods, press to enter submenu. For characters input, you can have T9 English, ABC(English), 123 (numeric), T9 Russian and

Symbols. By using key to select the input method you want. No matter that T9 English or ABC English methods, press turn on function for upper case and lower case。By pressing and holding , you can switch to Symbols. By pressing and holding , you can switch among Chinese, English, and Numeric methods.

1. T9 English

While inputting, you can only press the button of letter without selecting particular one. The T9 English will smartly detect what you want for written wording. Switch upper case and lower case by press ; for example, you can have upper case of first letter 『Eng』, or all in upper case 『ENG』, or all in lower case 『eng』by switching and pressing numeric button 『123』.

Example：Smart

Button pressed as follows as below：

→ press once→ press once → press once → press once → press once → press once

Menu Function

For speedy access with certain options, press to proceed with Inbox, Profile, Hot Key Setting, and Soft Key Switch. This mobile phone provides different features and several options to meet your needs by manipulating :

Phone Book

The phonebook menu lets you save the names and phone numbers in the SIM card or in the memory of the phone, press to enter this menu. You may also have Search, Add Entry, Edit, Delete, Copy, P. Book Setting and Memory Status. This menu will show the records according to the sort you selected, and the detail window will show the content of current record. Depended on the selection of SIM or phone itself, phone memory module has 10 fields, and SIM module has 6 fields. You can use to move forward and backward to those fields. If you want to get into the submenu, press left/right key. With inputting completely, press to save or discard this record. If there are three sets of phone number, press , and then press to select the one you want to dial out.

Search

In search function, the “search name” input window will be displayed on the screen. After typing in the name that you want to search for, then press . If the input methods are needed, press to enter it. When the first letter you typed fits in with your list, the first one will be highlighted and all matched data will be listed down. You can use to browser and view the rest data.

Add Entry

After pressing key to launch the function, items of new record including memory type SIM/Phone, name, tel. number, caller groups, voice dial, e-mail, address record number, and birthday, will be displayed on the screen. Blank is not allowed in both name and phone fields.

1. The phone will automatically assign a memory location to store the data on the SIM or phone itself according to your selection.
2. You will need to enter both the phone number and name, and no data will be stored if you leave any of these two items in blank. In the name field, press to enter text entry mode, and press again for input methods selection. See on page 34.
3. Empty filed is not allowed in phone number. Three sets of phone numbers can be input for handset setting (NVM), and one phone number is for SIM card setting
4. You may assign a caller group to a phone number, so that you can identify it next time when it comes in. There are 7 default

choices accessible by pressing right/left key and choosing from the submenu; that is, Family, VIP, Colleagues, Friend, Classmates, Business, and None.

5. Move to the field of Voice Dial and press to start this function to record the voice into your voice record. Refer to page 33.
6. Enter E-mail address to the field with handset setting (NVM). By pressing to search _ underscore, and ”▪” dot can be found and entered into it
7. Normally, the phone will automatically generate an address number on input field. If you want to assign a memory address to the data, you may enter the address and the phone will store the data to the address you assign. However, if you put it empty, no data can be stored.
8. Enter the birthday and date format will be dd/mm/yyyy.

Edit

This function is for you to modify or edit an existed record. Use  to select the field you want to modify. All fields and items should be manipulated as the same as above “New function”. In the Voice Dial field, Modify, Play, and Delete can be selected in the submenu to record the voice, play and remove the voice from this field

Delete

Select this function to remove the phone record from your address book. After launching this function, three selections are

“Delete One”, “Delete All in SIM Card”, and “Delete All in Phone” in submenu by press . A message prompt will ask for your confirmation of this deletion before execute deleting. Press to save data or to discard.

Copy

You may use this function to copy single or all phone records to SIM or handset memory at your will. On launching this function, the system will automatically provide you an available position. You may also give a designated position to save your data instead of system assigned number.

P.Book Setting

1. Caller Group

It is for setting a ring tone in corresponsive with a specific incoming call. After entering into this option, select one of the six ring tone groups to setup such as Family, VIP, Colleagues, Friends, Classmates, and Business by key. Messages

This phone allows you to send and receive various kinds of messages. Please contact with your network operator for more details on which service you could use.

SMS

Press to enter this menu, after you finished editing your message and the recipient's phone number, press to enter into the sub menu that include options of send, send & store, send & save to pre-message, and store. Send option allows you to send out the message. Send & store option allows you to store then send the message at the same time. Send & save to pre-message option allows you to store the message as pre-message then send it out at the

same time. Store will only store the message onto the SIM card

1. Write

Press to enter the message editor. Press while in the editor allows you to switch between input methods. You can add text, pictures, animation, and sounds into your message.
If you would like to add pre-message, pictures, animation or sounds into the message,

Press and use the directional keys to select the items, then press to confirm.
For details on how to use text input method, please refer to page 17.

When entering the recipient's phone number, you can press the down directional key to enter
phonebook and search for the number directly or enter it yourself. After that, simply select whether to send, send &store, or store the message.

2. Inbox

When enter into the inbox, you will see a list of all

message received (both on the phone and the SIM card) including the name or phone number of the message sender and the time you receive it. All unread messages will be indicated by the"✉" icon. Press key to select and display the content of a message onto screen. For multiple pages message, you can use the up and down directional key to look through the entire message. Press to select more options, which include; delete message, forward, reply, call and store number. Delete option allows you to delete this particular message from the phone or SIM card. Reply option allows you reply a message to the sender of this message. Forward option allows you to send this message to others. Call/Store option will list all the numbers in the message and you can then select a number to call out or store to the phonebook. To delete all the messages in the inbox, you can select the delete all option at the bottom of the list.

3. Outbox

Functions for outbox are the same as inbox. After editing a message and select send &store, it will be store in the outbox with the icon and indicate with the icon when select store only.

4. Delete message

Similar to the delete function above, press and you will be prompted to confirm whether to delete the selected message from inbox or outbox.

5. Free count

This function allows you to check the total amount of messages that can be store plus the amount of free space available currently on both the phone and the SIM card. Message will be save onto the phone by default, and will be save onto the SIM card once the phone is full. The total amount of messages that can be store on the phone is 100. The total amount of messages that can be save onto the SIM card will depend on each individual SIM card.

⊙ NOTE:

In situation where one or more messages in inbox/outbox are long messages, each of these long messages will be considered and calculated as two, three, or more messages. Therefore, the free space available displayed will actually be less than the total amounts of messages that can be store deduct by the number of messages in inbox/outbox.

6. Settings

⊙ Pre - Message

Here you can add up to eight frequently used messages and save them as pre-message. These messages are all empty by default.

⊙ SMS Center

Battery

- The battery is rechargeable up to hundreds of times, but it capacity will reduce. You may need to replace a new battery when the operation duration (calling and standing duration) reduces evidently.

- Remove charger from the source each time after charging. Over charging will shorten the life of the battery. Avoid charging a battery for over 24 consecutive hours.

- Use only batteries certified by the mobile phone manufacturer.

- Extreme temperatures will affect charging performance. The desirable ambient temperature for charging is 0°C-45°C (32°F-113°F).

- Do not use damaged or old batteries.

- Avoid contacts of the + and – poles of the battery with metals, such as coins, scissors, and pens. It will damage or cause short circuit to the battery. Place spare batteries in a safe place or wrap them up with insulated materials before putting inside your pocket or handbags.

- Extreme temperatures will reduce the capacity or shorten the life of batteries. Avoid placing batteries in extreme temperatures, such as inside vehicles or near air-conditioner outlets. The desirable battery storage temperature is 15°C-25°C (59°F-77°F). Batteries that have been charged may not work properly in extreme temperatures.

- Keep batteries away from water or fire.

- Dispose batteries according to local environmental regulations.

Care and Maintenance

Follow the instructions below to take care of your mobile phone. They will help you to enjoy life with this product.

- Keep the mobile phone and its accessories out of children's reach.
- Keep the mobile phone dry. Rain, moisture and liquid contain minerals which will corrode the circuit of the mobile phone.
- Keep the mobile phone away from dirt or dust.
- Keep the mobile phone away from heat. Heat will shorten the life of electronics, damage the battery, or even deform or corrode the shell of the mobile phone.
- Keep the mobile phone away from coldness. Condensation takes place and the moisture will damage the circuit board when the mobile phone resumes normal temperature.
- Do not open the mobile phone. Non-professional treatment may cause damage to the mobile phone.
- Avoid falling, impact or vibration of the mobile phone. Improper external force may damage the circuit of the mobile phone.
- Do not clean the mobile phone with chemical solutions or detergents. Gently wipe the shell of the mobile phone with a soft cotton cloth and clear water or mild soap.
- Use accessories and batteries from the manufacturer.
- Contact your nearest service station if the mobile phone is out of order. Our well-trained technicians will provide you the best service.

FCC Regulations

Conditions of Use

Operation of this TG7C mobile phone is subject to the following two conditions; (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This TG7C mobile phone generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. If this device does cause harmful interference to radio or television reception, which can be determined by turning the device on and off, the user is encouraged to try to correct the interference by one or more of the following measures:

1). Reorient or relocate the receiving antenna.

2). Increase the distance between the device and receiver.

3). Connect the device into an outlet on a circuit different from that to which the receiver is connected.

4). Consult the dealer or an experienced radio/TV technician for help.

The radiated output power of this internal wireless radio is far below the FCC radio frequency exposure limits. Nevertheless, the wireless radio shall be used in such a manner that the radio is 1.5 cm or further from the human body. However, the user of wireless radios may be restricted in some places or situations, such as aboard airplanes. If you are unsure of restrictions, you are encouraged to ask for authorization before turning on the wireless radio. Several restrictions and cautions of using mobile phone are listed in the **Safety**.

FCC RF Exposure Information

Read this information before using your handset

In August 1996 the Federal Communication Commission (FCC) of the United States with its action in Report and Order FCC 96-326 adopted an updated safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by both U.S and international standards bodies. The design of this phone complies with the FCC guidelines and these international standards.

Use only the supplied or an approved antenna. Unauthorized antennas, modifications, or attachments could impair call quality, damage the phone, or result in violation of FCC regulations.

Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Please contact your local dealer for replacement antenna.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with FCC RF exposure requirements, a minimum separation distance of 1.5 cm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with FCC RF exposure requirements and should be avoided.

For more information about RF exposure, please visit the FCC website at www.fcc.gov
