## 1. System configuration

### 1.1 Scope of SK IBU System

IBU(Integrated Body control unit) System(-SMK) integrate BCM in one ECU

#### 1.1.1 IBU(-SMK) system offer following feature

- LF communication
- immobilizer backup solution integrated into IBU
- communication to the engine management system via a single line interface
- communication to the ESCL via a single line interface
- block of the steering column by the ESCL device

#### 1.1.2 BCM functions offer following feature

- BCM functions directly or indirectly control Lamps, Indicators, Rear curtain, Steering wheel heat and relay

### 1.2 short description of the SYSTEM

If insert the Immobilizer including trasponder to ignition switch and then power enter the IBU(-SMK)

After Receive the frequency of key, ECU decide the own's key and if same code ,starting a engine.

#### 1.2.1 General Definition of IBU(-SMK)

IBU(-SMK) has a immobilizer function which enable the start up When Folding key approaching the Lock-body.

#### 1.2.2 Wireless Communication

the Electromagnetic waves used for communication between Foldingkey and car.  
Therefore car and Folding key include the transmitter, receiver and Immobilizer Antenna.

#### 1.2.3 concept Description

magnetic field with a frequency of 125 kHz and ASK modulation is used

Technical aspects of 125 kHz – magnetic field:

- high penetration,
- less sensitive for detuning compared to higher frequency.

For the down-link from the SMART KEY FOB to the vehicle, the standard radio frequency (RF) is used (similar to the classic remote control functions) with FSK modulation.

## 2. SK IBU(-SMK) ECU

The main functional blocks of the IBU ECU are:

- Power supply
- Microcontroller with FLASH Memory
- Single Line Interface to ESCL
- Single Line Interface to EMS
- Input stage
- LF antenna amplifier/driver
- Immobilizer Antenna output
- ESCL power supply
- Terminal Control(ACC, IGN1/2, Start Rly)
- CAN communication with Other
- ECU Internal receiver(433Mhz)
- Rear curtain control
- Steering wheel heat control
- Head lamp washer relay control
- Indicators control
- Lamps control
- High speed CAN communication
- LIN communication

### 3. Homologation

#### FCC Compliance Statement.

**This device complies with part 15 of the FCC Rules.  
 Operation is subject to the following two conditions :  
 (1) This device may not cause harmful interference, and  
 (2) This device must accept any interference received, including  
 interference that may cause undesired operation.**

This appliance and its antenna must not be co-located or operation in conjunction with any other antenna or transmitter.

#### Do Not

**Any changes or modifications to the equipment not expressly approved by the party responsible for compliance could void user's authority to operate the equipment.**

#### IC Compliance Statement.

**This device complies with Industry Canada licence-exempt RSS standard(s).  
 Operation is subject to the following two conditions:  
 (1) this device may not cause interference, and  
 (2) this device must accept any interference, including interference that may cause undesired operation of the device.**

Le present appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisee aux deux conditions suivantes :

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioelectrique subi, meme si le brouillage est susceptible d'en compromettre le fonctionnement.
