## **IEEE802.15.4 System-On-Chip ZigBee Module**

**T**HIS DOCUMENT describes the DFZM-E72xx ZigBee module hardware specification. The EM357 based modules provide cost effective, low power, and flexible platform to add ZigBee connectivity for embedded devices for a variety of applications, such as wireless sensors and energy monitoring. It combines 32-bit ARM Cortex-M3 processor, in-system programmable flash memory, 12-KB RAM, 192KB flash memory and off module certified antenna options, and various RF front end options for end customer range needs in order to provide a ZigBee and regulatory certified. The module has various operating modes, making it highly suitable for systems where ultralow power consumption is required. Short transition times between operating modes further ensure low energy consumption.

## **1. Features**

- ▶ Family of modules with different antenna and output power options:
  - DFZM-E72xx 27 mm by 16 mm by 3.3 mm (Length \* Width \* Height) 28-pin Dual Flat pack PCB Surface Mount Package.
  - DFZM-E7220, DFZM-E7221, DFZM-E7210, and DFZM-E7211 are all pin to pin compatible (see section 7 Ordering Information), and the user has to account only for power consumption for various end applications.
  - Simple API for embedded markets covering large areas of applications.
- ▶ Compliant with IEEE 802.15.4 and regulatory domains:
  - RoHS compliant.
- ▶ Microcontroller:
  - Industry-leading ARM Cortex-M3 processor.
  - 192KB Flash with optional read protection.
  - 12KB RAM memory.
  - Flexible nested vectored interrupt controller.

**DFZM-E72xx**

---

► Interfaces:

- Internal antenna or external antenna options.
- Flexible ADC, UART/SPI/TWI serial communications, and general purpose timers.
- Up to 22 configurable general purpose I/Os.
- Single voltage operation: 2.1~3.6V

► Embedded RTC (Real Time Clock) can run directly from battery.

**DFZM-E72xx**

## **3-2.Block Diagram Description**

### **3-2-1.Overview**

DFZM-E72xx module is a highly integrated ZigBee system-on-chip (SOC) that contains the following:

- The module includes Silicon Labs EM357 SoC, which contains CPU- and memory-related, peripherals-related, clocks and power management-related in a single package.
- The module features an IEEE802.15.4-compliant radio transceiver with onboard 24 MHz crystal circuitries, RF, and certified antenna or external antenna options.
  - The low power module option has a capability of +8dBm output power at the antenna (see Figure 3-1).
  - The high power module option has a capability of +18.5dBm output power at the antenna (see Figure 3-2).
- Variety of interfaces are available such as UART, SPI, TIMER, ADC, Operational amperifier and GPIO.
- DFZM-E72xx contains single power supply (VCC).

### **3-2-2.CPU and Memory**

The EM357 integrates the ARM® Cortex-M3 microprocessor. The ARM® Cortex-M3 is an advanced 32-bit modified Harvard architecture processor that has separate internal program and data buses, but presents a unified program and data address space to software. The word width is 32 bits for both the program and data sides. The ARM® Cortex-M3 allows unaligned word and half-word data accesses to support efficiently-packed data structures.

The ARM® Cortex-M3 clock speed is configurable to 6 , 12 , or 24 MHz. For normal operation 24 MHz is preferred over 12 MHz due to improved performance for all applications and improved duty cycling for applications using sleep modes. The 6 MHz operation can only be used when radio operations are not required since the radio requires an accurate 12 MHz clock.

The ARM® Cortex-M3 in the EM357 has also been enhanced to support two separate memory protection levels. Basic protection is available without using the MPU, but normal operation uses the MPU. The MPU allows for protecting unimplemented areas of the memory map to prevent common software bugs from interfering with software operation. The architecture could also allow for separation of the networking stack from the application code using a fine granularity RAM protection module. Errant writes are captured and details are reported to the

developer to assist in tracking down and fixing issues. Figure 3.3 shows the EM357 ARM® Cortex-M3 memory map.

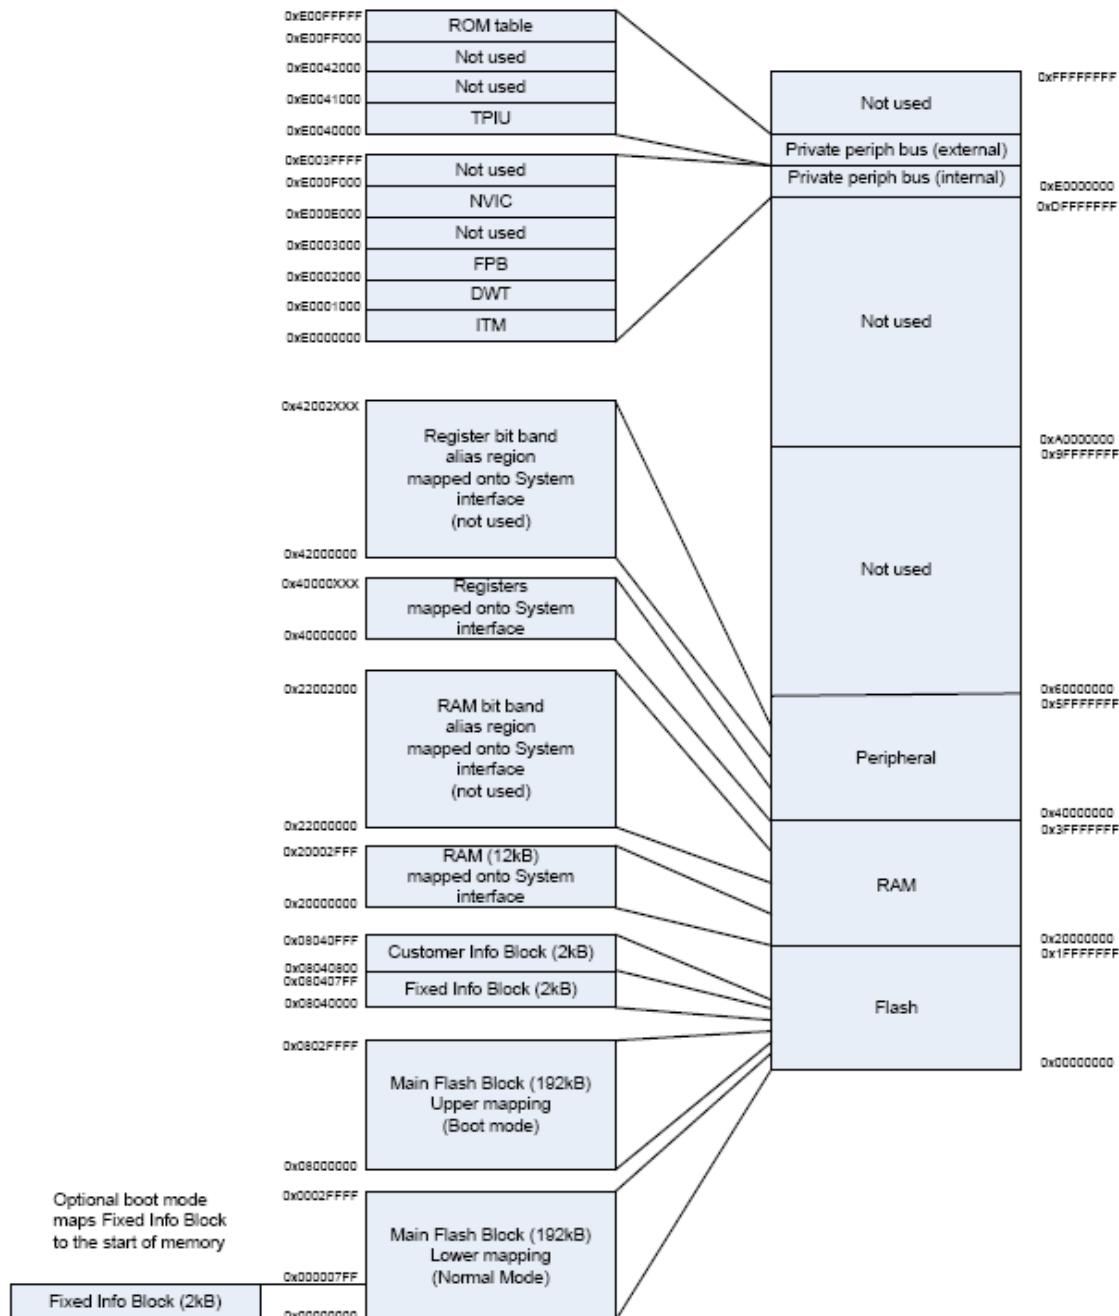

Figure 3-3: DFZM-E72xx memory map

### 3-2-3.Clocks and Power Management

The DFZM-E72xx integrates four oscillators:

- 12 MHz RC oscillator
- 24 MHz crystal oscillator
- 10 kHz RC oscillator

Figure 3-4 shows a block diagram of the clocks in the DFZM-E72xx. This simplified view shows all the clock sources and the general areas of the chip to which they are routed

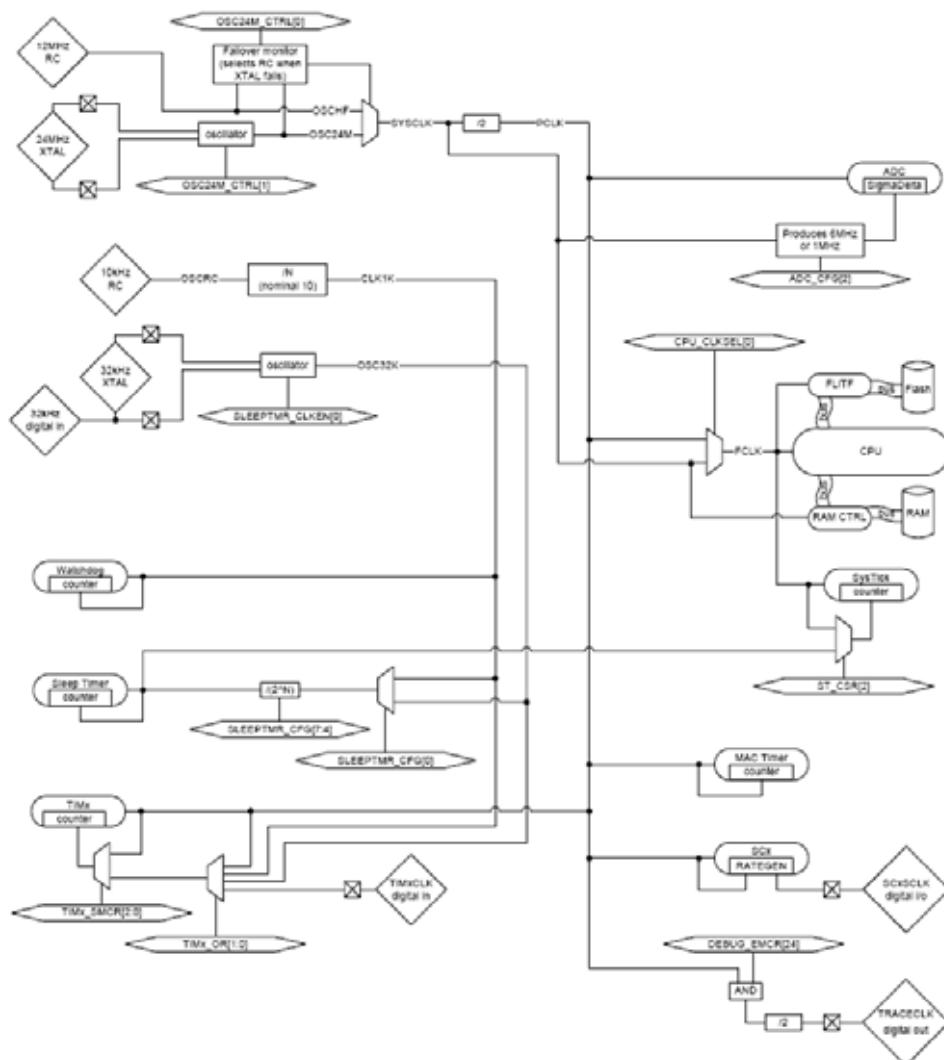

Figure 3-4: DFZM-E72xx block diagram of the clocks

The DFZM-E72xx's power management system is designed to achieve the lowest deep sleep current consumption possible while still providing flexible wakeup sources, timer activity, and debugger operation. The DFZM-E72xx has four main sleep modes:

- Idle Sleep: Puts the CPU into an idle state where execution is suspended until any interrupt occurs. All power domains remain fully powered and nothing is reset.
- Deep Sleep 1: The primary deep sleep state. In this state, the core power domain is fully powered down and the sleep timer is active.
- Deep Sleep 2: The same as Deep Sleep 1 except that the sleep timer is inactive to save power. In this mode the sleep timer cannot wake up the DFZM-E72xx.
- Deep Sleep 0 (also known as Emulated Deep Sleep): The chip emulates a true deep sleep without powering down the core domain. Instead, the core domain remains powered and all peripherals except the system debug components (ITM, DWT, FPB, NVIC) are held in reset. The purpose of this sleep state is to allow DFZM-E72xx software to perform a deep sleep cycle while maintaining debug configuration such as breakpoints.

The power management state diagram in Figure 3-5 shows the basic operation of the power management controller.

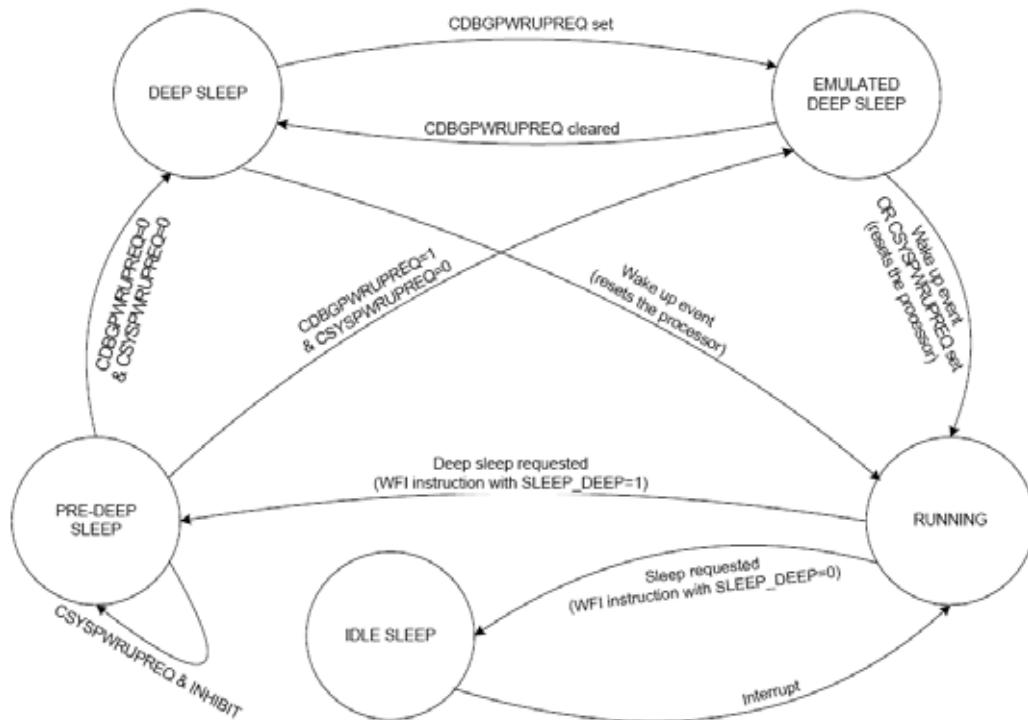

Figure 3-5: DFZM-E72xx power management state diagram

DFZM-E72xx

### 3-2-4.Peripherals

The DFZM-E72xx has 22 multipurpose GPIO pins, which may be individually configured as:

- General purpose output
- General purpose open-drain output
- Alternate output controlled by a peripheral device
- Alternate open-drain output controlled by a peripheral device
- Analog
- General purpose input
- General purpose input with pull-up or pull-down resistor

The GPIO signal assignments are shown in Table 3-1.

| GPIO | Analog | Alternate Output  | Input   | Output Current Drive |
|------|--------|---|---|----------------------|
| PA0  |        | TIM2C1 <sup>1</sup> , SC2MOSI                             | TIM2C1 <sup>1</sup> , SC2MOSI                             | Standard             |

**Notes:**

1. Default signal assignment (not remapped).
2. Overrides during reset as an input with pull up.
3. Overrides after reset as an open-drain output.
4. Alternate signal assignment (remapped).
5. Overrides in JTAG mode as a input with pull up.
6. Overrides in JTAG mode as a push-pull output.
7. Overrides in Serial Wire mode as either a push-pull output, or a floating input, controlled by the debugger.

**Table 3-1: DFZM-E72xx GPIO signal assignments**

The DFZM-E72xx has two serial controllers, SC1 and SC2, which provide several options for full-duplex synchronous and asynchronous serial communications.

- SPI (Serial Peripheral Interface), master or slave
- TWI (Two Wire serial Interface), master only
- UART (Universal Asynchronous Receiver/Transmitter), SC1 only
- Receive and transmit FIFOs and DMA channels, SPI and UART modes

Before using a serial controller, configure and initialize it as follows:

1. Set up the parameters specific to the operating mode (master/slave for SPI, baud rate for UART, etc.).
2. Configure the GPIO pins used by the serial controller as shown in Tables 3-2 and 3-3.
3. If using DMA, set up the DMA and buffers.
4. If using interrupts, select edge- or level-triggered interrupts with the SCx\_INTMODE register, enable the desired second-level interrupt sources in the INT\_SCxCFG register, and finally enable the top-level SCx interrupt in the NVIC.
5. Write the serial interface operating mode (SPI, TWI, or UART) to the SCx\_MODE register

DFZM-E72xx

## 5. Electrical Characteristics

### 5-1. Absolute Maximum Rating

Conditions beyond those cited in Table 5-1 may cause permanent damage to the DFZM-E72xx, and must be avoided.

| Parameter                  | Minimum | Maximum | Unit |
|----------------------------|---------|---------|------|
| Supply voltage(VCC)        | -0.3    | 3.6     | V    |
| Storage temperature range  | -40     | 125     | °C   |
| Voltage on any digital I/O | -0.3    | VCC+0.3 | V    |

Table 5-1: Absolute Maximum Ratings

### 5-2. Recommended Operating Conditions

| Parameter                                    | Minimum | Maximum | Unit |
|--|---------|---------|------|
| Operating supply voltage(VCC)                | 2.1     | 3.6     | V    |
| Operating ambient temperature range( $T_A$ ) | -40     | +85     | °C   |

Table 5-2: Recommended Operating Conditions

### 5-3. Power Consumption

Test Conditions:  $T_A=25\text{ °C}$ , VCC=3.0V

| Parameter  | Test conditions | Mim | Typ | Max | Unit |
|--|-----------------|-----|-----|-----|------|
| <b>Deep Sleep Current</b>                          |                 |     |     |     |      |
| Quiescent current, internal RC oscillator disabled |                 |     | 0.4 |     | uA   |
| Quiescent current, including internal RC           |                 |     | 0.7 |     | uA   |

DFZM-E72xx

|  |  |  |      |     |    |
|--|--|--|------|-----|----|
| oscillator   |  |  |      |     |    |
| Simulated deep sleep (debug mode) current  | With no debugger activity  |  | 300  |     | uA |
| <b>Reset Current</b>   |  |  |      |     |    |
| Quiescent current, nRESET asserted   |  |  | 1.2  | 2.0 | mA |
| <b>Processor and Peripheral Currents</b>   |  |  |      |     |    |
| ARM® Cortex-M3, RAM, and flash memory  | ARM® Cortex-M3 running at 24 MHz from crystal oscillator Radio and all peripherals off                     |  | 7.5  | 9.5 | mA |
| ARM® Cortex-M3, RAM, and flash memory sleep current  | ARM® Cortex-M3 sleeping, CPU clock set to 12 MHz from the crystal oscillator Radio and all peripherals off |  | 3.0  |     | mA |
| Serial controller current  | For each controller at maximum data rate   |  | 0.2  |     | mA |
| General purpose timer current  | For each timer at maximum clock rate   |  | 0.25 |     | mA |
| General purpose ADC current  | At maximum sample rate, DMA enabled  |  | 1.1  |     | mA |
| <b>RX Current</b>  |  |  |      |     |    |
| Radio receiver, MAC, and baseband  | ARM® Cortex-M3 sleeping, CPU clock set to 12 MHz   |  | 22   |     | mA |
| Total RX current ( = IRadio receiver, MAC and baseband, CPU + IRAM, and Flash memory )           | ARM® Cortex-M3 running at 24 MHz   |  | 26.5 | 31  | mA |
| Boost mode total RX current ( = IRadio receiver, MAC and baseband, CPU+ IRAM, and flash memory ) | ARM® Cortex-M3 running at 24 MHz   |  | 28.5 |     | mA |
| <b>TX current</b>  |  |  |      |     |    |
| Radio transmitter, MAC, and baseband   | max. power out (+3 dBm typical)<br>ARM® Cortex-M3 sleeping, CPU clock set to 12 MHz                        |  | 26.0 |     | mA |
| Total TX current ( = IRadio transmitter, MAC and baseband, CPU + IRAM, and flash memory)         | maximum power setting (+8 dBm); ARM® Cortex-M3 running at 24 MHz   |  | 43.5 |     | mA |
|  | maximum power setting (+18.5 dBm); ARM® Cortex-M3 running at 24 MHz  |  | 110  |     | mA |

## 5-6.Radio Parameters

Test Conditions:  $T_A=25\text{ }^{\circ}\text{C}$ , VCC=3.0V

| Parameter                          | Min  | Typ  | Max  | Unit | Notes     |
|------------------------------------|------|------|------|------|-----------|
| RF Frequency range                 | 2400 |      | 2500 | MHz  |           |
| TX/RX specification for DFZM-E722x |      |      |      |      |           |
| Output power(boost mode)           | 1    | 8    |      | dBm  |           |
| Output power                       | -3   | 5    |      | dBm  |           |
| Error vector magnitude (EVM)       |      | 5    | 15   | %    |           |
| Frequency error tolerance          | -30  | 0    | 30   | ppm  |           |
| Receiver sensitivity(boost mode)   |      | -102 | -87  | dBm  | PER = 1%  |
| Receiver sensitivity               |      | -100 | -85  | dBm  | PER = 1%  |
| Saturation(Maximum input level)    | 0    |      |      | dBm  | PER = 1%, |
| TX/RX specification for DFZM-E721x |      |      |      |      |           |
| Output power                       | 16   | 18.5 | 23   | dBm  |           |
| Error vector magnitude (EVM)       |      | 5    | 15   | %    |           |
| Frequency error tolerance          | -30  | 0    | 30   | ppm  |           |
| Receiver sensitivity               | -102 | -100 | -94  | dBm  | PER = 1%, |
| Saturation(Maximum input level)    | 6    |      |      | dBm  | PER = 1%, |

Table 5-7: Radio Parameters

DFZM-E72xx

## 5-7.ADC Parameters

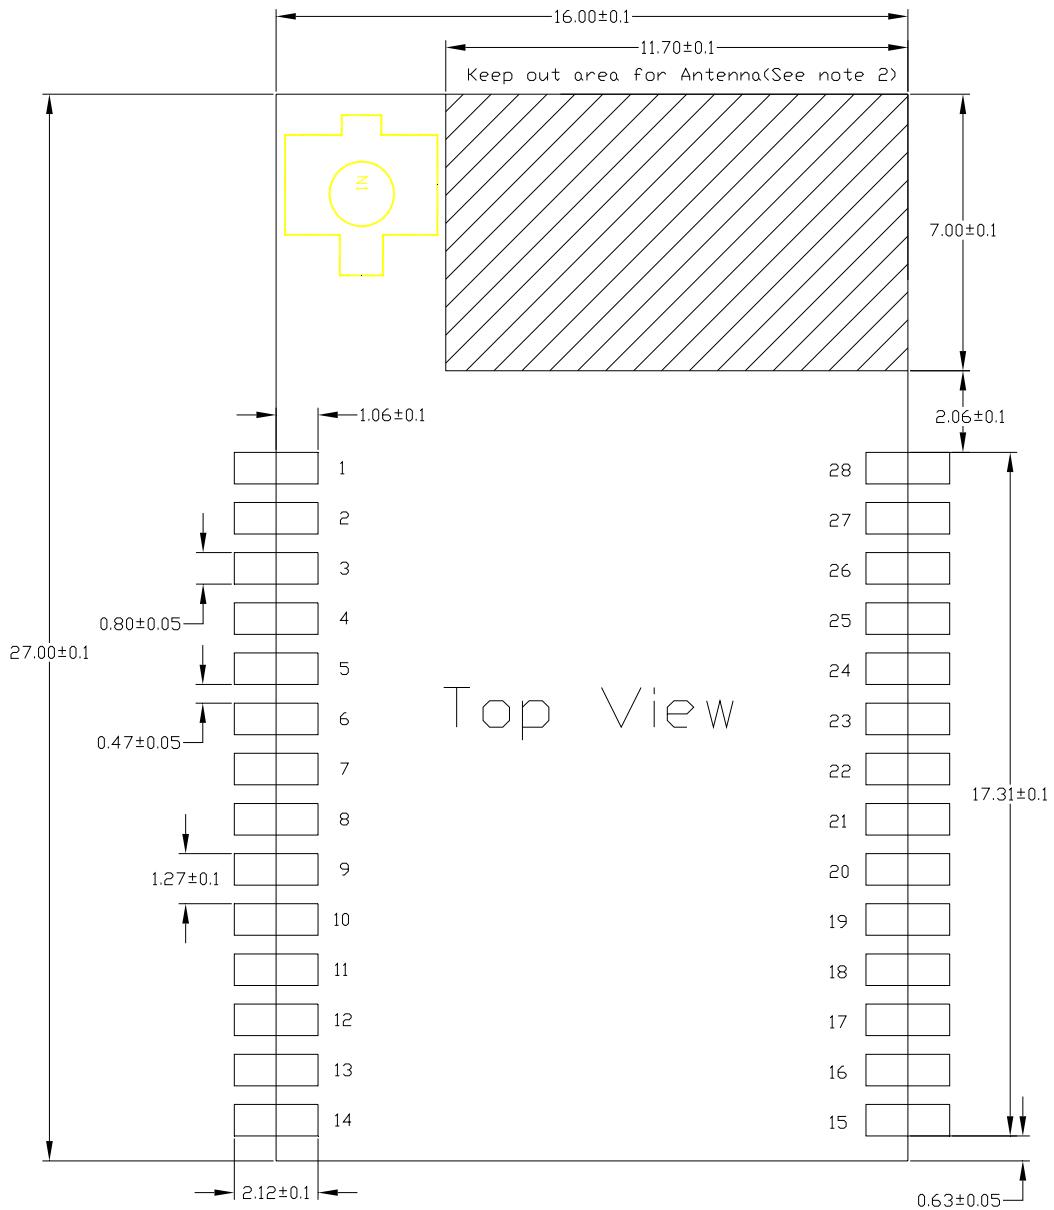

Test Conditions:  $T_A=25\text{ }^{\circ}\text{C}$ ,  $VCC=3.0\text{V}$

| Parameter  | Min   | Typ | Max   | Unit |
|--|-------|-----|-------|------|
| VREF   | 1.17  | 1.2 | 1.23  | V    |
| VREF output current  |       |     | 1     | mA   |
| VREF load capacitance  |       |     | 10    | nF   |
| External VREF voltage range  | 1.1   | 1.2 | 1.3   | V    |
| External VREF input impedance  | 1     |     |       | MΩ   |
| Minimum input voltage  | 0     |     |       | V    |
| Maximum input voltage  |       |     | VREF  | V    |
| Single-ended signal range  | 0     |     | VREF  | V    |
| Differential signal range  | -VREF |     | +VREF | V    |
| Common mode range  | 0     |     | VREF  | V    |
| Input referred ADC offset  | -10   |     | 10    | mV   |
| Input Impedance  |       |     |       |      |
| 1MHz sample clock  | 1     |     |       |      |
| 6MHz sample clock  | 0.5   |     |       |      |
| Not sample   | 10    |     |       |      |
| *Note: The signal-ended ADC measurements are limited in their range and only guaranteed for accuracy within the limits shown in this table. The ADC's internal design allows for measurements outside of this range ( $\pm 200\text{ mV}$ ), but the accuracy of such measurements is not guaranteed. The maximum input voltage is of more interest to the differential sampling where a differential measurement might be small, but a common mode can push the actual input voltage on one of the signals towards the upper voltage limit. |       |     |       |      |

Table 5-8: ADC Parameters

## 6. Package and Layout Guidelines

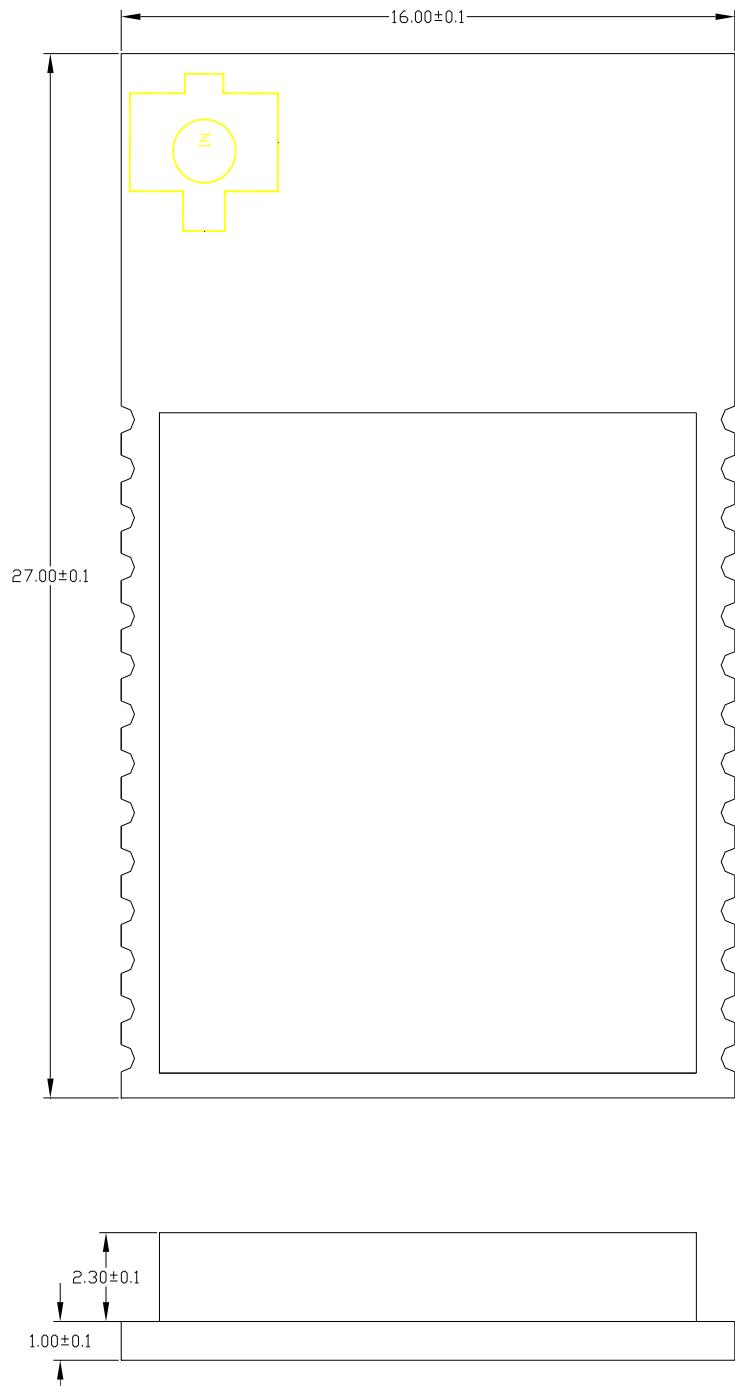

### 6-1.Recommended PCB Footprint and Dimensions

**Figure 6-1: DFZM-E72xx Module Recommended PCB Footprint (in mm)**

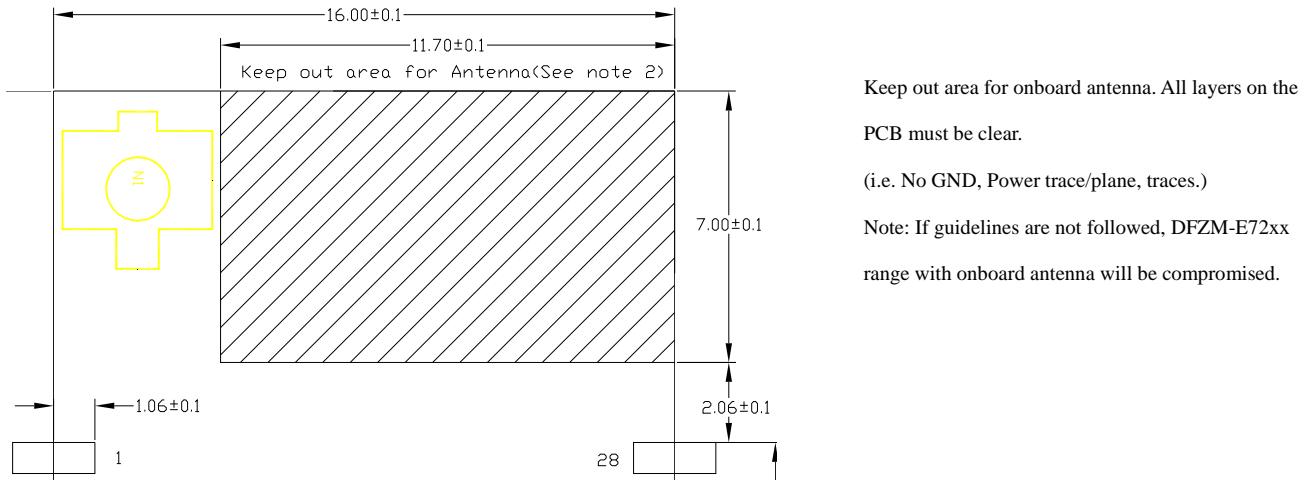

**DFZM-E72xx**

**Figure 6-2: DFZM-E72xx Module Dimensions (in mm)**

## 6-2.Layout Guidelines

**Figure 6-3: DFZM-E72xx module onboard antenna keep-out layout guidelines (in mm)**

Notes:

1. All Dimensions are in mm. Tolerances shall be  $\pm 0.10$  mm.
2. Absolutely no metal trace or ground layer underneath this area.
3. It is recommended not to run circuit traces underneath the module.
4. In performing SMT or manual soldering of the module to the base board, please align the two row of pins.

In addition to the guidelines in Figure 6-3, note the following suggestions:

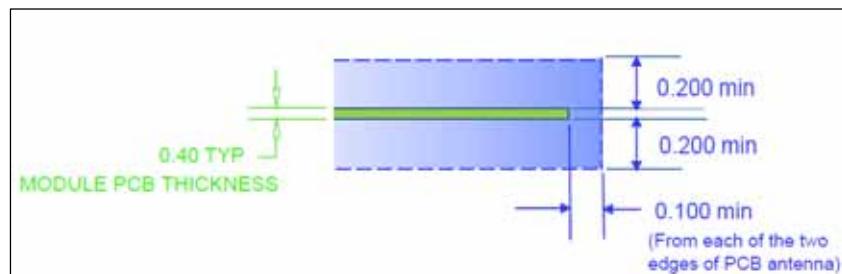

DFZM-E72xx

- External Bypass capacitors for all module supplies should be as close as possible to the module pins.
- Never place the antenna very close to metallic objects.
- The external dipole antennas need a reasonable ground plane area for antenna efficiency.

DFZM-E7221; DFZM-E7211 onboard antenna specific

- The onboard antenna keep out area, as shown in Figure 6-3, must be adhered to. In addition it is recommended to have clearance above and below the PCB trace antenna (Figure 6-4) for optimal range performance.

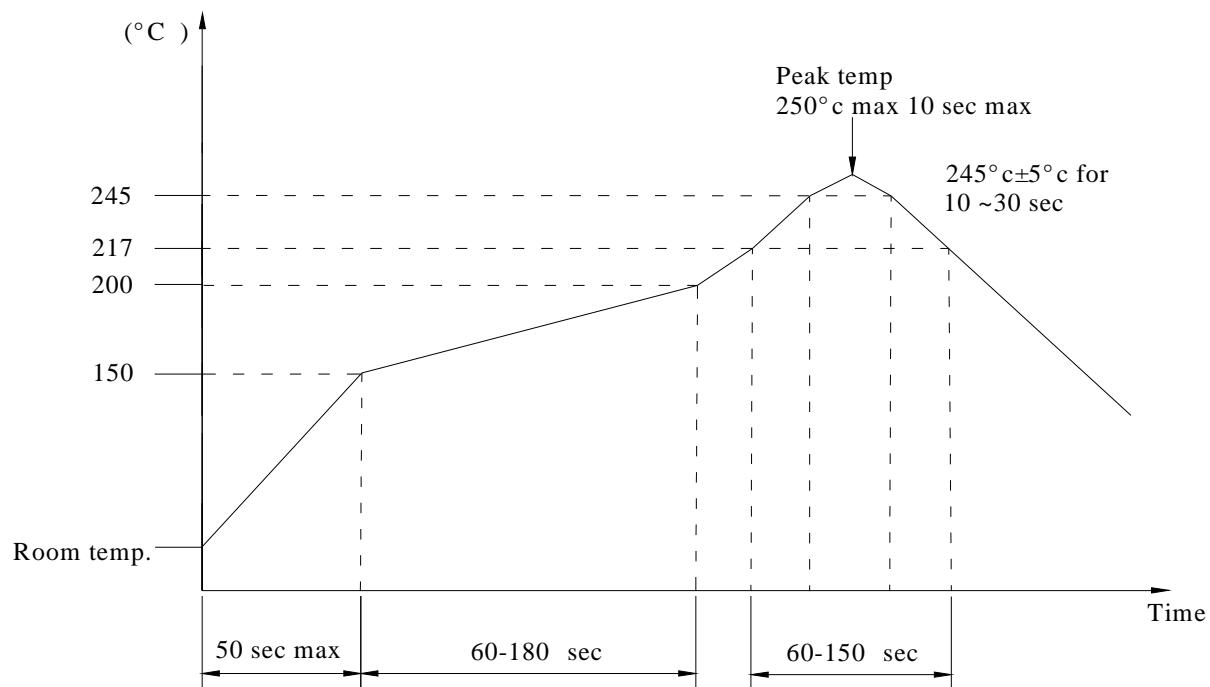

- Do not use a metallic or metalized plastic for the end product enclosure.
- Recommendation is to keep plastic enclosure clearance of 1cm from top and bottom of the DFZM-E72xx onboard antenna keep-out area, if possible. 5-mm (0.2 in) clearance shall be the minimum as shown in Figure 6-4.

**Figure 6-4 Recommended clearance above and below the PCB trace antenna**

### 6-2-1.Surface Mount Assembly

The reflow profile is shown in Figure 6-5.

**Figure 6-5: Reflow temperature profile**

**DFZM-E72xx**

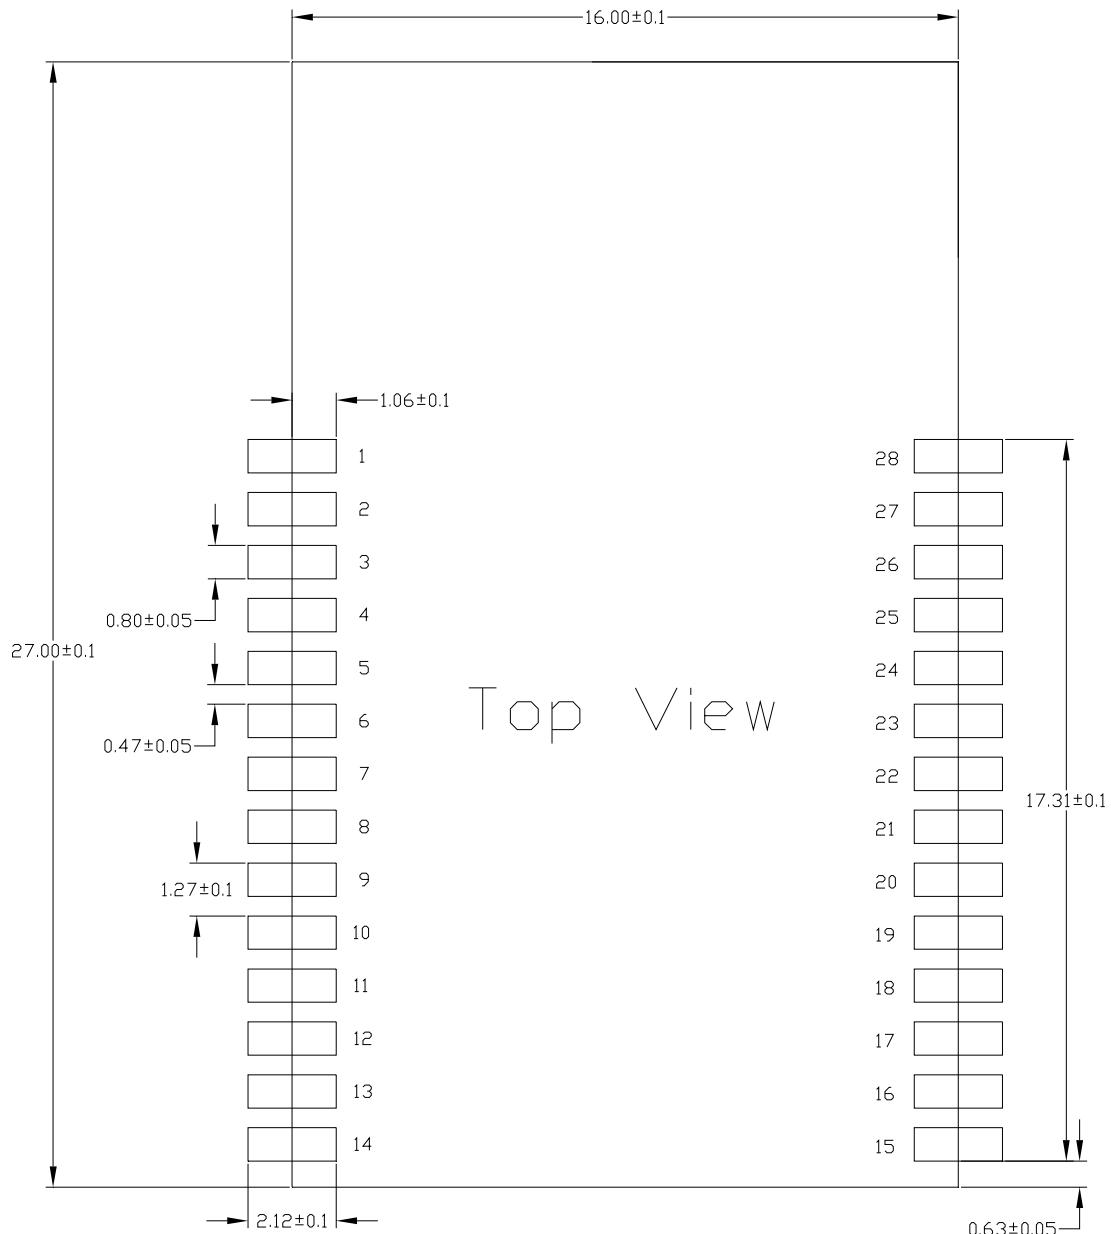

---

Note:

1. Perform adequate test in advance as the reflow temperature profile will vary accordingly to the conditions of the parts and boards, and the specifications of the reflow furnace.
2. Be careful about rapid temperature rise in preheat zone as it may cause excessive slumping of the solder paste.
3. If the preheat is insufficient, rather large solder balls tend to be generated. Conversely, if performed excessively, fine balls and large balls will generate in clusters at a time.
4. If the temperature is too low, non-melting tends to be caused in the area with large heat capacity after reflow.
5. Be careful about sudden rise in temperature as it may worsen the slump of solder paste.
6. Be careful about slow cooling as it may cause the positional shift of parts and decline in joining strength at times.

### **6-3.Recommended Stencil Aperture**

Note: The thickness of the stencil should be 0.15mm over this area.

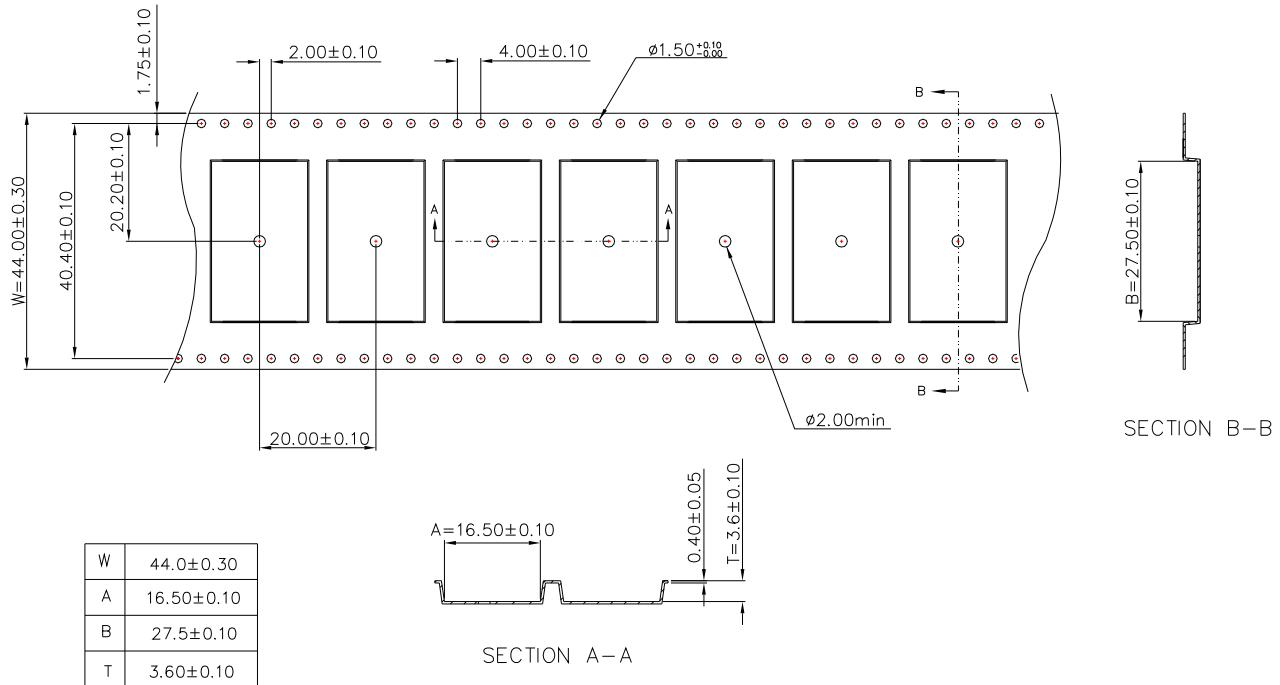

**Figure 6-6: DFZM-E72xx recommended stencil aperture**

## 7. Ordering Information

| DEVICE DESCRIPTION                           | ORDERING NUMBER |
|--|-----------------|
| Extended range module using external antenna | DFZM-E7210-DT0R |
| Extended range module using onboard antenna  | DFZM-E7211-DT0R |
| Low power module using external antenna      | DFZM-E7220-DT0R |
| Low power module using onboard antenna       | DFZM-E7221-DT0R |

## **8-4. RF exposure warning statement**

### **FCC Label Statement**

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

### **Federal Communications Commission (FCC) Statement**

15.21

You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.105(b)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-Consult the dealer or an experienced radio/TV technician for help.

### **FCC RF Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must not

**DFZM-E72xx**

---

be co-located or operating in conjunction with any other antenna or transmitter.

**IC ID warning statement :**

**Canada, Industry Canada (IC) Notices**

This Class B digital apparatus complies with Canadian ICES-003 and RSS-210.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

**Canada, avis d'Industry Canada (IC)**

Cet appareil numérique de classe B est conforme aux normes canadiennes ICES-003 et RSS-210.

Son fonctionnement est soumis aux deux conditions suivantes : (1) cet appareil ne doit pas causer d'interférence et (2) cet appareil doit accepter toute interférence, notamment les interférences qui peuvent affecter son fonctionnement.

**1. Detachable antenna thus special text required on that (see RSS-Gen section 7.1.2).**

- Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.
  
- Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

**DFZM-E72xx**

---

## Detachable antennas

- This radio transmitter (identify the device by certification number, or model number if Category II) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.
  
  - Le présent émetteur radio (identifier le dispositif par son numéro de certification ou son numéro de modèle s'il fait partie du matériel de catégorie I) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.
  
  - 2. Text on RF Exposure with distance of 20cm is required.
- Caution: Exposure to Radio Frequency Radiation.**
- To comply with RSS 102 RF exposure compliance requirements, a separation distance of at least 20 cm must be maintained between the antenna of this device and all persons. Pour se conformer aux exigences de conformité CNR 102 RF exposition, une distance de séparation d'au moins 20 cm doit être maintenue entre l'antenne de cet appareil et toutes les personnes
3. Remark for the OEM integrator (with e.g. label info like contains IC ID...) is required.

### IC Labeling Requirements for the End Product

Any end product integrating the Model: DFZM-E7211-DT0R, DFZM-E7210-DT0R must be labeled with at least the following information:

This device contains transmitter with: IC-ID: 4259B-DFZME7210

Any end product integrating the Model: DFZM-E7221-DT0R, DFZM-E7220-DT0R must be labeled with at least the following information:

This device contains transmitter with: IC-ID: 4259B-DFZME7220

### IC Label Information

The eGM-A20 shows IC-ID on the product label. IC allows to state the IC-ID in the product manual. This product has been granted to do so.

Model: DFZM-E7211-DT0R, DFZM-E7210-DT0R

**DFZM-E72xx**

---

The IC-ID is: 4259B-DFZME7210

Model: DFZM-E7221-DT0R, DFZM-E7220-DT0R

The IC-ID is: 4259B-DFZME7220
