Battery installation into mouse

1. Push the battery buckle, pull it then open
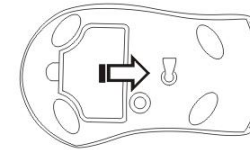

2. Put into two AAA（7#） batteries in correct direction
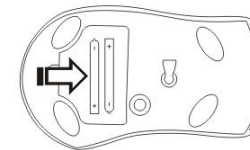

3. Recover it carefully.

1. In order to achieve the best economical battery capacity effect, we have used the intelligent saving electricity technology. When the mouse moves, the red LED lamp is brightest, by now for full-load conditions; When the mouse stop moves, the red LED lamp quickly gets down darkly, it can save much power, If your mouse stops working for about 5 minutes, the LED lamp would shut down, and the mouse stop working completely. We also have designed the electric awaken circuit to restart the mouse at once by press any keystroke or roll the wheel.

2. In order to prevent the accident awakens, we have designed the quick close function of the mouse, there is a CONNECT button in the bottom of the mouse, if you press the CONNECT button over 5 seconds, the mouse will be closed immediately, and the red LED lamp will shut down, the mouse is in the off-position, now the mouse can't return to the working condition by pressing keys or rolling the wheel, If you want to release the off-position, please press the CONNECT button over 3 seconds.
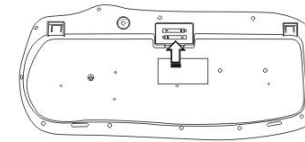

Also we have some know-how pleasure to tell you, all optical mouse would cost more power on black mat than on the white mat.

Battery installation into keyboard

1. Pull OPEN battery cap on the backside

2. Put into two AA（5#）batteries in correct direction

3. Recover it carefully.

Low voltage checking circuit design in the mouse, low voltage indicator light glitter indicate that insufficient voltage on the batteries, which warning user to change，Please use same level batteries and do not match old battery with new battery.
