FOREWORD

This manual contains an introductory description on the SUZUKI LT-A750X/P and procedures for its inspection/ service and overhaul of its main components.
Other information considered as generally known is not included.
Read the GENERAL INFORMATION section to familiarize yourself with the vehicle and its maintenance. Use this section as well as other sections to use as a guide for proper inspection and service.
This manual will help you know the vehicle better so that you can assure your customers of fast and reliable service.

- ** This manual has been prepared on the basis of the latest specifications at the time of publication. If modifications have been made since then, differences may exist between the content of this manual and the actual vehicle.*
- ** Illustrations in this manual are used to show the basic principles of operation and work procedures. They may not represent the actual vehicle exactly in detail.*
- ** This manual is written for persons who have enough knowledge, skills and tools, including special tools, for servicing SUZUKI vehicles. If you do not have the proper knowledge and tools, ask your authorized SUZUKI motorcycle dealer to help you.*

⚠ WARNING

Inexperienced mechanics or mechanics without the proper tools and equipment may not be able to properly perform the services described in this manual.
Improper repair may result in injury to the mechanic and may render the vehicle unsafe for the rider and passenger.

Warning / Caution / Note

B831G20000001

Please read this manual and follow its instructions carefully. To emphasize special information, the symbol and the words WARNING, CAUTION and NOTE have special meanings. Pay special attention to the messages highlighted by these signal words.

⚠ WARNING

Indicates a potential hazard that could result in death or injury.

⚠ CAUTION

Indicates a potential hazard that could result in vehicle damage.

NOTE

Indicates special information to make maintenance easier or instructions clearer.

Please note, however, that the warnings and cautions contained in this manual cannot possibly cover all potential hazards relating to the servicing, or lack of servicing, of the vehicle. In addition to the WARNINGS and CAUTIONS stated, you must use good judgement and basic mechanical safety principles. If you are unsure about how to perform a particular service operation, ask a more experienced mechanic for advice.

General Precautions

B831G20000002

⚠ WARNING

- **Proper service and repair procedures are important for the safety of the service mechanic and the safety and reliability of the vehicle.**
- **When 2 or more persons work together, pay attention to the safety of each other.**
- **When it is necessary to run the engine indoors, make sure that exhaust gas is forced outdoors.**
- **When working with toxic or flammable materials, make sure that the area you work in is well ventilated and that you follow all of the material manufacturer's instructions.**
- **Never use gasoline as a cleaning solvent.**
- **To avoid getting burned, do not touch the engine, engine oil, radiator and exhaust system until they have cooled.**
- **After servicing the fuel, oil, water, exhaust or brake systems, check all lines and fittings related to the system for leaks.**

⚠ CAUTION

- **If parts replacement is necessary, replace the parts with Suzuki Genuine Parts or their equivalent.**
- **When removing parts that are to be reused, keep them arranged in an orderly manner so that they may be reinstalled in the proper order and orientation.**
- **Be sure to use special tools when instructed.**
- **Make sure that all parts used in reassembly are clean. Lubricate them when specified.**
- **Use the specified lubricant, bond, or sealant.**
- **When removing the battery, disconnect the negative (–) cable first and then the positive (+) cable.**
- **When reconnecting the battery, connect the positive (+) cable first and then the negative (–) cable, and replace the terminal cover on the positive (+) terminal.**
- **When performing service to electrical parts, if the service procedures do not require use of battery power, disconnect the negative (–) cable the battery.**
- **When tightening the cylinder head or case bolts and nuts, tighten the larger sizes first. Always tighten the bolts and nuts diagonally from the inside toward outside and to the specified tightening torque.**
- **Whenever you remove oil seals, gaskets, packing, O-rings, locking washers, self-locking nuts, cotter pins, circlips and certain other parts as specified, be sure to replace them with new ones. Also, before installing these new parts, be sure to remove any left over material from the mating surfaces.**

- **Never reuse a circlip. When installing a new circlip, take care not to expand the end gap larger than required to slip the circlip over the shaft. After installing a circlip, always ensure that it is completely seated in its groove and securely fitted.**
- **Use a torque wrench to tighten fasteners to the specified torque. Wipe off grease and oil if a thread is smeared with them.**
- **After reassembling, check parts for tightness and proper operation.**
- **To protect the environment, do not unlawfully dispose of used motor oil, engine coolant and other fluids: batteries, and tires.**
- **To protect Earth's natural resources, properly dispose of used vehicle and parts.**

Precautions for Electrical Circuit Service

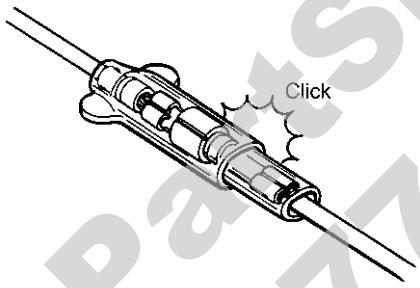
B831G20000003

When handling the electrical parts or servicing the FI systems, observe the following points for the safety of the systems.

Electrical Parts

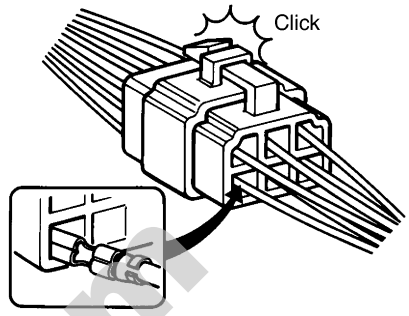
Connector / Coupler

- When connecting a connector, be sure to push it in until a click is felt.



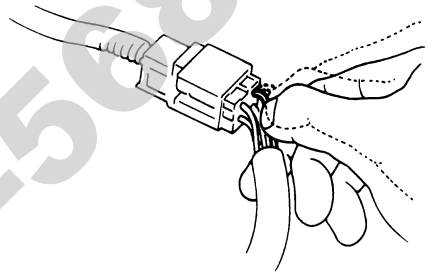
I310G1000001-01

- With a lock type coupler, be sure to release the lock when disconnecting, and push it in fully to engage the lock when connecting.
- When disconnecting the coupler, be sure to hold the coupler body and do not pull the lead wires.
- Inspect each terminal on the connector/coupler for looseness or bending.
- Push in the coupler straightly. An angled or skewed insertion may cause the terminal to be deformed, possibly resulting in poor electrical contact.
- Inspect each terminal for corrosion and contamination. The terminals must be clean and free of any foreign material which could impede proper terminal contact.
- Before refitting the sealed coupler, make sure its seal rubber is positioned properly. The seal rubber may possibly come off the position during disconnecting work and if the coupler is refitted with the seal rubber improperly positioned, it may result in poor water sealing.



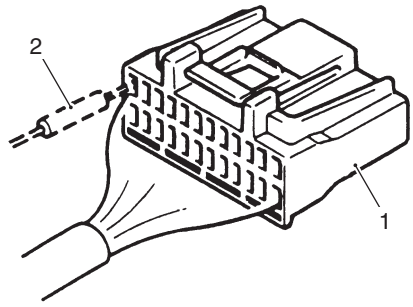
I310G1000002-01

- Inspect each lead wire circuit for poor connection by shaking it by hand lightly. If any abnormal condition is found, repair or replace.



I310G1000003-02

- When taking measurements at electrical connectors using a tester probe, be sure to insert the probe from the wire harness side (backside) of the connector/coupler.

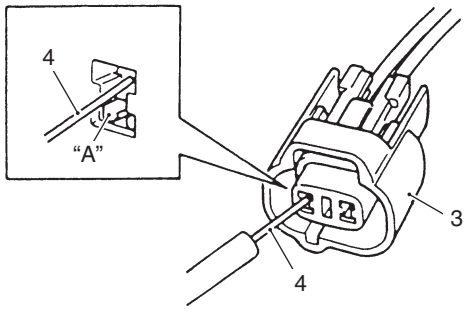


I649G1000013-02

1. Coupler	2. Probe

- When connecting meter probe from the terminal side of the coupler (where connection from harness side not being possible), use extra care not to force and cause the male terminal to bend or the female terminal to open. Connect the probe as shown to avoid opening of female terminal. Never push in the probe where male terminal is supposed to fit.

- Check the male connector for bend and female connector for excessive opening. Also check the coupler for locking (looseness), corrosion, dust, etc.

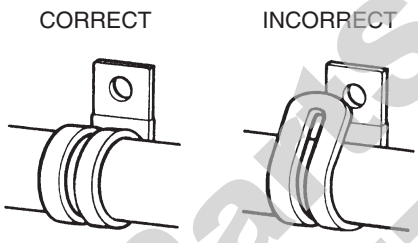


I649G1000030-02

3. Coupler	4. Probe	"A": Where male terminal fits

Clamp

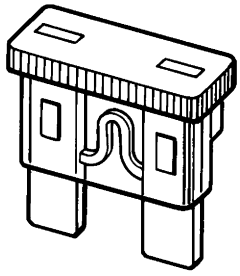
- Clamp the wire harness at such positions as indicated in "Wiring Harness Routing Diagram in Section 9A (Page 9A-4)".
- Bend the clamp properly so that the wire harness is clamped securely.
- In clamping the wire harness, use care not to allow it to hang down.
- Do not use wire or any other substitute for the band type clamp.



I718H1000001-02

Fuse

- When a fuse blows, always investigate the cause to correct it and then replace the fuse.
- Do not use a fuse of different capacity.
- Do not use wire or any other substitute for the fuse.



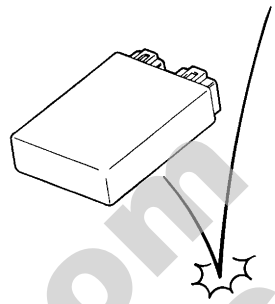
I649G1000001-02

Switch

Never apply grease material to switch contact points to prevent damage.

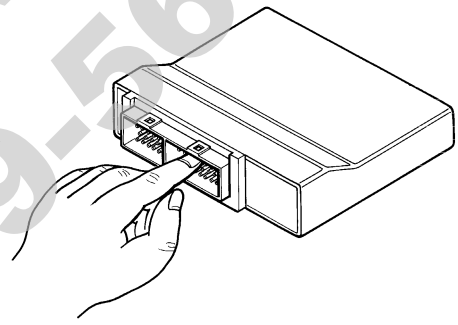
ECM / Various sensors

- Since each component is a high-precision part, great care should be taken not to apply any severe impacts during removal and installation.



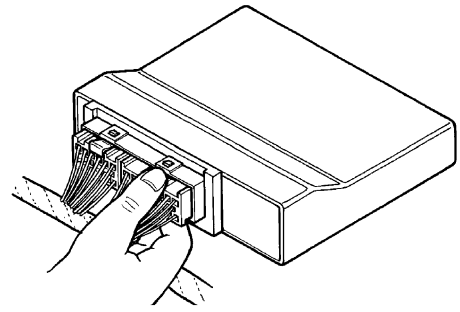
I310G1000007-01

- Be careful not to touch the electrical terminals of the electronic parts (ECM, etc.). The static electricity from your body may damage these.



I310G1000008-01

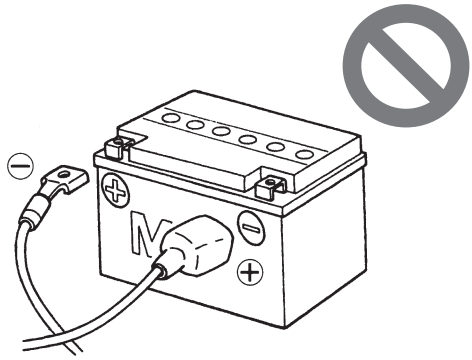
- When disconnecting and connecting the coupler, make sure to turn OFF the ignition switch, or electronic parts may get damaged.



I831G1000001-01

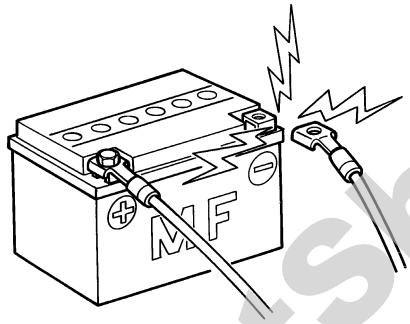
Battery

- Battery connection in reverse polarity is strictly prohibited. Such a wrong connection will damage the components of the FI systems instantly when reverse power is applied.



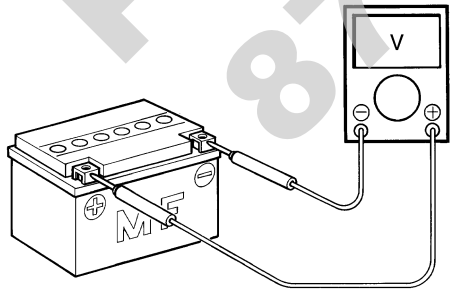
I718H1000004-01

- Removing any battery terminal of a running engine is strictly prohibited. The moment such removal is made, damaging counter electromotive force will be applied to the ECM which may result in serious damage.



I310G1000011-01

- Before measuring voltage at each terminal, check to make sure that battery voltage is 11 V or higher. Terminal voltage check with a low battery voltage will lead to erroneous diagnosis.



I310G1000012-02

- Never connect any tester (voltmeter, ohmmeter, or whatever) to the electronic unit when its coupler is disconnected. Otherwise, damage to electronic unit may result.
- Never connect an ohmmeter to the ECM with its coupler connected. If attempted, damage to ECM or sensors may result.
- Be sure to use a specified voltmeter/ohmmeter. Otherwise, accurate measurements may not be obtained and personal injury may result.

Electrical Circuit Inspection Procedure

While there are various methods for electrical circuit inspection, described here is a general method to check for open and short circuit using an ohmmeter and a voltmeter.

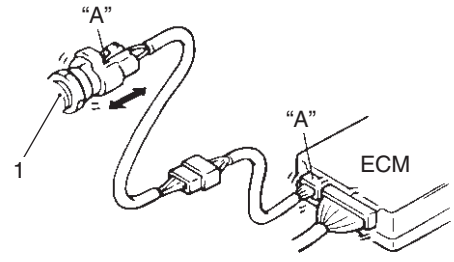
Open circuit check

Possible causes for the open circuit are as follows. As the cause can exist in the connector/coupler or terminal, they need to be checked carefully.

- Loose connection of connector/coupler
- Poor contact of terminal (due to dirt, corrosion or rust, poor contact tension, entry of foreign object etc.)
- Wire harness being open.
- Poor terminal-to-wire connection.

When checking system circuits including an electronic control unit such as ECM, etc., it is important to perform careful check, starting with items which are easier to check.

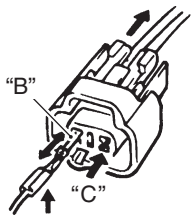
1) Disconnect the negative (–) cable from the battery.
2) Check each connector/coupler at both ends of the circuit being checked for loose connection. Also check for condition of the coupler lock if equipped.



I718H1000005-02

1. Sensor	"A": Check for loose connection

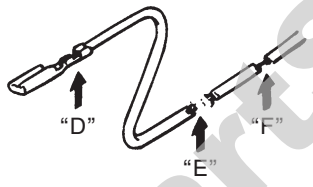
3) Using a test male terminal, check the female terminals of the circuit being checked for contact tension.
Check each terminal visually for poor contact (possibly caused by dirt, corrosion, rust, entry of foreign object, etc.). At the same time, check to make sure that each terminal is fully inserted in the coupler and locked.
If contact tension is not enough, rectify the contact to increase tension or replace. The terminals must be clean and free of any foreign material which could impede proper terminal contact.



I649G1000027-02

"B":	Check contact tension by inserting and removing.
"C":	Check each terminal for bend and proper alignment.

4) Using continuity inspect or voltage check procedure as described below, inspect the wire harness terminals for open circuit and poor connection.
Locate abnormality, if any.

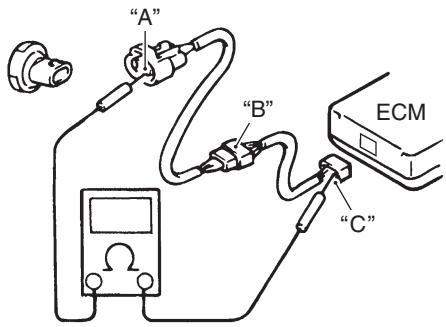


I649G1000028-02

"D":	Looseness of crimping
"E":	Open
"F":	Thin wire (A few strands left)

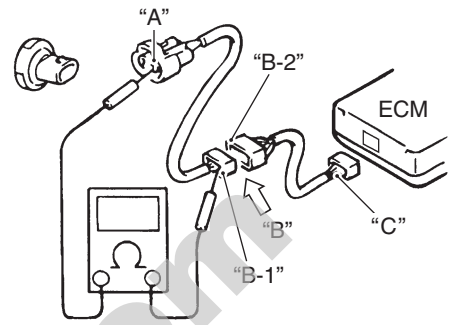
Continuity check

1) Measure resistance across coupler "B" (between "A" and "C" in figure).
If no continuity is indicated (infinity or over limit), the circuit is open between terminals "A" and "C".



I705H1000006-02

2) Disconnect the coupler "B" and measure resistance between couplers "A" and "B-1".
If no continuity is indicated, the circuit is open between couplers "A" and "B-1". If continuity is indicated, there is an open circuit between couplers "B-2" and "C" or an abnormality in coupler "B-2" or coupler "C".



I705H1000010-02

Voltage check

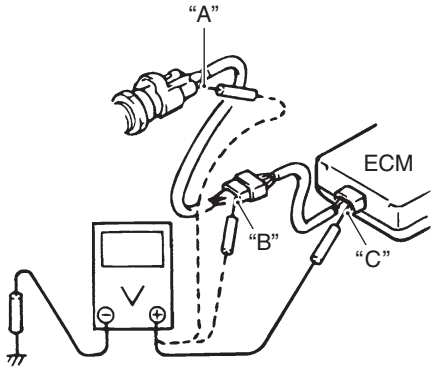
If voltage is supplied to the circuit being checked, voltage check can be used as circuit check.

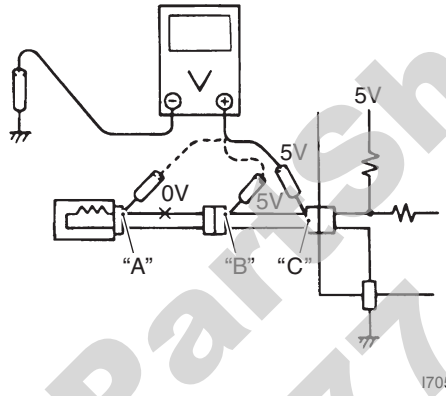
1) With all connectors/couplers connected and voltage applied to the circuit being checked, measure voltage between each terminal and body ground.
2) If measurements were taken as shown in the figure and results were listed in the following, it means that the circuit is open between terminals "A" and "B".

Voltage between
"A" and body ground: Approx. 5 V
"B" and body ground: Approx. 5 V
"C" and body ground: 0 V

3) Also, if measured values are as listed following, a resistance (abnormality) exists which causes the voltage drop in the circuit between terminals “A” and “B”.

Voltage between
“A” and body ground: Approx. 5 V
“B” and body ground: Approx. 5 V – 2 V voltage drop
“C” and body ground: 3 V – 2 V voltage drop





I705H1000007-01

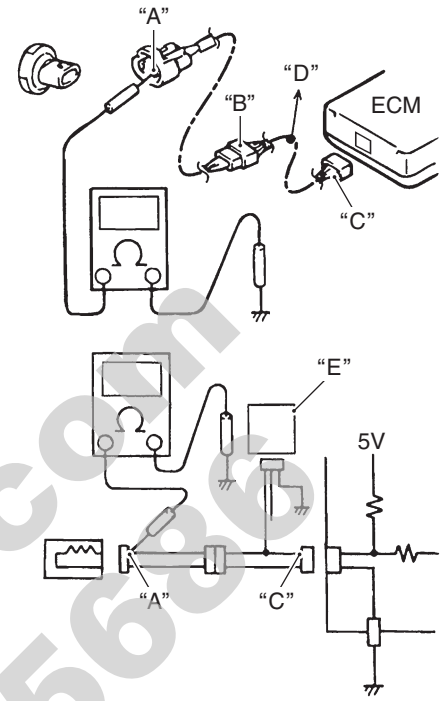
Short circuit check (Wire harness to ground)

1) Disconnect the negative (–) cable from the battery.
2) Disconnect the connectors/couplers at both ends of the circuit to be checked.

NOTE

If the circuit to be checked branches to other parts as shown, disconnect all connectors/ couplers of those parts. Otherwise, diagnosis will be misled.

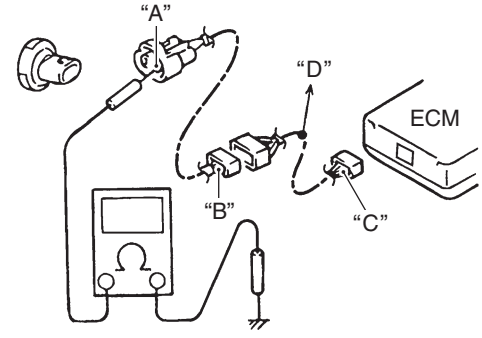
3) Measure resistance between terminal at one end of circuit (“A” terminal in figure) and body ground. If continuity is indicated, there is a short circuit to ground between terminals “A” and “C”.



I705H1000008-01

“D”: To other parts	“E”: Other parts

4) Disconnect the connector/coupler included in circuit (coupler “B”) and measure resistance between terminal “A” and body ground. If continuity is indicated, the circuit is shorted to the ground between terminals “A” and “B”.



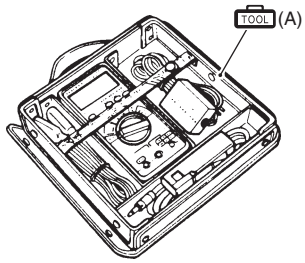
I705H1000009-02

“D”: To other parts

Using The Multi-Circuit Testers

- Use the Suzuki multi-circuit tester set.
- Use well-charged batteries in the tester.
- Be sure to set the tester to the correct testing range.

Special tool
TOOL (A): 09900–25008 (Multi-circuit tester set)

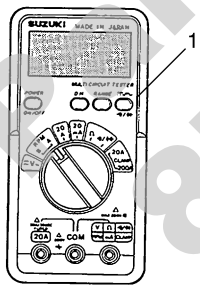


I649G1000024-03

Using the testers

- Incorrectly connecting the (+) and (–) probes may cause the inside of the tester to be burnout.
- If the voltage and current are not known, make measurements using the highest range.
- When measuring the resistance with the multi-circuit tester (1), ∞ will be shown as 10.00 MΩ and "1" flashes in the display.
- Check that no voltage is applied before making the measurement. If voltage is applied the tester may be damaged.
- After using the tester, turn the power off.

Special tool
TOOL : 09900–25008 (Multi-circuit tester set)



I649G1000002-02

NOTE

- **When connecting the multi-circuit tester, use the needle pointed probe to the back side of the lead wire coupler and connect the probes of tester to them.**
- **Use the needle pointed probe to prevent the rubber of the water proof coupler from damage.**
- **When using the multi-circuit tester, do not strongly touch the terminal of the ECM coupler with a needle pointed tester probe to prevent the terminal damage or terminal bend.**

I831G1010004-01

Fuel and Oil Recommendation

B831G20101006

Fuel (For USA and Canada)

Use only unleaded gasoline of at least 87 pump octane (R/2 + M/2) or 91 octane or higher rated by the research method.

Gasoline containing MTBE (Methyl Tertiary Butyl Ether), less than 10% ethanol, or less than 5% methanol with appropriate cosolvents and corrosion inhibitor is permissible.

Fuel (For Other Countries)

Gasoline used should be graded 91 octane (Research Method) or higher. Unleaded gasoline is recommended.

Engine Oil (For USA)

Oil quality is a major contributor to your engine’s performance and life. Always select good quality engine oil.

Suzuki recommends the use of SUZUKI PERFORMANCE 4 MOTOR OIL or an equivalent engine oil. Use of SF/SG or SH/SJ in API with MA in JASO.

Suzuki recommends the use of SAE 10W-40 engine oil. If SAE 10W-40 engine oil is not available, select and alternative according to the chart.

Engine Oil (For Other Countries)

I831G1010008-01

Front Differential Gear Oil
Use hypoid gear oil that meets the API service classification GL-5 and is rated SAE #90. Use a hypoid gear oil with a rating of SAE #80 if the vehicle is operated where the ambient temperature is below 0 °C (32 °F).

Rear Drive (Final) Gear Oil
Use mobil fluid 424 or equivalent oil.

Brake Fluid
Specification and classification: DOT 4

⚠ WARNING

Since the brake system of this vehicle is filled with a glycol-based brake fluid by the manufacturer, do not use or mix different types of fluid such as silicone-based and petroleum-based fluid for refilling the system, otherwise serious damage will result.
Do not use any brake fluid taken from old or used or unsealed containers.
Never reuse brake fluid left over from a previous servicing, which has been stored for a long period.

Engine Coolant Recommendation

B831G20101007

Engine Coolant
Use an anti-freeze/engine coolant compatible with an aluminum radiator, mixed with distilled water only.

Water for mixing
Use distilled water only. Water other than distilled water can corrode and clog the aluminum radiator.

Anti-freeze / Engine coolant
The engine coolant perform as a corrosion and rust inhibitor as well as anti-freeze. Therefore, the engine coolant should be used at all times even though the atmospheric temperature in your area does not go down to freezing point.
Suzuki recommends the use of SUZUKI COOLANT anti-freeze/engine coolant. If this is not available, use an equivalent which is compatible with an aluminum radiator.

Liquid amount of water / Engine coolant

Solution capacity (total)
2 450 ml (2.6/2.2 US/Imp qt)

For engine coolant mixture information, refer to "Engine Coolant Description in Section 1F (Page 1F-1)".

⚠ CAUTION

Mixing of anti-freeze/engine coolant should be limited to 60%. Mixing beyond it would reduce its efficiency. If the anti-freeze/engine coolant mixing ratio is below 50%, rust inhabiting performance is greatly reduced. Be sure to mix it above 50% even though the atmospheric temperature does not go down to the freezing point.

BREAK-IN Procedures

B831G20101008

During manufacture only the best possible materials are used and all machined parts are finished to a very high standard but it is still necessary to allow the moving parts to "BREAK-IN" before subjecting the engine to maximum stresses. The future performance and reliability of the engine depends on the care and restraint exercised during its early life. The general rules are as follows.

1) Keep to these break-in engine speed limits:

   Speed limits
   Initial 500 km (300 miles): Less than 1/2 throttle

2) Upon reaching an odometer reading of 500 km (300 miles) you can subject the vehicle to full throttle operation, for short periods of time.

Maintenance and Lubrication

Precautions

Precautions for Maintenance

B931G20200001

The “Periodic Maintenance Schedule Chart” lists the recommended intervals for all the required periodic service work necessary to keep the vehicle operating at peak performance and economy. Maintenance intervals are expressed in terms of kilometers, miles and months for your convenience.

NOTE

More frequent servicing may be required on vehicle that are used under severe conditions.

General Description

Recommended Fluids and Lubricants

B931G20201001

Refer to “Fuel and Oil Recommendation in Section 0A (Page 0A-3)” and “Engine Coolant Recommendation in Section 0A (Page 0A-4)”.

Lubrication Points

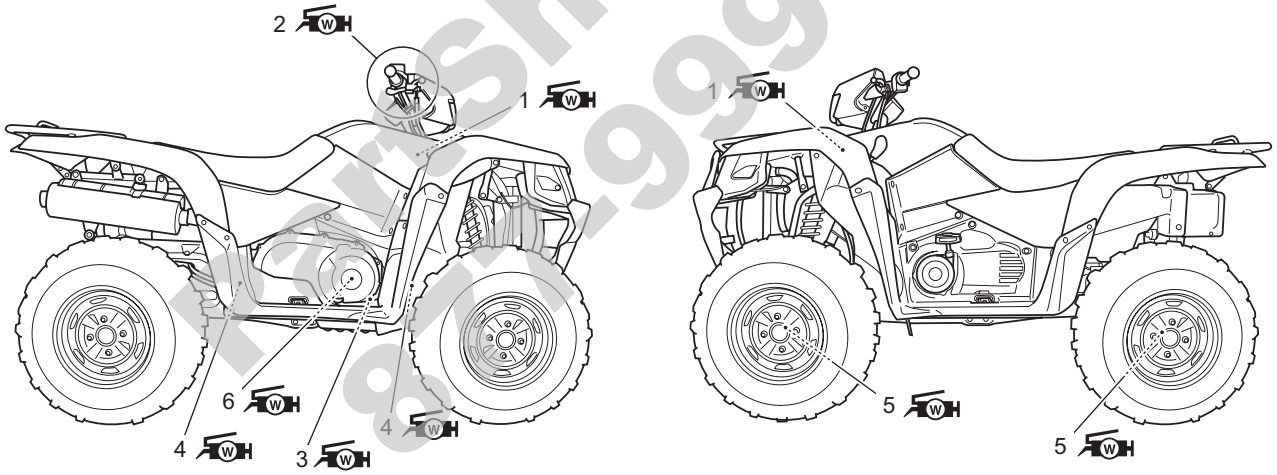
B931G20205002

Proper lubrication is important for smooth operation and long life of each working part of the vehicle. Major lubrication points are indicated as follows.

NOTE

- **Before lubricating each part, clean off any rusty spots and wipe off any grease, oil, dirt or grime.**
- **Lubricate exposed parts which are subject to rust, with a rust preventative spray whenever the vehicle has been operated under wet or rainy conditions.**

Lubricate exposed parts
Every 1 000 km (600 miles, 3 months)



I831G1020001-03

1. Steering shaft holder	4. Propeller shaft joint spline	: Apply water resistance grease.
2. Brake level holder and throttle lever	5. Drive shaft joint spline	
3. Brake pedal	6. Drive belt cover bearing (Inner race)	

Repair Instructions

Air Cleaner Element Inspection and Cleaning

B931G20206001

Inspect and clean element
Every 1 000 km (600 miles, 3 months)

Inspection

1) Remove the air cleaner element. Refer to “Air Cleaner Element Removal and Installation in Section 1D (Page 1D-5)”.
2) Inspect the air cleaner element for clogging. If it is clogged with dirt, clean or replace it with a new one.

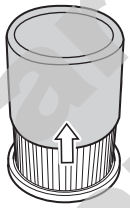
⚠ CAUTION

If driving under dusty conditions, inspect or clean the air cleaner element more frequently. The surest way to accelerate engine wear is to operate the engine without the element or to use a torn element. Make sure that the air cleaner is in good condition at all times. Life of the engine depends largely on this component.

3) After finishing the air cleaner element inspection, reinstall the removed parts.

Cleaning

1) Remove the air cleaner element assembly. Refer to “Air Cleaner Element Removal and Installation in Section 1D (Page 1D-5)”.
2) Separate the polyurethane from element.

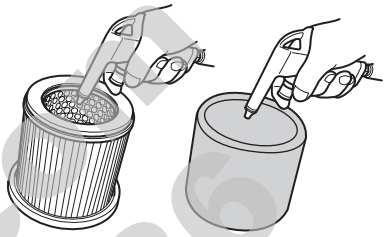


I831G1020002-01

3) Carefully use compressed air to clean the air cleaner element.

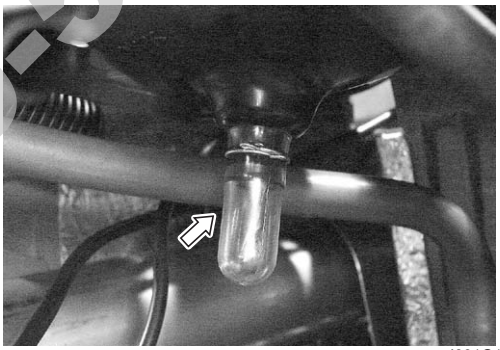
⚠ CAUTION

Always apply compressed air to the inside of the air cleaner element. If compressed air is applied to the outside, dirt will be forced into the pores of the air cleaner element, restricting air flow through the air cleaner element.



I831G1020003-01

4) After cleaning the air cleaner element, reinstall the removed parts.
5) Drain water from the air cleaner by removing the drain plug.



I831G1020004-01

6) Reinstall the drain plug.

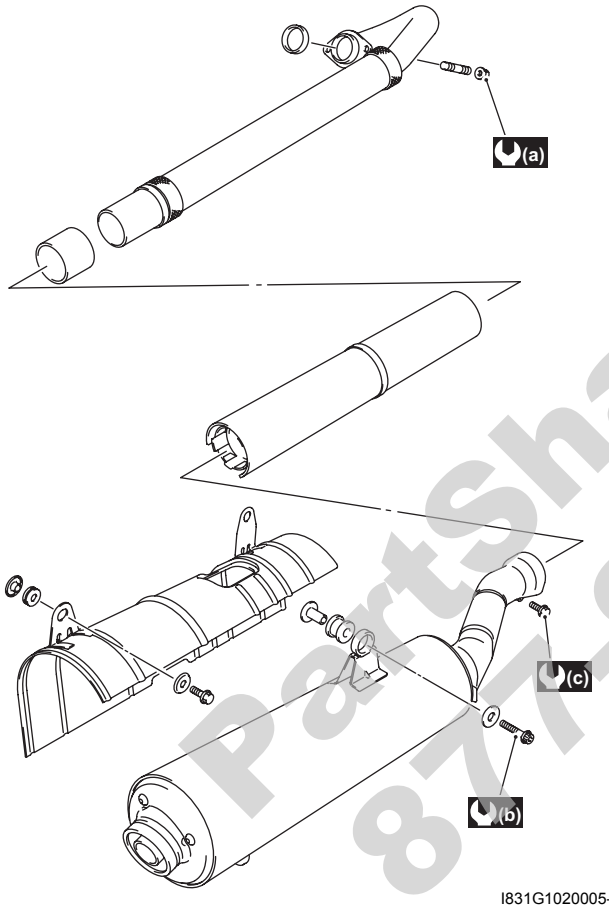
Exhaust Pipe Bolt and Muffler Bolt Inspection

B931G20206002

Tighten exhaust pipe bolts, muffler bolt and nut
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

Check the exhaust pipe bolts, muffler bolts and nut to the specified torque. Refer to “Exhaust Pipe / Muffler Removal and Installation in Section 1K (Page 1K-2)”.

Tightening torque
Exhaust pipe nut (a): 23 N·m (2.3 kgf-m, 16.5 lbf-ft)
Muffler mounting bolt (b): 23 N·m (2.3 kgf-m, 16.5 lbf-ft)
Muffler connecting bolt (c): 23 N·m (2.3 kgf-m, 16.5 lbf-ft)



I831G1020005-02

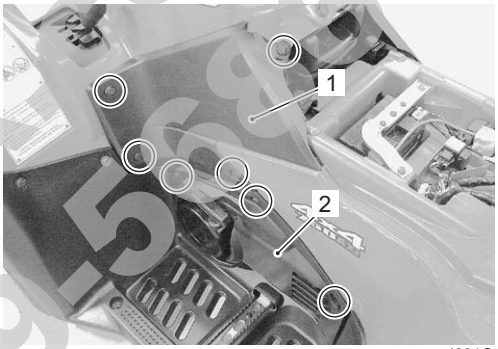
Valve Clearance Inspection and Adjustment

B931G20206003

Inspect valve clearance
Initially at 200 km (100 miles, 1 month) and every 2 000 km (1 200 miles, 6 months) thereafter

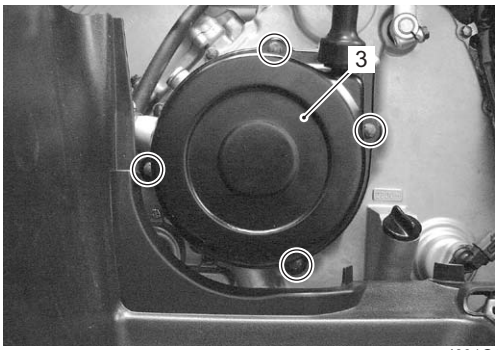
Inspection
Valve clearance adjustment must be checked and adjusted, a) at the time of periodic inspection, b) when the valve mechanism is serviced, and c) when the camshafts are removed for servicing.

1) Remove the front inner fender (LH & RH). Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the inlet V-belt cooling duct. Refer to “V-belt Cooling Duct Removal and Installation in Section 5A (Page 5A-5)”.
3) Remove the left side cover (1) and engine side cover (2).



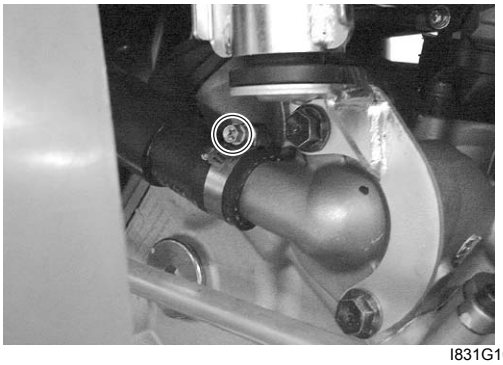
I831G1020009-02

4) Remove the recoil starter (3).



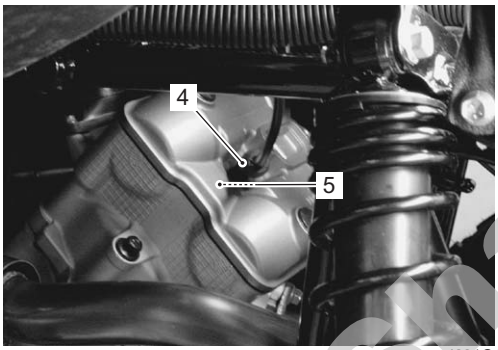
I831G1020010-01

5) Drain a small amount of engine coolant and disconnect the radiator upper hose of thermostat side. Refer to “Cooling System Inspection (Page 0B-15)”.



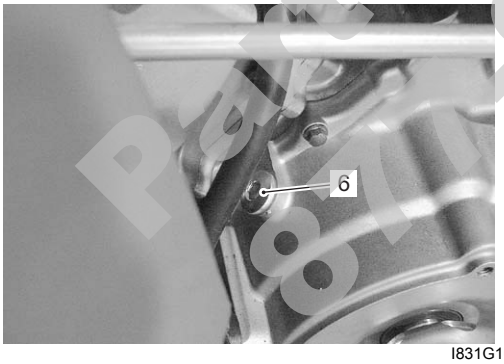
I831G1020012-01

6) Remove the spark plug cap (4) and spark plug (5). Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.



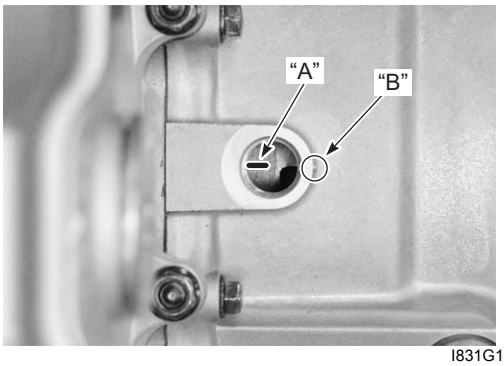
I831G1020085-03

7) Remove the valve timing inspection plug (6).



I831G1020011-02

8) Turn the crankshaft to bring the “TDC” line “A” on the generator rotor to the lug mark “B”.

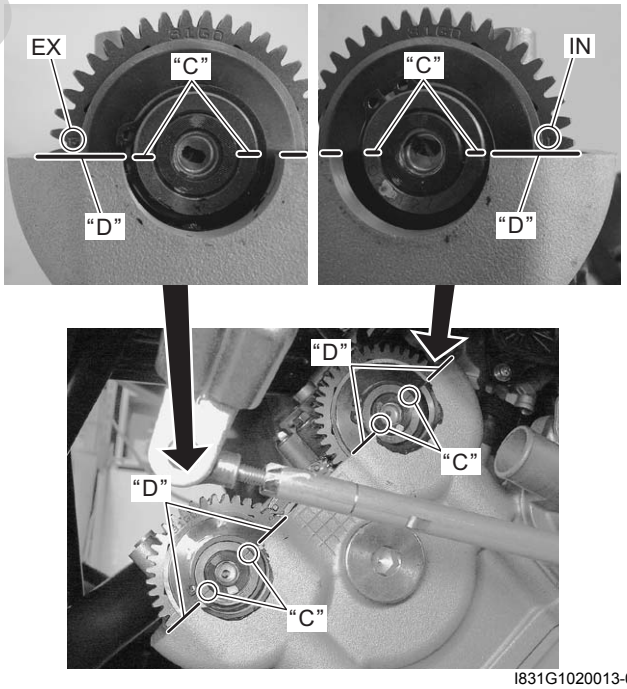


I831G1140086-03

9) Remove the cylinder head cover. Refer to “Engine Top Side Disassembly in Section 1D (Page 1D-17)”.

NOTE

- **Check the engraved lines “C” on the camshafts, so it is parallel with the mating surface “D” on the cylinder head cover.**
- **The valve clearance should be taken cylinder is at Top Dead Center (TDC) of compression stroke.**
- **The clearance specification is for COLD state.**
- **To turn the crankshaft for clearance checking, be sure to use a wrench, and rotate in the normal running direction.**



I831G1020013-03

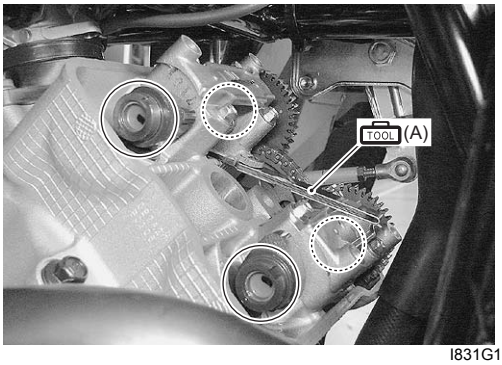
10) Insert the thickness gauge between the tappet and the cam. If the clearance is out of specification, adjust it to the specified range.

NOTE

The valve clearance specification is different for both intake and exhaust valves.

Special tool
(A): 09900–20803 (Thickness gauge)

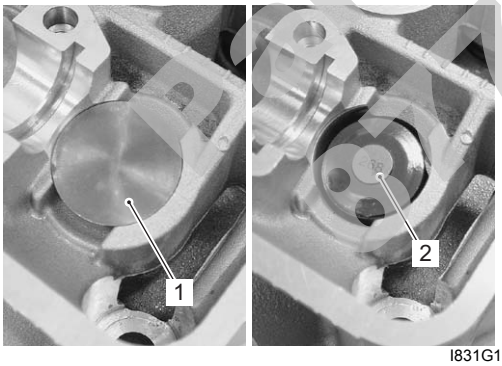
Valve clearance (When cold)
IN.: 0.10 – 0.20 mm (0.004 – 0.008 in)
EX.: 0.20 – 0.30 mm (0.008 – 0.012 in)



I831G1020015-01

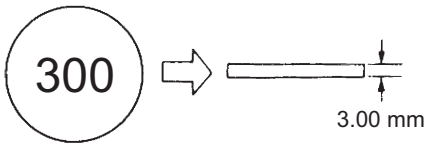
Adjustment
The clearance is adjusted by replacing the existing tappet shim with a thicker or thinner shim.

1) Remove the intake or exhaust camshafts. Refer to "Engine Top Side Disassembly in Section 1D (Page 1D-17)".
2) Remove the tappet (1) and shim (2) by fingers or magnetic hand.



I831G1020016-01

3) Check the figures printed on the shim. These figures indicate the thickness of the shim, as illustrated.



I831G1020091-01

4) Select a replacement shim that will provide a clearance within the specified range. For the purpose of this adjustment, a total of 25 sizes of tappet shim are available ranging from 2.50 to 3.50 mm in steps of 0.05 mm.

⚠ CAUTION

Both the right and left valve clearances should be as closely as possible.

5) Fit the selected shim (2) to the valve stem end, with numbers toward tappet. Be sure to check shim size with micrometer to ensure its size.

NOTE

- **Be sure to apply engine oil to tappet shim top and bottom faces.**
- **When seating the tappet shim, be sure the figure printed surface faces the tappet.**

HOW TO USE THIS CHART:

I. Measure valve clearance. “ENGINE IS COLD”
II. Measure present shim size.
III. Match clearance in vertical column with present shim size in horizontal column.

EXAMPLE

Valve clearance is	0.23 mm
Present shim size	2.70 mm
Shim size to be used	2.80 mm

HOW TO USE THIS CHART:

I. Measure valve clearance. “ENGINE IS COLD”

II. Measure present shim size.

III. Match clearance in vertical column with present shim size in horizontal column.

EXAMPLE

Valve clearance is	0.38 mm
Present shim size	2.90 mm
Shim size to be used	3.05 mm

I831G1020018-02

6) Install the camshafts. Refer to “Engine Top Side Assembly in Section 1D (Page 1D-21)”.
7) Rotate the engine so that the tappet is depressed fully. This will squeeze out oil trapped between the shim and the tappet that could cause an incorrect measurement, then check the clearance again to confirm that it is within the specified range.
8) After finishing the tappet clearance adjustment, reinstall the removed parts. Refer to “Engine Top Side Assembly in Section 1D (Page 1D-21)”.

Spark Plug Replacement

B931G20206004

Replace spark plug
Every 6 000 km (4 000 miles)

Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.

Spark Plug Inspection and Cleaning

B931G20206005

Inspect spark plug
Every 2 000 km (1 200 miles, 6 months)

Heat Range

1) Remove the spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.
2) Check spark plug heat range by observing electrode color.
   If it appears white or glazed, replace the spark plug with colder type one.

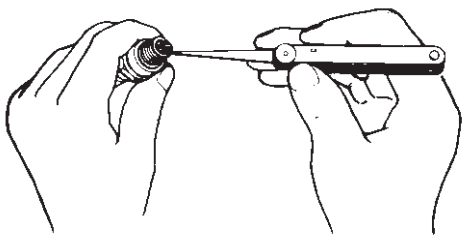
   Heat range

	Standard	Cold type
NGK	CR6E	CR7E
DENSO	U20ESR-N	U22ESR-N

3) After finishing the spark plug inspection, reinstall the removed parts.

Carbon Deposits

1) Remove the spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.
2) Check carbon deposits on the spark plug.
   If carbon is deposited, remove it using a spark plug cleaner machine or carefully use a tool with a pointed end.



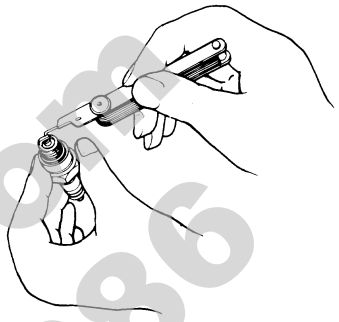
I649G1020010-02

3) After finishing the spark plug inspection, reinstall the removed parts.

Spark Plug Gap

1) Remove the spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.
2) Measure the spark plug gap using a wire gauge. Adjust the spark plug gap if necessary.

   Spark plug gap
   0.7 – 0.8 mm (0.028 – 0.030 in)



I831G1020092-01

3) After finishing the spark plug inspection, reinstall the removed parts.

Electrodes Condition

1) Remove the spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.
2) Check to see the worn or burnt condition of the electrodes.
   If it is extremely worn or burnt, replace the plug. And also replace the plug if it has a broken insulator, or damaged thread.
3) After finishing the spark plug inspection, reinstall the removed parts.

⚠ CAUTION

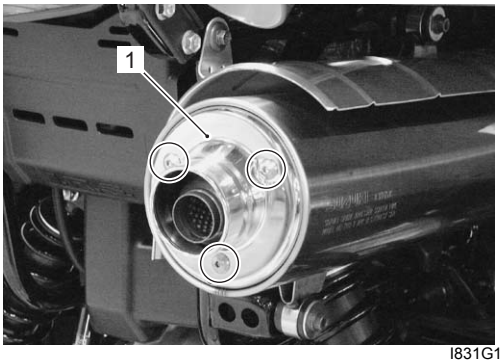
Check the thread size and reach when replacing the spark plug. If the reach is too short, carbon will be deposited on the screw portion of the spark plug hole and engine damage may result.

Spark Arrester Cleaning

B931G20206006

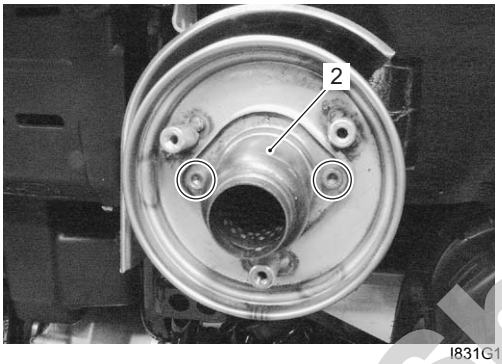
Spark arrester cleaning
Every 2 000 km (1 200 miles, 6 months)

1) Remove the muffler end cover (1).



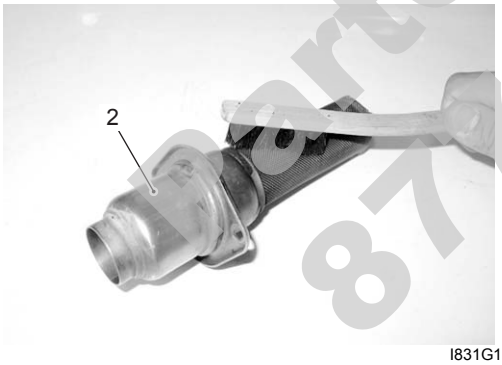
I831G1020006-02

2) Remove the spark arrester (2) from the muffler.



I831G1020007-03

3) Clean the spark arrester (2) with a brush.



I831G1020008-03

4) After finishing the spark arrester cleaning, reinstall the removed parts.

Fuel Line Inspection

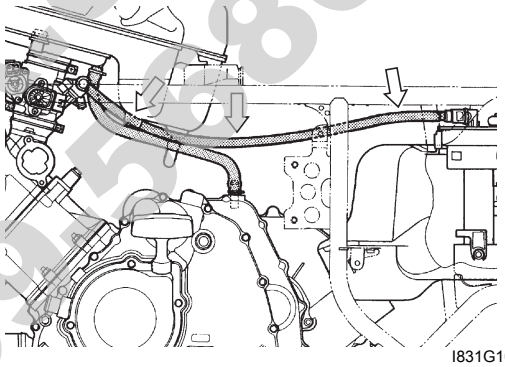
B931G20206007

Inspect fuel line
Every 1 000 km (600 miles, 3 months)

Replace fuel line
Every 4 years

Inspect the fuel line in the following procedures:

1) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
3) Remove the fuel tank side cover. Refer to “Fuel Tank Removal and Installation in Section 1G (Page 1G-8)”.
4) Inspect the fuel feed hose for damage and fuel leakage. If any defects are found, the fuel feed hose must be replaced.



I831G1020019-02

5) After finishing the fuel feed hose inspection or replacement, reinstall the removed parts.

Engine Oil and Filter Replacement

B931G20206008

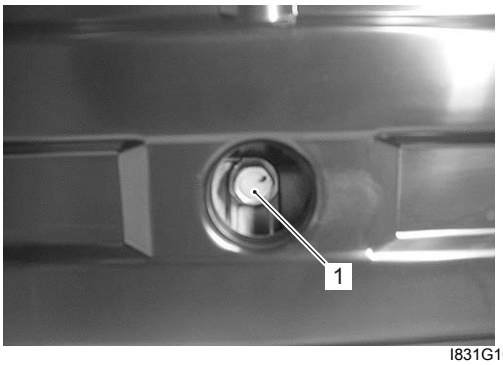
Replace engine oil
Initially at 200 km (100 miles, 1 month) and every 2 000 km (1 200 miles, 6 months) thereafter

Replace oil filter
Initially at 200 km (100 miles, 1 month) and every 2 000 km (1 200 miles, 6 months) thereafter

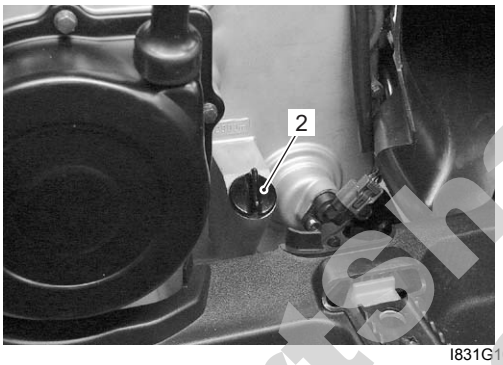
Oil should be changed while the engine is warm. Oil filter replacement at the above intervals, should be done together with the engine oil change.

Engine Oil Replacement

1) Place the vehicle on a level ground and set the brake lock.
2) Remove the engine side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Place an oil pan below the engine, and drain engine oil by removing the oil drain plug (1) and filler cap (2).



I831G1020020-01



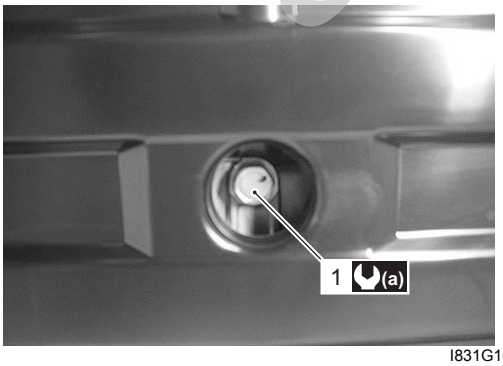
I831G1020022-01

4) Tighten the oil drain plug (1) to the specified torque.

⚠ CAUTION

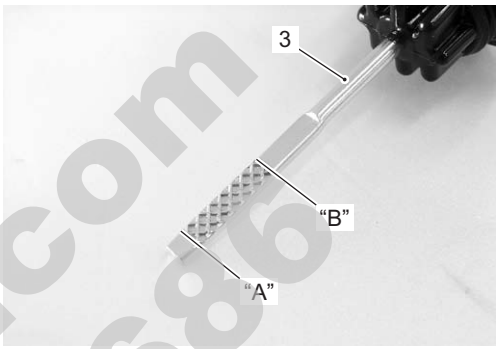
Replace the gasket washer with a new one.

Tightening torque
Oil drain plug (a): 21 N·m (2.1 kgf-m, 15.0 lbf-ft)



I831G1020021-01

5) Pour new oil through the oil filler. When performing an oil change (without oil filter replacement), the engine will hold about 2.3 L (2.4/2.0 US/Imp qt) of oil. Use of SF/SG or SH/SJ in API with MA in JASO.
6) Start up the engine and allow it to run for several minutes at idling speed after tightening the oil filler cap.
7) Turn off the engine and wait about three minutes, and then check the oil level on the dipstick (3). The oil level should be between the low level line “A” and full level line “B”. If the oil level is lower than the low level line “A”, add oil to the full level line “B”.



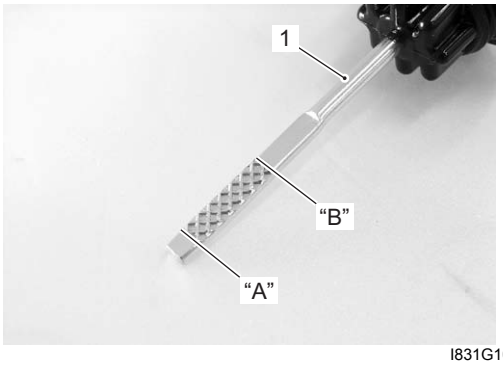
I831G1020023-01

Oil Level Inspection

1) Place the vehicle on a level ground and set the brake lock.
2) Start up the engine and allow it to run for several minutes at idling speed.
3) Turn off the engine and wait about three minutes, then check the oil level on the dipstick (1). If the level is below low level line “A”, add oil to full level line “B”. If the level is above full level line “B”, drain oil to full level line “B”.

NOTE

When inspecting the oil level, the oil filler cap threads are not run in but touching the filler hole upper edge.

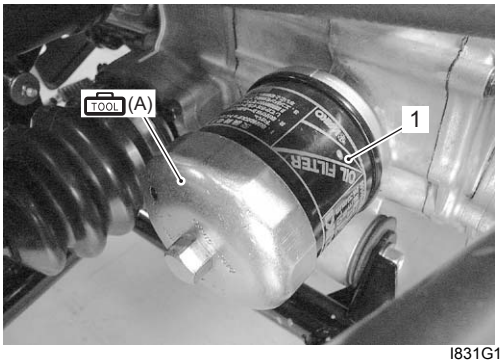


I831G1020024-01

Oil Filter Replacement

1) Drain engine oil as described in the engine oil replacement procedure.
2) Remove left inner cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Remove the oil filter (1) using the special tool.

Special tool
TOOL (A): 09915–40610 (Oil filter wrench)



I831G1020025-01

4) Apply engine oil lightly to the O-ring of new oil filter, before installation.

⚠ CAUTION

ONLY USE A GENUINE SUZUKI MOTORCYCLE OIL FILTER.
Other manufacturer’s oil filters may differ in thread specifications (thread diameter and pitch), filtering performance and durability which may lead to engine damage or oil leaks. Also, do not use a genuine Suzuki automobile oil filter on this vehicle.

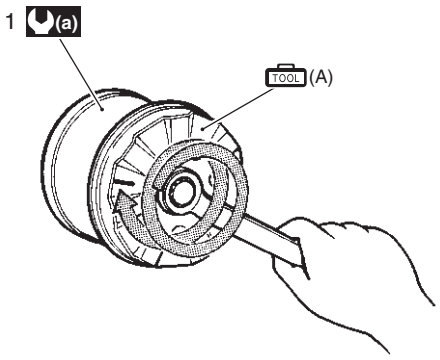
5) Install a new oil filter. Turn it by hand until you feel that the oil filter O-ring contacts the oil filter mounting surface. Then, tighten the oil filter two full turns (or to specified torque) using the special tool.

NOTE

To properly tighten the oil filter, use the special tool. Never tighten the oil filter by hand only.

Special tool
TOOL (A): 09915–40610 (Oil filter wrench)

Tightening torque
Oil filter (a): 20 N·m (2.0 kgf-m, 14.5 lbf-ft)



I718H1020026-01

6) Add new engine oil and check the oil level is as described in the engine oil replacement procedure.

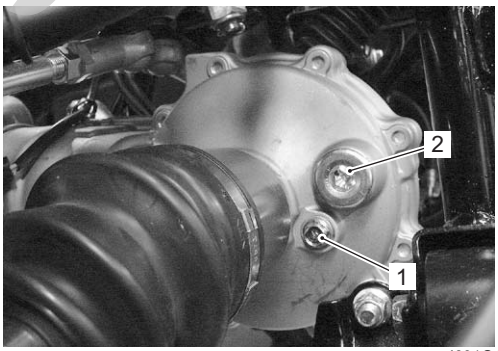
Necessary amount of engine oil
Oil change: 2 300 ml (2.4/2.0 US/Imp qt)
Oil and filter change: 2 500 ml (2.6/2.2 US/Imp qt)
Engine overhaul: 3 000 ml (3.2/2.6 US/Imp qt)

Front Differential Gear Oil Inspection

B931G20206009

Inspect front differential gear oil
Every 2 000 km (1 200 miles, 6 months)

1) Place the vehicle on level ground.
2) Remove the oil level plug (1) and oil filler plug (2), and inspect the oil level. If the oil level is below the level hole, add fresh oil until oil flows from the level hole.



I831G1020036-01

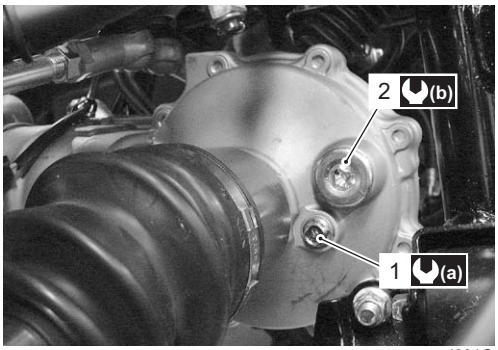
3) Tighten the oil level plug (1) and oil filler plug (2) to the specified torque.

⚠ CAUTION

Replace the gasket washers with new ones.

Tightening torque
Front differential gear oil level plug (a): 8.5 N·m (0.85 kgf-m, 6.0 lbf-ft)

Tightening torque
Front differential gear oil filler plug (b): 35 N·m (3.5 kgf-m, 25.5 lbf-ft)



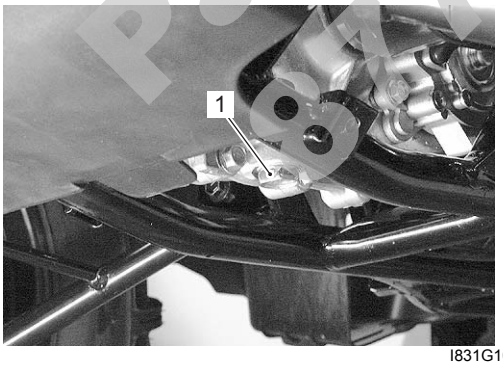
I831G1020037-01

Front Differential Gear Oil Replacement

B931G20206010

Replace front differential gear oil
Every 2 years

1) Place the vehicle on level ground.
2) Remove the front under cover. Refer to "Under Cover Removal and Installation in Section 9D (Page 9D-12)".
3) Drain the front differential gear oil by removing the oil drain plug (1), oil filler plug and oil level plug.



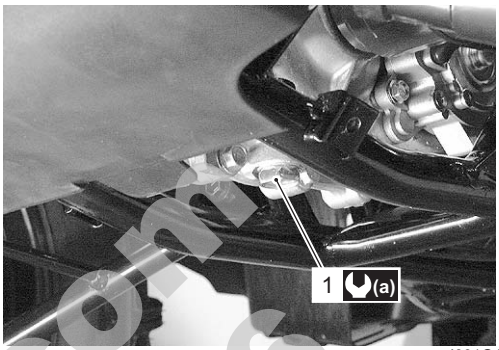
I831G1020038-01

4) Tighten the oil drain plug (1) to the specified torque.

⚠ CAUTION

Replace the gasket washers with a new one.

Tightening torque
Front differential gear oil drain plug (a): 32 N·m (3.2 kgf-m, 23.0 lbf-ft)



I831G1020081-01

5) Pour fresh oil through the oil filler hole until it overflows from the oil level hole. When performing an oil change, the front differential will hold about 500 ml (0.53 US qt, 0.44 Imp qt) of oil. Use hypoid gear oil SAE #90, API grade GL-5.

NOTE

Use hypoid gear oil SAE #80, API grade GL-5, if the vehicle is ridden where the ambient temperature is below 0 °C (32 °F).

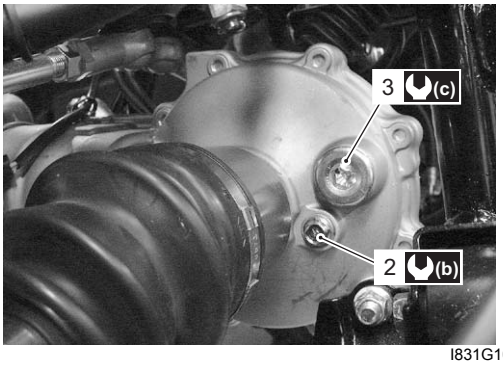
Front differential gear oil capacity
500 ml (0.53 US qt, 0.44 Imp qt)

6) Tighten the oil level plug (2) and oil filler plug (3) to the specified torque.

⚠ CAUTION

Replace the gasket washers with new ones.

Tightening torque
Front differential gear oil level plug (b): 8 N·m (0.8 kgf-m, 5.7 lbf-ft)
Front differential gear oil filler plug (c): 35 N·m (3.5 kgf-m, 25.5 lbf-ft)



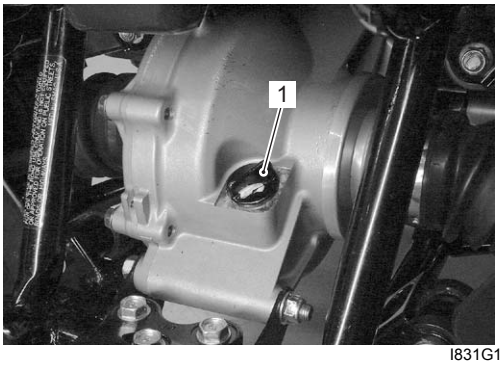
I831G1020039-03

Final Gear Oil Inspection

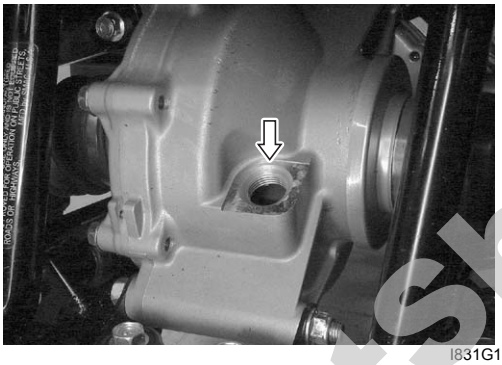
B931G20206011

Inspect final gear oil
Every 2 000 km (1 200 miles, 6 months)

1) Place the vehicle on a level ground.
2) Remove the filler plug (1), and inspect the oil level. If the oil level is below, add fresh oil until the oil level reaches the bottom tip of the thread.



I831G1020040-01



I831G1020041-01

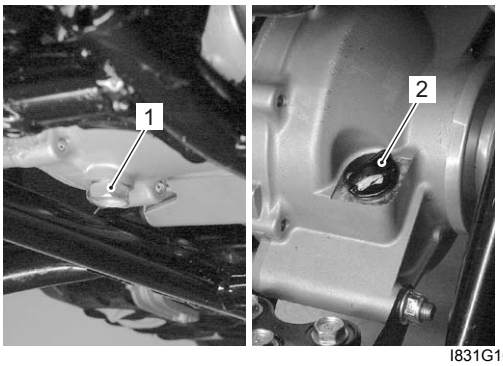
3) Tighten the oil filler plug (1) securely.

Final Gear Oil Replacement

B931G20206012

Replace final gear oil
Every year

1) Place the vehicle on a level ground.
2) Remove the rear under cover. Refer to “Under Cover Removal and Installation in Section 9D (Page 9D-12)”.
3) Place an oil pan below the final gear case.
4) Drain oil by removing the oil drain plug (1) and oil filler plug (2).



I831G1020042-02

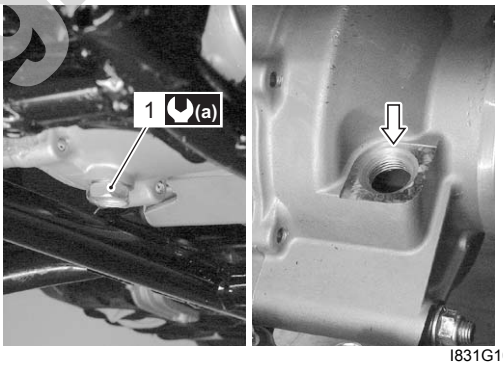
5) Tighten the oil drain plug (1) to the specified torque, and pour fresh oil through the oil filler hole until the oil level reaches the bottom tip of the thread. Use Mobil fluid 424 or equivalent oil.

Final gear oil capacity
770 ml (0.81 US qt, 0.68 Imp qt)

⚠ CAUTION

Replace the gasket with a new one.

Tightening torque
Final gear oil drain plug (a): 23 N·m (2.3 kgf-m, 16.5 lbf-ft)



I831G1020044-02

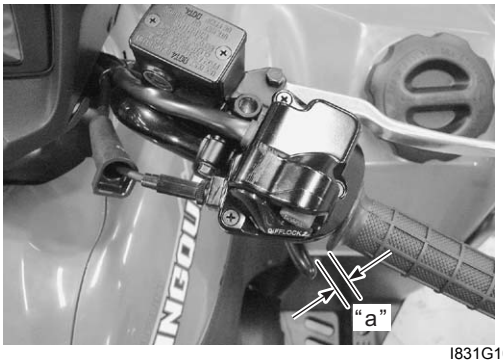
Throttle Cable Play Inspection and Adjustment

B931G20206013

Inspect throttle cable play
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

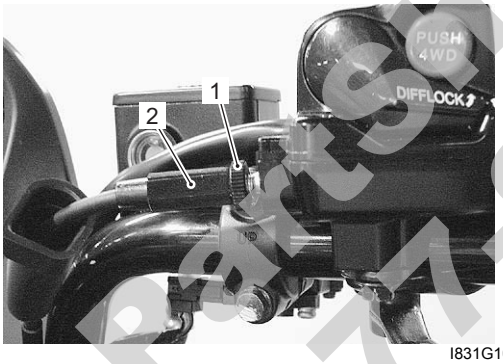
Inspect and adjust the throttle cable play “a” as follows.

Throttle cable play “a”
3.0 – 5.0 mm (0.12 – 0.20 in)



I831G1020026-01

1) Loosen the lock-nut (1) of the throttle cable.
2) Turn the adjuster (2) in or out until the throttle cable play “a” (at the throttle lever) is between 3 – 5 mm (0.12 – 0.20 in).
3) Tighten the lock-nut (1) while holding the adjuster (2).



I831G1020027-01

⚠ WARNING

After the adjustment is completed, check that handlebar movement does not raise the engine idle speed and that the throttle lever returns smoothly and automatically.

Throttle Body Inspection

B931G20206014

Inspect throttle body
Every 1 000 km (600 miles, 3 months)

Inspect the throttle body periodically for dart or mud. If any dirt or mud is found, clean it. Refer to “Throttle Body Removal and Installation in Section 1D (Page 1D-8)”.

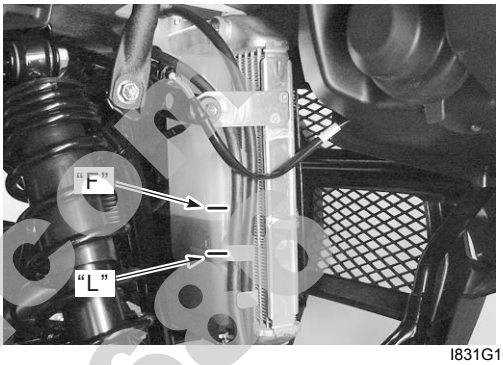
Cooling System Inspection

B931G20206015

Replace engine coolant
Every 2 years

Engine Coolant Level Inspection

1) Place the vehicle on a level ground.
2) Check the engine coolant level by observing the full and lower lines on the engine coolant reservoir tank. If the level is below the lower line, add engine coolant to the full line from the engine coolant reservoir tank filler.



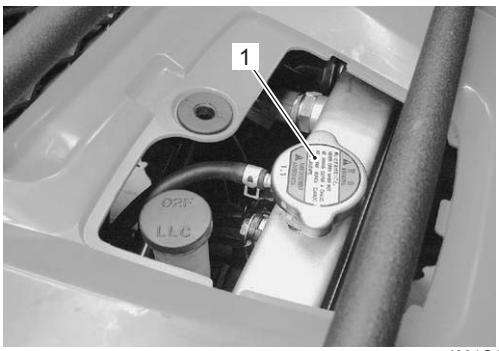
I831G1020028-01

Engine Coolant Change
Refer to “Engine Coolant Description in Section 1F (Page 1F-1)”.

⚠ WARNING

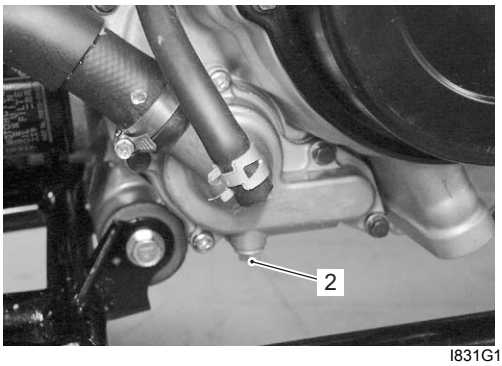
Do not open the radiator cap when the engine is hot, as you may be injured by escaping hot liquid or vapor. Engine coolant may be harmful if swallowed or if it comes in contact with skin or eyes. If engine coolant gets into the eyes or in contact with the skin, flush thoroughly with plenty of water. If swallowed, induce vomiting and call physician immediately.

1) Remove the radiator cap lid.
2) Remove the radiator cap (1).



I831G1020029-01

3) Remove the left inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
4) Remove the front under cover. Refer to “Under Cover Removal and Installation in Section 9D (Page 9D-12)”.
5) Place a pan below the water pump, and then drain the engine coolant by removing the drain plug (2).



I831G1020030-01

6) Flush the radiator with fresh water if necessary.
7) Tighten the drain plug (4) to the specified torque.

⚠ CAUTION

Replace the gasket with a new one.

Tightening torque
Engine coolant drain plug (a): 13 N·m (1.3 kgf-m, 9.5 lbf-ft)

I831G1020031-02

8) Pour the specified engine coolant up to the radiator inlet.

Engine coolant capacity (including reservoir)
2 450 ml (2.6/2.2 US/Imp qt)

I831G1020080-01

9) Bleed air from the cooling circuit.
10) After changing engine coolant, reinstall the removed parts.

Air Bleeding From the Cooling Circuit

1) Place the vehicle on a level ground and set the brake lock.
2) Pour engine coolant up to the radiator inlet.
3) Slowly swing the vehicle, right and left, to bleed the air trapped in the cooling circuit.
4) Add engine coolant up to the radiator inlet.
5) Start up the engine and bleed air from the radiator inlet completely.
6) Add engine coolant up to the radiator inlet.
7) Repeat the 6), 7) procedures until no air bleeds from the thermostat connector inlet.
8) Close the radiator cap securely.
9) After warming up and cooling down the engine, add the specified engine coolant until the level is between the upper and lower lines on the engine coolant reservoir tank.

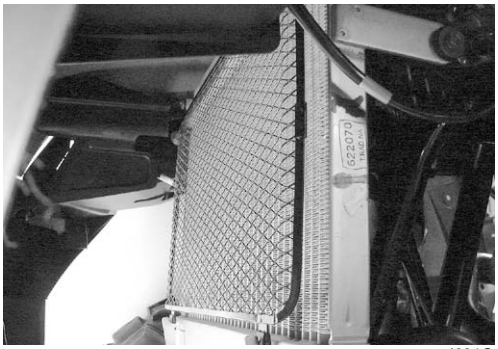
I831G1020032-01

10) Reinstall the removed parts.

Radiator Inspection

Inspect radiator
Every 1 000 km (600 miles, 3 months)

Inspect the radiator for damage and engine coolant leakage. If any defects are found, replace it with a new one.

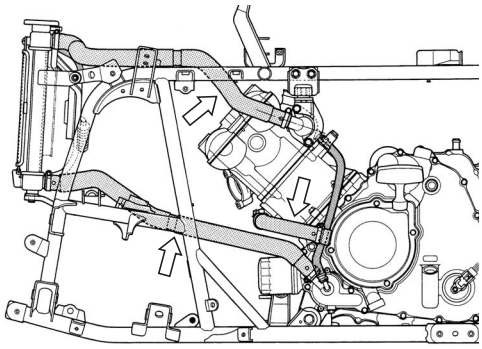


I831G1020034-01

Radiator Hoses Inspection

Inspect radiator hoses
Every 2 000 km (1 200 miles, 6 months)

Inspect the radiator hoses for damage and engine coolant leakage. If any defects are found, replace them with new ones.



I831G1020033-01

Drive V-belt Inspection and Replacement

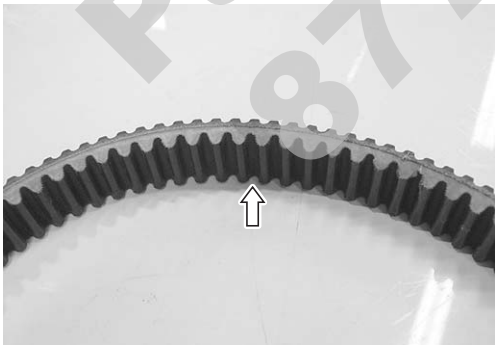
B931G20206016

Inspect drive V-belt
Every 1 000 km (600 miles, 3 months)

Replace drive V-belt
Every 2 000 km (1 200 miles, 6 months)

Inspect the drive V-belt in the following procedures:

1) Remove the drive V-belt. Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)”.
2) Inspect the drive V-belt for crack or other damage and measure the width of belt if necessary. If any abnormal point are found, replace the drive V-belt with a new one. Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)”.



I831G1020043-01

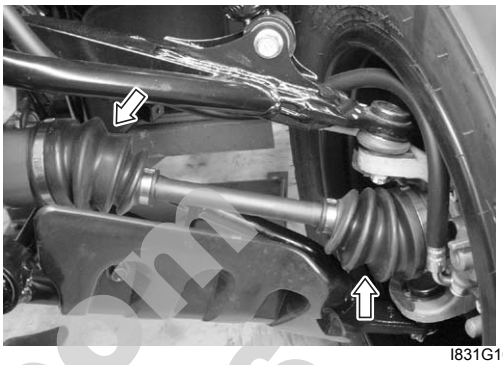
3) Install the removed parts. Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)”.

Drive Shaft Boots Inspection

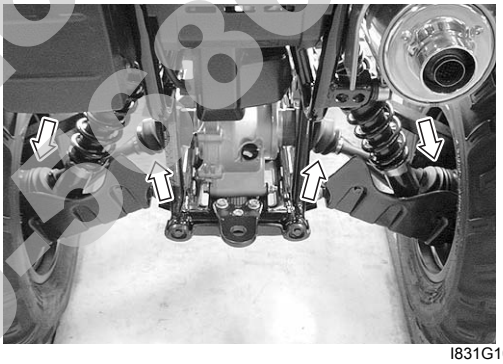
B931G20206017

Inspect drive shaft
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

Inspect the boots for wear or damage. If any defects are found, replace them with new ones.



I831G1020045-02



I831G1020046-01

Front Brake System Inspection

B931G20206018

Inspect brake system
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

⚠ WARNING

- **The brake system of this vehicle is filled with a glycol-based brake fluid. Do not use or mix different types of fluid such as silicone-based and petroleum-based fluids. Do not use any brake fluid taken from old, used or unsealed containers. Never reuse brake fluid left over from the last servicing or stored for a long period of time.**
- **Brake fluid, if it leaks, will interfere with safe running and immediately discolor painted surfaces. Check the brake hoses and hose joints for cracks and oil leakage before riding.**

Brake Fluid Level Check

Inspect brake fluid level
Every 1 000 km (600 miles, 3 months)

1) Place the vehicle on a level ground.
2) Check the brake fluid level by observing the lower limit lines on the brake fluid reservoir. When the brake fluid level is below the lower limit line, replenish with brake fluid that meets the following specification.

BF: Brake fluid (DOT 4)

I831G1020047-01

Brake Fluid Replacement

Replace brake fluid
Every 2 years

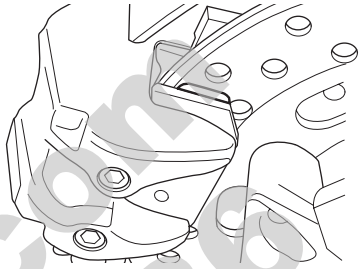
Refer to “Brake Fluid Replacement in Section 4A (Page 4A-6)”.

Air Bleeding from Brake Fluid Circuit
Refer to “Air Bleeding from Front Brake Fluid Circuit in Section 4A (Page 4A-5)”.

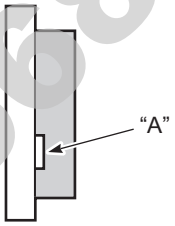
Front Brake Pads Check
The extent of front brake pad wear can be checked by observing the grooved limit line “A” on the pad. When the wear exceeds the grooved limit line, replace the pads with new ones. Refer to “Front Brake Pad Replacement in Section 4B (Page 4B-2)”.

⚠ CAUTION

Replace the brake pad as a set, otherwise braking performance will be adversely affected.



I831G1020048-01

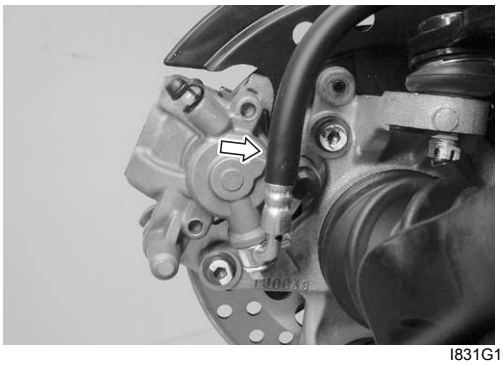


I831G1020082-01

Front Brake Hose Inspection

Inspect brake hose
Every 2 000 km (1 200 miles, 6 months)

1) Turn the handlebars to left or right.
2) Inspect the brake hoses and hose joints for crack, damage or brake oil leakage. If any defects are found, replace the front brake hose with a new one. Refer to “Front Brake Hose Removal and Installation in Section 4A (Page 4A-7)”.



I831G1020035-01

Front Brake Hose Replacement

Replace brake hose
Every 4 years

Refer to “Front Brake Hose Removal and Installation in Section 4A (Page 4A-7)”.

Rear Brake Pedal / Rear Brake (Parking Brake) Lever Inspection and Adjustment

B931G20206019

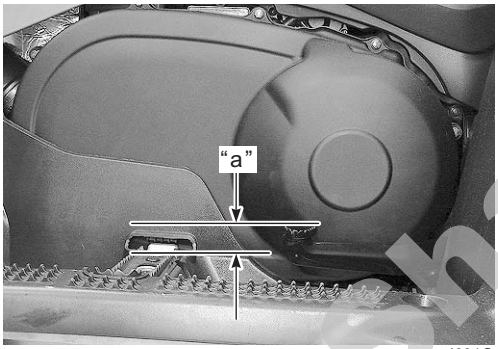
NOTE

Adjust the rear brake by adjusting the brake pedal first and then adjust the brake lever.

Brake Pedal Height

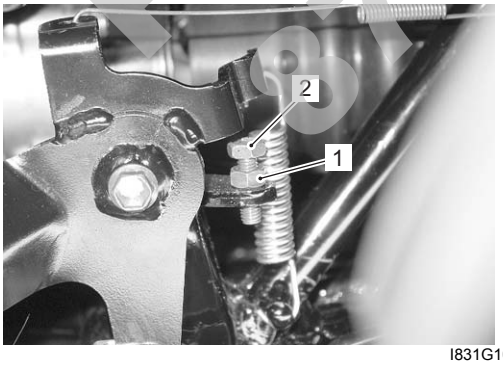
1) Inspect the brake pedal height “a” between the pedal top face and footrest. Adjust the brake pedal height if necessary.

Brake pedal height “a”
12.5 – 22.5 mm (0.5 – 0.9 in)



I831G1020051-02

2) Loosen the lock-nut (1).
3) Turn the adjuster (2) until the brake pedal becomes 12.5 – 22.5 mm (0.5 – 0.9 in) “a” higher from the top of the footrest.
4) Tighten the lock-nut (1) securely.



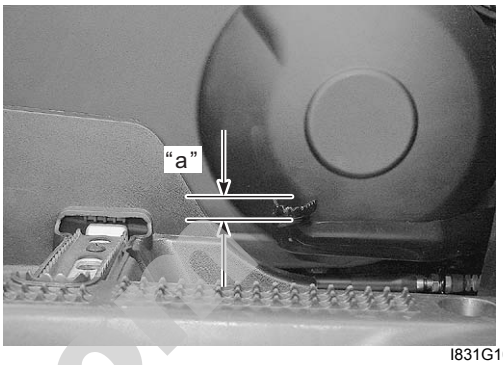
I831G1020052-02

Brake Pedal Free Travel

Inspection

Inspect and adjust the rear brake pedal free travel “a” as follows.

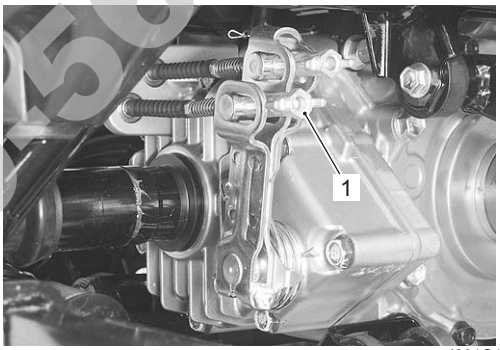
Rear brake pedal free travel “a”
20 – 30 mm (0.8 – 1.2 in)



I831G1020053-02

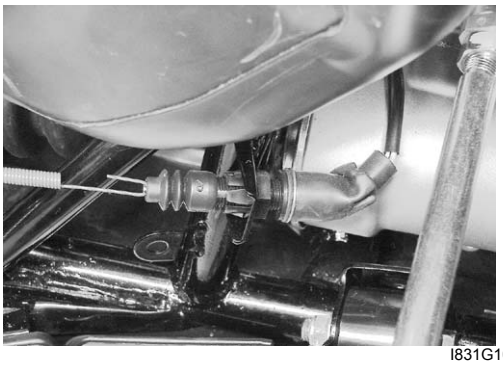
Adjustment

- Turn the adjuster nut (1) so the rear brake pedal has 20 – 30 mm (0.8 – 1.2 in) free travel at the rear brake pedal end before pressure is felt.



I831G1020054-01

- Adjust the rear brake light switch so that the brake light will come on just before pressure is felt when the brake pedal is depressed.

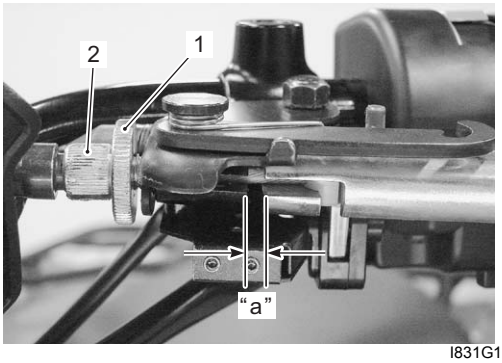


I831G1020090-01

Rear Brake (Parking Brake) Lever Play Adjustment

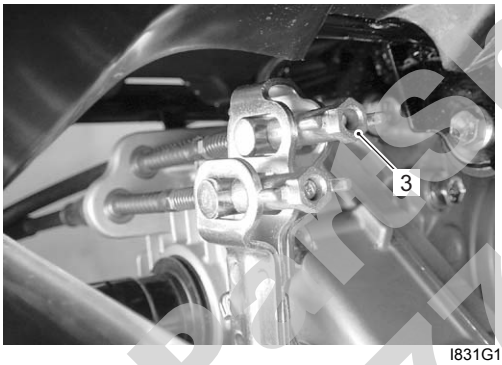
1) After adjusting the brake pedal, check the rear brake lever play “a” The brake lever play “a” as measured at the lever holder should be between 6 – 8 mm (0.2 – 0.3 in) when the lever is lightly pulled in towards the grip. If adjustment is necessary, slacken the cable by loosening the lock-nut (1) and screwing the cable adjuster (2) on the brake lever holder all the way in.

Rear brake lever play “a”
6 – 8 mm (0.2 – 0.3 in)



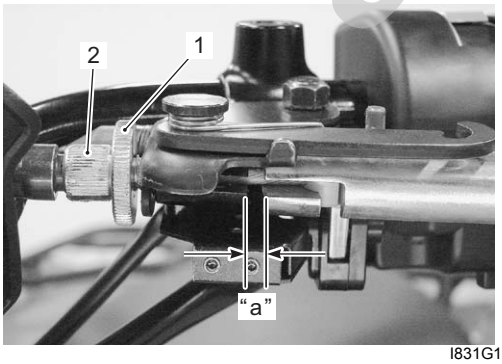
I831G1020093-01

2) Turn the adjust nut (3) so the rear brake lever has 6 – 8 mm (0.2 – 0.3 in) play “a” at the rear brake lever end before pressure is felt.



I831G1020057-03

3) Minor adjustment can be made with the adjuster (2).
4) Tighten the lock-nut (1).



I831G1020093-01

5) After adjusting the play, check that the rear wheels roll freely without applying the brake, the transmission in neutral and the rear wheels off the ground. Readjust the rear brake lever if the rear wheels could not roll freely.

Rear Brake Friction Plate Wear Limit Inspection

B931G20206020

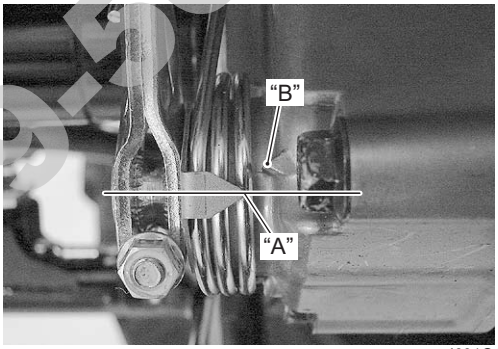
Replace rear brake friction plate
Every 10 000 km (6 000 miles)

After adjusted rear brake pedal and rear brake lever, inspect the rear brake friction plate wear limit.

- While fully applying the rear brake, check to see that the extension line of the index mark “A” is within the limit “B”. If the extension line is out of the limit “B”, replace the friction plates with new ones. Refer to “Rear Brake Disassembly and Assembly in Section 4C (Page 4C-3)”.

⚠ CAUTION

Replace the friction plate as a set, otherwise breaking performance will be adversely affected.



I831G1020049-02

Tire Inspection

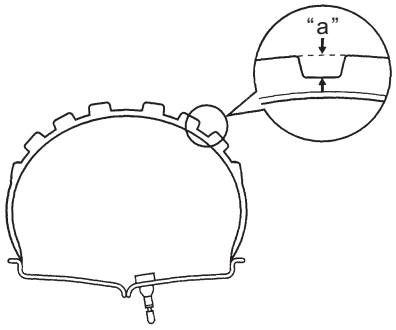
B931G20206021

Inspect tire
Every 1 000 km (600 miles, 3 months)

Tire Tread Condition
Operating the vehicle with excessively worn tires will decrease riding stability and consequently invite a dangerous situation. It is highly recommended to replace a tire when the remaining depth of tire tread reaches the following specification.

Special tool
TOOL : 09900–20805 (Tire depth gauge)

Tire tread depth "a" (Service limit)
Front: 4.0 mm (0.16 in)
Rear: 4.0 mm (0.16 in)



I831G1020084-01

Tire Pressure
If the tire pressure is too high or too low, steering will be adversely affected and tire wear increased. Therefore, maintain the correct tire pressure for good roadability or longer tire life will result. Cold inflation tire pressure is as follows.

Cold inflation tire pressure

	kPa	kgf/cm^2	psi
Front	35	0.35	5.1
Rear	30	0.30	4.4

Vehicle load capacity limit
172 kg (380 lbs)

⚠ CAUTION

To minimize the possibility of tire damage from over-inflation, we strongly recommended that a manual type air pump be used rather than a high pressure air compressor as found in service stations. When filling air into the tires, never exceed 70 kPa (0.7 kgf/cm^2, 10 psi)

⚠ CAUTION

The standard tire fitted on this vehicle is an AT25 x 8-12☆☆ for the front and a AT25 x 10-12☆☆ for the rear. The use of tires other than those specified may cause instability. It is highly recommended to use the specified tires.

Tire type
DUNLOP

- **Front: DUNLOP KT411**
- **Rear: DUNLOP KT415**

Steering System Inspection

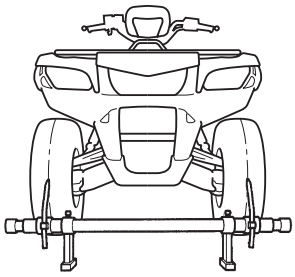
B931G20206022

Inspect steering system
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

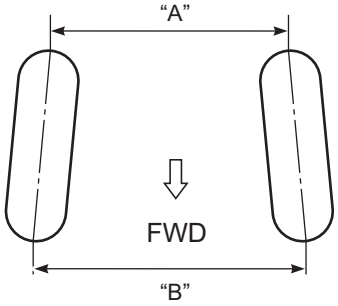
Steering should be adjusted properly for smooth turning of handlebars and safe running.

1) Place the vehicle on level ground.
2) Make sure the tire pressure for right and left tires in the same and set to the proper specification.
3) Set the front wheels in the straight position.
4) Place a load of 75 kg (165 lbs) on the seat.
5) Measure the distances ("A" and "B") between the front wheels. Subtract the measurement of "A" from that of "B" to find the toe-out. If the toe-out is not within specification, adjust the tie-rod to the right or left until the toe-out is within the specified range.

Toe-out ("B" – "A")
Standard: 10 ± 4 mm (0.39 ± 0.16 in)



I831G1020058-01



I831G1020059-04

If the toe-out is out of specification, bring it into the specified range. Refer to “Toe Adjustment (Page 0B-22)”.

Toe Adjustment

B931G20206023

Adjust the toe-out as follows:

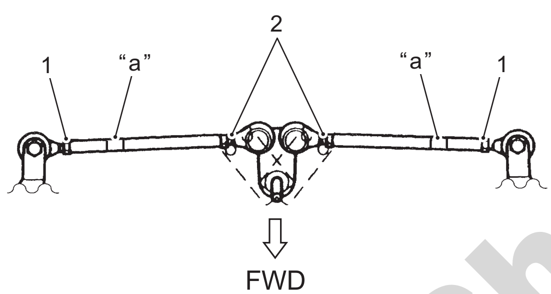
1) Loosen the lock-nuts (1), (2) on each tie-rod.

⚠ CAUTION

- **The lock-nuts (2) have left-hand threads.**
- **When loosening and tightening the lock-nuts, hold the tie-rod end with a open end wrench.**

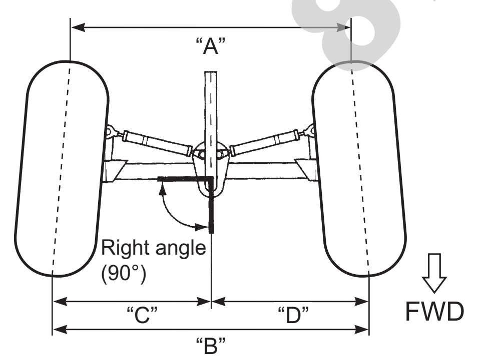
NOTE

Hold the concave part “a” of tie-rod with a wrench.



I831G1020087-03

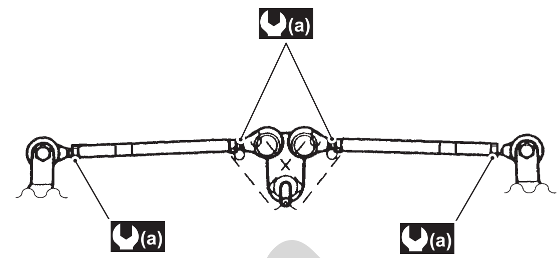
2) Temporarily tighten the four lock-nuts.
3) Check that the distances “C” and “D” are equal, as shown. If the distances are not equal, adjust the tie-rod to the right or left until the toe-out is within specification. Check the toe-out again by measuring distances “A” and “B”.
4) If the toe-out is not within specification, repeat the adjustment as above until the proper tor-out is obtained and distances “C” and “D” become equal.



I831G1020088-04

5) After adjustment has been made, tighten the four lock-nuts to the specified torque.

Tightening torque
Tie-rod lock-nut (a): 45 N·m (4.5 kgf-m, 32.5 lbf-ft)



I831G1020089-01

Suspensions Inspection

B931G20206024

<u>**Inspect suspension**</u>
Every 2 000 km (1 200 miles, 6 months)

1) Support the vehicle with a jack and wooden blocks.
2) Remove the front and rear wheels.
3) Inspect the suspension arm and bearing for scratches, wear, or damage. If any defects are found, replace them with new ones. Refer to “Front Shock Absorber Removal and Installation in Section 2B (Page 2B-3)”.
4) Inspect the front and rear shock absorbers for oil leakage or damage. If any defects are found, replace them with new ones. Refer to “Front Shock Absorber Removal and Installation in Section 2B (Page 2B-3)” and “Rear Shock Absorber Removal and Installation in Section 2C (Page 2C-3)”.

Chassis Bolt and Nut Inspection

B931G20206025

Tighten chassis bolt and nut

Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

Check that all chassis bolts and nuts are tightened to their specified torque.

Oil Pressure Check

B931G20206027

Refer to “Oil Pressure Check in Section 1E (Page 1E-2)”.

SDS Check

B931G20206028

Refer to “SDS Check in Section 1A (Page 1A-15)”.

Automatic Clutch Inspection

B931G20206029

This vehicle is equipped with a centrifugal type automatic clutch.
To insure proper performance and longevity of the clutch assemblies it is essential that the clutches engage smoothly and gradually. Before checking the initial engagement and clutch lock-up two inspection checks must be performed to thoroughly check the operation of the drive train.

Initial Engagement Inspection

1) Warm up the engine.
2) Connect the tachometer or the multi circuit tester onto the spark plug high-tension cord (1).

I831G1020086-01

3) Start the engine.
4) Shift the range lever to the “High” position.
5) Slowly open the throttle and note the engine speed (r/min) when the vehicle begins to move forward.

Special tool
(TOOL) : 09900–26006 (Engine tachometer (solar cell type))
(TOOL) : 09900–25008 (Multi-circuit tester set)

Engagement speed
1 500 – 2 000 r/min

6) Disconnect the tachometer and install the frame front cover.

Clutch “Lock-up” Inspection

Perform this inspection to determine if the clutch is engaging fully and not slipping.

1) Warn up the engine.
2) Connect a tachometer onto the spark plug high-tension code.
3) Start the engine.
4) Shift the range lever to the “High” position.
5) Apply the front and rear brakes as firm as possible.
6) Fully open the throttle fully and note the maximum engine speed sustained during the test cycle.

⚠ CAUTION

Do not apply full power for more than 5 seconds or damage to the clutch or engine may occur.

Lock-up r/min
3 500 – 4 000 r/min

If the lock-up speed (r/min) does not coincide with the standard range, inspect the following items for any abnormalities.
Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)”.

- Clutch shoe
- Clutch wheel
- Movable drive and driven face

Engine General Information and Diagnosis

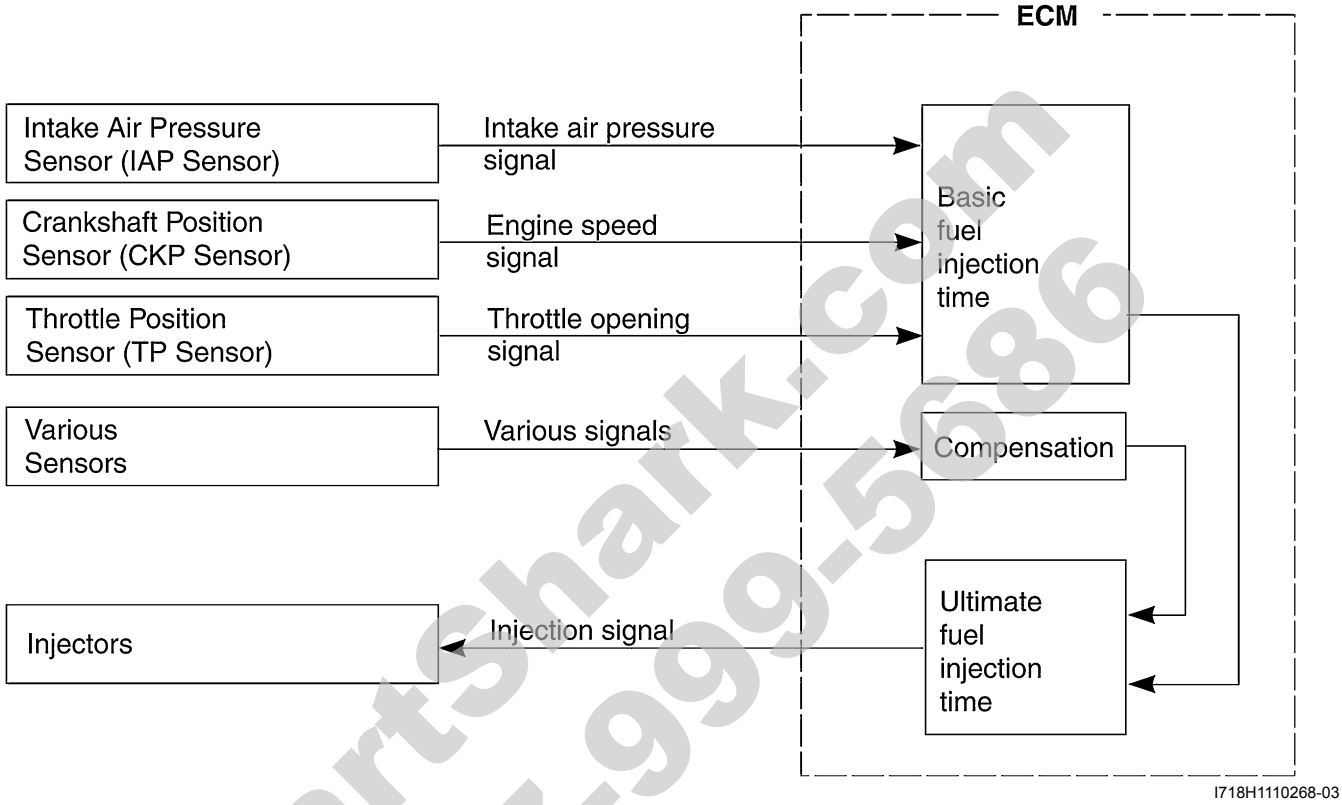
General Description

Injection Timing Description

B831G21101001

Injection Time (Injection Volume)

The factors to determine the injection time include the basic fuel injection time, which is calculated on the basis of the intake air pressure, engine speed and throttle opening angle, and various compensations. These compensations are determined according to the signals from various sensors that detect the engine and driving conditions.



I718H1110268-03

Compensation of Injection Time (Volume)
The following different signals are output from the respective sensors for compensation of the fuel injection time (volume).

Signal	Descriptions
ENGINE COOLANT TEMPERATURE SENSOR SIGNAL	When engine coolant temperature is low, injection time (volume) is increased.
INTAKE AIR TEMPERATURE SENSOR SIGNAL	When intake air temperature is low, injection time (volume) is increased.
BATTERY VOLTAGE SIGNAL	ECM operates on the battery voltage and at the same time, it monitors the voltage signal for compensation of the fuel injection time (volume). A longer injection time is needed to adjust injection volume in the case of low voltage.
ENGINE RPM SIGNAL	At high speed, the injection time (volume) is increased.
STARTING SIGNAL	When starting engine, additional fuel is injected during cranking engine.
ACCELERATION SIGNAL/ DECELERATION SIGNAL	During acceleration, the fuel injection time (volume) is increased in accordance with the throttle opening speed and engine rpm. During deceleration, the fuel injection time (volume) is decreased.

Injection Stop Control

Signal	Descriptions
TIP-OVER SENSOR SIGNAL (FUEL SHUT-OFF)	When the vehicle tips over, the tip-over sensor sends a signal to the ECM. Then, this signal cuts OFF current supplied to the fuel pump, fuel injectors and ignition coils.
OVER-REV. LIMITER SIGNAL	The fuel injector stops operation when engine rpm reaches rev. limit rpm.

Self-Diagnosis Function
The self-diagnosis function is incorporated in the ECM. The function has two modes, “User mode” and “Dealer mode”. The user can only be notified by the LCD (DISPLAY) panel and LED (FI indicator light). To check the function of the individual FI system devices, the dealer mode is prepared. In this check, the special tool is necessary to read the code of the malfunction items.

User Mode

Malfunction		LCD (display) indication “A”	FI indicator light indication “B”	Indication mode
“NO”		Clock/Hour meter *1	—	—
“YES”	Engine can start	Clock/Hour meter (*1) and “FI” letters *2	FI indicator light turns ON.	Each 2 sec. Odometer (*1) and “FI” is indicated alternately.
	Engine can not start	“FI” letters *3	FI indicator light turns ON and blinks.	“FI” is indicated continuously.

***1**
Current letter displayed any one of the clock/hour meter.
***2**
When one of the signals is not received by ECM, the fail-safe circuit works and injection is not stopped. In this case, “FI” and clock/hour meter (*1) are indicated in the LCD panel and vehicle can run.
***3**
The injection signal is stopped, when the crankshaft position sensor signal, tip-over sensor signal, ignition signal, injector signal, fuel pump relay signal or ignition switch signal is not sent to ECM. In this case, “FI” is indicated in the LCD panel. Vehicle does not run.

“CHEC”:
The LCD panel indications “CHEC” when no communication signal from the ECM is received for 3 seconds.
For Example:
The ignition switch is turned ON, and the engine stop switch is turned OFF. In this case, the speedometer does not receive any signal form ECM, and the panel indicates “CHEC”.

If “CHEC” is indicated, the LCD does not indicate the trouble code. It is necessary to check the wiring harness between ECM and speedometer couplers.
The possible cause of this indication is as follows;
Engine stop switch is in OFF position. Ignition fuse is burnt.

NOTE

The FI light turns ON 2 seconds after the ignition switch turns ON.

Dealer Mode
The defective function is memorized in the computer. Use the special tool’s coupler to connect to the mode select switch. The memorized malfunction code is displayed on LCD (DISPLAY) panel. Malfunction means that the ECM does not receive signal from the devices. These affected devices are indicated in the code form.

⚠ CAUTION

Before checking the malfunction code, do not disconnect the ECM coupler.
If the coupler form the ECM is disconnected, the malfunction code memory is erased and the malfunction code can not be checked.

Use of Mode Select Switch

NOTE

- **Do not disconnect coupler from ECM, the battery cable from the battery, ECM ground wire harness from the engine or main fuse before confirming DTC (Diagnostic Trouble Code) stored in memory. Such disconnection will erase memorized information in ECM memory.**
- **DTC stored in ECM memory can be checked by the special tool.**
- **Before checking DTC, read self-diagnosis function "User mode and dealer mode" (Refer to "Self-Diagnostic Procedures (Page 1A-11)".) carefully to have good understanding as to what functions are available and how to use it.**
- **Be sure to read "Precautions for Electrical Circuit Service" (Refer to "Precautions for Electrical Circuit Service in Section 00 (Page 00-2)".) before inspection and observe what is written there.**

1) Remove the seat. Refer to "Seat Removal and Installation in Section 9D (Page 9D-11)".
2) Connect the special tool to the mode select switch at the wiring harness.

Special tool

6) After repairing the trouble, turn OFF the ignition switch and turn ON again. If DTC is indicated (C00), the malfunction is cleared.

NOTE

- **Even though DTC (C00) is indicated, the previous malfunction history DTC still remains stored in the ECM. Therefore, erase the history DTC memorized in the ECM using SDS.**
- **DTC is memorized in the ECM also when the wire coupler of any sensor is disconnected. Therefore, when a wire coupler has been disconnected at the time of diagnosis, erase the stored history DTC using SDS. Refer to "Use of SDS Diagnosis Reset Procedures (Page 1A-13)".**

7) Turn the ignition switch OFF and disconnect the special tool from the mode select switch.
8) Reinstall the seat.

Use of SDS

NOTE

- **Do not disconnect the coupler from ECM, the battery cable from the battery, ECM ground wire harness from the engine or main fuse before confirming DTC (Diagnostic Trouble Code) stored in memory. Such disconnection will erase the memorized information in ECM memory.**
- **DTC stored in ECM memory can be checked by the SDS.**
- **Be sure to read "Precautions for Electrical Circuit Service in Section 00 (Page 00-2)" before inspection and observe what is written there.**

1) Remove the seat. Refer to "Seat Removal and Installation in Section 9D (Page 9D-11)".
2) Set up the SDS tools. (Refer to the SDS operation manual for further details.)

4) Start the engine or crank the engine for more than 4 seconds.
5) Check the DTC to determine the malfunction part. Refer to “DTC Table (Page 1A-19)”.

NOTE

- **Read the DTC (Diagnostic Trouble Code) and show data when trouble (displaying data at the time of DTC) according to instructions displayed on SDS.**
- **Not only SDS is used for detecting Diagnostic Trouble Codes but also for reproducing and checking on screen the failure condition as described by customers using the trigger. (Refer to “Show Data When Trouble (Displaying Data at the Time of DTC) (Page 1A-14)”.)**
- **How to use trigger. (Refer to the SDS operation manual for further details.)**

6) After repairing the trouble, clear to delete history code (Past DTC). Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.
7) Close the SDS tool and turn the ignition switch OFF.
8) Disconnect the SDS tool and install the right frame cover.

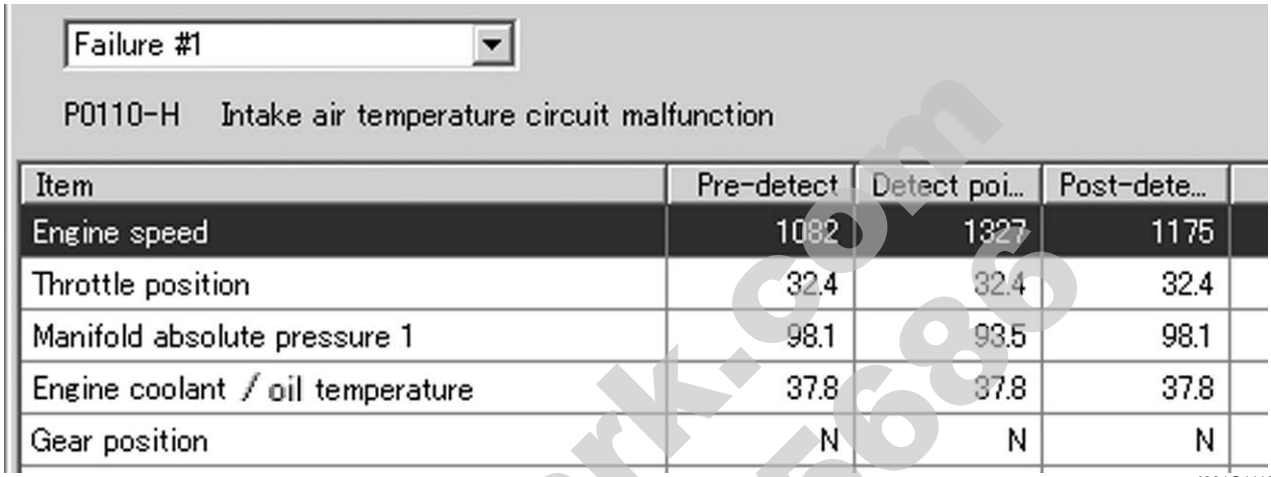
Show Data When Trouble (Displaying Data at the Time of DTC)

B831G21104004

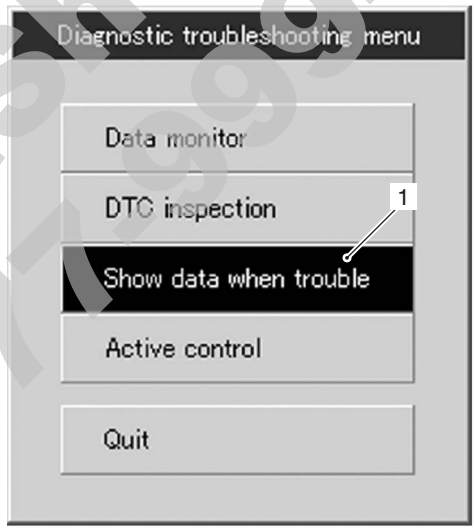
Use of SDS

ECM stores the engine and driving conditions (in the form of data as shown in the figure) at the moment of the detection of a malfunction in its memory. This data is called “Show data when trouble”.
Therefore, it is possible to know engine and driving conditions (e.g., whether the engine was warm or not, where the motorcycle was running or stopped) when a malfunction was detected by checking the show data when trouble. This show data when trouble function can record the maximum of two Diagnostic Trouble Codes in the ECM.
Also, ECM has a function to store each show data when trouble for two different malfunctions in the order of occurrence as the malfunction is detected. Utilizing this function, it is possible to know the order of malfunctions that have been detected. Its use is helpful when rechecking or diagnosing a trouble.



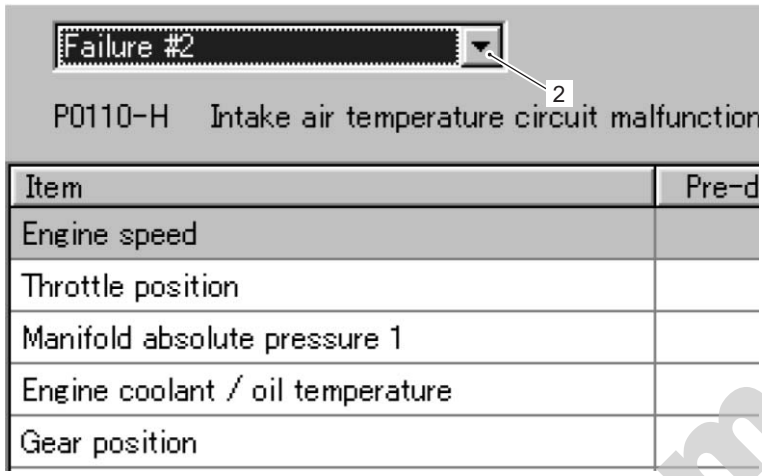
I831G1110016-02

1) Click “Show data when trouble” (1) to display the data.



I718H1110269-02

2) Click the drop down button (2), either “Failure #1” or “Failure #2” can be selected.



I831G1110017-01

SDS Check

B831G21104005

Using SDS, sample the data at the time of new and periodic vehicle inspections.
After saving the sampled data in the computer, file them by model and by user.
The periodically filed data help improve the accuracy of troubleshooting since they can indicate the condition of vehicle functions that has changed with time.
For example, when a vehicle is brought in for service but the troubleshooting of a failure is not easy, comparing the current data value to past filed data value at time of normal condition can allow the specific engine failure to be determined.
Also, in the case of a customer vehicle which is not periodically brought in for service with no past data value having been saved, if the data value of a good vehicle condition have been already saved as a master (STD), comparison between the same models helps to facilitate the troubleshooting.

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Set up the SDS tool. (Refer to the SDS operation manual for further details.)

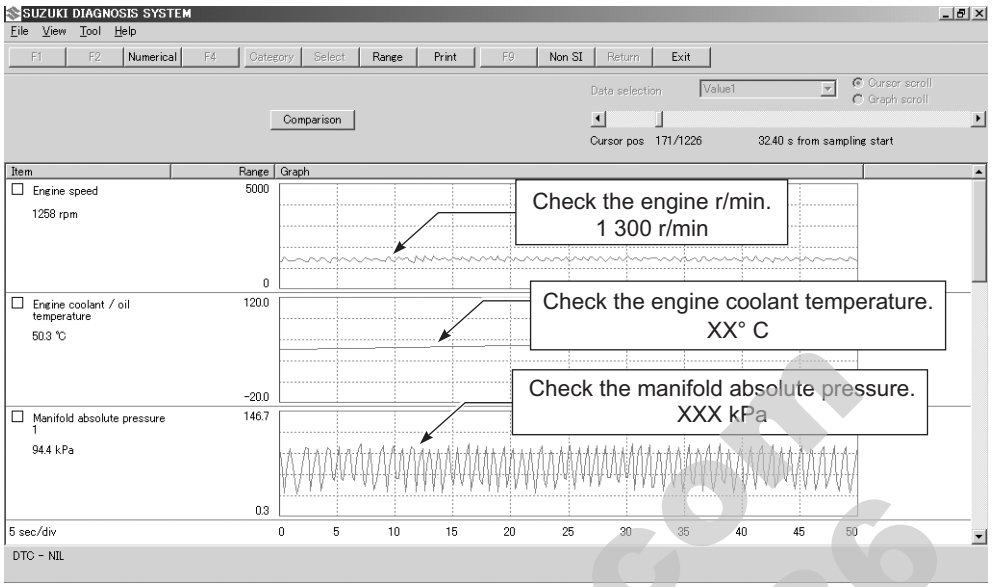
Special tool
(TOOL) : 09904–41010 (SDS set)
(TOOL) : 99565–01010–013 (CD-ROM Ver.13)

NOTE

- **Before taking the sample of data, check and clear the Past DTC.**
- **A number of different data under a fixed condition as shown below should be saved or filed as sample.**

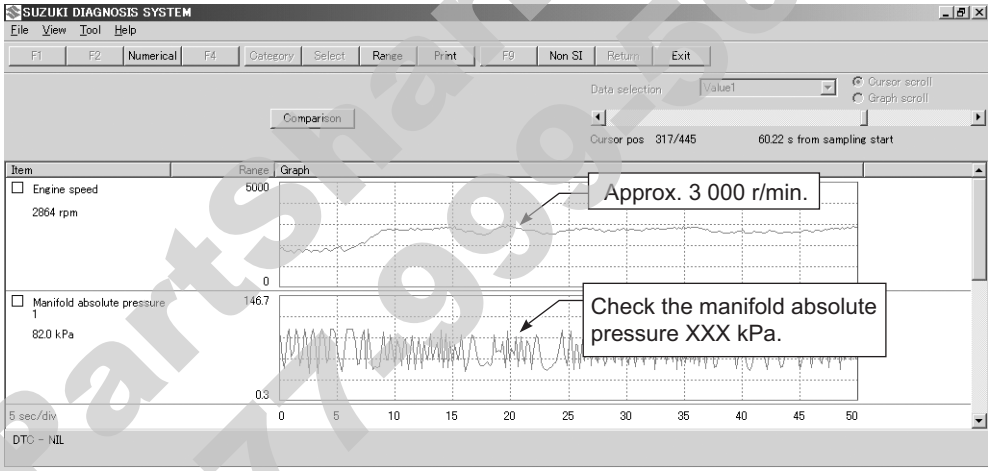
Sample

Data sampled from cold starting through warm-up



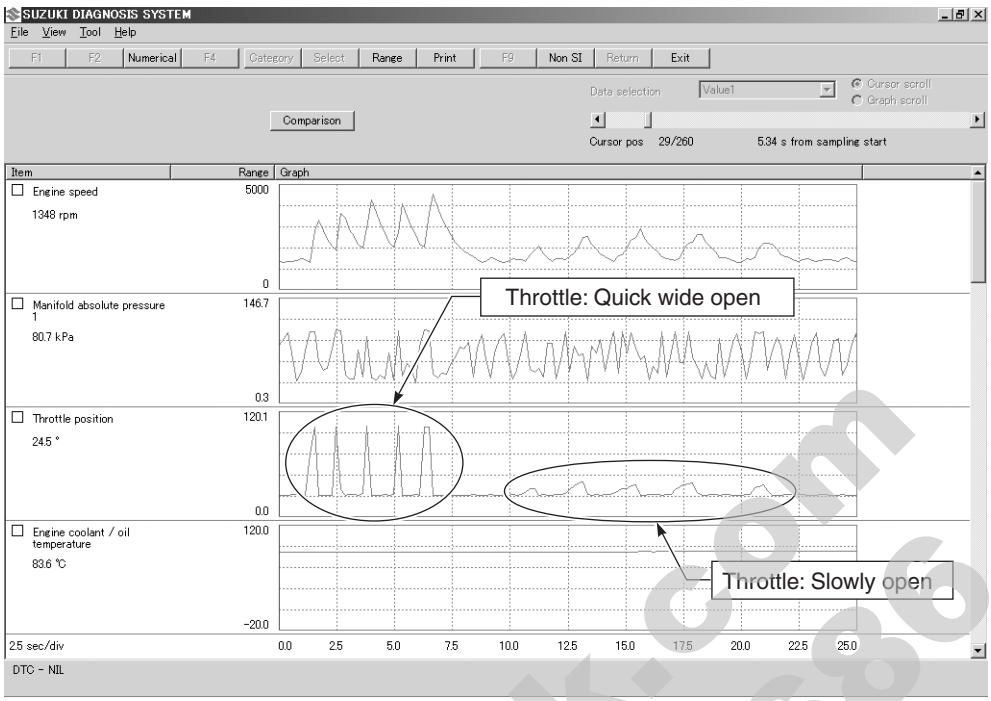
I831G1110009-03

Data at 3 000 r/min under no load



I831G1110010-04

Data at the time of racing



I831G1110011-01

Example of Trouble

Three data; value 1 (current data 1), value 2 (past data 2) and value 3 (past data 3); can be made in comparison by showing them in the graph. Read the change of value by comparing the current data to the past data that have been saved under the same condition, then you may determine how changes have occurred with the passing of time and identify what problem is currently occurring.

NOTE

With DTC not output, if the value of engine coolant temperature is found to be lower than the data saved previously, the possible cause may probably lie in a sensor circuit opened, ground circuit opened or influence of internal resistance value changes, etc.

C41 (P0230-H/L) ☞(Page 1A-59)	Fuel pump control system (FP relay)	Fuel pump, Fuel pump relay

In the LCD (DISPLAY) panel, the malfunction code is indicated from small code to large code.
*1
To get the proper signal from the throttle position sensor, the sensor basic position is indicated in the LCD (DISPLAY) panel. The malfunction code is indicated in three digits. In front of three digits, a line appears in any of the position, upper, middle or lower line. If the indication is upper or lower line when engine rpm is 1 300 rpm, slightly turn the throttle position sensor and bring the line to middle.
In the normal condition, the throttle valve stop screw pushes throttle valves slightly, and indication point is middle line.

Fail-Safe Function Table

B831G21104007

FI system is provided with fail-safe function to allow the engine to start and the motorcycle to run in a minimum performance necessary even under malfunction condition.

Item	Fail-Safe Mode	Starting Ability	Running Ability
IAP sensor	Intake air pressure is fixed to 101 kPa (760 mmHg).	“YES”	“YES”
TP sensor	The throttle opening is fixed to full open position. Ignition timing is also fixed.	“YES”	“YES”
ECT sensor	Engine coolant temperature value is fixed to 80 °C (176 °F).	“YES”	“YES”
IAT sensor	Intake air temperature value is fixed to 40 °C (104 °F).	“YES”	“YES”
Diff-lock relay	Differential position signal is fixed to neutral gear.	“YES”	“YES”

The engine can start and can run even if the above signal is not received from each sensor. But, the engine running condition is not complete, providing only emergency help (by fail-safe circuit). In this case, it is necessary to bring the vehicle to the workshop for complete repair.

Visual Inspection

Prior to diagnosis using the mode select switch or SDS, perform the following visual inspections. The reason for visual inspection is that mechanical failures (such as oil leakage) cannot be displayed on the screen with the use of mode select switch or SDS.

- Engine oil level and leakage. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
- Engine coolant level and leakage. Refer to “Cooling Circuit Inspection in Section 1F (Page 1F-4)”.
- Fuel level and leakage. Refer to “Fuel Line Inspection in Section 0B (Page 0B-10)”.
- Clogged air cleaner element. Refer to “Air Cleaner Element Inspection and Cleaning in Section 0B (Page 0B-3)”.
- Battery condition.
- Throttle cable play. Refer to “Throttle Cable Play Inspection and Adjustment in Section 0B (Page 0B-15)”.
- Vacuum hose looseness, bend and disconnection.
- Broken fuse.
- FI light operation. Refer to “Combination Meter Inspection in Section 9C (Page 9C-4)”.
- Each indicator light operation. Refer to “Combination Meter Inspection in Section 9C (Page 9C-4)”.
- Speedometer operation. Refer to “Speedometer Inspection in Section 9C (Page 9C-6)”.
- Exhaust gas leakage and noise. Refer to “Exhaust System Inspection in Section 1K (Page 1K-3)”.
- Each coupler disconnection.
- Clogged radiator fins. Refer to “Radiator Inspection and Cleaning in Section 1F (Page 1F-5)”.

	L		Sensor voltage is lower than specified value.	IAP sensor circuit open or shorted to the ground or VCC circuit open.
C14		TP sensor	The sensor should produce following voltage. 0.2 V ≤ sensor voltage < 4.8 V In other than the above range, C14 (P0120) is indicated.	TP sensor, lead wire/coupler connection.
P0120	H		Sensor voltage is higher than specified value.	TP sensor circuit shorted to VCC or ground circuit open.
	L		Sensor voltage is lower than specified value.	TP sensor circuit open or shorted to the ground or VCC circuit open.
C15		ECT sensor	The sensor voltage should be the following. 0.15 V ≤ sensor voltage < 4.85 V In other than the above range, C15 (P0115) is indicated.	ECT sensor, lead wire/coupler connection.
P0115	H		Sensor voltage is higher than specified value.	ECT sensor circuit open or ground circuit open.
	L		Sensor voltage is lower than specified value.	ECT sensor circuit shorted to the ground.
C20 P1752		Diff-lock relay	No voltage is applied to 4WD/diff-lock actuator, although ignition switch is turned ON, or voltage is applied to 4WD/diff-lock actuator, although ignition switch is turned OFF. In this case, the code C20 (P1752) is indicated.	Diff-lock relay circuit open or shorted to ground.
C21		IAT sensor	The sensor voltage should be the following. 0.15 V ≤ sensor voltage < 4.85 V In other than the above range, C21 (P0110) is indicated.	IAT sensor, lead wire/coupler connection.
P0110	H		Sensor voltage is higher than specified value.	IAT sensor circuit open or ground circuit open.
	L		Sensor voltage is lower than specified value.	IAT sensor circuit shorted to the ground.
C23		TO sensor	The sensor voltage should be the following for 2 sec. and more, after ignition switch is turned ON. 0.2 V ≤ sensor voltage < 4.8 V In other than the above value, C23 (P1651) is indicated.	TO sensor, lead wire/coupler connection.
P1651	H		Sensor voltage is higher than specified value.	TO sensor circuit shorted to VCC or ground circuit open.
	L		Sensor voltage is lower than specified value.	TO sensor circuit open or shorted to the ground or VCC circuit open.

Malfunction Code		Detected Item	Detected Failure Condition	Check For
C24		Ignition signal	CKP sensor (pick-up coil) signal is produced, but signal from ignition coil is interrupted 8 times or more continuously. In this case, the code C24 (P0351) is indicated.	Ignition coil, wiring/coupler connection, power supply from the battery.
P0351				
C32		Fuel injector	CKP sensor (pick-up coil) signal is produced, but fuel injector signal is interrupted 4 times or more continuously. In this case, the code C32 (P0201) is indicated.	Fuel injector, wiring/coupler connection, power supply to the injector.
P0201				
C40		ISC valve	The circuit voltage of motor drive is unusual.	ISC valve circuit open or shorted to the ground. Power source circuit open.
P0505				
C41		Fuel pump relay	No voltage is applied to the fuel pump, although fuel pump relay is turned ON, or voltage is applied to fuel pump, although fuel pump relay is turned OFF.	Fuel pump relay, lead wire/ coupler connection, power source to the fuel pump relay and fuel injectors.
P0230	H		Voltage is applied to the injector and fuel pump relay is turned OFF.	Fuel pump relay switch circuit shorted to power source. Fuel pump relay (switch side).
	L		No voltage is applied to the injector and fuel pump relay is turned ON.	Fuel pump relay circuit open or short. Fuel pump relay (coil side).

DTC “C12” (P0335): CKP Sensor Circuit Malfunction

B831G21104010

Detected Condition and Possible Cause

Detected Condition	Possible Cause
The signal does not reach ECM for 3 sec. or more, after receiving the starter signal.	• Metal particles or foreign material being stuck on the CKP sensor and rotor tip. • CKP sensor circuit open or short. • CKP sensor malfunction. • ECM malfunction.

Troubleshooting

⚠ CAUTION

When using the multi-circuit tester, do not strongly touch the terminal of the ECM coupler with a needle pointed tester probe to prevent the terminal damage or terminal bend.

NOTE

After repairing the trouble, clear the DTC using SDS tool. Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.

Step	Action	Yes	No
1	1) Turn the ignition switch OFF. 2) Check the CKP sensor coupler for loose or poor contacts. If OK, then measure the CKP sensor resistance.  I831G1110020-02 3) Disconnect the CKP sensor coupler and measure the resistance. **Special tool** **(A): 09900–25008 (Multi-circuit tester set)** **Tester knob indication** **Resistance (Ω)** **CKP sensor resistance** **150 – 250 Ω (Bl – W)**  I831G1110007-01	Go to Step 2.	Replace the CKP sensor with a new one.

Step	Action	Yes	No
1	4) If OK, then check the continuity between each terminal and ground. **Special tool** **(A): 09900–25008 (Multi-circuit tester set)** **CKP sensor continuity** **∞ Ω (Infinity) (Bl – Ground, W – Ground)**  I831G1110021-01 *Are the resistance and continuity OK?*	Go to Step 2.	Replace the CKP sensor with a new one.
2	1) Crank the engine several seconds with the starter motor, and measure the CKP sensor peak voltage at the coupler. **Special tool** **(A): 09900–25008 (Multi-circuit tester set)** **Tester knob indication** **Voltage (⎓)** **CKP sensor peak voltage** **5.0 V and more** **((+) terminal: Bl – (–) terminal: W)**  I831G1110022-01 2) Repeat the above test procedure a few times and measure the highest peak voltage. *Is the voltage OK?*	• Bl or W wire open or shorted to the ground, or poor “9” or “18” connection. • If wire and connection are OK, intermittent trouble or faulty ECM. • Recheck each terminal and wire harness for open circuit and poor connection. • Replace the ECM with a known good one, and inspect it again. Refer to “ECM Removal and Installation in Section 1C (Page 1C-1)”.	• Inspect that metal particles or foreign material stuck on the CKP sensor and rotor tip. • If there are no metal particles and foreign material, then replace the CKP sensor with a new one. Refer to “CKP Sensor Removal and Installation in Section 1C (Page 1C-1)”.

DTC “C13” (P0105-H/L): IAP Sensor Circuit Malfunction

B831G21104011

Detected Condition and Possible Cause

Detected Condition			Possible Cause
C13		IAP sensor voltage is not within the following range. 0.5 V < Sensor voltage ≤ 4.85 V **NOTE** **Note that atmospheric pressure varies depending on weather conditions as well as altitude. Take that into consideration when inspecting voltage.**	• Clogged vacuum passage between throttle body and IAP sensor. • Air being drawn from vacuum passage between throttle body and IAP sensor. • IAP sensor circuit open or shorted to the ground. • IAP sensor malfunction. • ECM malfunction.
P0105	H	Sensor voltage is higher than specified value.	• IAP sensor circuit is open or shorted to VCC or ground circuit open.
	L	Sensor voltage is lower than specified value.	• IAP sensor circuit is shorted to the ground or VCC circuit open.

Troubleshooting

⚠ CAUTION

When using the multi-circuit tester, do not strongly touch the terminal of the ECM coupler with a needle pointed tester probe to prevent the terminal damage or terminal bend.

NOTE

After repairing the trouble, clear the DTC using SDS tool. Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.

Step	Action	Yes	No
1	1) Remove the rear fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.  I831G1110049-01 2) Connect the disconnected couplers and battery. 3) Turn the ignition switch OFF. 4) Check the diff-lock relay coupler for loose or poor contacts. If OK, then check the diff-lock relay insulation and continuity. Refer to “2WD/4WD/Diff-lock System Inspection in Section 3B (Page 3B-17)”. *Is the diff-lock relay OK?*	• Inspect the 4WD/diff-lock switch. • Y/B wire open or shorted to ground, or poor “21” connection. • If wire and connection are OK, intermittent trouble or faulty ECM. • Recheck each terminal and wire harness for open circuit and poor connection. • Replace the ECM with a known good one, and inspect it again.	Replace the diff-lock relay with a new one.

DTC “C21” (P0110-H/L): IAT Sensor Circuit Malfunction

B831G21104015

Detected Condition and Possible Cause

Detected Condition			Possible Cause
C21		Output voltage is not with in the following range. 0.15 V ≤ Sensor voltage < 4.85 V	• IAT sensor circuit open or short. • IAT sensor malfunction. • ECM malfunction.
P0110	H	Sensor voltage is higher than specified value.	• IAT sensor circuit open or ground circuit open.
	L	Sensor voltage is lower than specified value.	• IAT sensor circuit shorted to the ground.

Troubleshooting

⚠ CAUTION

When using the multi-circuit tester, do not strongly touch the terminal of the ECM coupler with a needle pointed tester probe to prevent the terminal damage or terminal bend.

NOTE

- **After repairing the trouble, clear the DTC using SDS tool. Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.**
- **Injector voltage can be detected only for 3 seconds after ignition switch is turned ON.**

Step	Action	Yes	No
1	1) Remove the side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”. 2) Turn the ignition switch OFF. 3) Check the injector coupler for loose or poor contacts. If OK, then measure the injector resistance.  I831G1110087-01 4) Disconnect the injector coupler and measure the resistance between terminals. **Special tool** **(A): 09900–25008 (Multi-circuit tester set)** **Tester knob indication** **Resistance (Ω)** **Injector resistance** **Approx. 11 – 13 Ω at 20 °C (68 °F)** **(Terminal – Terminal)**  I831G1110088-01	Go to Step 2.	Replace the injector with a new one. Refer to “Throttle Body Disassembly and Assembly in Section 1D (Page 1D-10)”.

Step	Action	Yes	No

2	1) Turn the ignition switch ON. 2) Measure the injector voltage between Y/R wire and ground. **Special tool** **TOOL (A): 09900–25008 (Multi-circuit tester set)** **Tester knob indication** **Voltage (⎓)** **Injector voltage** **Battery voltage** **((+) terminal: Y/R – (–) terminal: Ground)**  I831G1110061-02 *Is the voltage OK?*	• Gr/W or Y/R wire open or shorted to ground, or poor "2" or "20" connection. • If wire and connection are OK, intermittent trouble or faulty ECM. • Recheck each terminal and poor connection. • Replace the ECM with a known good one, and inspect it again.	Open circuit in the Y/R wire.

DTC “C40” (P05057): ISC Valve Circuit Malfunction

B831G21104019

Detected Condition and Possible Cause

Detected Condition	Possible Cause
No voltage is applied to ISC valve motor, although ignition switch is turned ON, or voltage is applied to ISC valve motor, although ignition switch is turned OFF.	• ISC valve circuit open or shorted to the ground. • ISC valve malfunction. • ECM malfunction.

I831G1110019-01

Troubleshooting

⚠ CAUTION

- **Be careful not to disconnect at lease 3 seconds after ignition switch is turned to OFF. If the ECM coupler is disconnected within 3 seconds after ignition switch is turned to OFF, there is a possibility of an usual valve being written in ECM and causing an error of ISC valve operation.**
- **When using the multi-circuit tester, do not strongly touch the terminal of the ECM coupler with a needle pointed tester probe to prevent the terminal damage or terminal bend.**

NOTE

After repairing the trouble, clear the DTC using SDS tool. Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.

Step	Action	Yes	No
1	1) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”. 2) Turn the ignition switch OFF. 3) Check the ISC valve coupler for loose or poor contacts. If OK, then check the ISC valve lead wire continuity.  I831G1110063-01 4) Disconnect the ISC valve coupler. 5) Check the continuity between terminals “A” and “34”, terminals “B” and “4”, terminals “C” and “17”, terminals “D” and “33”, terminals “E” and “4” and terminals “F” and “16”. **Special tool** **TOOL (A): 09900–25008 (Multi-circuit tester set)** **Tester knob indication** **Continuity test (•)))** **ECM coupler (Harness side)**  I831G1110064-02  I831G1110065-02 *Is the continuity OK?*	Go to Step 2. Replace the ISC valve with a new one.

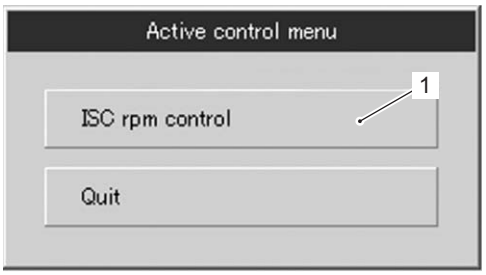
ACTIVE CONTROL INSPECTION (ISC RPM CONTROL)

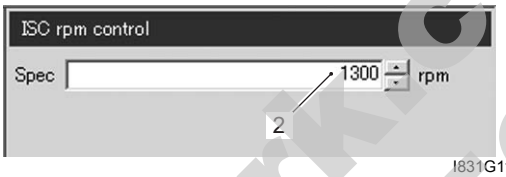
Check 1

1) Set up the SDS tool. (Refer to the SDS operation manual for further details.)
2) Check that the engine is running.
3) Click the “Active control”.
4) Click the “ISC rpm control” (1).



I831G1110070-02

5) Check that the “Spec” (2) is idle speed 1 300 ± 100 rpm.
6) Check that the “Desired idle speed” (3) is within the specified idle rpm.

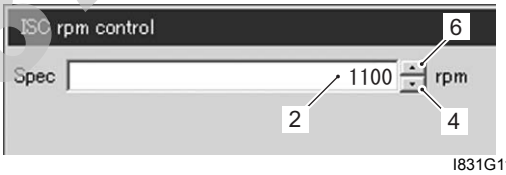


I831G1110068-02

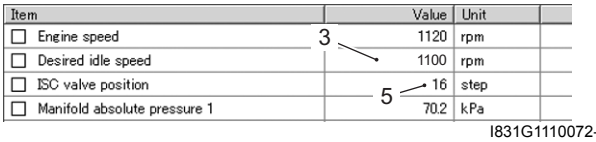
I831G1110069-02

Check 2

1) Click the button (4) and decrease the “Spec” (2) to 1 100 rpm slowly.
2) Check that the “Desired idle speed” (3) is nearly equal to the “Spec” (2). At the same time, check that the number of steps (5) in the ISC valve position decreases.
3) Click the button (6) and increase the “Spec” (2) slowly.
4) Check that the “Desired idle speed” (3) is nearly equal to the “Spec” (2). Also, check that the number of steps (5) in the ISC valve position increases.



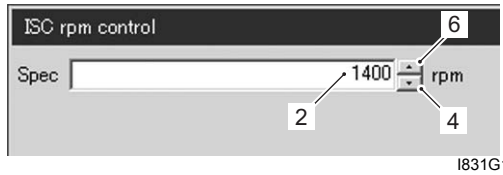
I831G1110071-05



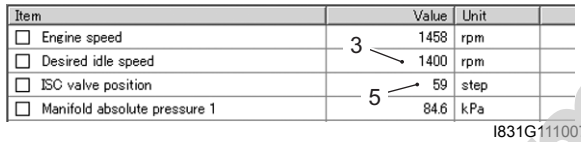
I831G1110072-02

Check 3

1) Click the button (6) and increase the “Spec” (2) to 1 400 rpm slowly.
2) Check that the “Desired idle speed” (3) is nearly equal to the “Spec” (2). Also, check that the number of steps (5) in the ISC valve position increases.



I831G1110073-01



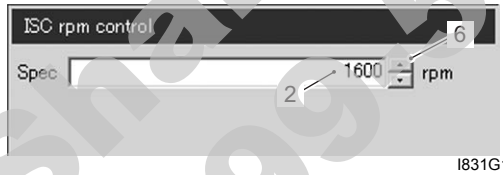
I831G1110074-01

Check 4

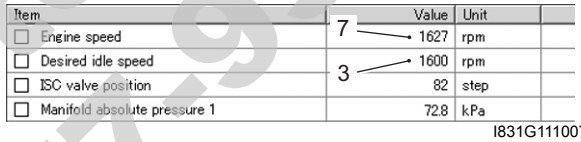
1) Click the button (6) and increase the “Spec” (2) to 1 600 rpm.
2) Check that the “Desired idle speed” (3) is approx. 1 600 rpm.
3) Check that the “Engine speed” (7) is close to 1 600 rpm.

NOTE

Be careful not to increase the “Spec” to 1 650 rpm, or the “Engine speed” may reach the upper limit.



I831G1110076-01



I831G1110075-01

If the ISC valve does not function properly, replace the ISC valve or inspect the ISC valve. Refer to “Throttle Body Disassembly and Assembly in Section 1D (Page 1D-10)”.

DTC “C41” (P230-H/L): FP Relay Circuit Malfunction

B831G21104020

Detected Condition and Possible Cause

Detected Condition			Possible Cause
C41		No voltage is applied to fuel pump although fuel pump relay is turned ON, or voltage is applied to fuel pump, although fuel pump relay is turned OFF.	• Fuel pump relay circuit open or short. • Fuel pump relay malfunction. • ECM malfunction.
P0230	H	Voltage is applied to fuel pump although fuel pump relay is turned OFF.	• Fuel pump relay switch circuit shorted to power source. • Faulty fuel pump relay (switch side).
	L	No voltage is applied to fuel pump although fuel pump relay is turned ON.	• Fuel pump relay coil circuit open or short. • Faulty fuel pump relay (coil side).

NOTE

After repairing the trouble, clear the DTC using SDS tool. Refer to “Use of SDS Diagnosis Reset Procedures (Page 1A-13)”.

C41 (Use of mode select switch)

Step	Action	Yes	No
1	1) Remove the seat. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”. 2) Turn the ignition switch to OFF. 3) Check the FP relay coupler for loose or poor contacts. If OK, then check the FP relay. Refer to “Fuel Pump Relay Inspection in Section 1G (Page 1G-7)”. *Is the FP relay OK?*	• Y/Bl or O/W wire open or shorted to ground, or poor “19” connection. • Y/R or R/B wire open or shorted to ground, or poor “20” connection. • If wire and connection are OK, intermittent trouble or faulty ECM. • Recheck each terminal and wire harness for open circuit poor connection. • Replace the ECM with a known good one, and inspect it again. Refer to “ECM Removal and Installation in Section 1C (Page 1C-1)”.	Replace the FP relay with a new one.

P0230-H (Use of SDS)

Step	Action	Yes	No
1	1) Remove the seat. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”. 2) Turn the ignition switch to OFF. 3) Check the FP relay coupler for loose or poor contacts. If OK, then check the FP relay. Refer to “Fuel Pump Relay Inspection in Section 1G (Page 1G-7)”.  I831G1110078-01 *Is the FP relay OK?*	• Y/R wire shorted to power source. • Y/Bl wire shorted to ground. • If wire and connection are OK, intermittent trouble or faulty ECM. • Recheck each terminal and wire harness for open circuit and poor connection. • Replace the ECM with a known good one, and inspect it again.	Replace the FP relay with a new one.

P0230-L (Use of SDS)

Step	Action	Yes	No
1	1) Turn the ignition switch to OFF. 2) Remove the seat. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”. 3) Check the FP relay coupler for loose or poor contacts. If OK, then check the FP relay. Inspect the PCV hose in the following procedures:

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Inspect the PCV hose (1) for wear or damage. If it is worn or damaged, replace the PCV hose with a new one.
   Check that the PCV hose (1) is securely connected.

Removal

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
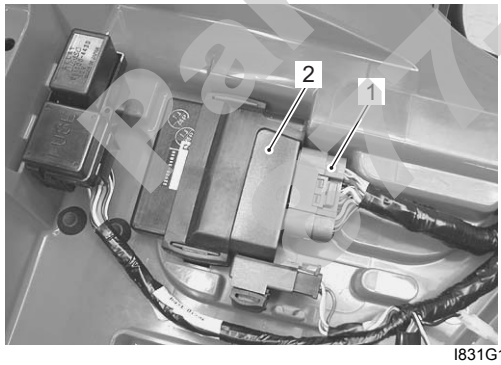
2) Remove the battery (–) lead wire.
3) Disconnect the ECM coupler (1) and remove the ECM (2).



I831G1130001-02

Installation

NOTE

When replacing the ECM, turn the ignition switch ON and OFF.

Install the ECM in the reverse order of removal.

CKP Sensor Inspection

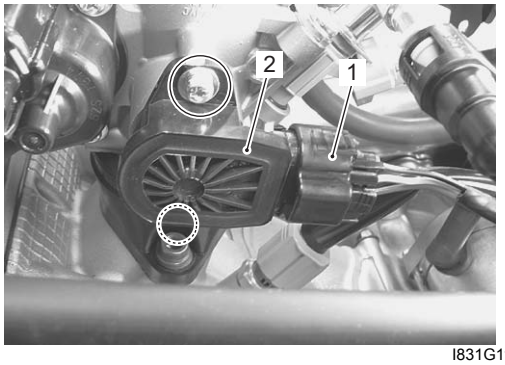
NOTE

Prior to disassembly, mark sensor original position with a paint or scribe for accurate reinstallation.

1) Remove the air cleaner box. Refer to “Air Cleaner Box Removal and Installation in Section 1D (Page 1D-5)”.
2) Disconnect the TP sensor coupler (1) and remove the TP sensor (2).



I831G1130004-01

Installation

NOTE

When replacing the TP sensor, turn the ignition switch ON and OFF.

Install the TP sensor in the reverse order of removal. Pay attention to the following points:

- Apply a thin coat of engine oil to the O-ring.
- Install the TP sensor (1) and tighten the TP sensor mounting screw to the specified torque.

NOTE

- **Align the throttle shaft end “A” with the groove “B” of TP sensor.**
- **Apply grease to the throttle shaft end “A” if necessary.**

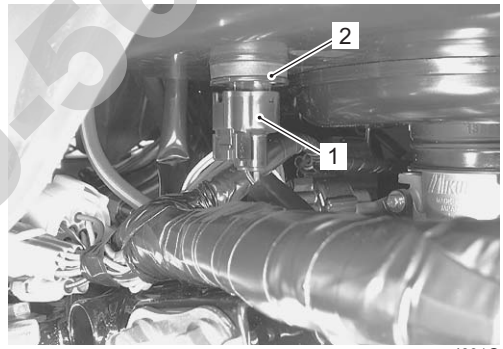
IAT Sensor Removal and Installation

B831G21306010

Removal

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Disconnect the coupler (1) and remove the IAT sensor (2).



I831G1130009-01

Installation

Install the IAT sensor in the reverse order of removal.

ECT Sensor Removal and Installation

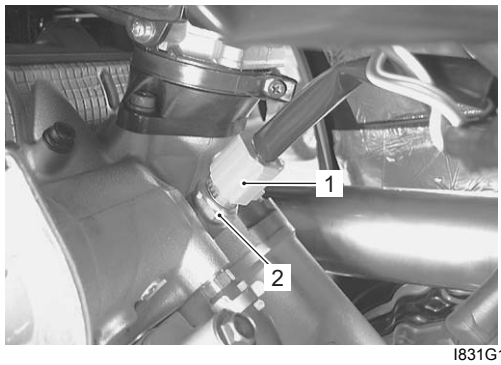
B831G21306011

Removal

1) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
2) Disconnect the coupler (1) and remove the ECT sensor (2).

⚠ CAUTION

Take special care when handling the ECT sensor. It may cause damage if it gets an excessive impact.



I831G1130010-01

Installation

Install the ECT sensor in the reverse order of removal.
Pay attention to the following points:

- Tighten the ECT sensor to the specified torque.

⚠ CAUTION

Use the new gasket washer (1) to prevent engine coolant leakage.

Tightening torque

ECT Sensor Inspection

B831G21306012

Refer to “DTC “C15” (P0115-H/L): ECT Sensor Circuit Malfunction in Section 1A (Page 1A-41)”.
Inspect the ECT sensor in the following procedures:

1) Remove the ECT sensor. Refer to “ECT Sensor Removal and Installation (Page 1C-4)”.
2) Connect the ECT sensor (1) to a circuit tester and place it in the oil (2) contained in a pan, which is placed on a stove.
3) Heat the oil to raise its temperature slowly and read the column thermometer (3) and the ohmmeter.
If the ECT sensor ohmic valve does not change in the proportion indicated, replace it with a new one.

⚠ CAUTION

Do not contact the ECT sensor and the column thermometer with a pan.

B831G21306016

Removal

⚠ CAUTION

Be careful not to disconnect the ISC valve coupler at least 3 seconds after ignition switch is turned to OFF. If the ECM coupler or ISC valve coupler is disconnected within 3 seconds after ignition switch is turned to OFF, there is a possibility of an unusual valve position being written in ECM and causing an error of ISC valve operation.

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Disconnect the ISC valve coupler (1) and remove the ISC valve (2).

Diagnostic Information and Procedures

Engine Mechanical Symptom Diagnosis

B831G21404001

Refer to “Engine Symptom Diagnosis in Section 1A (Page 1A-8)”.

Compression Pressure Check

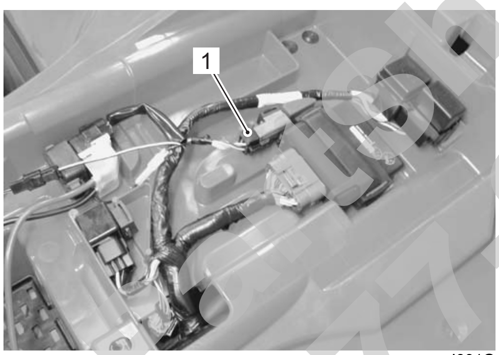
B831G21404002

The compression pressure reading of a cylinder is a good indicator of its internal condition.
Periodic maintenance records kept at your dealership should include compression readings for each maintenance service.

NOTE

- **Before checking the engine for compression pressure, make sure that the cylinder head nuts are tightened to the specified torque values and the valves are properly adjusted.**
- **Make sure that the battery is in fully-charged condition.**

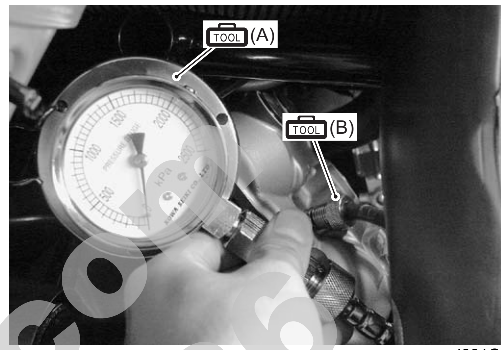
1) Warm up the engine.
2) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
3) Disconnect the fuel pump relay coupler (1).



I831G1140003-01

4) Remove the spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.
5) Install the compression gauge and adaptor in the spark plug hole. Make sure that the connection is tight.

Special tool
TOOL (A): 09915–64512 (Compression gauge)
TOOL (B): 09915–63311 (Compression gauge attachment)



I831G1140004-01

6) Keep the throttle grip in the fully-opened position.

I831G1140005-01

7) Press the starter button and crank the engine for a few seconds. Record the maximum gauge reading as the cylinder compression.

Compression pressure specification

Standard
Approx. 1 000 kPa (10.0 kgf/cm², 142 psi) (Automatic decompression actuated)

Low compression pressure can indicate any of the following conditions:

- **Excessively worn cylinder wall**
- **Worn piston or piston rings**
- **Piston rings stuck in grooves**
- **Poor valve seating**
- **Ruptured or otherwise defective cylinder head gasket**

8) After checking the compression pressure, reinstall the removed parts.

Removal

1) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the right handlebar switch box. Refer to “Handlebars Removal and Installation in Section 6B (Page 6B-3)”.
3) Remove the throttle cable as shown in the cable routing diagram. Refer to “Throttle Cable Routing Diagram (Page 1D-1)”.

Installation

Install the throttle cables in the reverse order of removal. Pay attention to the following points:

- Install the throttle cable as shown in the cable routing diagram. Refer to “Throttle Cable Routing Diagram (Page 1D-1)”.
- Check the throttle cable play and proper operation.

Throttle Cable Inspection

B831G21406006

Check that the throttle lever moves smoothly from full open to full close. If it does not move smoothly, lubricate the throttle cable.

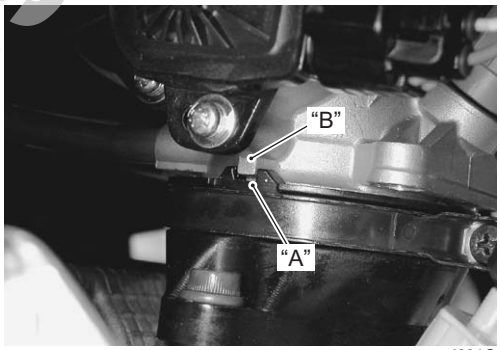
When replacing the throttle body, turn the ignition switch ON and OFF.

Install the throttle body in the reverse order of removal. Pay attention to the following points:

- Install the throttle body.

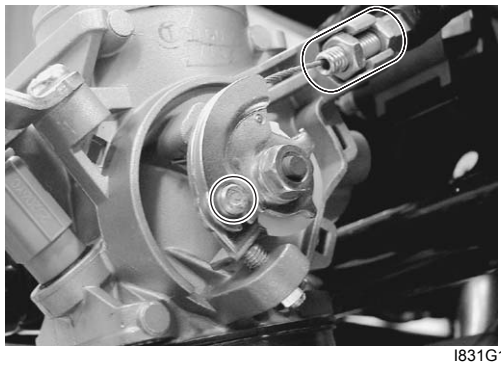
NOTE

When installing the throttle body, fit the concave part "A" of the intake pipe onto the convex part "B" of the throttle body.



I831G1140026-01

- Connect the throttle cable.



I831G1140027-01

- Tighten the throttle body clamp screws. Refer to “Throttle Body Construction (Page 1D-8)”.

I831G1140028-01

- After installed throttle cable, adjust the throttle cable play. Refer to “Throttle Cable Play Inspection and Adjustment in Section 0B (Page 0B-15)”.

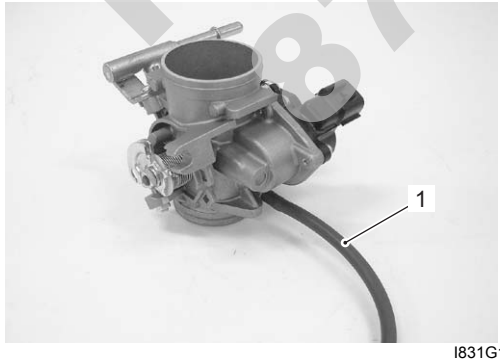
Throttle Body Disassembly and Assembly

B831G21406011

Refer to “Throttle Body Removal and Installation (Page 1D-9)”.

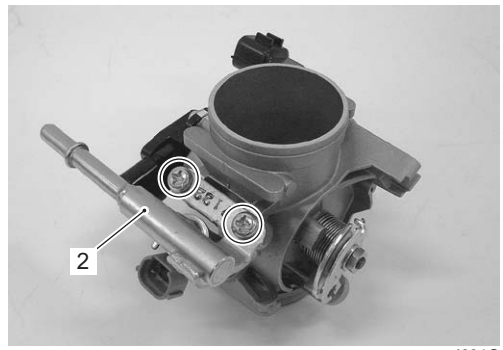
Disassembly

1) Disconnect the vacuum hose (1).



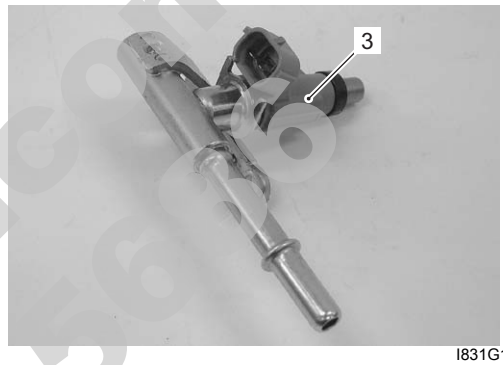
I831G1140030-01

2) Remove the fuel delivery pipe assembly (2) by removing its mounting screws.



I831G1140031-01

3) Remove the fuel injector (3).



I831G1140033-01

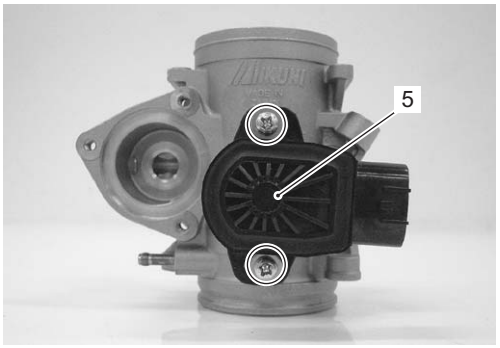
4) Remove the ISC valve (4).

I831G1140034-01

5) Remove the TP sensor (5).

NOTE

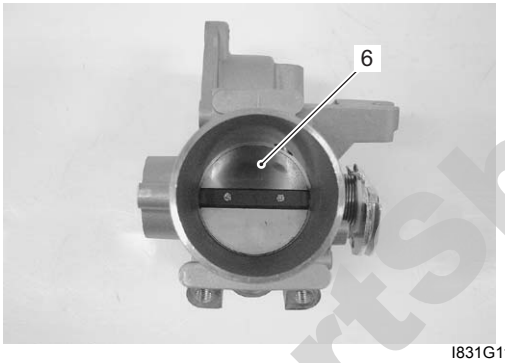
Prior to disassembly, mark the TP sensors original position with a paint or scribe for accurate reinstallation.



I831G1140035-01

⚠ CAUTION

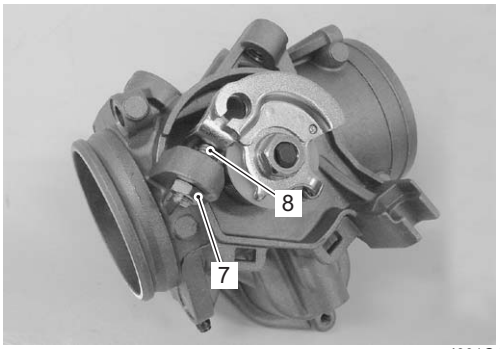
Never remove the throttle valve (6).



I831G1140038-01

⚠ CAUTION

- **Do not loosen the lock-nut (7).**
- **The fast idle screw (8) is factory-adjusted at the time of delivery and therefore avoid removing or turning it unless otherwise necessary.**



I831G1140039-01

Assembly

Assembly is the throttle body in the reverse order of removal. Pay attention to the following points:

- Apply a thin coat of engine oil to the O-ring.
- With the throttle valve fully closed, install the TP sensor (1) and tighten the TP sensor mounting screw to the specified torque.

NOTE

- **Align the secondary throttle shaft end "A" with the groove "B" of TP sensor.**
- **Apply grease to the secondary throttle shaft end "A" if necessary.**

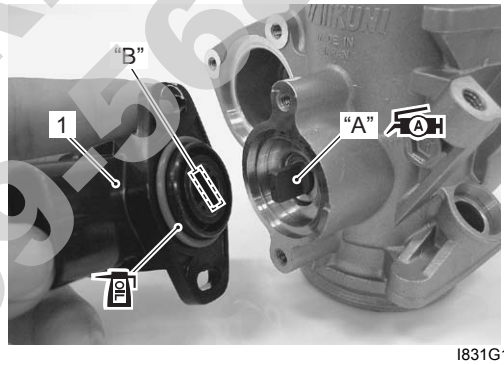
: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

Special tool

: 09930–11950 (Torx wrench)

Tightening torque

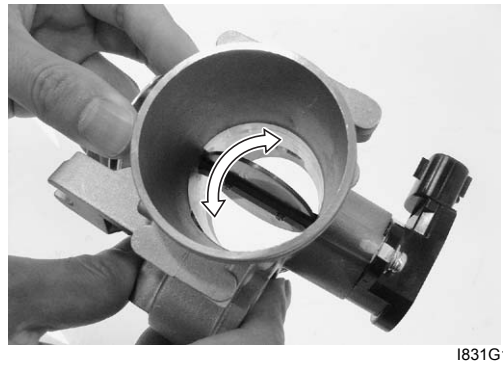
TP sensor mounting screw: 2 N·m (0.2 kgf-m, 1.5 lb-ft)



I831G1140040-01

NOTE

Make sure the TP valve open or close smoothly. If the TP sensor adjustment is necessary, refer to "TP Sensor Adjustment in Section 1C (Page 1C-3)".



I831G1140042-01

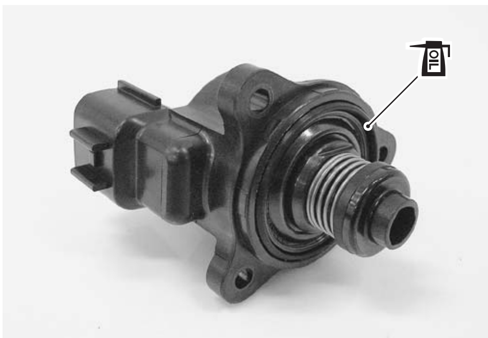
- Apply a thin coat of engine oil to the O-ring and install the ISC valve assembly.

⚠ CAUTION

Replace the O-ring with a new one.

Special tool
TOOL : 09930–11950 (Torx wrench)

Tightening torque
ISC valve mounting screw (a): 2 N·m (0.2 kgf-m, 1.5 lb-ft)

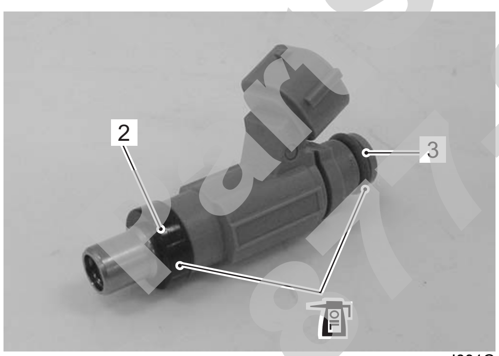


I831G1140044-01

- Apply a thin coat of engine oil to the new cushion seal (2) and the O-ring (3).

⚠ CAUTION

Replace the cushion seal and O-ring with the new ones.

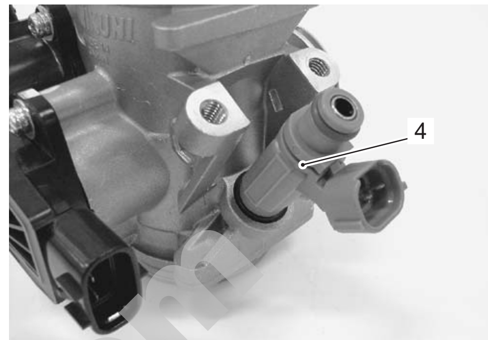


I831G1140046-01

- Install the fuel injector (4) by pushing it straight to the throttle body.

⚠ CAUTION

Never turn the injector while pushing it.



I831G1140047-01

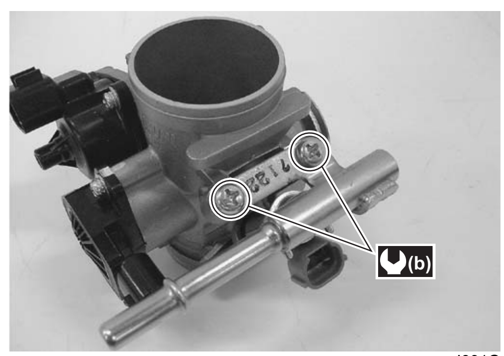
- Install the fuel delivery pipe assembly (5) to the fuel injector.

⚠ CAUTION

Never turn the fuel injector while installing them.

- Tighten the fuel delivery pipe mounting screws to the specified torque.

Tightening torque
Fuel delivery pipe mounting screw (b): 5 N·m (0.5 kgf-m, 3.5 lb-ft)



I831G1140048-01

Throttle Body Inspection and Cleaning

B831G21406012

Refer to “Throttle Body Disassembly and Assembly (Page 1D-10)”.

Cleaning

⚠ WARNING

Some carburetor cleaning chemicals, especially dip-type soaking solutions, are very corrosive and must be handled carefully. Always follow the chemical manufacturer’s instructions on proper use, handling and storage.

- Clean passageways with a spray-type carburetor cleaner and blow dry with compressed air.

⚠ CAUTION

Do not use wire to clean passageways. Wire can damage passageways. If the components cannot be cleaned with a spray cleaner it may be necessary to use a dip-type cleaning solution and allow them to soak. Always follow the chemical manufacturer’s instructions for proper use and cleaning of the throttle body components. Do not apply carburetor cleaning chemicals to the rubber and plastic materials.

Inspection

Check following items for any defects or clogging. Replace the throttle body if necessary.

- O-ring
- Throttle valve
- Vacuum hose

ISC Valve Visual Inspection

Check the ISC valve for carbon deposits or other damage. If carbon is deposited, remove it with a brush and clean with a compressed air.

⚠ CAUTION

Normally, the removed O-ring must be replaced with a new one. However, this O-ring is not available for the spare parts. If it is found to be damaged, replace the ISC valve assembly with new one.

I831G1140049-02

Engine Assembly Removal

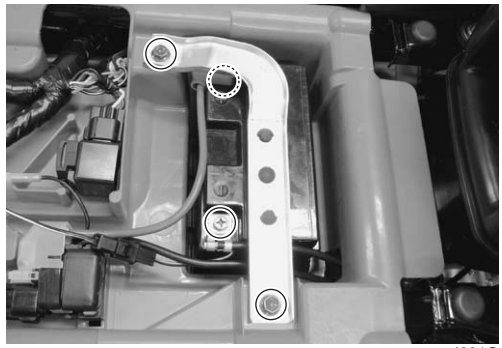
B831G21406013

Before taking the engine out of the frame, wash the engine using a steam cleaner. Engine removal is sequentially explained in the following steps:

1) Drain engine oil. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
2) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
3) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
4) Disconnect the battery lead wires.

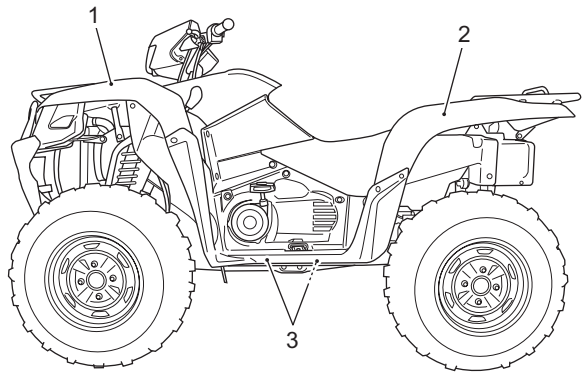
⚠ CAUTION

When disconnecting the battery lead wires, be sure to disconnect the battery (–) lead wire first.



I831G1140050-01

5) Remove the following parts from the vehicle.
   - Front fender (1). Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
   - Rear fender (2). Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
   - Mud guard (Left and Right) (3). Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.



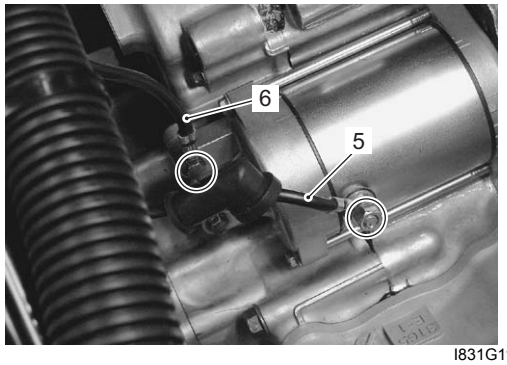
I831G1140052-02

6) Remove the shift lever assembly. Refer to “Shift Lever Assembly Removal and Installation in Section 5A (Page 5A-24)”.

7) Disconnect the spark plug cap (4).

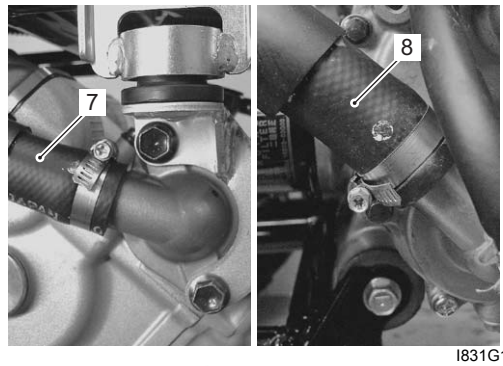
I831G1140053-01

8) Disconnect the starter motor lead wire (5) and ground lead wire (6).



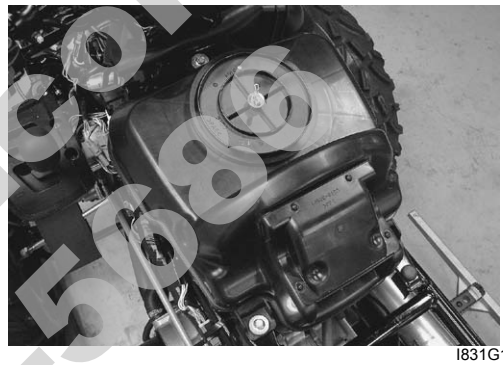
I831G1140054-01

9) Disconnect the radiator inlet hose (7) and outlet hose (8).



I831G1140055-02

10) Remove the air cleaner box. Refer to “Air Cleaner Box Removal and Installation (Page 1D-5)”.

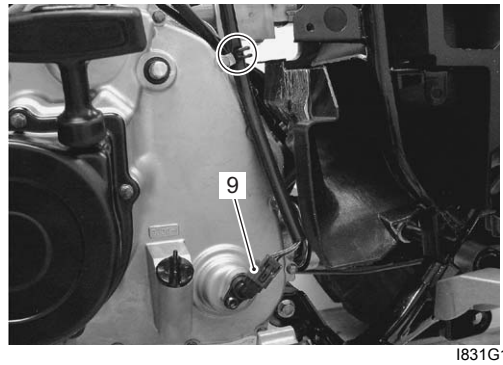


I831G1140056-01

11) Remove the throttle body assembly. Refer to “Throttle Body Removal and Installation (Page 1D-9)”.

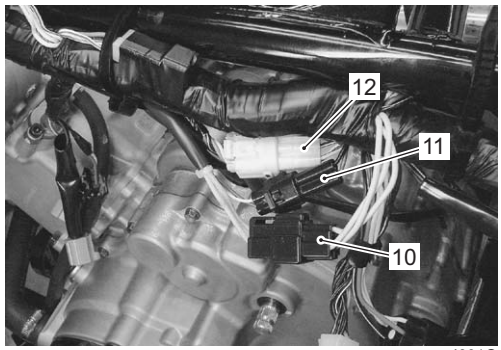
I831G1140057-01

12) Disconnect the speed sensor coupler (9) and clamp.



I831G1140058-02

13) Disconnect the generator coupler (10), CKP sensor coupler (11) and gear position sensor coupler (12).



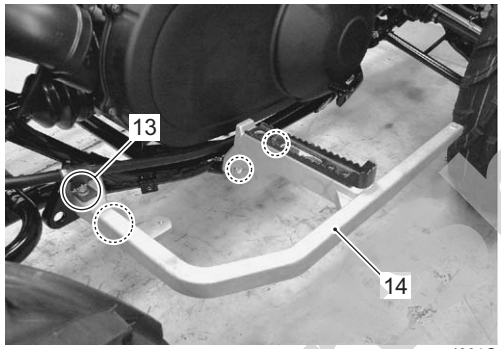
I831G1140060-02

14) Remove the V-belt cooling ducts. Refer to “V-belt Cooling Duct Removal and Installation in Section 5A (Page 5A-5)”.

15) Remove the muffler and exhaust pipes. Refer to “Exhaust Pipe / Muffler Removal and Installation in Section 1K (Page 1K-2)”.

16) Remove the rear brake cable clamp bolt (13).

17) Remove the right footrest (14).

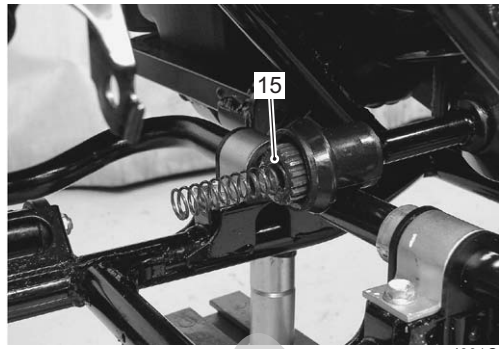


I831G1140061-02

18) Remove the rear brake pedal. Refer to “Rear Brake Pedal Removal and Installation in Section 4A (Page 4A-14)”.

I831G1140062-01

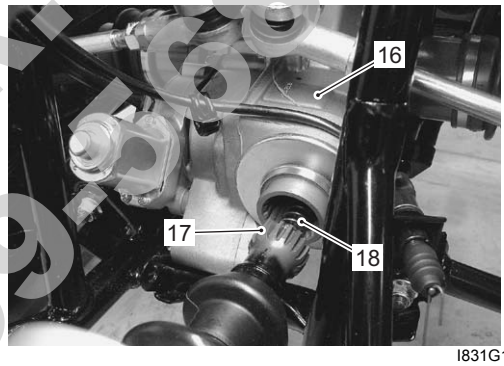
19) Remove the rear propeller shaft (15). Refer to “Rear Propeller Shaft Removal and Installation in Section 3D (Page 3D-17)”.



I831G1140063-03

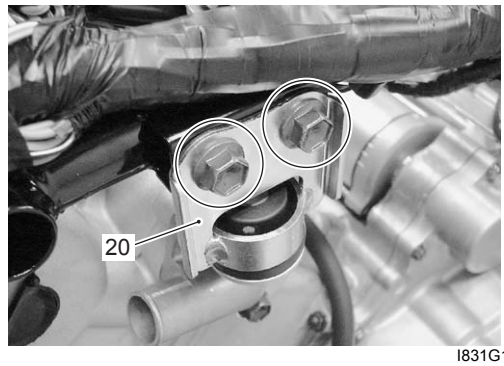
20) Remove the front differential mounting bolts and slide the front differential assembly (16) forward. Refer to “Front Drive (Differential) Assembly Removal and Installation in Section 3B (Page 3B-4)”.

21) Remove the front propeller shaft (17) and spring (18).



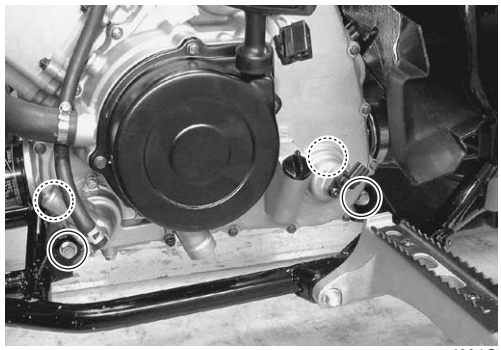
I831G1140064-02

22) Remove the dumper stopper (20) by removing the mounting bolts.



I831G1140065-02

23) Support engine with a jack and remove the engine mounting bolts and nuts.



I831G1140066-01

24) Remove the engine from the right side.

⚠ WARNING

Care should be taken not to drop the engine accidentally when the engine mounting bolts and nuts are removed.

Engine Assembly Installation

B831G21406014

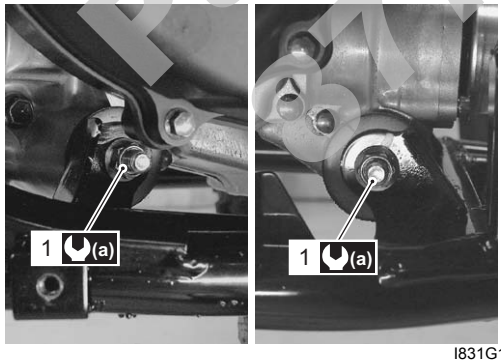
Reinstall the engine in the reverse order of engine removal. Pay attention to the following points:

- Tighten the engine mounting nuts (1) to the specified torque.

Tightening torque
Engine mounting nut (a): 60 N·m (6.0 kgf-m, 43.5 lb-ft)

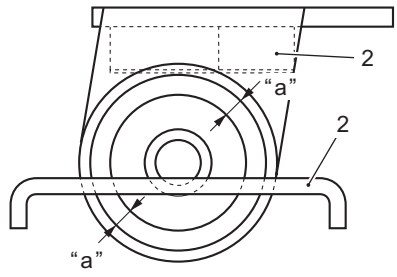
NOTE

The engine mounting nuts are self-locking. Once the nuts have been removed, they are no longer of any use.



I831G1140067-03

- When installing the engine mounting damper stopper (2), keep that the clearance are equal.

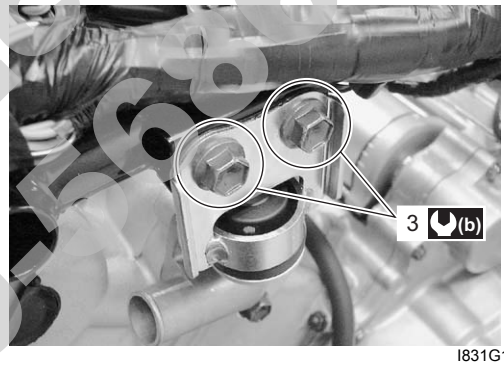


I831G1140068-03

"a": Clearance

- Tighten the engine mounting damper stopper bolts (3) to the specified torque.

Tightening torque
Engine mounting damper stopper bolt (b): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



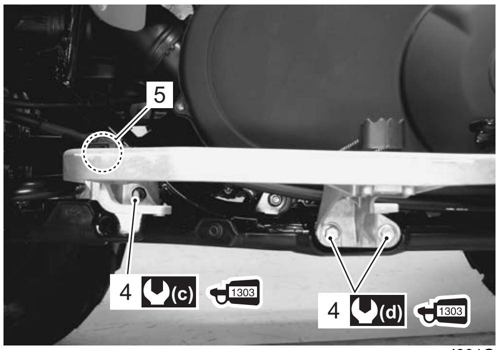
I831G1140070-05

- Install the front propeller shaft and front differential assembly. Refer to "Front Drive (Differential) Assembly Removal and Installation in Section 3B (Page 3B-4)".
- Install the rear propeller shaft and rear differential assembly. Refer to "Final Gear Assembly Removal and Installation in Section 3B (Page 3B-23)".
- Apply thread lock to the footrest bolts (4), and tighten them to the specified torque.

1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

Tightening torque
Footrest mounting bolt (M8) (c): 26 N·m (2.6 kgf-m, 19.0 lb-ft)
Footrest mounting bolt (M10) (d): 55 N·m (5.5 kgf-m, 40.0 lb-ft)

- Install the rear brake cable clamp (5).



I831G1140071-04

- Install the rear brake pedal. Refer to “Rear Brake Pedal Removal and Installation in Section 4A (Page 4A-14)”.
- Install the exhaust pipe assembly and muffler. Refer to “Exhaust Pipe / Muffler Removal and Installation in Section 1K (Page 1K-2)”.
- Install the shift lever assembly. Refer to “Shift Lever Assembly Removal and Installation in Section 5A (Page 5A-24)”.
- Install the throttle body. Refer to “Throttle Body Removal and Installation (Page 1D-9)”.
- After remounting the engine, route the wiring harness, cable and hoses properly. Refer to “Wiring Harness Routing Diagram in Section 9A (Page 9A-4)”, “Throttle Cable Routing Diagram (Page 1D-1)” and “Water Hose Routing Diagram in Section 1F (Page 1F-3)”.
- Pour engine coolant and engine oil. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)” and “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
- After finishing the engine installation, check the following items:
  – Throttle cable play
    Refer to “Throttle Cable Play Inspection and Adjustment in Section 0B (Page 0B-15)”.
  – Rear brake cable play
    Refer to “Rear Brake Pedal / Rear Brake (Parking Brake) Lever Inspection and Adjustment in Section 0B (Page 0B-19)”.
  – Parking Brake cable play
    Refer to “Rear Brake Pedal / Rear Brake (Parking Brake) Lever Inspection and Adjustment in Section 0B (Page 0B-19)”.
  – Engine oil and coolant leakage
    Refer to “Cooling Circuit Inspection in Section 1F (Page 1F-4)”.

Engine Top Side Disassembly

B831G21406015

It is unnecessary to remove the engine assembly from the frame when servicing the engine top side.

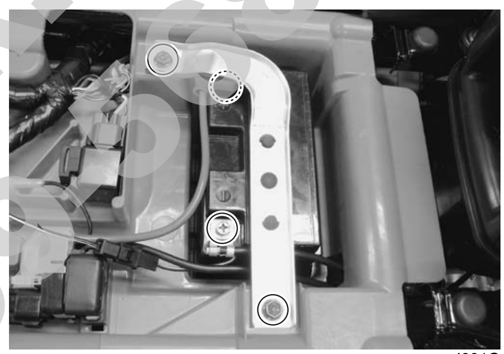
⚠ **CAUTION**

Identify the position of each removed part. Organize the parts in their respective groups (e.g., intake, exhaust) so that they can be reinstalled in their original positions.

1) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
2) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
3) Remove the battery.

⚠ **CAUTION**

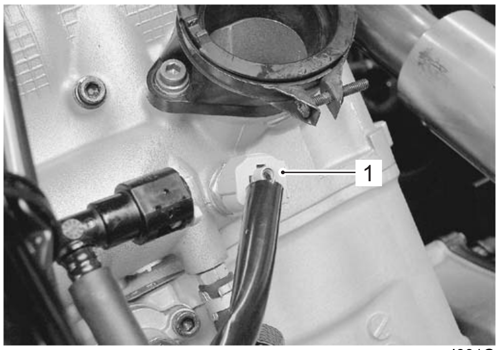
When disconnecting the battery lead wires, be sure to disconnect the battery (–) lead wire first.



I831G1140072-01

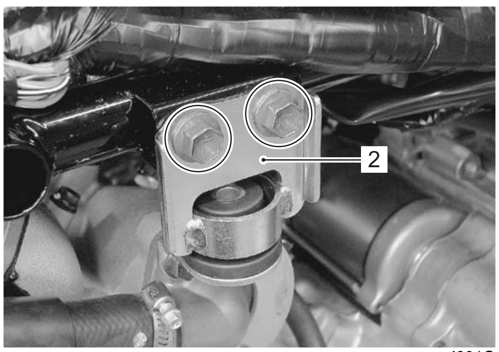
4) Remove the front fender and left mud guard. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)” and “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
5) Remove the shift lever assembly. Refer to “Shift Lever Assembly Removal and Installation in Section 5A (Page 5A-24)”.
6) Remove the air cleaner box. Refer to “Air Cleaner Box Removal and Installation (Page 1D-5)”.
7) Remove the throttle body. Refer to “Throttle Body Removal and Installation (Page 1D-9)”.

8) Disconnect the ECT sensor coupler (1).



I831G1140073-01

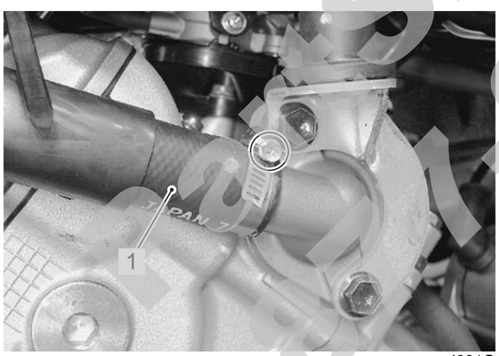
9) Remove the engine mounting dumper stopper (2).



I831G1140076-01

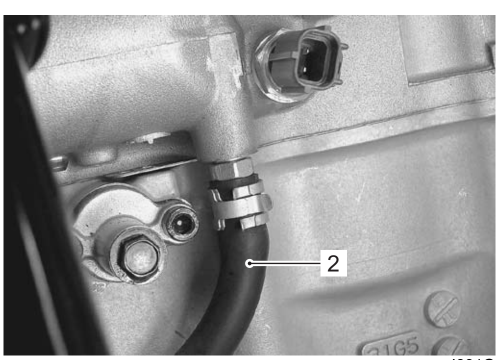
Water Hose

1) Disconnect the radiator inlet hose (1) of the thermostat.



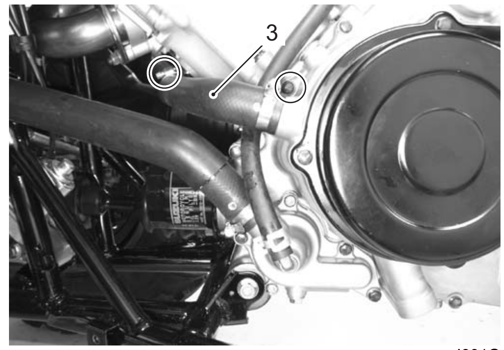
I831G1140079-01

2) Disconnect the water bypass hose (2) of the cylinder head side.



I831G1140080-03

3) Remove the water pump outlet hose (3).



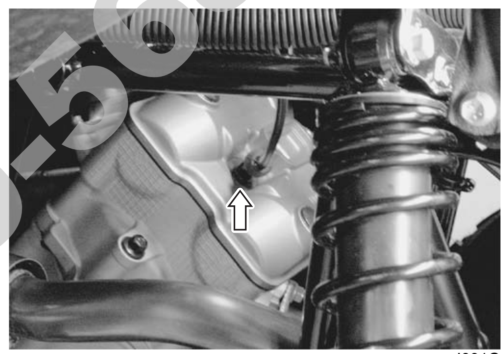
I831G1140081-03

Exhaust Pipe

Remove the exhaust pipe. Refer to “Exhaust Pipe / Muffler Removal and Installation in Section 1K (Page 1K-2)”.

Spark Plug Cap / Spark Plug

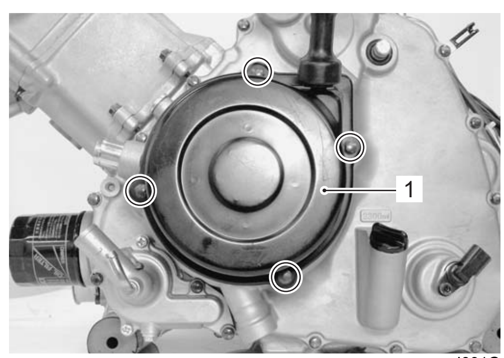
Remove the spark plug cap and spark plug. Refer to “Spark Plug Cap and Spark Plug Removal and Installation in Section 1H (Page 1H-3)”.



I831G1140082-01

Recoil Starter

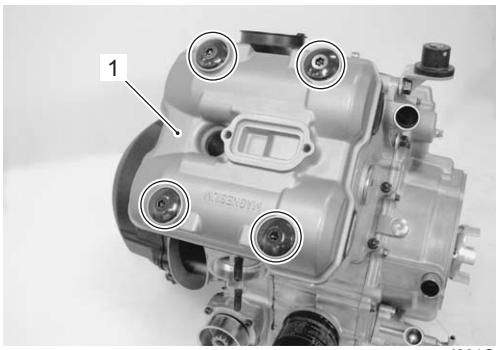
Remove the recoil starter (1) by removing the bolts.



I831G1140083-01

Cylinder Head Cover

Remove the cylinder head cover (1) and its gasket.



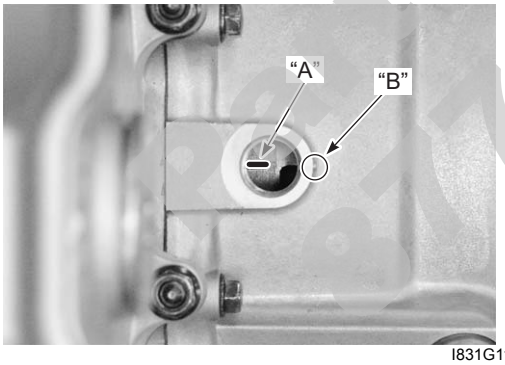
I831G1140084-02

Cam Shaft

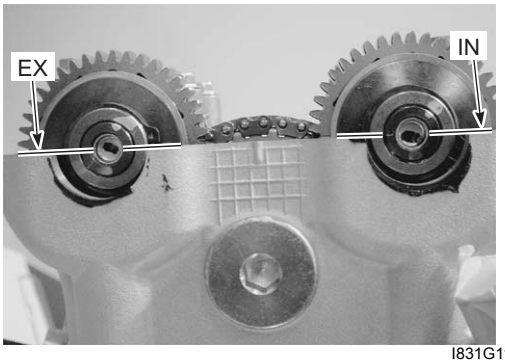
1) Remove the valve timing inspection plug.

I831G1140085-02

2) Turn the crankshaft and align the match mark “A” on the crankshaft with the mark “B” of the crankcase. Also position each of the camshaft as shown.



I831G1140086-03

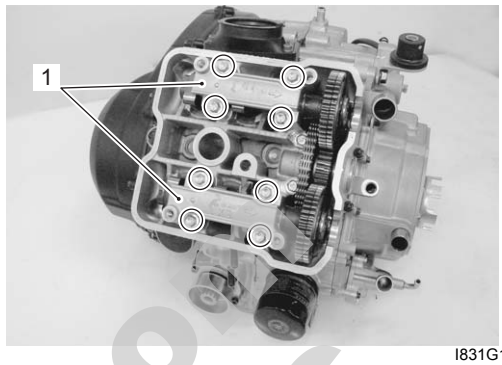


I831G1140087-03

3) Remove the camshaft journal holders (1).

⚠ CAUTION

Be sure to loosen the camshaft journal holder bolts evenly by shifting the wrench diagonally.

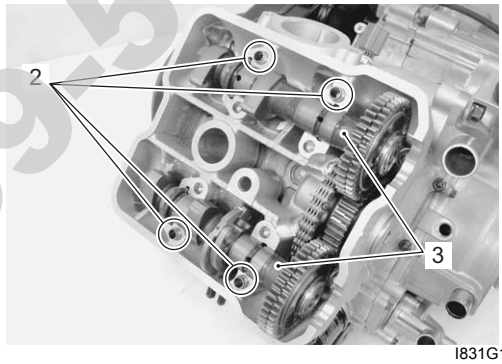


I831G1140088-01

4) Remove the dowel pins (2) and camshafts (3).

NOTE

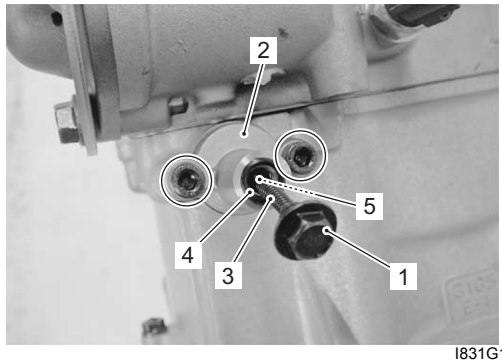
Be careful not to drop the dowel pins into the crankcase.



I831G1140089-01

Cam Chain Tension Adjuster

1) Remove the cam chain tension adjuster cap bolt (1).
2) Remove the cam chain tension adjuster (2) with the spring (3), O-ring (4) and bar (5).



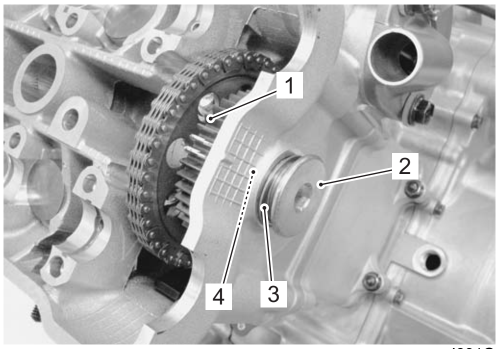
I831G1140090-02

Cylinder Head

1) Remove the cam drive idle gear/sprocket (1) by removing its shaft (2) with the idle shaft gasket (3) and cam chain idle shim (4).

NOTE

Be careful not to drop the cam chain idle shim (4) into the crankcase.

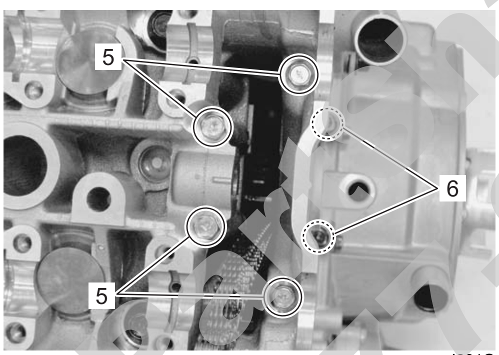


I831G1140091-01

2) Remove the cylinder head bolts (M6) (5).

NOTE

Sightly loosen the cylinder nuts (6) to facilitate later disassembly.



I831G1140186-01

3) Remove the cylinder head bolts (M10) and washers.

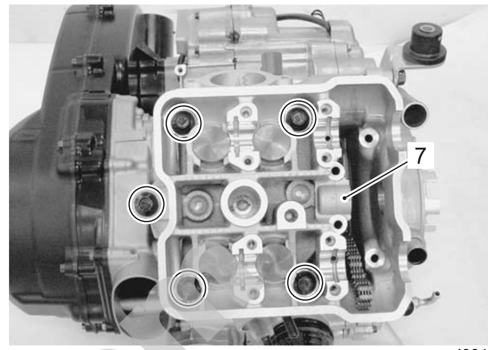
NOTE

When loosening the cylinder head bolts, loosen each bolt little by little diagonally.

4) Remove the cylinder head (7).

NOTE

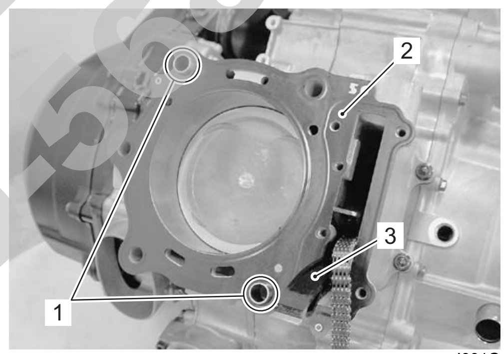
If the cylinder head does not come off easily, lightly tap using a plastic hammer.



I831G1140093-01

Cylinder

1) Remove the dowel pins (1) and gasket (2).
2) Remove the cam chain guide (3).

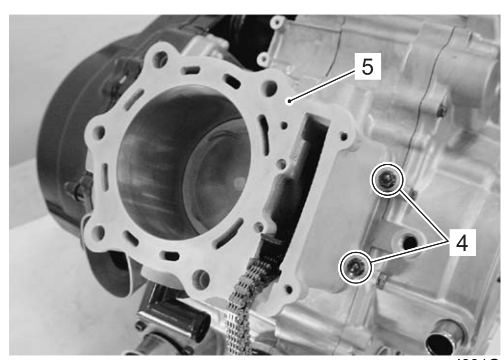


I831G1140096-01

3) Remove the cylinder (5) by removing the cylinder nuts (4).

NOTE

If the cylinder does not come off easily, lightly top using a plastic hammer.

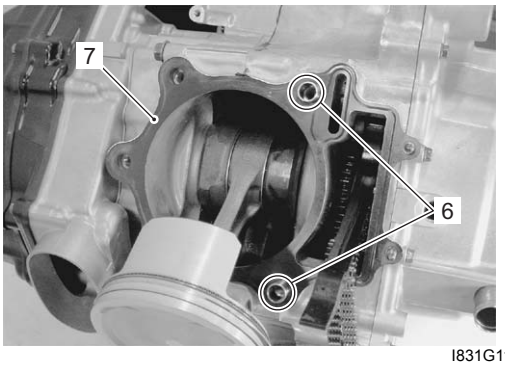


I831G1140097-01

4) Remove the dowel pins (6) and gasket (7).

NOTE

Be careful not to drop the dowel pins (6) into the crankcase.



I831G1140098-01

Piston

1) Place a clean rag over the cylinder base so as not to drop the piston pin circlips into the crankcase.
2) Remove the piston pin circlip (1).

I831G1140103-01

3) Draw out the piston pin (2) and remove the piston (3).

I831G1140104-01

Engine Top Side Assembly

B831G21406016

Assemble the engine top side in the reverse order of disassembly. Pay attention to the following points:

⚠ CAUTION

When turning the crankshaft, pull the cam chain upward, or the chain will be caught between the crankcase and the cam drive sprocket.

Piston

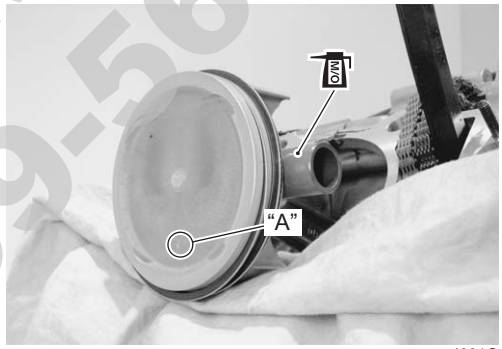
- When installing the piston pin, apply a light coat molybdenum oil solution onto piston pin.

  M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)

- Install the piston and piston pin.

NOTE

When installing the piston, the indent "A" on the piston head must be faced to exhaust side.



I831G1140105-01

- Place a clean rag over the cylinder base so as not to drop the piston pin circlip (1) into the crankcase.
- Install the piston pin circlip (1).

⚠ CAUTION

Use new piston pin circlip (1) to prevent circlip failure which will occur when it is bent.

NOTE

End gap of the circlip (1) should not be aligned with the cutaway in the piston pin bore.

I831G1140106-02

- Apply molybdenum oil solution to the sliding surface of the piston.

M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)

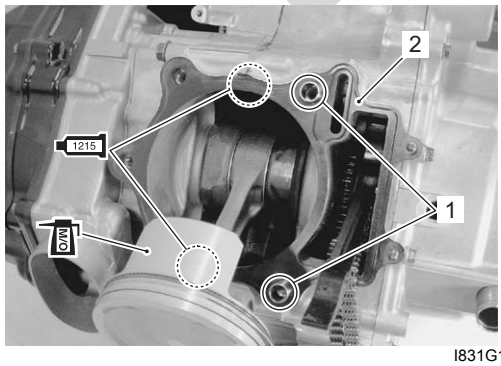
- Apply bond lightly to the mating surfaces of crankcases.

1215 : Sealant 99000–31110 (SUZUKI BOND No.1215 or equivalent)

- Fit the dowel pins (1) and the new gasket (2).

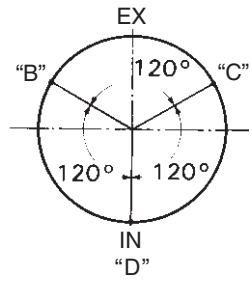
⚠ CAUTION

Replace the cylinder gasket (2) with a new one.



I831G1140108-03

- Position the piston ring gaps as shown in the figure. Before inserting each piston into its cylinder, check that the gaps are properly positioned.



I718H1140051-01

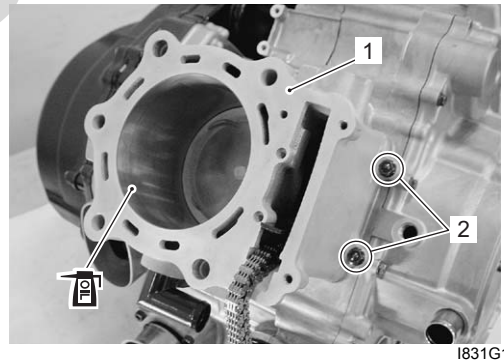
"B":	2nd ring and lower side rail
"C":	Upper side rail
"D":	1st ring and spacer

Cylinder

- Insert the piston into the cylinder (1).
- Temporarily tighten the cylinder base nuts (2).
- Apply engine oil to sliding surface of the cylinder.

⚠ CAUTION

When installing the cylinder, pull the cam chain upward, or the chain will be caught between the crankcase and cam drive sprocket.



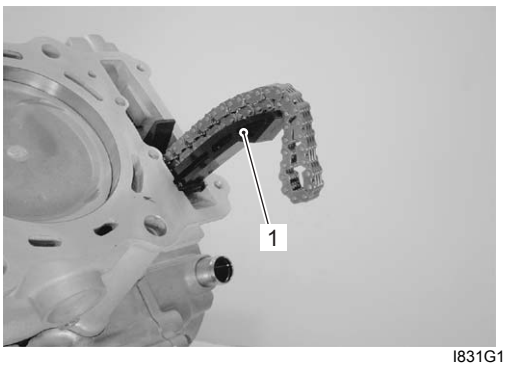
I831G1140109-02

Cam Chain Guide

- Install the cam chain guide (1).

⚠ CAUTION

Be sure that the cam chain guide (1) is installed properly.



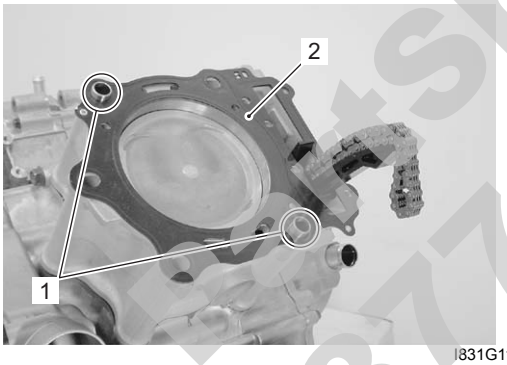
I831G1140110-01

Cylinder Head

- Fit the dowel pins (1) and new cylinder head gasket (2).

⚠ CAUTION

Replace the cylinder head gasket (2) with a new one.

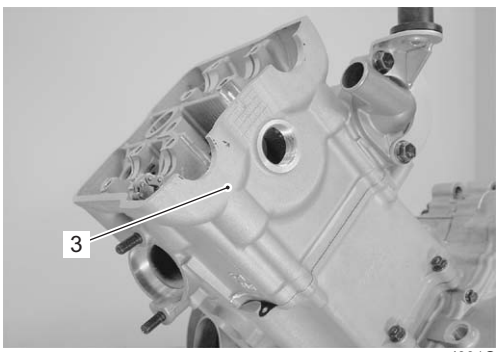


I831G1140111-02

- Place the cylinder head (3) on the cylinder.

NOTE

When installing the cylinder head (3), keep the cam chain taut.



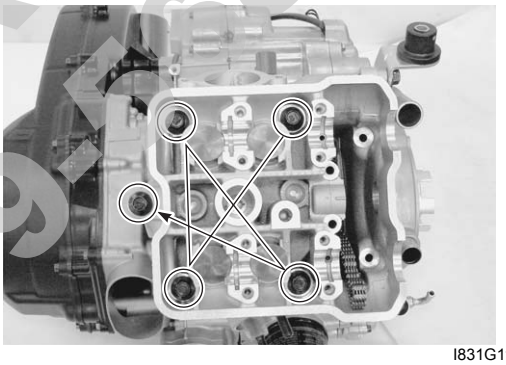
I831G1140112-01

- Apply the engine oil to the threads and both sides of washers.

I831G1140113-01

- Tighten the cylinder head bolts to the specified two-step torque with a torque wrench sequentially and diagonally.

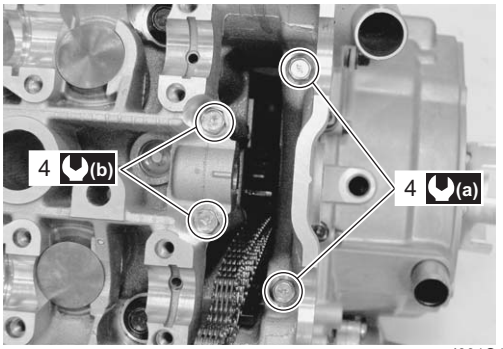
Tightening torque
Cylinder head bolt (L: 200) (Initial): 25 N·m (2.5 kgf-m, 18.0 lb-ft)
Cylinder head bolt (L: 200) (Final): 37 N·m (3.7 kgf-m, 27.0 lb-ft)



I831G1140114-02

- After firmly tightening the cylinder head bolts (4), install the cylinder head bolts.

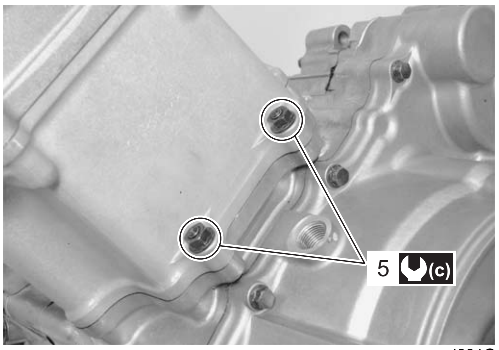
Tightening torque
Cylinder head bolt (L: 70) (a): 10 N·m (1.0 kgf-m, 7.0 lb-ft)
Cylinder head bolt (L: 100) (b): 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1140115-02

- Tighten the cylinder base nuts (5) to the specified torque.

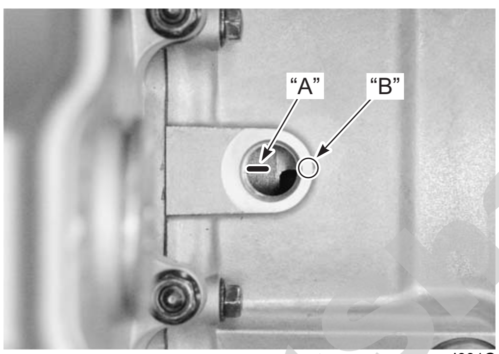
  Tightening torque
  Cylinder base nut (c): 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1140116-02

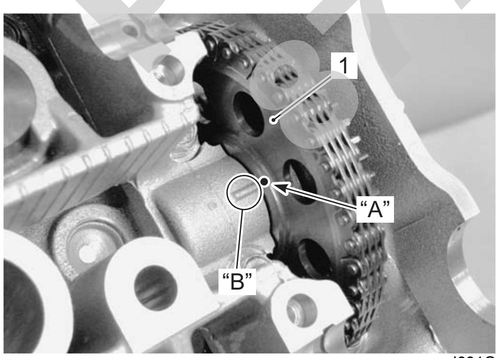
Cam Drive Idle Gear / Sprocket

- Align the match mark “A” on the generator rotor with the mark “B” on the crankcase.



I831G1140117-02

- Install the cam drive idle gear/sprocket (1) onto the cylinder head and cam chain on it. When installing the cam drive idle gear/sprocket, align the punched mark “A” on the cam drive gear/sprocket (1) with the embossed line “B” on the cylinder head.

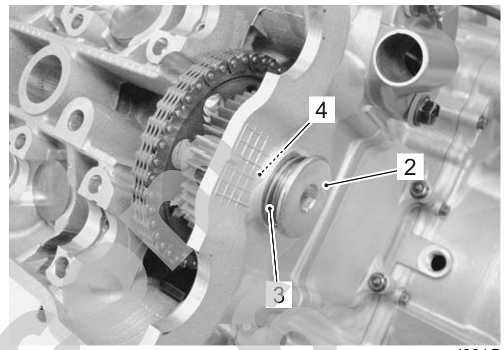


I831G1140118-01

- Install the cam drive idle gear/sprocket shaft (2), copper washer (3) and shim (4).

⚠ CAUTION

When checking the positions, remove the cam chain slack at the cam chain guide side by holding the cam drive idle gear/sprocket by hand.



I831G1140119-01

NOTE

Due to special valve train mechanism, aligning of the three elements; the punched mark “C”, embossed line “D” and the gear tooth root on the cam drive idle gear/ sprocket; can occur once every other rotation of crankshaft.

⚠ CAUTION

If the punched mark “C” does not align the embossed line “D”, turn the crankshaft 360° (1 turn) to bring the line on the generator rotor to the index mark on the crankcase again and reinstall the cam drive idle gear/ sprocket to the correct position as shown in the figure.

I831G1140328-01

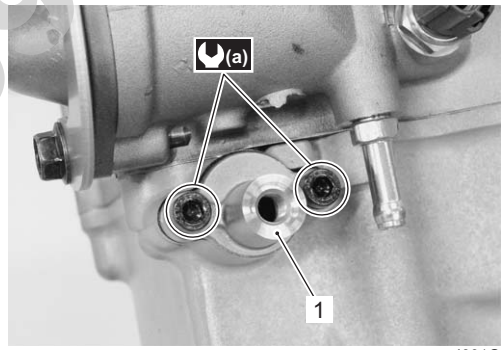
Cam Chain Tension Adjuster

- Install the cam chain tension adjuster (1) and tighten the its mounting bolts to the specified torque.

⚠ CAUTION

Use a new gasket to prevent oil leakage.

Tightening torque
Cam chain tension adjuster bolt (a): 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1140123-01

- Install the new O-ring (2), spring (3) and bar (4).

⚠ CAUTION

Use a new O-ring to prevent oil leakage.

- Install the cam chain tension adjuster cap bolt (5).

NOTE

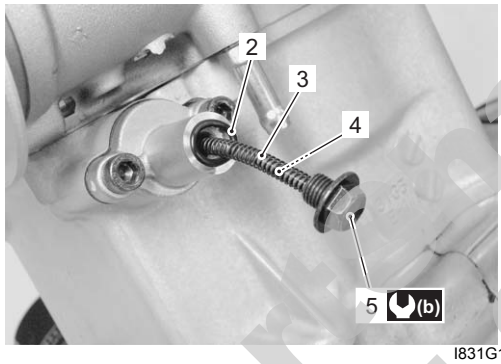
Click sound is heard when the cam chain tension adjuster cap bolt is installed.

- Tighten the cam chain tension adjuster cap bolt (5) to the specified torque.

Tightening torque
Cam chain tension adjuster cap bolt (b): 7 N·m (0.7 kgf-m, 5.0 lb-ft)

⚠ CAUTION

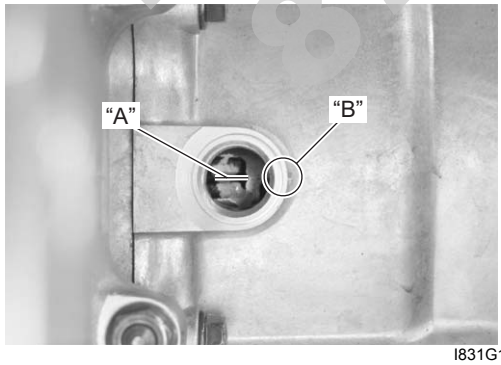
After installing the cam chain tension adjuster, check to be sure that the adjuster works properly by checking the slack of cam chain.



I831G1140124-01

Camshaft

- Align the line “A” on the generator rotor with the index mark “B” on the crankcase.

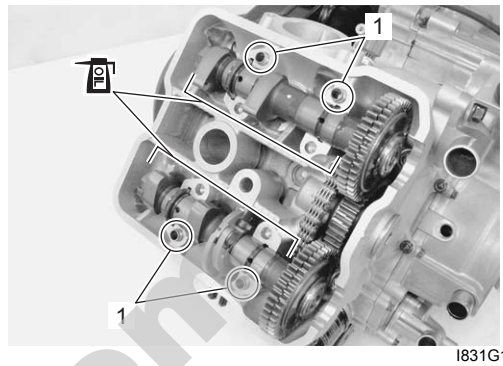


I831G1140125-01

- Install the dowel pins (1).
- The camshafts are identified by the engraved letters.
- Before replacing the camshafts on cylinder head, apply engine oil to their journals and cam faces.
- Apply engine oil to the camshaft journal holders.

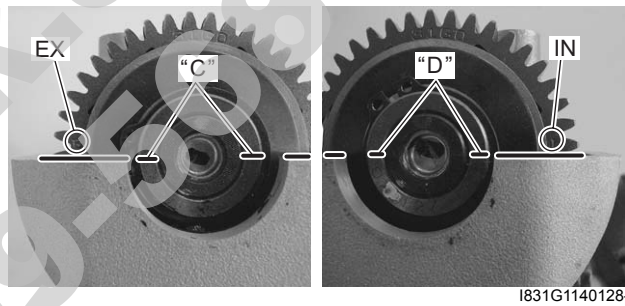
NOTE

Before installing the camshaft, check that the tappets are installed correctly.



I831G1140126-01

- Align the engraved mark “C” and “D” on the camshaft sprockets so it is parallel with the matching surface of the cylinder head cover.



I831G1140128-05

- Tighten the journal holder bolts to the specified torque.

NOTE

- Be sure to check and adjust the valve clearance. Refer to “Valve Clearance Inspection and Adjustment in Section 0B (Page 0B-4)”.
- Before assemble the cylinder head cover, pour a small amount of engine oil in oil pocket in the cylinder head.

Cylinder Head Cover

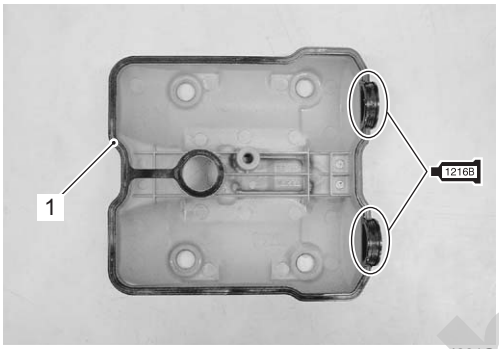
- Install a new gasket (1) to the cylinder head cover.

⚠ CAUTION

Use a new gasket (1) to prevent oil leakage.

- Apply bond to the cam end caps of the gasket as shown in the figure.

1216B : Sealant 99000–31230 (SUZUKI BOND No.1216B or equivalent)



I831G1140129-01

Camshaft Identification

The exhaust camshaft has the automatic decompression (1).

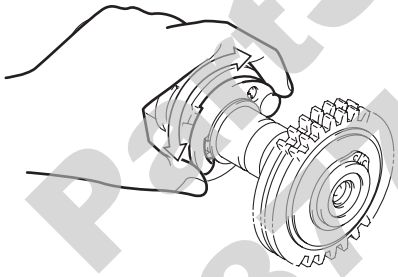
I831G1140132-03

Automatic decompression

Move the automatic decompression weight by hand to inspect if it is operating smoothly. If it does not operate smoothly, replace the camshaft/automatic decompression assembly with a new one.

⚠ CAUTION

Do not attempt to disassemble the camshaft/automatic decompression assembly.
It is not serviceable.



I831G1140133-01

Cam Wear

Check the camshaft for wear or damage.
Measure the cam height “a” with a micrometer.
Replace a camshaft if the cams are worn to the service limit.

Special tool
TOOL : 09900–20202 (Micrometer (1/100 mm, 25 – 50 mm))

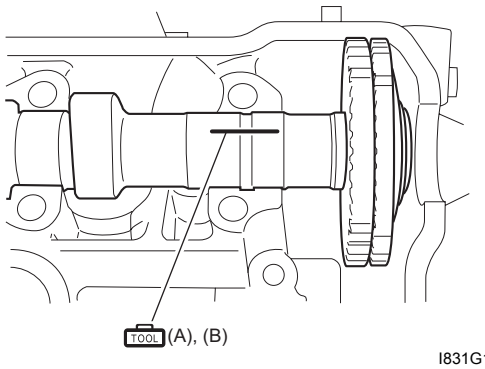
Camshaft Journal Wear

Inspect the camshaft journal wear in the following procedures:

1) Determine whether or not each journal is worn down to the limit by measuring the oil clearance with the camshaft installed in place.

2) Use the plastigauge to read the clearance at the widest portion, which is specified as follows.

Special tool
(A): 09900–22301 (Plastigauge (0.025 – 0.076 mm))
(B): 09900–22302 (Plastigauge (0.051 – 0.152 mm))



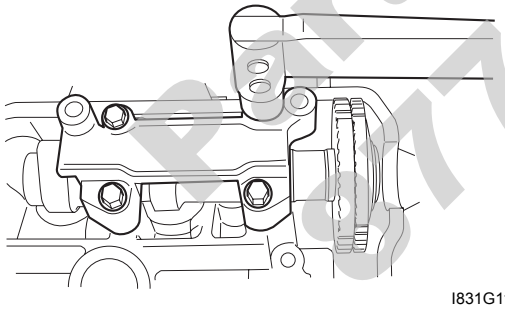
I831G1140331-01

3) Install each camshaft journal holder to its original position. Refer to “Engine Top Side Assembly (Page 1D-21)”.
4) Tighten the camshaft journal holder bolts evenly and diagonally to the specified torque. Refer to “Engine Top Side Assembly (Page 1D-21)”.

NOTE

Do not rotate the camshafts with the plastigauge in place.

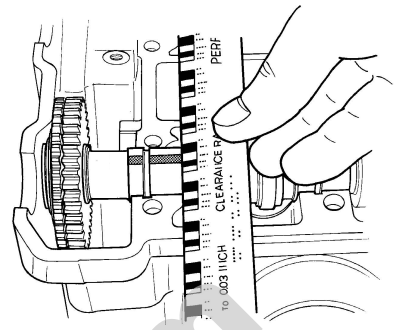
Tightening torque
Camshaft journal holder bolt: 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1140332-01

5) Remove the camshaft journal holders and measure the width of the compressed plastigauge using the envelope scale.
6) This measurement should be taken at the widest part of the compressed plastigauge.

Camshaft journal oil clearance (IN. & EX.)
Service limit: 0.150 mm (0.0059 in)



I831G1140137-01

7) If the camshaft journal oil clearance exceeds the limit, measure the inside diameter of the camshaft journal holder and the outside diameter of the camshaft journal. Replace the camshaft or the cylinder head depending upon which one exceeds the specification.

Special tool
(C): 09900–20602 (Dial gauge (1/1000 mm, 1 mm))
(D): 09900–22403 (Small bore gauge (18 – 35 mm))

Camshaft journal holder I.D. (IN. & EX.)
Standard: 22.012 – 22.025 mm (0.8666 – 0.8671 in)

Special tool

I831G1140139-01

Camshaft Sprocket Inspection

B831G21406019

Inspect the camshaft sprocket in the following procedures:

1) Remove the intake and exhaust camshafts. Refer to “Engine Top Side Disassembly (Page 1D-17)”.
2) Inspect the teeth of each camshaft sprocket for wear or damage.
   If they are worn or damaged, replace the camshaft and cam chain as a set.

⚠ CAUTION

- **Do not disassemble the camshaft sprocket.**
- **The camshaft sprocket and cam shaft is available only as an assembly.**

I831G1140140-01

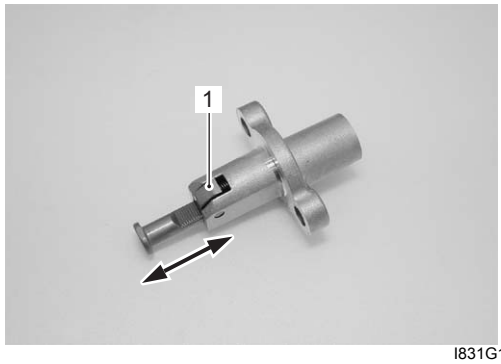
3) Install the camshafts. Refer to “Engine Top Side Assembly (Page 1D-21)”.

Cam Chain Tension Adjuster Inspection

B831G21406020

The cam chain tension adjuster is maintained at the proper tension by an automatically adjusted.

1) Remove the cam chain tension adjuster. Refer to “Engine Top Side Disassembly (Page 1D-17)”.
2) Check that the push rod slides smoothly when releasing stopper (1). If it does not slide smoothly, replace the cam chain tension adjuster with a new one.



I831G1140141-01

3) Install the cam chain tension adjuster. Refer to “Engine Top Side Assembly (Page 1D-21)”.

Cam Chain Guide Removal and Installation

B831G21406021

Removal

1) Remove the cylinder head. Refer to “Engine Top Side Disassembly (Page 1D-17)”.
2) Remove the cam chain guide (1).

NOTE

Be careful not to drop the chain into the crankcase.

I831G1140142-01

Installation

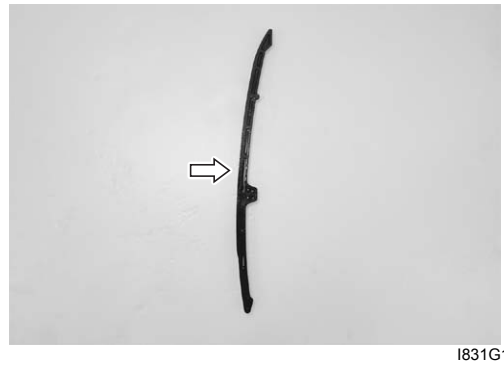
Install the cam chain guide in the reverse order of removal.

Cam Chain Guide Inspection

B831G21406022

Inspect the cam chain guide in the following procedures:

- Remove the cam chain guides. Refer to “Cam Chain Guide Removal and Installation (Page 1D-30)”.
- Check the contacting surface of the cam chain guide. If it is worn or damaged, replace it with a new one.



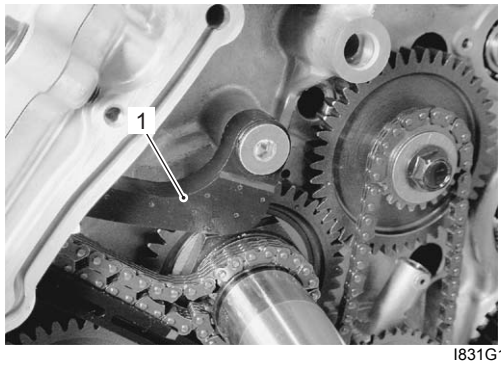
I831G1140143-01

Cam Chain Tensioner Inspection

B831G21406023

Inspect the cam chain tensioner in the following procedures:

1) Remove the cylinder head. Refer to “Engine Top Side Disassembly (Page 1D-17)”.
2) Remove the starter driven gear. Refer to “Engine Bottom Side Disassembly (Page 1D-45)”.
3) Remove the cam chain tensioner (1).



I831G1140144-02

4) Check the contacting surface of the cam chain tensioner. If it is worn or damaged, replace it with a new one.

I831G1140145-01

5) Install the cam chain tensioner.
6) Reinstall the starter driven gear. Refer to “Engine Bottom Side Assembly (Page 1D-51)”.
7) Reinstall the cylinder head cover. Refer to “Engine Top Side Assembly (Page 1D-21)”.
8) Reinstall the removed parts.

Cylinder Head Disassembly and Assembly

B831G21406024

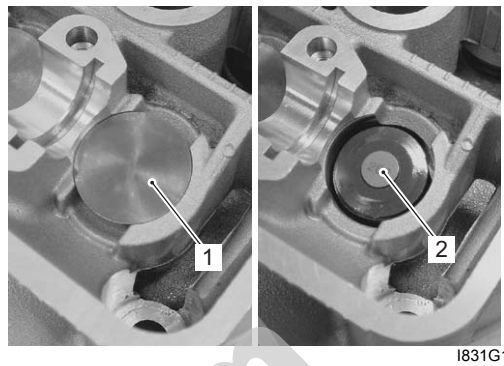
Refer to “Engine Top Side Disassembly (Page 1D-17)”.

⚠ CAUTION

Identify the position of each removed part. Organize the parts in their respective groups (i.e., intake, exhaust) so that they can be installed in their original locations.

Disassembly

1) Remove the tappet (1) and shim (2) by fingers or magnetic hand.



I831G1140188-02

2) Using the special tools, compress the valve spring and remove the two cotter halves (3) from the valve stem.

⚠ CAUTION

To prevent damage of the tappet sliding surface with the special tool, use the sleeve protector.

Special tool
TOOL (A): 09916–14510 (Valve spring compressor)
TOOL (B): 09916–14521 (Valve spring compressor attachment)

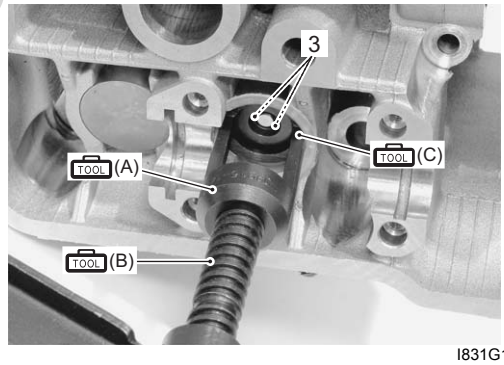
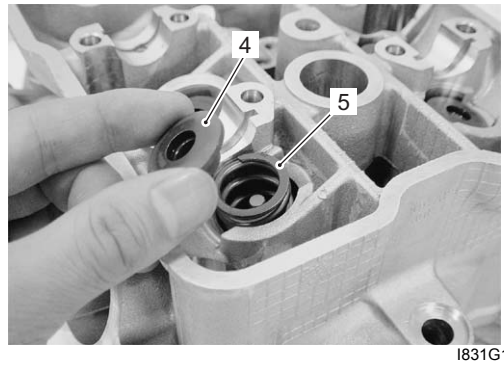
TOOL (C): 09919–28610 (Sleeve protector)



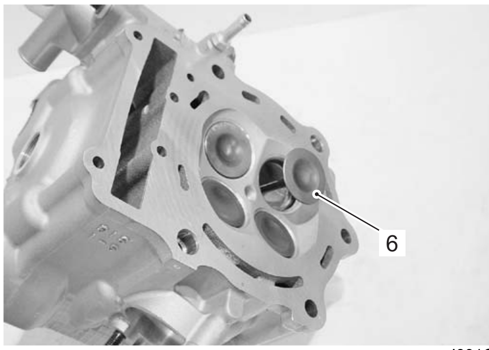
I831G1140146-02

3) Remove the valve spring retainer (4) and valve spring (5).



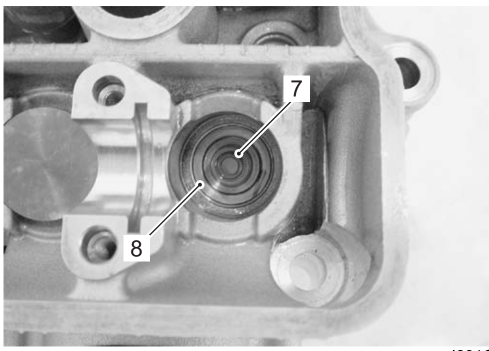
I831G1140147-01

4) Pull out the valve (6) from the combustion chamber side.



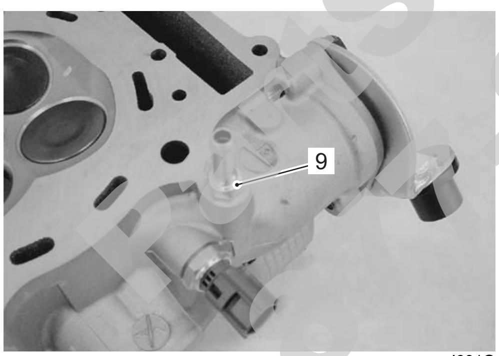
I831G1140148-01

5) Remove the oil seal (7) and spring seat (8).



I831G1140149-01

6) Remove the other valves in the same manner as described previously.
7) Remove the bypass union (9).

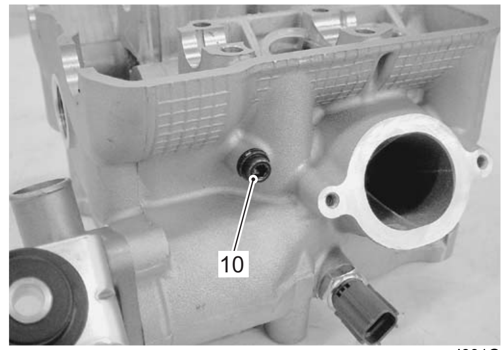


I831G1140150-01

8) Remove the intake pipe.

I831G1140151-01

9) Remove the oil gallery plug (cylinder head) (10).



I831G1140152-01

10) Remove the ECT sensor. Refer to "ECT Sensor Removal and Installation in Section 1C (Page 1C-4)".
11) Remove the thermostat. Refer to "Thermostat Removal and Installation in Section 1F (Page 1F-11)".

Assembly

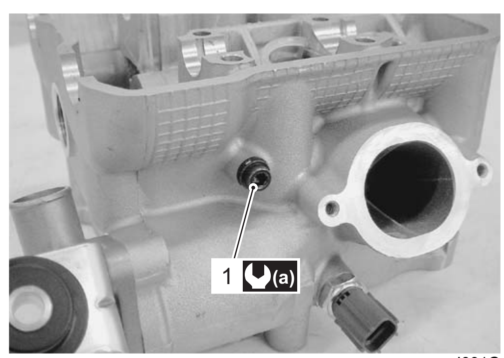
Assembly is in the reverse order of disassembly. Pay attention to the following points:

- Install the thermostat. Refer to "Thermostat Removal and Installation in Section 1F (Page 1F-11)".
- Instal the ECT sensor. Refer to "ECT Sensor Removal and Installation in Section 1C (Page 1C-4)".
- Tighten the oil gallery plug (1) (cylinder head) to the specified torque.

Tightening torque
Oil gallery plug (Cylinder head) (a): 10 N·m (1.0 kgf-m, 7.0 lb-ft)

⚠ CAUTION

Replace the gasket with new ones.



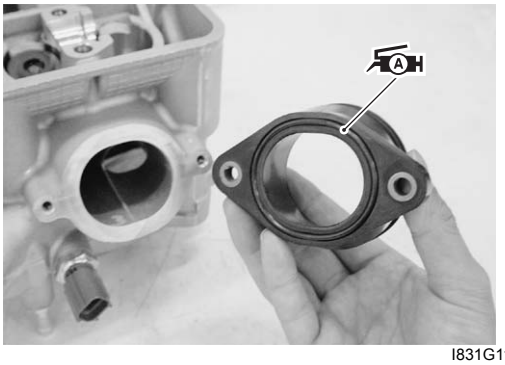
I831G1140153-02

- Apply grease to the O-ring of the intake pipe.

⚠ CAUTION

Replace the O-ring with new ones.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1140156-01

- Apply a small quantity of thread lock to the intake pipe mounting bolts and tighten them to the specified torque.

NOTE

Make sure that the "UP" mark faces up.

Tightening torque
Intake pipe bolt (b): 9 N·m (0.9 kgf-m, 6.5 lb-ft)

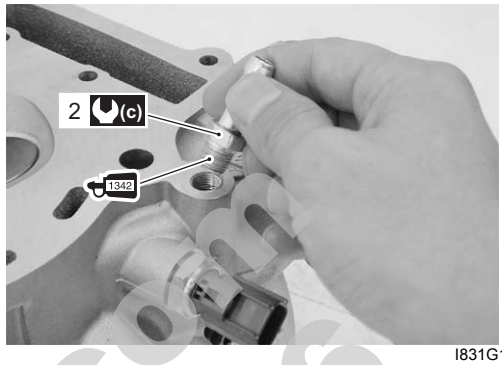
: Thread lock cement 99000–32050 (THREAD LOCK CEMENT 1342 or equivalent)

I831G1140157-02

- Apply thread lock to the water bypass union (2) and tighten it to the specified torque.

Tightening torque
Water bypass union (c): 12 N·m (1.2 kgf-m, 8.5 lb-ft)

: Thread lock cement 99000–32050 (THREAD LOCK CEMENT 1342 or equivalent)

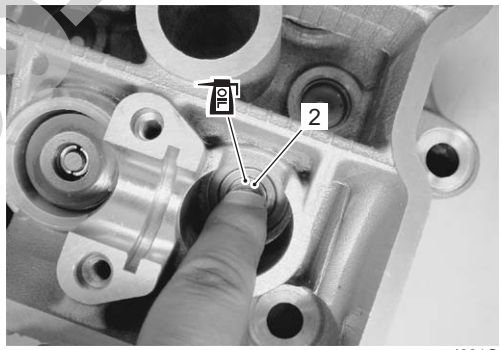


I831G1140158-04

- Install the valve spring seat.
- Apply engine oil to the oil seal (2), and press-fit it into position.

⚠ CAUTION

Do not reuse the removed oil seal.



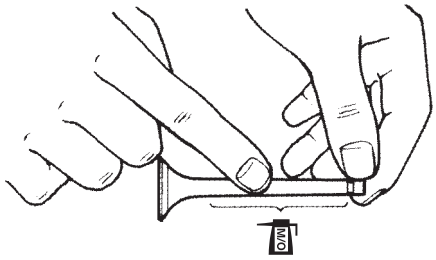
I831G1140159-05

- Insert the valve, with its stem coated with molybdenum oil all around and along the full stem length without any break.

⚠ CAUTION

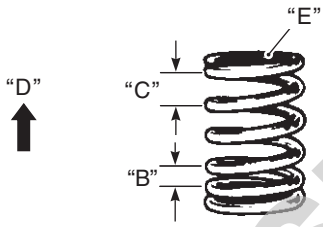
When inserting the valve, take care not to damage the lip of the oil seal.

M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)



I705H1140165-01

- Install the valve spring with the small-pitch portion "B" facing cylinder head.



I718H1140004-01

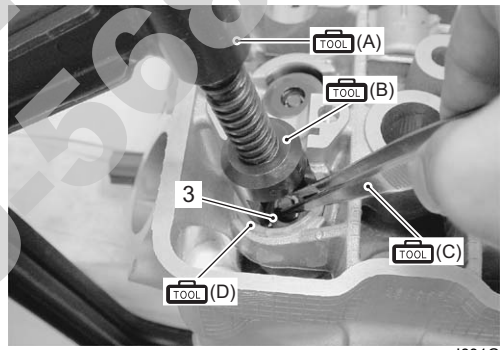
"B": Small-pitch portion	"D": UPWARD
"C": Large-pitch portion	"E": Paint

- Put on the valve spring retainer (3), and using the special tools, press down the spring, fit the cotter halves to the stem end, and release the lifter to allow the cotter halves to wedge in between retainer and stem.

⚠ CAUTION

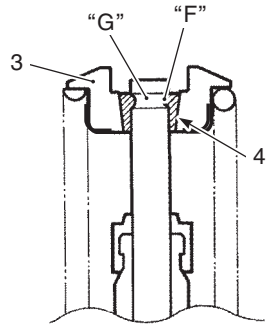
- **Be sure to restore each spring and valve to their original positions.**
- **Be careful not to damage the valve and valve stem when handling them.**
- **To prevent damage of the tappet sliding surface with the special tool, use the sleeve protector.**

Special tool
TOOL (A): 09916–14510 (Valve spring compressor)
TOOL (B): 09916–14910 (Valve spring compressor attachment)
TOOL (C): 09916–84511 (Tweezers)
TOOL (D): 09919–28610 (Sleeve protector)



I831G1140160-03

- Be sure that the rounded lip "F" of the cotter fits snugly into the groove "G" in the stem end.



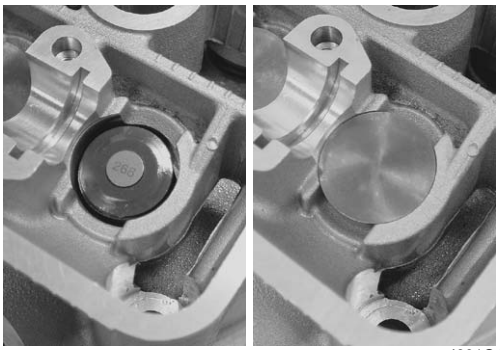
I831G1140161-02

3. Valve spring retainer	4. Cotter

- Install the other valves and springs in the same manner as described previously.
- Install the tappet shims and the tappets to their original positions.

NOTE

- **Apply engine oil to the stem end, shim and tappet before fitting them.**
- **When seating the tappet shim, be sure the figure printed surface faces the tappet.**



I831G1140162-01

Cylinder Head Related Parts Inspection

B831G21406025

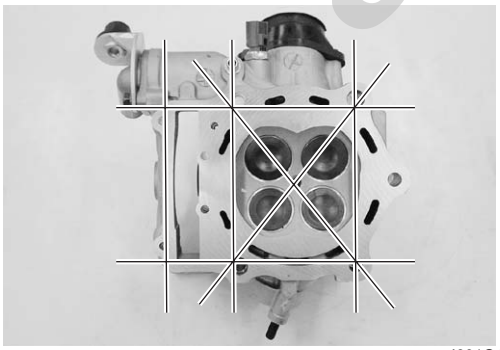
Refer to “Cylinder Head Disassembly and Assembly (Page 1D-31)”.

Cylinder Head Distortion

1) Decarbonize the combustion chambers.
2) Check the gasket surface of the cylinder head for distortion. Use a straightedge and thickness gauge. Take clearance readings at several places. If readings exceed the service limit, replace the cylinder head.

Special tool
TOOL : 09900–20803 (Thickness gauge)

Cylinder head distortion
Service limit: 0.05 mm (0.002 in)



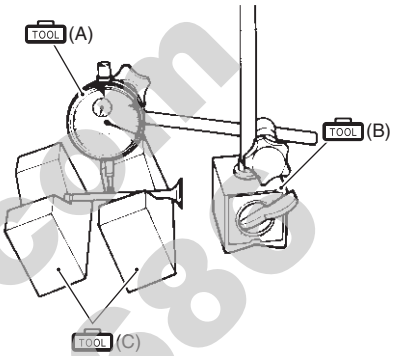
I831G1140163-01

Valve Stem Runout

Support the valve using V-blocks, as shown, and check its runout using the dial gauge. If the runout exceeds the service limit, replace the valve.

Special tool
TOOL (A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
TOOL (B): 09900–20701 (Magnetic stand)
TOOL (C): 09900–21304 (V-block (100 mm))

Valve stem runout (IN. & EX.)
Service limit: 0.05 mm (0.002 in)



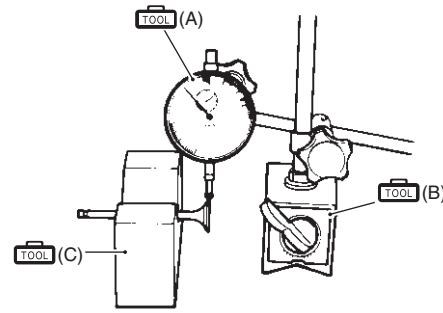
I649G1140231-03

Valve Head Radial Runout

Place the dial gauge at a right angle to the valve head face and measure the valve head radial runout. If it measures more than the service limit, replace the valve.

Special tool
TOOL (A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
TOOL (B): 09900–20701 (Magnetic stand)
TOOL (C): 09900–21304 (V-block (100 mm))

Valve head radial runout (IN. & EX.)
Service limit: 0.03 mm (0.001 in)

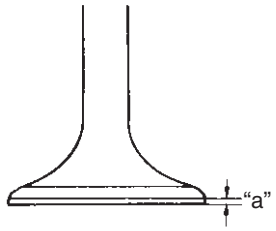


I649G1140232-03

Valve Face Wear
Visually inspect each valve face for wear. Replace any valve with an abnormally worn face. The thickness of the valve face decreases as the face wears. Measure the valve head “a”. If it is out of specification replace the valve with a new one.

Special tool
TOOL : 09900–20101 (Vernier calipers (1/15 mm, 150 mm))

Valve head thickness “a” (IN. & EX.)
Service limit: 0.5 mm (0.02 in)

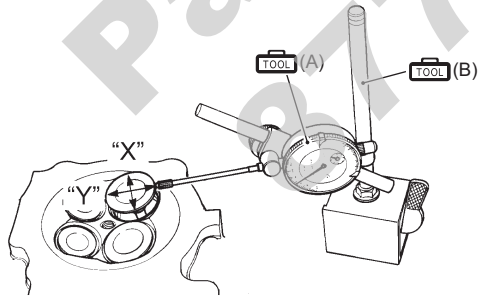


I649G1140233-02

Valve Stem Deflection
Lift the valve about 10 mm (0.39 in) “a” from the valve seat. Measure the valve stem deflection in two directions, “X” and “Y”, perpendicular to each other. Position the dial gauge as shown. If the deflection exceeds the service limit, then determine whether the valve or the guide should be replaced with a new one.

Special tool
TOOL (A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
TOOL (B): 09900–20701 (Magnetic stand)

Valve stem deflection (IN. & EX.)
Service limit: 0.35 mm (0.014 in)



I831G1140164-02

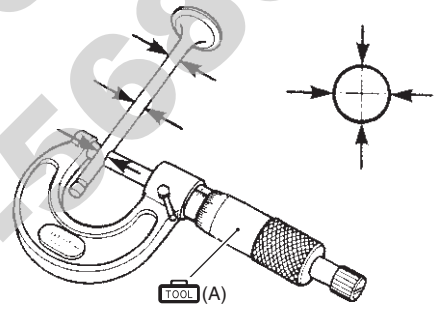
Valve Stem Wear
Measure the valve stem O.D. using the micrometer. If it is out of specification, replace the valve with a new one. If the valve stem O.D. is within specification but the valve stem deflection is not, replace the valve guide. After replacing the valve or valve guide, recheck the deflection.

Special tool
TOOL (A): 09900–20205 (Micrometer (0 – 25 mm))

Valve stem O.D.
Standard (IN.): 5.475 – 5.490 mm (0.2156 – 0.2161 in)
Standard (EX.): 5.455 – 5.470 mm (0.2148 – 0.2154 in)

NOTE

If valve guides have to be removed for replacement after inspecting related parts, carry out the steps shown in valve guide replacement. Refer to “Valve Guide Replacement (Page 1D-38)”.



I718H1140122-01

Valve Spring

The force of the coil spring keeps the valve seat tight. A weakened spring results in reduced engine power output and often accounts for the chattering noise coming from the valve mechanism.

Check the valve springs for proper strength by measuring their free length and also by the force required to compress them. If the spring length is less than the service limit or if the force required to compress the spring does not fall within the specified range, replace the valve spring.

Special tool

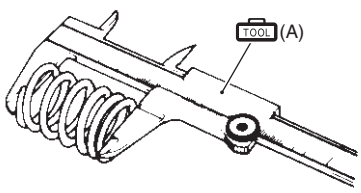
TOOL (A): 09900–20101 (Vernier calipers (1/15 mm, 150 mm))

Valve spring free length (IN. & EX.)

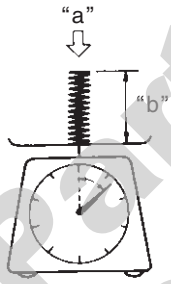
Service limit: 46.1 mm (1.81 in)

Valve spring tension (IN. & EX.)

Standard: 182 – 210 N (18.6 – 21.4 kgf, 41.0 – 47.2 lbs)/36.35 mm (1.43 in)



I649G1140237-03



I649G1140238-03

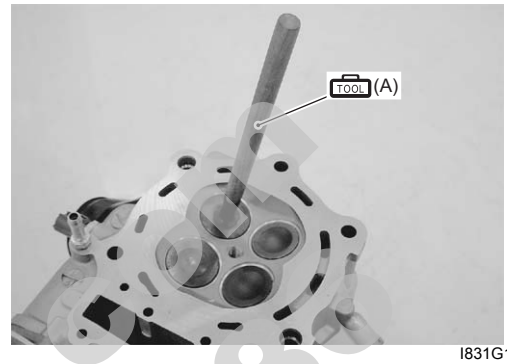
Tension “a”	Length “b”
182 – 210 N (18.6 – 21.4 kgf, 41.0 – 47.2 lbs)	36.35 mm (1.43 in)

Valve Seat Width

1) Visually check for valve seat width on each valve face. If the valve face has worn abnormally, replace the valve.
2) Coat the valve seat with a red lead (Prussian Blue) and set the valve in place.
3) Rotate the valve with light pressure.

Special tool

TOOL (A): 09916–10911 (Valve lapper set)

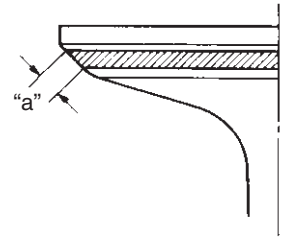


I831G1140165-01

4) Check that the transferred red lead (blue) on the valve face is uniform all around and in center of the valve face.
If the seat width “a” measured exceeds the standard value, or seat width is not uniform reface the seat using the seat cutter. Refer to “Valve Seat Repair (Page 1D-40)”.

Valve seat width “a” (IN. & EX.)

Standard: 0.9 – 1.1 mm (0.035 – 0.043 in)



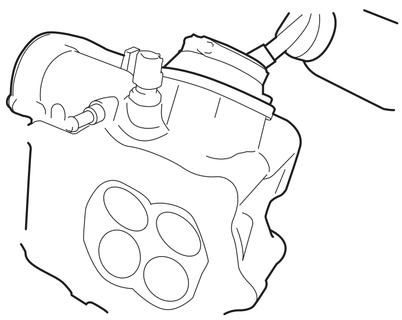
I649G1140246-02

Valve Seat Sealing Condition

1) Clean and assemble the cylinder head and valve components.
2) Fill the intake and exhaust ports with gasoline to check for leaks. If any leaks occur, inspect the valve seat and face for burrs or other things that could prevent the valve from sealing. Refer to "Valve Seat Repair (Page 1D-40)".

⚠ WARNING

Always use extreme caution when handling gasoline.



I831G1140334-02

NOTE

After servicing the valve seats, be sure to check the valve clearance after the cylinder head has been reinstalled. Refer to "Valve Clearance Inspection and Adjustment in Section 0B (Page 0B-4)".

Valve Guide Replacement

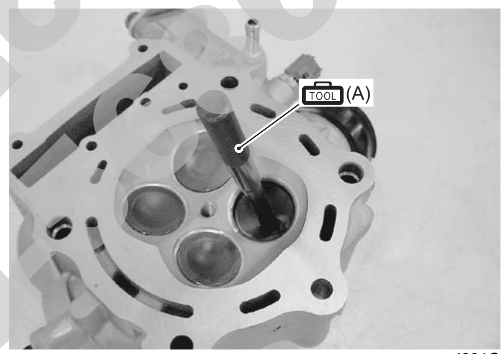
B831G21406026

1) Remove the cylinder head. Refer to "Engine Top Side Disassembly (Page 1D-17)".
2) Remove the valves. Refer to "Cylinder Head Disassembly and Assembly (Page 1D-31)".
3) Using the valve guide remover, drive the valve guide out toward the intake or exhaust camshaft side.

Special tool
TOOL (A): 09916–44910 (Valve guide remover/ installer)

NOTE

- **Discard the removed valve guide sub-assemblies.**
- **Only oversized valve guides are available as replacement parts. (Part No. 11115-32E70)**



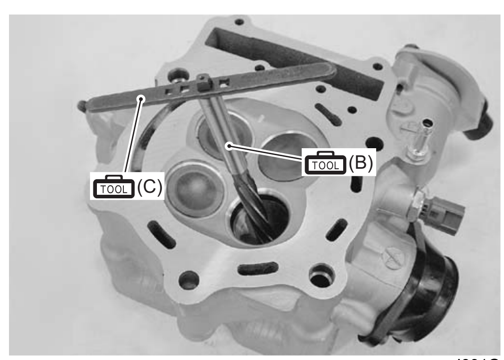
I831G1140166-01

4) Refinish the valve guide holes in the cylinder head using the reamer and handle.

⚠ CAUTION

When refinishing or removing the reamer from the valve guide hole, always turn it clockwise.

Special tool
TOOL (B): 09916–34580 (Valve guide reamer (10.8 mm))
TOOL (C): 09916–34542 (Reamer handle)



I831G1140167-01

5) Cool down the new valve guides in a freezer for about one hour and heat the cylinder head to 100 – 150 °C (212 – 302 °F) with a hot plate.

⚠ CAUTION

Do not use a burner to heat the valve guide hole to prevent cylinder head distortion.

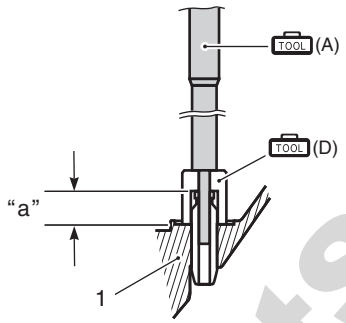
6) Apply engine oil to each valve guide and valve guide hole.

7) Drive the guide into the guide hole using the valve guide installer.

⚠ CAUTION

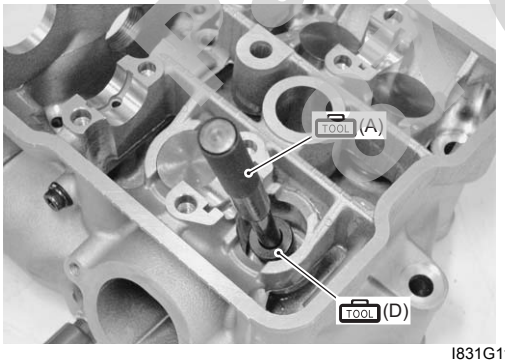
Failure to oil the valve guide hole before driving the new guide into place may result in a damaged guide or head.

Special tool
TOOL (A): 09916–44910 (Valve guide remover/ installer)
TOOL (D): 09916–57360 (Attachment)



I718H1140127-01

1. Cylinder head	"a": IN.: 14.5 mm (0.57 in) EX.: 12.5 mm (0.49 in)



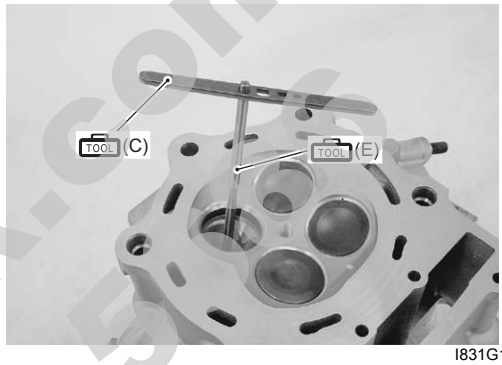
I831G1140168-01

8) After installing the valve guides, refinish their guiding bores using the reamer. Be sure to clean and oil the guides after reaming.

Special tool
TOOL (C): 09916–34542 (Reamer handle)
TOOL (E): 09916–34550 (Valve guide reamer (5.5 mm))

NOTE

- **Be sure to cool down the cylinder head to ambient air temperature.**
- **Insert the reamer from the combustion chamber and always turn the reamer handle clockwise.**



I831G1140169-01

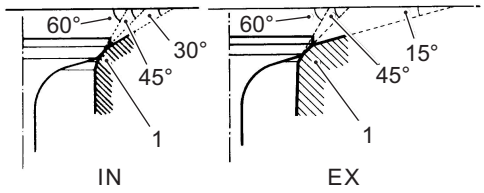
9) Reassemble the cylinder head. Refer to "Cylinder Head Disassembly and Assembly (Page 1D-31)".

10) Install the cylinder head assembly. Refer to "Engine Top Side Assembly (Page 1D-21)".

Valve Seat Repair

B831G21406027

The valve seats (1) for both the intake and exhaust valves are machined to three different angles. The seat contact surface is cut at 45°.



I831G1140170-02

	Intake	Exhaust
Seat angle	30°/45°/60°	15°/45°/60°
Seat width	0.9 – 1.1 mm (0.035 – 0.043 in)	←
Valve diameter	36 mm (1.42 in)	33 mm (1.30 in)
Valve guide I.D.	5.500 – 5.512 mm (0.2165 – 0.2170 in)	←

⚠ CAUTION

- **The valve seat contact area must be inspected after each cut.**
- **Do not use lapping compound after the final cut is made. The finished valve seat should have a velvety smooth finish but not a highly polished or shiny finish. This will provide a soft surface for the final seating of the valve which will occur during the first few seconds of engine operation.**

NOTE

After servicing the valve seats, be sure to check the valve clearance after the cylinder head has been reinstalled. Refer to "Valve Clearance Inspection and Adjustment in Section 0B (Page 0B-4)".

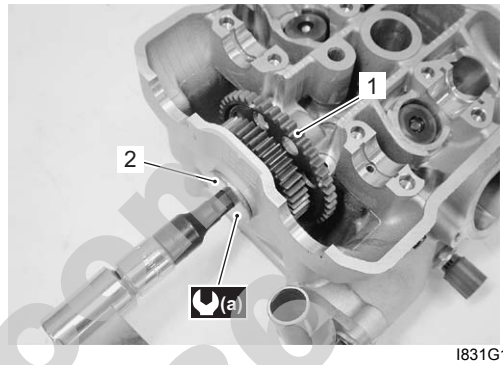
Cam Drive Idle Gear / Sprocket Thrust Clearance Inspection and Adjustment

B831G21406028

Inspection

- Install the cam drive idle gear/sprocket (1) and tighten the shaft (2) to the specified torque.

Tightening torque
Cam drive idle gear/sprocket shaft (a): 41 N·m (4.1 kgf-m, 29.5 lb-ft)

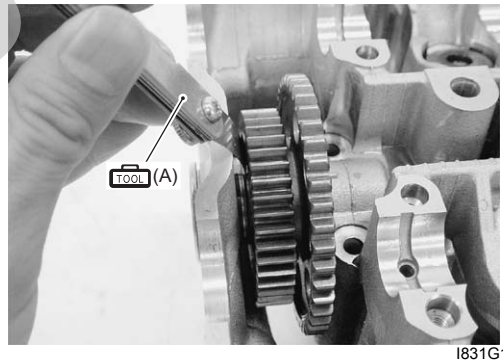


I831G1140171-01

- Measure the thrust clearance between the idle gear and shim by using a thickness gauge.

Special tool
TOOL (A): 09900–20803 (Thickness gauge)

Cam drive idle gear/sprocket thrust clearance
Standard: 0.15 – 0.27 mm (0.006 – 0.011 in)

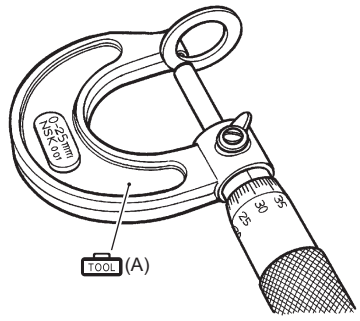


I831G1140172-01

Adjustment
If the thrust clearance is exceed the standard, adjust the thrust clearance by the following procedures:

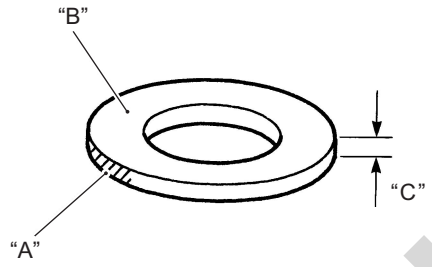
- Remove the shim, and measure its thickness with a micrometer.

Special tool
(A): 09900–20205 (Micrometer (0 – 25 mm))



I831G1140173-01

- Replace the sim with a other size.



I831G1140174-01

Yellow (09181-15181)	1.28 – 1.32 (0.050 – 0.052)
Light blue (09181-15176)	1.18 – 1.22 (0.046 – 0.048)
Light green (09181-15172)	1.08 – 1.12 (0.043 – 0.044)
Brown (09181-15166)	0.98 – 1.02 (0.039 – 0.040)
"J" mark (09181-15164)	0.88 – 0.92 (0.035 – 0.036)

- Recheck the thrust clearance.

Cylinder Disassembly and Assembly

B831G21406029

Disassembly
Refer to "Engine Top Side Disassembly (Page 1D-17)".

Assembly
Assembly is in the reverse order of disassembly. Pay attention to the following points:

- Apply engine coolant to O-ring of water union.

⚠ CAUTION

Replace the O-ring with a new one.

I831G1140175-01

- Tighten the water union bolt.

Cylinder Inspection

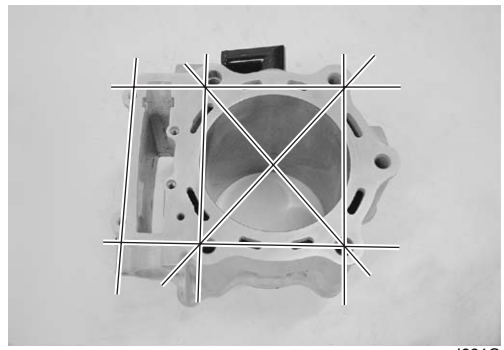
B831G21406030

Refer to "Engine Top Side Disassembly (Page 1D-17)".
Refer to "Engine Top Side Assembly (Page 1D-21)".

Cylinder Distortion
Check the gasket surface of the cylinder for distortion. Use a straightedge and thickness gauge. Take clearance readings at several places. If any reading exceeds the service limit, replace the cylinder.

Special tool
: 09900–20803 (Thickness gauge)

Cylinder distortion
Service limit: 0.05 mm (0.102 in)



I831G1140176-01

Cylinder Bore
Inspect the cylinder wall for any scratches, nicks or other damage. If any defects are found, replace the cylinder with a new one.
Measure the cylinder bore diameter at six places.

Special tool
(A): 09900–20530 (Cylinder gauge set)

Cylinder bore

Piston-to-cylinder Clearance
Refer to “Piston and Piston Ring Inspection (Page 1D-43)”.

Piston Ring Removal and Installation

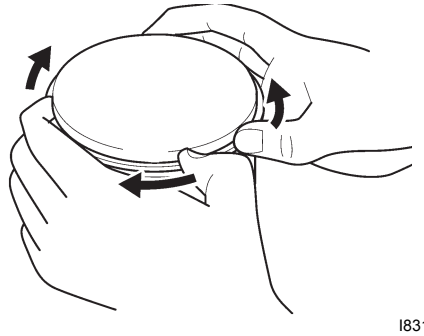
B831G21406031

Removal

1) Draw out the piston pin and remove the piston. Refer to “Engine Top Side Disassembly (Page 1D-17)”.
2) Carefully spread the ring opening with your thumbs and then push up the opposite side of the 1st ring to remove it.

NOTE

Do not expand the piston ring excessively since it is apt to be broken down.



I831G1140178-01

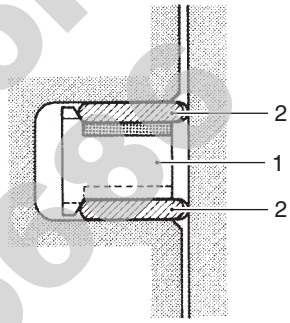
3) Remove the 2nd ring and oil ring in the same manner.

Installation

NOTE

- **When installing the piston ring, be careful not to damage the piston.**
- **Do not expand the piston ring excessively since it is apt to be broken down.**

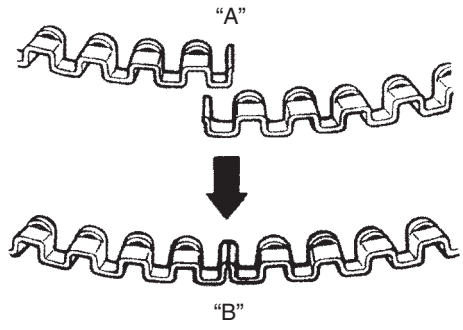
1) Install the piston rings in the order of the oil ring, second ring and top ring.
   a) The first member to go into the oil ring groove is a spacer (1).
   After placing the spacer, fit the two side rails (2).



I718H1140143-02

⚠ CAUTION

When installing the spacer, be careful so that the both edges are not overlapped.



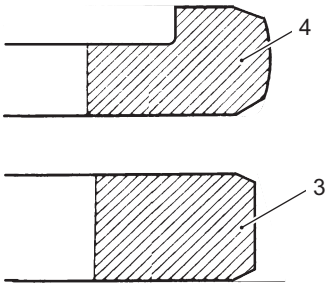
I705H1140170-02

“A”: INCORRECT	“B”: CORRECT

b) Install the 2nd ring (3) and 1st ring (4) to piston.

NOTE

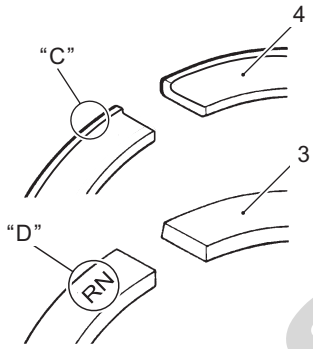
1st ring (4) and 2nd ring (3) differ in shape.



I831G1140179-02

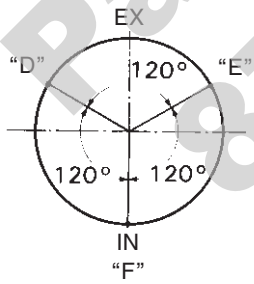
NOTE

Face the side with the edge "C" and stamped mark "D" upward when assembling.



I831G1140180-01

2) Position the gaps of the three rings and side rails as shown. Before inserting piston into the cylinder, check that the gaps are so located.



I831G1140181-03

"D":	2nd ring and lower side rail
"E":	Upper side rail

3) Install the piston and piston pin. Refer to "Engine Top Side Assembly (Page 1D-21)".

Piston and Piston Ring Inspection

B831G21406032

Refer to "Piston Ring Removal and Installation (Page 1D-42)".

Piston Diameter

Measure the piston diameter using the micrometer at 15 mm (0.6 in) "a" from the skirt end. If the piston diameter is less than the service limit, replace the piston.

Special tool

TOOL (A): 09900–20210 (Micrometer (100 – 125 mm))

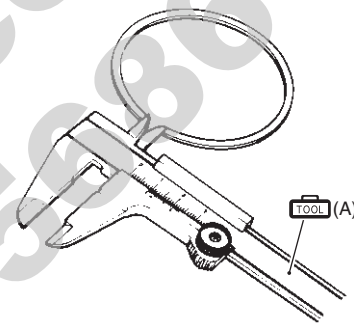
Piston Ring Free End Gap and Piston Ring End Gap
Measure the piston ring free end gap using vernier calipers. Next, fit the piston ring squarely into the cylinder and measure the piston ring end gap using the thickness gauge. If any of the measurements exceed the service limit, replace the piston ring with a new one.

Special tool
(A): 09900–20101 (Vernier calipers (1/15 mm, 150 mm))

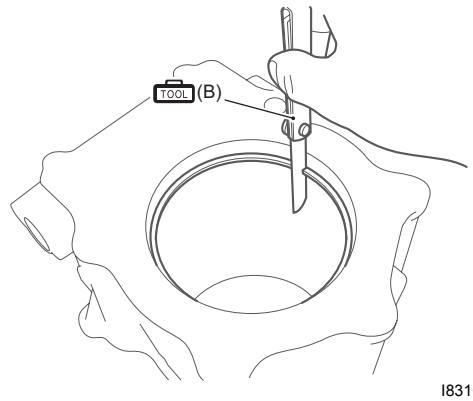
Piston ring free end gap
Service limit: (1st): 10.5 mm (0.41 in)
Service limit: (2nd): 11.7 mm (0.46 in)

Special tool
(B): 09900–20803 (Thickness gauge)

Piston ring end gap
Service limit: (1st): 0.50 mm (0.020 in)
Service limit: (2nd): 0.50 mm (0.020 in)



I649G1140265-03

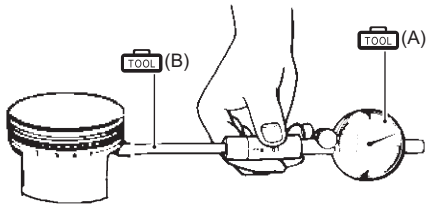


I831G1140184-02

Piston Pin and Pin Bore
Measure the piston pin bore inside diameter using the small bore gauge. If measurement is out of specification, replace the piston.

Special tool
(A): 09900–20602 (Dial gauge (1/1000 mm, 1 mm))
(B): 09900–22403 (Small bore gauge (18 – 35 mm))

Piston pin bore I.D.
Service limit: 23.030 mm (0.9067 in)



I831G1140185-02

Measure the piston pin outside diameter at three positions using the micrometer. If any of the measurements are out of specification, replace the piston pin.

Special tool
(C): 09900–20205 (Micrometer (0 – 25 mm))

Piston pin O.D.
Service limit: 22.980 mm (0.9047 in)

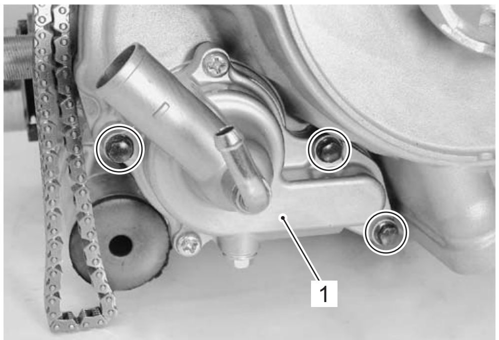
Water Pump

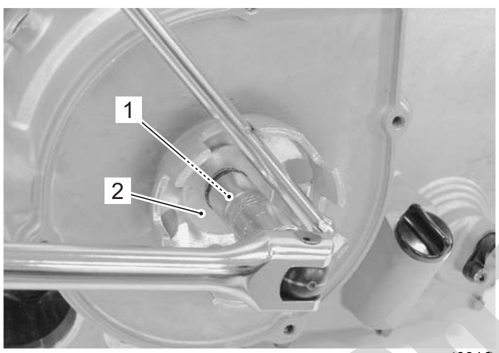
Remove the water pump (1).



I831G1140192-01

Starter Cup

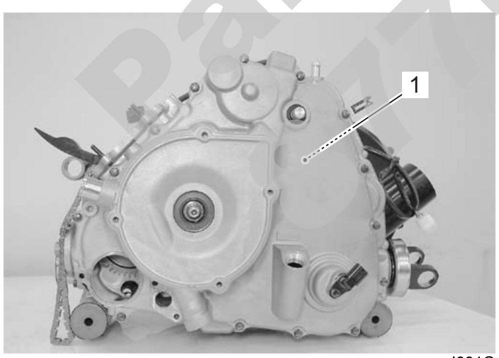
1) Remove the starter cup nut (1) with a suitable bar.
2) Remove the starter cup (2).



I831G1140193-01

Generator

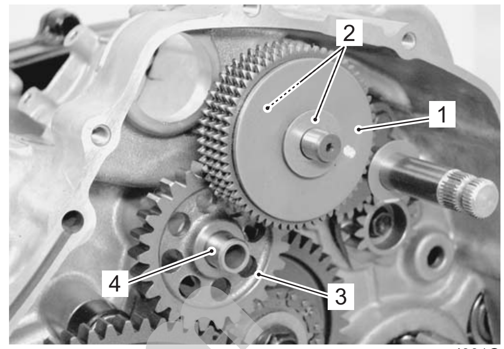
Remove the generator component parts (1). Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)”.



I831G1140194-01

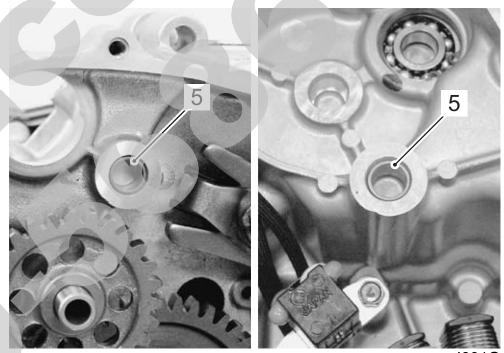
Starter Torque Limiter / Starter Idle Gear

1) Remove the starter torque limiter (1) with the washers (2).
2) Remove the starter idle gear (3) and shaft (4).



I831G1140196-02

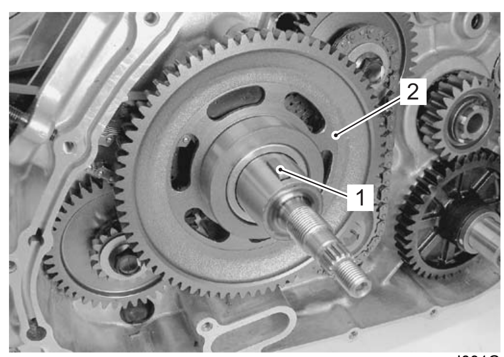
3) Remove the bushings (5) from the crankcase and generator cover.



I831G1140197-01

Starter Driven Gear

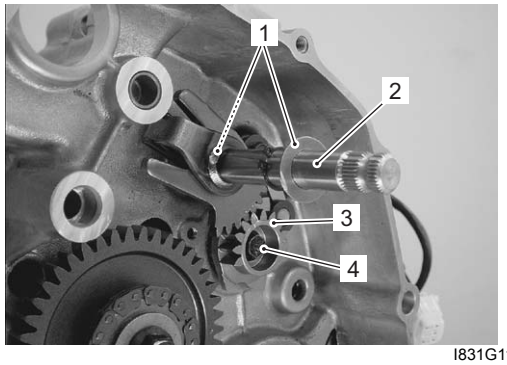
Remove the key (1) and starter driven gear (2).



I831G1140195-01

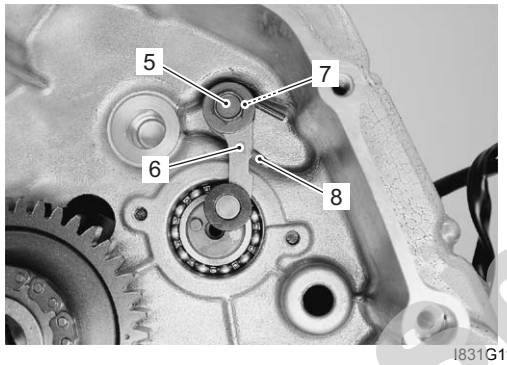
Gear Shift System

1) Remove the washers (1) and gearshift shaft (2).
2) Remove the cam driven gear (3) by removing its bolt (4).



I831G1140198-02

3) Remove the gear shift cam stopper bolt (5) and gear shift cam stopper (6), washer (7) and return spring (8).

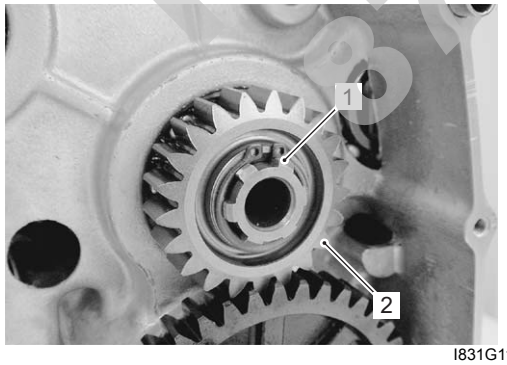


I831G1140199-01

Transfer Output Drive Gear

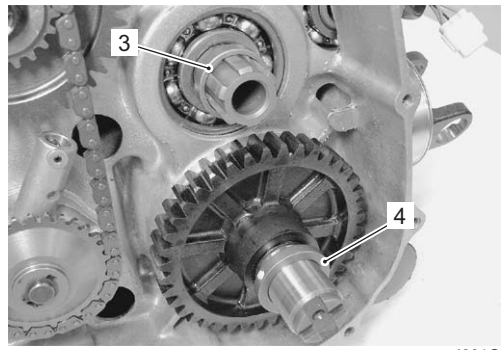
1) Remove the snap ring (1) and transfer output drive gear (2).

Special tool
TOOL : 09900–06107 (Snap ring pliers)



I831G1140203-01

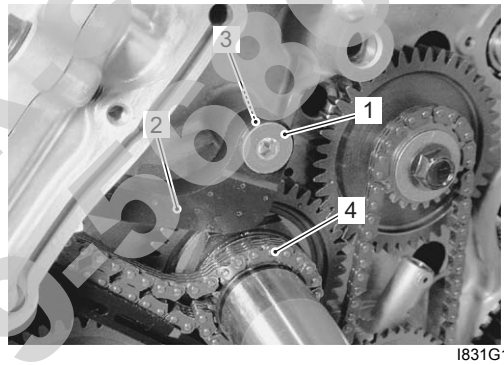
2) Remove the drive gear spacer (3) and output shaft spacer (4).



I831G1140204-01

Cam Chain / Cam Chain Tensioner

1) Remove the cam chain tensioner bolt (1), cam chain tensioner (2) and washer (3).
2) Remove the cam chain (4).



I831G1140205-01

Oil Pump

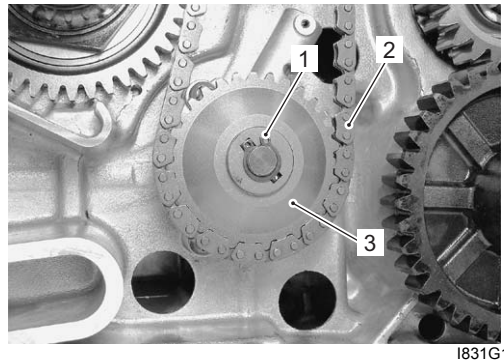
1) Remove the snap ring (1).

NOTE

Do not drop the snap ring (1) into the crankcase.

Special tool
TOOL : 09900–06107 (Snap ring pliers)

2) Remove the oil pump drive chain (2) and oil pump driven gear (3) from the oil pump.

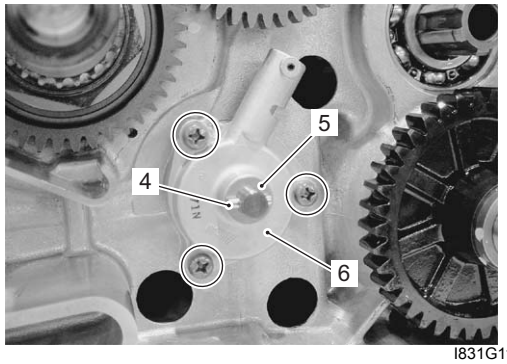


I831G1140207-01

3) Remove the pin (4) and washer (5).
4) Remove the oil pump (6).

NOTE

Do not drop the pin (4) and washer (5) into the crankcase.

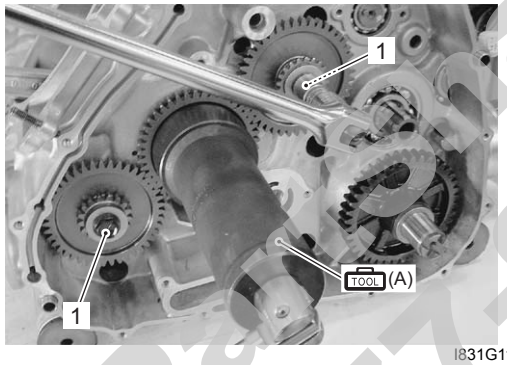


I831G1140209-01

Balancer Shaft Drive / Driven Gear

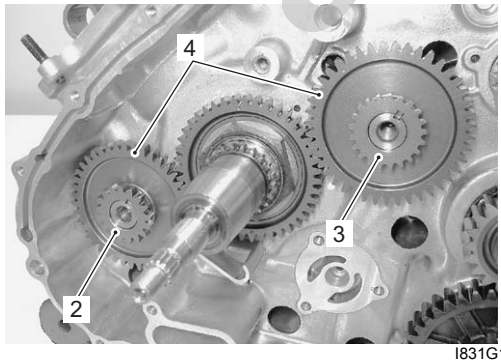
1) Remove the balancer shaft driven gear bolts (1) by holding the crankshaft with the special tool.

Special tool
TOOL : 09924–52460 (Socket (52 mm))



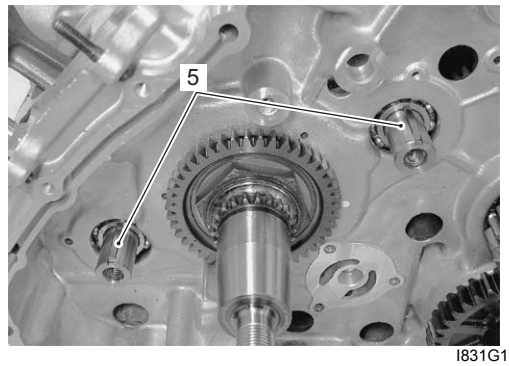
I831G1140210-01

2) Remove the water pump drive gear (2) and oil pump drive gear (3).
3) Remove the crank balancer shaft driven gears (4).



I831G1140211-01

4) Remove the keys (5).



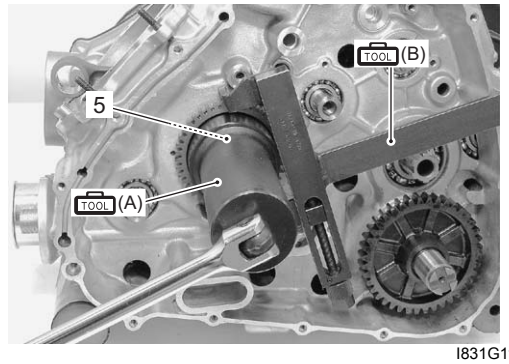
I831G1140212-01

5) Unlock the crank balancer drive gear nut.

I831G1140213-02

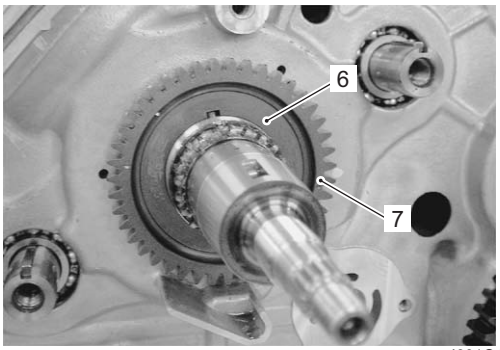
6) Remove the crank balancer drive gear nut (5) with the special tools.

Special tool
TOOL (A): 09924–52460 (Socket (52 mm))
TOOL (B): 09920–53740 (Clutch sleeve hub holder)
TOOL : 09920–31020 (Extension handle)



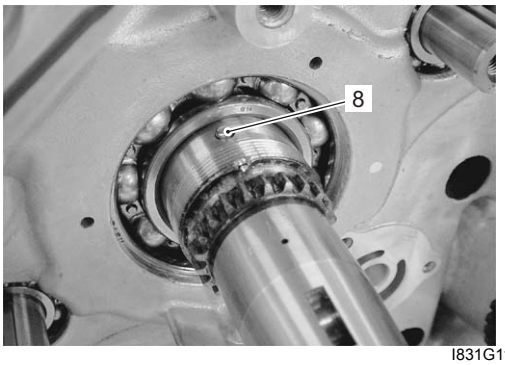
I831G1140214-01

7) Remove the washer (6) and crank balancer drive gear (7).



I831G1140215-01

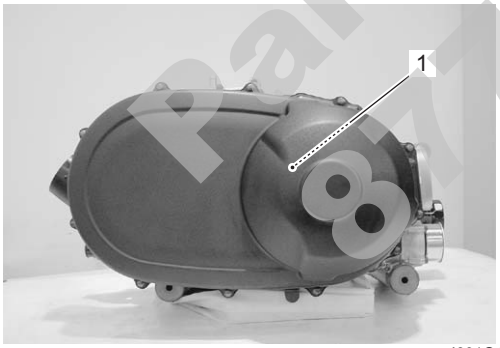
8) Remove the pin (8).



I831G1140216-01

Automatic Transmission

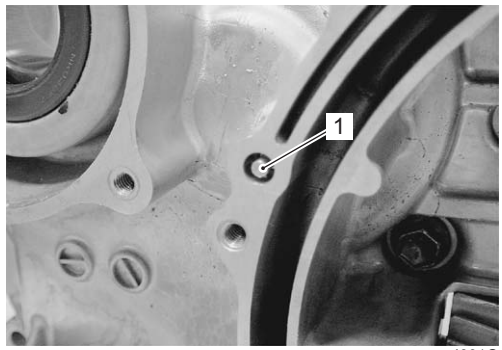
Remove the automatic component parts (1). Refer to "V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)" and "Clutch Shoe Removal and Installation in Section 5A (Page 5A-16)".



I831G1140217-01

Oil Jet

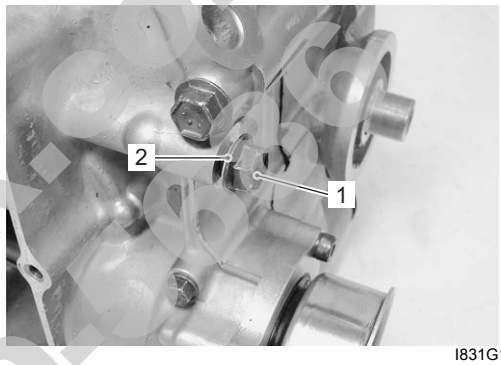
Remove the oil jet (1) from crankcase.



I831G1140218-01

Oil Gallery Plug

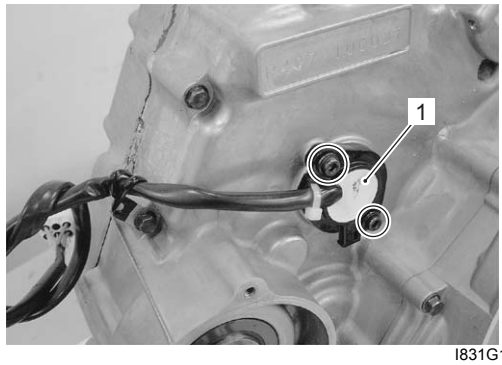
Remove the oil gallery plug (1) and gasket (2).



I831G1140219-01

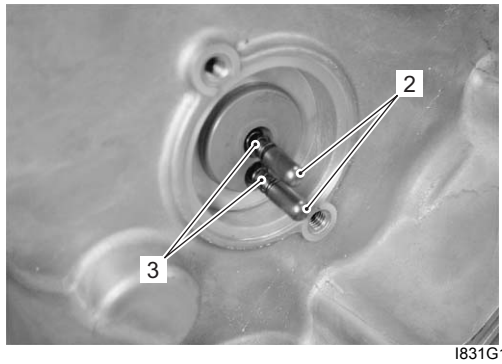
Gear Position Switch

1) Remove the gear position switch (1).



I831G1140220-01

2) Remove the gear position switch contacts (2) and its springs (3).



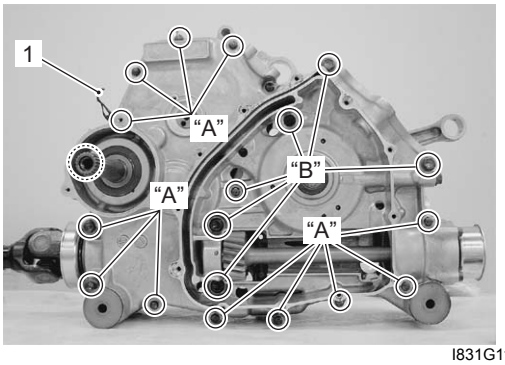
I831G1140221-01

Crankcase

1) Remove the crankcase bolts “A” and clamp (1).
2) Remove the crankcase bolts “B”.

NOTE

Loosen the crankcase bolts diagonally with the smaller sizes first.



I831G1140222-02

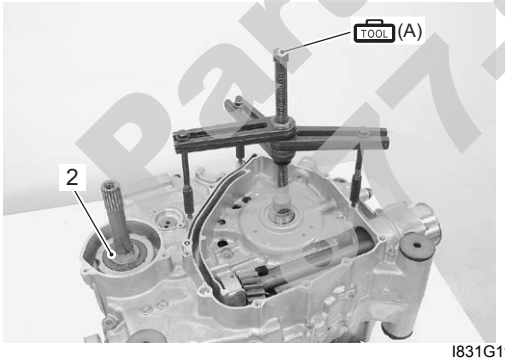
3) Separate the crankcase with the special tool.

NOTE

- **The crankcase separator plate is parallel with the end face of the crankcase.**
- **The crankshaft must remain in the left crankcase half.**

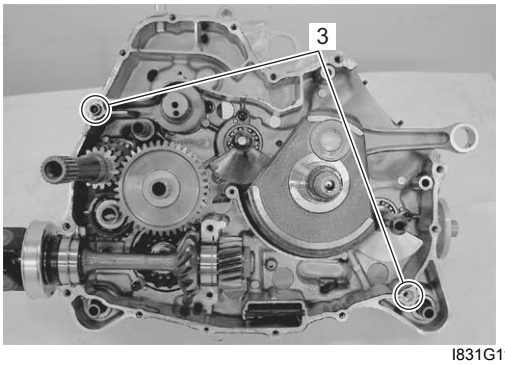
Special tool
TOOL (A): 09920–13120 (Crankcase separating tool)

4) Remove the collar (2).



I831G1140224-01

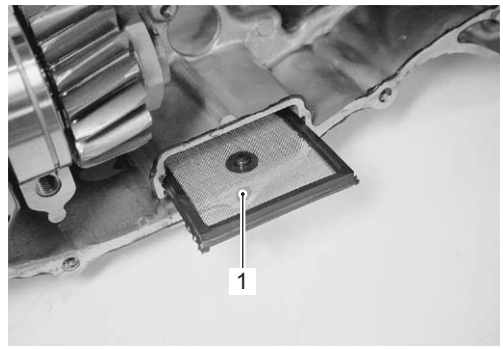
5) Remove the dowel pins (3).



I831G1140225-01

Oil Strainer

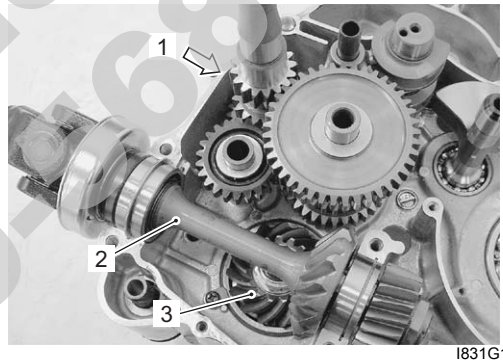
Remove the oil strainer (1).



I831G1140229-01

Transfer / Rear Output Shaft / Rear Output Shaft Bevel Gear

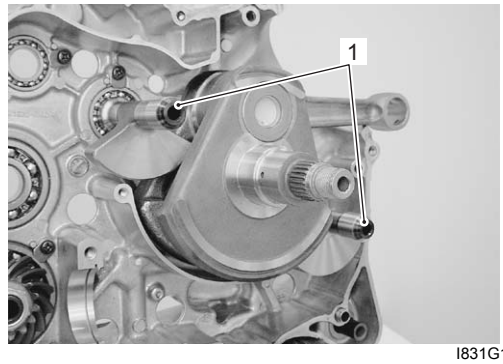
Remove the transfer component parts (1), rear output shaft (2) and rear output shaft bevel gear component parts (3). Refer to “Transfer Removal and Installation in Section 3C (Page 3C-3)”.



I831G1140230-03

Crank Balancer

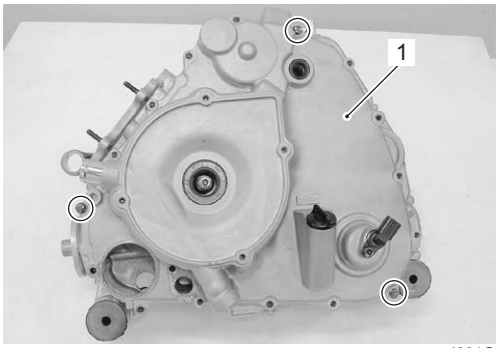
Remove the crank balancer shafts (1).



I831G1140233-01

Crankshaft

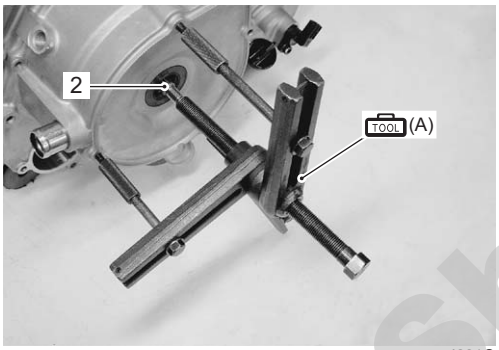
1) Install the removed generator cover (1) and tighten the bolts at three places.



I831G1140234-01

2) Remove the crankshaft (2) with the special tool.

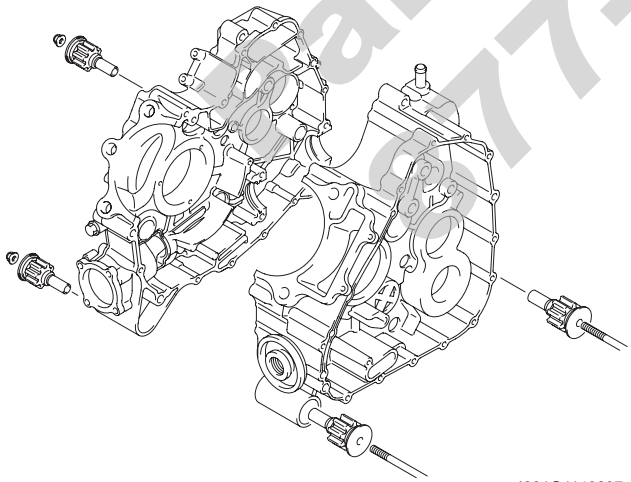
Special tool
TOOL (A): 09920–13120 (Crankcase separating tool)



I831G1140236-01

Engine Mount Bushing

Remove the engine mount bushings if necessary.



I831G1140237-01

Engine Bottom Side Assembly

B831G21406034

Assemble the engine bottom side in the reverse order of disassembly. Pay attention to the following points:

NOTE

Apply engine oil to each running and sliding part before reassembling.

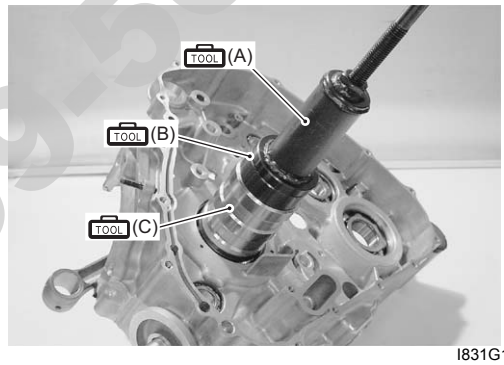
Crankshaft

⚠ CAUTION

Never fit the crankshaft into the crankcase by striking it with a plastic mallet.
Always use the special tool, otherwise the accuracy of the crankshaft alignment will be affected.

- Install the crankshaft to left crankcase with the special tools.

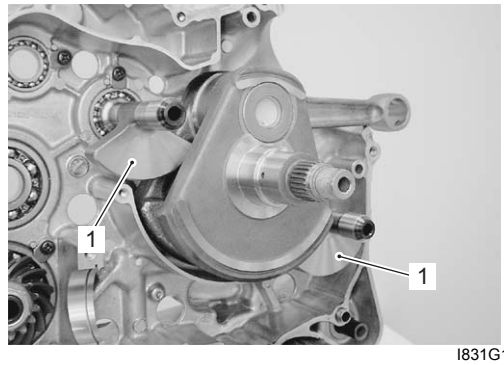
Special tool
TOOL (A): 09910–32812 (Crankshaft installer)
TOOL (B): 09910–32860 (Attachment)
TOOL (C): 09941–53610 (Front fork installer hammer)



I831G1140239-01

Crank Balancer

- Install the crank balancer shafts (1).



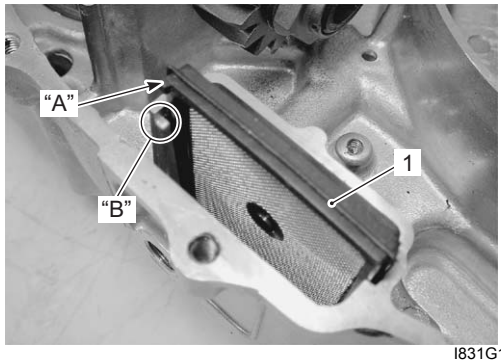
I831G1140241-01

Oil Strainer

- Install the oil strainer (1).

NOTE

Fit the convex part "A" of the oil strainer in the concave part "B" of the crankcase.



I831G1140246-01

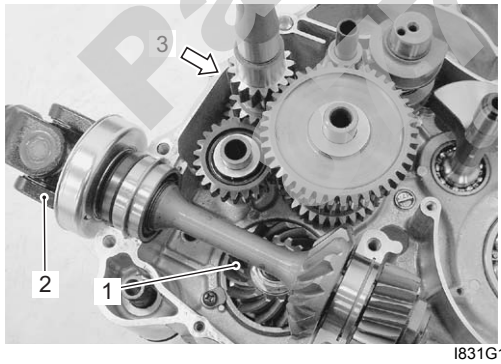
Transfer / Rear Output Shaft / Rear Output Shaft Bevel Gear

- Install the rear output shaft bevel gear (1) and rear output shaft (2). Refer to "Transfer Removal and Installation in Section 3C (Page 3C-3)".

NOTE

Measure the backlash before installing the transfer component parts (3). Refer to "Rear Output Shaft Drive Bevel Gear Shim Inspection and Adjustment in Section 3D (Page 3D-11)".

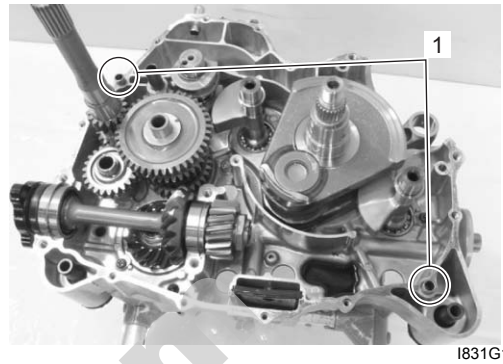
- Install the transfer component parts (3). Refer to "Transfer Removal and Installation in Section 3C (Page 3C-3)".



I831G1140247-02

Crankcase

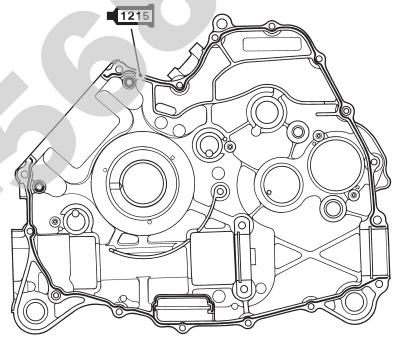
- Wipe the crankcase mating surface (both surfaces).
- Insert the dowel pins (1) onto the left crankcase.
- Apply engine oil to the conrod big end and each gear.



I831G1140248-03

- Apply bond to the mating surface of the right crankcase.

1215 : Sealant 99000–31110 (SUZUKI BOND No.1215 or equivalent)

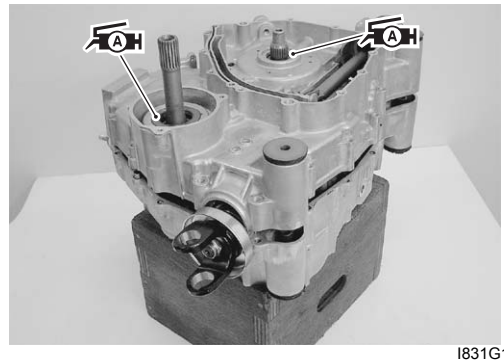


I831G1140252-01

- Apply grease to the oil seals.

A : Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

- Assemble the crankcase with in few minutes.



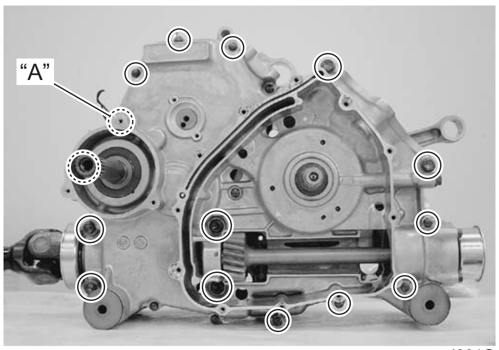
I831G1140250-01

- Tighten the crankcase bolts a little at a time to equalize the pressure.
- Tighten the crankcase bolts to the specified torque.

NOTE

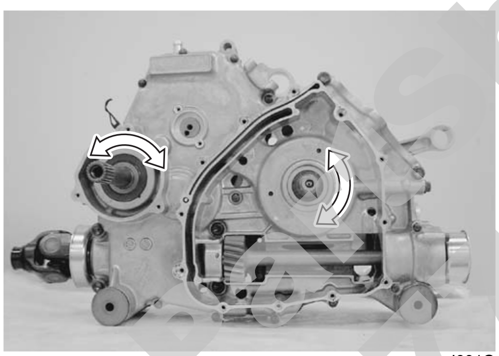
- **Tighten the larger diameter crankcase bolts first and then smaller ones diagonally and evenly.**
- **Fit the cramp to the bolt “A”.**

Tightening torque
Crankcase bolt (M6): 10 N·m (1.0 kgf-m, 7.0 lb-ft)
Crankcase bolt (M8): 26 N·m (2.6 kgf-m, 19.0 lb-ft)



I831G1140253-01

- After the crankcase bolts have been tightened, check if the each shaft rotate smoothly.



I831G1140255-01

I831G1140256-02

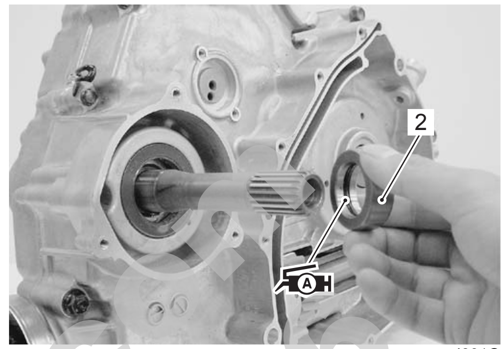
- Apply grease to the O-ring.

⚠ CAUTION

Use the new O-ring to prevent oil leakage.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

- Install the collar (2).



I831G1140258-03

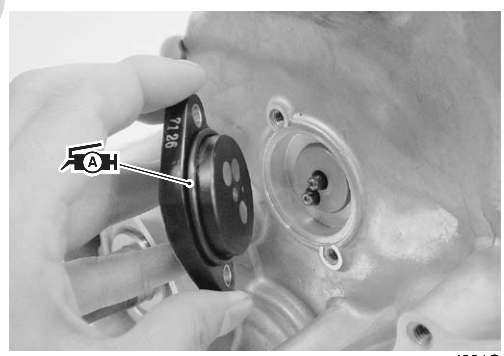
Gear Position Switch

- Install each gear shift switch contact and spring.
- Apply grease to the O-ring.

⚠ CAUTION

Replace the O-ring with a new one.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

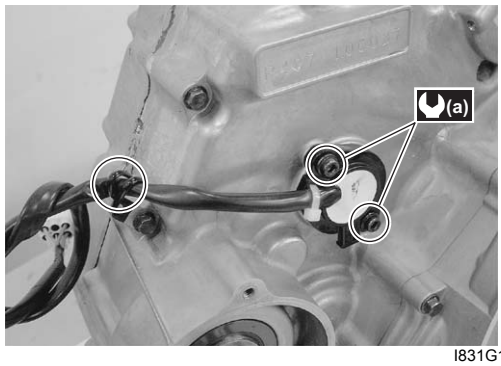


I831G1140260-01

- Tighten the gear position switch mounting bolts.

⚠ CAUTION

- **Be careful not to tighten the bolts too much.**
- **Clamp the read wire firmly.**



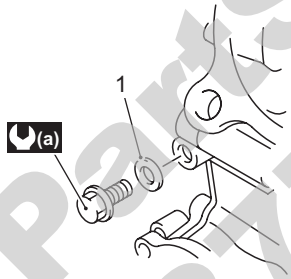
I831G1140261-03

Oil Gallery Plug
Install the oil gallery plug to the specified torque.

⚠ CAUTION

Use a new gasket (1) to prevent oil pressure leak.

Tightening torque
Main oil gallery plug (a): 18 N·m (1.8 kgf-m, 13.0 lb-ft)



I831G1140339-01

Oil Jet
When installing the oil jet, apply grease to the O-ring.

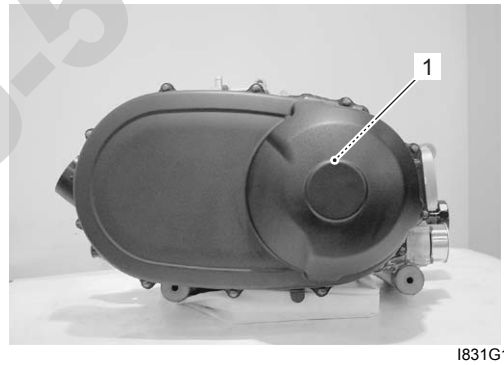
⚠ CAUTION

Use a new O-ring to prevent oil pressure leak.

I831G1140262-01

Automatic Transmission

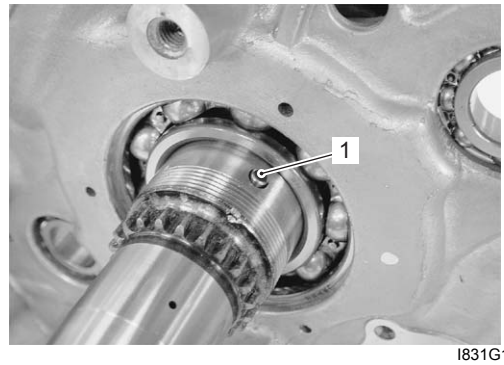
- Install the automatic transmission component parts (1). Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)” and “Clutch Shoe Removal and Installation in Section 5A (Page 5A-16)”.



I831G1140263-01

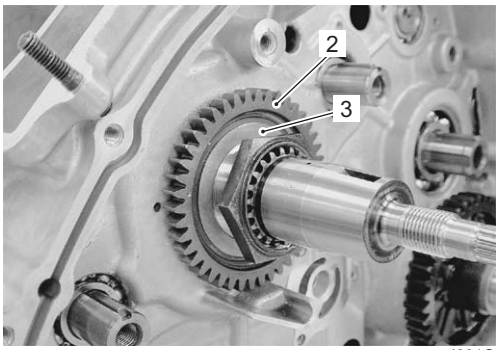
Crank Balancer Drive / Driven Gear

- Install the pin (1).



I831G1140264-02

- Install the crank balancer drive gear (2) and washer (3).



I831G1140265-02

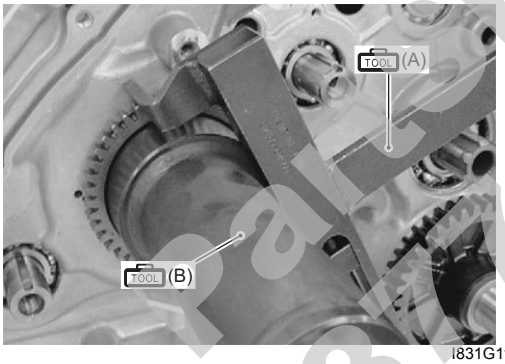
- Hold the crank balancer drive gear with the special tools and tighten the drive gear nut to the specified torque with the special tool.

⚠ CAUTION

Do not reuse the balancer drive gear nut.

Special tool
(A): 09920–53740 (Clutch sleeve hub holder)
(B): 09924–52460 (Socket (52 mm))
: 09920–31020 (Extension handle)

Tightening torque
Crank balancer drive gear nut: 150 N·m (15.0 kgf-m, 108.5 lb-ft)

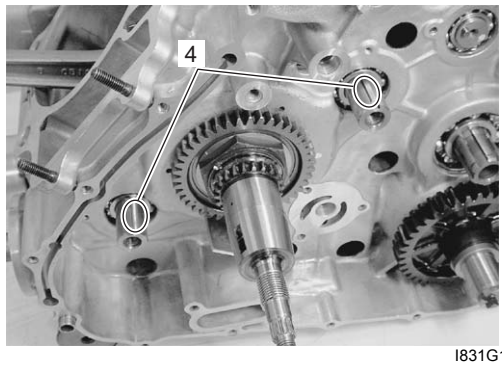


I831G1140266-02

- Lock the crank balancer drive gear nut with a center punch.

I831G1140267-02

- Install the keys (4).

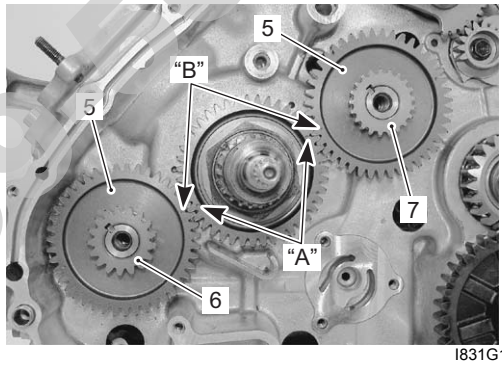


I831G1140268-01

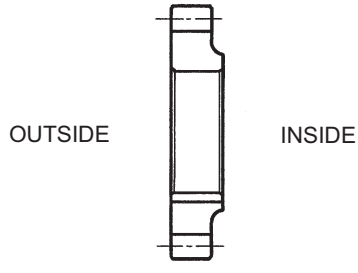
- Install the crank balancer driven gears (5) water pump drive gear (6) and oil pump drive gear (7).

NOTE

- **Align the punch mark “A” of crank balancer drive gear with the punch marks “B” of each crank balancer driven gear as shown.**
- **Be careful direction of the oil pump drive gear.**



I831G1140269-01



I831G1140270-02

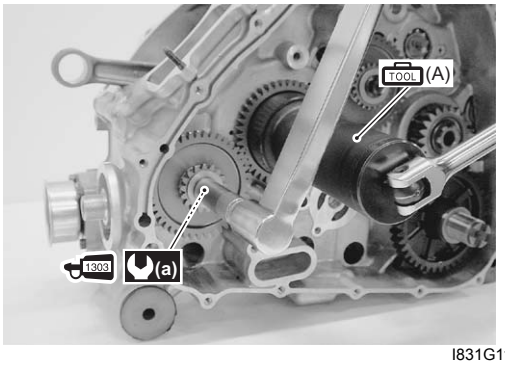
- Apply thread lock to the balancer driven gear bolts.

  1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

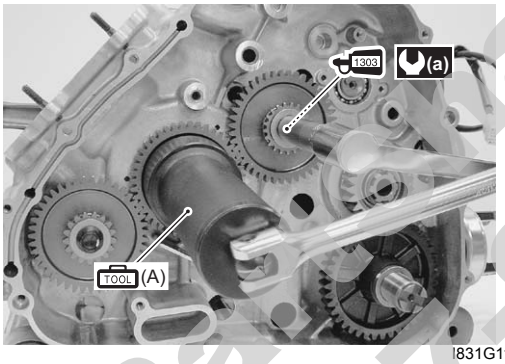
- Hold the crank balancer drive gear nut with the special tool and tighten bolts to the specified torque.

  Special tool
  TOOL (A): 09924–52460 (Socket (52 mm))

  Tightening torque
  Crank balancer driven gear bolt (a): 50 N·m (5.0 kgf-m, 36.0 lb-ft)



I831G1140271-02



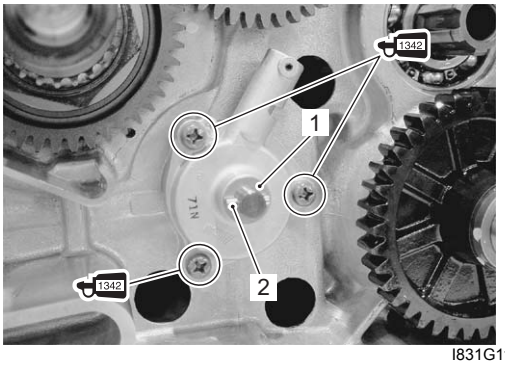
I831G1140272-01

Oil Pump

- Apply thread lock to the oil pump mounting bolts and tighten the bolts.

  1342 : Thread lock cement 99000–32050 (THREAD LOCK CEMENT 1342 or equivalent)

- Install the washer (1) and pin (2).

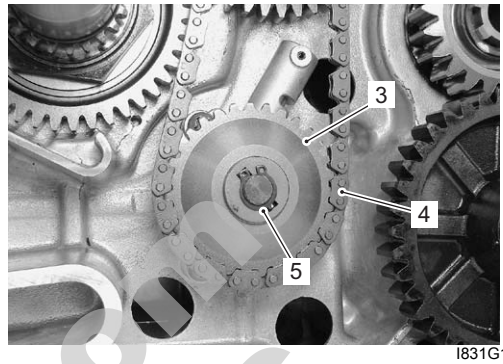


I831G1140273-01

- Install the oil pump drive gear (3) with chain (4).
- Install the snap ring (5).

NOTE

Be careful not to drop the snap ring (5) into the crankcase.

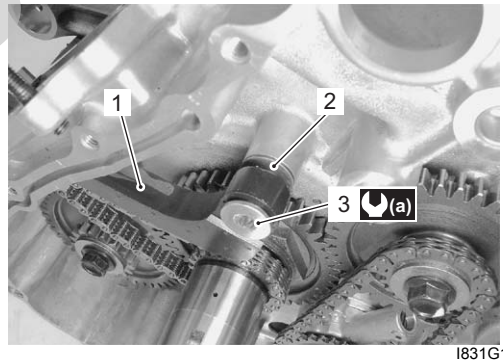


I831G1140274-01

Cam Chain Tensioner

- Install the cam chain tensioner (1) along with the washer (2).
- Tighten the cam chain tensioner bolt (3) to the specified torque.

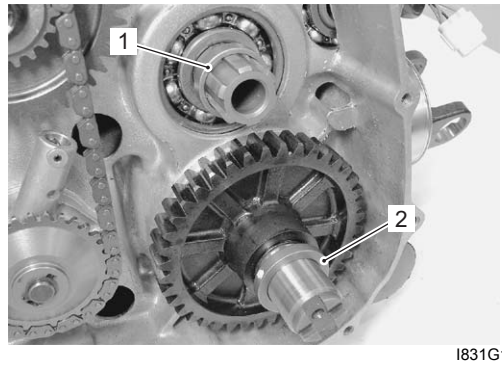
  Tightening torque
  Cam chain tensioner bolt (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G1140275-01

Transfer Output Drive Gear

- Install the spacer (1) and (2).



I831G1140276-01

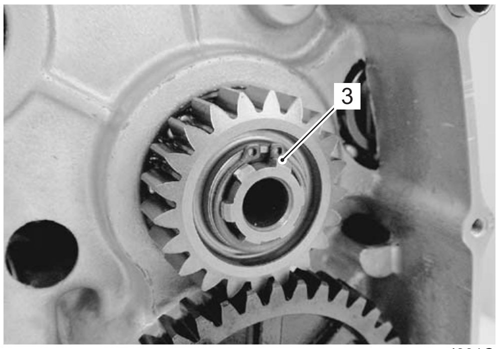
- Install the snap ring (3).

⚠ CAUTION

The removed snap ring must be replaced with a new one.

Special tool

TOOL : 09900–06107 (Snap ring pliers)



I831G1140277-01

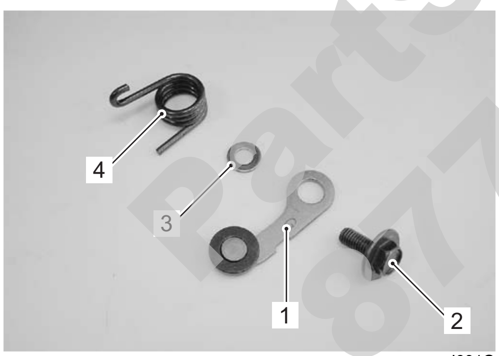
Gearshift System

- Install the gearshift cam stopper (1), bolt (2), washer (3) and return spring (4).

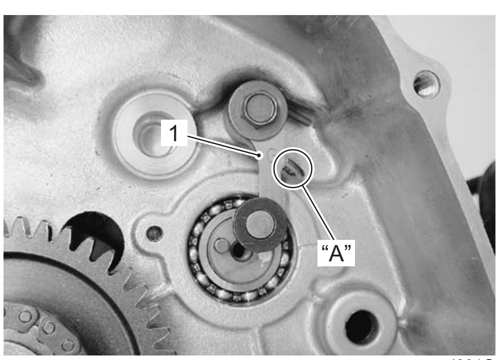
NOTE

Hook the return spring end “A” to the stopper (1).

- Check the gearshift cam stopper moves smoothly.
- Locate the gearshift cam in the neutral position.



I831G1140278-01

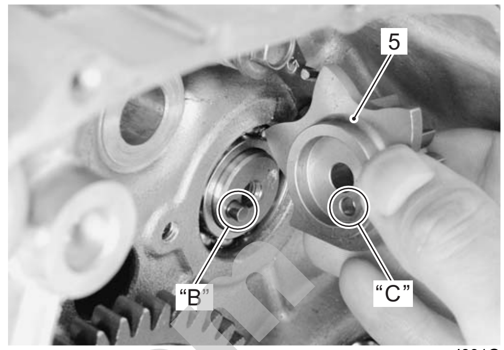


I831G1140279-02

- Install the gearshift cam stopper plate (5).

NOTE

Align the gearshift cam pin “B” with the gearshift cam stopper plate hole “C”.

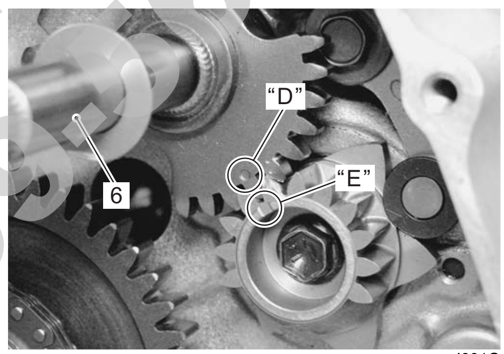


I831G1140280-01

- Install the gearshift shaft (6).

NOTE

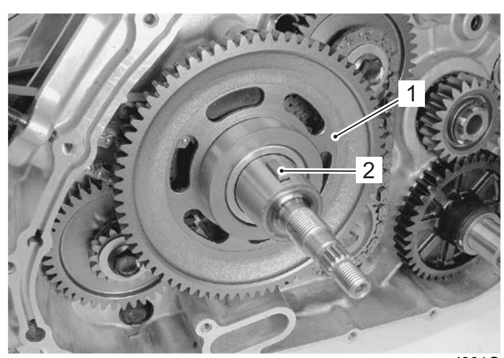
Align the punch mark “D” with the concave mark “E” of gearshift cam of surface.



I831G1140282-01

Starter Driven Gear

- Install the starter driven gear (1) and key (2).

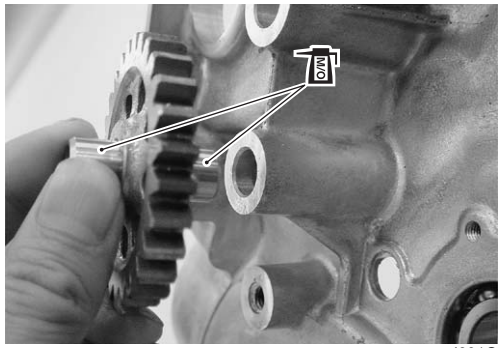


I831G1140323-01

Starter Torque Limiter / Starter Idle Gear

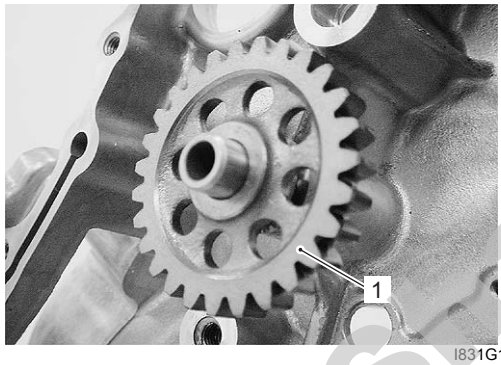
- Apply molybdenum oil solution to the starter idle gear pin.

  M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)



I831G1140283-01

- Install the starter idle gear (1).



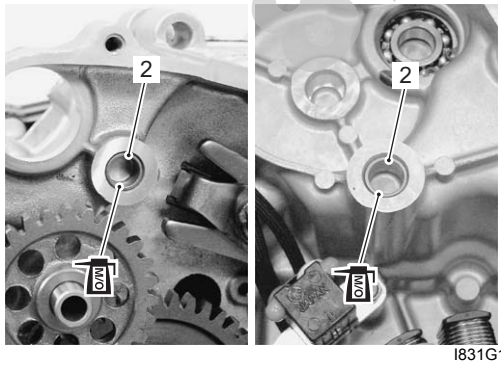
I831G1140284-01

- Install the bushings (2) into the crankcase and generator cover.

  NOTE

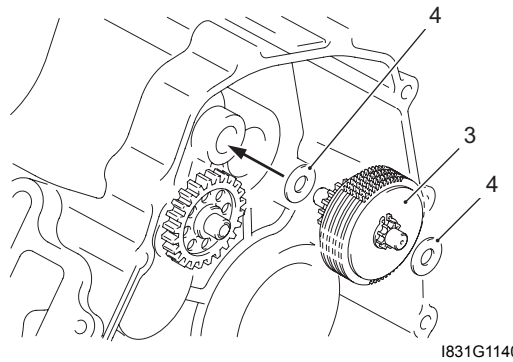
  Apply molybdenum oil solution to the inside of the bushings.

  M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)



I831G1140285-01

- Install the starter torque limiter (3) with washers (4).



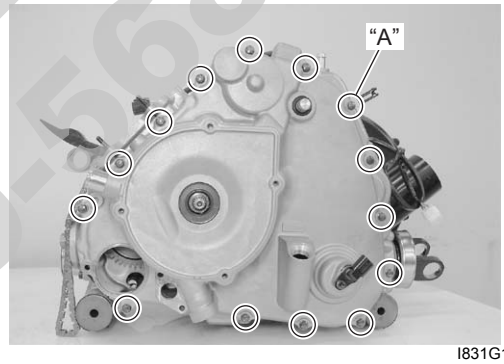
I831G1140286-02

Generator

- Install the generator component parts. Refer to "Generator Removal and Installation in Section 1J (Page 1J-4)".

  NOTE

  Fit the clamp to the bolt "A".

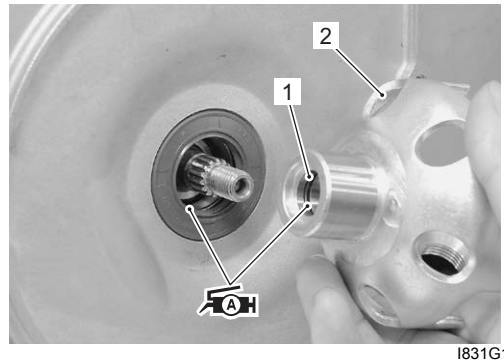


I831G1140287-02

Starter Cup

- Apply grease to the O-ring and lip of the oil seal.
- Install the starter cup (1).

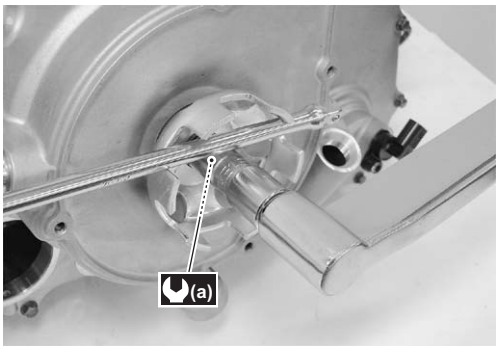
  : Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1140288-01

- Tighten the starter cup nut to the specified torque by holding starter cup with the suitable bar (2).

Tightening torque
Starter cup nut (a): 38 N·m (3.8 kgf-m, 27.5 lb-ft)



I831G1140289-01

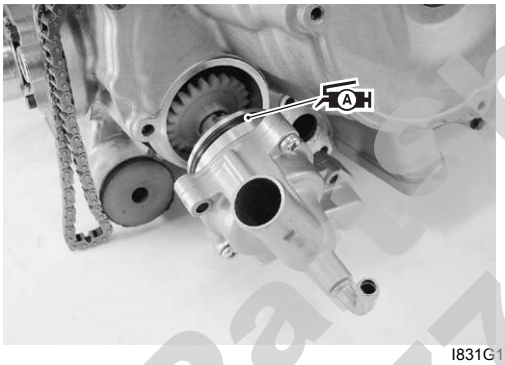
Water Pump

- Apply grease to the O-ring.

⚠ CAUTION

Replace the O-ring with a new one.

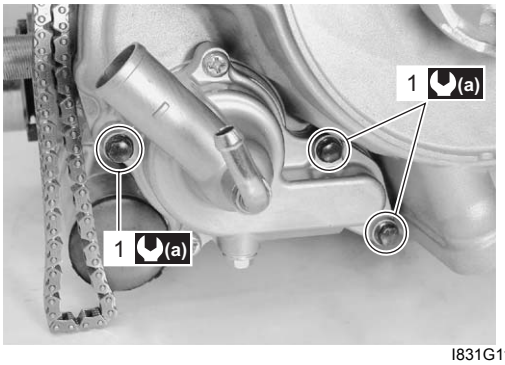
: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1140290-01

- Tighten the water pump mounting bolts (1) to the specified torque.

Tightening torque
Water pump mounting bolt: 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1140291-02

Starter Motor
Install the starter motor. Refer to “Starter Motor Removal and Installation in Section 1I (Page 1I-4)”.

Engine Top Side
Assemble the engine top side. Refer to “Engine Top Side Assembly (Page 1D-21)”.

Conrod and Crankshaft Inspection

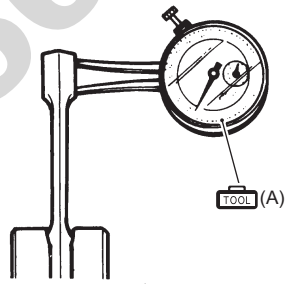
B831G21406035

Refer to “Engine Bottom Side Disassembly (Page 1D-45)”.

Conrod Small End I.D.
Measure the conrod small end inside diameter with the dial calipers.
If conrod small end inside diameter exceeds the service limit, replace the conrod.

Special tool
TOOL (A): 09900–20605 (Dial calipers (1/100 mm, 10 – 34 mm))

Conrod small end I.D.
Service limit: 23.040 mm (0.9071 in)



I831G1140292-02

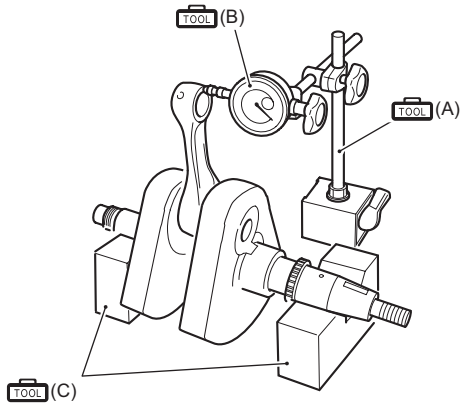
Conrod Deflection

Wear On the big end of the conrod can be estimated by checking the movement of the small end of the rod. This method can also check the extent of ware on the parts of the conrod's big end.

Special tool

(A): 09900–20701 (Magnetic stand)
(B): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
(C): 09900–21304 (V-block (100 mm))

Conrod deflection
Service Limit: 3.0 mm (0.12 in)



I831G1140293-01

Conrod Big End Side Clearance

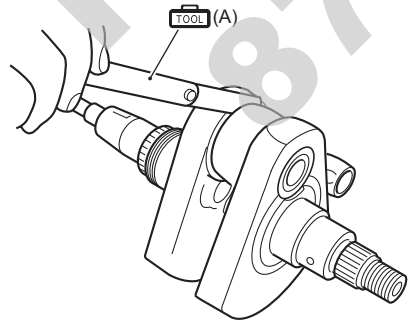
1) Check the conrod big end side clearance with the thickness gauge.

Special tool

(A): 09900–20803 (Thickness gauge)

Conrod big end side clearance
Service limit: 1.0 mm (0.04 in)

2) If the clearance exceeds the limit, replace the crankshaft assembly and conrod with a new one.



I831G1140294-01

Crankshaft Runout

- Measure the crankshaft runout with V-blocks and dial gauge.

NOTE

- **Place the crankshaft onto the V-blocks so that it becomes horizontally.**
- **Measure the runout from the tips of the crankshaft.**

Crankshaft runout
Service limit: 0.08 mm (0.003 in)

Special tool

(A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
: 09900–20701 (Magnetic stand)

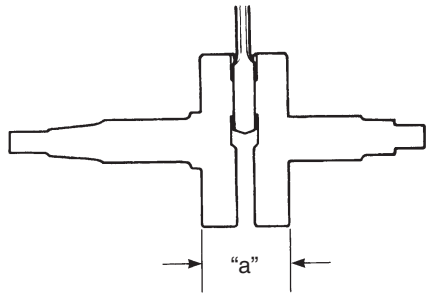
I705H1140241-01

Width Between Crankshaft Webs

B831G21406036

Measure the width between crankshaft webs "a".

Width between crankshaft webs "a"
Standard: 72.9 – 73.1 mm (2.87 – 2.88 in)

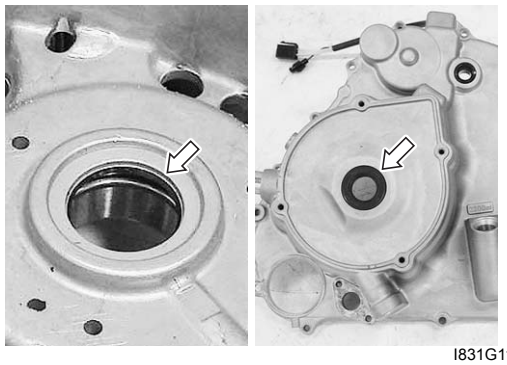


I705H1140149-04

Crankshaft Oil Seal Inspection

B831G21406037

Check the oil seal for damage. If any damage is found, replace the oil seal with a new one. Refer to “Engine Bottom Side Disassembly (Page 1D-45)” and “Bearing Removal and Installation (Page 1D-61)”.



I831G1140296-01

Bearing Inspection

B831G21406038

Refer to “Engine Bottom Side Disassembly (Page 1D-45)”.

Rotate the bearing inner race by finger to inspect for abnormal play, noise and smooth rotation while the bearings are in the crankcase. Replace the bearing if there is anything unusual.

Diagnostic Information and Procedures

Engine Lubrication Symptom Diagnosis

B831G21504001

Condition	Possible cause	Correction / Reference Item
Engine overheats	Insufficient amount of engine oil.	*Check level and add.*
	Defective oil pump.	*Replace.*
	Clogged oil circuit.	*Clean.*
	Incorrect engine oil.	*Change.*
Exhaust smoke is dirty or thick	Excessive amount of engine oil.	*Check level and drain.*
Engine lacks power	Excessive amount of engine oil.	*Check level and drain.*

Oil Pressure Check

B831G21504002

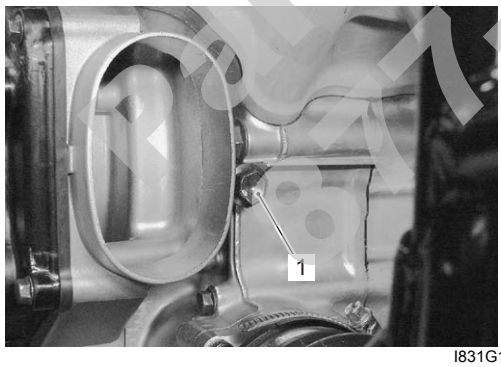
Check the engine oil pressure periodically. This will give a good indication of the condition of the moving parts.

NOTE

Before checking the oil pressure, check the following.

- **Oil level (Refer to "Engine Oil and Filter Replacement in Section 0B (Page 0B-10)".)**
- **Oil leaks (If leak is found, repair it.)**
- **Oil quality (If oil is discolored or deteriorated, replace it.)**

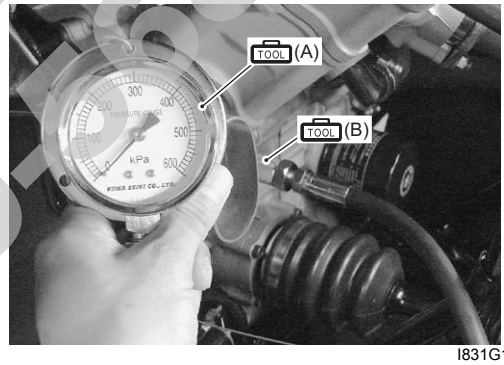
1) Remove the right inner fender. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)".
2) Remove the belt cooling intake duct. Refer to "V-belt Cooling Duct Removal and Installation in Section 5A (Page 5A-5)".
3) Remove the main oil gallery plug (1).



I831G1150002-01

4) Install the oil pressure gauge and attachment into the main oil gallery.
5) Connect the tachometer to the high-tension cord.

Special tool
(A): 09915–74511 (Oil pressure gauge set)
(B): 09915–74533 (Oil pressure gauge attachment)
: 09900–26006 (Engine tachometer (solar cell type))



I831G1150003-02

6) Warm up the engine as follows:
Summer: 10 min. at 2 000 r/min
Winter: 20 min. at 2 000 r/min

7) After warm up, increase the engine speed to 3 000 r/min (Observe the tachometer), and read the oil pressure gauge.
If the oil pressure is lower or higher than the specification, the following causes may be considered.

Oil pressure specification
140 – 180 kPa (1.4 – 1.8 kgf/cm², 20 – 26 psi) at 3 000 r/min, Oil temp. at 60 °C (140 °F)

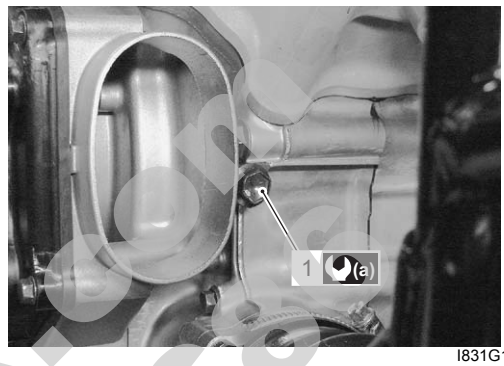
High oil pressure	Low oil pressure
• Engine oil viscosity is too high. • Clogged oil passage. • Combination of the above items.	• Clogged oil filter. • Oil leakage from the oil passage. • Damaged O-ring. • Defective oil pump. • Combination of the above items.

8) Stop the engine and remove the oil pressure gauge and attachment.
9) Reinstall the main oil gallery plug (1) and tighten it to the specified torque.

⚠ CAUTION

Use a new gasket to prevent oil leakage.

Tightening torque
Main oil gallery plug (a): 18 N·m (1.8 kgf-m, 13.0 lb-ft)



I831G1150004-02

10) Check the engine oil level. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
11) Reinstall the removed parts.

Repair Instructions

Engine Oil and Filter Replacement

B831G21506001

Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.

Engine Oil Level Inspection

B831G21506002

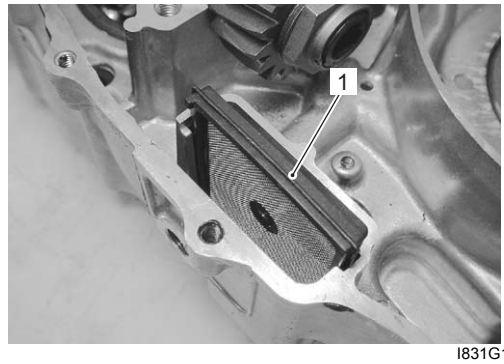
Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.

Oil Sump Filter Removal and Installation

B831G21506003

Removal

1) Remove the engine assembly from the frame. Refer to “Engine Assembly Removal in Section 1D (Page 1D-13)”.
2) Disassemble the engine top side. Refer to “Engine Top Side Disassembly in Section 1D (Page 1D-17)”.
3) Separate the left and right crankcase. Refer to “Engine Bottom Side Disassembly in Section 1D (Page 1D-45)”.
4) Remove the oil sump filter (1).



I831G1150005-01

Installation

Install the oil sump filter in the reverse order of removal. Pay attention to the following points:

- Install the oil sump filter (1).

⚠ CAUTION

- **The lip "A" of the oil sump filter should be positioned downward.**
- **The shorter side "B" of the oil sump filter should be positioned inside.**

Oil Sump Filter Inspection and Cleaning

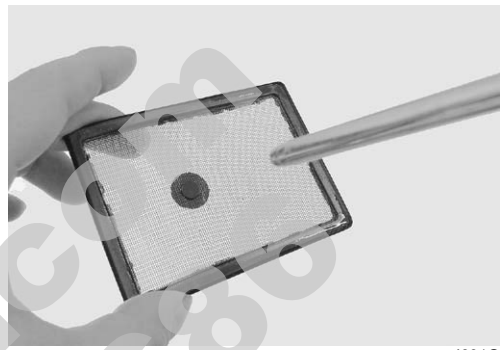
B831G21506004

Inspect the oil sump filter in the following procedures:

1) Remove the oil sump filter. Refer to "Oil Sump Filter Removal and Installation (Page 1E-3)".
2) If the oil sump filter is clogged with sediment or rust, clean the oil sump filter using compressed air.

NOTE

When the filter is dirtied excessively, replace the oil sump filter with a new one.



I831G1150007-01

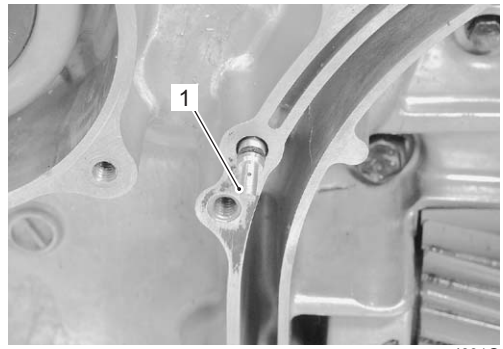
3) Install the oil sump filter. Refer to "Oil Sump Filter Removal and Installation (Page 1E-3)".

Oil Jet Removal and Installation

B831G21506005

Removal

1) Remove the clutch shoe housing case and gasket. Refer to "Clutch Shoe Removal and Installation in Section 5A (Page 5A-16)".
2) Remove the oil jet (1).



I831G1150008-01

Installation
Install the oil jet in the reverse order of removal. Pay attention to the following point:

- Apply engine oil to the O-ring.

⚠ CAUTION

Use a new O-ring to prevent oil leakage.

I831G1150009-03

Oil Jet Inspection

B831G21506006

Refer to “Oil Jet Removal and Installation (Page 1E-4)”. Make sure that the oil jet is not clogged. If it is clogged, clean the oil passage using a wire of the proper size and compressed air.

I831G1150010-02

Oil Pump Removal and Installation

B831G21506007

Removal

NOTE

Do not drop the each parts into the crankcase.

1) Drain the engine oil. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
2) Remove the starter motor (1). Refer to “Starter Motor Removal and Installation in Section 1I (Page 1I-4)”.
3) Remove the starter torque limiter and starter idle gear (2). Refer to “Starter Torque Limiter / Starter Clutch Removal and Installation in Section 1I (Page 1I-10)”.
4) Remove the generator rotor assembly (3) and starter driven gear (4). Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)” and “Starter Torque Limiter / Starter Clutch Removal and Installation in Section 1I (Page 1I-10)”.

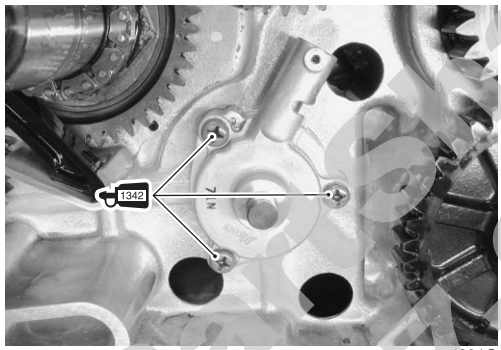
Install the oil pump in the reverse order of removal. Pay attention to the following points:

- Apply thread lock to the oil pump bolts.

1342 : Thread lock cement 99000–32050 (THREAD LOCK CEMENT 1342 or equivalent)



I831G1150015-02

- Install the new snap ring (1).

Special tool
TOOL : 09900–06107 (Snap ring pliers)

- Install the oil pump drive gear (2) with chain.

NOTE

Oil Pump Inspection

B831G21506008

Inspect the oil pump in the following procedures:

1) Remove the oil pump. Refer to “Oil Pump Removal and Installation (Page 1E-5)”.
2) Rotate the oil pump by hand and check that it moves smoothly. If it does not move smoothly, replace the oil pump assembly.

⚠ CAUTION

Do not attempt to disassemble the oil pump assembly.
The oil pump is available only as an assembly.

I831G1150019-01

3) Install the oil pump. Refer to “Oil Pump Removal and Installation (Page 1E-5)”.

Engine Cooling System

Precautions

Precautions for Engine Cooling System

B831G21600001

⚠ WARNING

- **You can be injured by boiling fluid or steam if you open the radiator cap when the engine is hot. After the engine cools, wrap a thick cloth around cap and carefully remove the cap by turning it a quarter turn to allow pressure to escape and then turn the cap all the way off.**
- **The engine must be cool before servicing the cooling system.**
- **Coolant is harmful:**
  - **If it comes in contact with skin or eyes, flush with water.**
  - **If swallowed accidentally, induce vomiting and call physician immediately.**
  - **Keep it away from children.**

Precautions for Engine Coolant

B831G21600002

Refer to “Engine Coolant Recommendation in Section 0A (Page 0A-4)”.

General Description

Engine Coolant Description

B831G21601001

⚠ CAUTION

- **Use a high quality ethylene glycol base anti-freeze, mixed with distilled water. Do not mix an alcohol base anti-freeze and different brands of anti-freeze.**
- **Do not put in more than 60% anti-freeze or less than 50%. (Refer to Fig. 1 and 2.)**

At the time of manufacture, the cooling system is filled with a 50:50 mixture of distilled water and ethylene glycol anti-freeze. This 50:50 mixture will provide the optimum corrosion protection and excellent heat protection, and will protect the cooling system from freezing at temperatures above –31 °C (–24 °F).
If the vehicle is to be exposed to temperatures below –31 °C (–24 °F), this mixing ratio should be increased up to 55% or 60% according to the figure.

Anti-freeze Proportioning Chart

Anti-freeze density	Freezing point
50%	–31 °C (–24 °F)
55%	–40 °C (–40 °F)
60%	–55 °C (–67 °F)

Repair Instructions

Cooling Circuit Inspection

B831G21606001

⚠ WARNING

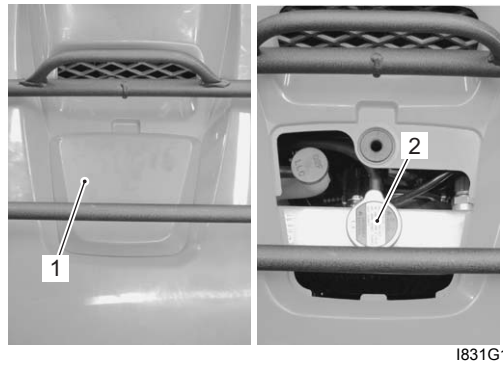
- **Do not open the radiator cap when the engine is hot, as you may be injured by escaping hot liquid or vapor.**
- **When removing the radiator cap tester, put a rag on the filler to prevent the engine coolant from spraying out.**

Inspect the cooling circuit in the following procedures:

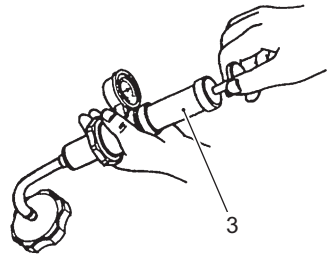
1) Remove the radiator cap lid (1) and radiator cap (2).
2) Connect the radiator tester (3) to the filler.
3) Pressurize the cooling system with 120 kPa (1.2 kgf/cm, 17 psi) of pressure, and then check if it holds the pressure for 10 seconds.

⚠ CAUTION

Do not exceed the radiator cap release pressure, or the radiator cap and subsequently the radiator, can be damaged.



I831G1160003-01



I831G1160005-01

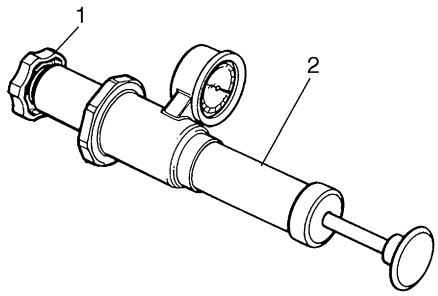
4) After finishing the cooling circuit inspection, reinstall the removed parts.

Radiator Cap Inspection

B831G21606002

Inspect the radiator cap in the following procedures:

1) Remove the radiator cap. Refer to “Cooling Circuit Inspection (Page 1F-4)”.
2) Attach the radiator cap (1) to the radiator tester (2) as shown in the figure.



I718H1160033-01

3) Slowly apply pressure to the radiator cap.
   If the radiator cap does not hold the pressure for at least 10 seconds, replace it with a new one.

   Radiator cap release pressure
   110 – 140 kPa (1.1 – 1.4 kgf/cm², 15.6 – 19.9 psi)

4) After finishing the radiator cap inspection, reinstall the removed parts.

Radiator Inspection and Cleaning

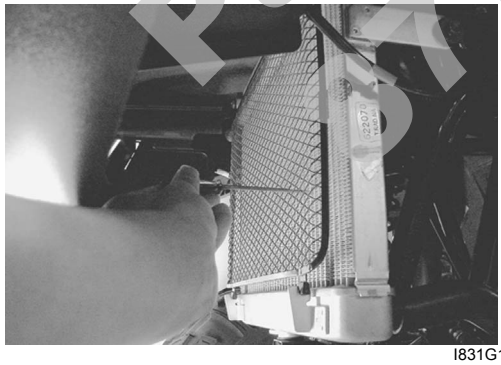
B831G21606003

Radiator Hose

Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.

Radiator

Inspect the radiator for water leaks. If any defects are found, replace the radiator with a new one.
If the fins are bent or dented, repair them by carefully straightening them with the blade of a small screwdriver.



I831G1160061-01

Radiator Cleaning

Blow out any foreign matter that is stuck in the radiator fins using compressed air.

⚠ CAUTION

- **Make sure not to bend the fins when using compressed air.**
- **Always apply compressed air from the engine side of engine. If compressed air is applied from the front side, dirt will be forced into the pores of radiator.**

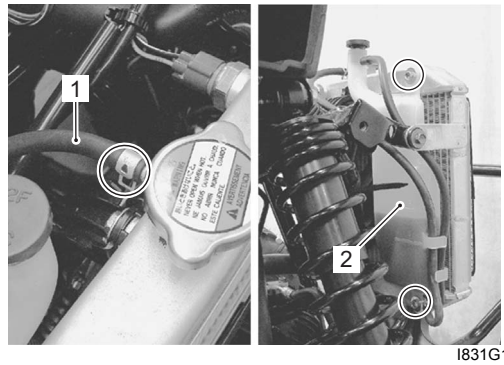
Cooling Fan Assembly / Radiator Removal and Installation

B831G21606004

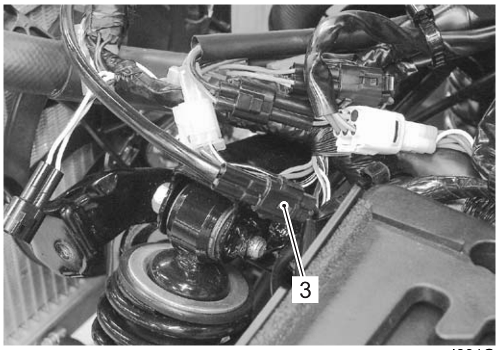
Removal

1) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the hoses (1).
3) Remove the reservoir tank (2).



I831G1160063-02

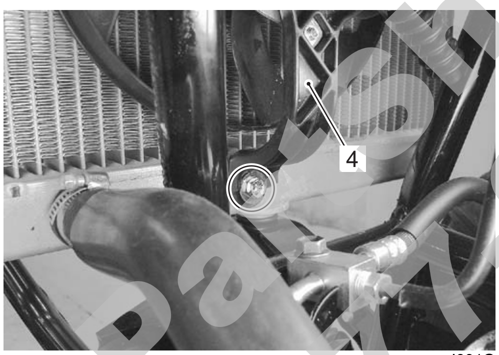
4) Disconnect the cooling fan motor coupler (3).



I831G1160055-01

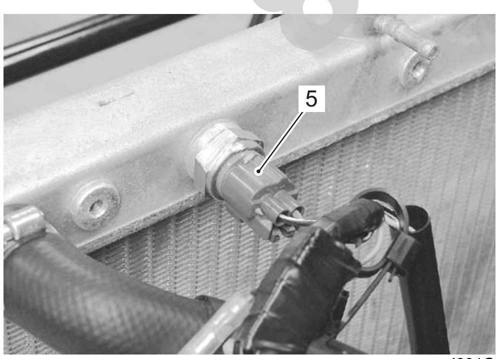
5) Remove the cooling fan assembly (4) by removing the bolts.

I831G1160004-01



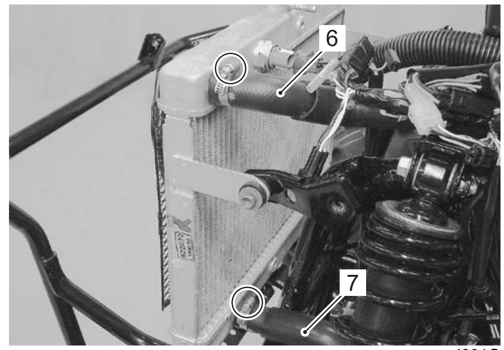
I831G1160007-01

6) Disconnect the cooling fan thermo-switch (5).



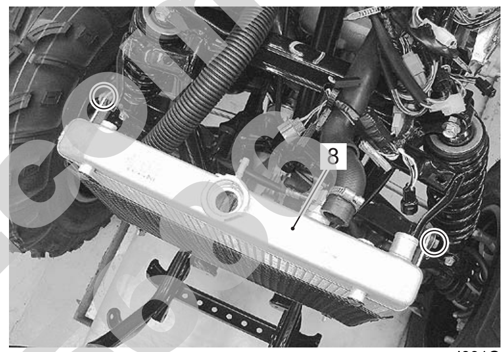
I831G1160008-01

7) Disconnect the inlet hose (6) and outlet hose (7).



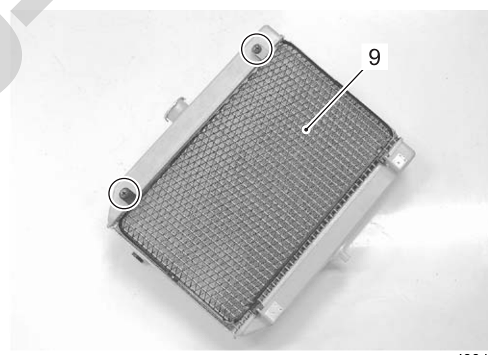
I831G1160009-01

8) Remove the radiator (8) by removing the bolts.



I831G1160010-01

9) Remove the radiator cover (9).



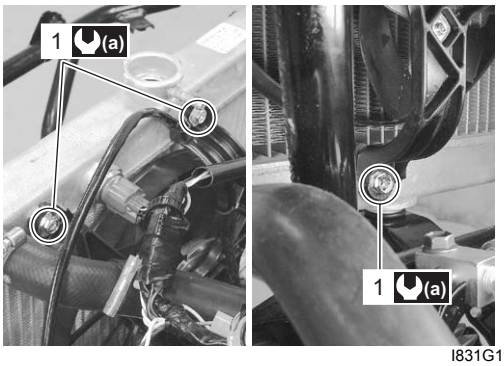
I831G1160011-02

Installation

Install the cooling fan assembly and radiator in the reverse order of removal. Pay attention to the following points:

- Connect the radiator hoses securely. Refer to “Water Hose Routing Diagram (Page 1F-3)”.
- Tighten the cooling fan assembly mounting bolts (1) to the specified torque.

Tightening torque
Cooling fan assembly mounting bolt (a): 8.5 N·m (0.85 kgf-m, 6.0 lbf-ft)



I831G1160012-03

- Pour engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
- Bleed air from the cooling circuit. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.

Water Hose Removal and Installation

B931G21606005

Removal

1) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
2) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Remove the water hose as shown in the water hose routing diagram. Refer to “Water Hose Routing Diagram (Page 1F-3)”.

Installation

1) Install the water hose as shown in the water hose routing diagram. Refer to “Water Hose Routing Diagram (Page 1F-3)”.
2) Pour engine coolant and bleed air from the cooling circuit. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
3) Reinstall the removed parts.

Cooling Fan Inspection

B931G21606006

Inspect the cooling fan in the following procedures:

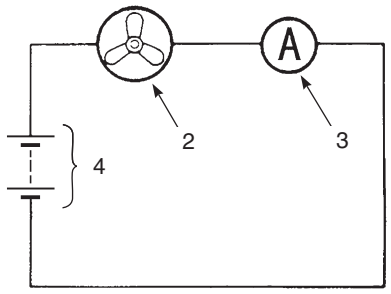
1) Disconnect the cooling fan motor coupler (1).

I831G1160018-02

2) Test the cooling fan motor for load current with an ammeter connected as shown in the figure.
If the fan motor does not turn, replace the cooling fan assembly with a new one. Refer to “Cooling Fan Assembly / Radiator Removal and Installation (Page 1F-5)”.

NOTE

- **When making this test, it is not necessary to remove the cooling fan.**
- **Make sure that the battery has a capacity enough to supply the motor with 12 V.**
- **With the motor running at full speed, the ammeter should indicate an amperage not higher than 8 A.**



I718H1160048-01

2. Fan motor	3. Ammeter	4. Battery

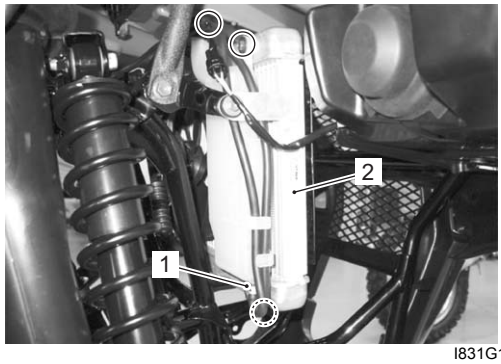
3) Connect the cooling fan motor coupler.

Radiator Reservoir Tank Removal and Installation

B831G21606007

Removal

1) Remove the right inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the reservoir tank mounting bolts.
3) Disconnect the hoses (1) and drain the engine coolant.
4) Remove the reservoir tank (2).

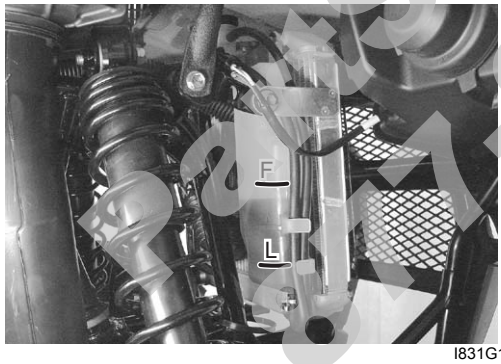


I831G1160019-02

Installation

Install radiator reservoir tank in the reverse order of removal. Pay attention to the following points:

- Connect the radiator reservoir tank hoses securely. Refer to “Water Hose Routing Diagram (Page 1F-3)”.
- Fill the reservoir tank to the upper level.

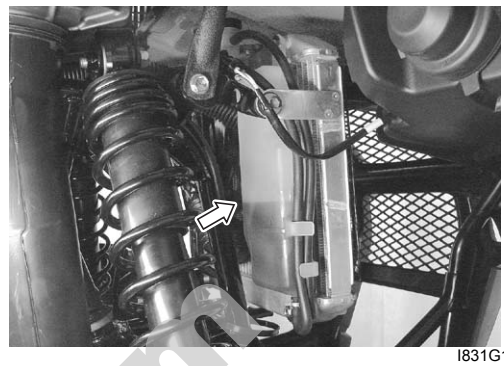


I831G1160020-04

Radiator Reservoir Tank Inspection

B831G21606008

Inspect the radiator reservoir tank cooling leaks. If any defects are found, replace the radiator reservoir tank with a new one.



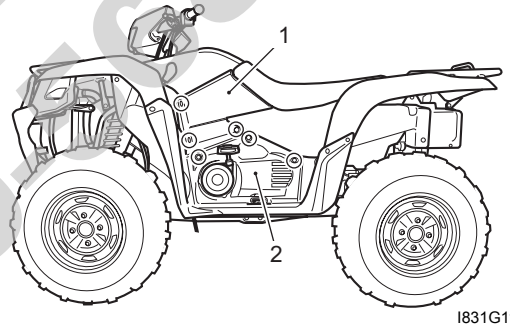
I831G1160021-01

Water Hose Inspection

B831G21606009

Inspect the water hoses in the following procedures:

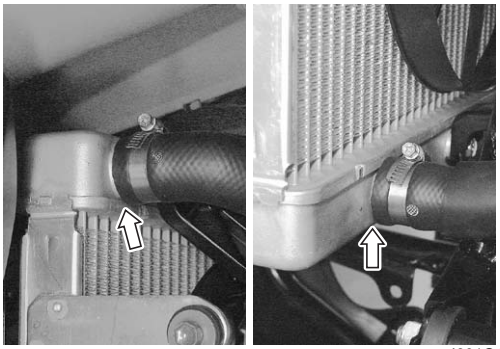
1) Remove the left side cover (1) and engine side cover (2).



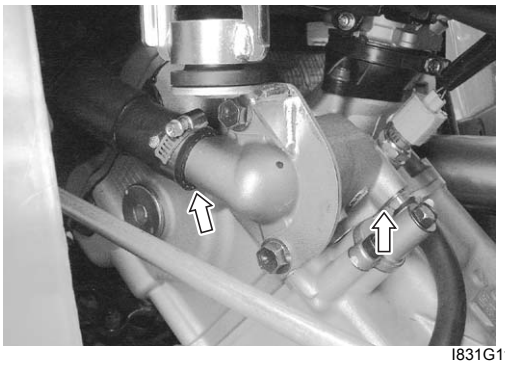
I831G1160064-02

2) Check the water hoses for crack, damage or engine coolant leakage. If any defects are found, replace the radiator hose with a new one.

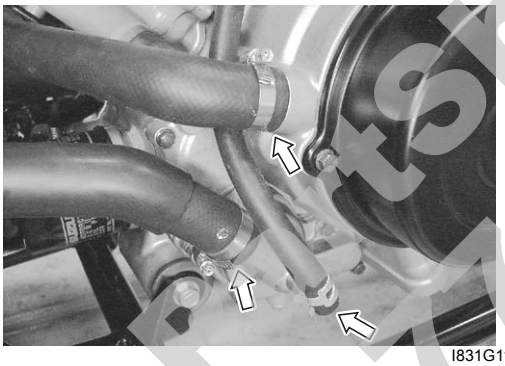
3) Any leakage from the connecting section should be corrected by proper tightening. Refer to “Water Hose Routing Diagram (Page 1F-3)”.



I831G1160022-01



I831G1160023-01



I831G1160024-02

4) After finishing the water hose inspection, reinstall the removed parts.

ECT Sensor Removal and Installation

B831G21606010

Refer to “ECT Sensor Removal and Installation in Section 1C (Page 1C-4)”.

ECT Sensor Inspection

B831G21606011

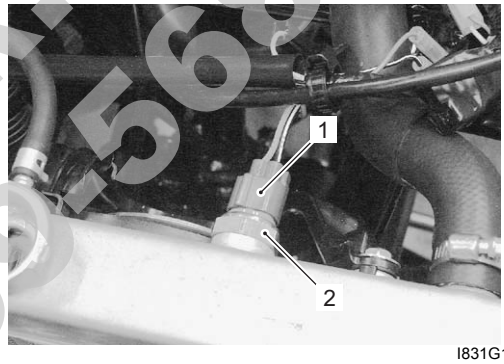
Refer to “ECT Sensor Inspection in Section 1C (Page 1C-4)”.

Cooling Fan Thermo-switch Removal and Installation

B831G21606012

Removal

1) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
3) Disconnect the cooling fan thermo-switch lead wire coupler (1).
4) Remove the cooling fan thermo-switch (2).



I831G1160025-02

Installation
Install the cooling fan thermo-switch in the reverse order of removal. Pay attention to the following points:

- Apply engine coolant to the O-ring.

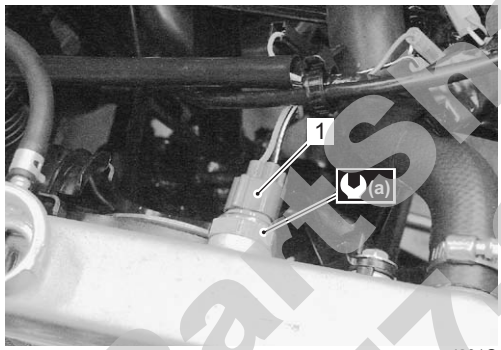
⚠ CAUTION

Replace the removed O-ring with a new one.

I831G1160026-01

- Tighten the cooling fan thermo-switch to the specified torque and connect the coupler (1).

Tightening torque
Cooling fan thermo-switch (a): 17 N·m (1.7 kgf-m, 12.5 lb-ft)



I831G1160065-01

- Pour engine coolant. Refer to "Cooling System Inspection in Section 0B (Page 0B-15)".
- Bleed air from the cooling circuit. Refer to "Cooling System Inspection in Section 0B (Page 0B-15)".

Cooling Fan Thermo-switch Inspection

B831G21606013

Inspect the cooling fan thermo-switch in the following procedures:

1) Remove the cooling fan thermo-switch. Refer to "Cooling Fan Thermo-switch Removal and Installation (Page 1F-9)".
2) Check the thermo-switch closing or opening temperatures by testing it at the bench as shown in the figure.
3) Connect the thermo-switch (1) to a circuit tester and place it in the water "A" contained in a pan, which is placed on the stove.
4) Heat the water to raise its temperature slowly and read the column thermometer (2) when the switch closes or opens. If any abnormality is found, replace the cooling fan thermo-switch with a new one.

⚠ CAUTION

- **Take special care when handling the cooling fan thermo-switch. Do not subject it to strong blows or allow it to be dropped.**
- **Do not contact the cooling fan thermo-switch (1) and the column thermometer (2) with a pan.**

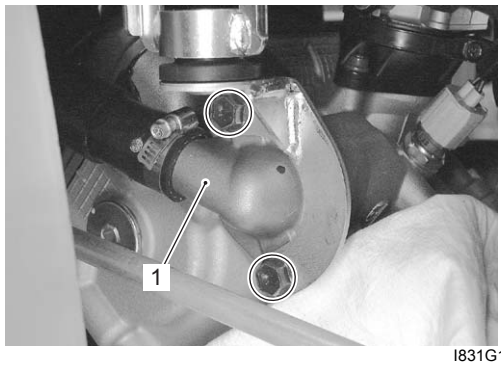
Thermostat Removal and Installation

B831G21606014

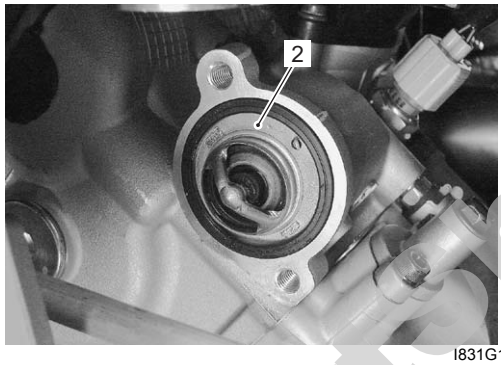
Removal

1) Drain a small amount of engine coolant. Refer to "Cooling System Inspection in Section 0B (Page 0B-15)".
2) Place a rag under the thermostat cover (1).
3) Remove the thermostat case (1).



I831G1160027-01

4) Remove the thermostat (2).



I831G1160028-01

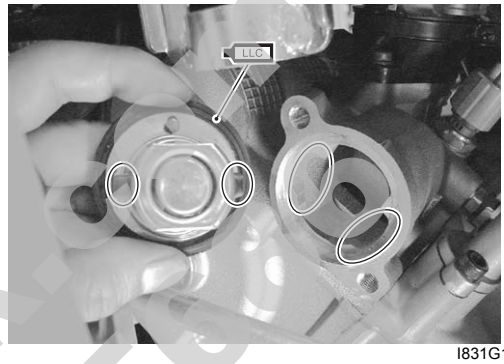
Installation

Install the thermostat in the reverse order of removal. Pay attention to the following points:

- Apply engine coolant to the rubber seal on the thermostat.
- Install the thermostat.

NOTE

- **Align the protrusions on the thermostat with the groove on the cylinder head.**
- **The jiggle valve of the thermostat faces upside.**

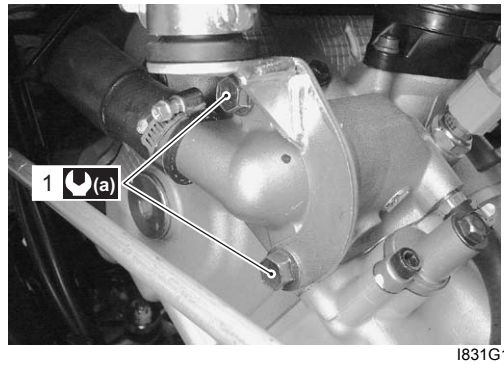


I831G1160029-01

I831G1160030-02

- Tighten the thermostat cover bolts (1) to the specified torque.

Tightening torque
Thermostat cover bolt (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G1160031-01

- Pour engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
- Bleed air from the cooling circuit. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.

Thermostat Inspection

B831G21606015

Inspect the thermostat in the following procedures:

1) Remove the thermostat. Refer to “Thermostat Removal and Installation (Page 1F-11)”.
2) Inspect the thermostat pellet for signs of cracking.

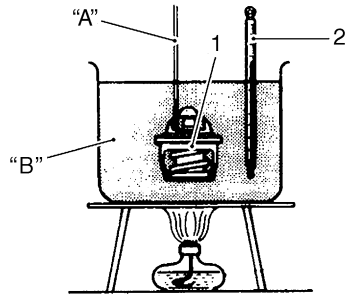
I831G1160032-01

3) Test the thermostat at the bench for control action.

⚠ CAUTION

- **Do not contact the thermostat (1) and the column thermometer (2) with a pan.**
- **As the thermostat operating response to water temperature change is gradual, do not raise water temperature too quickly.**
- **The thermostat with its valve open even slightly under normal temperature must be replaced.**

4) Immerse the thermostat (1) in the water contained in a beaker and note that the immersed thermostat is in suspension.
5) Heat the water by placing the beaker on a stove and observe the rising temperature on a thermometer (2).



I705H1160030-03

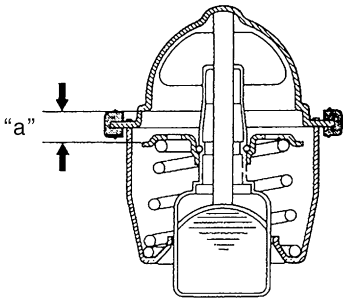
“A”: String	“B”: Water

6) Read the thermometer just when opening the thermostat. If this reading, which is the temperature level at which the thermostat valve begins to open, is out of the standard value, replace the thermostat with a new one.

Thermostat valve opening temperature
Standard: Approx. 82 °C (180 °F)

7) Keep on heating the water to raise its temperature.
8) Just when the water temperature reaches specified value, the thermostat valve should have been lifted by at least 8 mm (0.31 in). A thermostat failing to satisfy either of the two requirements (start-to-open temperature and valve lift) must be replaced.

Thermostat valve lift “a”
Standard: 8 mm (0.31 in) and over at 95 °C (203 °F)



I705H1160031-04

9) Install the thermostat. Refer to “Thermostat Removal and Installation (Page 1F-11)”.

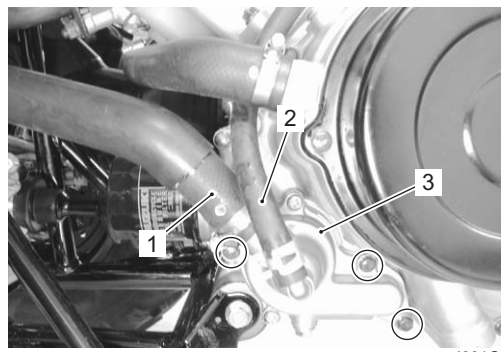
Removal

NOTE

Before draining engine oil and engine coolant, inspect engine oil and coolant leakage between the water pump and crankcase. If engine oil is leaking, visually inspect the oil seal and O-ring. If engine coolant is leaking, visually inspect the mechanical seal and seal washer. Refer to "Water Pump Related Parts Inspection (Page 1F-18)".

1) Remove the left inner fender. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)".
2) Remove the left mud guard. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)".
3) Drain engine oil and coolant. Refer to "Engine Oil and Filter Replacement in Section 0B (Page 0B-10)" and "Cooling System Inspection in Section 0B (Page 0B-15)".
4) Disconnect the outlet hose (1) and water bypass hose (2).
5) Remove the water pump assembly (3).



I831G1160034-01

Installation
Install the water pump in the reverse order of removal. Pay attention to the following points:

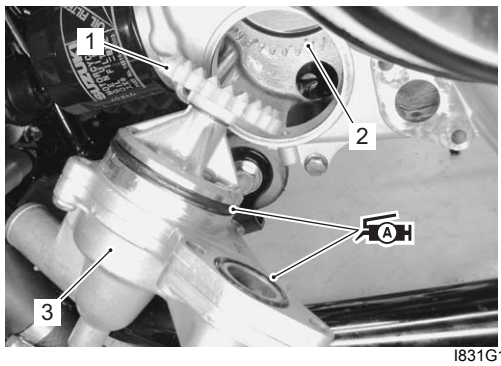
- Apply grease to the O-rings.

⚠ CAUTION

Replace the O-rings with the new ones.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

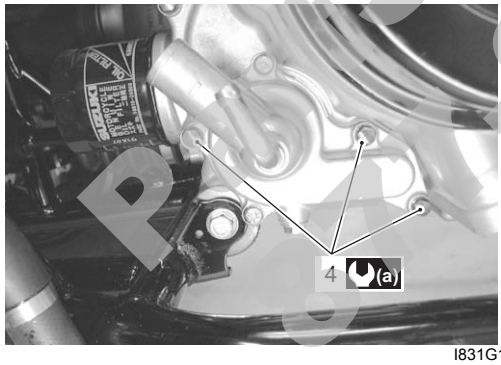
- Set the water pump driven gear (1) to the water pump drive gear (2) and install the water pump assembly (3).



I831G1160035-01

- Tighten the water pump mounting bolts (4) to the specified torque.

Tightening torque
Water pump mounting bolt (a): 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1160036-01

- Connect the water hoses securely. Refer to “Water Hose Routing Diagram (Page 1F-3)”.
- Pour engine oil and coolant. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)” and “Cooling System Inspection in Section 0B (Page 0B-15)”.
- Bleed air from the cooling circuit. Refer to “Front Differential Gear Oil Inspection in Section 0B (Page 0B-12)”.

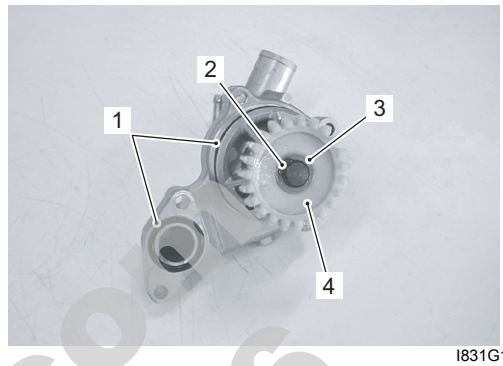
Water Pump Disassembly and Assembly

B831G21606018

Refer to “Water Pump Removal and Installation (Page 1F-13)”.

Disassembly

1) Remove the O-rings (1), snap ring (2), washer (3) and water pump driven gear (4).



I831G1160037-02

2) Remove the water pump cover (5).

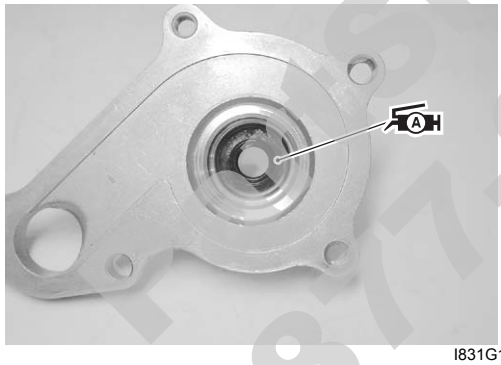
2) Apply a small quantity of the grease to the oil seal lip.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1160046-01

3) Install a new mechanical seal using a suitable size socket wrench.

⚠ CAUTION

Replace the mechanical seal with a new one.

NOTE

On the new mechanical seal, the sealer "A" has been applied.

I831G1160047-01

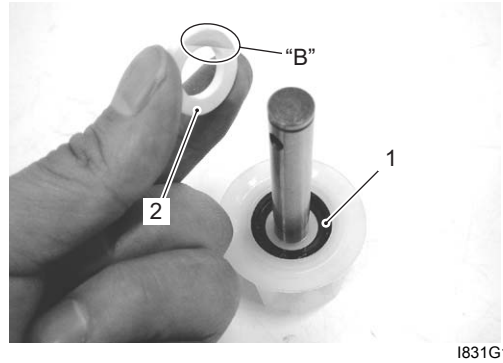
I831G1160048-01

4) Install the rubber seal (1) into the impeller.

5) After wiping off the oily or greasy matter from the mechanical seal ring (2), install it into the impeller.

NOTE

The paint marked side "B" of mechanical seal ring faces the rubber seal.

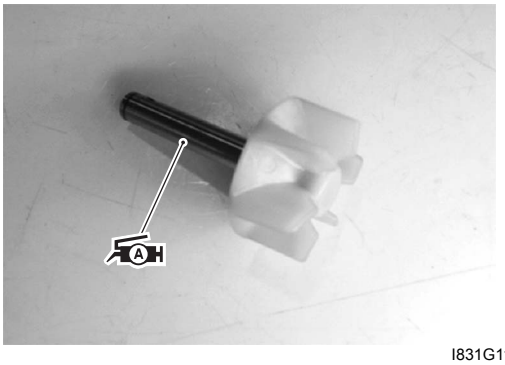


I831G1160049-02

6) Apply grease to the impeller shaft.

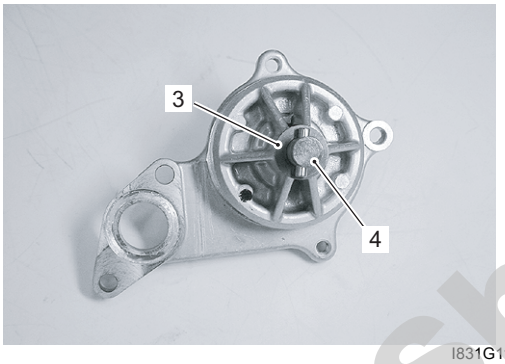
: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

7) Install the impeller shaft to the water pump body.



I831G1160051-01

8) Install the washer (3) and pin (4) to the impeller shaft.

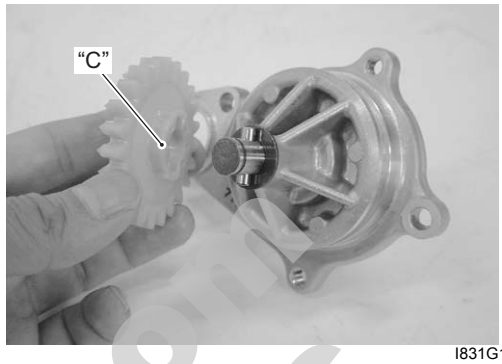


I831G1160050-02

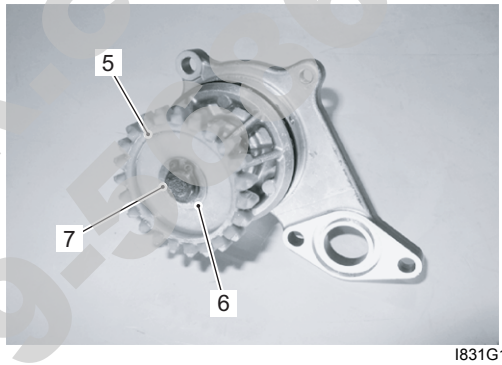
9) Install the water pump driven gear (5), washer (6) and snap ring (7).

⚠ CAUTION

The convex part "C" of water pump driven gear should face the water pump side.



I831G1160052-02

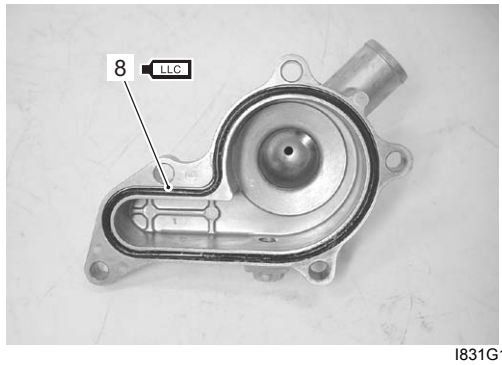


I831G1160053-04

10) Install a new O-ring (8) and apply engine coolant to it.

⚠ CAUTION

Use a new O-ring to prevent engine coolant leakage.



I831G1160054-02

11) Fit the water pump cover and tighten the water pump cover screws (9) to the specified torque.

Tightening torque

Precautions

Precautions for Fuel System

B831G21700001

⚠ WARNING

- **Keep away from fire or spark.**
- **During disassembling, use care to minimize spillage of gasoline.**
- **Spilled gasoline should be wiped off immediately.**
- **Work in a well-ventilated area.**

⚠ CAUTION

- **To prevent the fuel system (fuel tank, fuel hose, etc.) from contamination with foreign particles, blind all openings.**
- **After removing the throttle body, tape the cylinder intake section to prevent foreign particles from entering.**

General Description

Fuel System Description

B831G21701001

Fuel System

The fuel delivery system consists of the fuel tank (1), fuel pump (2), fuel mesh filter (3), fuel feed hose (4), fuel delivery pipe (5) (including fuel injector) and fuel pressure regulator (6). There is no fuel return hose. The fuel in the fuel tank (1) is pumped up by the fuel pump (2) and pressurized fuel flows into the injector (7) installed in the fuel delivery pipe (5). Fuel pressure is regulated by the fuel pressure regulator (6). As the fuel pressure applied to the fuel injector (7) (the fuel pressure in the fuel delivery pipe) is always kept at absolute fuel pressure of 300 kPa (3.0 kgf/cm^2, 43 psi), the fuel is injected into the throttle body in conic dispersion when the injector (7) opens according to the injection signal from the ECM.

The fuel relieved by the fuel pressure regulator (6) flows back to the fuel tank (1).

Repair Instructions

Fuel Pressure Inspection

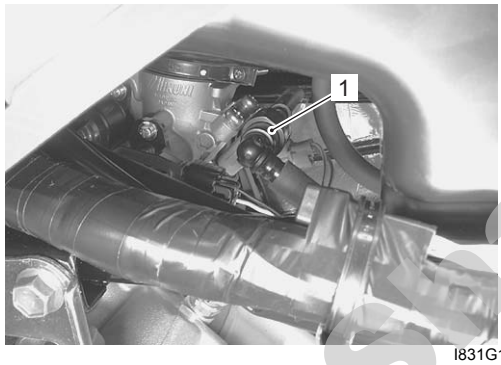
B831G21706001

⚠ WARNING

- **Keep away from fire or spark.**
- **Spilled gasoline should be wiped off immediately.**
- **Work in a well-ventilated area.**

Inspect the fuel pressure in the following procedures:

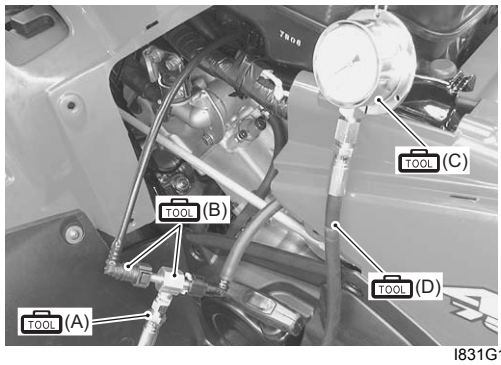
1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Place a rag under the fuel feed hose and disconnect fuel feed hose (1) from the fuel delivery pipe.



I831G1170005-02

4) Install the special tools between the fuel pump and fuel delivery pipe.

Special tool
TOOL (A): 09940–40211 (Fuel pressure gauge adapter)
TOOL (B): 09940–40220 (Fuel pressure gauge hose attachment)
TOOL (C): 09915–77331 (Meter (for high pressure))
TOOL (D): 09915–74521 (Oil pressure gauge hose)



I831G1170007-01

5) Turn the ignition ON and check for fuel pressure.

Fuel pressure
Approx. 294 kPa (2.9 kgf/cm², 41 psi)

If the fuel pressure is lower than the specification, check for the followings:

- Fuel hose leakage
- Clogged fuel filter
- Pressure regulator
- Fuel pump

If the fuel pressure is higher than the specification, check for the followings:

- Fuel pump
- Pressure regulator

6) Remove the special tools.

⚠ WARNING

Before removing the special tools, turn the ignition switch OFF and release the fuel pressure slowly.

7) Reinstall the removed parts.

Fuel Pump Inspection

B831G21706002

Turn the ignition switch ON and check that the fuel pump operates for a few seconds.
If the fuel pump motor does not make operating sound, inspect the fuel pump circuit connections or inspect the fuel pump relay and TO sensor. Refer to “Fuel Pump Relay Inspection (Page 1G-7)” and “TO Sensor Inspection in Section 1C (Page 1C-5)”.
If the fuel pump relay, TO sensor and fuel pump circuit connections are OK, the fuel pump may be faulty, replace the fuel pump with a new one. Refer to “Fuel Pump Assembly Removal and Installation (Page 1G-9)”.

Fuel Discharge Amount Inspection

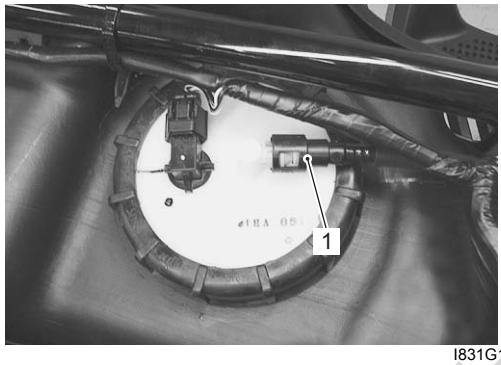
B831G21706003

⚠ WARNING

- **Keep away from fire or spark.**
- **Spilled gasoline should be wiped off immediately.**
- **Work in a well-ventilated area.**

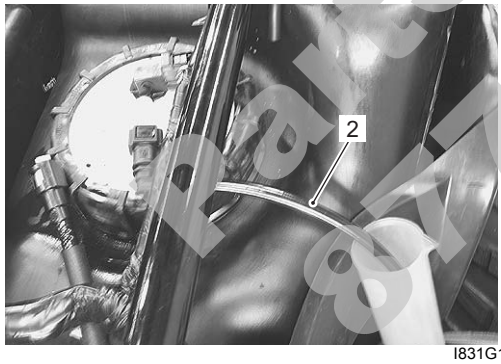
Inspect the fuel discharge amount in the following procedures:

1) Remove the rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
2) Place a rag under the fuel feed hose (1) and disconnect fuel feed hose from the fuel pump.



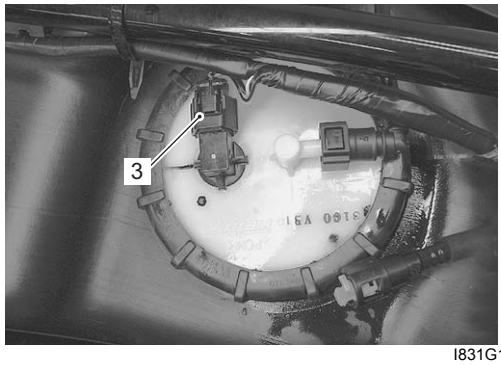
I831G1170008-01

3) Connect a proper fuel hose (2) to the fuel pump.
4) Place the measuring cylinder and insert the fuel hose end into the measuring cylinder.



I831G1170009-01

5) Disconnect the fuel pump lead wire coupler (3).



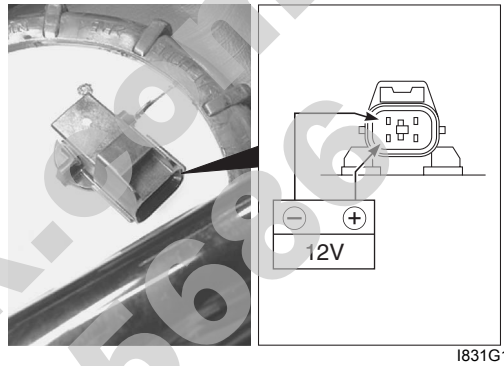
I831G1170010-01

6) Connect a proper lead wire into the fuel pump lead wire coupler (fuel pump side) and apply 12 V to the fuel pump (between (+) Y/R wire and (–) B/W wire) for 10 seconds and measure the amount of fuel discharged.
If the discharge amount is out of the specification, the probable cause may be failure of the fuel pump or clogged fuel filter.

NOTE

The battery must be in fully charged condition.

Fuel discharge amount
55.5 ml (1.88/1.95 US/Imp oz) and more/10 sec.



I831G1170012-02

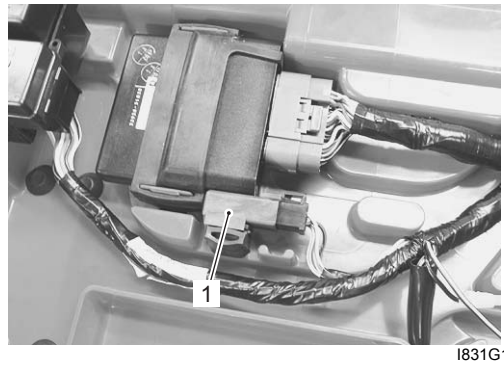
7) After finishing the fuel discharge inspection, reinstall the rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.

Fuel Pump Relay Inspection

B831G21706004

Refer to “Electrical Components Location in Section 0A (Page 0A-7)”.
Inspect the fuel pump relay in the following procedures:

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the fuel pump relay (1).



I831G1170013-01

3) First, check for insulation with the tester between terminals “A” and “B”. Next, check for continuity between “A” and “B” with 12 V voltage applied, positive (+) to terminal “C” and negative (–) to terminal “D”. If continuity does not exist, replace the relay with a new one.

Removal

⚠ WARNING

- **Keep away from fire or spark.**
- **Spilled gasoline should be wiped off immediately.**
- **Work in a well-ventilated area.**

1) Remove the rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
2) Remove the fuel tank outer cover. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
3) Place a rag under the fuel feed hose and disconnect the fuel feed hose (1) from the fuel pump.
4) Disconnect the fuel tank coupler (2) and fuel tank breather hose (3).

I831G1170020-01

Assembly

Assemble the fuel tank pump in the reverse order of the disassembly.

Fuel Mesh Filter Inspection and Cleaning

B831G21706013

Inspect the fuel mesh filter in the following procedures:

1) Remove the fuel cup holder. Refer to “Fuel Pump Disassembly and Assembly (Page 1G-10)”.
2) If the fuel mesh filter is clogged with foreign particles, it hinders smooth gasoline flow resulting in loss of engine power. Such a filter should be cleaned by blowing with compressed air.

NOTE

When the fuel mesh filter is dirtied excessively, replace the fuel mesh filter with a new one.

I831G1170021-01

3) After finishing the fuel mesh filter inspection, reinstall the fuel cup holder and fuel pump assembly. Refer to “Fuel Pump Assembly Removal and Installation (Page 1G-9)”.

Fuel Injector Inspection and Cleaning

B831G21706014

Inspect the fuel injector in the following procedures:

1) Remove the fuel injector. Refer to “Fuel Injector / Fuel Delivery Pipe Removal and Installation (Page 1G-10)”.
2) Check the fuel injector filter for evidence of dirt and contamination. If present, clean and check for presence of dirt in the fuel lines and fuel tank.

I831G1170022-01

3) Install the fuel injector. Refer to “Fuel Injector / Fuel Delivery Pipe Removal and Installation (Page 1G-10)”.

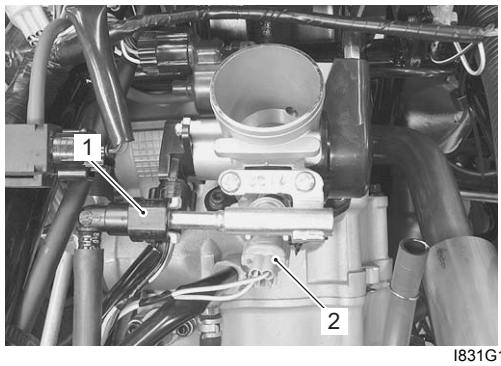
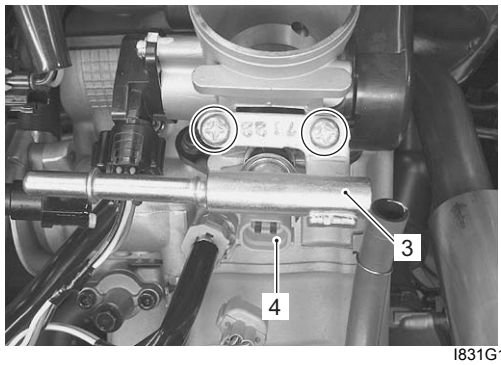
1) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the air cleaner box. Refer to “Air Cleaner Box Removal and Installation in Section 1D (Page 1D-5)”.
3) Place a rug under the fuel feed hose (1) and disconnect the fuel feed hose (1) from the fuel delivery pipe.

4) Disconnect the injector coupler (2).



I831G1170023-01

5) Remove the fuel delivery pipe (3) with the injector (4).



I831G1170024-01

6) Remove the fuel injector (4) from the fuel delivery pipe.

I831G1170025-02

Installation

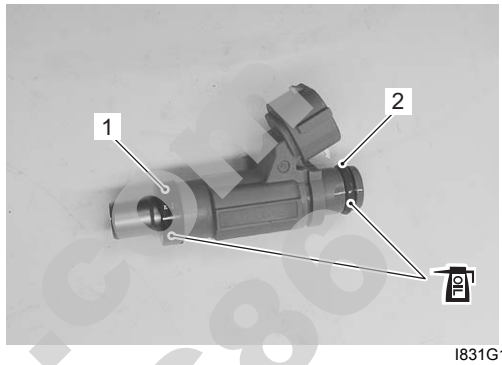
Install the fuel injector / fuel delivery pipe in the reverse order of removal.

Pay attention to the following points:

- Apply a thin coat of engine oil to the new cushion seal (1) and O-ring (2).

⚠ CAUTION

Replace the cushion seal and O-ring with the new ones.



I831G1170026-01

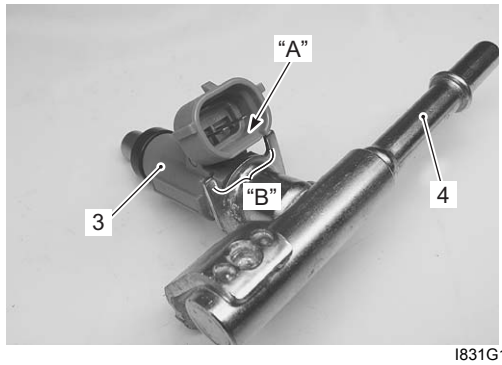
- Install the fuel injector (3) by pushing it straight to the delivery pipe (4).

⚠ CAUTION

Never turn the injector while pushing it.

NOTE

Align the coupler "A" of injector with boss "B" of the delivery pipe.



I831G1170027-01

- Install the fuel delivery pipe assembly (5) to the throttle body assembly.

⚠ CAUTION

Never turn the fuel injector while installing it.

- Tighten the fuel delivery pipe mounting screws to the specified torque.

Ignition System

General Description

Override Switch Description

B831G21801001

The override switch allows the rider to increase the power available by overriding the normal speed limiter in forward Differential Lock or Reverse. For example, the rider may need to use extra power when stuck in the mud. To override the normal speed limiter the rider must push the override button and hold it in. When the switch button is released, engine speed will once again be limited by the speed limiter.
In forward Differential Lock made, the override mode can be used for an indefinite period of time simply by holding the button in continuously.

I831G1180013-01

Operation

1) Set the diff-lock position or “R” (Reverse) position.
2) Operate the override switch while pushing it.

Troubleshooting

NOTE

Check that the transfer is in neutral and the engine stop switch is in the "RUN" position. Check that the fuse is not blown and the battery is fully-charged before diagnosing.

Step	Action	Yes	No
1	Check the ignition system couplers for poor connections. *Is there connection in the ignition system couplers?*	Go to step 2.	Poor connection of couplers.
2	Measure the battery voltage between input lead wires (O/W and B/W) at the ECM with the ignition switch in the "ON" position. *Is the voltage OK?*	Go to Step 3.	• Faulty ignition switch. • Faulty wire harness. • Broken wire harness or poor connection of related circuit couplers.
3	Measure the ignition coil primary peak voltage. Refer to "Ignition Coil and Plug Cap Inspection (Page 1H-3)". **NOTE** **This inspection method is applicable only with the multi-circuit tester and the peak volt adaptor.** *Is the peak voltage OK?*	Go to step 4.	Go to step 5.

Step	Action	Yes	No
4	Inspect the spark plug. Refer to “Spark Plug Inspection and Cleaning in Section 0B (Page 0B-9)”. *Is the spark plug OK?*	Go to Step 5.	Faulty spark plug.
5	Inspect the ignition coil. Refer to “Ignition Coil and Plug Cap Inspection (Page 1H-3)”. *Is the ignition coil OK?*	Go to step 6.	Faulty ignition coil.

Spark Plug Inspection and Cleaning

B831G21806002

Refer to “Spark Plug Inspection and Cleaning in Section 0B (Page 0B-9)”.

Ignition Coil and Plug Cap Inspection

B831G21806003

Refer to “Electrical Components Location in Section 0A (Page 0A-7)”.

Ignition Coil Primary Peak Voltage

1) Remove the right side cover and right inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the spark plug cap. Refer to “Spark Plug Cap and Spark Plug Removal and Installation (Page 1H-3)”.

3) Connect the new spark plug to spark plug cap and ground it to the cylinder head.

NOTE

Be sure that the spark plug is connected properly and the battery used is in fully-charged condition.

I831G1180005-01

4) Connect the multi-circuit tester with the peak voltage adaptor as follows:

⚠ CAUTION

Before using the multi-circuit tester and peak voltage adaptor, refer to the appropriate instruction manual.

NOTE

Do not disconnect the ignition coil lead wires.

Starting System Symptom Diagnosis

B831G21904001

Condition	Possible cause	Correction / Reference Item
Starter button is not effective	Run down battery.	*Repair or replace.*
	Defective switch contacts.	*Replace.*
	Brushes not seating properly on starter motor commutator.	*Repair or replace.*
	Defective starter relay or neutral relay.	*Replace.*
	Defective main fuse or ignition fuse.	*Replace.*

Starter Motor will not Run

B831G21904002

NOTE

Make sure the fuses are not blown and the battery is fully-charged before diagnosing.

Troubleshooting

Step	Action	Yes	No
1	1) Shift the transfer to neutral. 2) Turn on the ignition switch with the engine stop switch in the "RUN" position and listen for a click from the starter relay when the starter button is pushed. *Is a click sound heard?*	Go to step 2.	Go to step 3.
2	Check if the starter motor runs when its terminal is connected to the battery (+) terminal. (Do not use thin "wire" because a large amount of current flows.) *Does the starter motor run?*	• Faulty starter relay. • Loose or disconnected starter motor lead wire. • Loose or disconnected between starter relay and battery (+) terminal.	Faulty starter motor.
3	Measure the starter relay voltage at the starter relay connectors (between Y/B (+) and B/W (–)) when the starter button is pushed. *Is the voltage OK?*	Go to Step 4.	• Faulty ignition switch. • Faulty engine stop switch. • Faulty neutral relay. • Faulty starter button. • Poor contact of connector. • Open circuit in wire harness.
4	Check the starter relay. Refer to "Starter Relay Inspection (Page 1I-7)". *Is the starter relay OK?*	Poor contact of the starter relay.	Faulty starter relay.

Starter Motor Runs but Does not Crank the Engine

B831G21904003

The starter motor runs when the transfer is in neutral, but does not run when the transfer is in any position other than neutral, with the parking lever grasped firmly.

Step	Action	Yes	No
1	Check the parking brake switch. Refer to "Parking Brake Switch Inspection (Page 1I-9)". *Is the parking brake switch OK?*	Go to Step 2.	Faulty parking brake switch.
2	Check the parking brake relay. Refer to "Parking Brake Relay Inspection (Page 1I-9)". *Is the parking brake relay OK?*	• Open circuit in wire harness. • Poor contact of connector.	• Faulty parking brake relay.

Disassembly

Disassemble the starter motor as shown in the starter motor components diagram. Refer to “Starter Motor Components (Page 1I-3)”.

Assembly

Reassemble the starter motor in the reverse order of removal. Pay attention to the following points:

⚠ **CAUTION**

Replace the O-rings with new ones to prevent oil leakage and moisture.

- Apply grease to the lip of the oil seal and bearing.

  : Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

I831G1190006-02

- Fit the washer to the housing end correctly as shown in the figure.

I831G1190007-01

- Apply a small quantity of moly paste to the armature shaft.

  : Moly paste 99000–25140 (SUZUKI Moly paste or equivalent)

I831G1190008-01

- Align the match mark on the starter motor case with the match mark on the housing end.
- Tighten the starter motor housing bolts.

Starter Motor Inspection

B831G21906004

Refer to “Starter Motor Disassembly and Assembly (Page 1I-4)”.

Carbon Brush

Inspect the carbon brushes for abnormal wear, cracks or smoothness in the brush holder.

If either carbon brush is defective, replace the brush holder set with a new one.

Measure the length “a” of the carbon brushes using a vernier calipers. If the measurement is less than the service limit, replace the housing end assembly with a new one.

Starter Relay Inspection

B831G21906006

Inspect the starter relay in the following procedures:

1) Remove the starter relay. Refer to “Starter Relay Removal and Installation (Page 1I-6)”.
2) Apply 12 V to “A” and “B” terminals and check for continuity between the positive and negative terminals using the multi-circuit tester. If the starter relay clicks and continuity is found, the relay is OK.

⚠ CAUTION

Do not apply battery voltage to the starter relay for five seconds and more, since the relay coil may overheat and get damaged.

Inspect the starter driven gear bearing for wear or damage. If necessary, replace it with a new one.

I831G1190042-01

Starter Torque Limiter

⚠ CAUTION

Do not attempt to disassemble the starter torque limiter. The starter torque limiter is available only as an assembly.

1) Set the starter torque limiter to the special tools and vise.
2) Turn the starter torque limiter and check the slip torque.

Special tool

Starter Idle Gear

Inspect the starter idle gear for wear or damage. If any damage is found, replace it with a new one.

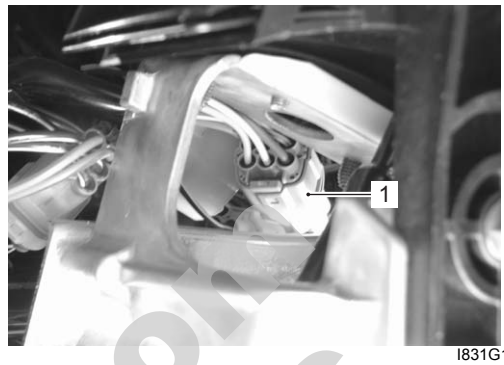
I831G1190044-01

Starter Button Inspection

B831G21906017

Inspect the starter button in the following procedures:

1) Remove the left inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the handlebar switch coupler (1).



I831G1190045-02

3) Measure the voltage between Y/G and O lead wires.

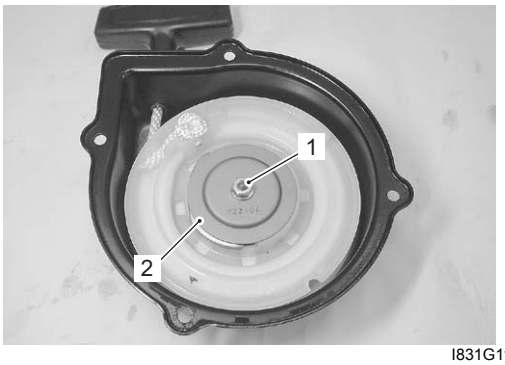
⚠ WARNING

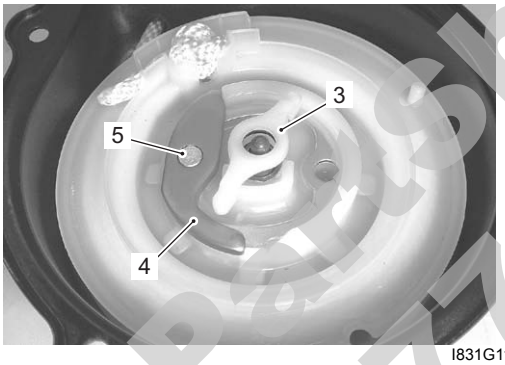
Wear hand and eye protection when removing the reel, since the spring may quickly unwind and cause an injury.

1) Remove the nut (1) and friction plate (2).



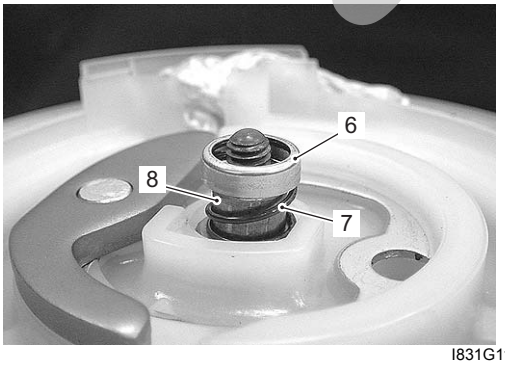
I831G1190049-03

2) Remove the ratchet guide (3), ratchet (4) and ratchet pin (5).



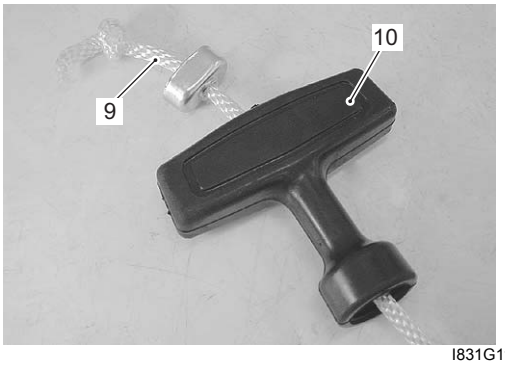
I831G1190050-02

3) Remove the spring cover (6), spring (7) and spacer (8).



I831G1190051-02

4) Disengage the rope (9) from the handle (10).

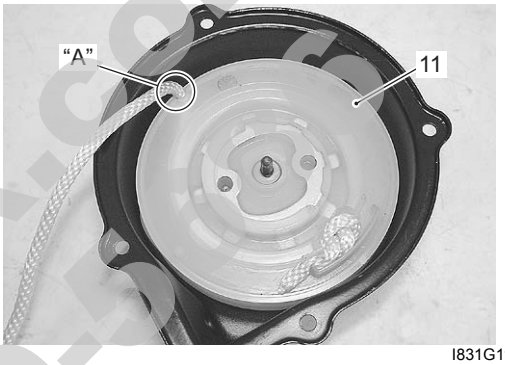


I831G1190052-02

5) Hook the rope to groove “A” of the reel (11).

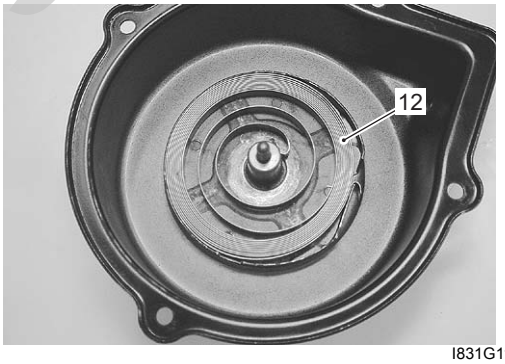
6) Turn the rope on the reel (11) properly.

7) Remove the reel (11).



I831G1190053-02

8) Remove the spiral spring (12).



I831G1190054-01

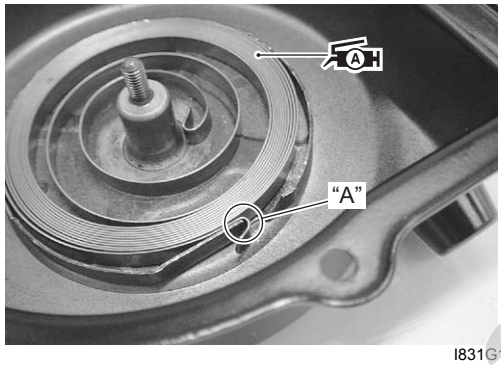
Assembly
Assemble the recoil starter in the reverse order of disassembly. Pay attention to the following points:

⚠ WARNING

Wear hand and eye protection when installing the reel, since the spring may quickly unwind and cause an injury.

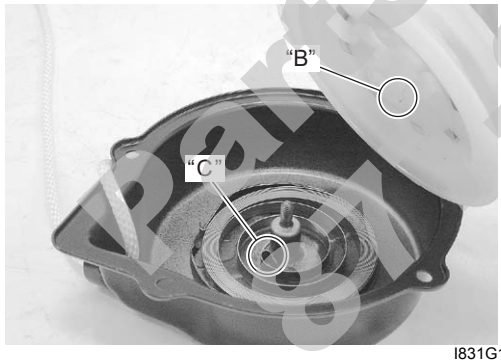
- When installing the spiral spring, hook the spiral spring end “A” with the recoil starter case as shown in the figure.
- Apply grease to the spiral spring.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



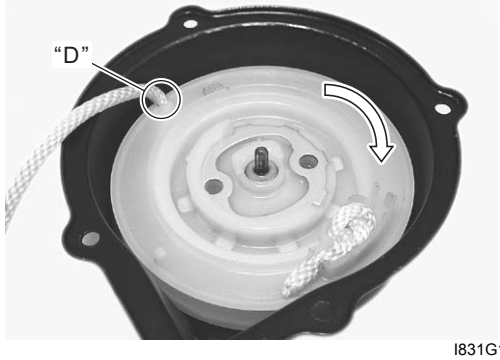
I831G1190055-01

- Turn the rope on the reel properly.
- After installing the spiral spring, engage the part “B” of the reel with the spiral spring end “C”.



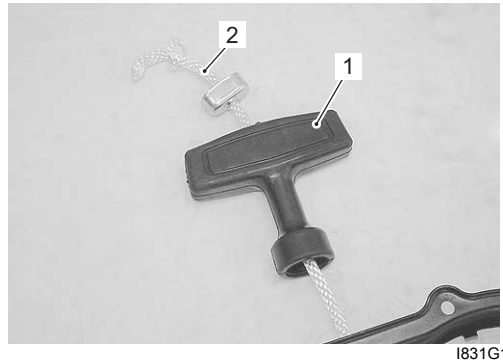
I831G1190056-01

- Hook the rope onto the hook part “D” of the reel, turn the reel clockwise five or six times with the rope.



I831G1190057-01

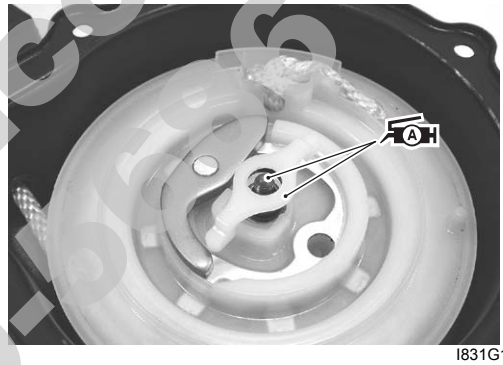
- Connect the handle (1) to the rope (2).



I831G1190058-02

- Install the ratchet related parts.
- Apply grease to the shaft and ratchet guide.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1190059-01

- Pull the rope and check that the ratchet is pushed out.

Condition	Possible cause	Correction / Reference Item
Generator does not charge	Open- or short-circuited lead wires, or loose lead connections.	*Repair, replace or connect properly.*
	Short-circuited, grounded or open generator coil.	*Replace.*
	Short-circuited or punctured regulator/ rectifier.	*Replace.*
Generator does charge, but charging rate is below the specification	Lead wires tend to get short- or open-circuited or loosely connected at terminals.	*Repair or retighten.*
	Grounded or open-circuited generator coil.	*Replace.*
	Defective regulator/rectifier.	*Replace.*
	Defective cell plates in the battery.	*Replace the battery.*
Generator overcharges	Internal short-circuit in the battery.	*Replace the battery.*
	Damaged or defective regulator/rectifier.	*Replace.*
	Poorly grounded regulator/rectifier.	*Clean and tighten ground connection.*
Unstable charging	Lead wire insulation frayed due to vibration, resulting in intermittent short-circuiting.	*Repair or replace.*
	Internally short-circuited generator.	*Replace.*
	Defective regulator/rectifier.	*Replace.*

Condition	Possible cause	Correction / Reference Item
Battery overcharges	Faulty regulator/rectifier.	*Replace.*
	Faulty battery.	*Replace.*
	Poor contact of generator lead wire coupler.	*Repair.*
Battery runs down quickly	Trouble in charging system.	*Check the generator, regulator/rectifier and circuit connections and make necessary adjustments to obtain specified charging operation.*
	Cell plates have lost much of their active materials a result of overcharging.	*Replace the battery and correct the charging system.*
	Internal short-circuit in the battery.	*Replace the battery.*
	Too low battery voltage.	*Recharge the battery fully.*
	Too old battery.	*Replace the battery.*
Battery "sulfation"	Incorrect charging rate. (When not in use battery should be checked at least once a month to avoid sulfation.)	*Replace the battery.*
	The battery was left unused in a cold climate for too long.	*Replace the battery if badly sulfated.*

Troubleshooting

Step	Action	Yes	No
1	Check accessories which use excessive amounts of electricity. *Are accessories being installed?*	Remove accessories.	Go to Step 2.
2	Check the battery for current leakage. Refer to "Battery Current Leakage Inspection (Page 1J-3)". *Is the battery for current leakage OK?*	Go to Step 3.	• Short circuit of wire harness. • Faulty electrical equipment.
3	Measure the regulated voltage between the battery terminals. Refer to "Regulated Voltage Inspection (Page 1J-3)". *Is the regulated voltage OK?*	• Faulty battery. • Abnormal driving condition.	Go to Step 4.
4	Measure the resistance of the generator coil. Refer to "Generator Inspection (Page 1J-3)". *Is the resistance of generator coil OK?*	Go to Step 5.	• Faulty generator coil. • Disconnected lead wires.
5	Measure the generator no-load performance. Refer to "Generator Inspection (Page 1J-3)". *Is the generator no-load performance OK?*	Go to Step 6.	Faulty generator.
6	Inspect the regulator/rectifier. Refer to "Regulator / Rectifier Inspection (Page 1J-8)". *Is the regulator/rectifier OK?*	Go to Step 7.	Faulty regulator/rectifier.
7	Inspect wirings. *Is the wirings OK?*	Faulty battery.	• Short circuit of wire harness. • Poor contact of couplers.

Repair Instructions

Battery Current Leakage Inspection

B831G21A06001

Inspect the battery current leakage in the following procedures:

1) Turn the ignition switch OFF.
2) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
3) Disconnect the (–) battery lead wire.
4) Measure the current between (–) battery terminal and the (–) battery lead wire using the multi-circuit tester. If the reading exceeds the specified value, leakage is evident.

⚠ CAUTION

- **In case of a large current leak, turn the tester to high range first to avoid tester damage.**
- **Do not turn the ignition switch ON when measuring current.**

5) Connect the (–) battery terminal and install the seat.

Regulated Voltage Inspection

B831G21A06002

Inspect the regulated voltage in the following procedures:

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Start the engine and keep it running at 5 000 r/min with the dimmer switch turned HI position.
3) Measure the DC voltage between the (+) and (–) battery terminals using the multi-circuit tester. If the voltage is not within the specified value, inspect the generator and regulator/rectifier. Refer to “Generator Inspection (Page 1J-3)” and “Regulator / Rectifier Inspection (Page 1J-8)”.

NOTE

When making this test, be sure that the battery is fully charged condition.

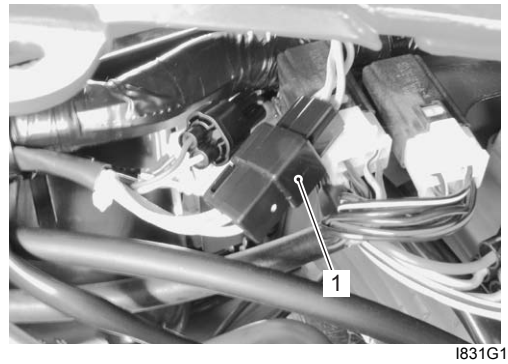
Generator Coil Resistance

1) Remove the left side cover and engine side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the generator coupler (1).



I831G11A0001-01

3) Measure the resistance between the three lead wires.
If the resistance is out of specified value, replace the stator with a new one. Also, check that the generator core is insulated properly.

NOTE

When making this test, it is not necessary to remove the generator.

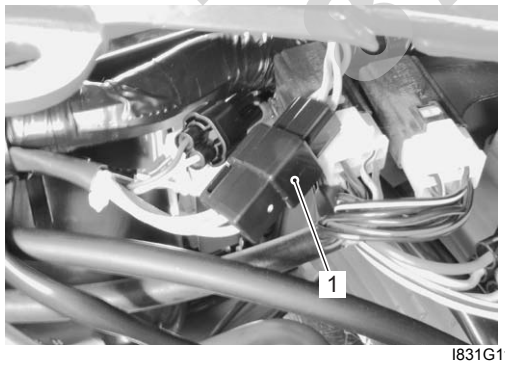
No-load Performance

1) Remove the side covers, left and right. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)".
2) Connect the tachometer onto the spark plug high-tension cord.
3) Disconnect the generator coupler (1).



I831G11A0001-01

4) Start the engine and keep it running at 5 000 r/min.
5) Using the multi-circuit tester, measure the voltage between three lead wires.

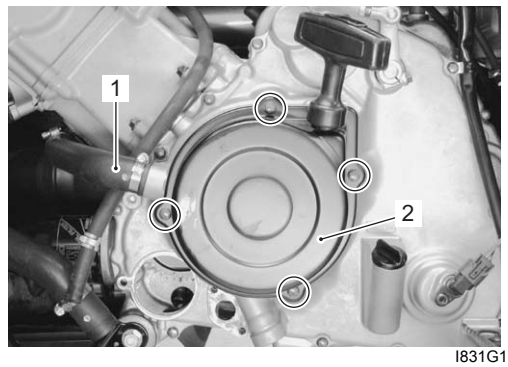
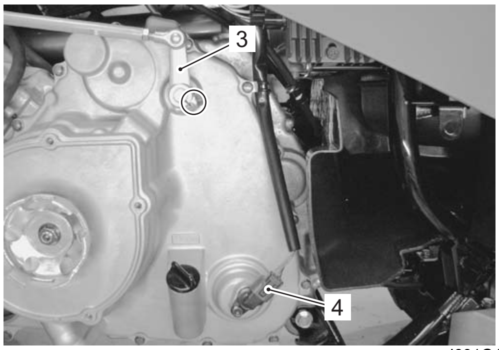
Removal

1) Disconnect the (–) battery lead wire. Refer to "Battery Removal and Installation (Page 1J-12)".
2) Drain engine oil. Refer to "Engine Oil and Filter Replacement in Section 0B (Page 0B-10)".
3) Remove the left inner fender. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)".
4) Remove the left mud guard. Refer to "Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)".
5) Drain engine coolant. Refer to "Cooling System Inspection in Section 0B (Page 0B-15)".
6) Remove the water pump assembly. Refer to "Water Pump Removal and Installation in Section 1F (Page 1F-13)".
7) Disconnect the water hose (1) and remove the recoil starter (2).



I831G11A0004-02

8) Disconnect the gearshift lever arm (3) and speed sensor coupler (4).



I831G11A0015-01

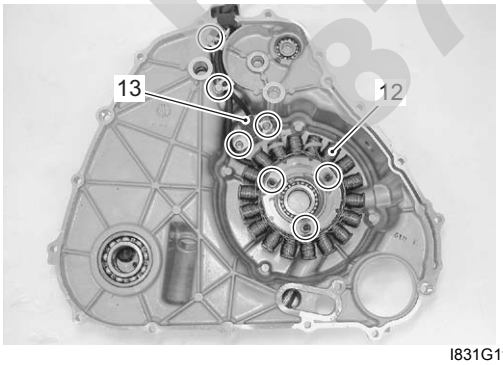
19) Remove the generator stator (12) along with the CKP sensor (13).



I831G11A0014-02

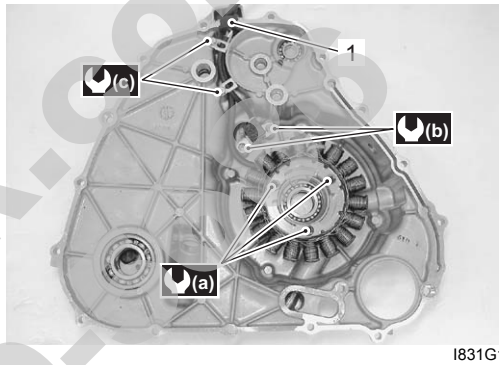
Installation
Install the generator in the reverse order of removal. Pay attention to the following points:

- Tighten the generator stator set bolts and CKP sensor mounting bolts to the specified torque.

NOTE

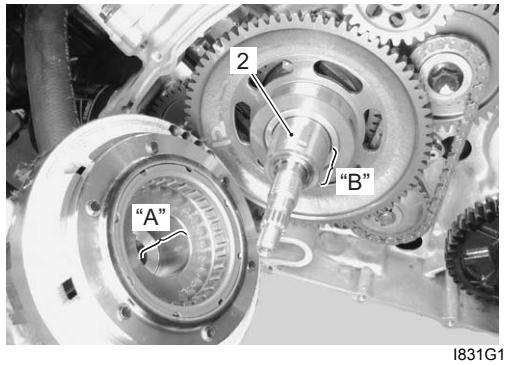
Be sure the grommet (1) is set to the generator cover.

Tightening torque
Generator stator set bolt (a): 11 N·m (1.1 kgf-m, 8.0 lb-ft)
CKP sensor mounting bolt (b): 6 N·m (0.6 kgf-m, 4.5 lb-ft)
Lead wire clamp bolt (c): 6 N·m (0.6 kgf-m, 4.5 lb-ft)



I831G11A0016-03

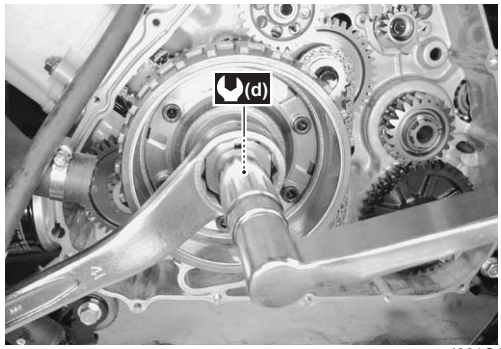
- Degrease the tapered portion "A" of generator rotor assembly and also the crankshaft "B". Use nonflammable cleaning solvent to wipe off oily or greasy matter to make these surfaces completely dry.
- Fit the key (2) in the key slot on the crankshaft.
- Install the generator rotor assembly onto crankshaft.



I831G11A0017-04

- Hold the generator rotor and tighten the generator rotor nut to the specified torque.

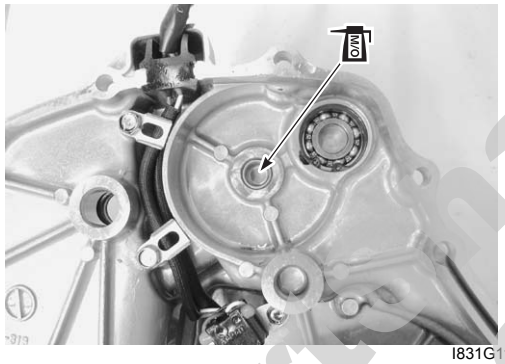
  Tightening torque
  Generator rotor nut (d): 160 N·m (16.0 kgf-m, 115.5 lb-ft)



I831G11A0018-05

- Apply molybdenum oil solution to the inside of the bush.

  M/O: Molybdenum oil (MOLYBDENUM OIL SOLUTION)



I831G11A0019-01

- Install the dowel pins and new gasket (3).

⚠ CAUTION

Use a new gasket to prevent oil leakage.

I831G11A0020-03

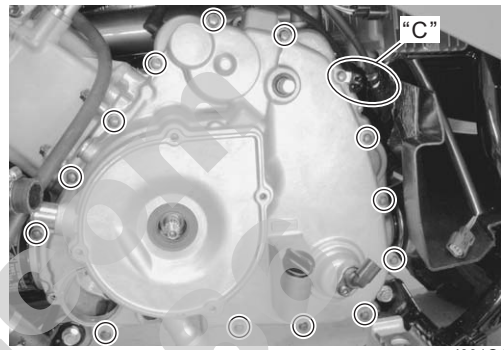
- Install the generator cover and tighten the generator cover bolts.

⚠ WARNING

Be careful not to pinch the finger between the generator cover and the crankcase.

⚠ CAUTION

Fit the clamp to the bolt “C”.



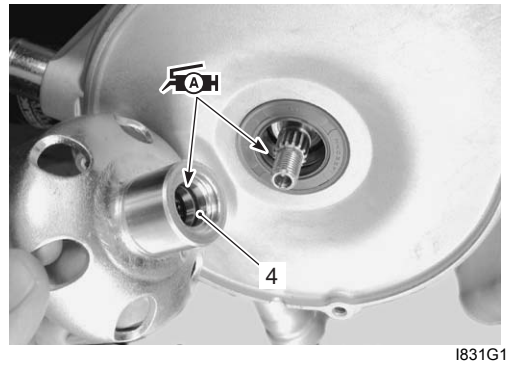
I831G11A0021-02

- Apply grease to the O-ring (4) and oil seal lip.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

⚠ CAUTION

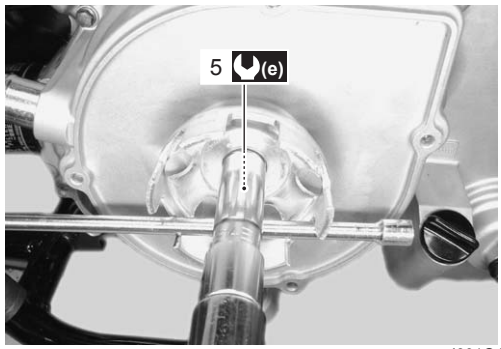
Replace the O-ring (4) with a new one.



I831G11A0022-03

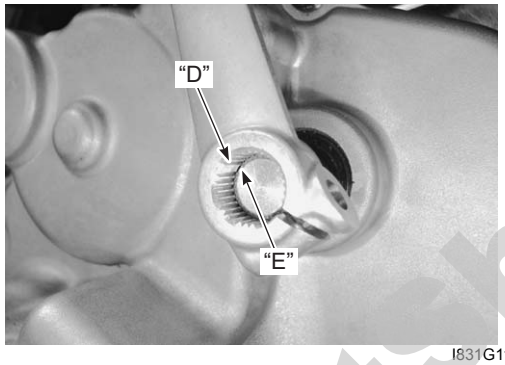
- Tighten the starter cup nut (5) to the specified torque.

  Tightening torque
  Starter cup nut (e): 38 N·m (3.8 kgf-m, 27.5 lb-ft)



I831G11A0023-05

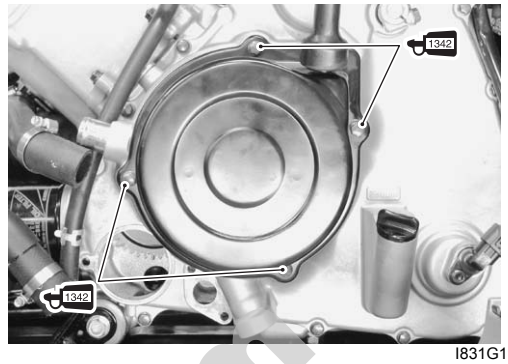
- When installing the gearshift lever arm, align the wide spline teeth “D” with “E”. Refer to “Shift Lever Disassembly and Assembly in Section 5A (Page 5A-25)”.



I831G11A0024-02

- Apply a small quantity of thread lock to the bolts.

  1342 : Thread lock cement 99000–32050
  (THREAD LOCK CEMENT 1342 or equivalent)



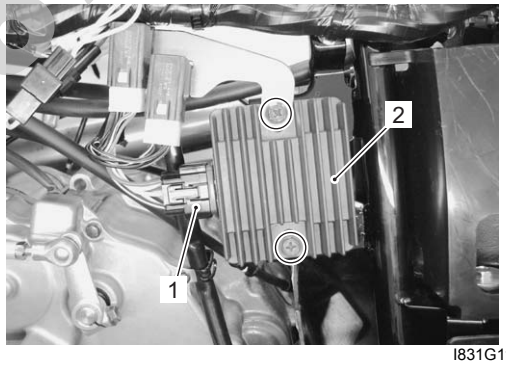
I831G11A0025-02

Regulator / Rectifier Inspection

B831G21A06005

Inspect the regulator/rectifier in the following procedures:

1) Turn the ignition switch OFF.
2) Remove the rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
3) Disconnect the regulator/rectifier coupler (1) and remove the regulator/rectifier (2).



I831G11A0026-01

4) Measure the voltage between the terminals using the multi-circuit tester as indicated in the following table. If the voltage is not within the specified value, replace the regulator/rectifier with a new one.

NOTE

If the tester reads 1.4 V and below when the tester probes are not connected, replace its battery.

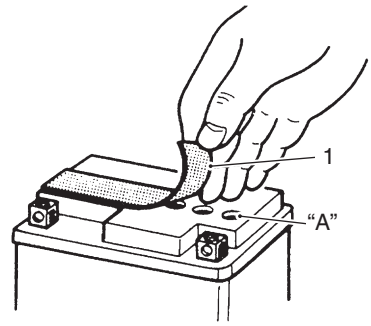
Initial Charging
Filling electrolyte

NOTE

When filling electrolyte, the battery must be removed from the vehicle and must be put on the level ground.

1) Remove the aluminum tape (1) which seals the battery filler holes "A".

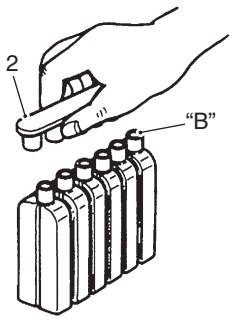


I649G11A0039-03

2) Remove the caps (2) from the electrolyte container.

NOTE

- **Do not remove or pierce the sealed areas "B" of the electrolyte container.**
- **After filling the electrolyte completely, use the removed cap (2) as sealing caps of battery-filler holes.**



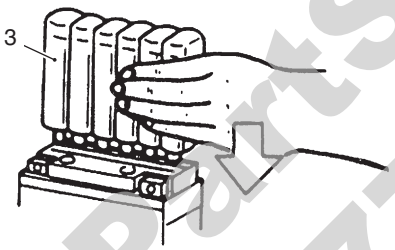
I649G11A0040-03

3) Insert the nozzles of the electrolyte container (3) into the electrolyte filler holes of the battery.

4) Hold the electrolyte container firmly so that it does not fall.

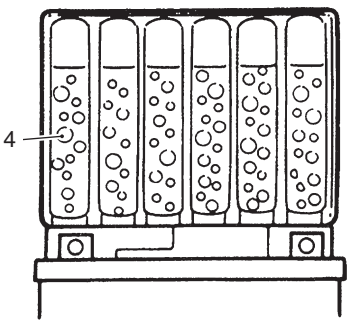
NOTE

Do not allow any of the electrolyte to spill.



I649G11A0041-03

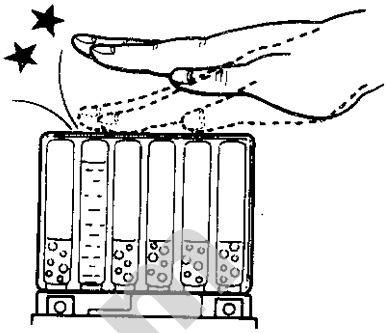
5) Make sure that air bubbles (4) rise to the top of each electrolyte container, and leave in this position for about more than 20 minutes.



I649G11A0042-03

NOTE

If no air bubbles come out from a filler port, tap the bottom of the electrolyte container two or three times.
Never remove the container from the battery.



I310G11A0024-01

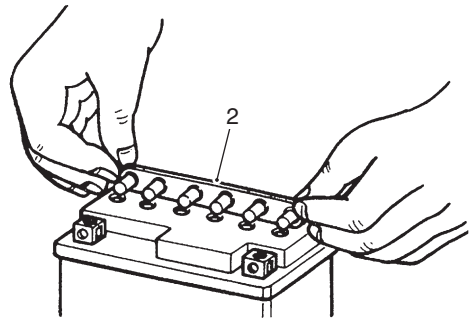
6) After confirming that the electrolyte has entered the battery completely, remove the electrolyte containers from the battery.

7) Wait for about 20 minutes.

8) Insert the caps (2) into the filler holes, pressing in firmly so that the top of the caps do not protrude above the upper surface of the battery's top cover.

⚠ CAUTION

- **Once the caps are installed to the battery, do not remove the caps.**
- **Do not tap the caps with a hammer when installing them.**



I718H11A0027-01

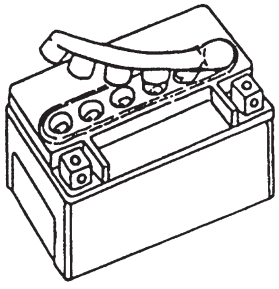
Incorrect



I649G11A0047-02

Charging

For initial charging, use the charger specially designed for MF battery.

⚠ CAUTION

- **For charging the battery, make sure to use the charger specially designed for MF battery. Otherwise, the battery may be overcharged resulting in shortened service life.**
- **Do not remove the cap during charging.**
- **Position the battery with the cap facing upward during charging.**

Battery Recharging

⚠ CAUTION

Do not remove the caps on the battery top while recharging.

NOTE

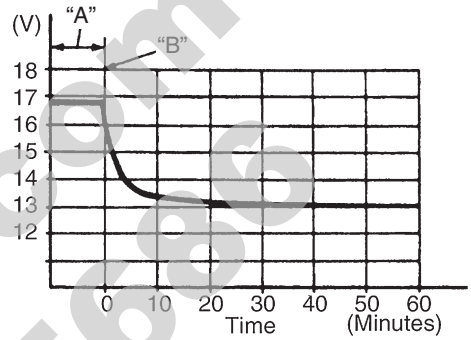
When the vehicle is not used for a long period, check the battery every 1 month to prevent the battery discharge.

1) Remove the battery from the vehicle. Refer to "Battery Removal and Installation (Page 1J-12)".

2) Measure the battery voltage using the multi-circuit tester.
   If the voltage reading is less than the 12 V (DC), recharge the battery with a battery charger.

   Recharging time
   1.8 A for 5 to 10 hour

3) After recharging, wait at least 30 minutes and then measure the battery voltage using the multi-circuit tester.
   If the battery voltage is less than 12.5 V, recharge the battery again.
   If the battery voltage is still less than 12.5 V after recharging, replace the battery with a new one.



I649G11A0045-02

"A": Charging period	"B": Stop charging

4) Install the battery to the vehicle. Refer to "Battery Removal and Installation (Page 1J-12)".

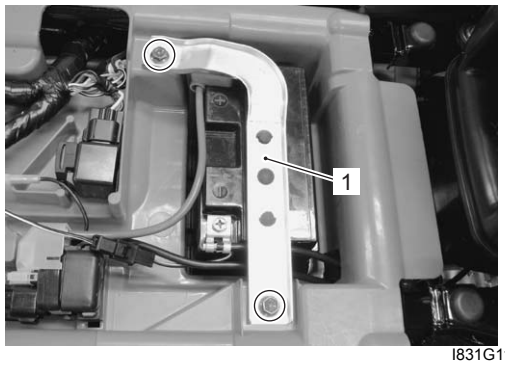
Battery Removal and Installation

B831G21A06008

Removal

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the battery stay (1).



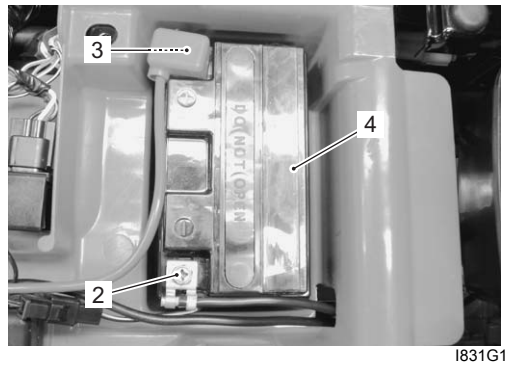
I831G11A0028-02

3) Disconnect the battery (–) lead wire (2).
4) Disconnect the battery (+) lead wire (3).

NOTE

Be sure to disconnect the battery (–) lead wire (2) first, then disconnect the battery (+) lead wire (3).

5) Remove the battery (4).



I831G11A0029-02

Installation

Install the battery in the reverse order of removal.
Pay attention to following point:

⚠ CAUTION

Never use anything except the specified battery.

- Tighten the battery lead wire mounting bolts securely.

Battery Visual Inspection

B831G21A06009

Inspect the battery in the following procedures:

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Visually inspect the surface of the battery container. If any signs of cracking or electrolyte leakage from the sides of the battery have occurred, replace the battery with a new one.
   If the battery terminals are found to be coated with rust or an acidic white powdery substance, clean the battery terminals with sandpaper.
3) Install the seat.

Precautions

Precautions for Exhaust System

B831G21B00001

⚠ WARNING

To avoid the risk of being burned, do not touch the exhaust system when the system is hot. Any service on the exhaust system should be performed when the system is cool.

⚠ CAUTION

Make sure that the exhaust pipe and muffler have enough clearance from the rubber parts and plastic parts to avoid melting.

Repair Instructions

Exhaust System Construction

I831G11B0001-03

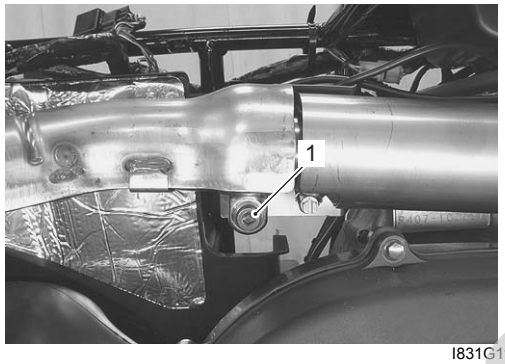
1. Exhaust pipe	4. Exhaust pipe nut	(a) : 23 N·m (2.3 kgf-m, 16.5 lb-ft)
2. Muffler	5. Exhaust pipe mounting bolt	⊗ : Do not reuse.
3. Connector	6. Muffler connecting bolt	

Exhaust Pipe / Muffler Removal and Installation

B831G21B06002

Removal

1) Remove the inner fenders and side covers, left and right. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the rear carrier. Refer to “Rear Carrier Removal and Installation in Section 9E (Page 9E-5)”.
3) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
4) Remove the engine side cover and rear fender. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
5) Loosen the muffler connecting bolt (1).

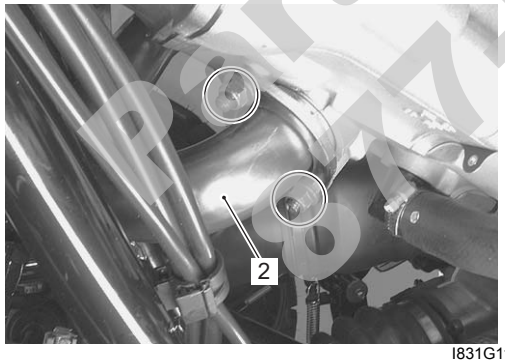


I831G11B0002-02

6) Remove the exhaust pipe (2).

NOTE

Support the exhaust pipe to prevent it from falling.

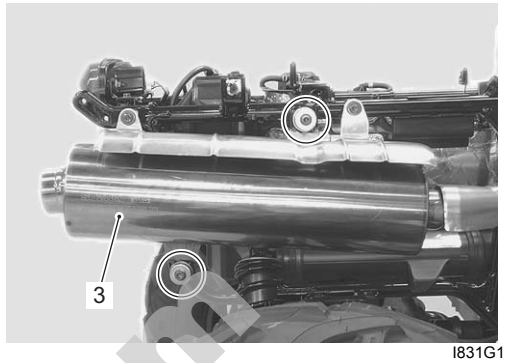


I831G11B0003-01

7) Remove the muffler (3).

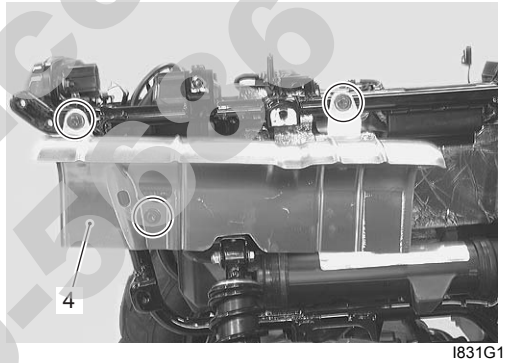
NOTE

Support the muffler to prevent it from falling.



I831G11B0004-03

8) Remove the muffler cover (4).



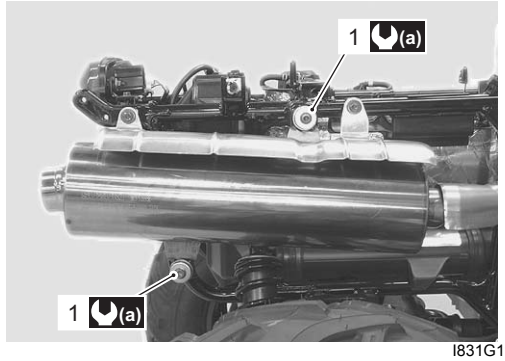
I831G11B0005-02

Installation

Install the exhaust pipe/muffler in the reverse order of removal.
Pay attention to the following points:

- Tighten the muffler mounting bolts (1) to the specified torque.

Tightening torque
Muffler mounting bolt (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)

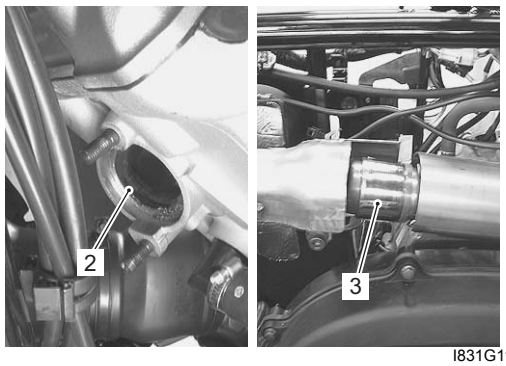


I831G11B0006-03

- Install the exhaust pipe gasket (2) and connector (3).

⚠ CAUTION

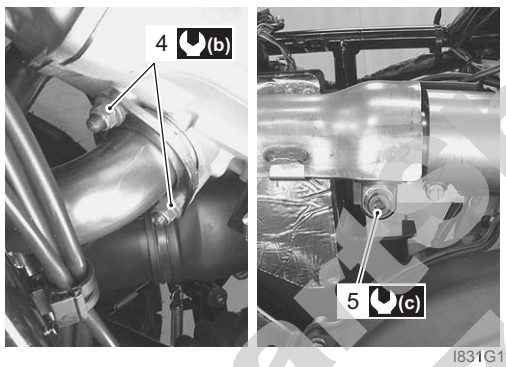
Replace the gasket and connector with new ones.



I831G11B0007-05

- Tighten the exhaust pipe nuts (4) and muffler connecting mounting bolt (5) to the specified torque.

Tightening torque
Exhaust pipe nut (b): 23 N·m (2.3 kgf-m, 16.5 lb-ft)
Muffler connecting bolt (c): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G11B0008-04

Exhaust System Inspection

B831G21B06003

Inspect the exhaust pipe connection and muffler connection for exhaust gas leakage and mounting condition. If any defect are found, replace the exhaust pipe assembly or muffler with a new one.
Check the exhaust pipe nuts (1), muffler connecting bolt (2) and muffler mounting bolts (3) are tightened to their specified torque.

Tightening torque
Exhaust pipe nut (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)
Muffler connecting bolt (b): 23 N·m (2.3 kgf-m, 16.5 lb-ft)

Suspension

CONTENTS

Precautions

Precautions

Precautions for Suspension

B831G22000001

Refer to “General Precautions in Section 00 (Page 00-1)”.

⚠ WARNING

All suspensions, bolts and nuts are an important part in that it could affect the performance of vital parts. They must be tightened to the specified torque periodically and if the suspension effect is lost, replace it with a new one.

⚠ CAUTION

Never attempt to heat, quench or straighten any suspension part. Replace it with a new one, or damage to the part may result.

NOTE

The right and left suspension related parts (shock absorbers, suspension arms and knuckles) are installed symmetrically and therefore the removal procedure for one side is the same as that for the other side.

Front Shock Absorber Removal and Installation

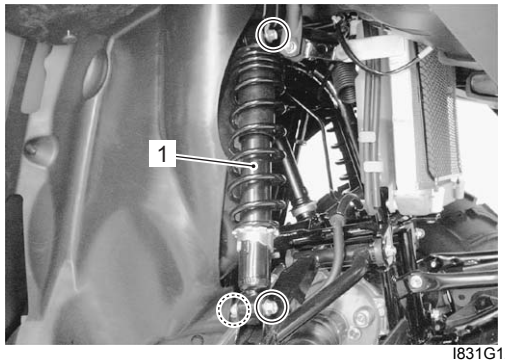
B831G22206003

⚠ CAUTION

Make sure that the vehicle is supported securely.

Removal

1) Remove the front wheel. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
2) Remove the front shock absorber upper mounting bolt.
3) Remove the front shock absorber lower mounting nut and bolt.
4) Remove the front shock absorber (1).



I831G1220003-02

Installation

Install the front shock absorber in the reverse order of removal. Pay attention to the following point:

- Tighten the mounting bolt and nut to the specified torque.

Tightening torque
Front shock absorber mounting bolt (Upper) (a): 55 N·m (5.5 kgf-m, 40.0 lb-ft)
Front shock absorber mounting nut (Lower) (b): 60 N·m (6.0 kgf-m, 43.5 lb-ft)

Front Suspension Inspection

B831G22206004

Refer to “Suspensions Inspection in Section 0B (Page 0B-22)”.

Front Shock Absorber Inspection

B831G22206005

Inspect the front shock absorber in the following procedures:

1) Remove the front shock absorber. Refer to “Front Shock Absorber Removal and Installation (Page 2B-3)”.
2) Inspect the front shock absorber for damage and oil leakage, and absorber bushing for wear or damage. If any defects are found, replace the front shock absorber with a new one.

⚠ CAUTION

Do not attempt to disassemble the front shock absorber. It is unserviceable.

I831G1220005-01

3) Install the front shock absorber. Refer to “Front Shock Absorber Removal and Installation (Page 2B-3)”.

Spring Pre-load Adjustment

B831G22206006

⚠ WARNING

Be sure to adjust the spring pre-load on the both suspensions equally.

- Turn the spring tension ring (1) to the desired position.

NOTE

Position 1 provides the softest spring tension and position 5 provides the stiffest.

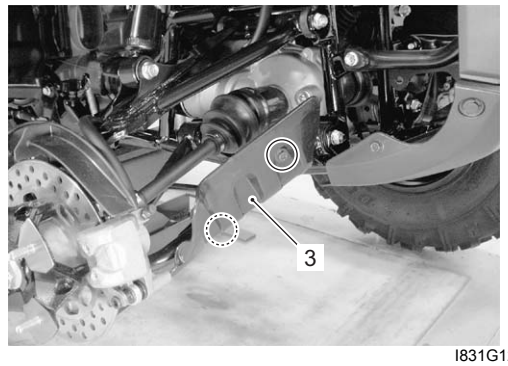
I831G1220006-01

2) Remove the front wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.

⚠ CAUTION

Make sure that the vehicle is supported securely.

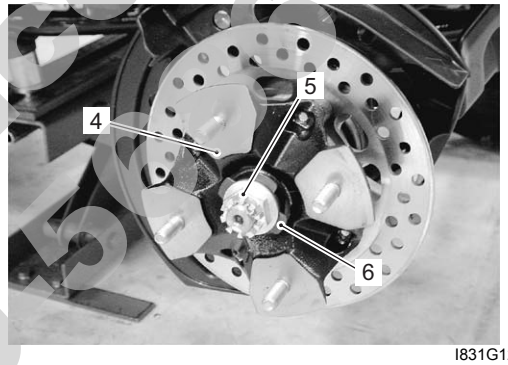
3) Remove the front drive shaft cover (3).



I831G1220007-01

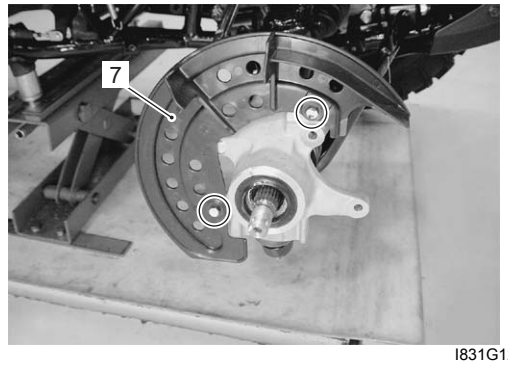
4) Remove the brake caliper. Refer to “Front Brake Caliper Removal and Installation in Section 4B (Page 4B-3)”.

5) Remove the front wheel hub (4) by removing hub nut (5) and washer (6).



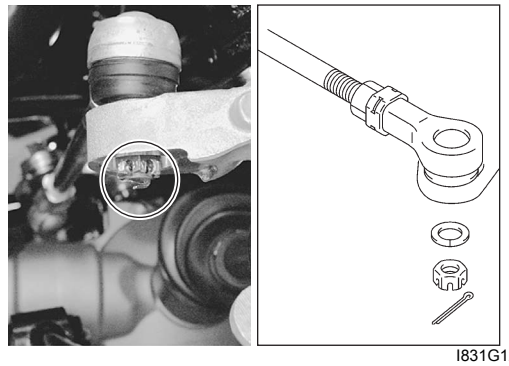
I831G1220008-01

6) Remove the front disc cover (7).



I831G1220010-01

7) Remove the cotter pin, tie-rod end nut and washer.



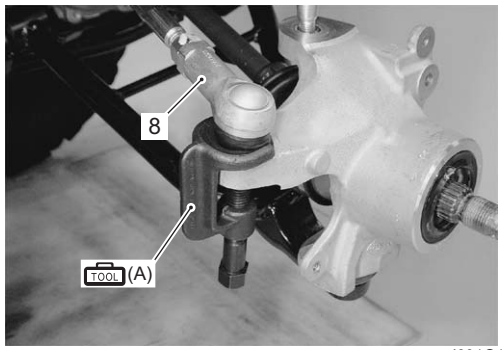
I831G1220011-03

8) Disengage the tie-rod end (8) with the special tool.

⚠ WARNING

When using the tie-rod end remover, keep clear of the tie-rod end because it may come loose with some force and could strike you.

Special tool
TOOL (A): 09942–72410 (Tie rod end remover)



I831G1220012-02

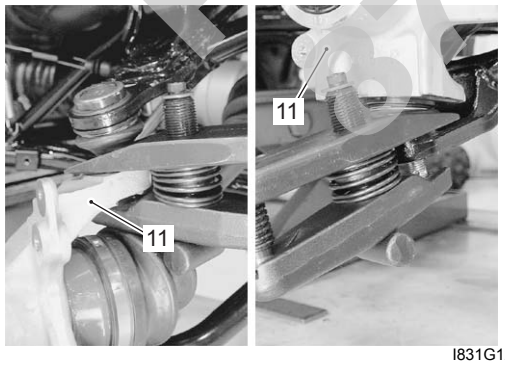
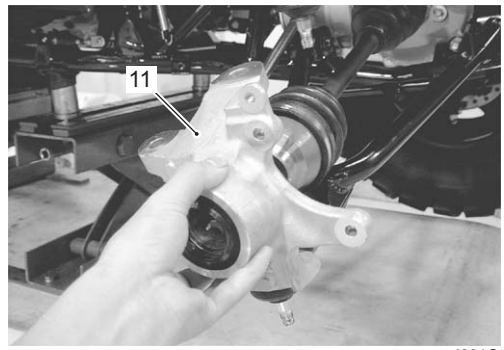
10) Remove the steering knuckle (11) with a commercially available bearing joint remover.



I831G1220014-02

11) Remove the steering knuckle (11).



I831G1220015-02

Installation
Install the steering knuckle in the reverse order of removal. Pay attention to the following points:

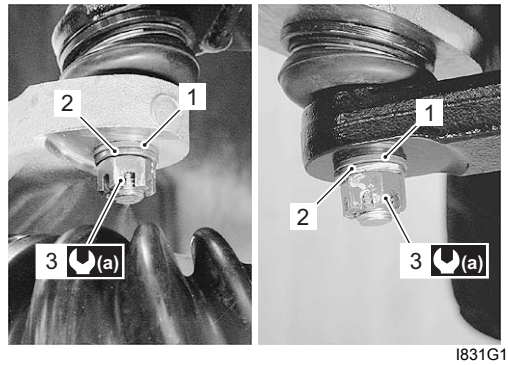
- Apply grease to the lip of inner dust seal.

  W/H : Grease 99000–25160 (Water resistance grease)

I831G1220016-01

- Install the washer (1) and lock washer (2) and tighten the knuckle end nuts (3) to the specified torque.

  Tightening torque
  Steering knuckle end nut (a): 29 N·m (2.9 kgf-m, 21.0 lb-ft)

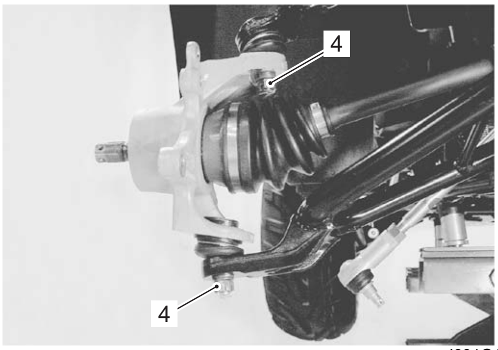


I831G1220017-01

- Install the cotter pins (4).

⚠ **CAUTION**

The removed cotter pins (4) must be replaced with new ones.



I831G1220018-01

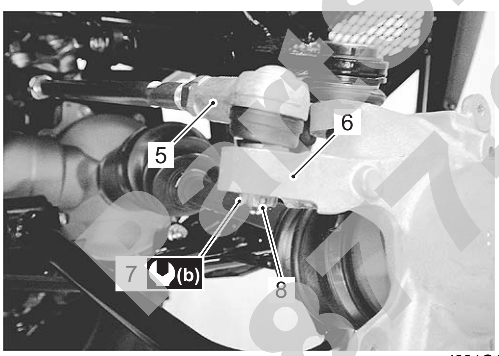
- Connect the tie-rod end (5) to the steering knuckle (6) and tighten the tie-rod end nut (7) to the specified torque.

Tightening torque
Tie-rod end nut (b): 29 N·m (2.9 kgf-m, 21.0 lb-ft)

- Install the cotter pin (8).

⚠ **CAUTION**

The removed cotter pin (8) must be replaced with a new one.

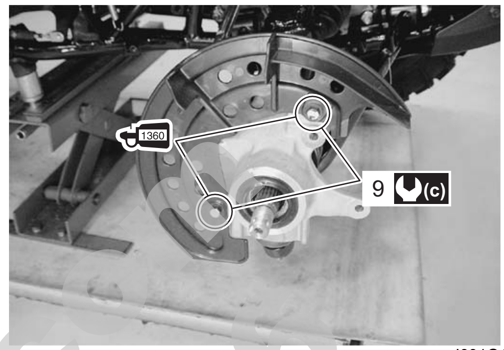


I831G1220019-01

- Apply thread lock to the brake disc cover mounting bolts (9) and tighten them to the specified torque.

1360 : Thread lock cement 99000–32130 (THREAD LOCK CEMENT SUPER 1360 or equivalent)

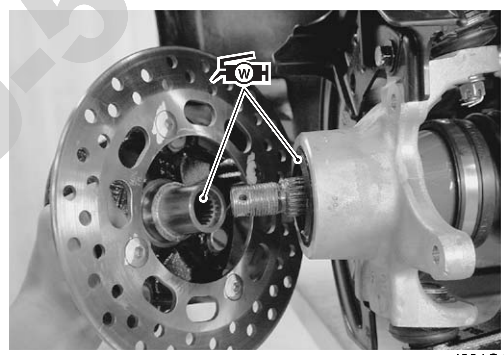
Tightening torque
Brake disc cover mounting bolt (c): 10 N·m (1.0 kgf-m, 7.0 lb-ft)



I831G1220020-01

- Apply grease to the wheel hub spline and lip of dust seal.

WH : Grease 99000–25160 (Water resistance grease)

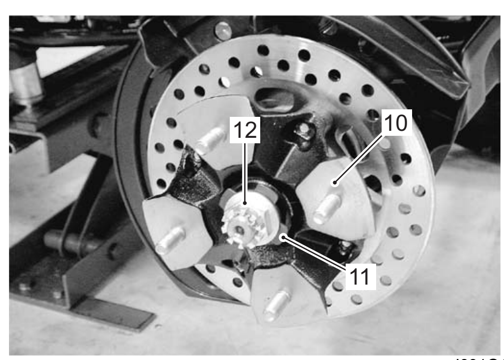


I831G1220021-01

- Install the wheel hub (10), washer (11) and front hub nut (12).

NOTE

The conical side of washer (11) faces out side. Refer to “Front Suspension Assembly Construction (Page 2B-2)”.



I831G1220022-01

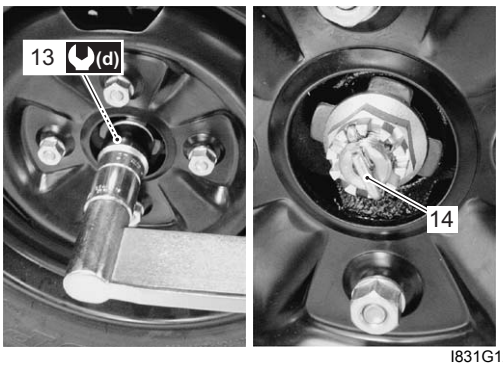
- Install the brake caliper. Refer to “Front Brake Caliper Removal and Installation in Section 4B (Page 4B-3)”.
- Install the front wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
- Tighten the front hub nut (13) to the specified torque.

  Tightening torque
  Front hub nut (d): 110 N·m (11.0 kgf-m, 79.5 lb-ft)

- Install the cotter pin (14).

⚠ CAUTION

The removed cotter pin (14) must be replaced with a new one.



I831G1220023-02

Front Hub Bearing Inspection

B831G22206008

Inspect the inner race play of the front hub bearing by hand while they are in the steering knuckle.
Rotate the inner races by hand to inspect for abnormal noise and smooth rotation. If there is anything unusual, replace the front hub bearing with a new one.

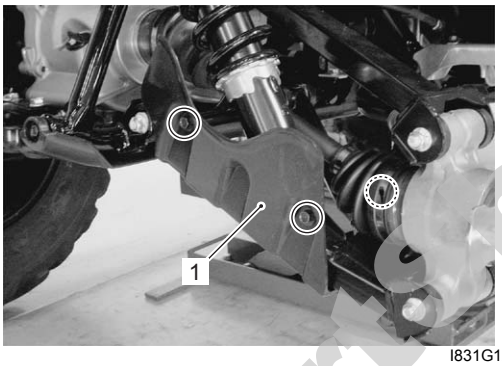
Rear Shock Absorber Removal and Installation

B931G22306003

Removal

1) Place the vehicle on level ground and support the vehicle with a jack.
2) Remove the rear wheel assembly. Refer to "Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)".
3) Remove the rear drive shaft cover (1).



I831G1230004-01

4) Remove the shock absorber (2) by removing the shock absorber upper and lower mounting bolt and nut.

I831G1230005-01

Installation

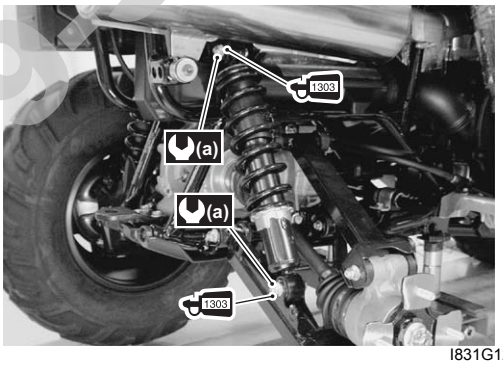
Install the rear shock absorber in the reverse order of removal. Pay attention to the following points:

- Apply thread lock to the rear shock absorber mounting bolts.

  1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

- Tighten the rear shock absorber upper/lower mounting bolts and nuts.

  Tightening torque
  Rear shock absorber mounting nut (a): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)



I831G1230062-03

- Install the rear wheel assembly. Refer to "Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)".

Rear Suspension Inspection

B931G22306004

Refer to “Suspensions Inspection in Section 0B (Page 0B-22)”.

Rear Shock Absorber Inspection

B931G22306005

Inspect the rear shock absorber in the following procedures:

1) Remove the rear shock absorber. Refer to “Rear Shock Absorber Removal and Installation (Page 2C-3)”.
2) Inspect the rear shock absorber for damage and oil leakage, and absorber bushing for wear or damage. If any defects are found, replace the rear shock absorber with a new one.

⚠ CAUTION

Do not attempt to disassemble the rear shock absorber. It is unserviceable.

I831G1230006-01

3) Install the rear shock absorber. Refer to “Rear Shock Absorber Removal and Installation (Page 2C-3)”.

Spring Pre-load Adjustment

B931G22306006

⚠ WARNING

Be sure to adjust the spring pre-load on the both suspensions equally.

After installing the rear suspension, adjust the spring pre-load as follows:

- Turn the spring tension ring (1) to the desired position.

NOTE

Position 1 provides the softest spring tension and position 5 provides the stiffest.

Rear Wheel Hub / Suspension Knuckle Removal and Installation

B931G22306007

NOTE

The right and left suspension parts are installed procedure for one side is the same as that for the other side.

Removal

1) Remove the cotter pin (1) and loosen the hub nut (2).

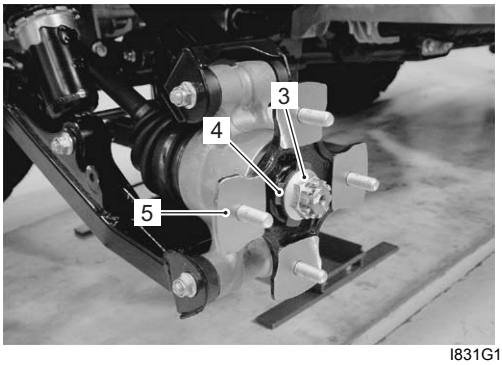
I831G1230007-01

2) Remove the rear wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.

⚠ CAUTION

Make sure that the vehicle is supported securely.

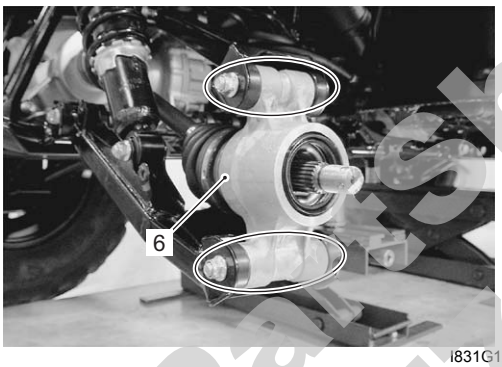
3) Remove the hub nut (3), washer (4) and rear wheel hub (5).



I831G1230008-01

4) Remove the suspension knuckle upper and lower bolts and nuts.

5) Remove the rear suspension knuckle (6).



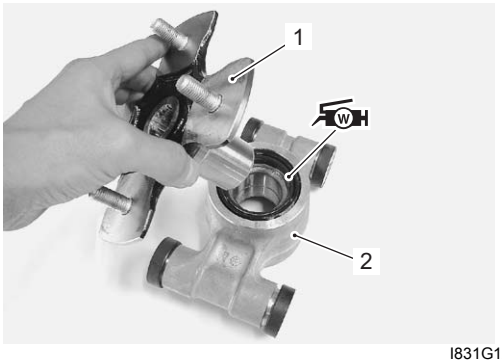
I831G1230009-01

Installation

- Apply grease to the lip of outer dust seal.

  : Grease 99000–25160 (Water resistance grease or equivalent)

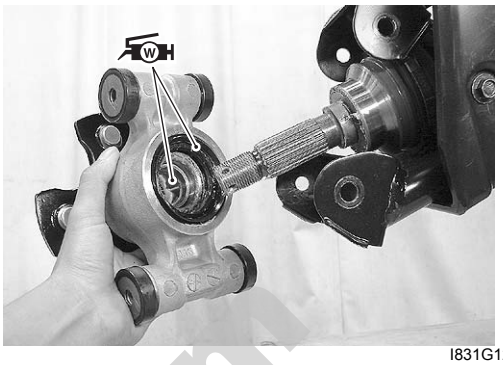
- Install the rear wheel hub (1) to the rear suspension knuckle (2).



I831G1230066-01

- Apply grease to the lip of outer dust seal and rear wheel hub spline.

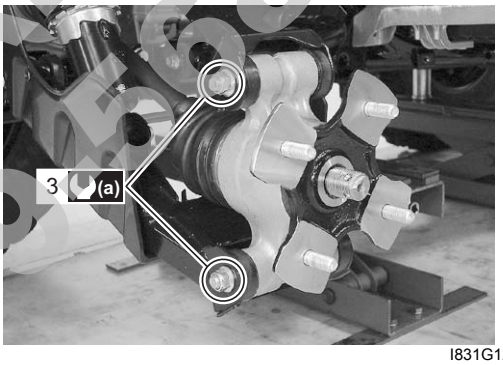
  : Grease 99000–25160 (Water resistance grease or equivalent)



I831G1230067-01

- Tighten the rear knuckle nuts (3) to the specified torque.

  Tightening torque
  Rear knuckle end nut (Upper and Lower) (a): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)

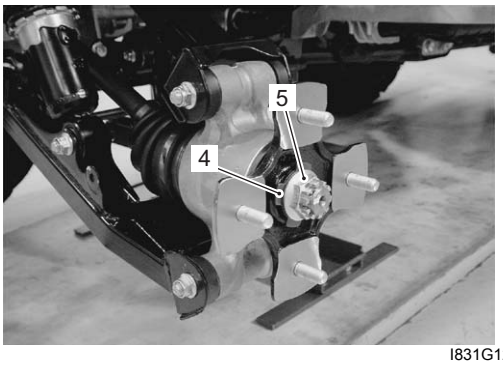


I831G1230068-01

- Install the washer (4) and hub nut (5).

NOTE

The conical side of washer (4) faces outside. Refer to “Rear Suspension Assembly Construction (Page 2C-2)”.



I831G1230013-03

- Install the rear wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
- Tighten the hub nut (5) to the specified torque.

  Tightening torque
  Rear wheel hub nut (b): 121 N·m (12.1 kgf-m, 87.5 lbf-ft)

- Install the cotter pin (6).

⚠ CAUTION

The removed cotter pin (6) must be replaced with a new one.

I831G1230014-01

Rear Hub Bearing Inspection

B931G22306008

Inspect the inner race play of the rear hub bearing by hand while it is in the rear knuckle.
Rotate the inner race by hand to inspect for abnormal noise and smooth rotation. If there is anything unusual, replace the rear hub bearing with a new one.

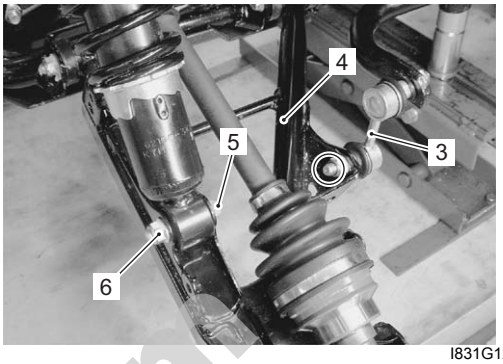
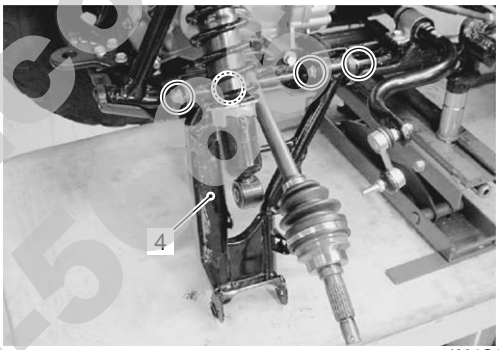
5) Disconnect the stabilizer joint (3) from the rear suspension lower arm (4).

6) Remove the shock absorber mounting lower bolt (5) and nut (6).



I831G1230026-01

7) Remove the rear suspension lower arm (4).



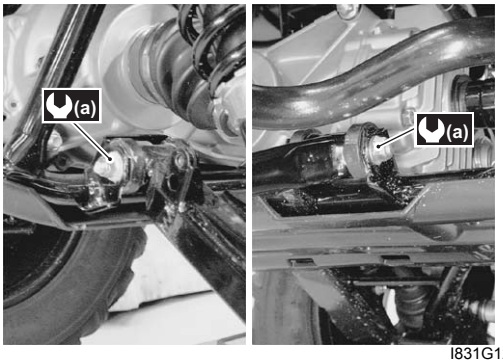
I831G1230027-02

Installation

Install the suspension arms in the reverse order of removal. Pay attention to the following points.

- Tighten the suspension arm pivot nuts to the specified torque.

Tightening torque
Suspension arm lower pivot nut (a): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)



I831G1230028-01

- Apply thread lock to the shock absorber mounting bolts.

  Tightening torque
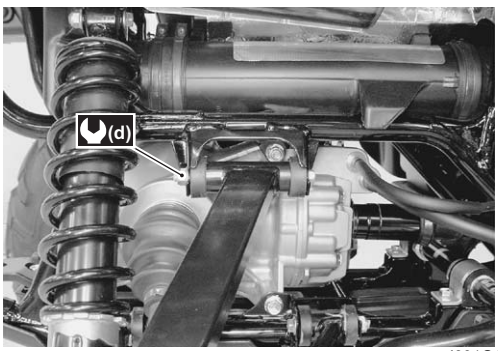
  Suspension arm upper pivot nut (d): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)



I831G1230031-01

- Install the rear suspension knuckle arm and wheel hub. Refer to “Rear Wheel Hub / Suspension Knuckle Removal and Installation (Page 2C-4)”.

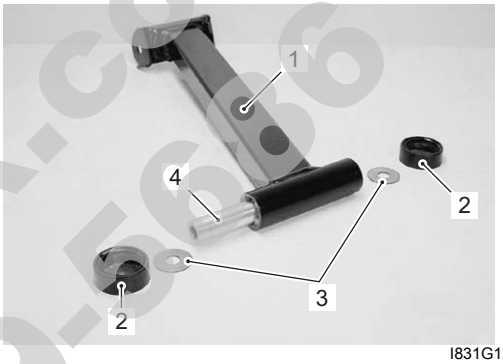
Rear Suspension Arm Related Parts Inspection

B931G22306011

Refer to “Rear Suspension Arm Upper / Lower Removal and Installation (Page 2C-8)”.

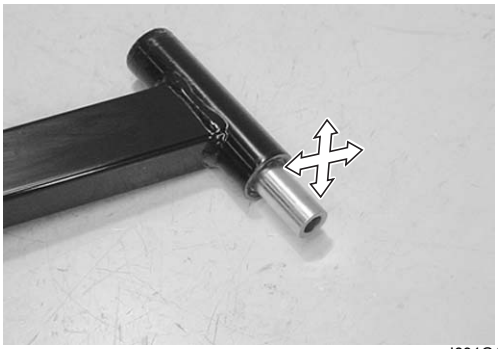
Upper Arm

1) Inspect the following parts for wear or damage. If any defects are found, replace defective parts with new ones.
   - Suspension upper arm (1)
   - Dust seal (2)
   - Washer (3)
   - Spacer (4)



I831G1230032-01

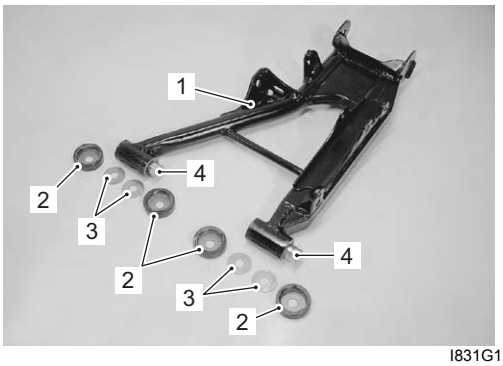
2) Insert the spacer into bushings.
3) Check the play by moving the spacer up and down. If excessive play is noted, replace the bushings with a new one. Refer to “Rear Suspension Upper Arm Bushing Removal and Installation (Page 2C-11)”.



I831G1230033-02

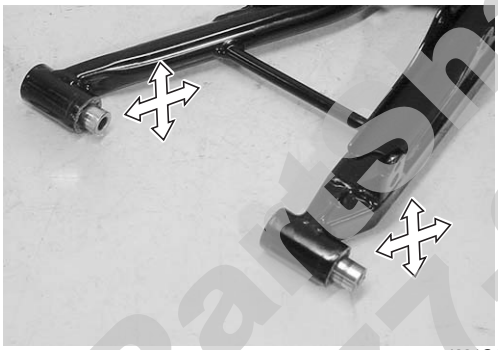
Lower Arm

1) Inspect the following parts for wear or damage. If any defects are found, replace defective parts with new ones.
   - Suspension lower arm (1)
   - Dust seal (2)
   - Washer (3)
   - Spacer (4)



I831G1230034-01

2) Insert the spacer into bushings.
3) Check the play by moving the spacer up and down. If excessive play is noted, replace the bushings with a new one. Refer to “Rear Suspension Lower Arm Bushing Removal and Installation (Page 2C-12)”.



I831G1230035-02

Suspension Knuckle

1) Inspect the following parts for wear or damage. If any defects are found, replace defective parts with new ones.
   - Suspension knuckle (1)
   - Dust seal (2)

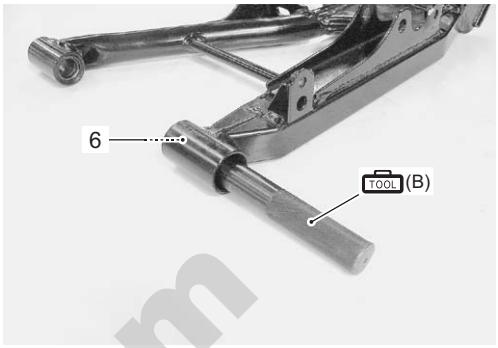
TOOL (B): 09943–88211 (Bearing remover/ installer)



I831G1230044-03

Installation

1) Install the rear lower arm bushings (1) and inner dust seals (2) with the special tool and suitable socket.

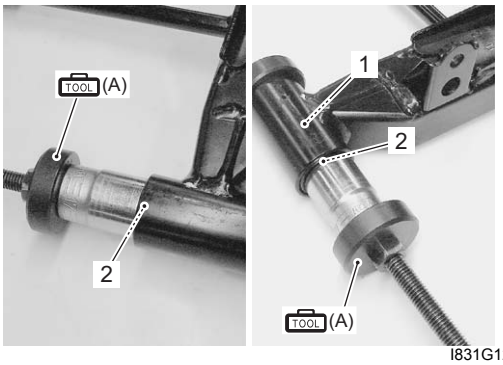
NOTE

Position the bushings and dust seals by referring to “Rear Suspension Assembly Construction (Page 2C-2)”.

⚠ CAUTION

The removed bushings and dust seals must be replaced with new ones.

Special tool
TOOL (A): 09941–34513 (Steering race installer)



I831G1230045-01

2) Apply grease to the lip of inner dust seals, spacer (3) and inside of dust seals (4).

: Grease 99000–25160 (Water resistance grease or equivalent)

3) Install the spacer (3), dust seals (4) and washers (5) to the rear suspension lower arm.

Rear Stabilizer Removal and Installation

B931G22306015

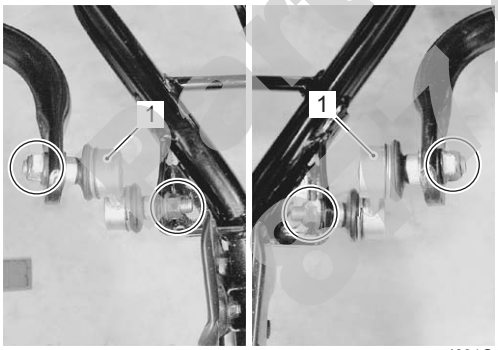
Removal

1) Remove the rear wheels. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.

⚠ CAUTION

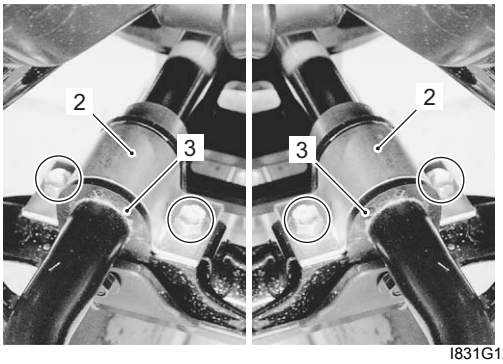
Make sure that the vehicle is supported securely.

2) Disconnect the stabilizer joints (1) from the rear suspension lower arm and stabilizer bar.



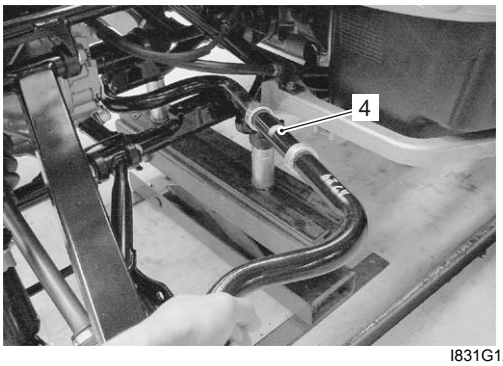
I831G1230055-01

3) Remove the stabilizer plates (2) and bushings (3).



I831G1230052-02

4) Remove the stabilizer bar (4).



I831G1230053-01

Installation

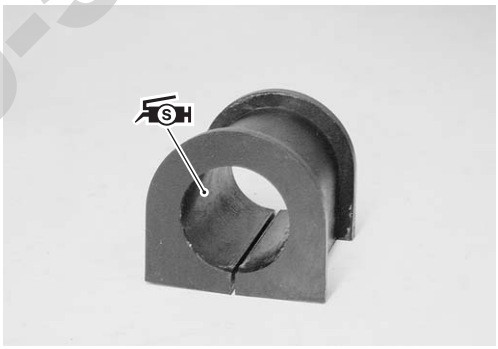
Install the stabilizer in the reverse order of removal. Pay attention to the following points:

Applicable model
Up to 5SAAR41A197105886

Install the stabilizer in the reverse order of removal. Pay attention to the following points:

- Apply grease to the inside of stabilizer bushing.

: Grease 99000–25100 (SUZUKI SILICONE GREASE or equivalent)

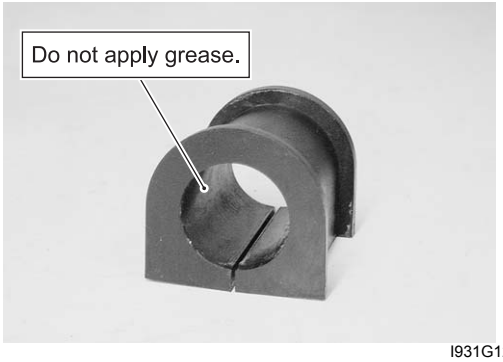


I831G1230051-03

Applicable model
From 5SAAR41A197105887

Install the stabilizer in the reverse order of removal. Pay attention to the following points:

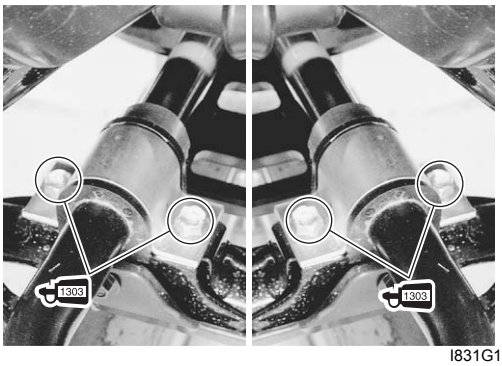
- Do not apply grease to the inside of stabilizer bushing.



I931G1230002-02

- Apply thread lock to the stabilizer plate mounting bolts and tighten the bolts securely.

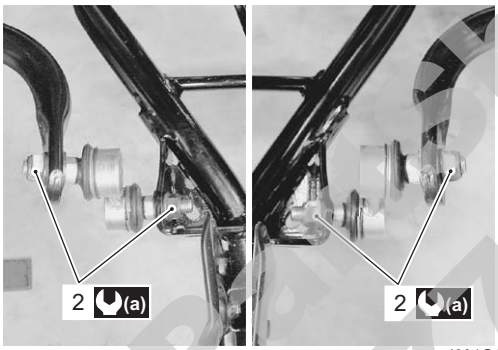
  1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)



I831G1230056-03

- Tighten the stabilizer joint nuts (2) to the specified torque.

  Tightening torque
  Rear stabilizer joint nut [Up to 5SAAR41A497105526] (a): 34 N·m (3.4 kgf-m, 24.5 lbf-ft)
  Rear stabilizer joint nut [From 5SAAR41A497105527] (a): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)



I831G1230057-01

Stabilizer Parts Inspection

B931G22306016

Refer to “Rear Stabilizer Removal and Installation (Page 2C-14)”.

Stabilizer Bar
Inspect for damage or deformation. If any defects are found, replace the stabilizer bar with a new one.

I831G1230058-01

Stabilizer Bushing / Plate
Inspect the bushing and plate for wear or damage. If any defects are found, replace the bushing and/or plate with a new one.

I831G1230059-01

Stabilizer Joint
Inspect the stabilizer joint for wear or damage. If any defects are found, replace the stabilizer joint with a new one.
Inspect the stabilizer joint smooth movement. If there are any abnormalities, replace the stabilizer joint with a new one.

NOTE

Stabilizer joint (1) cannot be disassembled.

Wheels and Tires

Precautions

Precautions for Wheel and Tire

B831G22400001

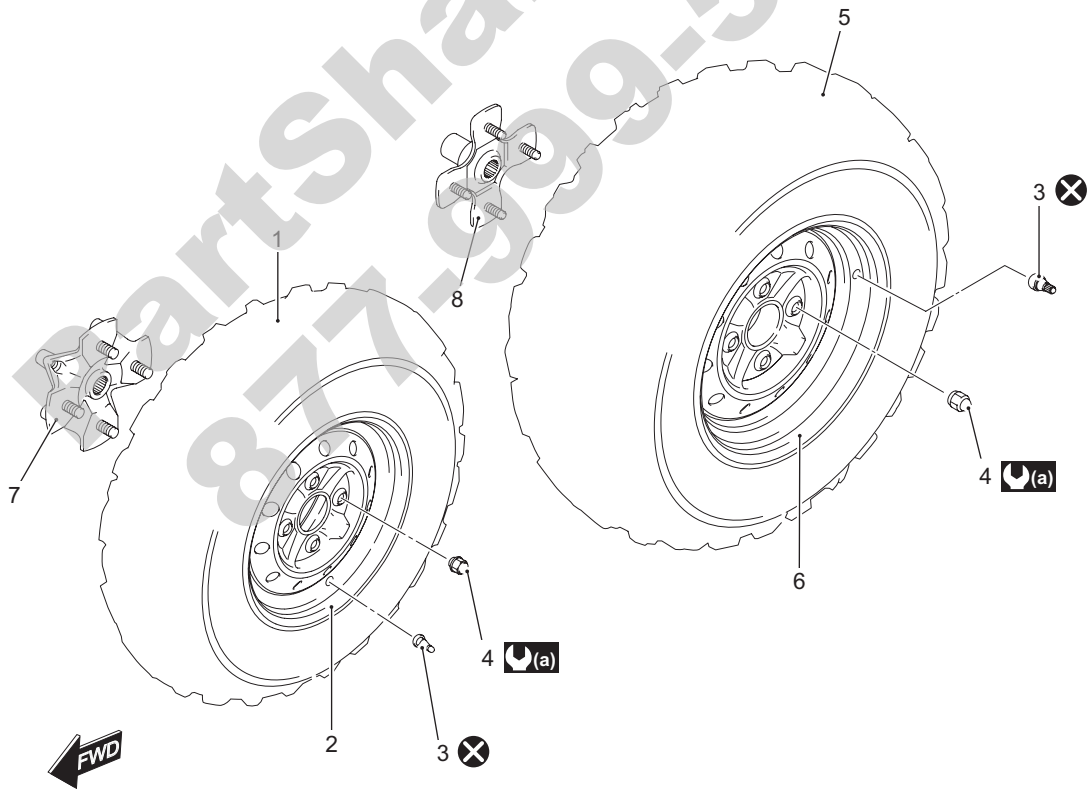
⚠ WARNING

- **Proper tire pressure and proper tire loading are important factors. Over loading tire can lead to tire failure and loss of vehicle control.**
- **Under-inflated tires make smooth cornering difficult, and can result in rapid tire wear.**
- **Over-inflated tires have a smaller amount of tire in contact with the load, which can contribute to skidding and loss of control.**
- **Replace the wheel if find damage such as crack, nick or scratch.**
- **When tire replacement is necessary, the original equipment type tire should be used.**
- **Do not mix different types of tires on the same vehicle except in emergencies, because handling may be seriously affected and may result in loss of control.**
- **Replacement wheel must be equivalent to the original equivalent wheel.**

Repair Instructions

Front and Rear Wheel Components

B831G22406001



I831G1240001-01

1. Front tire	6. Rear wheel
2. Front wheel	7. Front wheel hub
3. Front wheel air valve	8. Rear wheel hub
4. Wheel nut	(a) : 60 N·m (6.0 kgf-m, 43.5 lb-ft)
5. Rear tire	⊗ : Do not reuse.

Front / Rear Wheel Removal and Installation

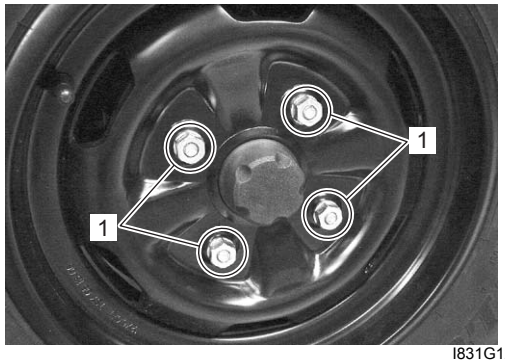
B831G22406002

NOTE

The front and rear wheels are installed symmetrically and therefore the removal procedure for one side is the same as that for the other side.

Removal

1) Place the vehicle on level ground.
2) Support the vehicle with a jack or wooden block.
3) Remove the wheel nuts (1).



I831G1240002-01

4) Remove the wheel.

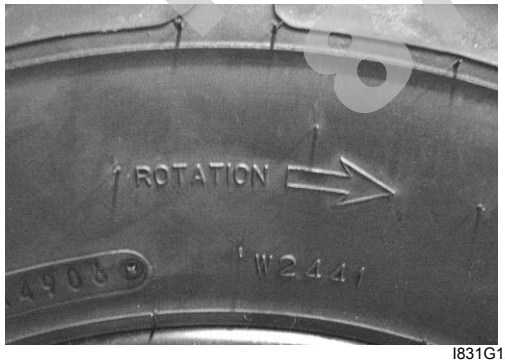
Installation

Install the wheel in the reverse order of removal. Pay attention to the following points:

- Install the wheel and tighten the wheel nuts temporarily.

⚠ WARNING

The directional arrow on the tire should point to the wheel rotation, when remounting the wheel.



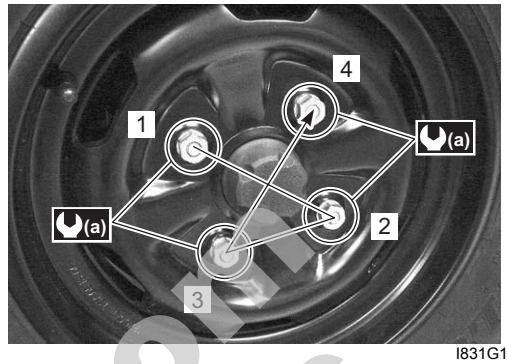
I831G1240003-01

- Tighten the wheel nuts to the specified torque.

NOTE

Tighten the wheel nuts diagonally.

Tightening torque
Wheel nut (a): 60 N·m (6.0 kgf-m, 43.5 lb-ft)

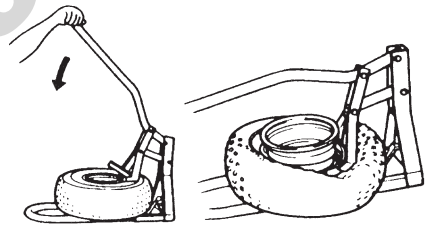


I831G1240004-01

Tire Removal and Installation

B831G22406003

1) Remove the wheel from vehicle. Refer to “Front / Rear Wheel Removal and Installation (Page 2D-2)”.
2) After removing the air valve caps, release the tire pressure by depressing the valves.
3) Dismount the bead from the rim completely as shown in the figure.

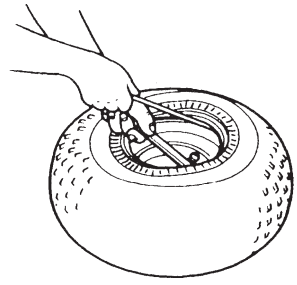


I831G1240005-01

4) Separate the tire from the rim using a set of tire levers and rim protectors.

⚠ CAUTION

When using the tire levers, do not scratch or hit the sealing portion (hump) of the wheel or it may cause air-leakage.

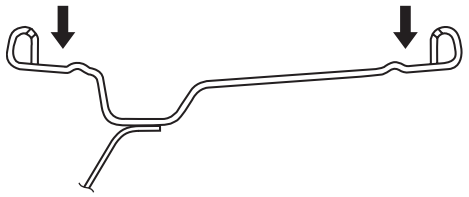


I831G1240006-01

5) After removing the tire, inspect the wheel if necessary.

Installation

1) Clean up the sealing portion of the rim.

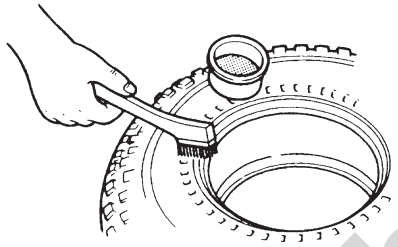


I831G1240007-02

2) Apply tire lubricant to the tire bead and the flange of the rim.

⚠ CAUTION

Never apply grease, oil or gasoline to the tire bead because they will deteriorate the tire.

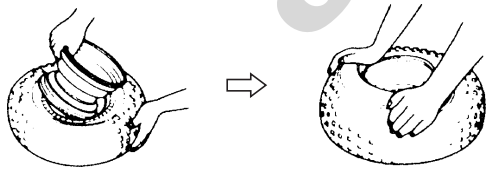


I831G1240008-01

⚠ CAUTION

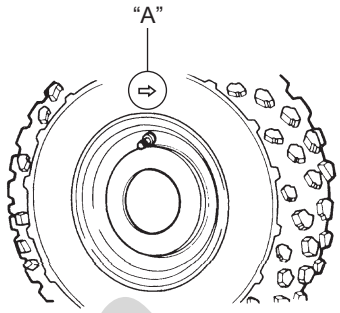
The standard tire fitted on this vehicle is AT25 x 8-12 ☆☆ for the front and AT25 x 10-12 ☆☆ for the rear. The use of tires other than the standard may cause instability. It is highly recommended to use the specified tire.

3) Mount the tire on the rim by hand as shown in the figure.



I831G1240009-02

4) When installing each tire, make sure the arrow “A” on the tire points in the direction of rotation. Also, make sure the outer side of the wheel rim is facing outward.



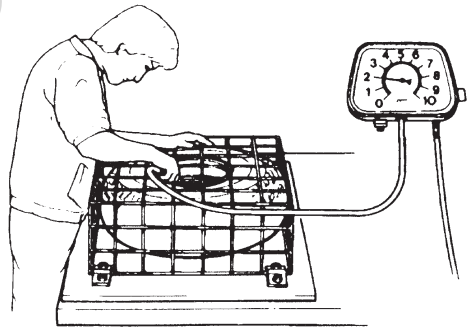
I831G1240010-01

5) Inflate the tire to seat the tire bead.

Maximum tire bead seat pressure
Front: 250 kPa (2.5 kgf/cm^2, 36psi)
Rear: 250 kPa (2.5 kgf/cm^2, 36 psi)

⚠ CAUTION

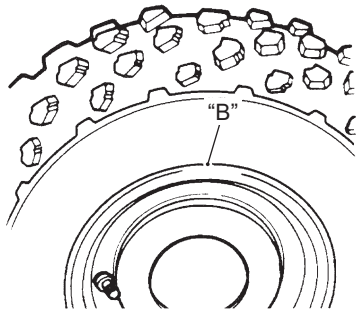
Place the tire under a protective tire cage or similar protective covering device before inflating the tire. To minimize the possibility of tire damage when seating the tire bead, never exceed the MAXIMUM TIRE BEAD SEAT PRESSURE rating shown on the tire.



I831G1240011-02

NOTE

Check the "rim line" "B" cast on the tire sidewalls. It must be equidistant from the wheel rim all the way around. If the distance between the rim line and the wheel rim varies, this indicates that the bead is not properly seated. If this is so, deflate the tire completely, and unseat the tire bead on both sides. Then, coat the bead with clean water, and re-seat the tire.



I831G1240012-02

6) Adjust the tire pressure to the specified pressure.

Cold inflation tire pressure
Front: 35 kPa (0.35 kgf/cm², 5.1 psi)
Rear: 30 kPa (0.30 kgf/cm², 4.4 psi)

Vehicle load capacity
172 kg (380 lbs)

⚠ CAUTION

Before inflating the tire, check the MAXIMUM OPERATING PRESSURE rating of the tire. This is indicated by a "☆" following the tire size shown on the sidewall. The number of "☆" on the tire indications the maximum operating pressure.

Maximum operating pressure
☆: 25 kPa (0.25 kgf/cm², 3.6 psi)
☆☆: 35 kPa (0.35 kgf/cm², 5.1 psi)
☆☆☆: 45 kPa (0.45 kgf/cm², 6.5 psi)

Front Drive Shaft Assembly Removal and Installation

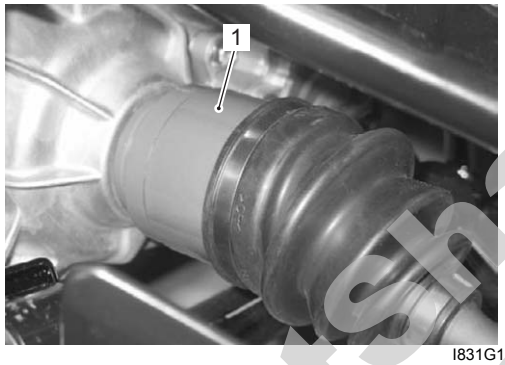
B831G23106002

Removal

1) Drain the front differential gear oil. Refer to “Front Differential Gear Oil Inspection in Section 0B (Page 0B-12)”.
2) Remove the front wheel. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
3) Remove the steering knuckle. Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
4) Hold the inboard joint (1) of the front drive shaft and tug the drive shaft horizontally.

NOTE

If it is difficult to remove the front drive shaft from the front differential gear case, use the suitable tool.



I831G1310003-01

Installation

Install the front drive shaft assembly in the reverse order of removal. Pay attention to the following points:

- Install a new circlip into the groove of front differential gear spline.

⚠ CAUTION

The removed circlip must be replaced with a new one.

- Apply grease to the spline of the front drive shafts and install the front drive shafts to the front differential gear case.

: Grease 99000–25160 (Water resistance grease)

⚠ CAUTION

Be careful not to damage the front differential gear case oil seals.

NOTE

After installing both drive shafts, make sure the stopper rings are seated properly by pulling both inboard joints lightly.

I831G1310004-02

- Install the steering knuckle. Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
- Install the front wheel. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
- Pour the front differential gear oil. Refer to “Front Differential Gear Oil Inspection in Section 0B (Page 0B-12)”.

Front Drive Shaft Disassembly and Assembly

B831G23106003

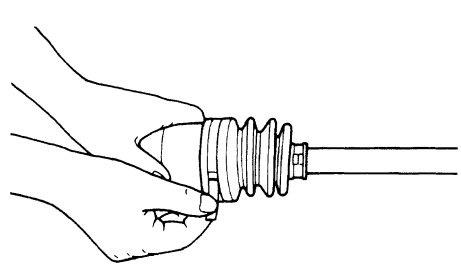
Refer to “Front Drive Shaft Assembly Removal and Installation (Page 3A-2)”.

Disassembly

⚠ CAUTION

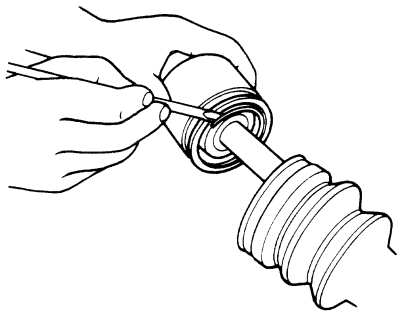
Do not disassemble the wheel side joint. If any damages are found, replace it with a new one.

1) Remove the boot band of the differential side joint.



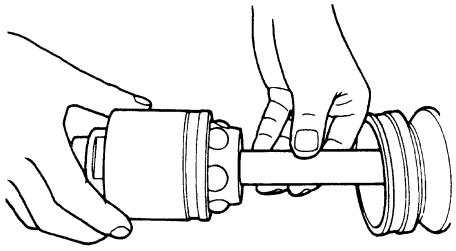
I831G1310005-01

2) Slide the boot toward the center of the front drive shaft and remove the stopper ring from the outer race.



I831G1310006-01

3) Remove the outer race from the front drive shaft.



I831G1310007-01

4) Wipe off any grease and remove the snap ring.

Special tool

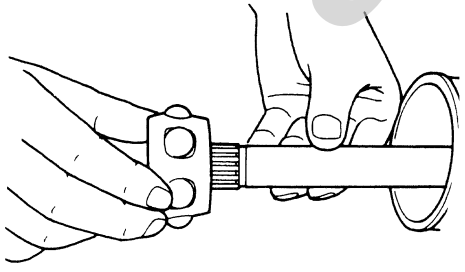
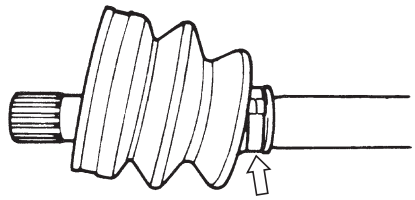
I831G1310022-01

5) Remove the cage from the front drive shaft.



I831G1310009-01

6) Remove the boot band of the small diameter side.



I831G1310011-02

Assembly

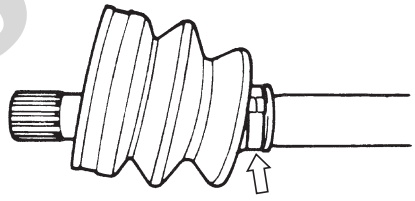
⚠ CAUTION

- **Wash all parts before installation, clean the inside and outside of the boots with a cloth.**
- **Do not wash the boots in any commercially available degreaser, such as gasoline or kerosene. Washing in a degreaser causes deterioration of the boots.**

1) Fit a boot on the drive shaft end, fitting the small diameter side of the boot to the shaft groove, fix its end with a new boot band.

⚠ CAUTION

Replace the boot band with a new one.

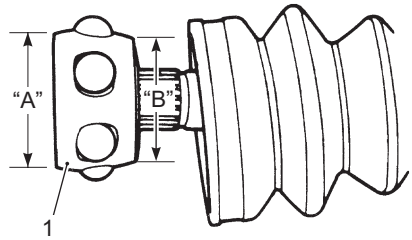


I831G1310011-02

2) Install the cage (1) on the shaft.

⚠ CAUTION

Install the cage with the large diameter side "A" facing the shaft end.



I831G1310012-02

"A": Large diameter	"B": Small diameter

3) Install the new snap ring to the cage.

⚠ CAUTION

Replace the snap ring with a new one.

Special tool

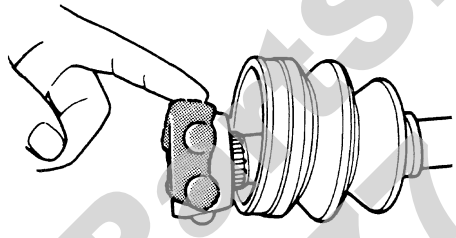
I831G1310023-01

4) Apply grease to the entire surface of the cage and the inside of the outer race.

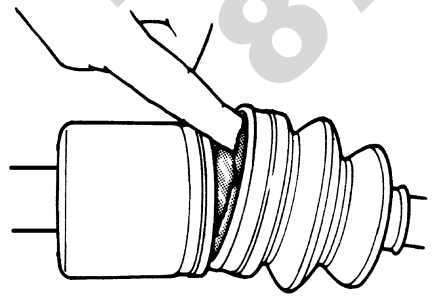
	Position	
	Wheel side	Differential side
Grease: Quantity	45 g	85 g

NOTE

The tube of joint grease is included in the wheel side boot set or wheel side joint assembly of spare parts.



I831G1310013-01

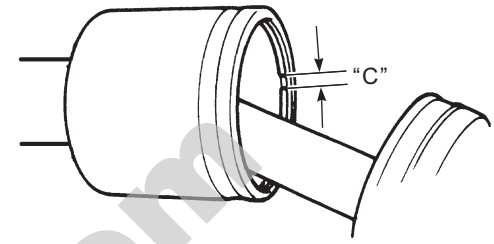


I831G1310014-01

5) Insert the cage into the outer race and install the new stopper ring to the groove of the outer race.

⚠ CAUTION

- **Replace the stopper ring with a new one.**
- **Position the opening of stopper ring "C" so that it will not be lined up with a ball.**



I831G1310015-01

6) After installing the boot on the outer race, insert a screw driver into the boot on the outer race side and allow air to enter the boot so that the air pressure in the boot becomes the same as the atmospheric pressure at the positions indicated in the figure.

7) Fix the boot on the outer race with a new boot band, taking care not to distort the boot.

8) Install the circlip (2) into the groove of front drive shaft spline.

⚠ CAUTION

The removed circlip must be replaced with a new one.

I831G1310017-02

9) Inspect the axle play by using a push-and-pull motion given to the axle shaft and wheel spindle.

I831G1310018-01

Front Drive Shaft Inspection

B831G23106004

Inspect the front drive shaft in the following procedures:

1) Remove the front drive shaft assembly. Refer to “Front Drive Shaft Assembly Removal and Installation (Page 3A-2)”.
2) Inspect the boots, circlip and boot bands for wear or damage. If any damages are found, replace them with new ones.

I831G1310019-01

3) Install the front drive shaft assembly. Refer to “Front Drive Shaft Assembly Removal and Installation (Page 3A-2)”.

Rear Drive Shaft Assembly Removal and Installation

B831G23106006

Removal

1) Drain the rear final gear oil. Refer to “Final Gear Oil Inspection in Section 0B (Page 0B-14)”.
2) Remove the rear wheel. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
3) Remove the rear wheel hub and rear suspension arm. Refer to “Rear Wheel Hub / Suspension Knuckle Removal and Installation in Section 2C (Page 2C-4)”.
4) Hold the in board joint (1) of the rear drive shaft and tug the drive shaft horizontally.

NOTE

If it is difficult to remove the rear drive shaft from the rear differential gear case, using the suitable tool.

I831G1310020-04

Installation
Install the rear drive shaft in the reverse order of removal. Pay attention to the following points:

- Install a new circlip (1) into the groove of drive shaft spline.

⚠ CAUTION

The removed circlip must be replaced with a new one.

- Apply grease to the spline of the rear drive shafts and install the rear drive shafts to the rear final gear case.

: Grease 99000–25160 (Water resistance grease)

⚠ CAUTION

Be careful not to damage the front drive case oil seal.

NOTE

After installing both drive shafts, make sure the circlips (1) is seated properly by pulling both inboard joints lightly.

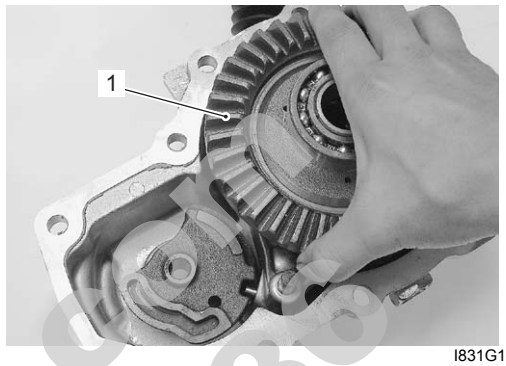
Front Drive (Differential) Gear Shim Inspection and Selection

B831G23206009

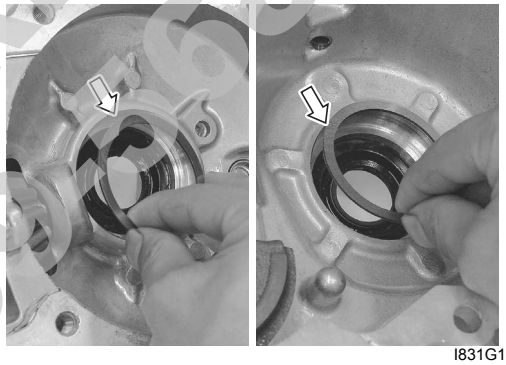
Refer to “Front Drive (Differential) Assembly Disassembly and Assembly (Page 3B-5)”.

Backlash

- Install the pinion gear, input shaft, left and right side shim(s) and front drive (differential) gear assembly (1).



I831G1320059-01



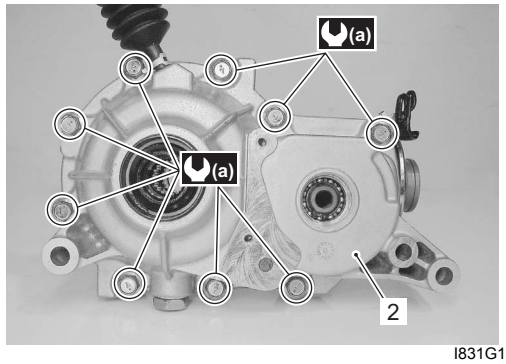
I831G1320034-01

- Install the front drive (differential) case (2) and tighten the bolts to the specified torque diagonally.

NOTE

At this time, it is not necessary to apply a sealant to the mating surface of the gear case.

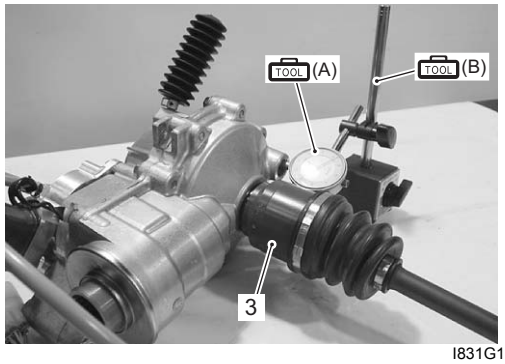
Tightening torque
Front drive (differential) case bolt (a): 22 N·m (2.2 kgf-m, 16.0 lb-ft)



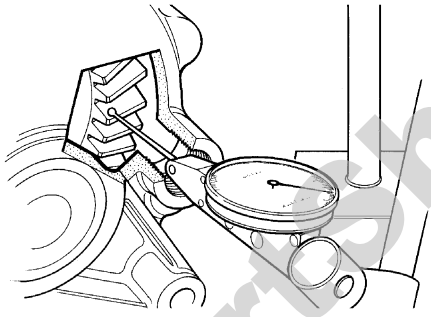
I831G1320060-02

- Remove the oil filler cap and measure the backlash of the differential ring gear using the horizontal type dial gauge and drive shaft (3) as shown in the figure.
- Take backlash readings at three places while turning the front drive (differential) gear slightly in each direction and securely holding the pinion gear. Rear the total backlash on the dial gauge.

Special tool
(A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
(B): 09900–20701 (Magnetic stand)



I831G1320061-01



I831G1320062-01

Front drive (differential) gear backlash
Standard: 0.05 – 0.10 mm (0.0020 – 0.0040 in)

- Remove the dial gauge and turn the front drive (differential) gear 120°, then measure the backlash. Repeat this procedure once more and compare the difference of the three measurements. If the backlash should be re-checked until the backlash is within specification. Check the table at the appropriate shim thickness.

NOTE

Adjust the backlash by referring to the table at using the thickness of the removed shims a guide.

Backlash	Shim adjustment
Under 0.05 mm (0.0020 in)	Increase shim thickness
0.05 – 0.10 mm (0.0020 – 0.0040 in)	Correct
Over 0.10 mm (0.0040 in)	Decrease shim thickness

List of shims (for right side)

Part No.	Shim thickness
27445-38FA0 (Shim set: 15 pcs.)	0.75 mm (0.0295 in)
	0.80 mm (0.0315 in)
	0.85 mm (0.0335 in)
	0.90 mm (0.0354 in)
	0.95 mm (0.0374 in)
	1.00 mm (0.0394 in)
	1.05 mm (0.0413 in)
	1.10 mm (0.0433 in)
	1.15 mm (0.0453 in)

	1.25 mm (0.0492 in)
	1.30 mm (0.0512 in)
	1.35 mm (0.0531 in)
	1.40 mm (0.0551 in)
	1.45 mm (0.0571 in)

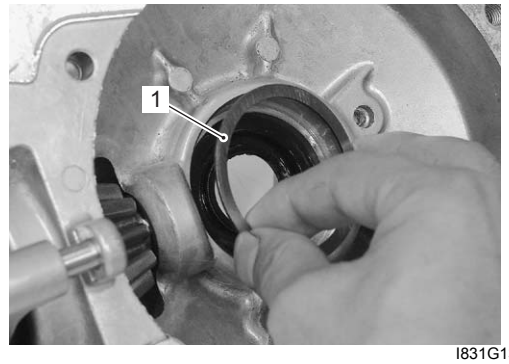
- If the backlash is too small, replace the right side shim(s) with a thicker one. If the backlash is too large, replace the right side shim(s) with a thinner one. If the right side shim was changed with a 0.10 mm thicker shim, replace the left side shim with one that is 0.10 mm thinner.

Left Side Shim Selection

- Install the right side shim(s) (1) and front drive (differential) gear assembly.

NOTE

Do not install the left side shim(s) at this time.



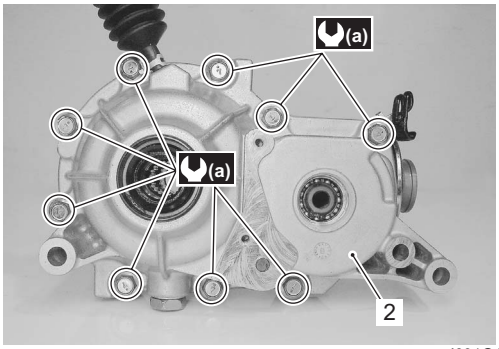
I831G1320064-01

- Put a few pieces of solder (O.D.: 1.2 – 1.5 mm x L: 6 mm) on the bearing outer race, as shown in the figure.

I831G1320065-01

- Install the front drive (differential) case (2) and tighten the bolts to the special torque diagonally.

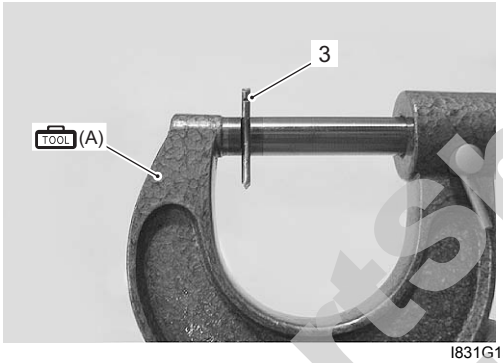
  Tightening torque
  Front drive (differential) case bolt (a): 22 N·m (2.2 kgf-m, 16.0 lb-ft)



I831G1320060-02

- Remove the front drive (differential) case.
- Measure the thickness of compressed solder (3) with the micrometer.

  Special tool
  (A): 09900–20205 (Micrometer (0 – 25 mm))



I831G1320066-01

- Select the proper size of shim(s) from the table, according the compressed solder thickness.

List of shims (for left side)

Part No.	Shim thickness
27445-38FA0 (Shim set: 15 pcs.)	0.75 mm (0.0295 in)
	0.80 mm (0.0315 in)

	1.35 mm (0.0531 in)
	1.40 mm (0.0551 in)
	1.45 mm (0.0571 in)

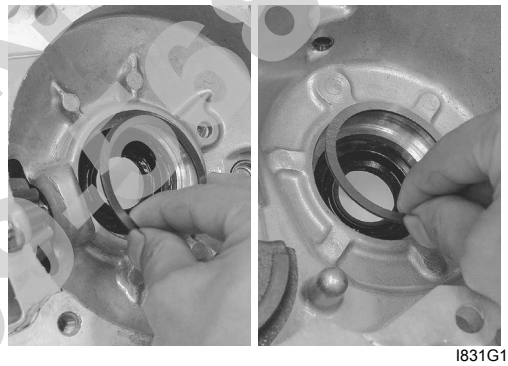
- After selecting the proper size of shim(s), check or adjust the backlash and tooth contact.

Tooth Contact

⚠ CAUTION

Make sure to check the backlash after the tooth contact has been adjusted, since it may have changed. Adjust the tooth contact and backlash until they are both within specification. If the correct tooth contact cannot be maintained when adjusting the backlash, replace the pinion gear and final drive (differential) gear as a set.

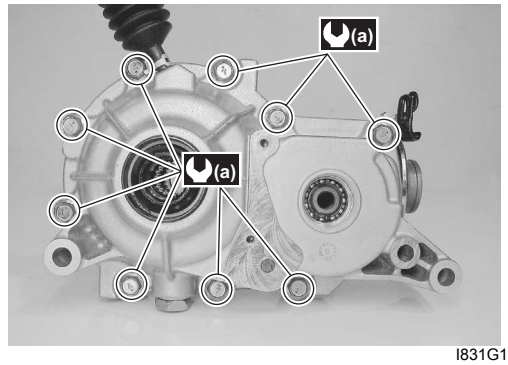
- Clean and degreas several teeth on the final drive (differential) gear and pinion gear, and the apply a coating of machinist's layout dye or paste to several teeth of the pinion gear.
- Install the left and right side shims and front drive (differential) assembly.



I831G1320067-01

- Install the front drive (differential) case and tighten the bolts to the specified torque diagonally.

  Tightening torque
  Front drive (differential) case bolt (a): 22 N·m (2.2 kgf-m, 16.0 lb-ft)



I831G1320068-01

- Rotate the final drive (differential) gear several turns in each direction. This will provide a contact pattern on the coated teeth of final drive (differential) gear.
- Remove the final drive (differential) gear and compare the coated teeth to the examples shown in [A], [B] and [C].
- If tooth contact is found to be incorrect (example [A] and [C]), the shim must be changed and the tooth contact should be re-check until correct (example [B]).

☐ Differential lock switch signal	GND

I831G1320075-01

If the transfer selecting switch dose not function properly, inspect the 4WD/diff-lock switch for continuity check.

Drive Relay

1) Remove the seat. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the drive relay (1).

I831G1320076-01

3) Check the continuity between “A” and “D”, between “D” and “F” terminals with the multi-circuit tester. Check the insulation between “A” and “E”, between “E” and “F”. Apply 12 V to the terminals “C” and “E” ((+) to “E” and (–) to “C”), check the insulation between “D” and “F”.

I831G1320126-01

- Check the backlash and tooth contact. Refer to “Final Gear Shim Inspection and Selection (Page 3B-31)”.
- Install the rear brake assembly. Refer to “Rear Brake Assembly Removal and Installation in Section 4C (Page 4C-2)”.

Final Gear Related Parts Inspection

B831G23206018

Refer to “Final Gear Assembly Removal and Installation (Page 3B-23)”.

Final Driven Gear Oil Seal

Inspect the oil seals lip for damage or wear. If any defect are found, replace the oil seals with new ones.

I831G1320127-01

Final Driven / Drive Gear Bering

Inspect the bearings for abnormal noise and smooth rotation. Replace the bearings if there is anything unusual.

Backlash

- Install the shim(s), final drive gear assembly and new final drive gear bearing stopper.
- Tighten the final drive gear bearing stopper (1) to the specified torque with the special tool.

NOTE

As this time, it is not necessary to bend the bearing stopper collar.

Special tool

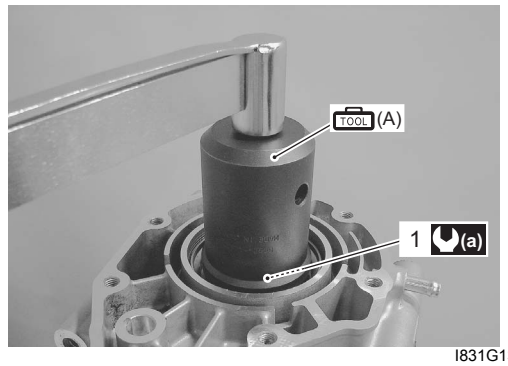
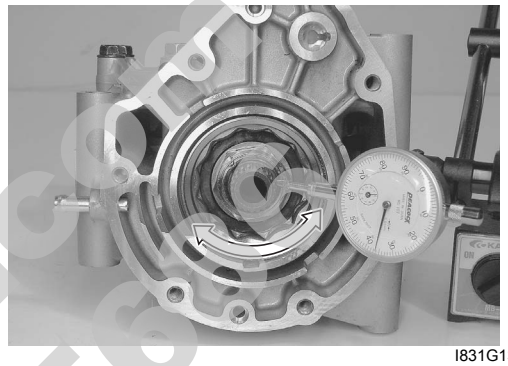
Tightening torque
Final drive gear bearing stopper (a): 100 N·m (10.0 kgf-m, 72.5 lb-ft)



I831G1320132-01

- Install the left side shim(s) and final driven gear.



I831G1320133-01

Special tool
TOOL : 09900–20607 (Dial gauge (1/100 mm, 10 mm))
TOOL : 09900–20701 (Magnetic stand)

Final gear backlash
Standard: 0.02 – 0.06 mm (0.0008 – 0.0024 in) (without gear cover specification)
Standard: 0.08 – 0.15 mm (0.0031 – 0.0059 in) (Gear cover assembled specification)

Measure the backlash with the dial gauge, as shown. Take backlash readings at several places while turning the gear shift in each direction and securely holding the final driven gear. If the backlash is not within specification, the shim must be changed and the backlash should be re-checked until the backlash is within specification. Check to the table for the appropriate shim thickness.

NOTE

Adjust the backlash by referring to the table at using the thickness of the removed shims as a guide.

Backlash	Shim adjustment
Under 0.02 mm (0.0008 in)	Increase shim thickness
0.02 – 0.06 mm (0.0008 – 0.0024 in)	Correct
Over 0.06 mm (0.0024 in)	Decrease shim thickness

- Check the left side shim selection.

Left Side Shim Selection

Put a few pieces of solder (O.D.: 1.2 – 1.5 mm x L: 6 mm) on the back side of final driven gear, as shown in the figure.

NOTE

Do not install the left side shim(s) at this time.

I831G1320134-01

- Install the final gear cover and tighten its bolts to the specified torque diagonally. Refer to “Final Gear Assembly Disassembly and Assembly (Page 3B-24)”.

NOTE

- **Do not install the new O-ring to the gear cover.**
- **Do not apply a thread lock to the bolts.**

I831G1320135-01

- Remove the final gear cover.
- Measure the thickness of compressed solder with the micrometer.

Special tool

TOOL : 09900–20205 (Micrometer (0 – 25 mm))

Shim thickness

Compressed solder thickness + 0.10 mm

I831G1320136-01

- Select the proper size of shim(s) from the table, according as the compressed solder thickness.

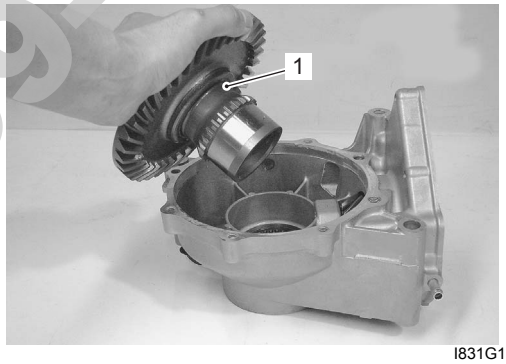
LIst of shims (for left side)

Part No.	Shim thickness
27326-31G00-030	0.30 mm (0.0118 in)
27326-31G00-035	0.35 mm (0.0138 in)
27326-31G00-040	0.40 mm (0.0157 in)
27326-31G00-050	0.50 mm (0.0197 in)
27326-31G00-060	0.60 mm (0.0236 in)

After selecting the proper size of shim(s), check or adjust the backlash and tooth contact.

Tooth Connect

- Remove the final driven gear assembly (1).

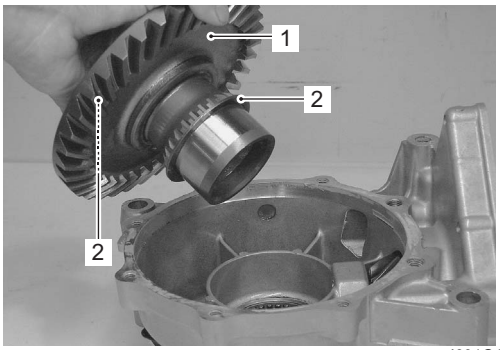


I831G1320137-01

- Clean and degreas several teeth on the final drive gear and final driven gear, and then apply a coating of machinist’s layout dye or paste to several teeth of the final drive gear.

I831G1320138-01

- Install the left and right side shim(s) (2) and final driven gear assembly (1).



I831G1320139-01

- Install the final gear cover, and then tighten the bolts to the specified torque diagonally. Refer to “Final Gear Assembly Disassembly and Assembly (Page 3B-24)”.

NOTE

At this time, it is not necessary to install the gear case cover’s O-ring.

I831G1320140-01

I831G1320141-01

- Rotate the final driven gear several turns in each direction. This will provide connect pattern on the coated teeth of the gear.
- Remove the final drive gear and compare the coated teeth to the examples shown in [A], [B] and [C].
  If tooth contact is found to be incorrect (examples [A] and [C]), the shim between the final drive gear bearing and gear case must be changed and the tooth contact should be re-checked until the tooth contact is found to be correct (example [B]).

Tooth contact	Shim adjustment
Contact at tooth top [A]	Decrease shim thickness
Contact at tooth top [C]	Increase shim thickness

⚠ CAUTION

Make sure to check the backlash and shim thickness after the tooth contact has been adjusted, since it may have changed. Adjust the tooth contact and backlash until they are both within specification. If the correct tooth contact cannot be maintained when adjusting the backlash, replace the final drive gear and final driven gear as a set.

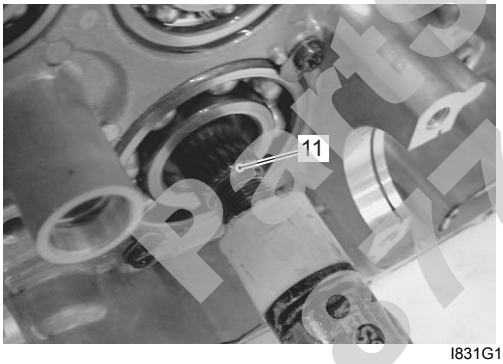
10) Remove the drive bevel gear (10). Refer to “Rear Output Shaft Removal and Installation in Section 3D (Page 3D-6)”.

I831G1330012-02

11) Remove the output shaft (11) with a plastic mallet.



I831G1330013-01

⚠ CAUTION

- **Do not disassemble the transfer output shaft.**
- **The transfer output driven gear and transfer output shaft is available only as an assembly.**

I831G1330014-01

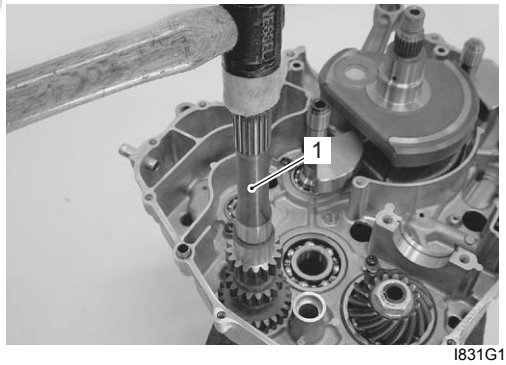
Installation

Install the transfer in the reverse order of removal. Pay attention to the following points:

⚠ CAUTION

Apply engine oil to each gears and shafts.

- Install the bevel gear. Refer to “Rear Output Shaft Removal and Installation in Section 3D (Page 3D-6)”.
- Install the drive shaft (1) with the plastic mallet.



I831G1330015-01

- Install the transfer output shaft assembly and reverse idle gear. Refer to “Transfer Components (Page 3C-2)”.
- Install the gearshift fork (2) and reverse gearshift fork (3).

NOTE

Identify the shape of the shift forks and install them properly.

Disassembly

⚠ CAUTION

Identify the position of each removed part. Organize the parts in their respective groups so that they can be reinstalled in their original positions.

- Remove the gearshift cam assembly. Refer to "Transfer Removal and Installation (Page 3C-3)".
- Remove the snap ring (1) with the special tool by holding the gearshift cam (2).

Special tool
TOOL : 09900–06107 (Snap ring pliers)

Assembly

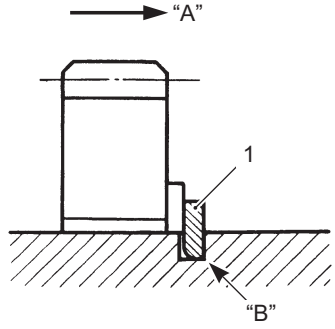
NOTE

When reassembling the gearshift cams, attention must be given to the locations and positions of washer and snap rings. The cross sectional view shows the correct position of the cams, washer and snap rings. Refer to "Gearshift System Construction (Page 3C-10)".

⚠ CAUTION

- **Never reuse a snap rings. After a snap rings has been removed from a shaft, it should be discarded and a new snap rings must be installed.**
- **When installing a new snap rings, do not expand the end gap larger than required to slip the snap rings over the shaft.**
- **After installing snap rings, make sure that they are completely seated in their groove and securely fitted.**

- When installing a new snap ring (1), pay attention to its direction. Fit it to the side where the thrust is as shown in the figure.



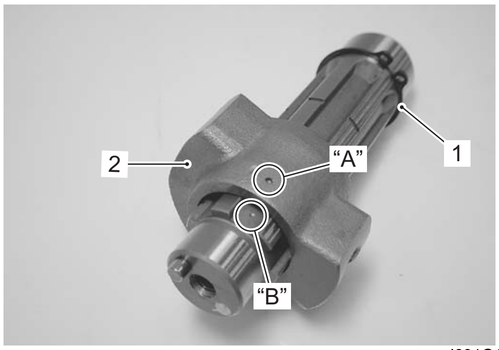
I831G1330039-01

1. Snap ring	"A": Thrust	"B": Sharp edge

- Install the snap ring (1) and gearshift cam (2).

⚠ **CAUTION**

- **Align the punch mark "A" of the gearshift cam with the punch mark "B" of the shaft.**

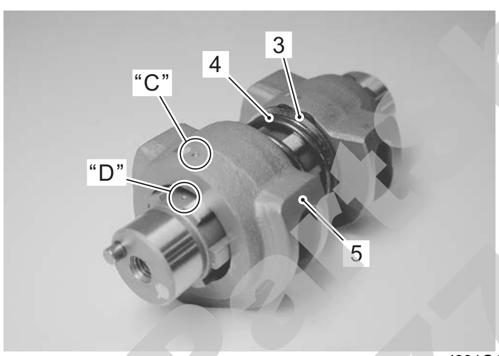


I831G1330038-03

- Install the washer (3), spring (4) and reverse shift cam (5).

⚠ **CAUTION**

- **Align the punch mark "C" of the reverse shift cam with the punch mark "D" of the shaft.**



I831G1330040-01

- Install the snap ring.

Transfer Gear Bearing Removal and Installation

B831G23306008

Refer to "Bearing Removal and Installation in Section 1D (Page 1D-61)".

Transfer Gear Bearing Inspection

B831G23306009

- Inspect the reverse idle gear shaft bearing for abnormal noise and smooth rotation. Replace the bearing if there is anything unusual.

I831G1330067-01

- Inspect the other bearings as shown in the bearing inspection. Refer to "Bearing Inspection in Section 1D (Page 1D-61)".

Transfer Related Parts Inspection

B831G23306010

Refer to "Transfer Removal and Installation (Page 3C-3)" and "Counter Shaft / Reverse Idle Gear Disassembly and Assembly (Page 3C-6)".

Gearshift Fork to Groove Clearance

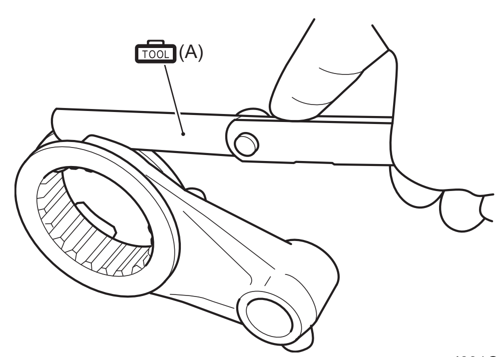
NOTE

The clearance for each gearshift fork plays an important role in the smoothness and positiveness of the shifting action.

Using a thickness gauge, check the gearshift fork clearance in the groove of its gear.
If the clearance checked is noted to exceed the limit, replace the fork or its dog, or both.

Special tool
TOOL (A): 09900–20803 (Thickness gauge)

<u>Gearshift fork to gearshift fork groove clearance</u>
Standard: 0.10 – 0.30 mm (0.0040 – 0.0120 in)
Service limit: 0.50 mm (0.020 in)

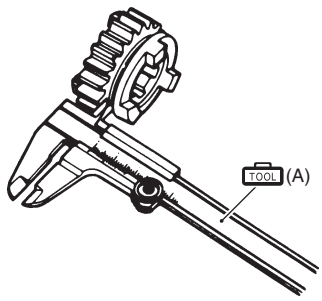


I831G1330066-01

Gearshift Fork Groove Width
Measure the gearshift fork groove width using the vernier calipers.

Special tool
(A): 09900–20102 (Vernier calipers (1/20 mm, 200 mm))

Gearshift fork groove width
Standard (Reverse/Low & High): 5.5 – 5.6 mm (0.217 – 0.220 in)



I649G1520057-03

Gearshift Fork Thickness
Measure the gearshift fork thickness using the vernier calipers.

Special tool
(A): 09900–20102 (Vernier calipers (1/20 mm, 200 mm))

Gearshift fork thickness
Standard (Reverse/Low & High): 5.3 – 5.4 mm (0.209 – 0.213 in)

Transfer Related Bearing Inspection

B831G23306011

Refer to “Bearing Inspection in Section 1D (Page 1D-61)”.

Gear Position (GP) Switch Inspection

B831G23306012

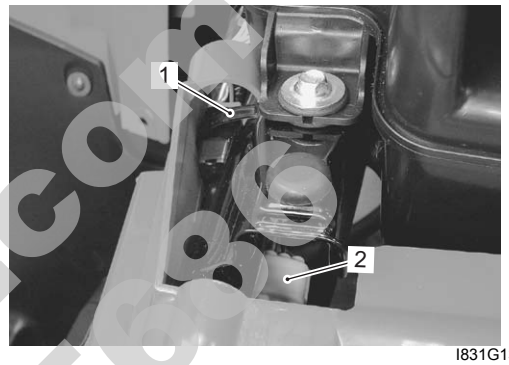
Refer to “Gear Position Switch Inspection in Section 1I (Page 1I-9)”.

Gear Position (GP) Switch Removal and Installation

B831G23306013

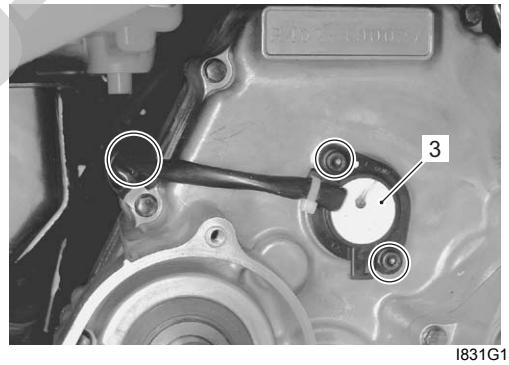
Removal

1) Turn the ignition switch OFF.
2) Remove the left and right side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Remove the drive V-belt inner cover. Refer to “Clutch Shoe Removal and Installation in Section 5A (Page 5A-16)”.
4) Remove the clamp (1) and disconnect the gear position switch coupler (2).



I831G1330044-01

5) Disconnect the clamp and remove the gear position switch (3).



I831G1330045-01

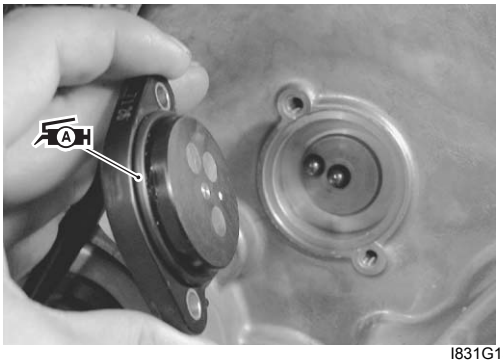
Installation
Install the gear position switch in the reverse order of removal. Pay attention to the following points:

- Apply grease to the O-ring.

⚠ CAUTION

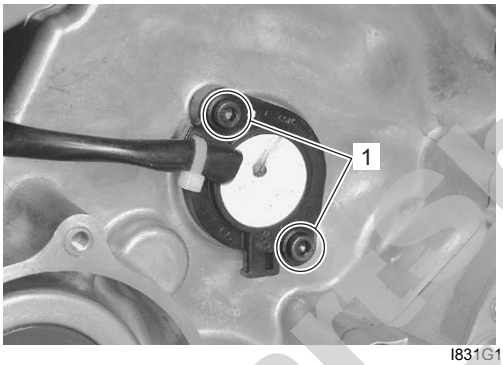
Replace the O-ring with a new one.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1330046-01

- Tighten the gear position switch bolts (1).



I831G1330047-03

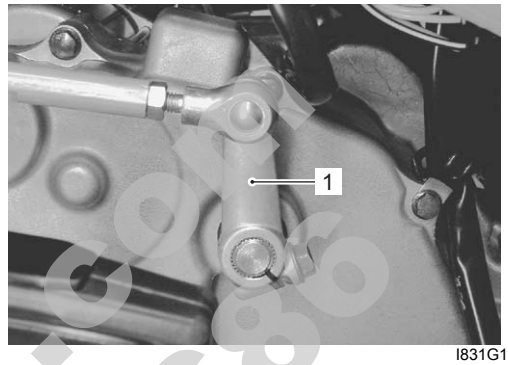
- Route the gear position switch lead wire. Refer to “Wiring Harness Routing Diagram in Section 9A (Page 9A-4)”.
- Install the V-belt inner cover. Refer to “Clutch Shoe Removal and Installation in Section 5A (Page 5A-16)”.
- Install the drive V-belt. Refer to “V-belt Type Continuously Variable Automatic Transmission Removal and Installation in Section 5A (Page 5A-5)”.
- Install the removed parts.

Gearshift Shaft No. 2 / Gearshift Cam Plate Removal and Installation

B831G23306014

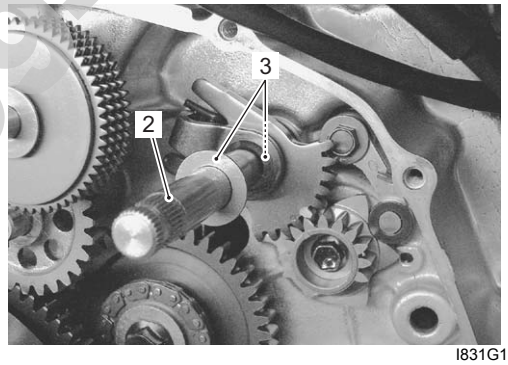
Removal
Refer to “Shift Lever Assembly Removal and Installation in Section 5A (Page 5A-24)”.

1) Drain engine oil. Refer to “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.
2) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)”.
3) Remove the gearshift arm (1).



I831G1330048-01

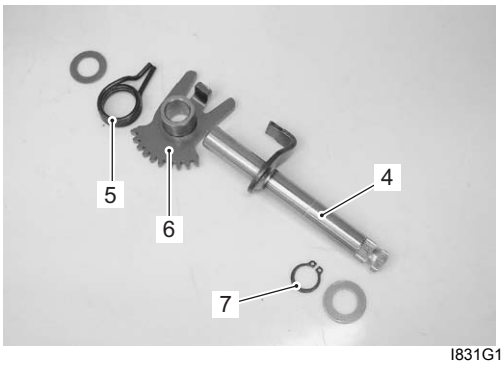
4) Remove the generator cover. Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)”.
5) Remove the gearshift shaft assembly (2) and washers (3).



I831G1330049-02

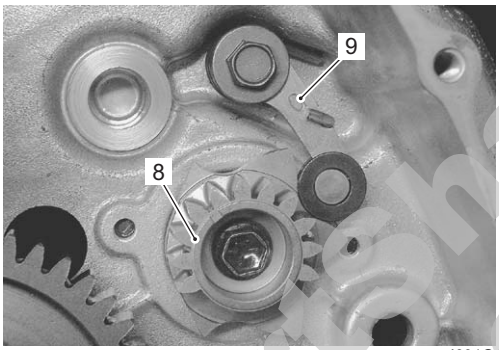
6) Remove the following parts from the gearshift shaft (4).
   - Gearshift return spring (5)
   - Shift gear (6)
   - Snap ring (7)

   Special tool
   TOOL : 09900–06107 (Snap ring pliers)



I831G1330050-03

7) Remove the gearshift cam stopper plate (8).
8) Remove the gearshift cam stopper (9).



I831G1330062-02

Installation
Install the gearshift shaft and gearshift cam plate in the reverse order of removal. Pay attention to the following points:

- Install the gearshift cam stopper (1), bolt (2), washer (3) and return spring (4).

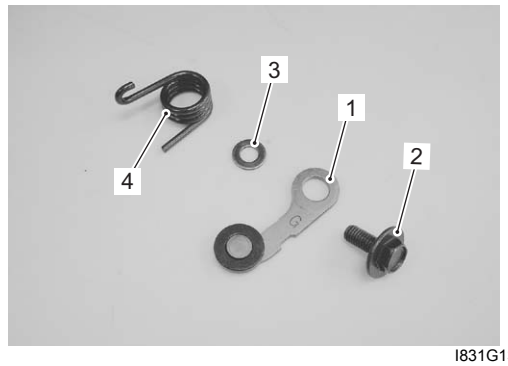
NOTE

Hook the return spring end “A” to the gearshift cam stopper.

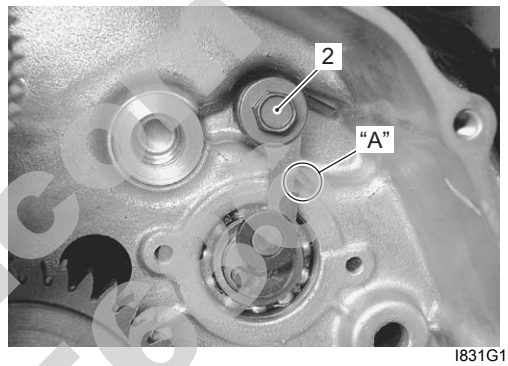
⚠ CAUTION

Make sure that the gearshift cam stopper moves smoothly.

- Tighten the gearshift cam stopper bolt (2) securely.



I831G1330051-01



I831G1330052-02

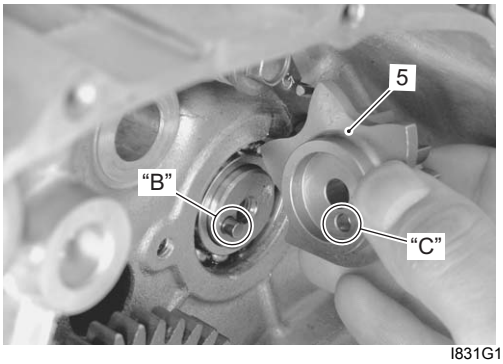
- Check the gearshift cam stopper moves smoothly.
- Locate the gearshift cam in the neutral position.

- Install the gearshift cam stopper plate (5).

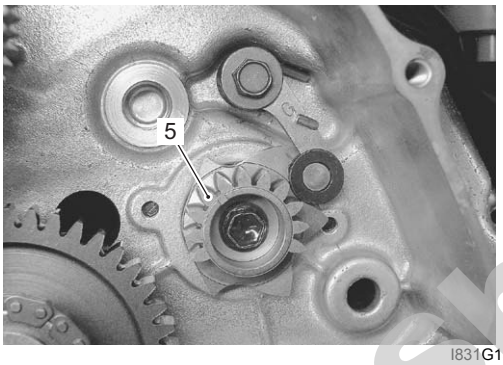
NOTE

- **Align the gearshift cam pin “B” with the gearshift cam stopper plate hole “C”.**

- Tighten the gearshift cam stopper plate bolt securely.

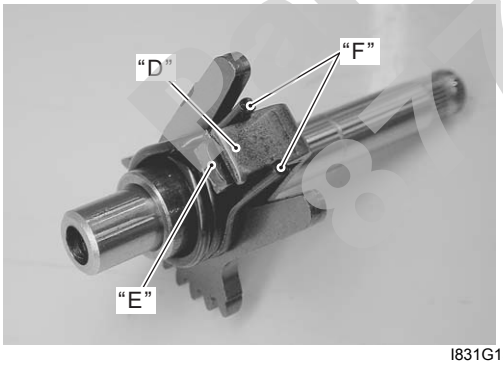


I831G1330053-02



I831G1330054-02

- When installing the shift arm return spring, position the stopper “D” of gearshift shaft No. 2 and stopper “E” of shift gear between the return spring ends “F”.

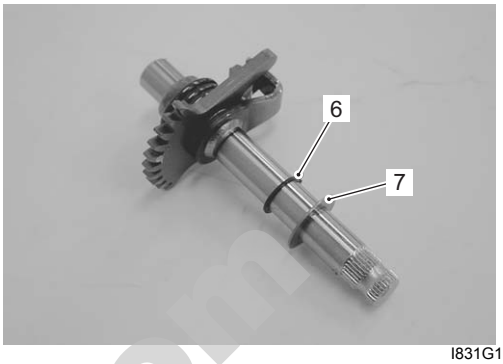


I831G1330055-01

- Install the snap ring (6) and washer (7).

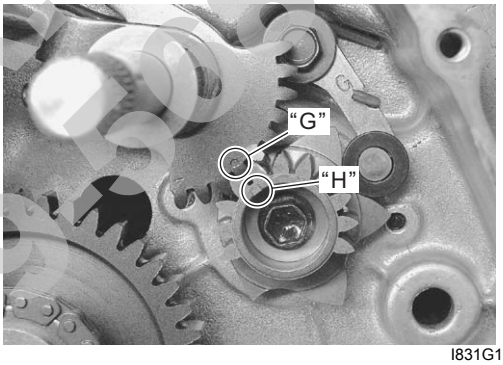
⚠ CAUTION

the removed snap ring (6) must be replaced with new one.



I831G1330056-01

- Install the gearshift assembly by aligning the punch mark “G” of shift gear with the match mark “H” of gearshift cam stopper plate.



I831G1330057-03

- Install the generator cover. Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)”.
- Pour engine coolant and engine oil. Refer to “Cooling System Inspection in Section 0B (Page 0B-15)” and “Engine Oil and Filter Replacement in Section 0B (Page 0B-10)”.

Gearshift Linkage Inspection

B831G23306015

Refer to “Gearshift Shaft No. 2 / Gearshift Cam Plate Removal and Installation (Page 3C-14)”.

Gearshift Shaft

Check the gearshift for bend or wear.
Check the return spring for damage or fatigue.
If any defects are found, replace the defective part(-s).

I831G1330058-01

Gearshift Shaft Oil Seal

Inspect the gearshift shaft oil seal lip for damage or wear. If any defect are found, replace the oil seal with a new one.

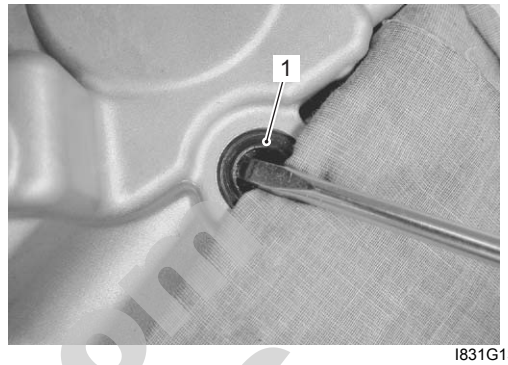
I831G1330059-01

Gearshift Shaft Oil Seal Removal and Installation

B831G23306016

Removal

- Remove the generator cover. Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)”.
- Remove the gearshift shaft oil seal (1).



I831G1330060-01

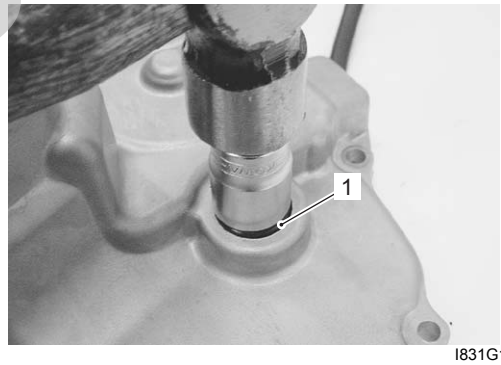
Installation

Install the oil seal in the reverse order of removal. Pay attention to the following points:

⚠ CAUTION

The removed oil seal must be replaced with new one.

- Install the oil seal (1) with a suitable socket wrench.



I831G1330061-01

- Install the generator cover. Refer to “Generator Removal and Installation in Section 1J (Page 1J-4)”.

Front Output Shaft Removal and Installation

B831G23406002

Removal

1) Remove the engine assembly from the frame. Refer to “Engine Assembly Removal in Section 1D (Page 1D-13)”.
2) Disassemble the engine top side. Refer to “Engine Top Side Disassembly in Section 1D (Page 1D-17)”.
3) Separate the crankcase with the special tool. Refer to “Engine Bottom Side Disassembly in Section 1D (Page 1D-45)”.

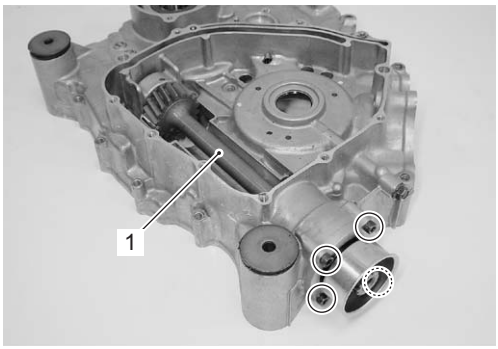
I831G1340002-03

4) Remove the front output shaft (1) from the right crankcase.

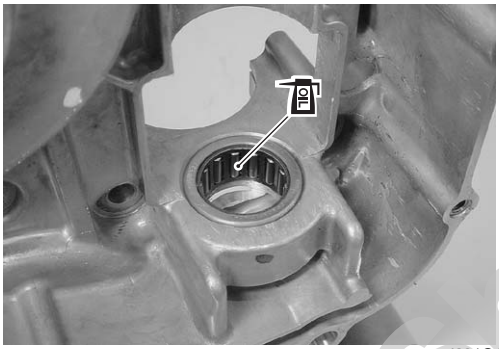


I831G1340003-02

Installation

Install the front output shaft in the reverse order of removal. Pay attention to the following point:

- Apply engine oil to the front output bearing (rear).



I831G1340097-01

- Apply a small quantity of grease to the O-ring (1).

⚠ CAUTION

Replace a O-ring (1) with a new one.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

I831G1340098-01

- Install the front output shaft to the right crankcase. Tighten the front output shaft bolts.

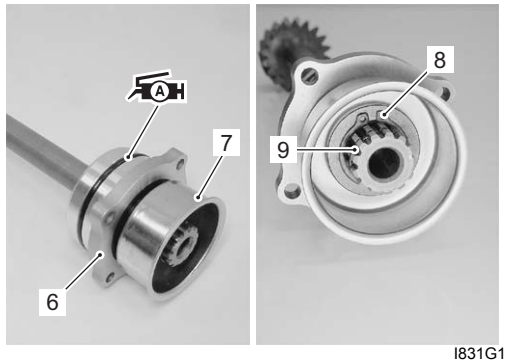
I831G1340016-02

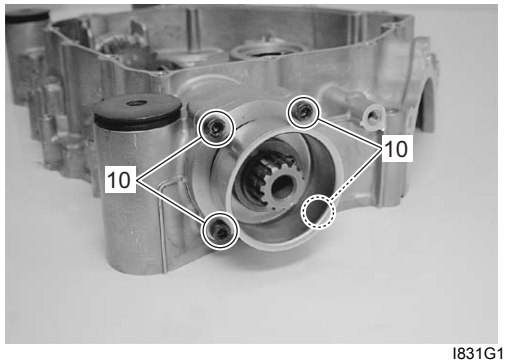
8) Install the output shaft housing (6) and front drive collar assembly (7) to the front output shaft.
9) Install the snap ring (8), C-ring (9) and O-ring.
10) Apply a small quantity of grease to the O-ring.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1340017-02

11) Install the front output shaft to the right crankcase.
12) Tighten the front output shaft bolts (10).



I831G1340018-03

13) Assemble the engine. Refer to “Engine Bottom Side Disassembly in Section 1D (Page 1D-45)” and “Engine Top Side Assembly in Section 1D (Page 1D-21)”.
14) Remount the engine assembly. Refer to “Engine Assembly Installation in Section 1D (Page 1D-16)”.

Front Output Shaft Related Parts Inspection

B831G23406004

Refer to “Front Output Shaft Disassembly and Assembly (Page 3D-2)”.

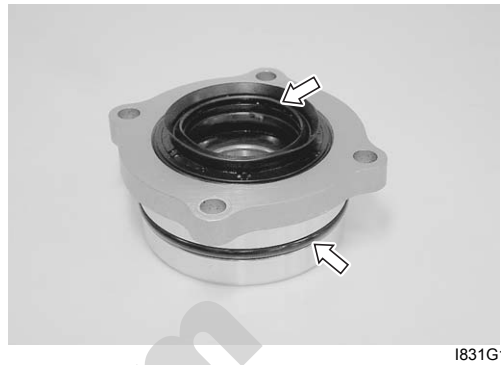
Front Output Shaft

Inspect the front output shaft for distortion.
If distortion is found, replace the front output shaft with a new one.
Inspect the gear of the front output shaft for wear or damage. If any defects are found, replace the drive and driven bevel gears as a set.

I831G1340019-01

Oil Seal

Visually inspect the oil seal for damage, with particular attention given to the lip.
Replace the oil seal that shows indications of leakage.



I831G1340020-01

Front Output Shaft Bearing

Inspect the front output shaft bearings for abnormal noise and smooth rotation.
Replace the bearings if there is anything unusual.

I831G1340021-01

4. Front output shaft drive gear	10. Drive bevel gear nut	OIL : Apply engine oil.
5. Bearing	11. Rear output shaft nut	: Do not reuse.
6. Rear output shaft	12. Output shaft nut	

Rear Output Shaft Removal and Installation

B831G23406006

Removal

1) Remove the engine assembly from the frame. Refer to “Engine Assembly Removal in Section 1D (Page 1D-13)”.
2) Disassemble the engine top side. Refer to “Engine Top Side Disassembly in Section 1D (Page 1D-17)”.
3) Separate the crankcase with the special tool. Refer to “Engine Bottom Side Disassembly in Section 1D (Page 1D-45)”.

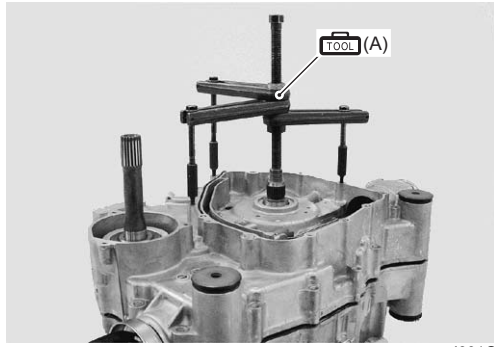
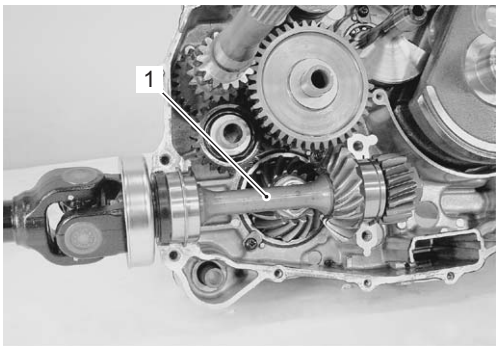
TOOL (A): 09920–13120 (Crankcase separating tool)



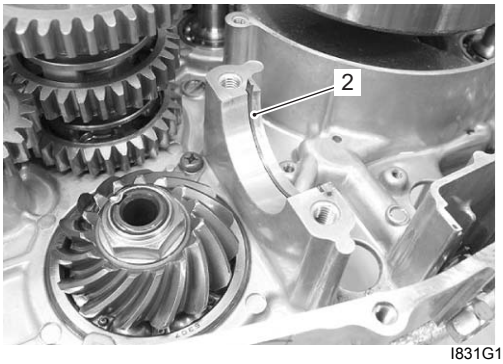
I831G1340002-03

4) Remove the rear output shaft (1).



I831G1340023-01

5) Remove the C-ring (2).



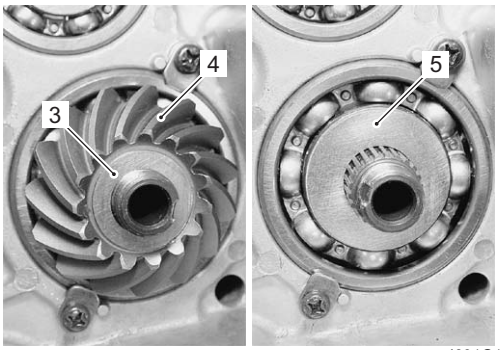
I831G1340090-01

6) Remove the drive shaft, counter shaft assembly and reverse idle gear. Refer to “Transfer Removal and Installation in Section 3C (Page 3C-3)”.
7) Unlock the drive bevel gear nut with a chisel.
8) Hold the transfer output driving gear with the special tool and remove the drive bevel gear nut.

Special tool
TOOL (A): 09920–53740 (Clutch sleeve hub holder)

I831G1340024-01

9) Remove the washer (3), drive bevel gear (4) and shim (5).



I831G1340026-02

Installation
Install the rear output shaft in the reverse order of removal. Pay attention to the following points:

- Hold the transfer output driven gear with the special tool and tighten the drive bevel gear nut to the specified torque.

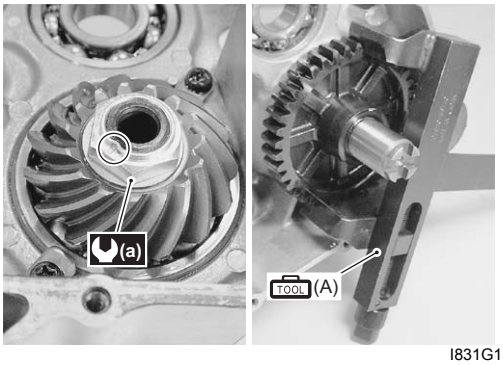
⚠ CAUTION

The removed drive bevel gear nut must be replaced with a new one.

Special tool
TOOL (A): 09920–53740 (Clutch sleeve hub holder)

Tightening torque
Rear output shaft drive bevel gear nut (a): 100 N·m (10.0 kgf-m, 72.5 lb-ft)

- Lock the drive bevel gear nut with a center punch.

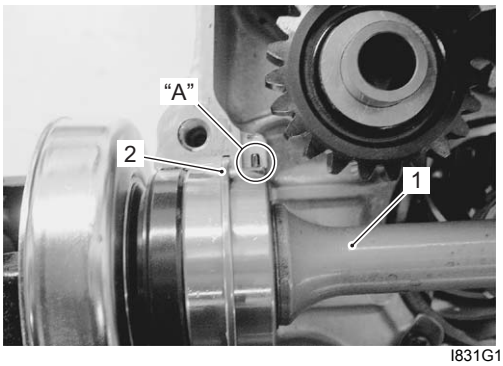


I831G1340027-01

- Install the rear output shaft (1).

NOTE

Be sure to fit the C-ring (2) and bearing knock-pin "A" on the bearing to the groove of the crankcase.



I831G1340028-03

- After installed rear output shaft, inspect the backlash and tooth contact. Refer to "Rear Output Shaft Drive Bevel Gear Shim Inspection and Adjustment (Page 3D-11)".

Rear Output Shaft Disassembly and Assembly

B831G23406007

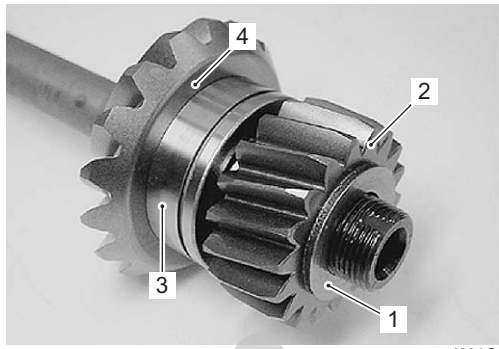
Refer to "Rear Output Shaft Removal and Installation (Page 3D-6)".

Disassembly

1) Using a chisel, unlock the nut. Remove the rear output shaft nut.

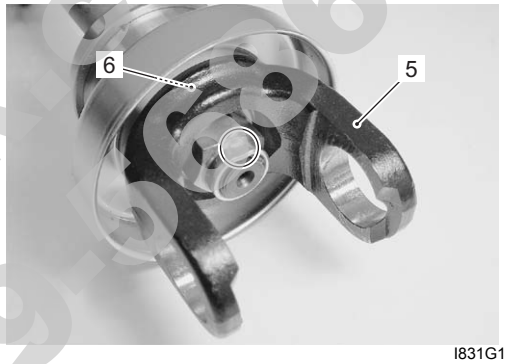
I831G1340031-05

2) Remove the washer (1), rear output shaft driven gear (2), bearing (3) and rear output shaft driven bevel gear (4).



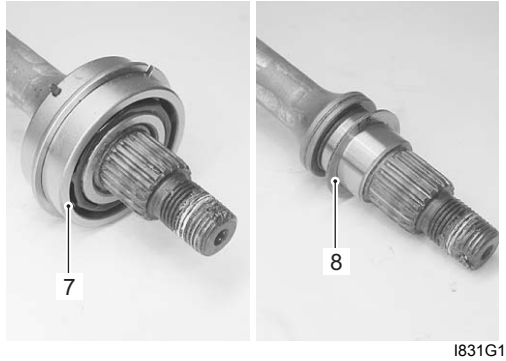
I831G1340032-06

3) Remove the rear output shaft yoke (5) and oil seal (6).
Refer to "Rear Propeller Shaft Removal and Installation (Page 3D-17)".



I831G1340029-03

4) Remove the bearing (7) and shim (8).



I831G1340030-03

Assembly
Assemble the rear output shaft in the reverse order of disassembly. Pay attention to the following points:

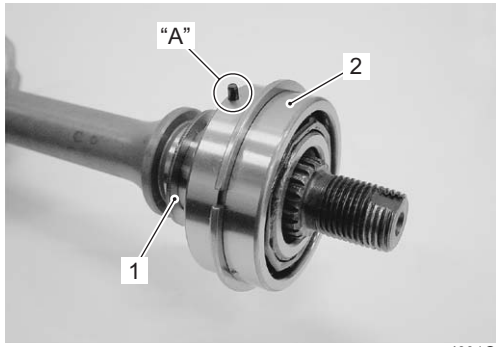
NOTE

Apply engine oil to each running part before reassembling.

- Install the shim(s) (1) and bearing (2).

NOTE

The bearing knock-pin "A" should be positioned inside.



I831G1340035-02

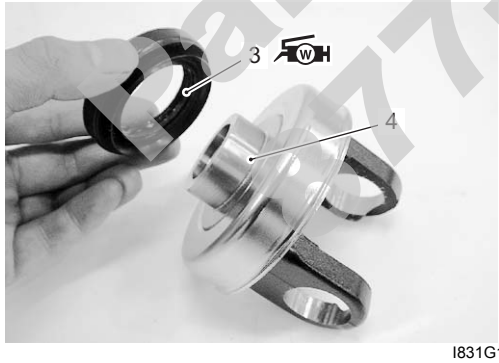
- Apply grease to the oil seal (3).

: Grease 99000–25160 (Water resistance grease)

- Install the oil seal to the rear output shaft yoke (4).

⚠ CAUTION

Replace the oil seal (3) with a new one.



I831G1340101-02

- Apply thread lock to the thread part of the output shaft.

: Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

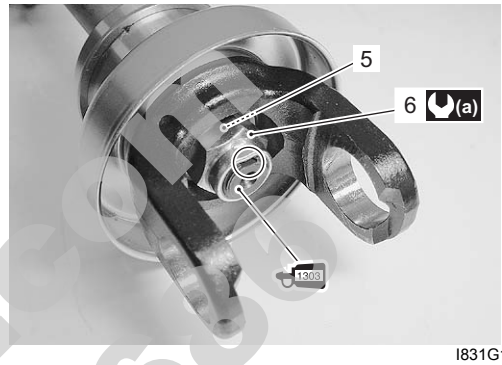
- After installed rear output shaft yoke to the rear output shaft, install the washer (5) and tighten the output shaft nut (6) to the specified torque.

⚠ CAUTION

Do not reuse the output shaft nut (6).

Tightening torque
Rear output shaft nut (a): 100 N·m (10.0 kgf-m, 72.5 lb-ft)

- Lock the rear output shaft nut with a center punch.

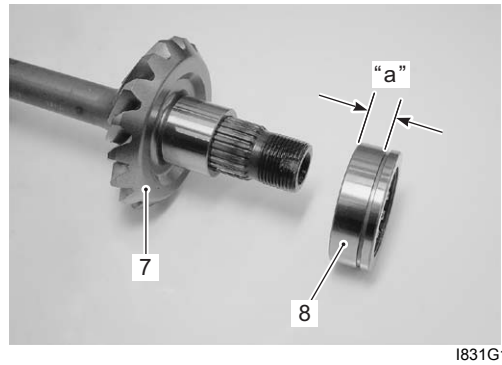


I831G1340102-03

- Install the rear output shaft driven bevel gear (7) and bearing (8).

NOTE

The wider side "a" of the bearing should be positioned bevel gear side.



I831G1340033-02

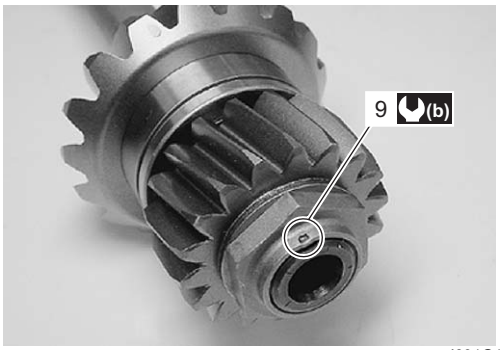
- With the rear output shaft held immovable with a vise, tighten the rear output shaft driven gear nut (9) to the specified torque.

⚠ CAUTION

The removed nut must be replaced with a new one.

Tightening torque
Rear output shaft driven gear nut (b): 100 N·m (10.0 kgf-m, 72.5 lb-ft)

- Lock the rear output shaft driven gear nut (9) with a center punch.



I831G1340034-03

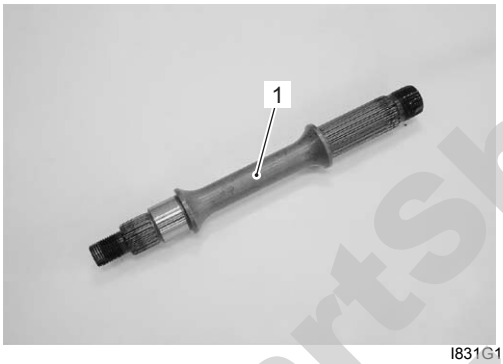
Rear Output Shaft Related Parts Inspection

B831G23406008

Refer to “Rear Output Shaft Disassembly and Assembly (Page 3D-8)”.

Rear Output shaft

Inspect the rear output shaft (1) for wear or damage. If any defects are found, replace the rear output shaft with a new one.



I831G1340036-01

Rear Output Shaft Bevel Gear

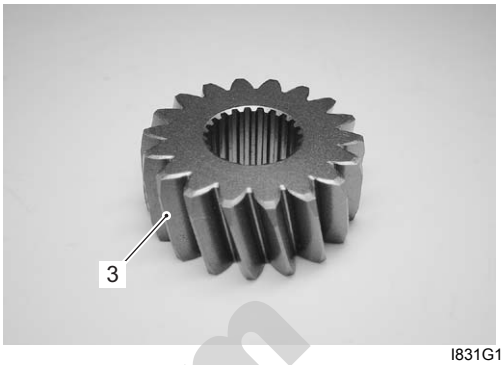
Inspect the drive and driven bevel gear for wear or damage.

- If any defects are found, replace the drive and driven bevel gears as a set.

I831G1340037-01

Rear Output Shaft Gear

Inspect the rear output shaft gear for wear or damage. If any defects are found, replace the rear output shaft gear with the new one.



I831G1340038-01

Bearing

Inspect the rear output shaft bearing and rear driven bevel gear bearing for abnormal noise and smooth rotation.

I831G1340039-01

Rear Output Shaft Drive Bevel Gear Shim Inspection and Adjustment

B831G23406009

Refer to “Rear Output Shaft Removal and Installation (Page 3D-6)”.

Backlash

- Install the shim, drive bevel gear, washer and new drive bevel gear nut.
- Hold the transfer output driven gear with the special tool and tighten the drive bevel gear nut to the specified torque.

NOTE

At this time, it is not necessary to bend the drive bevel gear nut collar.

Special tool
(A): 09920–53740 (Clutch sleeve hub holder)
(B): 09920–31020 (Extension handle)

Tightening torque

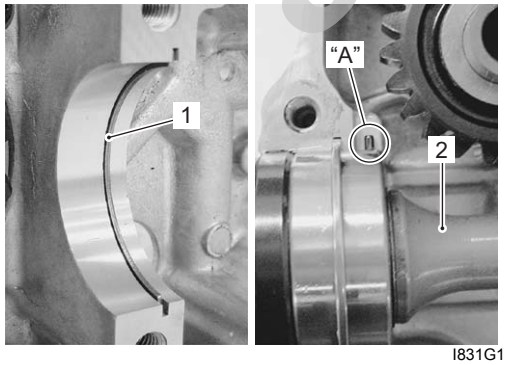
I831G1340040-01

- Install the C-ring (1) and rear output shaft (2).

NOTE

Be sure to fit the bearing knock-pin “A” on the bearing to the groove of the crankcase.



I831G1340041-01

- Place the rear output shaft on the left crankcase half and hold bearings with the special tool.

- Measure the backlash by turning the drive bevel gear shaft in each direction, reading the total backlash with the dial gauge. If the backlash is not within specification, the shim must be changed and backlash should be re-checked until correct. Check the table at the appropriate shim thickness.

NOTE

Adjust the backlash by referring to the table at the using the thickness of the removed shims as a guide.

Rear output shaft bevel gear backlash
Standard: 0.03 – 0.15 mm (0.0001 – 0.006 in)

Backlash	Shim adjustment
Under 0.03 mm (0.001 in)	Increase shim thickness
0.03 – 0.15 mm (0.001 – 0.006 in)	Correct
Over 0.15 mm (0.006 in)	Decrease shim thickness

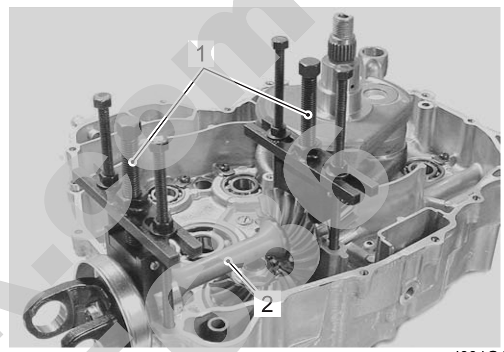
- Check the tooth contact.

Tooth Contact

⚠ **CAUTION**

Make sure to check the backlash after the tooth contact has been adjusted, since it may have changed. Adjust the tooth contact and backlash until they are both within specification. If the correct tooth contact cannot be maintained when adjusting the backlash, replace the rear output shaft drive and driven bevel gears.

- Remove the special tool (1) and rear output shaft (2) from the left crankcase.



I831G1340044-02

- Clean and degrease several teeth of the drive and driven bevel gears, and then apply a coating of machinist's layout dye or paste to several teeth of the rear output shaft driven bevel gear.
- Install the rear output shaft.
- Rotate the rear output shaft driven bevel gear several turns in both directions.
- Remove the output shaft and inspect the coated teeth of the rear output shaft drive bevel gear. The tooth contact pattern should be as shown in [A], [B] and [C]. If tooth contact is found to be incorrect (examples [A] and [C]), the shim thickness between the rear output shaft drive bevel gear and bearing must be changed and the tooth contact re-checked until correct (examples [B]).

Front Propeller Shaft Removal and Installation

B831G23406011

Refer to “Front Propeller Shaft Components (Page 3D-14)” and “Front Drive (Differential) Construction in Section 3B (Page 3B-3)”.

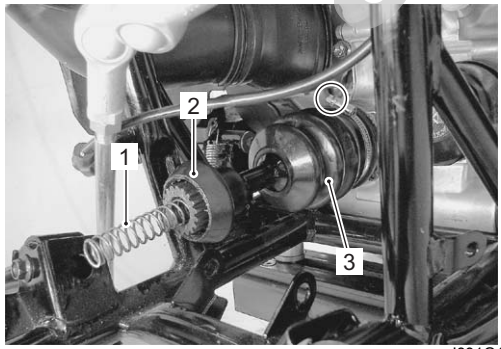
Removal

Remove the front drive (differential) assembly.
Refer to “Front Drive (Differential) Assembly Removal and Installation in Section 3B (Page 3B-4)”.

1) Remove the front propeller shaft spring (1) and front propeller shaft boot (2).
2) Loosen the boot clamp screw and remove the universal joint boot (3).

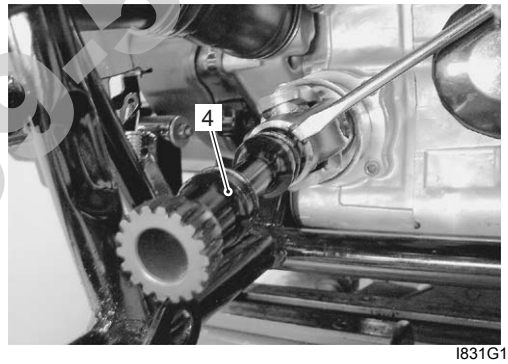
NOTE

Apply oil to the removing direction of the universal joint boot before removing.



I831G1340046-01

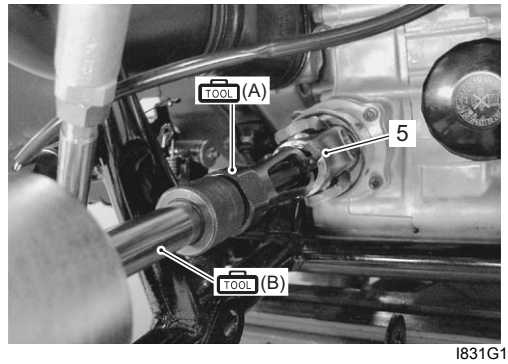
3) Using a (–) screwdriver or the like into a notch of the universal joint and remove the front propeller shaft (4).



I831G1340047-01

4) Remove the universal joint (5) from the joint portion (at the engine side) with special tools.

Special tool
TOOL (A): 09923–74511 (Bearing remover)
TOOL (B): 09930–30104 (Rotor remover slide shaft)



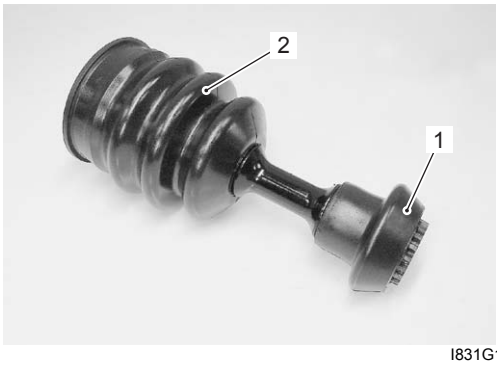
I831G1340048-01

Installation

⚠ CAUTION

The removed circlips must be replaced with new ones.

1) Fit the front propeller shaft boot (1) and universal joint boot (2) to the front propeller shaft groove.

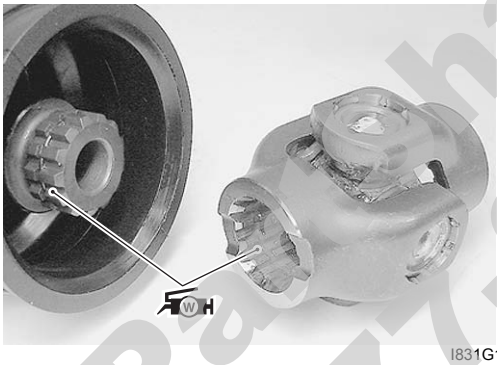


I831G1340049-02

2) Apply grease (approx. 4 grams) to the spline of universal joint and spline of the front propeller shaft.

: Grease 99000–25160 (Water resistance grease)

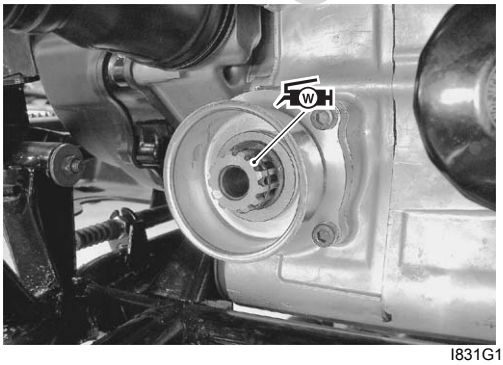
3) Connect the propeller shaft to the universal joint.



I831G1340050-02

4) Apply grease (approx. 4 grams) to the spline.

: Grease 99000–25160 (Water resistance grease)



I831G1340051-01

5) Connect the universal joint to the joint portion (at the engine side).

6) Attach the boot to the front drive collar and tighten the boot clamp screw to the specified torque.

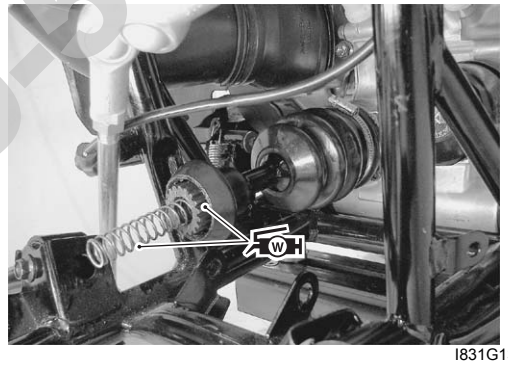
Tightening torque
Front propeller shaft boot clamp screw: 1.3 N·m (0.13 kgf-m, 1.0 lb-ft)

I831G1340100-01

7) Install the front propeller shaft spring.

8) Apply grease (approx. 4 grams) to the spline of front propeller shaft and spring.

: Grease 99000–25160 (Water resistance grease)



I831G1340052-01

9) Install the front drive (differential) assembly. Refer to “Front Drive (Differential) Assembly Removal and Installation in Section 3B (Page 3B-4)”.

Front Propeller Shaft Related Parts Inspection

B831G23406012

Refer to “Front Propeller Shaft Removal and Installation (Page 3D-14)”.

Front Propeller Shaft

Inspect the front propeller shaft for wear or damage. If any defects are found, replace the front propeller shaft with a new one.

I831G1340053-01

Front Propeller Shaft Spring

Inspect the front propeller shaft spring for damage or fatigue. If any defects are found, replace the front propeller shaft spring with a new one.

I831G1340054-01

Universal Joint

Inspect the play by turning the universal joint. If excessive play is noted, replace it with a new one.

⚠ CAUTION

Do not attempt to disassemble the universal joint.

I831G1340055-01

Boots

Inspect the front propeller shaft boot (1) and universal joint boot (2) for crack or damage. If any defects are found, replace the boot part with a new one.

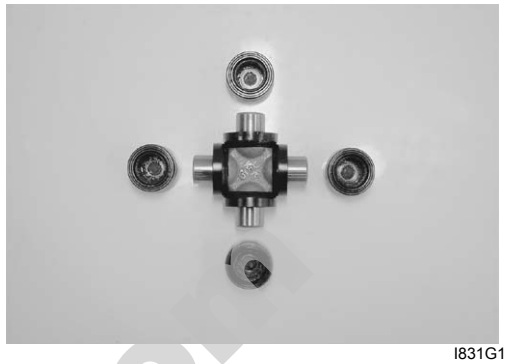
Inspect the rear output joint boot (1) and propeller shaft joint boot (2) for crack or damage. If any defects are found, replace the boot with a new one.

I831G1340086-01

Universal Joint

Inspect the universal joint in the following procedures:

1) Inspect the universal joint and outer surface of the bearing for scuffing, wear or damage. If any defects are found, replace the bearings and universal joint as a set.



I831G1340087-01

2) Insert the universal joint to the bearing and check the play by turning the universal joint, as shown in the figure. If excessive play is found, replace the bearings and universal joint as a set.

Precautions for Brake System

B831G24000001

Refer to “General Precautions in Section 00 (Page 00-1)”.

Brake Fluid Information

B831G24000002

⚠ WARNING

- **This brake system is filled with an ethylene glycol-based DOT 4 brake fluid. Do not use or mix different types of fluid, such as silicone-based or petroleum-based.**
- **Do not use any brake fluid taken from old, used or unsealed containers. Never reuse brake fluid left over from the last servicing or which has been stored for a long period of time.**
- **When storing brake fluid, seal the container completely and keep it away from children.**
- **When replenishing brake fluid, take care not to get dust into the fluid.**
- **When washing brake components, use new brake fluid. Never use cleaning solvent.**
- **A contaminated brake disc or brake pad reduces braking performance. Discard contaminated pads and clean the disc with high quality brake cleaner or neutral detergent.**

⚠ CAUTION

Immediately and completely wipe off any brake fluid contacting any part of the vehicle. The brake fluid reacts chemically with paint, plastics and rubber materials, etc., and will damage them severely.

Repair Instructions

Brake Pedal Height Inspection and Adjustment

B831G24106001

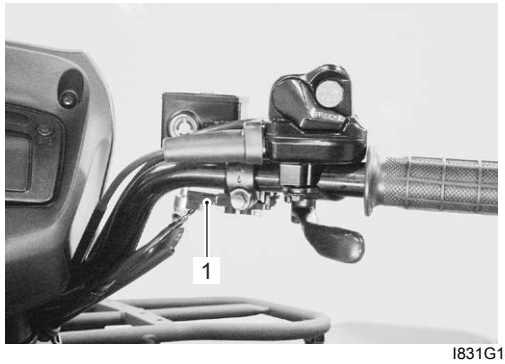
Refer to “Rear Brake Pedal / Rear Brake (Parking Brake) Lever Inspection and Adjustment in Section 0B (Page 0B-19)”.

Front Brake Light Switch Inspection

B831G24106002

Inspect the front brake light switch in the following procedures:

1) Disconnect the front brake light switch coupler (1).



I831G1410002-01

2) Inspect the switch for continuity with a tester.
If any abnormality is found, replace the front brake light switch with a new one. Refer to “Front Brake Master Cylinder / Brake Lever Disassembly and Assembly (Page 4A-11)”.

Rear Brake Light Switch Inspection

B831G24106003

Inspect the rear brake light switch in the following procedures:

1) Remove the left front inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the rear brake light switch lead wire coupler (1).

I831G1410034-01

3) Inspect the switch for continuity with a tester.
If any abnormality is found, replace the rear brake light switch with a new one.

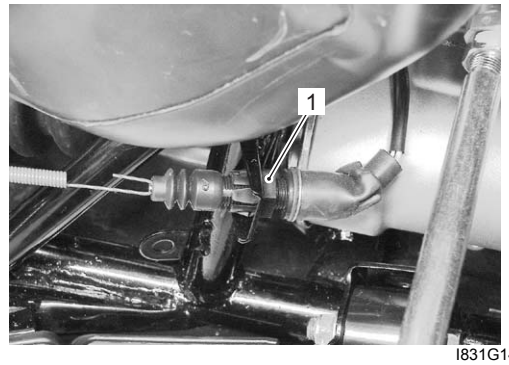
Rear Brake Switch Inspection and Adjustment

B831G24106004

Check the rear brake light switch so that the brake light will come on just before pressure is felt when the brake pedal is depressed. If the brake light switch adjustment is necessary, turn the adjuster nut (1) in or out while holding the brake pedal.



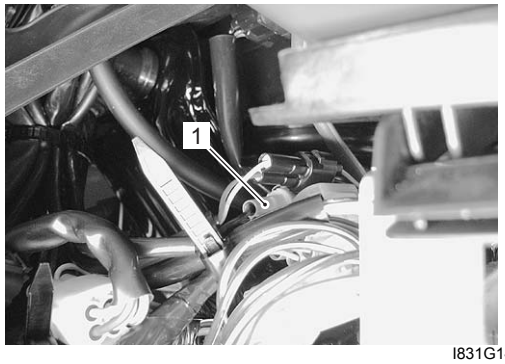
I831G1410005-01

Parking / Rear Brake Light Switch Inspection

B831G24106005

Inspect the parking/rear brake light switch in the following procedures:

1) Remove the left inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the parking/rear brake light switch lead wire coupler (1).



I831G1410043-01

3) Inspect the parking/rear brake light switch for continuity with a tester. If any abnormality is found, replace the parking/rear brake lever assembly with a new one. Refer to “Handlebars Removal and Installation in Section 6B (Page 6B-3)”.

B831G24106008

Refer to “Front Brake System Inspection in Section 0B (Page 0B-17)”.

Air Bleeding from Front Brake Fluid Circuit

B831G24106009

Air trapped in the brake fluid circuit acts like a cushion to absorb a large proportion of the pressure developed by the master cylinder and thus interferes with the full braking performance of the brake caliper. The presence of air is indicated by “sponginess” of the brake lever and also by lack of braking force. Considering the danger to which such trapped air exposes the machine and rider, it is essential that after remounting the brake and restoring the brake system to the normal condition, the brake fluid circuit be purged of air in the following manner:

⚠ CAUTION

- **Make sure that the vehicle is supported securely.**
- **Handle brake fluid with care: the fluid reacts chemically with paint, plastic, rubber materials, etc.**

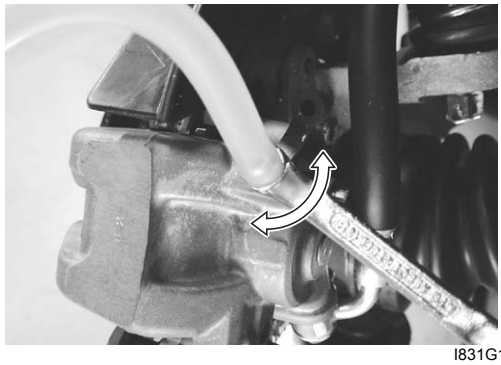
1) Fill the master cylinder reservoir to the top of the inspection window. Place the reservoir cap to prevent dirt from entering.

I831G1410009-01

2) Attach a hose to the air bleeder valve, and insert the free end of the hose into a receptacle.
3) Squeeze and release the brake lever several times in rapid succession and squeeze the lever fully without releasing it.

I831G1410010-01

4) Loosen the air bleeder valve by turning it a quarter of a turn so that the brake fluid runs into the receptacle, this will remove the tension of the brake lever causing it to touch the handlebar grip.



I831G1410011-01

5) Close the air bleeder valve, pump and squeeze the lever, and open the valve.
6) Repeat this process until the fluid flowing into the receptacle no longer contains air bubbles.

NOTE

While bleeding the brake system, replenish the brake fluid in the reservoir as necessary. Make sure that there is always some fluid visible in the reservoir.

7) Close the air bleeder valve and disconnect the hose.

Tightening torque
Front brake air bleeder valve: 6 N·m (0.6 kgf-m, 4.5 lb-ft)

8) Fill the reservoir with brake fluid to the upper mark of the reservoir.

I831G1410008-01

9) Install the reservoir cap.

Brake Fluid Replacement

B831G24106010

⚠ CAUTION

- **Make sure that the vehicle is supported securely.**
- **Handle brake fluid with care: the fluid reacts chemically with paint, plastic, rubber materials, etc.**

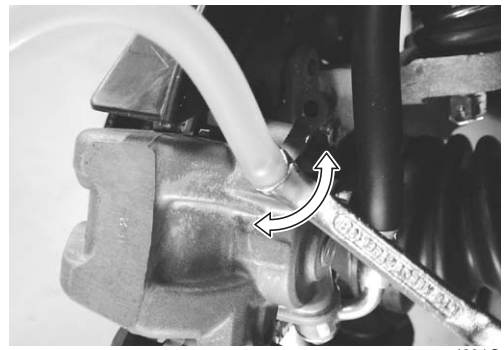
1) Support the vehicle on a level surface with a jack and keep the handlebars straight.
2) Remove the front wheels. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
3) Remove the brake fluid reservoir cap and diaphragm.
4) Suck up the old brake fluid as much as possible.

I831G1410008-01

5) Fill the reservoir with new brake fluid.

BF: Brake fluid (DOT 4)

6) Connect a clear hose to the air bleeder valve and insert the other end of the hose into a receptacle.



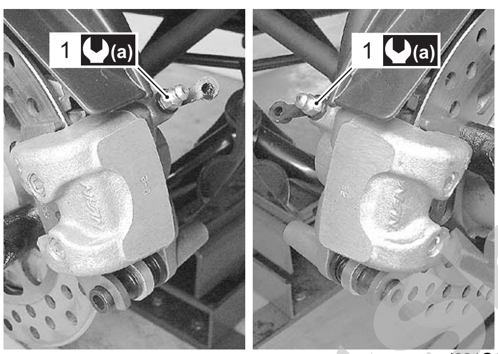
I831G1410011-01

7) Loosen the air bleeder valve and pump the brake lever until the old brake fluid flows out of the brake system.

I831G1410012-01

8) Close the air bleeder valve (1) and disconnect the clear hose.

Tightening torque
Front brake air bleeder valve (a): 6 N·m (0.6 kgf-m, 4.5 lb-ft)



I831G1410013-01

9) Fill the reservoir with brake fluid.

I831G1410036-01

10) Install the reservoir cap.
11) Install the front wheels. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.

Front Brake Hose Removal and Installation

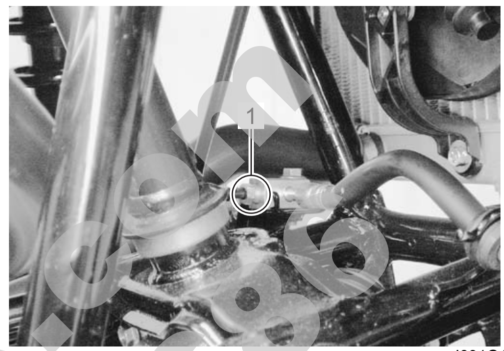
B831G24106011

Removal

⚠ **CAUTION**

Make sure that the vehicle is supported securely.

1) Drain brake fluid. Refer to “Brake Fluid Replacement (Page 4A-6)”.
2) Loosen the flare nuts (1) and disconnect the brake pipe.



I831G1410014-01

3) Remove the front brake hoses as shown in the front brake hose routing diagram. Refer to “Front Brake Hose Routing Diagram (Page 4A-1)”.

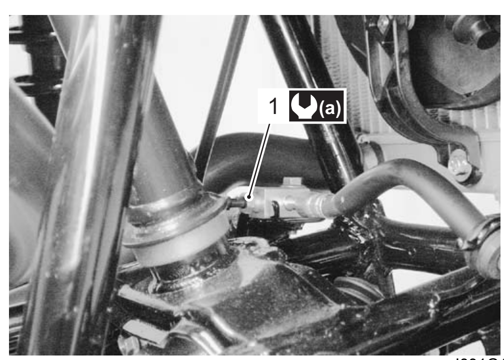
Installation

⚠ **CAUTION**

The seal washers should be replaced with the new ones to prevent fluid leakage.

1) Install the front brake hose as shown in the front brake hose routing diagram. Refer to “Front Brake Hose Routing Diagram (Page 4A-1)”.
2) Tighten the brake flare nut (1) to the specified torque.

Tightening torque
Brake pipe flare nut (a): 16 N·m (1.6 kgf-m, 11.5 lb-ft)



I831G1410015-01

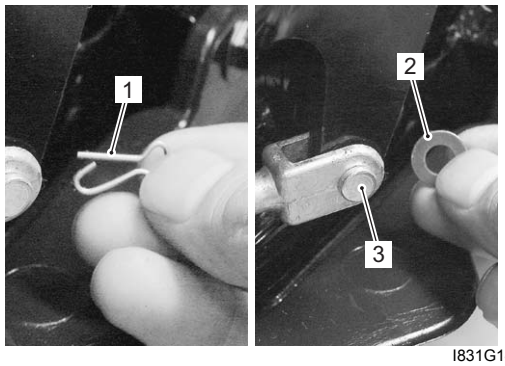
3) Bleed air from the front brake system. Refer to “Air Bleeding from Front Brake Fluid Circuit (Page 4A-5)”.

Rear Brake Cable Removal and Installation

B831G24106012

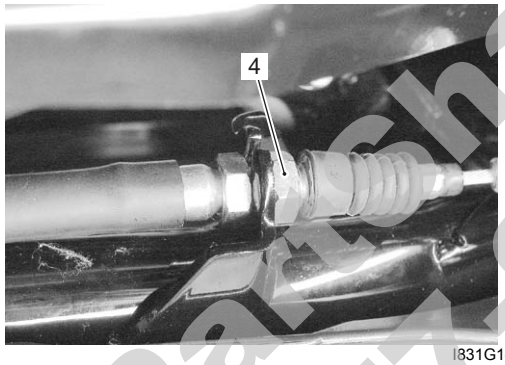
Removal

1) Remove the right inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the right mud guard. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
3) Remove the cotter pin (1), washer (2) and rear brake cable pin (3).



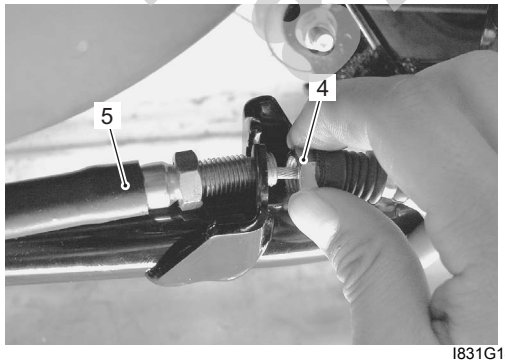
I831G1410016-02

4) Loosen the rear brake cable holder nut (4).



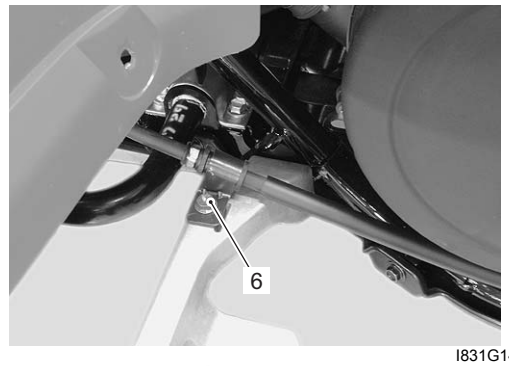
I831G1410017-01

5) Remove the rear brake holder nut (4) and brake cable (5).



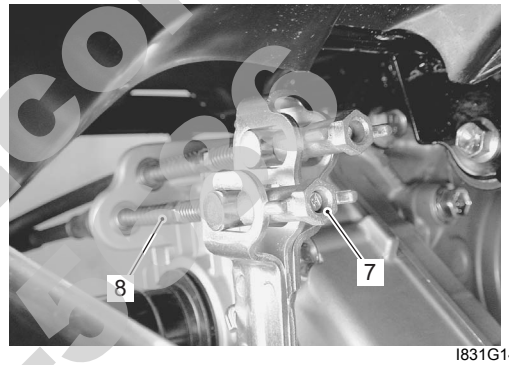
I831G1410033-04

6) Remove the rear brake cable bolt (7) from the right footrest.



I831G1410018-02

7) Remove the rear brake cable adjuster nut (7) and cable (8).



I831G1410037-03

Installation

1) Install the rear brake cable as shown in the rear brake cable routing diagram. Refer to “Rear Blake Cable Routing Diagram (Page 4A-2)”.
2) After installed rear brake cable, adjust the adjuster nut. Refer to “Rear Brake Pedal / Rear Brake (Parking Brake) Lever Inspection and Adjustment in Section 0B (Page 0B-19)”.
3) Install the removed parts.

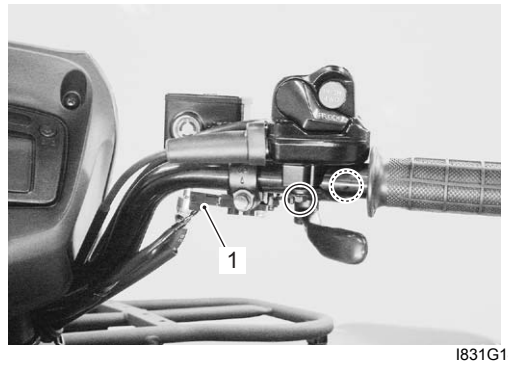
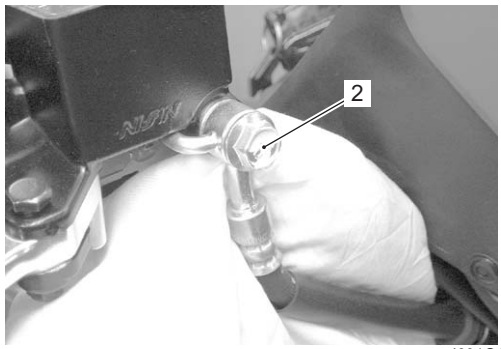
Removal

1) Drain brake fluid. Refer to “Brake Fluid Replacement (Page 4A-6)”.
2) Remove the throttle case assembly. Refer to “Handlebars Removal and Installation in Section 6B (Page 6B-3)”.
3) Disconnect the front brake light switch coupler (1).



I831G1410020-01

4) Place a rag underneath the brake hose union bolt (2) on the master cylinder to catch any spilt brake fluid.
5) Remove the brake hose union bolt (2) and disconnect the brake hose.



I831G1410021-01

6) Remove the master cylinder assembly (3).

I831G1410022-01

Installation
Install the front brake master cylinder in the reverse order of removal. Pay attention to the following points:

- When installing the master cylinder (1) onto the handlebars (2), align the master cylinder holder's mating surface "A" with the punch mark "B" on the handlebars (2) and tighten the upper holder bolt first. Refer to "Steering / Handlebars Assembly Construction in Section 6B (Page 6B-2)".

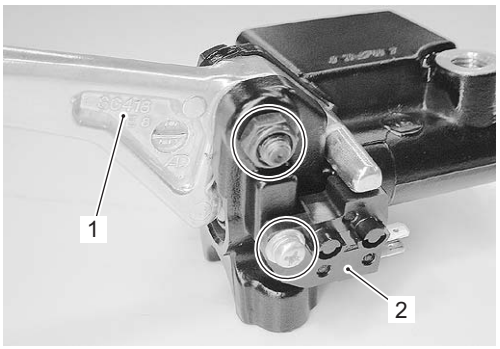
Front Brake Master Cylinder / Brake Lever Disassembly and Assembly

B831G24106015

Refer to “Front Brake Master Cylinder Assembly Removal and Installation (Page 4A-9)”.

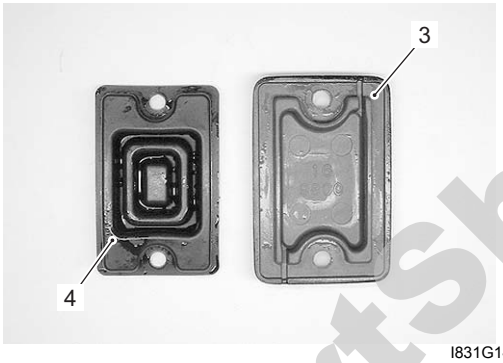
Disassembly

1) Remove the brake lever (1) and brake light switch (2).



I831G1410026-01

2) Remove the reservoir cap (3) and diaphragm (4).



I831G1410027-01

3) Pull out the dust boot (5) and remove the snap ring (6) with a special tool.

Special tool

TOOL : 09900–06108 (Snap ring pliers)

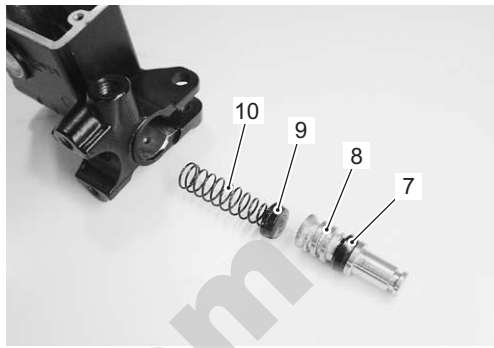
4) Remove the following parts from the master cylinder.

- Secondary cup (7)
- Piston (8)
- Primary cup (9)
- Spring (10)



I831G1410029-01

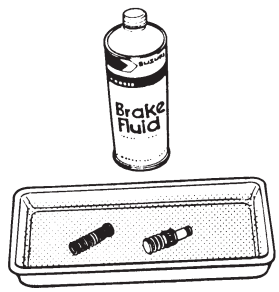
Assembly

Assemble the master cylinder in the reverse order of disassembly. Pay attention to the following points:

⚠ CAUTION

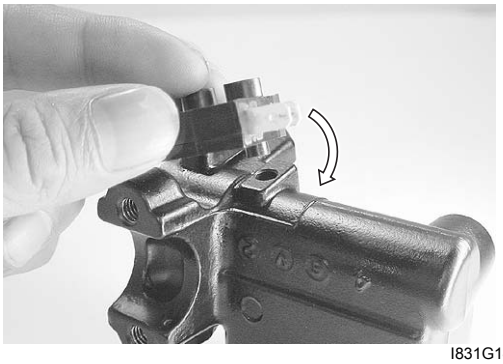
- **Wash the master cylinder components with new brake fluid before reassembly.**
- **Do not wipe the brake fluid off after washing the components.**
- **When washing the components, use the specified brake fluid. Never use different types of fluid or cleaning solvents such as gasoline, kerosine, etc.**
- **Apply brake fluid to the master cylinder bore and all of the master cylinder component to be inserted into the bore.**

BF: Brake fluid (DOT 4)



I649G1410024-02

- When installing the brake light switch, align the projection on the switch with the hole in the master cylinder.



I831G1410030-01

- Apply grease to the brake lever pivot bolt.
- Apply grease to the contact point between piston and brake lever.

: Grease 99000–25100 (SUZUKI Silicone Grease or equivalent)

I831G1410031-01

- Tighten the pivot bolt and lock-nut to the specified torque.

Tightening torque
Brake lever pivot bolt: 6 N·m (0.6 kgf-m, 4.5 lb-ft)

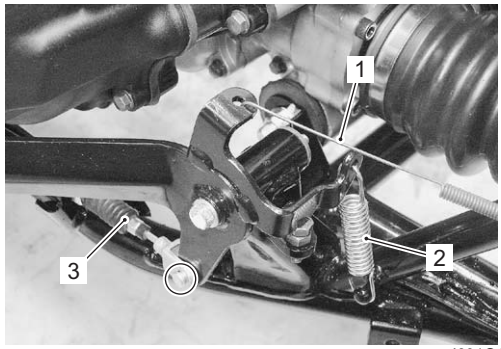
Rear Brake Pedal Removal and Installation

B831G24106018

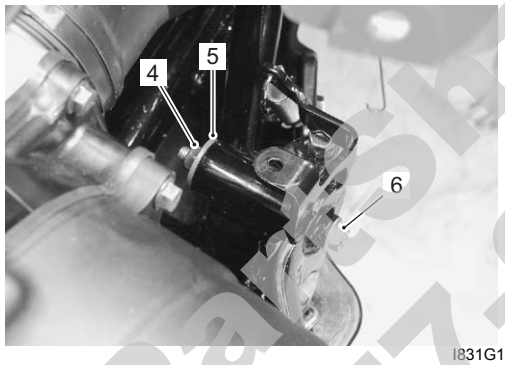
Removal

1) Remove the right inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Remove the right mud guard. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
3) Remove the spring (1) and (2).
4) Disconnect the rear brake cable (3). Refer to “Rear Brake Cable Removal and Installation (Page 4A-8)”.



I831G1410039-02

5) Remove the nut (4), washer (5) and bolt (6).



I831G1410040-02

6) Remove the rear brake pedal.

Installation

Install the rear brake pedal in the reverse order of removal. Pay attention to the following points:

- Apply grease to the O-rings as shown in the rear brake pedal construction. Refer to “Rear Brake Pedal Construction (Page 4A-13)”.

⚠ CAUTION

Replace the O-rings with new ones.

: Grease 99000–25160 (Water resistance grease)

- Apply grease to the pivot part of brake pedal.

Precautions

Precautions for Front Brakes

B831G24200001

⚠ WARNING

When servicing the front brake system, place the vehicle on a level ground and support the vehicle with a jack.

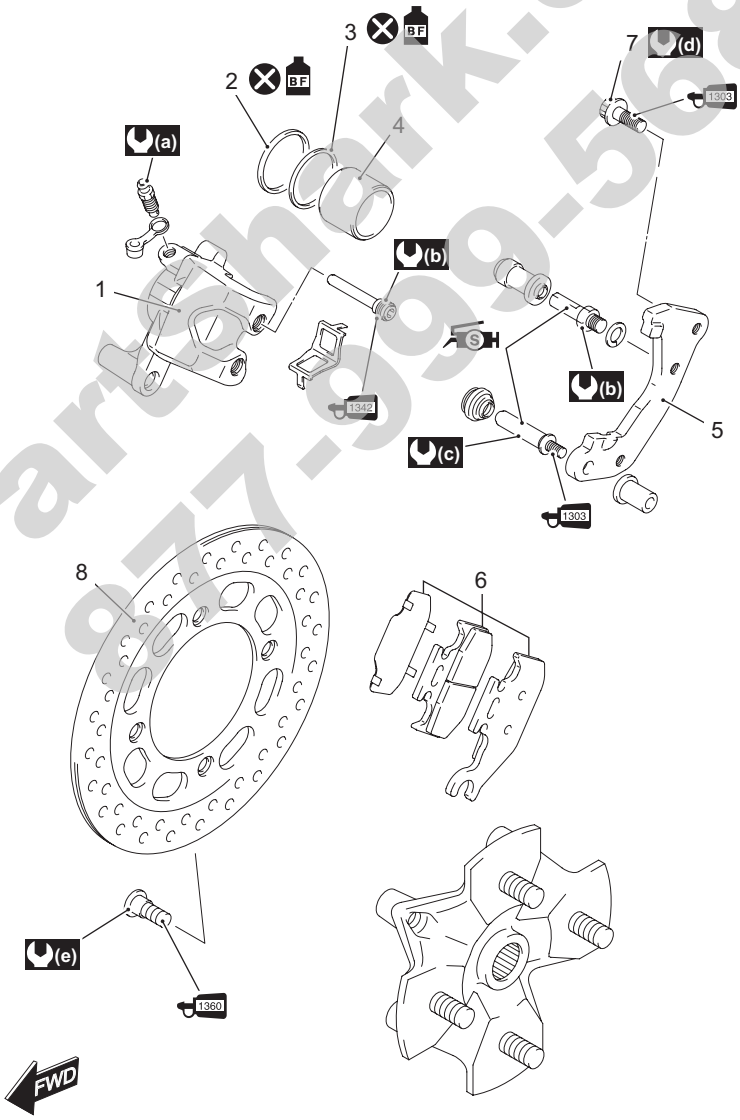
NOTE

The right and left calipers, brake pads and discs are installed symmetrically and therefore the removal procedure for one side is the same as that for the other side.

Repair Instructions

Front Brake Components

B831G24206001



I831G1420001-11

1. Front brake caliper	7. Brake caliper mounting bolt	(e) : 23 N·m (2.3 kgf-m, 16.5 lb-ft)
2. Piston seal	8. Front brake disk	1303 : Apply thread lock to the thread part.
3. Dust seal	(a) : 6 N·m (0.6 kgf-m, 4.5 lb-ft)	1342 : Apply thread lock to the thread part.
4. Piston	(b) : 18 N·m (1.8 kgf-m, 13.0 lb-ft)	1360 : Apply thread lock to the thread part.
5. Brake caliper holder	(c) : 23 N·m (2.3 kgf-m, 16.5 lb-ft)	BF : Apply brake fluid.
6. Front brake pad set	(d) : 26 N·m (2.6 kgf-m, 19.0 lb-ft)	: Do not reuse.

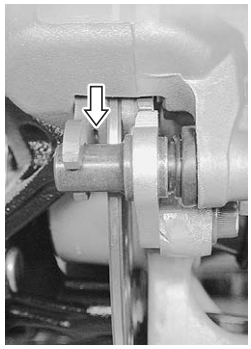
Front Brake Pad Inspection

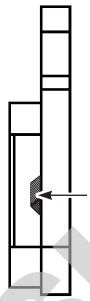
B831G24206002

The extent of brake pads wear can be checked by observing the grooved limit line “A” on the pads. When the wear exceeds the grooved limit line, replace the pads with new ones. Refer to “Front Brake Pad Replacement (Page 4B-2)”.

⚠ CAUTION

Replace the brake pad as a set, otherwise braking performance will be adversely affected.





I831G1420002-01

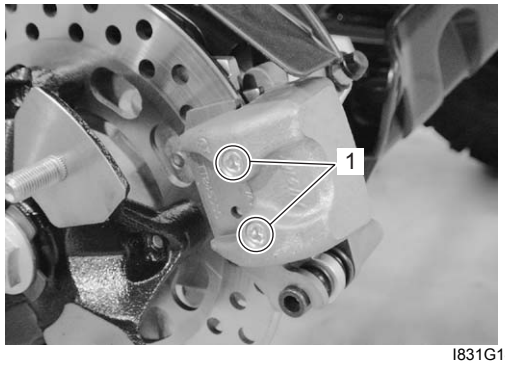
Front Brake Pad Replacement

B831G24206003

1) Remove the front wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
2) Remove the pad mounting pins (1).

NOTE

When removing the pads, push the piston all the way into the brake caliper.

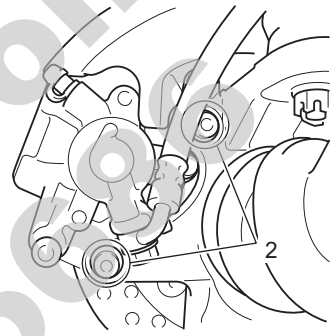


I831G1420004-02

⚠ CAUTION

Do not operate the brake lever while dismounting the pads.

3) Remove the front brake caliper by removing the brake caliper mounting bolts (2). Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.

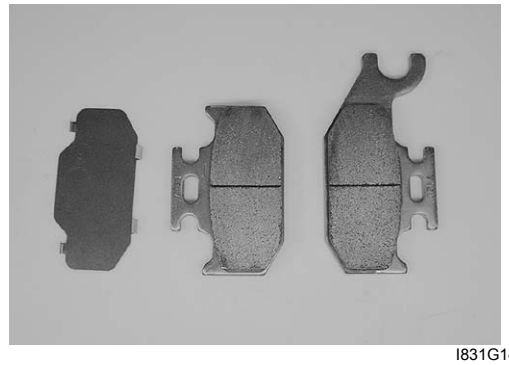


I831G1420031-01

4) Remove the brake pads.
5) Clean up the caliper especially around the caliper piston.
6) Install the new brake pads.

⚠ CAUTION

Replace the brake pads as a set, otherwise braking performance will be adversely affected.



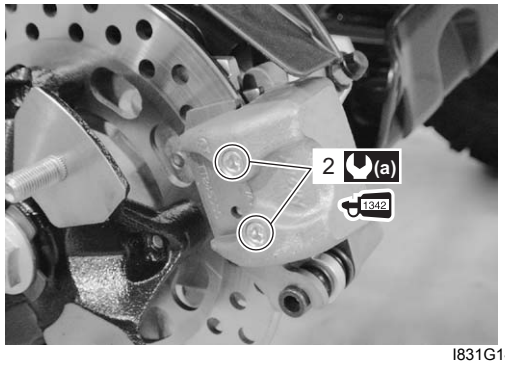
I831G1420005-01

7) Apply a small quantity of thread lock to the brake pad mounting pins (2).

1342 : Thread lock cement 99000–32050 (THREAD LOCK CEMENT 1342 or equivalent)

8) Tighten the front brake pad mounting pins (2) to the specified torque.

Tightening torque
Front brake pad mounting pin (a): 18 N·m (1.8 kgf-m, 13.0 lb-ft)



I831G1420006-08

NOTE

After replacing the brake pads, pump the brake lever several times to check for proper brake operation and then check the brake fluid level.

9) Install the front wheel assembly.

Front Brake Caliper Removal and Installation

B831G24206004

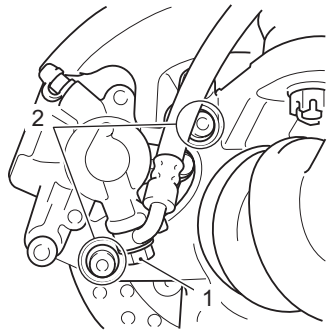
Removal

1) Remove the front wheel assembly.
2) Drain brake fluid. Refer to "Brake Fluid Replacement in Section 4A (Page 4A-6)".
3) Remove the brake hose from the caliper by removing the union bolt (1) and catch the brake fluid in a suitable receptacle.

NOTE

Place a rag underneath the union bolt on the brake caliper to catch any spilt brake fluid.

4) Remove the brake caliper by removing the brake caliper mounting bolts (2).



I831G1420032-01

Installation

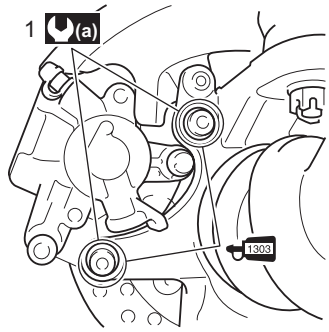
Install the brake caliper in the reverse order of removal. Pay attention to the following points:

- Apply a small quantity of thread lock to the front brake caliper mounting bolts (1).

1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

- Tighten the brake caliper mounting bolts (1) to the specified torque.

Tightening torque
Brake caliper mounting bolt (a): 26 N·m (2.6 kgf-m, 19.0 lb-ft)



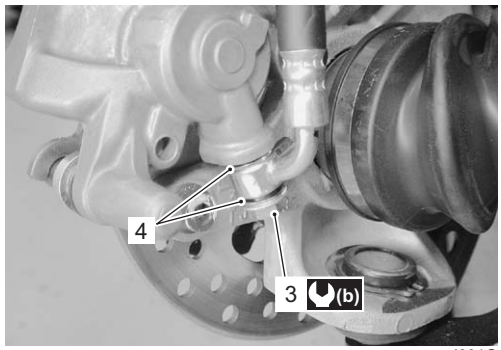
I831G1420033-01

- After setting the brake hose union to the stopper, tighten the union bolt (3) to the specified torque.

⚠ CAUTION

The seal washers (4) should be replaced with the new ones to prevent fluid leakage.

Tightening torque
Front brake hose union bolt (b): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G1420011-05

- Bleed air from the brake system after installing the caliper. Refer to “Air Bleeding from Front Brake Fluid Circuit in Section 4A (Page 4A-5)”.
- Install the front wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
- Check the brake fluid leakage and brake operation.

⚠ WARNING

Brake fluid, if it leaks, will interfere with safe running and discolor painted surfaces. Check the brake hose and hose joints for cracks and fluid leakage.

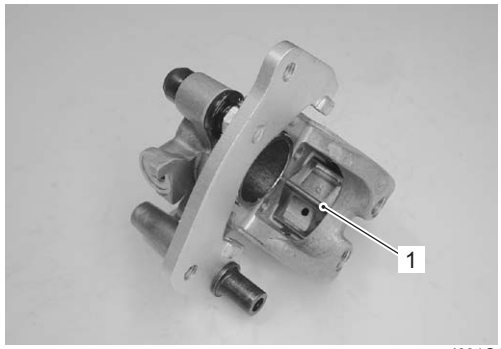
Front Brake Caliper Disassembly and Assembly

B831G24206005

Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.

Disassembly

1) Remove the brake caliper. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.
2) Remove the pad spring (1).



I831G1420012-03

3) Place a rag over the brake caliper piston to prevent it from popping out and then force out the piston using compressed air.

⚠ CAUTION

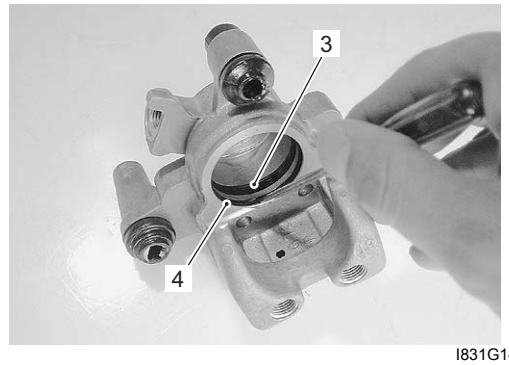
Do not use high pressure air to prevent brake caliper piston damage.

I831G1420013-02

4) Remove the caliper holder (2) from brake caliper.

I831G1420014-01

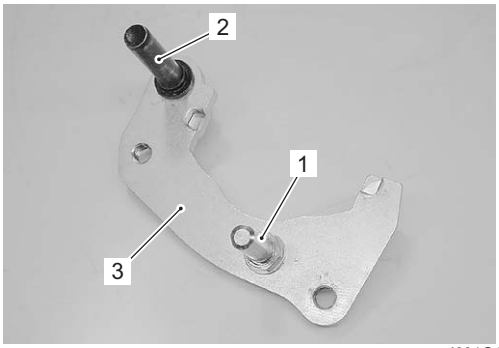
5) Remove the piston seal (3) and dust seal (4).



I831G1420015-02

Brake Caliper Holder

- Remove the caliper holder pin (1) and caliper holder slide pin (2) from caliper holder (3).



I831G1420016-01

Assembly

Assemble the caliper in the reverse order of disassembly. Pay attention to the following points:

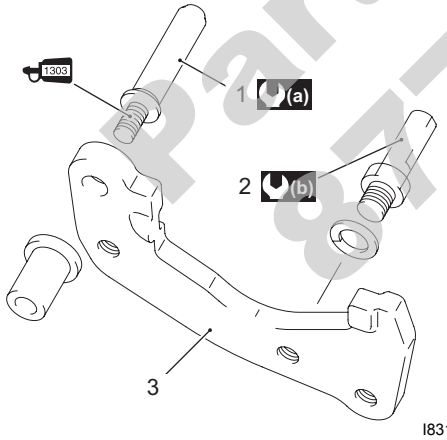
Brake caliper holder

- Apply thread lock to the caliper holder slide pin (1).

  1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

- Tighten the caliper holder slide pin (1) and caliper holder pin (2) to the holder (3) to the specified torque.

  Tightening torque
  Caliper holder slide pin (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)
  Caliper holder pin (b): 18 N·m (1.8 kgf-m, 13.0 lb-ft)



I831G1420017-04

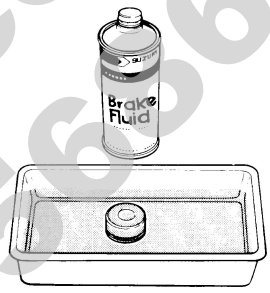
Brake caliper

- Wash the caliper bores and pistons with specified brake fluid. Particularly wash the dust seal groove and piston seal groove.

  BF: Brake fluid (DOT 4)

⚠ CAUTION

- **Wash the caliper components with fresh brake fluid before reassembly. Never use cleaning solvent or gasoline to wash them.**
- **Do not wipe the brake fluid off after washing the components.**
- **When washing the components, use the specified brake fluid. Never use different types of fluid or cleaning solvent such as gasoline, kerosine or the others.**



I649G1430018-02

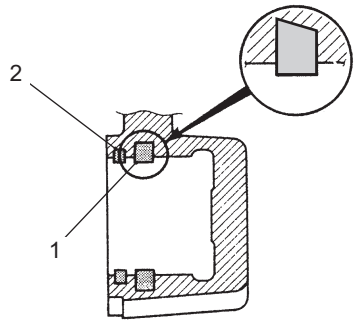
- Apply the brake fluid to piston seal (1) and dust seal (2).

⚠ CAUTION

Replace the piston seal (1) and dust seal (2) with new ones.

BF: Brake fluid (DOT 4)

- Install the piston seal as shown in the figure.

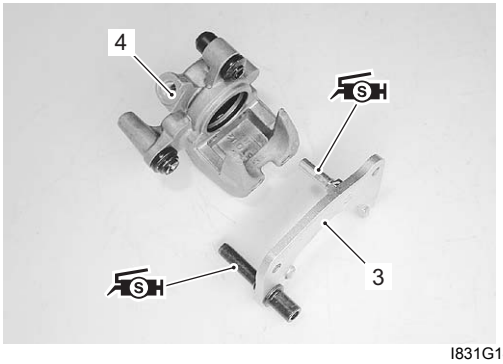


I831G1420018-03

- Apply silicon grease to the two pins.

  : Grease 99000–25100 (SUZUKI SILICONE GREASE or equivalent)

- Install the brake caliper holder (3) to the brake caliper (4).



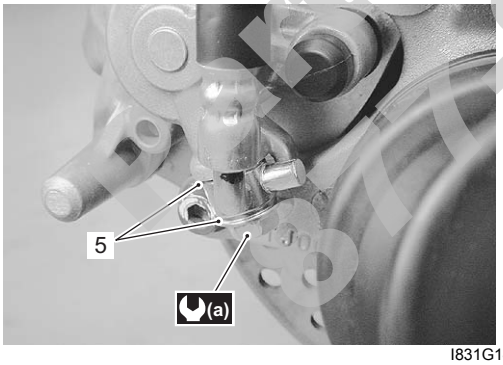
I831G1420019-01

- Install the brake pads. Refer to “Front Brake Pad Replacement (Page 4B-2)”.
- Install the brake caliper and brake hose. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)” and “Front Brake Hose Routing Diagram in Section 4A (Page 4A-1)”
- Tighten the union bolt to the specified torque.

⚠ CAUTION

Replace the gaskets (5) with new ones.

Tightening torque
Front brake hose union bolt (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G1420022-01

Front Brake Caliper Parts Inspection

B831G24206006

Refer to “Front Brake Caliper Disassembly and Assembly (Page 4B-4)”.

Brake Caliper Cylinder
Inspect the brake caliper cylinder wall for nicks, scratches or other damage. If any damage is found, replace the caliper with a new one.

I831G1420025-01

Brake Caliper Piston
Inspect the brake caliper piston surface for any scratches or other damage. If any damage is found, replace the piston with a new one.

I831G1420021-01

Boots
Inspect the boots for damage or wear. If any defects are found, replace them with new ones.

I831G1420020-03

Brake Pad Mounting Pin
Inspect the brake pad mounting pin for wear or other damage. If any damage is found, replace the mounting pin with a new one.

I831G1420023-01

Brake Pad Spring
Inspect the brake pad springs for damage or excessive bend. If any defects are found, replace them with new ones.

I831G1420024-01

Brake Caliper Holder
Inspect the brake caliper holder for damage. If any damage is found, replace the caliper holder with a new one.

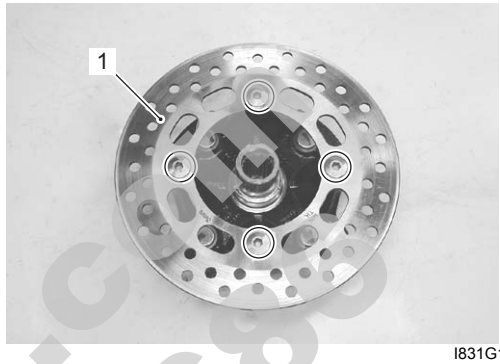
I831G1420026-01

Front Brake Disc Removal and Installation

B831G24206007

Removal

1) Remove the front wheel assembly. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
2) Remove the front wheel hub. Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
3) Remove the brake disc (1) from the front wheel hub.



I831G1420027-02

Installation
Install the front brake disc in the reverse order of removal. Pay attention to the following points:

- Make sure that the brake discs are clean and free of any grease.
- Apply thread lock to the brake disc bolts (1) and tighten them to the specified torque.

1360 : Thread lock cement 99000–32130 (THREAD LOCK CEMENT SUPER 1360 or equivalent)

Tightening torque

Front Brake Disc Inspection

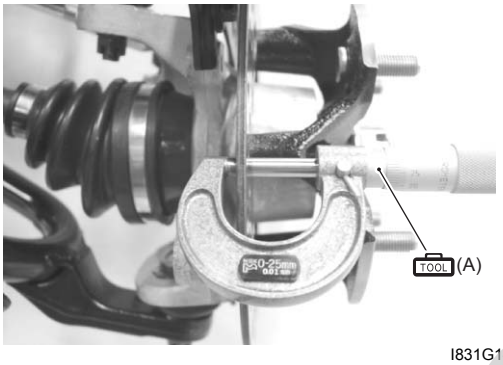
B831G24206008

Brake Disc Thickness

1) Dismount the front brake caliper. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.
2) Check the brake disc for damage or cracks and measure the thickness using the micrometer.
3) Replace the brake disc if the thickness is less than the service limit or if detect is found.

Special tool
TOOL (A): 09900–20205 (Micrometer (0 – 25 mm))

Brake disc thickness
Service limit: 3.0 mm (0.12 in)



I831G1420029-02

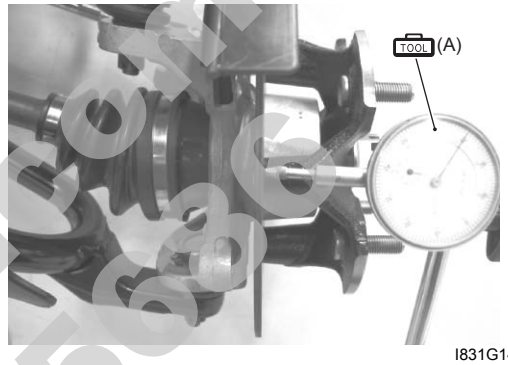
4) Remount the front brake caliper. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.

Brake Disc Runout

1) Dismount the front brake caliper. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.
2) Measure the runout using the dial gauge. Replace the disc if the runout exceeds the service limit.

Special tool
TOOL (A): 09900–20607 (Dial gauge (1/100 mm, 10 mm))
TOOL : 09900–20701 (Magnetic stand)

Brake disc runout
Service limit: 0.30 mm (0.012 in)



I831G1420030-01

3) Remount the front brake caliper. Refer to “Front Brake Caliper Removal and Installation (Page 4B-3)”.

Rear Brakes

Precautions

Precautions for Rear Brake

B831G24300001

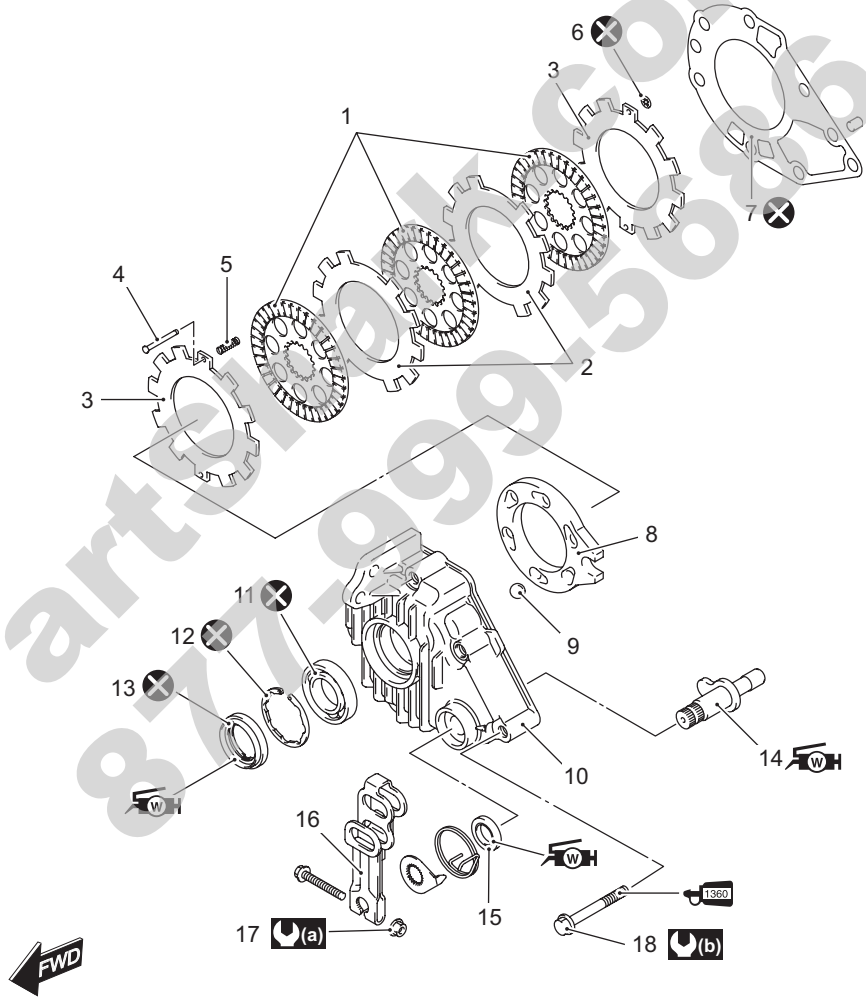
⚠ WARNING

When servicing the rear brake system, place the vehicle on a level ground and support the vehicle with a jack.

Repair Instructions

Rear Brake Components

B831G24306001



I831G1430001-06

1. Friction plate	9. Ball	17. Rear brake cam lever nut
2. Separator plate	10. Rear brake case	18. Rear brake case mounting bolt
3. Side plate	11. Bearing	(a) : 11 N·m (1.1 kgf-m, 8.0 lb-ft)
4. Side plate pin	12. Snap ring	(b) : 26 N·m (2.6 kgf-m, 19.0 lb-ft)
5. Side plate spring	13. Oil seal	W : Apply water resistance grease.
6. Side plate stopper	14. Rear brake cam shaft	1360 : Apply thread lock to the thread part.
7. Gasket	15. Oil seal	: Do not reuse.
8. Pressure plate	16. Rear brake cam lever	

Rear Brake Friction Plate Inspection

B831G24306002

Refer to “Rear Brake Friction Plate Wear Limit Inspection in Section 0B (Page 0B-20)”.

Rear Brake Friction Plate Replacement

B831G24306003

Refer to “Rear Brake Disassembly and Assembly (Page 4C-3)”.

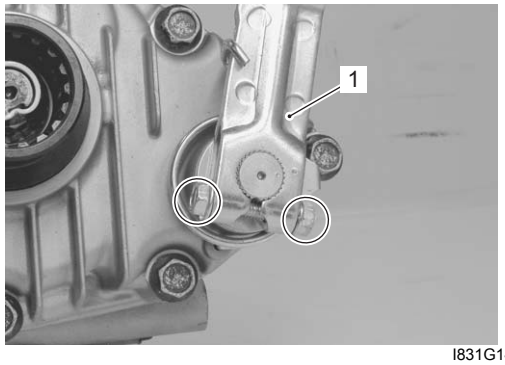
Rear Brake Assembly Removal and Installation

B831G24306004

Refer to “Final Gear Assembly Removal and Installation in Section 3B (Page 3B-23)”.

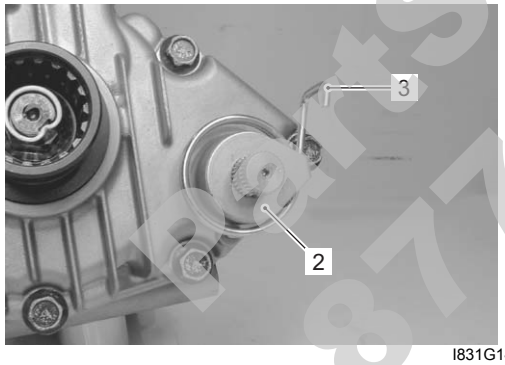
Removal

1) Remove the rear brake cam lever (1).



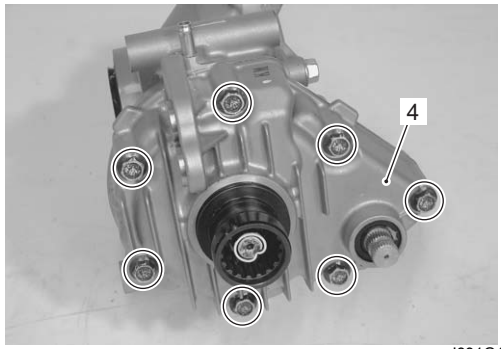
I831G1430003-01

2) Remove the brake lining indicator (2) and rear brake cam lever return spring (3).



I831G1430004-01

3) Remove the rear brake case (4).



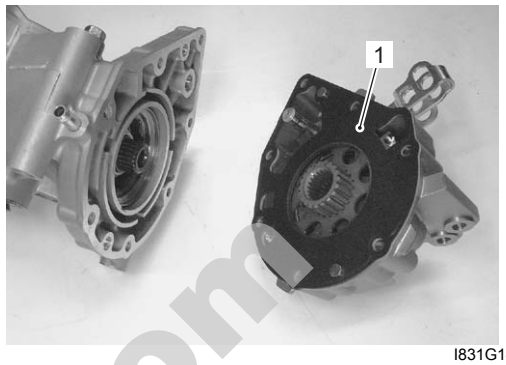
I831G1430005-01

Installation

- Fit the rear brake case gasket (1).

⚠ CAUTION

Replace the gasket (1) with a new one.

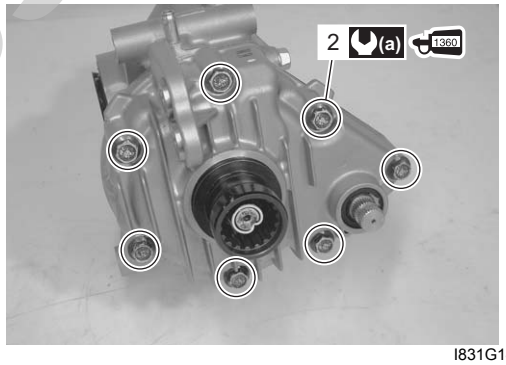


I831G1430006-01

- Install the rear brake case.
- Apply a small quantity thread lock to the rear brake case bolts (2).
- Tighten the bolts diagonally to the specified torque.

Tightening torque
Rear brake case bolt (a): 26 N·m (2.6 kgf-m, 19.0 lb-ft)

1360 : Thread lock cement 99000–32130 (THREAD LOCK CEMENT SUPER 1360 or equivalent)

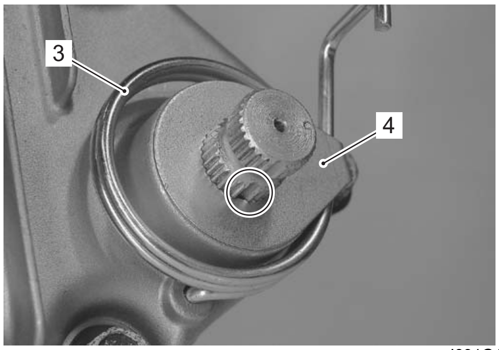


I831G1430007-02

- Install the return spring (3) and lining indicator (4).

NOTE

Align the boss of lining indicator (4) with wide spline on the brake cam shaft.



I831G1430008-01

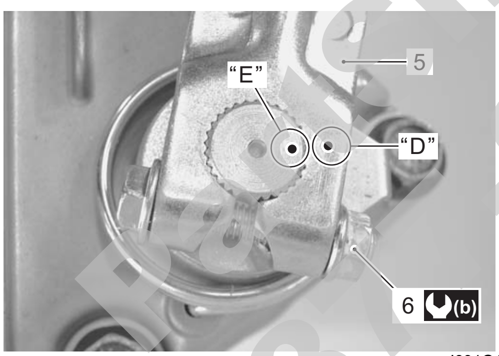
- Install the rear brake cam lever (5) to the rear brake cam shaft.

NOTE

When installing the brake cam lever, align the punched mark “D” with “E”.

- Tighten the cam lever nut (6) to the specified torque.

Tightening torque
Rear brake cam lever nut (b): 11 N·m (1.1 kgf-m, 8.0 lb-ft)



I831G1430009-02

- Install the final gear assembly to the vehicle. Refer to “Final Gear Assembly Removal and Installation in Section 3B (Page 3B-23)”.

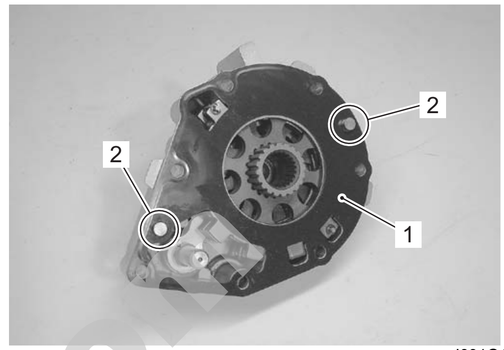
Rear Brake Disassembly and Assembly

B831G24306005

Refer to “Rear Brake Assembly Removal and Installation (Page 4C-2)”.

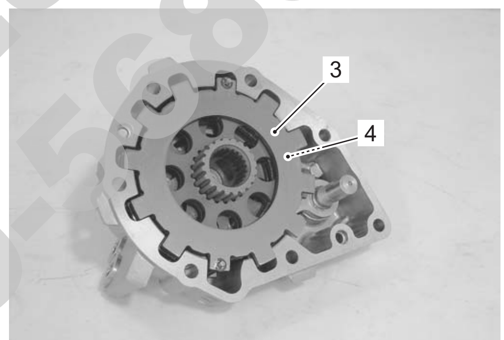
Disassembly

1) Remove the gasket (1) and dowel pins (2).



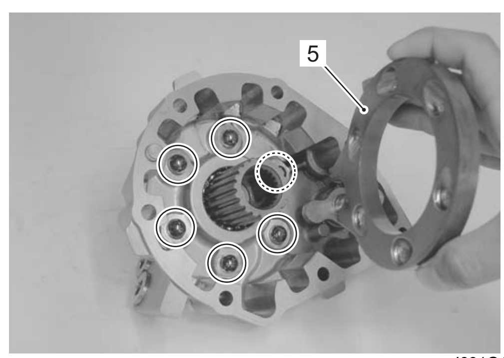
I831G1430010-02

2) Remove the rear brake steel plates (3) along with the friction plates (4).



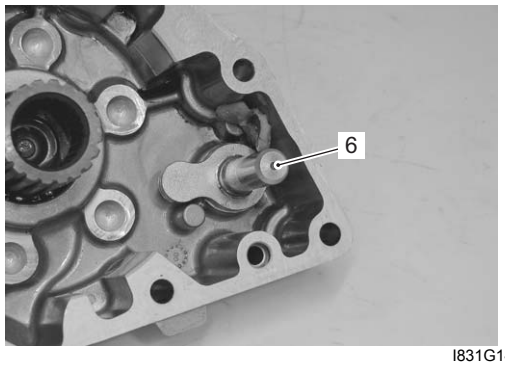
I831G1430011-01

3) Remove the rear brake pressure plate (5) and balls.



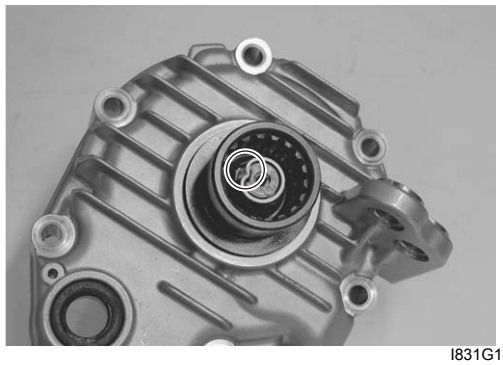
I831G1430012-01

4) Remove the rear bake cam shaft (6).



I831G1430013-01

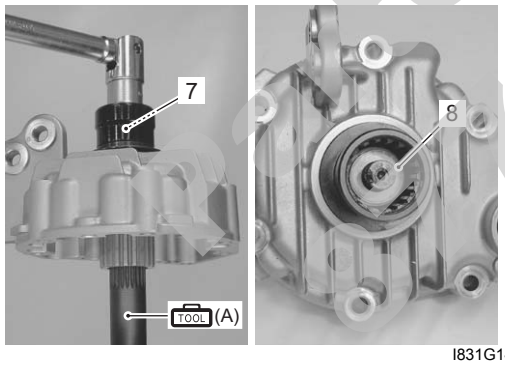
5) Unlock the nut with a chisel.



I831G1430014-01

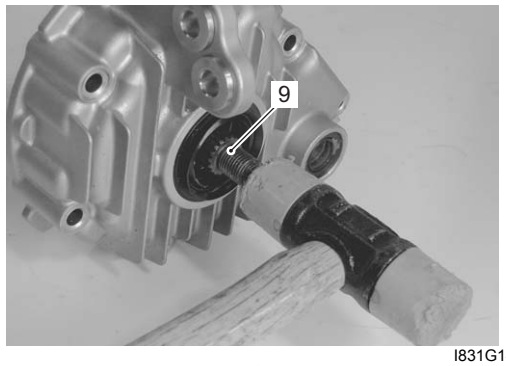
6) Remove the rear drive gear shaft nut (7) with the special tool and remove the washer (8).

Special tool
(A): 09924–52420 (Secondary bevel gear holder)



I831G1430015-01

7) Remove the rear drive gear shaft (9), with plastic mallet.

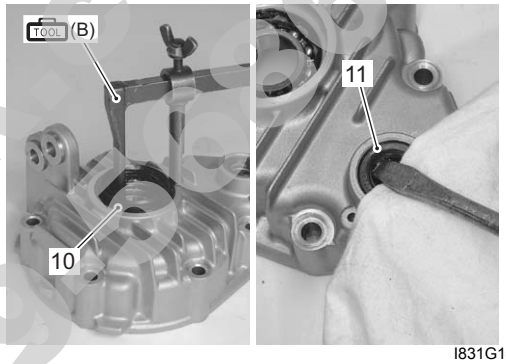


I831G1430016-01

8) Remove the oil seal (10) with the special tool.

Special tool
(B): 09913–50121 (Oil seal remover)

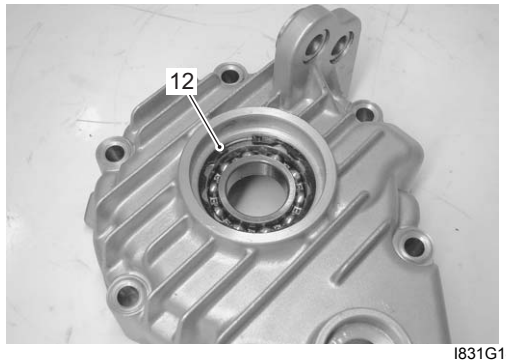
9) Remove the oil seal (11).



I831G1430017-01

10) Remove the snap ring (12) with the special tool.

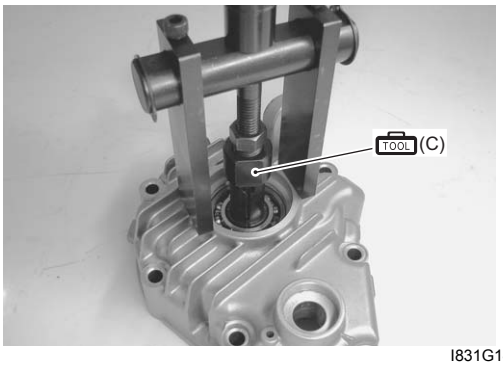
Special tool
: 09900–06108 (Snap ring pliers)



I831G1430018-01

11) Remove the bearing with the special tool.

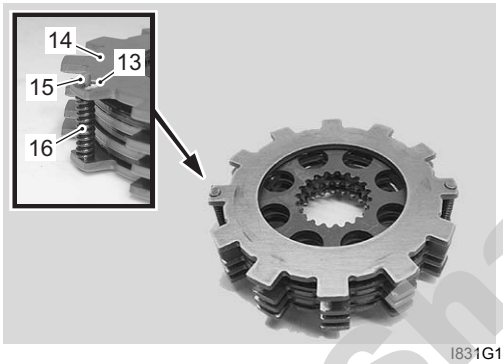
Special tool
TOOL (C): 09921–20240 (Bearing remover set)



I831G1430019-02

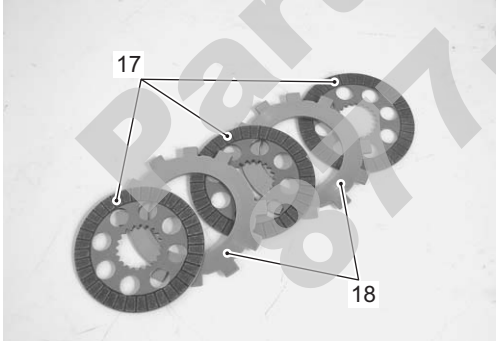
12) Remove the side plate stopper (13).

13) Remove the side plate (14), pins (15) and springs (16).



I831G1430043-03

14) Separate the friction plates (17) and separator plates (18).



I831G1430021-01

Assembly

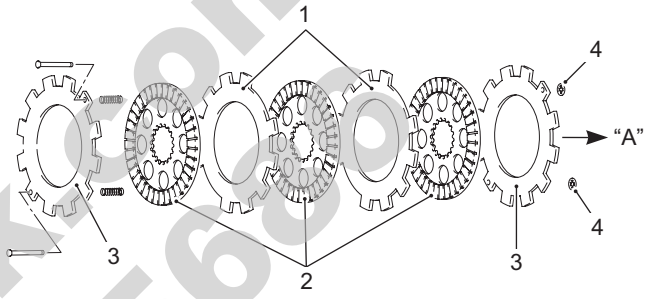
⚠ CAUTION

The removed oil seal, bearing and snap ring must be replaced with new ones.

- Install the rear brake in the reverse order of disassembly. Pay attention to the following points:
- Assemble the rear brake plates as shown in the figure.

⚠ CAUTION

Replace the remove side plate stopper (4) with a new one.



I831G1430022-04

1. Separator plate	4. Side plate stopper
2. Friction plate	"A": Direction of out side
3. Side plate	

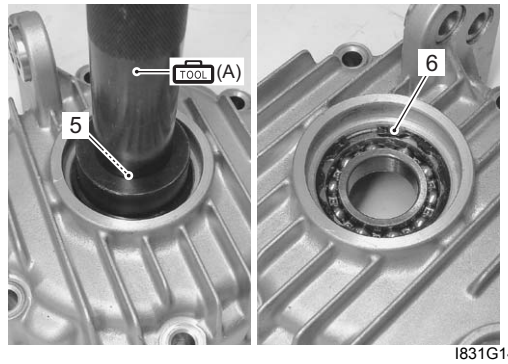
- Apply final gear oil to the bearing (5) before installing it.
- Install the bearing with the special tool.

Special tool
TOOL (A): 09913–70210 (Bearing installer set)

NOTE

The stamped mark of bearing faces outside.

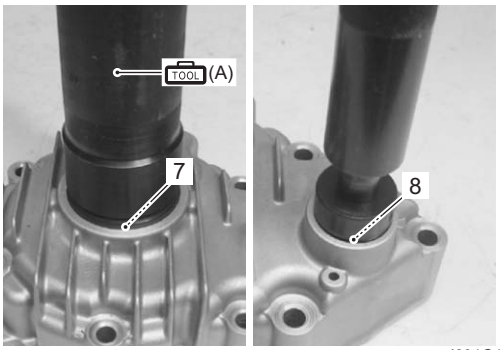
- Install the snap ring (6).



I831G1430023-03

- Install the oil seals (7) and (8) with the special tool.

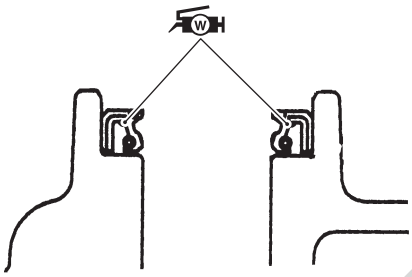
Special tool
(A): 09913–70210 (Bearing installer set)



I831G1430024-05

- Apply grease to the lip of cam shaft oil seal.

: Grease 99000–25160 (Water resistance grease)

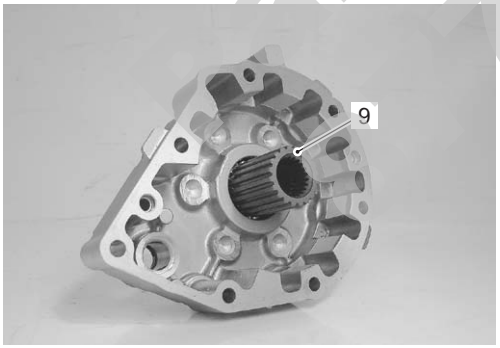


I831G1430025-03

- Install the rear final drive gear shaft (9).

NOTE

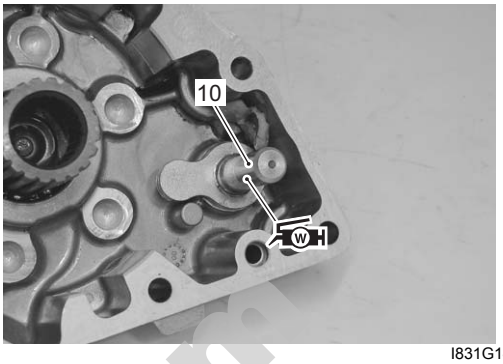
If the rear final drive gear shaft not install easily, lightly tap it using a plastic mallet.



I831G1430026-04

- Install the rear brake cam shaft (10).
- Apply grease to the rear brake cam shaft.

: Grease 99000–25160 (Water resistance grease)



I831G1430027-05

- Install the rear propeller shaft coupling (11).
- Install the washer (12) and rear drive gear shaft nut (13).

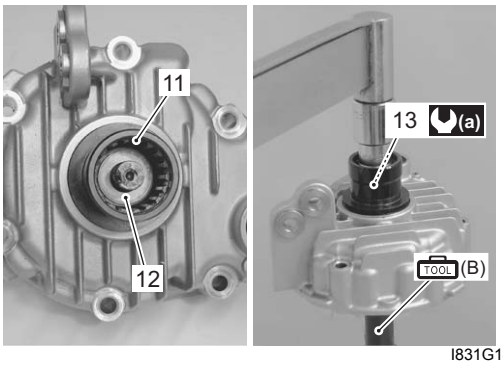
⚠ CAUTION

The removed nut (13) must be replaced with a new one.

- Tighten the rear drive gear shaft nut (13) to the specified torque with the special tool.

Special tool
(B): 09924–52420 (Secondary bevel gear holder)

Tightening torque
Rear propeller shaft coupling nut (a): 100 N·m (10.0 kgf-m, 72.5 lb-ft)



I831G1430028-06

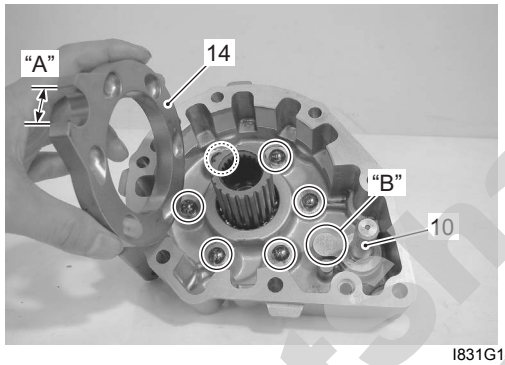
- Bend the collar of the nut to the notch on the shaft of the rear propeller shaft coupling.

I831G1430029-01

- Install the balls and rear brake pressure plate (14).

NOTE

When installing the rear brake pressure plate (14), align its groove "A" with the cam "B" of rear brake cam shaft (10).

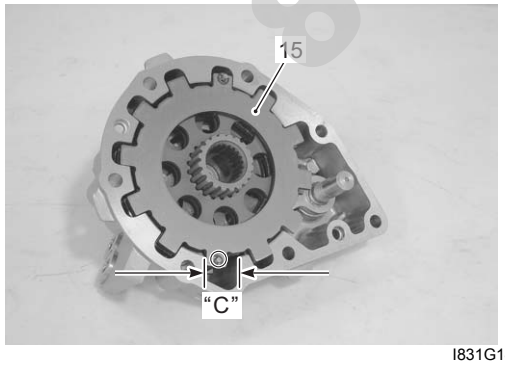


I831G1430030-04

- Install the rear brake plates (15), aligning the grooves "C" of the case.

NOTE

Align the side plate pin with groove "C" of the case as shown in the figure.

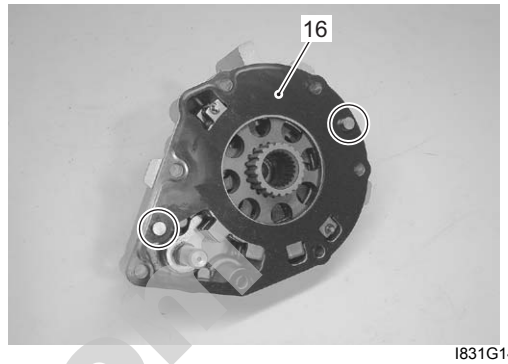


I831G1430031-05

- Install the dowel pins and gasket (16).

⚠ CAUTION

The removed gasket must be replaced with a new one.



I831G1430032-03

Rear Brake Parts Inspection

B831G24306006

Refer to "Rear Brake Disassembly and Assembly (Page 4C-3)".

Rear Brake Cam Lever

Inspect the rear brake cam lever for wear or damage. If any wear or damage is found, replace it with a new one Inspect the rear brake cam lever return spring for wear or damage. If any wear or damage is found, replace it with a new one.

I831G1430033-01

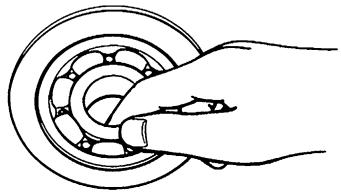
Oil Seal

Inspect the oil seals for wear or damage. If any wear or damage is found, replace it with a new one.

I831G1430034-01

Bearing
Inspect the inner race play of the bearing by hand while it is in the rear brake case.
Turn the inner race by hand to inspect for abnormal noise or smooth rotation.

- If there is anything unusual, replace it with a new one.



I649G1240015-02

Rear Brake Cam Shaft
Inspect the rear brake cam shaft for wear or damage. If any wear or damage is found, replace it with a new one.

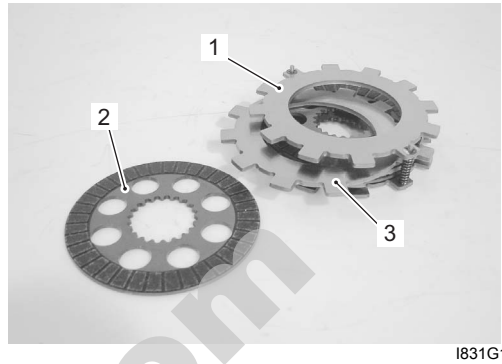
I831G1430036-01

Rear Drive Gear Shaft
Inspect the rear drive gear shaft for wear or damage. If any defects are found, replace rear drive gear shaft with a new one.

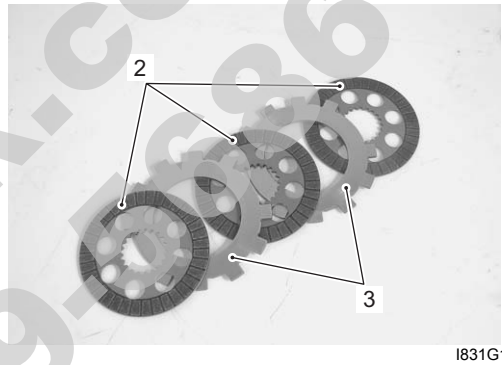
I831G1430037-01

Rear Brake Side Plate / Rear Brake Friction Plate / Steel Plate

- Inspect the rear brake side plates (1), rear brake friction plates (2) and separator plates (3) for wear or damage. If any defects are found, replace them as a set.



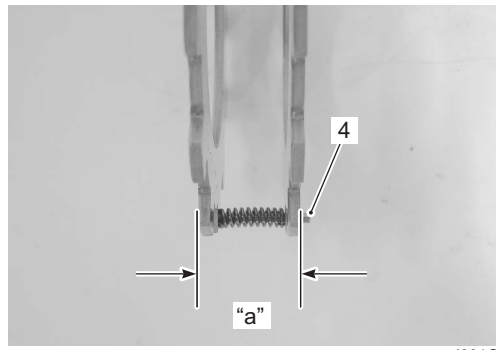
I831G1430038-01



I831G1430039-01

- Measure the outer distance “a” between the side plates as shown in the figure. If the distance “a” is less than the specification, reassemble the rear brake plates using the new plate stoppers (4).

Outer distance “a”
Standard: 26.0 – 27.0 mm (1.02 – 1.06 in)

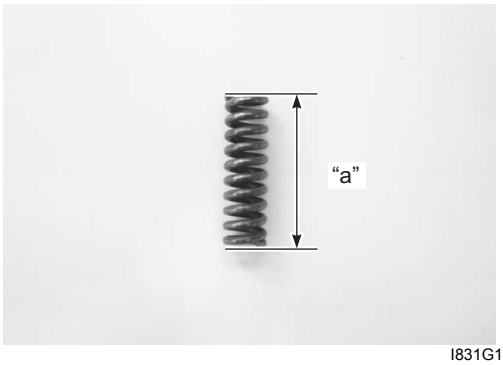


I831G1430040-04

Brake Side Plate Spring

- Measure the free length “a”.
- If the free length “a” is shorter than the limit, replace the spring with a new one.

Brake side plate spring free length “a”
Service limit: 20.2 mm (0.80 in)



I831G1430041-02

Rear Brake Pressure Plate

Inspect the rear brake pressure plate for wear or damage. If any wear or damage is found, replace it with a new one.
Inspect the balls for wear or damage. If any wear or damage is found, replace them with new ones.

V-belt Cooling Duct Removal and Installation

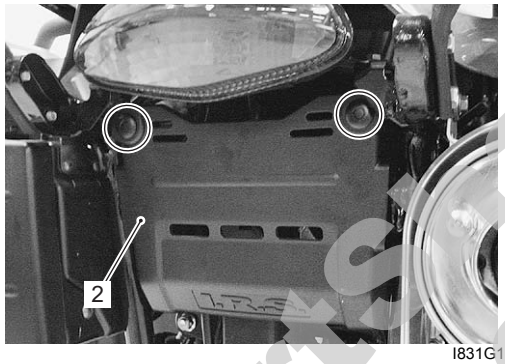
B831G25106003

Removal

1) Remove the right inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Loosen the clamp screw and remove the inlet cooling duct assembly (1).

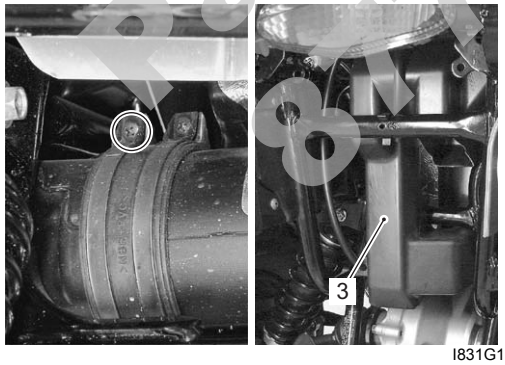
I831G1510004-01

3) Remove the rear cover (2).



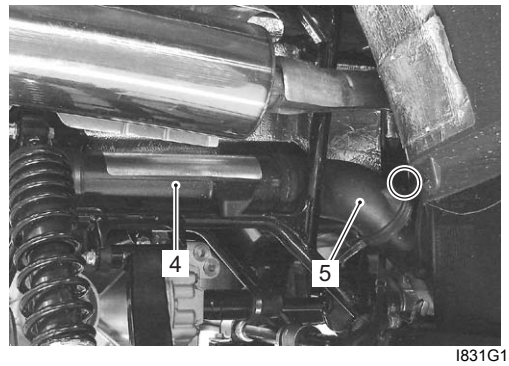
I831G1510005-01

4) Loosen the clamp and remove the outlet belt cooling duct No. 2 (3).



I831G1510006-01

5) Remove the outlet belt cooling duct No. 1 (4) along with outlet belt cooling duct connector (5).



I831G1510007-03

Installation

1) Install the V-belt cooling duct as shown in the V-belt cooling duct construction. Refer to “V-belt Cooling Duct Construction (Page 5A-4)”.
2) Install the removed parts.

Clutch Engagement and Lock-up Speed Inspection

B831G25106004

Refer to “Automatic Clutch Inspection in Section 0B (Page 0B-26)”.

Removal

V-belt outer cover

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the right cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Remove the inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
4) Removal the footrest. Refer to “Footrest Removal and Installation in Section 9E (Page 9E-2)”.
5) Remove the brake pedal. Refer to “Rear Brake Pedal Removal and Installation in Section 4A (Page 4A-14)”.

6) Remove the V-belt outer cover (1).

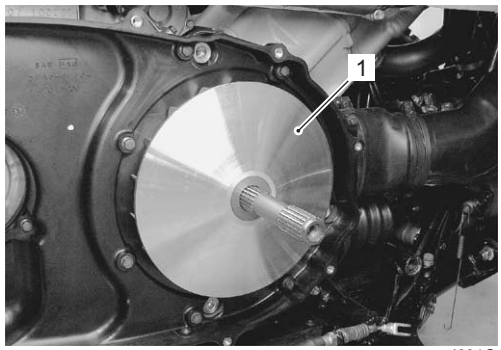
Fixed drive face
Remove the fixed drive face (1).



I831G1510014-01

Installation
Install the automatic transmission component parts in the reverse order of removal. Pay attention to the following points:

Fixed drive face
Install the fixed drive face (1).

⚠ CAUTION

Degrease the fixed drive face. Use nonflammable cleaning solvent to wipe off oily or greasy matter and make its surfaces completely dry.

I831G1510014-01

Movable driven face / drive V-belt

- Install the drive belt (1), as low as possible, between the movable driven face and fixed driven face by tapping with a plastic mallet.

⚠ CAUTION

- **The drive belt should be installed so that the arrows on the drive belt periphery point in the normal turning direction.**
- **The drive belt contact surface of the driven face should be thoroughly cleaned.**

I831G1510015-01

- Apply grease in the groove of fixed driven face.

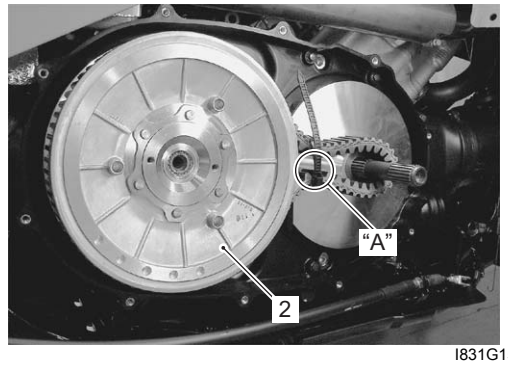
: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

I831G1510016-01

- Install the movable driven face assembly (2).

⚠ CAUTION

Pull the center area “A” of upper and lower belt lines to be close to each other to prevent the belt from expanding.



I831G1510017-01

- Tighten the movable driven face bolt (3) to the specified torque with the special tool.

NOTE

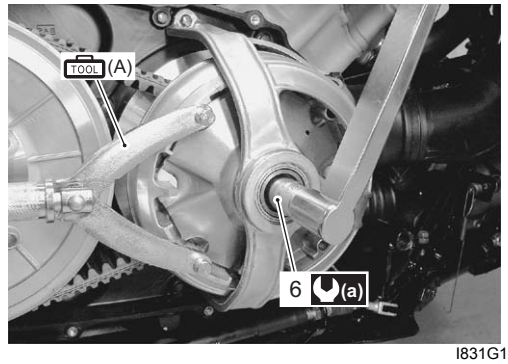
Turn the fixed drive face until the belt is seated in and driven faces will move together smoothly without slip.



I831G1510022-01

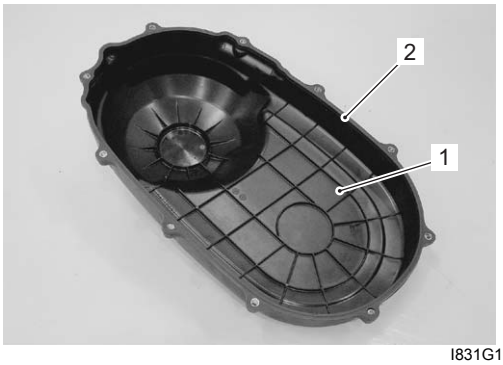
- Install the cap.

V-belt Outer Cover

- Install the V-belt outer cover (1).

⚠ CAUTION

If there are wear or damage, replace the gasket (2) with a new one.



I831G1510023-01

- Tighten the V-belt outer cover bolts to the specified torque.

Tightening torque
V-belt outer cover bolt (a): 8 N·m (0.8 kgf-m, 6.0 lb-ft)

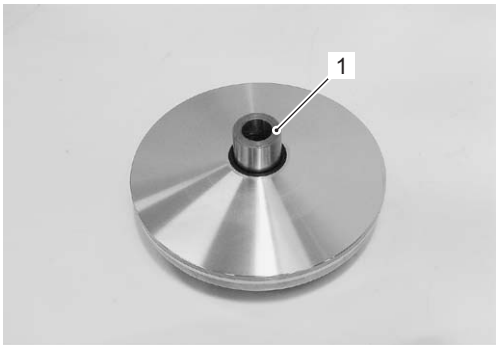
Movable Drive Face Disassembly and Assembly

B831G25106006

Refer to “Automatic Transmission Components (Page 5A-3)” and “V-belt Type Continuously Variable Automatic Transmission Removal and Installation (Page 5A-5)”.

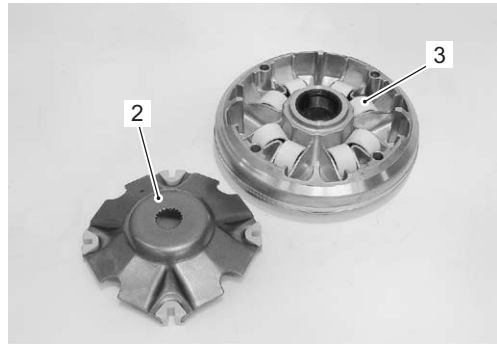
Disassembly

1) Remove the spacer (1).



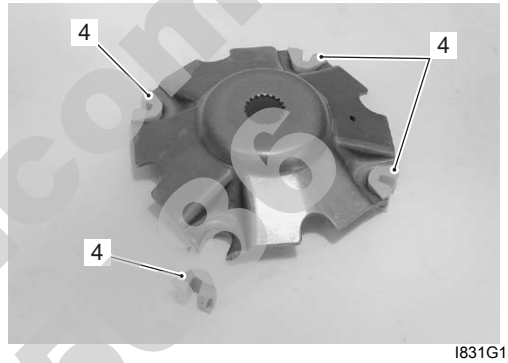
I831G1510024-01

2) Remove the movable drive plate (2) and rollers (3).



I831G1510025-01

3) Remove the dampers (4).

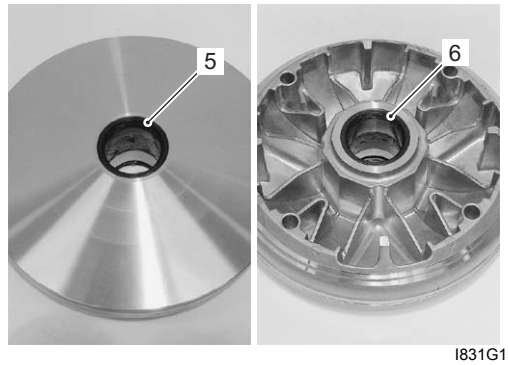


I831G1510026-01

4) Remove the oil seals (5) and (6).

NOTE

If there are no abnormal conditions, the oil seals removal are not necessary.



I831G1510027-01

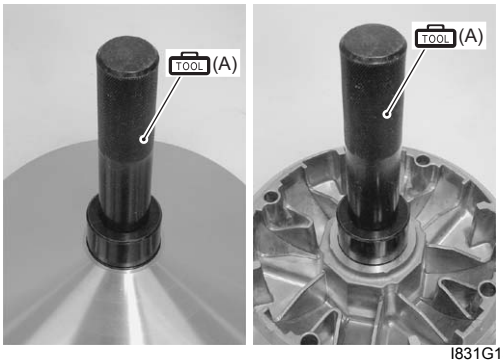
Assembly

1) Install the oil seals with the special tool.

Special tool
(A): 09913–70210 (Bearing installer set)

NOTE

The removed oil seals must be replaced with new ones.



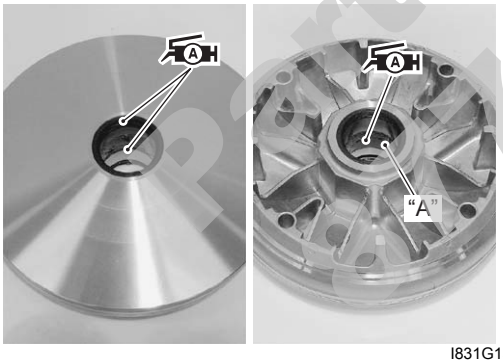
I831G1510028-01

2) Apply grease to the lip of oil seals and inside grease groove “A” of the movable drive face.

: Grease 99000–25010 (SUSUKI SUPER GREASE A or equivalent)

⚠ CAUTION

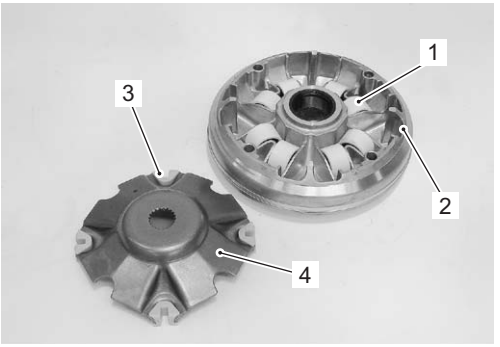
- **Wipe off any excess grease thoroughly.**
- **Take care not to apply grease to the contact surface of the drive belt.**



I831G1510029-02

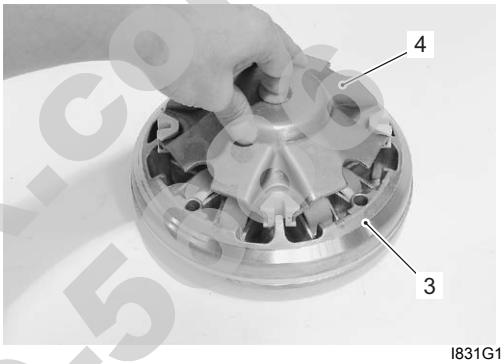
3) Assemble the rollers (1) to the movable drive face (2).

4) Assemble the four dampers (3) to the movable drive plate (4).



I831G1510030-01

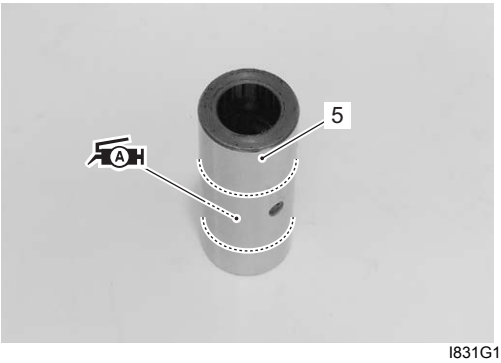
5) Assemble the movable plate (4) to the movable drive face (3).



I831G1510031-01

6) Apply grease to the inside groove of the spacer (5).

: Grease 99000–25010 (SUSUKI SUPER GREASE A or equivalent)

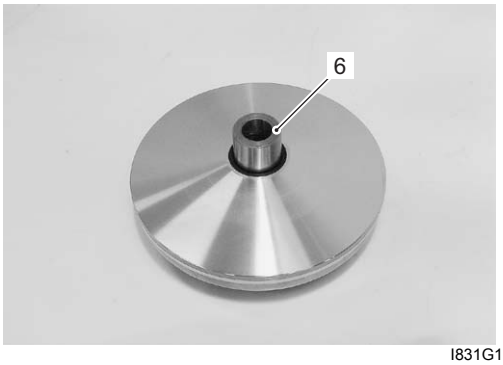


I831G1510032-02

7) Install the spacer (6).

NOTE

When installing the spacer, press down the movable drive face plate so as not to cause the rollers to come out of position.



I831G1510033-01

Movable Driven Face Disassembly and Assembly

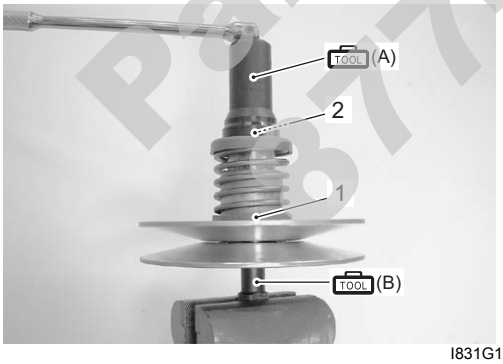
B831G25106007

1) Hold the movable driven face assembly (1) with the special tool and vise, loosen the movable driven face ring nut (2) with the special tool.

⚠ WARNING

Do not remove the movable driven face ring nut before attaching the clutch spring compressor.

Special tool
TOOL (A): 09917–23711 (Ring nut wrench)
TOOL (B): 09924–52450 (Fixed driven face holder)



I831G1510034-01

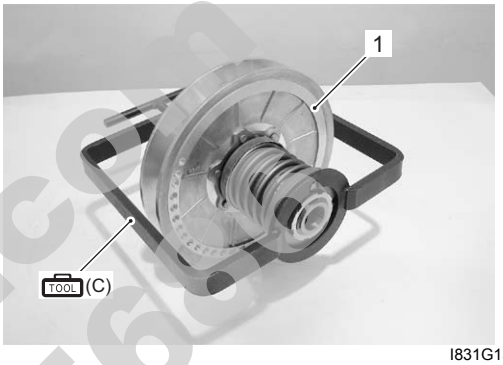
2) Set the special tool to the movable driven face assembly (1) and compress the movable driven face assembly by turning in the special tool handle.

NOTE

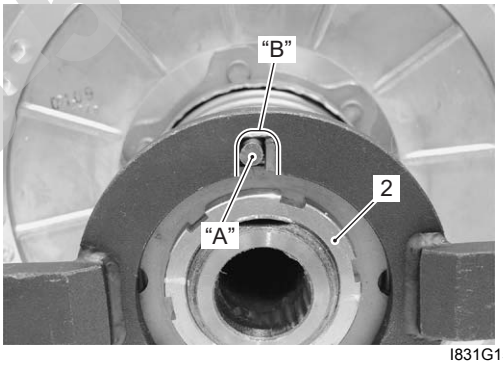
Make sure to insert the spring end "A" into the slot "B" of the special tool as shown in the figure.

Special tool
TOOL (c): 09922–31430 (Clutch spring compressor)

3) Remove the movable driven face ring nut (2).



I831G1510035-01

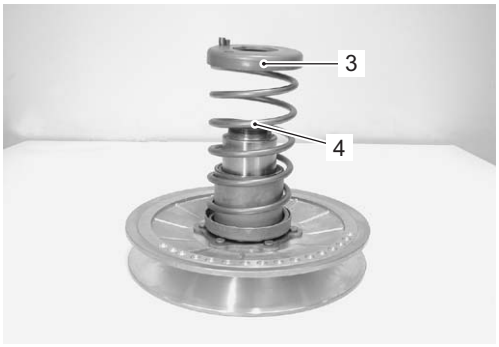


I831G1510036-02

⚠ WARNING

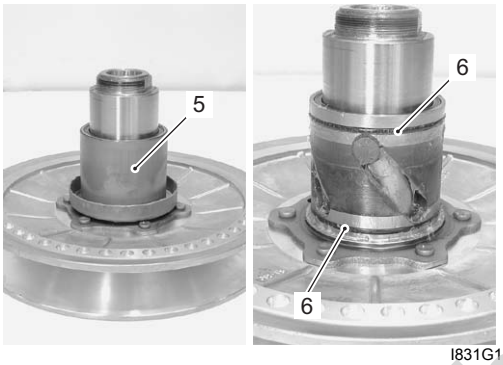
Since a high spring force applies to the movable driven face, care must be used so as not to cause the movable driven face to come off abruptly.

4) Loosen the special tool handle slowly and remove the special tool.
5) Remove the spring plate (3) and spring (4).



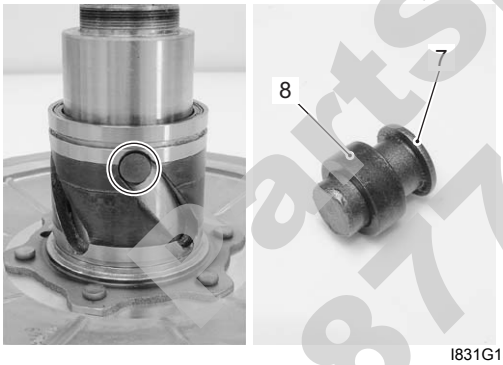
I831G1510037-01

6) Remove the spring seat (5) and O-rings (6).



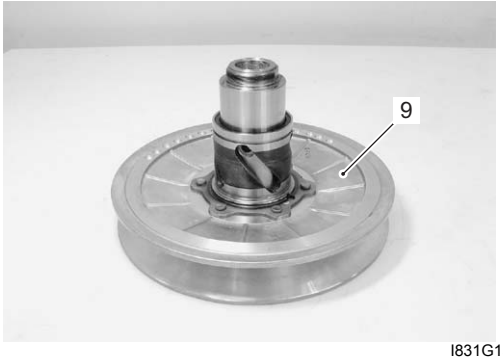
I831G1510038-01

7) Remove the pins (7) and rollers (8).



I831G1510039-01

8) Remove the movable driven face (9).

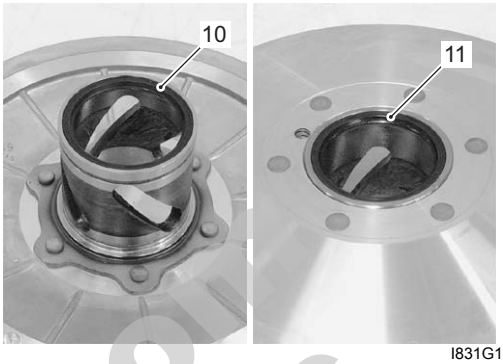


I831G1510040-01

9) Remove the oil seals (10) and (11) from the movable driven face.

NOTE

If there are no abnormal conditions, the oil seals removal are not necessary.



I831G1510041-01

Assembly

Assemble the movable driven face in the reverse order of disassembly. Pay attention to the following points:

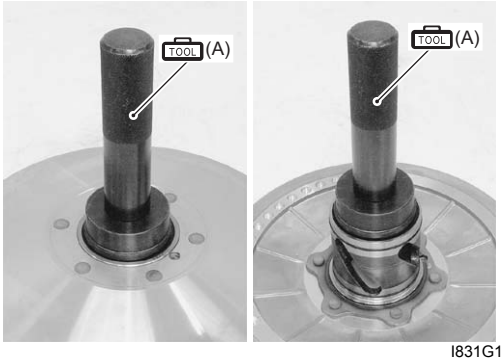
- Install the oil seals with the special tool.

Special tool

TOOL (A): 09913–70210 (Bearing installer set)

⚠ CAUTION

The removed oil seals must be replaced with new ones.



I831G1510042-01

- Install the O-rings (1) to the movable driven face.
- Apply grease to the oil seal lips, O-rings and inside groove of movable driven face.

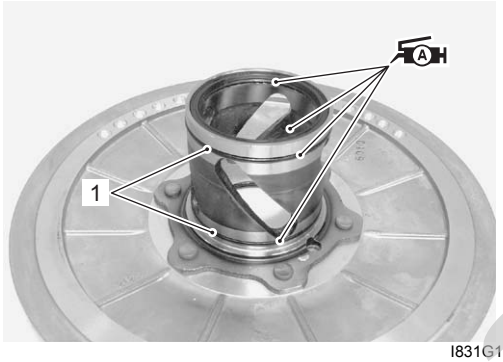
⚠ CAUTION

Replace the O-rings (1) with new ones.

: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

⚠ CAUTION

- **Wipe off any excess grease thoroughly.**
- **Take care not to apply grease to the contact surface of the drive belt.**



I831G1510043-01

- Install the movable driven face (2) to the fixed driven face (3).
- Apply grease to the pin grooves of the movable driven face.

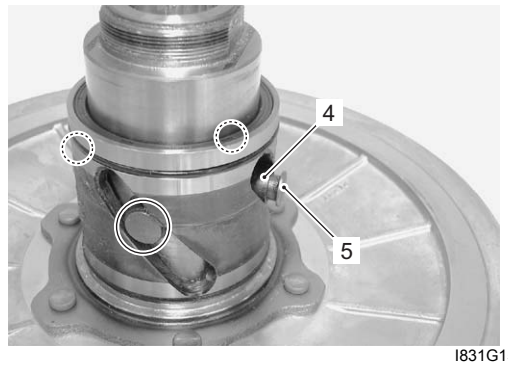
: Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)

⚠ CAUTION

To prevent damaging the oil seal lip from during installation, slide the lip using a 0.1-mm steel sheet as a guide.

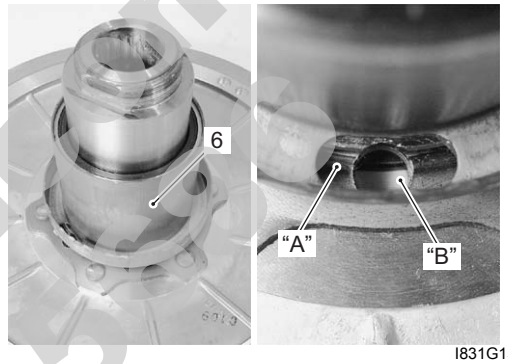
I831G1510116-01

- Install the rollers (4) and pins (5).



I831G1510044-02

- Install the spring seat (6) aligning the hole “A” with the hole “B”.



I831G1510045-01

- Install the spring (7) and spring plate (8) by aligning the spring ends with the holes.

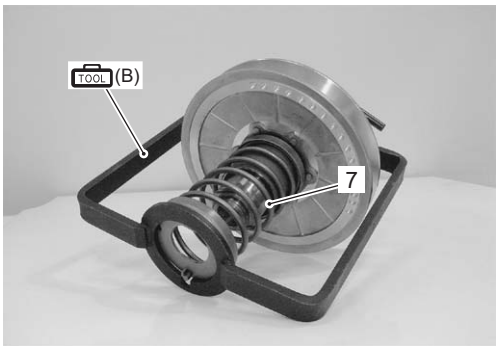
I831G1510046-01

- Compress the spring (7) with the special tool.

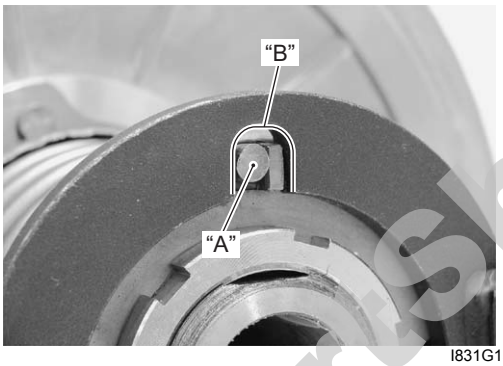
Special tool
(B): 09922–31430 (Clutch spring compressor)

NOTE

Make sure to insert the spring end "A" into the slot "B" of the special tool as shown in the figure.

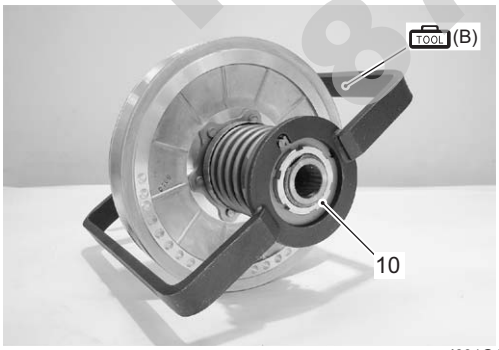


I831G1510047-02



I831G1510048-01

- Tighten the movable driven face ring nut (10) temporarily.
- Remove the special tool from the movable driven face assembly.



I831G1510049-01

- Tighten the movable driven face ring nut (10) to the specified torque with the special tools.

Tightening torque
Movable driven face ring nut (a): 110 N·m (11.0 kgf-m, 79.5 lb-ft)

Special tool

I831G1510050-01

Drive V-belt Inspection

B831G25106008

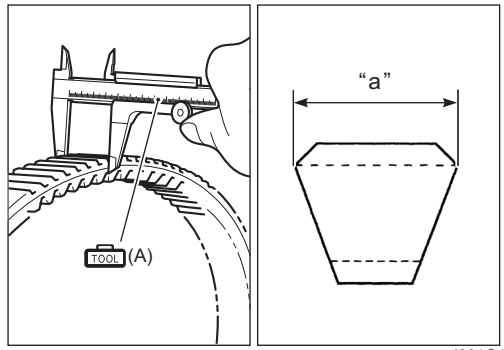
Inspect that the drive belt is free from any greasy substance.
Inspect the contact surface of the drive belt for cracks or damage and measure the width of the drive belt with the vernier calipers.
If any defects are found or measurement exceeds the service limit, replace the drive belt with a new one.

⚠ CAUTION

If grease or oil is present on the surface of the drive belt, degrease the belt thoroughly.

Drive V-belt width
Standard: 34.3 (1.35 in)
Service limit: 33.3 mm (1.31 in)

Special tool
(A): 09900–20101 (Vernier calipers (1/15 mm, 150 mm))



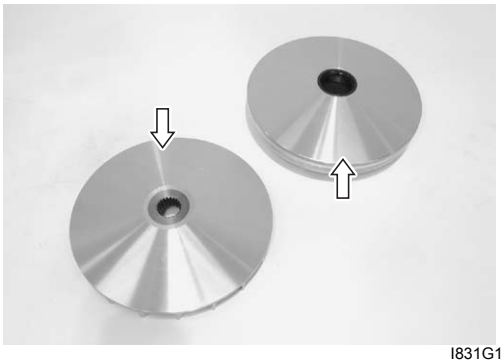
I831G1510051-02

Movable / Fixed Drive Face Parts Inspection

B831G25106009

Movable / Fixed Drive Face

Inspect the drive faces for any abnormal conditions such as stepped wear or discoloration caused by burning.
If any damages are found, replace the drive faces with new ones.



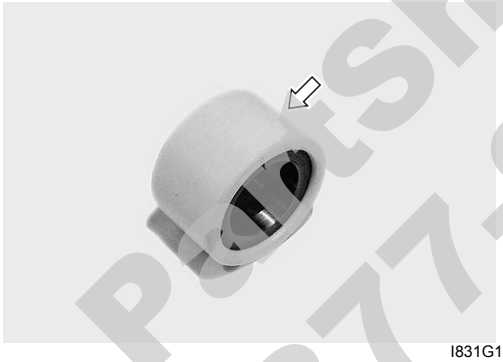
I831G1510053-01

Roller

Inspect each roller and their sliding surface for wear or damage.
If any defects are found, replace the rollers as a set.

NOTE

The rollers must always be changed as a set.



I831G1510054-01

Damper

Inspect the dampers for wear or damage.
If any defects are found, replace the dampers with new ones.

I831G1510055-01

Oil Seal

Inspect the lip of the oil seal for wear or damage.
If any damages are found, replace the oil seal with a new one.
Refer to “Movable Driven Face Disassembly and Assembly (Page 5A-11)”.

I831G1510056-01

Movable / Fixed Driven Face Parts Inspection

B831G25106010

Movable / Fixed Driven Face

Inspect the driven face for any abnormal conditions, such as stepped wear or discoloration caused by burning.
If any defects are found, replace them with new ones.

I831G1510057-01

Movable Driven Pin and Spacer

Inspect the movable driven pin and spacer for abnormal wear or damage. If any defects are found, replace the pin and spacer with a new one.

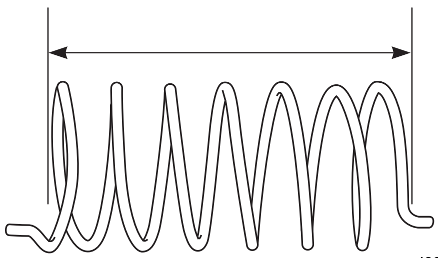
I831G1510058-01

Movable Driven Spring

Measure the spring free length with the vernier calipers.

- If the length is shorter than the service limit, replace the spring with a new one.

Movable driven face spring free length
Service limit: 145.4 mm (5.72 in)



I831G1510059-02

O-ring and Oil Seal

Inspect the O-rings and oil seals for wear or damage. If any defects are found, replace the O-rings and oil seals with new ones.

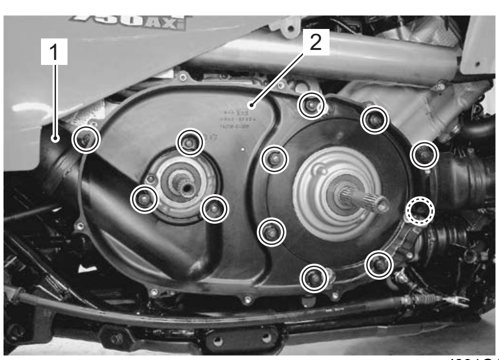
Clutch Shoe Removal and Installation

B831G25106011

Refer to "V-belt Type Continuously Variable Automatic Transmission Removal and Installation (Page 5A-5)".

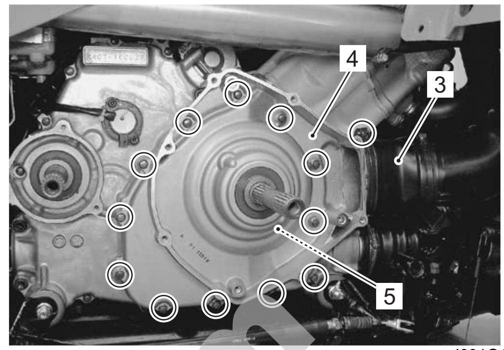
Removal

1) Drain the engine oil. Refer to "Engine Oil and Filter Replacement in Section 0B (Page 0B-10)".
2) Remove the outlet cooling duct connector (1) from the V-belt inner cover (2).
3) Remove the V-belt inner cover (2).



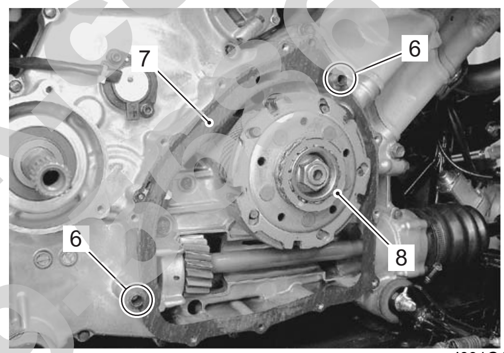
I831G1510061-01

4) Remove the inlet cooling duct connector (3) from the clutch housing case (4).
5) Remove the clutch housing case (4) along with the clutch housing (5).



I831G1510062-02

6) Remove the dowel pins (6) and gasket (7).
7) Remove the one way clutch (8).



I831G1510063-02

8) Remove the clutch shoe nut (9) with the special tools.

⚠ **CAUTION**

The clutch shoe nut (9) has left-hand threads.

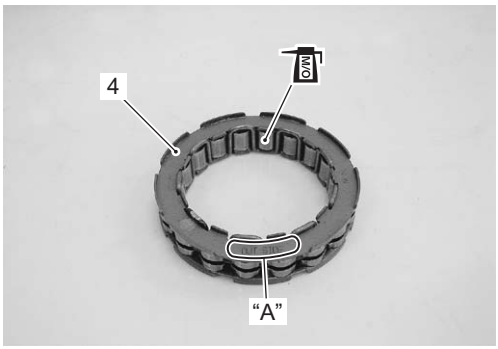
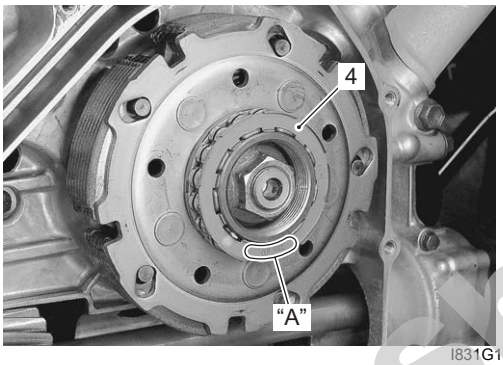
- Install the one way clutch (4) with facing the “OUTSIDE” mark “A” outside.



I831G1510071-02

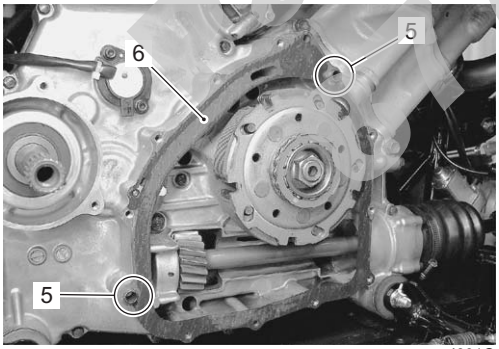


I831G1510072-02

- Install the dowel pins (5) and gasket (6).

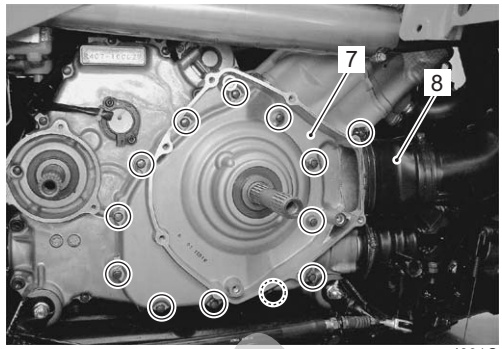
⚠ CAUTION

Use a new gasket (6) to prevent oil leakage.



I831G1510114-02

- Install the clutch housing case (7) and inlet belt cooling duct connector (8) and tighten the bolts diagonally.



I831G1510112-01

- Install the V-belt inner cover (9).

⚠ CAUTION

If there are wear or damage, replace the gaskets (10) with new ones.

I831G1510113-01

⚠ CAUTION

Tighten the clutch inner cover bolts “A” first and then other ones diagonally.

I831G1510081-01

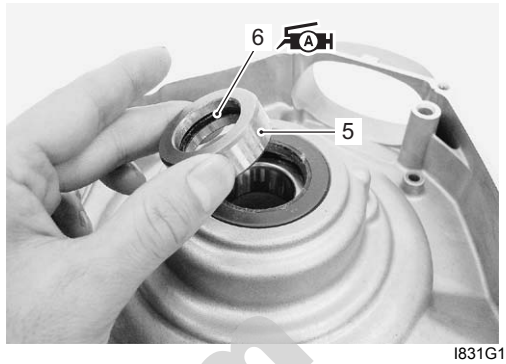
- Install the collar (5).

  ⚠ CAUTION

  Replace a O-ring (6) with a new one.

- Apply grease to the O-ring (6).

  A : Grease 99000–25010 (SUZUKI SUPER GREASE A or equivalent)



I831G1510082-01

- Install the clutch housing (7).

I831G1510083-01

- After installed the clutch housing, check if the clutch housing rotates smoothly.

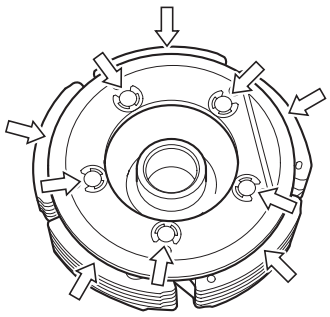
I831G1510052-01

Clutch Parts Inspection

B831G25106013

Refer to "Clutch Housing Case Disassembly and Assembly (Page 5A-19)".

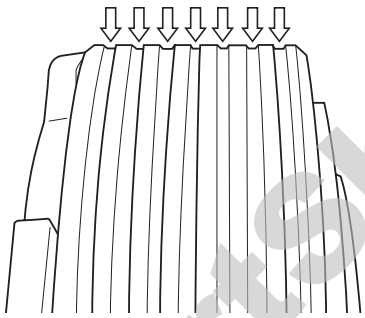
Clutch Shoe
Inspect the boss and centrifugal weight fulcrum sections for looseness, damage and operation.
Inspect the clutch shoe for damage and fouling with oil on the surface.
If any defects are found, replace the clutch shoe assembly with a new one.



I831G1510084-01

Measure the thickness of the clutch shoe at the center position. If the thickness is less than the service limit, replace the clutch shoe assembly with a new one.

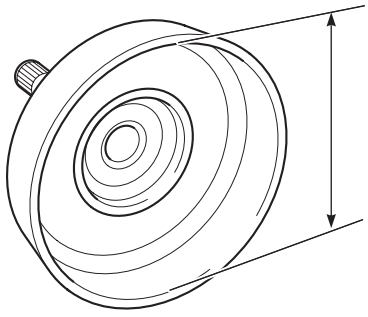
Clutch shoe thickness
Service limit: No groove at any part



I831G1510085-01

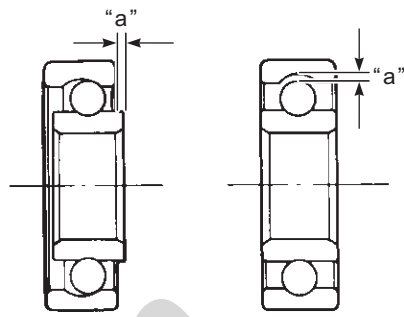
Clutch housing
Inspect the clutch housing for any abnormal surface damage. Measure the inside diameter of the clutch housing. If the measurement exceeds the service limit, replace the clutch housing with a new one.

Clutch housing I.D.
Service limit: 140.5 mm (5.53 in)



I831G1510086-01

Left Clutch Housing Bearing
Rotate the inner race by finger to inspect for abnormal play, noise and smooth rotation. If there is anything unusual, replace the bearing with a new one.



I831G1510087-01

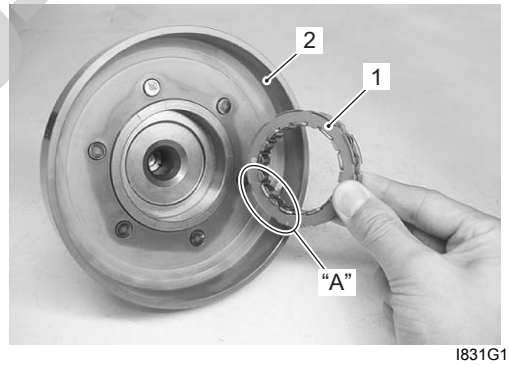
One Way Clutch
Install the one way clutch (1) onto the proper direction as shown.

NOTE

When Installing the one way clutch (1) onto the clutch housing (2), make sure that the "OUTSIDE" mark "A" in the one way clutch faces to the clutch housing.



I831G1510088-01

- Install the clutch shoe (3) onto the clutch housing and turn the clutch shoe by hand to inspect the one way clutch for a smooth movement. The clutch shoe turns one direction only. If a large resistance is felt to rotation, inspect the one way clutch for damage or one way clutch contacting surface of the clutch shoe for wear or damage. If any defects are found, replace them with new ones.

1) Removed the shift lever assembly. Refer to “Shift Lever Assembly Removal and Installation (Page 5A-24)”.
2) Disassemble the shift lever assembly as shown in the shift lever components. Refer to “Shift Lever Assembly Components (Page 5A-23)”.

Assembly

1) Assemble the shift lever as shown in the shift lever components. Refer to “Shift Lever Assembly Components (Page 5A-23)”.
2) Install the shift lever assembly. Refer to “Shift Lever Assembly Components (Page 5A-23)”.
3) After installing the gear shift lever assembly, adjust the shift rod. Refer to “Shift Rod Adjustment (Page 5A-25)”.

Shift Rod Adjustment

B831G25106020

1) Holding the rod (2), loosen the lock-nuts (1).
2) Turning the rod (2), adjust the length of the rod.
3) Tighten the lock-nuts (1).

NOTE

Be careful not to separate the rod from the joint by turning the rod too much.

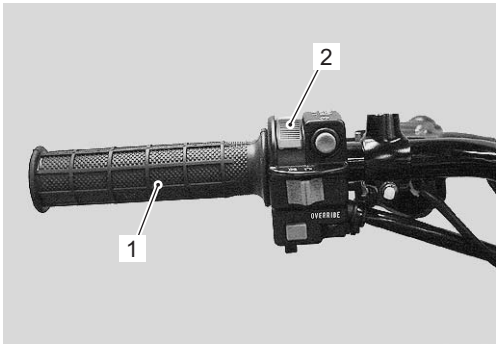
Handlebars Removal and Installation

B831G26206003

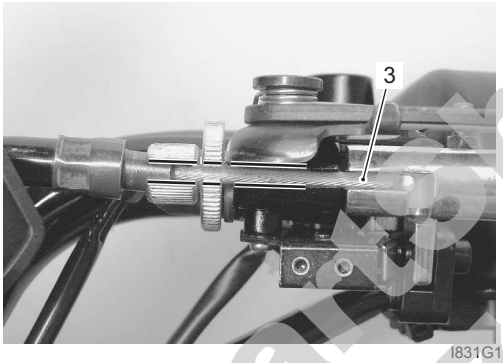
Removal

1) Remove the combination meter. Refer to “Combination Meter Removal and Installation in Section 9C (Page 9C-3)”.
2) Remove the following parts from left handlebar.
   a) Left grip (1)
   b) Left switch box (2)



I831G1620003-03

3) Disconnect the parking brake cable (3) from parking brake lever.

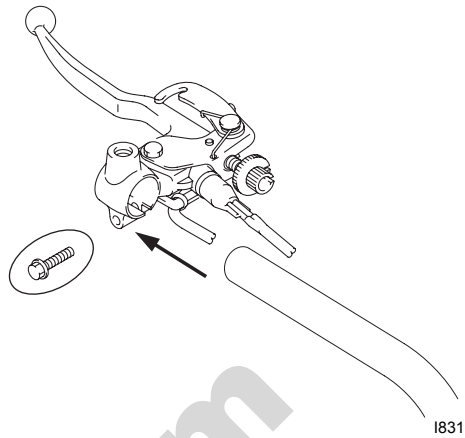


I831G1620004-02

4) Remove the clamp.

I831G1620005-02

5) Remove the parking brake lever from the handlebar by removing mounting bolt.



I831G1620006-05

6) Remove the clamp.

I831G1620007-02

7) Disconnect the brake hose from the hose guide.

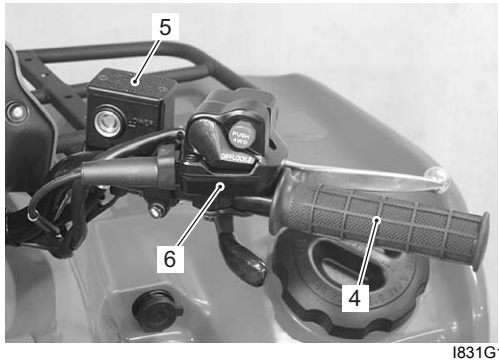
I831G1620008-02

8) Remove the following parts from the right handlebar.
   a) Right grip (4)
   b) Front brake master cylinder/Front brake lever (5)

⚠ CAUTION

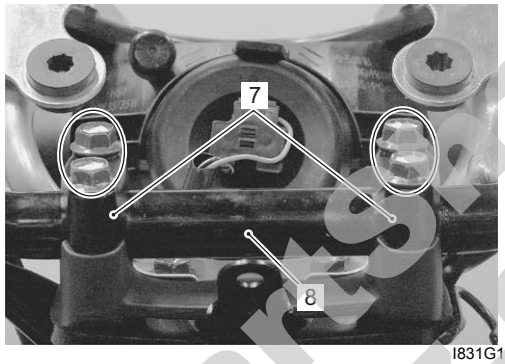
Do not turn the front brake master cylinder upside down.

   c) Throttle lever case (6)



I831G1620009-01

9) Remove the handlebar upper clamps (7) and handlebars (8).

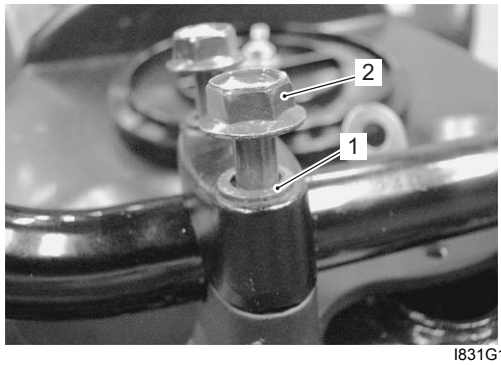


I831G1620010-01

Installation

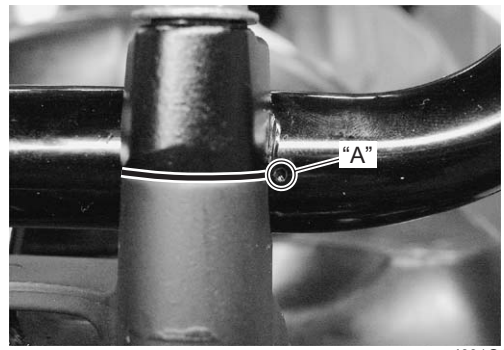
Install the handlebars in the reverse order of removal. Pay attention to the following points:

- Install the washers (1) and bolts (2) as shown in the steering/handlebars construction. Refer to “Steering / Handlebars Assembly Construction (Page 6B-2)”.



I831G1620011-01

- Set the handlebars so that its punch mark “A” aligns with the mating surface of the left handlebar holder.



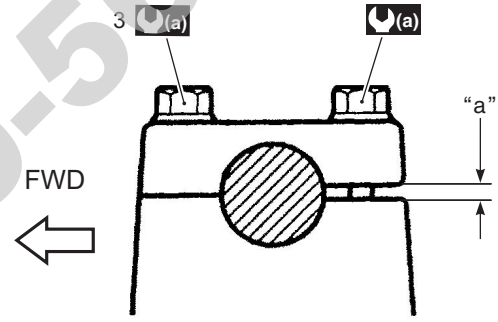
I831G1620012-02

- Tighten the handlebar holder bolts (3) to the specified torque.

NOTE

First tighten the handlebar holder bolts (3) (front ones) to the specified torque.

Tightening torque
Handlebar clamp bolt (a): 26 N·m (2.6 kgf-m, 19.0 lb-ft)

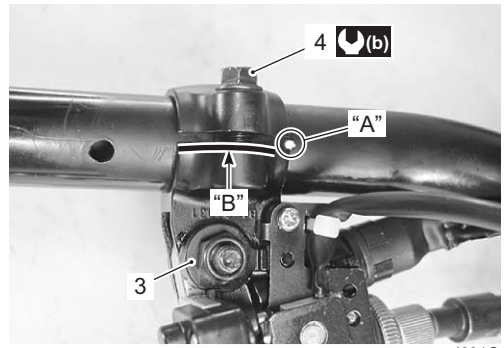


I831G1620013-01

“a”: Clearance

- Align the punch mark “A” on the handlebars with the mating surface “B” of rear brake lever assembly.
- Tighten the rear brake lever holder clamp bolt (4) to the specified torque.

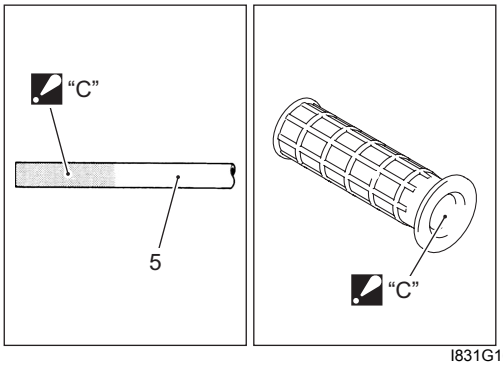
Tightening torque
Rear brake lever holder clamp bolt (b): 11 N·m (1.1 kgf-m, 8.0 lb-ft)



I831G1620049-01

- Apply adhesive agent to the handlebar right and left end and right and left grip inner wall.

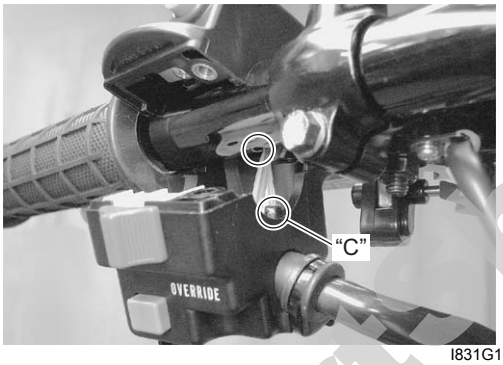
  BOND : Handle grip bond (Handle Grip Bond (commercially available))



I831G1620014-02

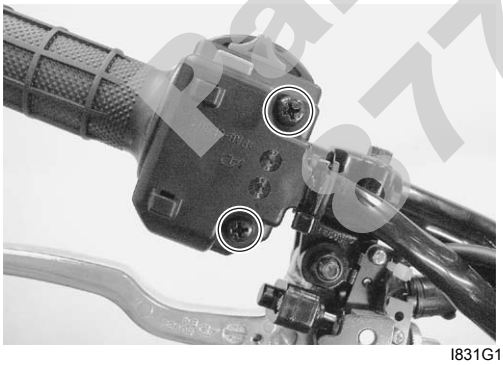
5.	Handlebar
"C":	Apply handle grip bond.

- Insert the projection "D" of the left switch assembly into the hole of the handlebars.



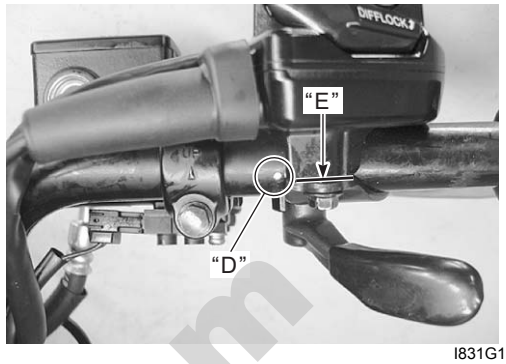
I831G1620015-02

- Tighten the left handlebar switch screws.



I831G1620016-01

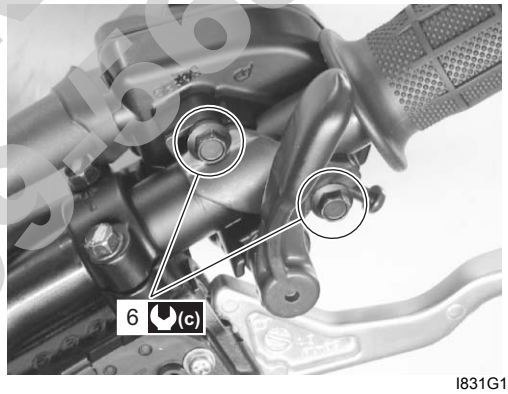
- Install the master cylinder. Refer to "Front Brake Master Cylinder Assembly Removal and Installation in Section 4A (Page 4A-9)".
- Align the punch mark "D" on the handlebars with the mating surface "E" of the throttle lever case.



I831G1620017-03

- Tighten the throttle lever case bolts (6) to the specified torque.

  Tightening torque
  Throttle lever case bolt (c): 5 N·m (0.5 kgf-m, 3.5 lb-ft)

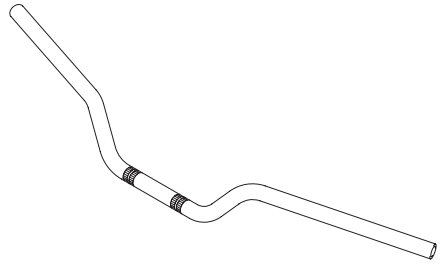


I831G1620018-03

Handlebars Inspection

B831G26206004

Refer to "Handlebars Removal and Installation (Page 6B-3)".
Inspect the handlebars for distortion or damage.
If any defects are found, replace the handlebars with a new one.



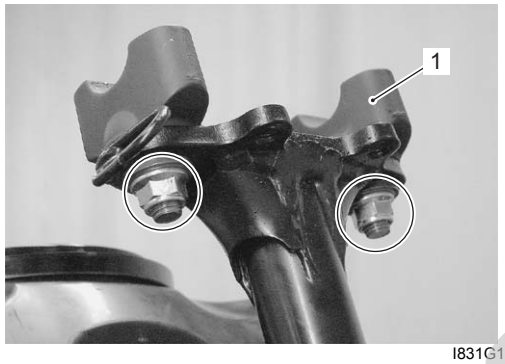
I831G1620019-02

Steering Shaft Removal and Installation

B831G26206005

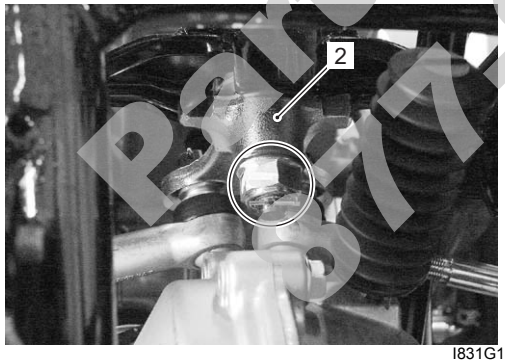
Removal

1) Remove the front wheels. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
2) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Remove the handlebars. Refer to “Handlebars Removal and Installation (Page 6B-3)”.
4) Remove the auxiliary headlight. Refer to “Auxiliary Headlight Removal and Installation in Section 9B (Page 9B-3)”.
5) Remove the handlebar holder (1).



I831G1620020-01

6) Disconnect the tie-rod ends. Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
7) Remove the steering lower arm plate (2) by removing cotter pin, nut and washer.

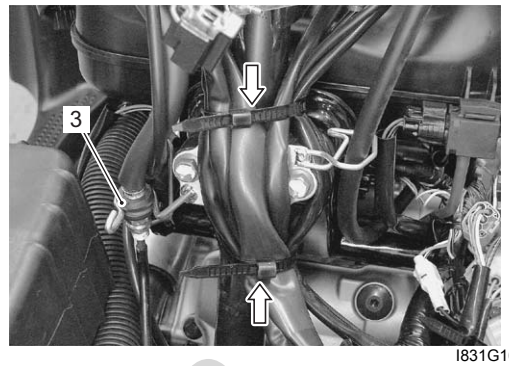


I831G1620021-01

8) Remove the center cover.

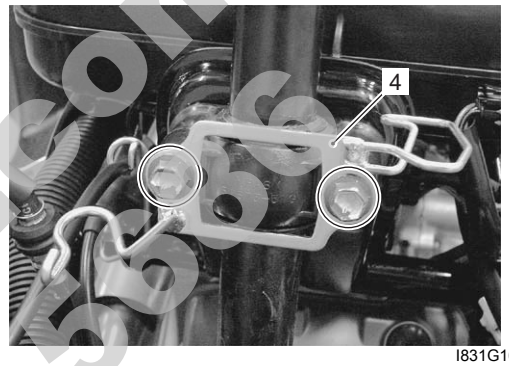
I831G1620023-01

9) Disconnect the brake hose (3) from the hose guide.
10) Remove the read wire clamps.



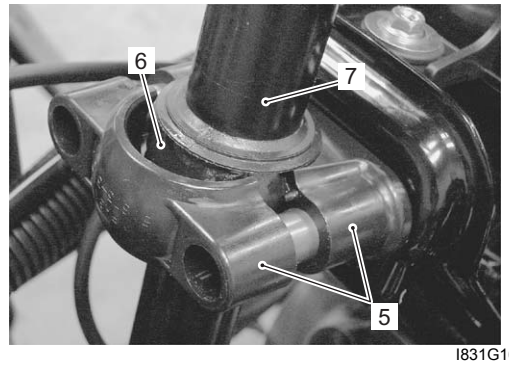
I831G1620024-03

11) Remove the steering shaft plate (4).



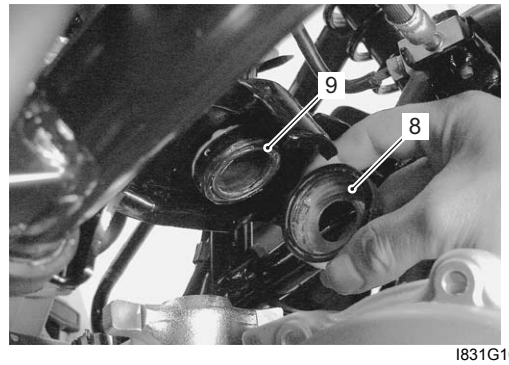
I831G1620025-03

12) Remove the steering shaft holders (5) and dust seal (6).
13) Remove the steering shaft (7) from the vehicle.



I831G1620026-03

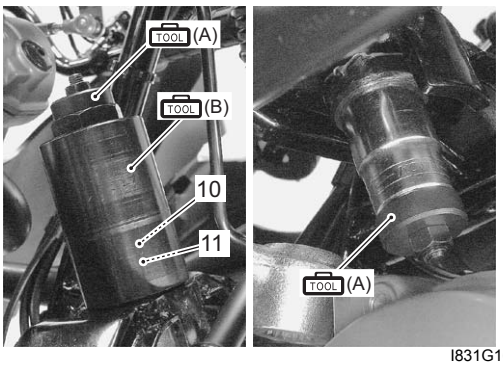
14) Remove the dust seal (8) and O-ring (9).



I831G1620022-03

15) Remove the steering shaft bushing (10) and dust seal (11) with the special tools and suitable socket wrench.

Special tool
(A): 09924–84521 (Bearing installer set)
(B): 09930–30721 (Rotor remover)

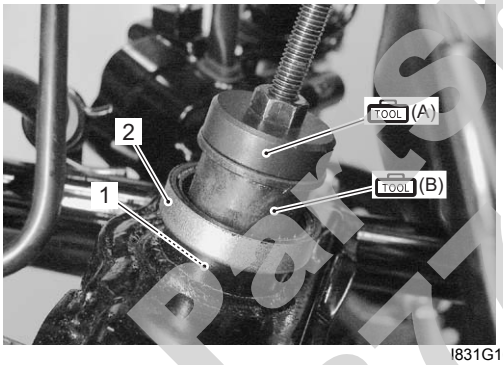


I831G1620027-04

Installation
Install the steering shaft in the reverse order of removal. Pay attention to the following points:

- Install the steering shaft lower bushing (1) along with dust seal (2) with the special tools.

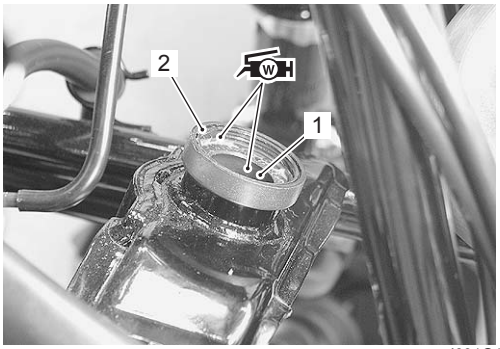
Special tool
(A): 09924–84521 (Bearing installer set)
(B): 09913–70210 (Bearing installer set)



I831G1620048-01

- Apply grease to the steering shaft lower bushing (1) and dust seal (2).

: Grease 99000–25160 (Water resistance grease)



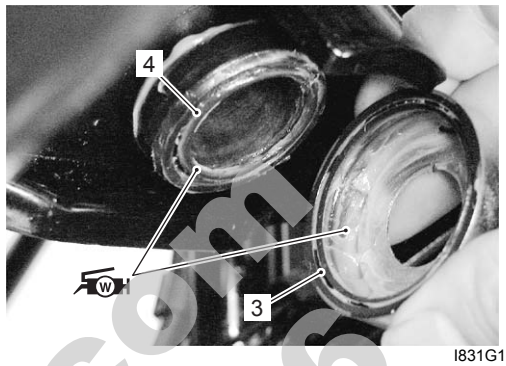
I831G1620029-02

- Apply grease to the dust seal (3) and O-ring (4).

⚠ CAUTION

The removed O-ring must be replaced with a new one.

: Grease 99000–25160 (Water resistance grease)



I831G1620032-02

- Apply grease to the spline of steering shaft.

: Grease 99000–25160 (Water resistance grease)

I831G1620033-01

- Install the steering shaft.
- Apply grease to the steering shaft holder dust seal before installing.

: Grease 99000–25160 (Water resistance grease)

I831G1620028-01

- Apply grease to the steering shaft holders before installing the shaft holders.

  : Grease 99000–25160 (Water resistance grease)

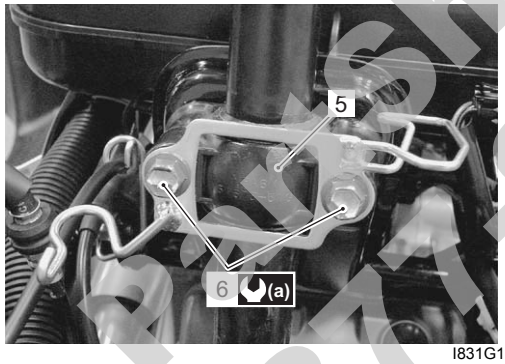
  ⚠ CAUTION

  To prevent the entry of dirt, the dust seal end "A" must face rearward when installing the dust seal to steering shaft.

I831G1620030-02

- Install the steering shaft holder (5) and tighten the mounting bolts (6) to the specified torque.

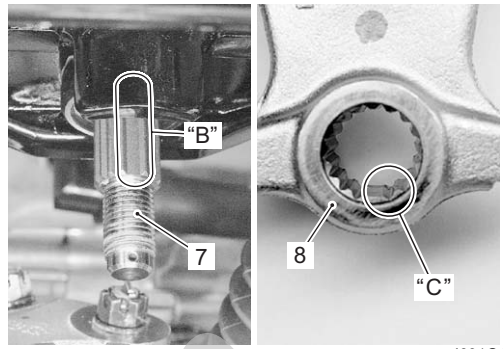
  Tightening torque
  Steering shaft holder bolt (a): 23 N·m (2.3 kgf-m, 16.5 lb-ft)



I831G1620031-02

- After installed steering shaft plate, make sure that the wiring harness, cables and brake hose routing are properly. Refer to "Wiring Harness Routing Diagram in Section 9A (Page 9A-4)".

- When installing the steering arm plate, align the wide spline "B" of steering shaft (7) with slit "C" of steering arm plate (8).



I831G1620034-02

- Apply a small quality thread lock to the thread part of steering shaft.

  1303 : Thread lock cement 99000–32030 (THREAD LOCK CEMENT SUPER 1303 or equivalent)

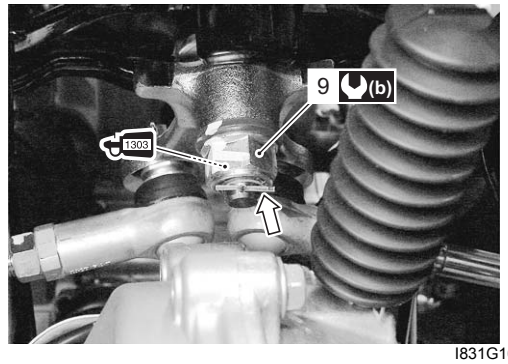
- Tighten the steering shaft lower nut (9) to the specified torque.

  Tightening torque
  Steering shaft lower nut (b): 162 N·m (16.2 kgf-m, 117.0 lb-ft)

- Install the cotter pin.

  ⚠ CAUTION

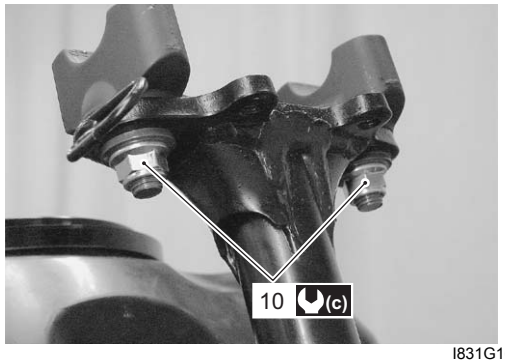
  The removed cotter pin must be replaced with a new one.



I831G1620035-03

- Connect the tie-rod ends. Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
- Tighten the handlebar holder nut (10) to the specified torque.

Tightening torque
Handlebar holder nut (c): 60 N·m (6.0 kgf-m, 43.5 lb-ft)



I831G1620036-02

- Install the handlebars. Refer to “Handlebars Removal and Installation (Page 6B-3)”.
- Install the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
- Install the front wheels. Refer to “Front / Rear Wheel Removal and Installation in Section 2D (Page 2D-2)”.
- After installing these parts, adjust the toe. Refer to “Toe Adjustment in Section 0B (Page 0B-22)”.

Tie-rod / Tie-rod End Removal and Installation

B831G26206006

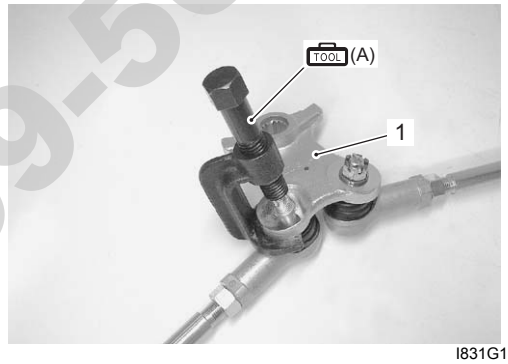
Removal

1) Remove the tie-rod end (steering knuckle side). Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
2) Remove the cotter pins, tie-rod end nut and spring washer.

I831G1620037-01

3) Remove the steering arm plate (1) with a special tool.

Special tool
(A): 09942–72410 (Tie rod end remover)

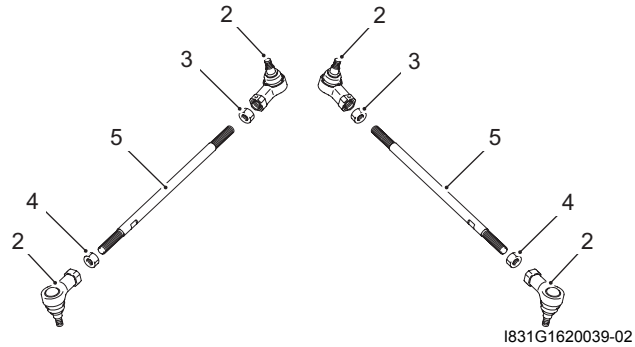


I831G1620038-01

4) Remove the other tie-rod end in the same manner as described previously.
5) Separate the tie-rod ends (2), nuts (3), and (4) and tie-rods (5).

⚠ CAUTION

The lock-nuts (3) have left-hand threads.



I831G1620039-02

Installation
Install the tie-rod in the reverse order of removal. Pay attention to the following points:

- When installing the tie-rods, make sure the short side “a” of tie-rod come outside.
- Push the tie-rod to tie-rod lock-nut tightening direction.
- Tighten the lock-nuts to the specification.

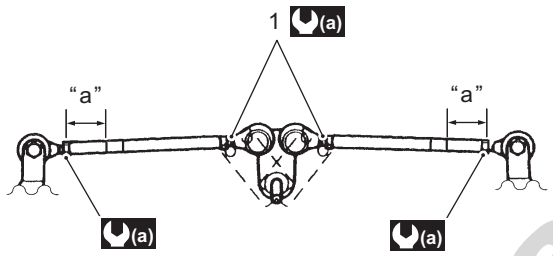
⚠ CAUTION

When tightening the lock-nuts, hold the tie-rod end with a open end wrench.

NOTE

The lock-nuts (1) have left-hand threads.

Tightening torque
Tie-rod lock-nut (a): 45 N·m (4.5 kgf-m, 32.5 lb-ft)



I831G1620040-03

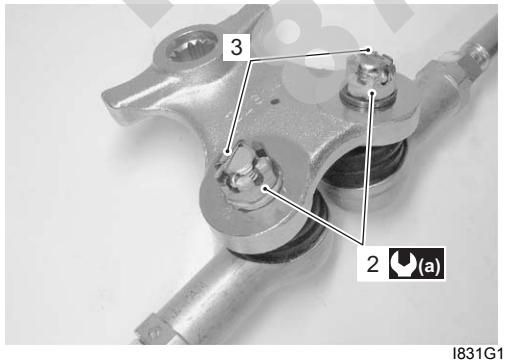
- Install the washers and tighten the rod end nuts (2) (steering arm plate side) to the specified torque.

Tightening torque
Tie-rod end nut (a): 29 N·m (2.9 kgf-m, 21.0 lb-ft)

- Install the cotter pins (3).

⚠ CAUTION

The removed cotter pins must be replaced with new ones.



I831G1620041-01

- Install the tie-rod ends (steering knuckle side). Refer to “Front Wheel Hub / Steering Knuckle Removal and Installation in Section 2B (Page 2B-4)”.
- After installed wheels, inspect the toe-out. If the toe-out is out of specification, bring it into the specified range. Refer to “Steering System Inspection in Section 0B (Page 0B-21)” and “Toe Adjustment in Section 0B (Page 0B-22)”.

Steering Parts Inspection

B831G26206007

Refer to “Steering Shaft Removal and Installation (Page 6B-6)” and “Tie-rod / Tie-rod End Removal and Installation (Page 6B-9)”.

Steering Shaft Holder Dust Seal
Inspect the dust seal for wear or damage. If any defects are found, replace the dust seal with a new one.

I831G1620042-01

Tie-rod
Inspect the tie-rod for distortion or damage. If any defects are found, replace the tie-rod with a new one.

I831G1620043-01

Tie-rod End
Inspect the tie-rod ends for smooth movement. If there are any abnormalities, replace the tie-rod ends with new ones. Inspect the tie-rod end boots for wear or damage. If any defects are found, replace the tie-rod ends with new ones.

I831G1620044-01

Steering Shaft
Inspect the steering shaft for distortion or bend. If any defects are found, replace the steering shaft with a new one.

I831G1620045-01

Steering Shaft Holder
Inspect the steering shaft holders for wear or damage. If any defects are found, replace the steering shaft holders with new ones.

I831G1620046-01

Steering Shaft Bushing and Dust Seal
Inspect the steering shaft bushing (1) and dust seal (2) for wear or damage. If any defects are found, replace them with new ones.

Combination Meter / Fuel Meter / Horn

General Description

Combination Meter System Description

B831G29301001

This combination meter mainly consists of LCD (Liquid Crystal Display) and LED (Light Emitting Diode).
The LCDs indicate Speed, Odo / Trip A / Trip B, Fuel level, Diff-lock, 4WD, Gear position, Engine coolant temperature, FI and Clock / Hour / FI (DTC) respectively.

LED (Light Emitting Diode)

LED is used for the illumination light and each indicator light.
LED is maintenance free. LED is less power consuming and more resistant to vibration resistance compared to the bulb.

Combination Meter Removal and Installation

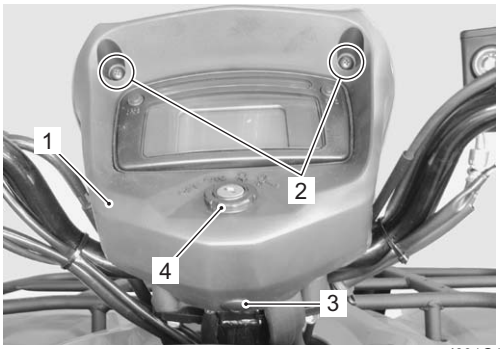
B831G29306002

⚠ CAUTION

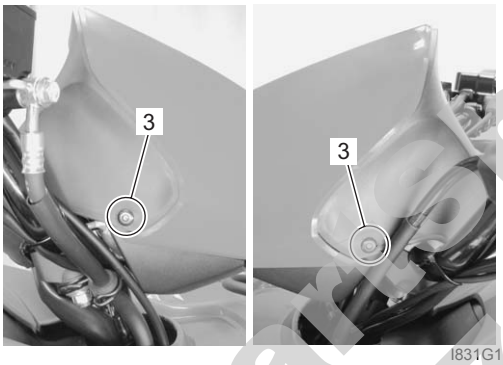
When disconnecting and reconnecting the combination meter coupler, make sure to turn OFF the ignition switch, or electronic parts may get damaged.

Removal

1) Remove the combination meter cover (1) by removing the screws (2), fasteners (3) and ignition switch ring nut (4).



I831G1930004-01

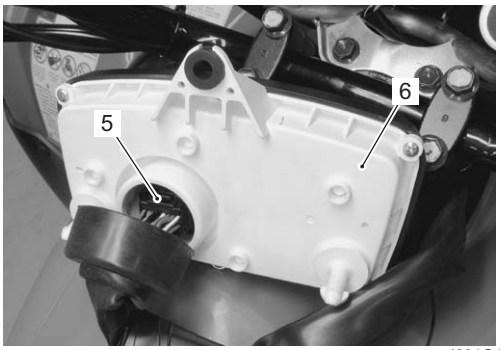


I831G1930003-01

2) Remove the combination meter mounting bolt.

I831G1930005-01

3) Disconnect the combination meter coupler (5) and remove the combination meter assembly (6).

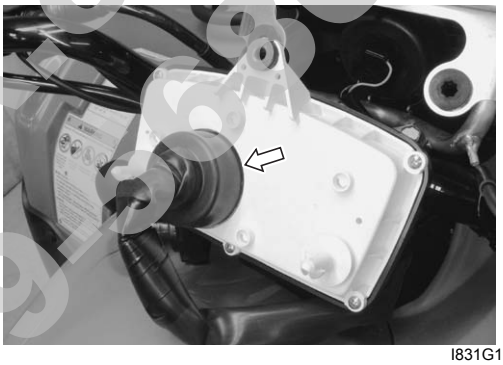


I831G1930006-01

Installation

Install the combination meter in the reverse order of removal. Pay attention to the following points:

- Make sure that speedometer coupler boot is positioned properly.



I831G1930007-01

Combination Meter Disassembly and Assembly

B831G29306003

Refer to “Combination Meter Removal and Installation (Page 9C-3)”.

⚠ CAUTION

Do not attempt to disassemble the combination meter unit.

Disassembly

Disassemble the combination meter as shown in the combination meter components. Refer to “Combination Meter Components (Page 9C-2)”.

Assembly

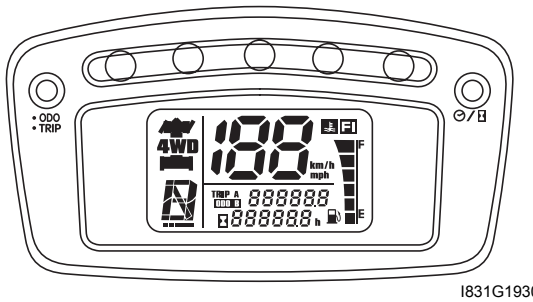
Assemble the combination meter as shown in the combination meter components. Refer to “Combination Meter Components (Page 9C-2)”.

Combination Meter Inspection

B831G29306004

LED Inspection

Check that the LEDs (Diff-lock indicator light, Reverse indicator light and FI indicator light / Engine coolant temperature indicator light) immediately light up for two seconds when the ignition switch is turned to ON.
Check that other LEDs (Neutral indicator light and High-beam indicator light (for P-17)) light up/go off by operating each switch.
If abnormal condition is found, replace the combination meter unit with a new one after checking its wire harness/coupler. Refer to “Combination Meter Removal and Installation (Page 9C-3)”.



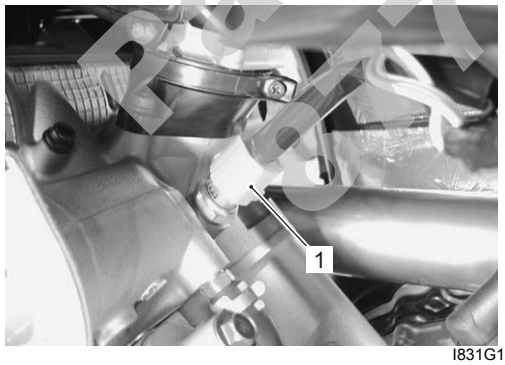
I831G1930008-02

Engine Coolant Temperature Indicator Light Inspection

B831G29306005

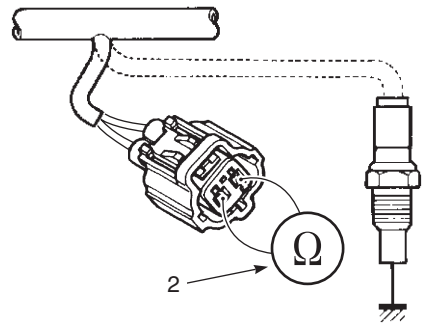
Inspect the engine coolant temperature indicator light in the following procedures:

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D (Page 9D-11)”.
2) Remove the left side cover. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
3) Disconnect the ECT sensor coupler (1).



I831G1930025-01

4) Connect the variable resistor (2) between the terminals.



I718H1930009-05

5) Turn the ignition switch ON.
6) Check the LCD and LED operations when the resistance is adjusted to the specified values.
If either one or all indications are abnormal, replace the combination meter with a new one. Refer to “Combination Meter Removal and Installation (Page 9C-3)”.

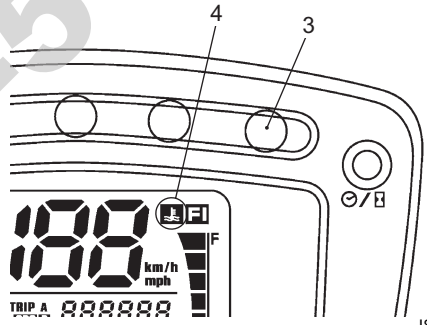
0 Ω (Jumper wire)	ON	ON	120 °C and over



I831G1930026-03

7) Connect the ECT sensor coupler.
8) Reinstall the removed parts.

Engine Coolant Temperature Removal and Installation

B831G29306006

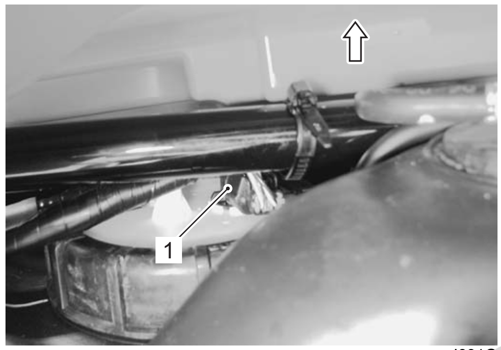
Refer to “ECT Sensor Removal and Installation in Section 1C (Page 1C-4)”.

Fuel Level Indicator Inspection

B831G29306007

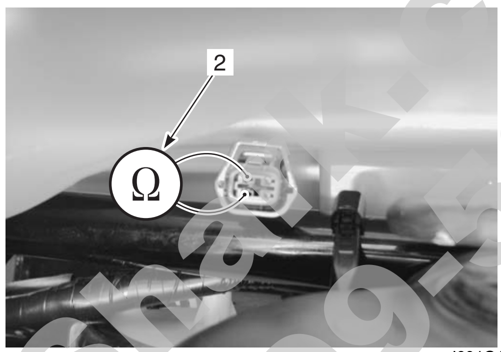
Inspect the fuel level indicator in the following procedures:

1) Move the rear fender upside. Refer to “Fuel Tank Pressure Control (FTPC) Valve Removal and Installation in Section 1G (Page 1G-12)”.
2) Disconnect the fuel level gauge coupler (1).



I831G1930011-01

3) Connect the variable resister (2) between the Y/B and B lead wires from the wire harness.



I831G1930012-02

4) Turn the ignition switch ON.
5) Check the display of fuel level indicator (LCD) as shown in the figure.
If any abnormality is found, replace the combination meter with a new one. Refer to “Combination Meter Removal and Installation (Page 9C-3)”.

NOTE

It takes approx. 13 seconds that the fuel level indicator indicates the detected fuel level.

Fuel Level Gauge Inspection

B831G29306008

Inspect the fuel level gauge in the following procedures:

1) Remove the fuel pump. Refer to “Fuel Pump Assembly Removal and Installation in Section 1G (Page 1G-9)”.
2) Measure the resistance at each fuel level gauge in float position. If the resistance is incorrect, replace fuel pump with a new one.

3) Install the fuel pump. Refer to “Fuel Pump Assembly Removal and Installation in Section 1G (Page 1G-9)”.

Speedometer Inspection

B831G29306009

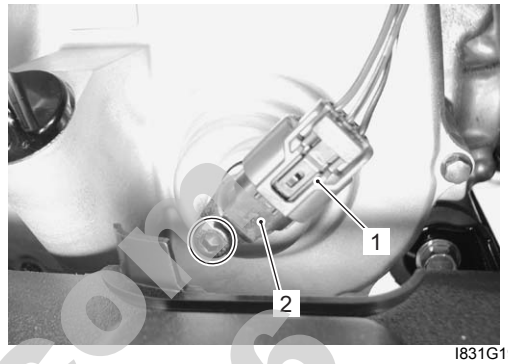
If the speedometer, odometer or trip meter does not function properly, inspect the speed sensor and the coupler connections. If the speed sensor and coupler connections are OK, replace the combination meter unit with a new one. Refer to “Combination Meter Removal and Installation (Page 9C-3)”.

Speed Sensor Removal and Installation

B831G29306010

Removal

1) Remove the engine side cover. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D (Page 9D-9)”.
2) Disconnect the speed sensor coupler (1).
3) Remove the speed sensor (2).



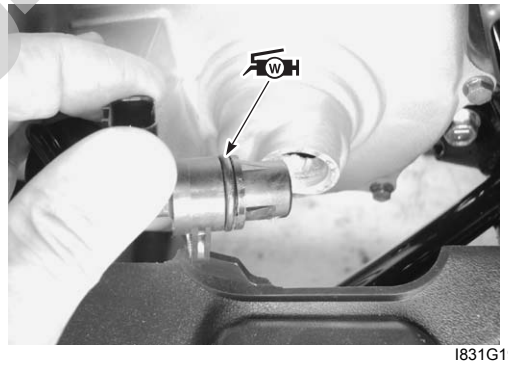
I831G1930015-01

Installation

Install the speed sensor in the reverse order of removal. Pay attention to the following points:

- Apply grease to the speed sensor O-ring.

(W) : Grease 99000–25160 (Water resistance grease)



I831G1930016-02

- Tighten the speed sensor mounting bolt to the specified torque.

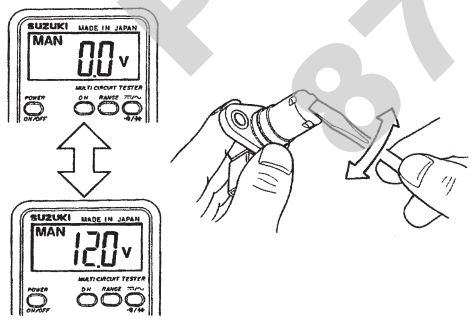
3) Move a screwdriver back and forth across the pick-up surface of the speed sensor. The voltage readings should cycle as follows (0 V → 12 V or 12 V → 0 V). If the voltage reading does not change, replace the speed sensor with a new one.

NOTE

While testing, the highest voltage reading should be the same as the battery voltage (12 V).



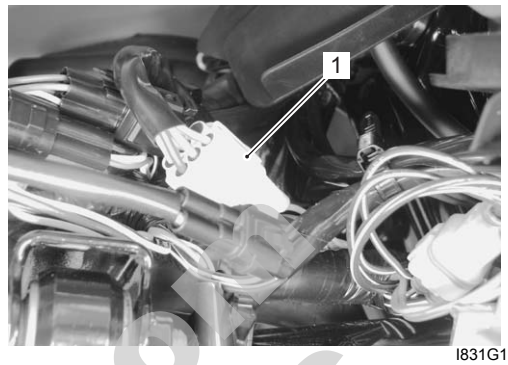
I831G1930022-01

Ignition Switch Inspection

B831G29306012

Inspect the ignition switch in the following procedures:

1) Remove the left inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D (Page 9D-6)”.
2) Disconnect the ignition switch coupler (1).



I831G1930019-02

Horn Inspection (For P-17, 24)

B831G29306014

NOTE

If the horn sound condition is normal, it is not necessary to inspect the horn button continuity.

Horn Button Inspection

1) Disconnect the horn couplers as shown in the wiring harness routing diagram. Refer to “Wiring Harness Routing Diagram in Section 9A (Page 9A-4)”.
2) Inspect the horn button for continuity with a tester. If any abnormality is found, replace the horn button with a new one.
   Refer to “Handlebars Removal and Installation in Section 6B (Page 6B-3)”.

1) Disconnect the horn couplers as shown in the wiring harness routing diagram. Refer to “Wiring Harness Routing Diagram in Section 9A (Page 9A-4)”.
2) Connect a 12 V battery to terminal and terminal. If the sound is not heard from the horn, replace the horn with a new one.
3) Connect the horn couplers.

Horn Removal and Installation (For P-17, 24)

B831G29306015

Removal

Disconnect the horn couplers and remove the horn by removing the mounting nut as shown in the wiring harness routing diagram. Refer to “Wiring Harness Routing Diagram in Section 9A (Page 9A-4)”.

Installation

Install the horn in the reverse order of removal.

FOREWORD

This SUPPLEMENTARY SERVICE MANUAL is a supplement to SUZUKI LT-A750X/Z SERVICE MANUAL.
It has been prepared exclusively for the following applicable model.

Applicable model:
LT-A750XP/ZK9

This supplementary service manual describes only service information which differ from that of the main manual. Therefore, whenever servicing the above applicable model, consult this supplement first. And for any section, item or description not found in this supplement, refer to the main manual below.

Main Manual:

Manual Name	Manual No.
LT-A750X/ZK9 SERVICE MANUAL	99500-47021-03E

Other information considered as generally known is not included.
Read the GENERAL INFORMATION section to familiarize yourself with the vehicle and its maintenance. Use this section as well as other sections to use as a guide for proper inspection and service.
This manual will help you know the vehicle better so that you can assure your customers of fast and reliable service.

- ** This manual has been prepared on the basis of the latest specifications at the time of publication. If modifications have been made since then, differences may exist between the content of this manual and the actual vehicle.*
- ** Illustrations in this manual are used to show the basic principles of operation and work procedures. They may not represent the actual vehicle exactly in detail.*
- ** This manual is written for persons who have enough knowledge, skills and tools, including special tools, for servicing SUZUKI vehicles. If you do not have the proper knowledge and tools, ask your authorized SUZUKI motorcycle dealer to help you.*

⚠ WARNING

Inexperienced mechanics or mechanics without the proper tools and equipment may not be able to properly perform the services described in this manual.
Improper repair may result in injury to the mechanic and may render the vehicle unsafe for the rider.

Precautions for EPS (LT-A750XP/ZK9)

B931G40000004

EPS Wiring

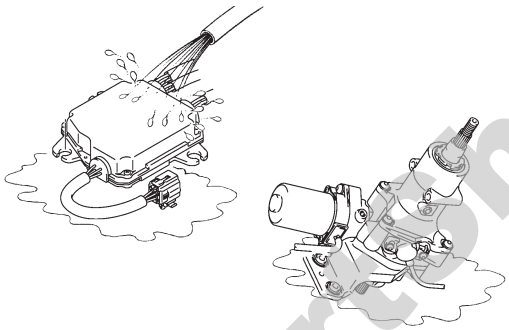
- The EPS parts are connected to various lead wires. The coupler and lead wire connections, as well as the lead wire and wire harness routings must be done correctly. Make sure that the proper clamps are used and positioned correctly.

NOTE

If all of the connections are not properly connected, the EPS may not operate correctly. For connector and coupler precautions. Refer to "Precautions for Electrical Circuit Service in related manual".

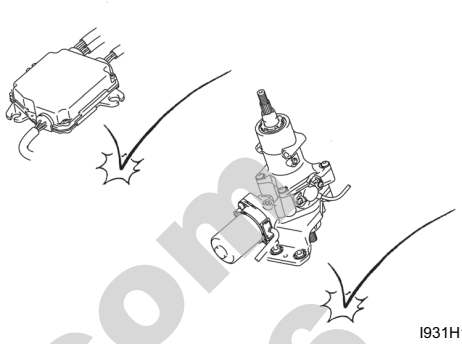
EPS Control Unit / EPS Body Assembly

- Never allow dust or water to contact the EPS control unit and EPS body assembly.



I931H1000004-01

- Since each component is a high-precision part, great care should be taken not to apply any service impacts during removal and installation.



I931H1000003-02

- The EPS control unit and EPS body assembly cannot be disassembled. Replace the whole unit with a new one.

Maintenance and Lubrication

Repair Instructions

Air Cleaner Element Inspection and Cleaning (LT-A750XP/ZK9)

B931G40206030

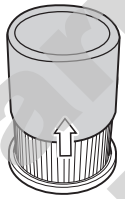
Clean element
Every 1 000 km (600 miles, 3 months)

If the air cleaner is clogged with dust, intake resistance will be increased, with a resultant decrease in power output and an increase in fuel consumption. Check and clean the air cleaner element in the following manner.

⚠ CAUTION

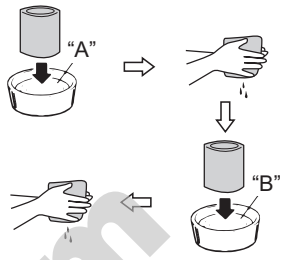
- **If driving under dusty conditions, clean the air cleaner element more frequently. The surest way to accelerate engine wear is to operate the engine without the element or to use a torn element. Make sure that the air cleaner is in good condition at all times. Life of the engine depends largely on this component.**
- **Inspect the air cleaner element for tears. A torn element must be replaced.**

1) Remove the air cleaner element. Refer to "Air Cleaner Element Removal and Installation in Section 1D in related manual".
2) Separate the polyurethane from element.



I831G1020002-01

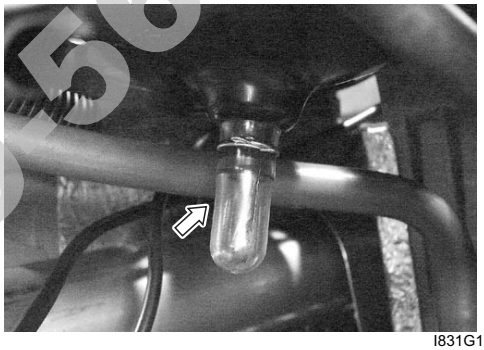
3) Fill a wash pan of a proper size with a non-flammable cleaning solvent. Immerse the air cleaner element in the cleaning solvent and wash it.
4) Press the air cleaner element between the palms of both hands to remove the excess solvent: do not twist or wring the element or it will tear.
5) Immerse the element in motor oil, and then squeeze out the excess oil leaving the element slightly wet.



I931G3020009-01

"A":	Non-flammable cleaning solvent
"B":	Motor oil SAE #30 or SAE 10W-40

6) After cleaning the air cleaner element, reinstall the removed parts.
7) Drain water from the air cleaner box by removing the drain plug.



I831G1020004-01

8) Reinstall the drain plug.

Steering System Inspection (LT-A750XP/ZK9)

B931G40206031

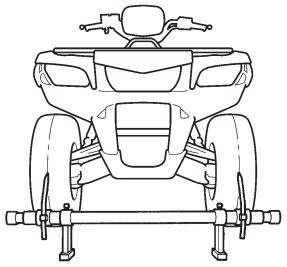
Inspect steering system
Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

Steering should be adjusted properly for smooth turning of handlebars and safe running.

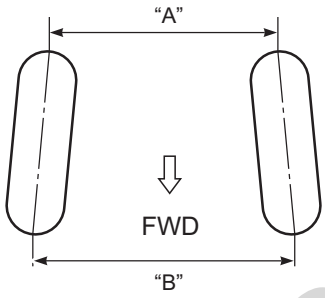
1) Place the vehicle on level ground.
2) Make sure the tire pressure for right and left tires in the same and set to the proper specification.
3) Set the front wheels in the straight position.
4) Place a load of 75 kg (165 lbs) on the seat.

5) Measure the distances (“A” and “B”) between the front wheels. Subtract the measurement of “A” from that of “B” to find the toe-out. If the toe-out is not within specification, adjust the tie-rod to the right or left until the toe-out is within the specified range.

Toe-out (“B” – “A”)
Standard: 5 ± 4 mm (0.20 ± 0.16 in)



I931H1020057-01



I831G1020059-04

If the toe-out is out of specification, bring it into the specified range. Refer to “Toe Adjustment (LT-A750XP/ZK9) (Page 0B-2)”.

Toe Adjustment (LT-A750XP/ZK9)

B931G40206032

Adjust the toe-out as follows:

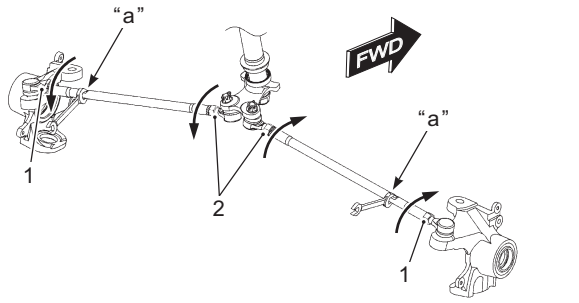
1) Loosen the lock-nuts (1), (2) on each tie-rod.

⚠ CAUTION

- **The lock-nuts (2) have left-hand threads.**
- **When loosening and tightening the lock-nuts, hold the tie-rod end with a open end wrench.**

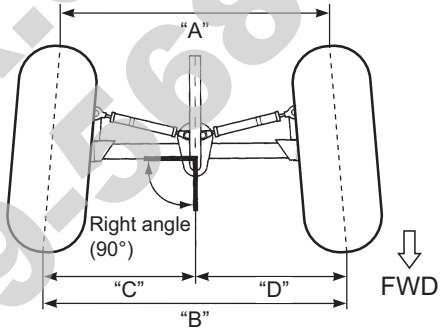
NOTE

Hold the concave part “a” of tie-rod with a wrench.



I931H1020079-02

2) Temporarily tighten the four lock-nuts.
3) Check that the distances “C” and “D” are equal, as shown. If the distances are not equal, adjust the tie-rod to the right or left until the toe-out is within specification. Check the toe-out again by measuring distances “A” and “B”.
4) If the toe-out is not within specification, repeat the adjustment as above until the proper toe-out is obtained and distances “C” and “D” become equal.



I831G1020088-04

5) After adjustment has been made, tighten the four lock-nuts to the specified torque.

<u>Tighten chassis bolt and nut</u>

Initially at 200 km (100 miles, 1 month) and every 1 000 km (600 miles, 3 months) thereafter

Check that all chassis bolts and nuts are tightened to their specified torque.

Thermostat + Radiator + Fan + Coolant

Item		Standard	Note
Thermostat valve opening temperature		Approx. 82 °C (180 °F)	
Thermostat valve lift		8 mm (0.31 in) and over at 95 °C (203 °F)	
ECT sensor resistance	20 °C (68 °F)	Approx. 2.45 kΩ	
	50 °C (122 °F)	Approx. 0.811 kΩ	
	80 °C (176 °F)	Approx. 0.318 kΩ	
	110 °C (230 °F)	Approx. 0.142 kΩ	
Radiator cap valve opening pressure		110 – 140 kPa (1.1 – 1.4 kgf/cm^2, 15.6 – 19.9 psi)	
Cooling fan thermo-switch operating temperature	OFF → ON	Approx. 93 °C (199 °F)	
	ON → OFF	Approx. 87 °C (189 °F)	
Engine coolant type		Use an antifreeze/coolant compatible with aluminum radiator, mixed with distilled water only, at the ratio of 50:50.	
Engine coolant	Reservoir	Approx. 250 ml (0.26/0.22 US/Imp qt)	
	Engine	Approx. 2 200 ml (2.32/1.94 US/Imp qt)	

Injector + Fuel Pump + Fuel Pressure Regulator

Item	Specification	Note
Injector resistance	11 – 13 Ω at 20 °C (68 °F)	
Fuel pump discharge amount	55.5 ml (1.88/1.95 US/Imp qt) and more/10 sec.	
Fuel pressure regulator operating set pressure	Approx. 294 kPa (2.9 kgf/cm^2, 41 psi)	

FI Sensors + Secondary Throttle Valve Actuator

Item		Specification	Note
CKP sensor resistance		150 – 250 Ω	
CKP sensor peak voltage		5.0 V and more	When cranking
IAP sensor input voltage		4.5 – 5.5 V	
IAP sensor output voltage		Approx. 2.63 V at idle speed	
TP sensor input voltage		4.5 – 5.5 V	
TP sensor output voltage	Closed	Approx. 1.1 V	
	Opened	Approx. 4.3 V	
ECT sensor input voltage		4.5 – 5.5 V	
ECT sensor output voltage		0.15 – 4.85 V	
ECT sensor resistance		Approx. 2.45 kΩ at 20 °C (68 °F)	
IAT sensor input voltage		4.5 – 5.5 V	
IAT sensor output voltage		0.15 – 4.85 V	
IAT sensor resistance		Approx. 1.60 kΩ at 20 °C (68 °F)	
TO sensor resistance		19 – 20 kΩ	
TO sensor voltage	Normal	0.4 – 1.4 V	
	Leaning	3.7 – 4.4 V	When leaning 65°
GP switch voltage		0.6 V and more	From 1st to Top
Injector voltage		Battery voltage	
Ignition coil primary peak voltage		80 V and more	When cranking
ISC valve resistance		Approx. 31 kΩ at 20 °C (68 °F)	

Throttle Body

Item	Specification
Bore size	42 mm
I.D. No.	31G0
Idle r/min	1 300 ± 100 r/min
Fast idle r/min	1 500 – 2 000 r/min (When cold engine)

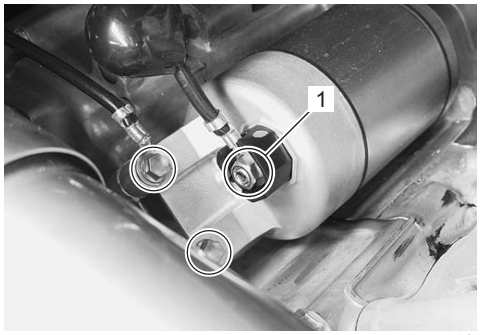
Starter Motor Removal and Installation (LT-A750XP/ZK9)

B931G41906023

Removal

1) Turn the ignition switch OFF and disconnect the battery (–) lead wire. Refer to “Battery Removal and Installation (LT-A750XP/ZK9) in Section 1J (Page 1J-2)”.
2) Remove the right side cover. Refer to“Front Side Exterior Parts Removal and Installation in Section 9D in related manual”.
3) Remove the starter motor lead wire (1).



I931G3190001-02

4) Remove the starter motor.

Installation

Install the starter motor in the reverse order of removal. Pay attention to the following points:

- Apply grease to the starter motor O-ring.

: Grease 99000–25010 (SUZUKI SUPER GREASE “A” or equivalent)

⚠ CAUTION

Replace the O-ring with a new one.

I931G3190002-02

- Tighten the starter motor mounting bolts (1) with the battery (–) lead wire (2) and starter motor lead wire mounting nut (3) to the specified torque. Refer to “Wiring Harness Routing Diagram (LT-A750XP/ZK9) in Section 9A (Page 9A-4)”.

Starter Motor Disassembly and Assembly (LT-A750XP/ZK9)

B931G41906024

Refer to “Starter Motor Removal and Installation in related manual”.

Disassembly

Disassemble the starter motor as shown in the starter motor components diagram. Refer to “Starter Motor Components in related manual”.

Assembly

Reassemble the starter motor in the reverse order of removal. Pay attention to the following points:

⚠ CAUTION

Replace the O-rings with new ones to prevent oil leakage and moisture.

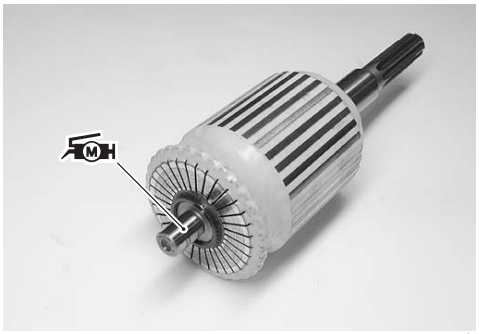
- Apply grease to the lip of the oil seal.

: Grease 99000–25010 (SUZUKI SUPER GREASE “A” or equivalent)

I931G3190004-02

- Apply a small quantity of moly paste to the armature shaft.

  : Moly paste 99000–25140 (SUZUKI Moly paste or equivalent)



I931G3190005-02

- Align the match mark on the starter motor case with the match mark on the housing end.
- Tighten the starter motor housing bolts (2) to the specified torque.

Starter Motor Related Parts Inspection (LT-A750XP/ZK9)

B931G41906025

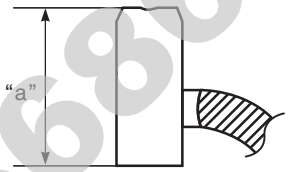
Refer to “Starter Motor Disassembly and Assembly in related manual”.

Carbon Brush

Inspect the carbon brushes for abnormal wear, cracks or smoothness in the brush holder.
If either carbon brush is defective, replace the brush holder set with a new one.
Measure the length “a” of the carbon brushes using a vernier calipers. If the measurement is less than the service limit, replace the housing end assembly with a new one.

Brush length “a”
Service limit: 6.5 mm (0.26 in)

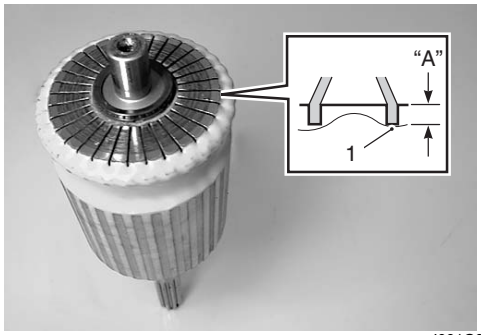
Special tool
: 09900–20102 (Vernier calipers (200 mm))



I718H1190013-01

Commutator

Inspect the commutator for discoloration, abnormal wear or undercut “A”.
If the commutator is abnormally worn, replace the armature.
If the commutator surface is discolored, polish it with #400 sandpaper and wipe it using a clean, dry cloth.
If there is no undercut, scrape out the insulator (1) with a saw blade.



I931G3190008-02

Armature Coil
Measure for continuity between each segment. Measure for continuity between each segment and the armature shaft.
If there is no continuity between the segments or there is continuity between the segments and shaft, replace the armature with a new one.

Special tool

I931G3190009-02

Bearing
Check the bearing of housing end for damage.
If any damage is found, replace the housing end.

I931G3190010-02

Oil Seal
Check the seal lip for damage. If any damage is found, replace the housing end (Inside).

Generator Removal and Installation (LT-A750XP/ZK9)

B931G41A06010

Removal

1) Disconnect the (–) battery lead wire. Refer to “Battery Removal and Installation (LT-A750XP/ZK9) (Page 1J-2)”.
2) Drain engine oil. Refer to “Engine Oil and Filter Replacement in Section 0B in related manual”.
3) Remove the left inner fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D in related manual”.
4) Remove the left mud guard. Refer to “Rear Side Exterior Parts Removal and Installation in Section 9D in related manual”.
5) Drain engine coolant. Refer to “Cooling System Inspection in Section 0B in related manual”.
6) Remove the water pump assembly (1). Refer to “Water Pump Removal and Installation in Section 1F in related manual”.
7) Disconnect the gearshift lever arm (2) and speed sensor coupler (3).
8) Remove the recoil cover (4).

Installation

Install the generator in the reverse order of removal. Pay attention to the following points:

- Install the generator cover. Refer to “Generator Removal and Installation in related manual”.

⚠ WARNING

Be careful not to pinch the finger between the generator cover and the crankcase.

- Apply grease to the O-ring (1) and oil seal lip.

AH : Grease 99000–25010 (SUZUKI SUPER GREASE “A” or equivalent)

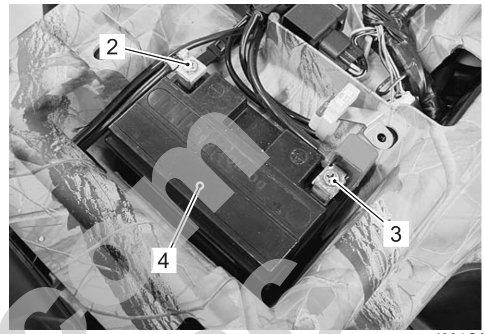
5) Remove the battery (4).



I931G31A0006-01

Installation

Install the battery in the reverse order of removal.
Pay attention to following point:

⚠ CAUTION

Never use anything except the specified battery.

- Tighten the battery mounting bolts securely.

NOTE

Fit the EPS fuse bracket (2) to the mounting bolt (1).

- Apply thread lock to the battery stay mounting bolts and tighten them securely.

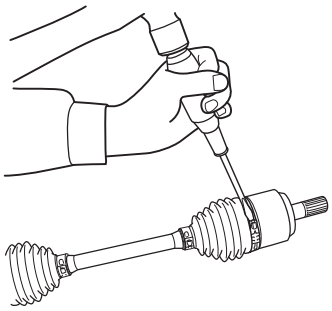
Refer to “Front Drive Shaft Assembly Removal and Installation in related manual”.

Disassembly

⚠ CAUTION

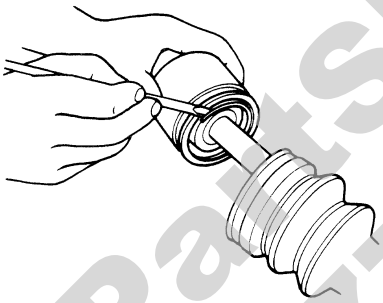
Do not disassemble the wheel side joint. If any damages are found, replace it with a new one.

1) Remove the boot band of the differential side joint.



I931H1310003-03

2) Slide the boot toward the center of the front drive shaft and remove the stopper ring from the outer race.



I831G1310006-01

Assembly

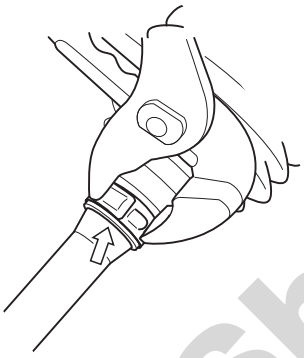
⚠ CAUTION

- **Wash all parts before installation, clean the inside and outside of the boots with a cloth.**
- **Do not wash the boots in any commercially available degreaser, such as gasoline or kerosene. Washing in a degreaser causes deterioration of the boots.**

1) Fit a boot on the drive shaft end, fitting the small diameter side of the boot to the shaft groove, fix its end with a new boot band.

⚠ CAUTION

Replace the boot band with a new one.



I931H1310005-02

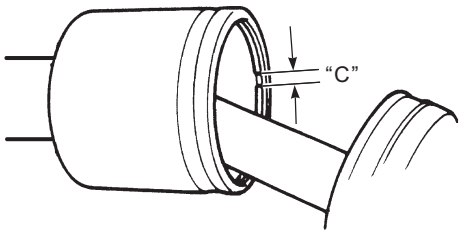
5) Insert the cage into the outer race and install the new stopper ring to the groove of the outer race.

⚠ CAUTION

- **Replace the stopper ring with a new one.**
- **Position the opening of stopper ring "C" so that it will not be lined up with a ball.**



I831G1310015-01

6) After installing the boot on the outer race, insert a screw driver into the boot on the outer race side and allow air to enter the boot so that the air pressure in the boot becomes the same as the atmospheric pressure at the positions indicated in the figure.

7) Fix the boot on the outer race with a new boot band, taking care not to distort the boot.

Repair Instructions

Front Brake Hose Removal and Installation (LT-A750XP/ZK9)

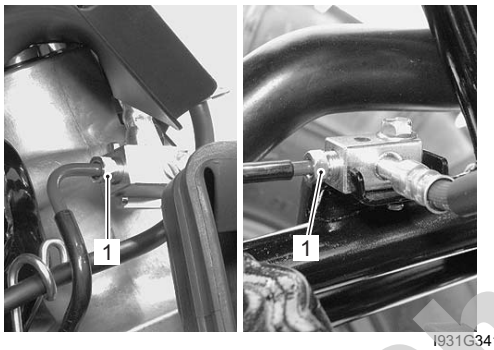
B931G44106019

Removal

⚠ CAUTION

Make sure that the vehicle is supported securely.

1) Remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D in related manual”.
2) Drain brake fluid. Refer to “Brake Fluid Replacement in related manual”.
3) Loosen the flare nuts (1) and disconnect the brake pipe.



I931G3410001-02

4) Remove the front brake hoses as shown in the front brake hose routing diagram. Refer to “Front Brake Hose Routing Diagram (LT-A750XP/ZK9) (Page 4A-1)”.

Installation

⚠ CAUTION

The seal washers should be replaced with the new ones to prevent fluid leakage.

1) Install the front brake hose as shown in the front brake hose routing diagram. Refer to “Front Brake Hose Routing Diagram in related manual”.
2) Tighten the brake flare nut (1) to the specified torque.

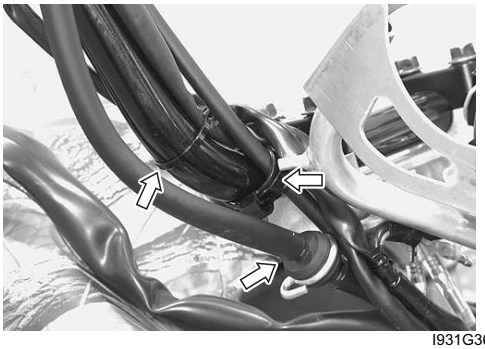
Handlebars Removal and Installation (LT-A750XP/ZK9)

B931G46206010

Removal

1) Remove the auxiliary headlight cover. Refer to “Auxiliary Headlight Removal and Installation in Section 9B in related manual”
2) Remove the combination meter. Refer to “Combination Meter Removal and Installation in Section 9C in related manual”.
3) Remove the clamps.
4) Disconnect the brake hose from the hose guide.



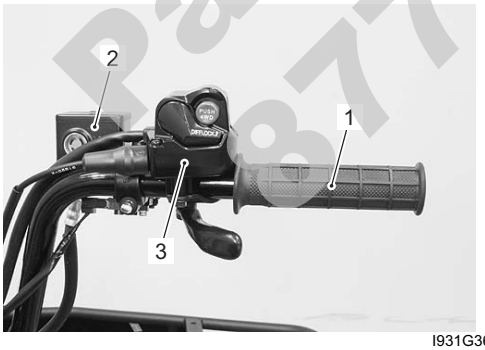
I931G3620001-01

5) Remove the following parts from the handlebars (right side).
   a) Right grip (1)
   b) Front brake master cylinder/Front brake lever (2)

⚠ CAUTION

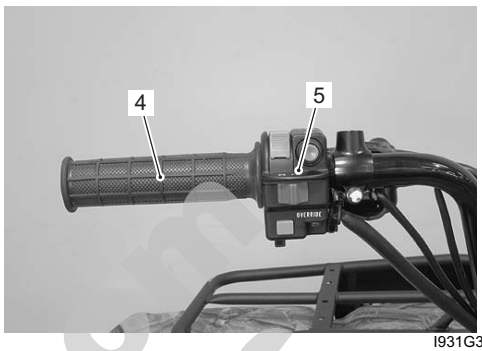
Do not turn the front brake master cylinder upside down.

   c) Throttle lever case (3)



I931G3620002-01

6) Remove the following parts from left handlebars (left side).
   a) Left grip (4)
   b) Left switch box (5)
   c) Horn button (For P-17, 24)
   d) Emergency switch (For P-17)



I931G3620003-01

7) Disconnect the parking brake cable (6) from left brake lever.

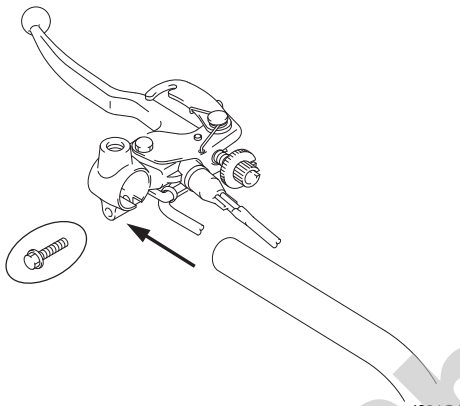
10) Remove the left brake lever from the handlebars (left side).



I831G1620006-05

Installation

Install the handlebars in the reverse order of removal. Pay attention to the following points:

- Install the left brake lever (1) to the handlebars.
- Align the punch mark “A” on the handlebars with the mating surface “B” of rear brake lever (1).
- Tighten the rear brake lever holder clamp bolt (2) to the specified torque.

Tightening torque

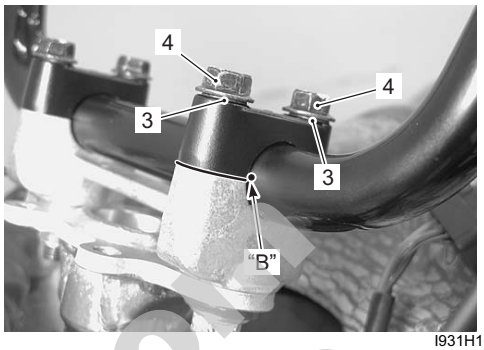
- Install the washers (3) and bolts (4) as shown in the steering/handlebars construction. Refer to “Steering / Handlebars Assembly Construction (LT-A750XP/ZK9) (Page 6B-2)”.
- Set the handlebars so that its punch mark “B” aligns with the mating surface of the left handlebar holder.



I931H1620009-02

- Tighten the handlebar clamp bolts (4) to the specified torque.

NOTE

First tighten the handlebar clamp bolts (4) (front ones) to the specified torque.

⚠ CAUTION

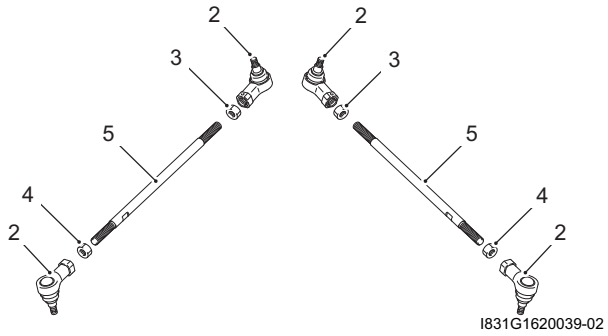
The lock-nuts (3) have left-hand threads.



I831G1620039-02

Installation
Install the tie-rod in the reverse order of removal. Pay attention to the following points:

- When installing the tie-rods, make sure the short side "a" of tie-rod come outside.
- Push the tie-rod to tie-rod lock-nut tightening direction.
- Tighten the lock-nuts to the specification.

⚠ CAUTION

When tightening the lock-nuts, hold the tie-rod end with a open end wrench.

NOTE

The lock-nuts (1) have left-hand threads.

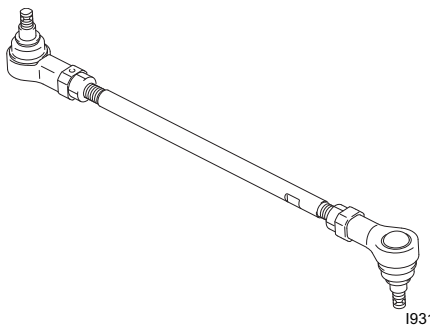
Tie-rod
Inspect the tie-rod for distortion or damage. If any defects are found, replace the tie-rod with a new one.



I931G3620024-01

Tie-rod End
Inspect the tie-rod ends for smooth movement. If there are any abnormalities, replace the tie-rod ends with new ones. Inspect the tie-rod end boots for wear or damage. If any defects are found, replace the tie-rod ends with new ones.

I931G3620025-01

Steering Shaft
Inspect the steering shaft for distortion or bend. If any defects are found, replace the steering shaft with a new one.

I931H1620034-01

Steering Shaft Bushing and Dust Seal
Inspect the steering shaft bushing (1), dust seal (2) and lower dust seal (3) for wear or damage. If any defects are found, replace them with new ones.

Precautions

Precautions for EPS (LT-A750XP/ZK9)

B931G46300001

Refer to “General Precautions in Section 00 in related manual” and “Precautions for EPS (LT-A750XP/ZK9) in Section 00 (Page 00-1)”.

NOTE

When repairing EPS system, remove the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D in related manual”.

P/S System Note (LT-A750XP/ZK9)

B931G46300002

⚠ CAUTION

Never remove the torque sensor to prevent accident and damage.

NOTE

EPS body assembly fasteners are important attaching parts in that they could affect the performance of vital parts and systems, and/or could result in major repair expense. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to assure proper retention of these parts.

Precautions in Diagnosing Troubles (LT-A750XP/ZK9)

B931G46300003

- Take a note of DTC indicated on the SDS tool or EPS indicator light.
- Before inspection, be sure to read “Precautions for Electrical Circuit Service in Section 00 in related manual” and “Precautions for EPS (LT-A750XP/ZK9) in Section 00 (Page 00-1)” and understand what is written there.
- DTC C1122 (engine speed signal failure) is indicated when ignition switch is at ON position and engine is not running, but it means there is nothing abnormal if indication changes to a normal one when engine is started.
- As DTC is stored in memory of the EPS control unit, be sure to clear memory after repair by performing the procedure described in “DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)”.

General Description

P/S System Description (LT-A750XP/ZK9)

B931G46301001

This electronic power steering (EPS) system consists of a EPS control unit (2), a torque sensor (3), a EPS motor (4). In this system, the EPS control unit determines the level and direction of the assist force for the handlebars (1) according to the signal from the torque sensor and the vehicle speed signal from speed sensor (9). The EPS control unit runs the motor so as to assist the operation of the handlebars (1). Take a note of DTC indicated on the EPS indicator light.

The EPS diagnoses troubles which may occur in the area including the following components when the ignition switch is ON and the engine is running. When the EPS control unit detects any malfunction, it stops the motor operation.

2. EPS control unit	4. EPS motor	6. Combination meter	8. ECM	

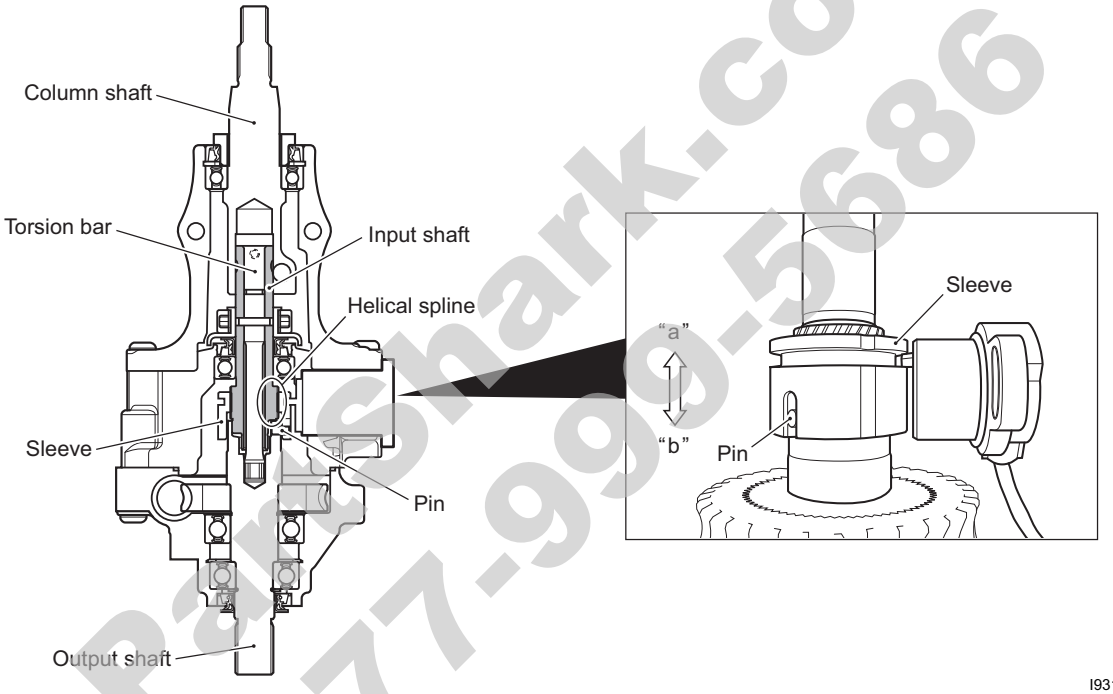
Detecting Principle

The column shaft is connected to the input shaft by means of serration. The output shaft and input shaft are connected via torsion bar. When torque is inputted from the column shaft, a relative angular displacement occurs between the input shaft and the output shaft due to twist of the torsion bar. As the sleeve is engaged with a fixed pin, such an angular displacement of the sleeve is converted to a linear displacement due to helical spline arrangement.

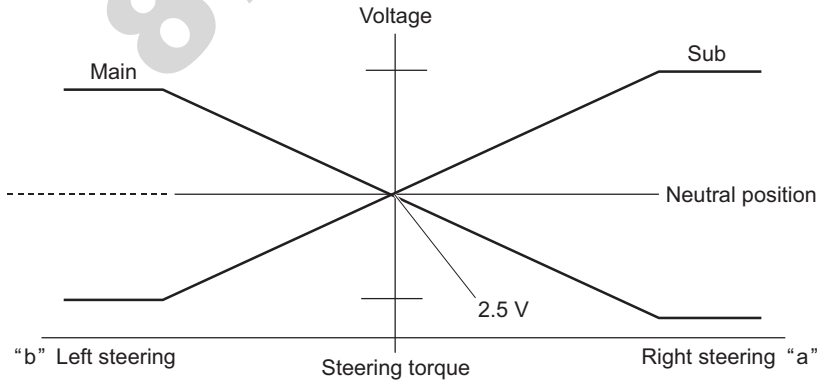
By the return spring of torque sensor lever, the sleeve is always forced to one side within its annular groove. The sleeve's linear displacement causes the torque sensor lever to turn, which is then converted to a voltage signal to supply to EPS control unit.

The torque sensor is a double circuit of main and sub, when the handlebars is in neutral position (no torsional torque applied to the steering wheel), each torque sensor (main and sub) output is 2.5 V and in this state the EPS control unit determines the steering torque as 0. During operating the handlebars, the EPS control unit processes the main torque sensor input signal to determine the steering torque required for the current condition. The relation between the steering direction of the EPS control unit and the output voltage is as follows: The direction is determined to be right turn steering “a” if the main torque sensor output voltage is lower than 2.5 V and to be left turn steering if the voltage is higher than 2.5 V for controlling the steering direction in the case of normal steering operation.

Conversely, the direction is determined to be left turn steering “b” if the sub torque sensor output voltage is lower than 2.5 V and to be right turn steering if the voltage is higher than 2.5 V for controlling the steering direction.



I931H1630002-05

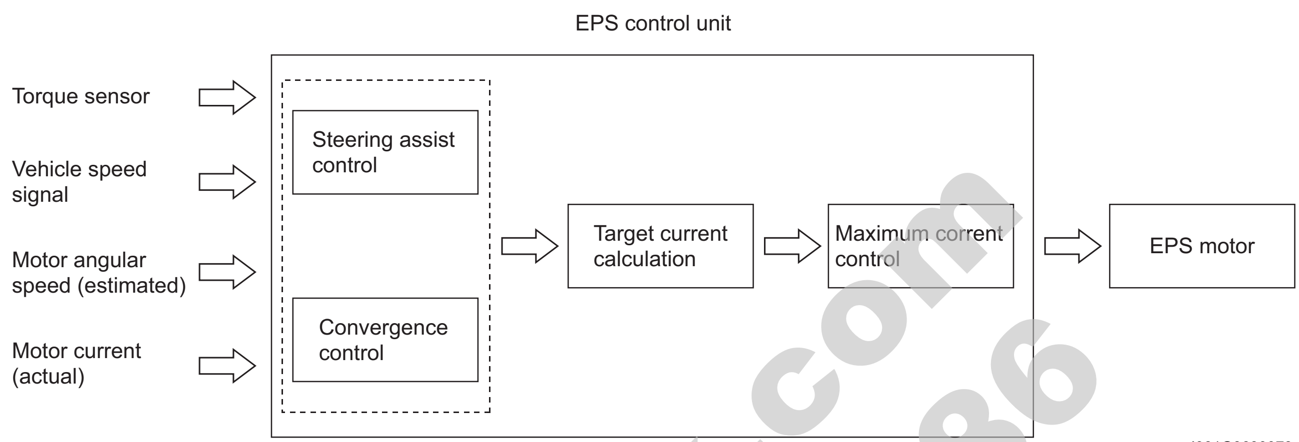


I931H1630003-02

Control System

In the EPS control unit, the steering assist control determines the basic power assist force and the convergence control improves the steering operation feeling. The controller determines the target motor current by the calculation of these controls and the maximum current limiting control and it also regulates the motor current so that the target motor current and the actual current are matched.

Power steering control input / output flow chart



I931G3630073-01

Control	Description
Steering assist control	This control determines the steering assist current on the basis of steering torque as detected by the torque sensor and of speed signal supplied from the speed sensor. This is the fundamental control necessary for the P/S system.
Convergence control	This control prevents convergence from deteriorating at a high speed by making current (compensating current) flow in the direction to keep the steering from turning, thereby improving vehicle maneuvering stability.
Maximum current control	If the steering input is sustained at a standstill, the motor continues to draw the maximum current for full-assist and the motor and EPS control unit may get overheated. To prevent this condition from occurring, this control limits and gradually reduces the maximum current flowing through the motor.
Failsafe control	In the EPS control unit, a failsafe function is integrated in the motor circuit for the purpose of safety. With the failsafe circuit in normal condition, the system is ON for the motor to draw current. If an abnormal condition is detected in the P/S system by the self-diagnostic function, the system turns OFF the circuit to interrupt the current supply to the motor so that the system can stop operation. Refer to "Fail-safe Function Description (LT-A750XP/ZK9) (Page 6C-5)".

EPS Diagnosis General Description (LT-A750XP/ZK9)

B931G46301002

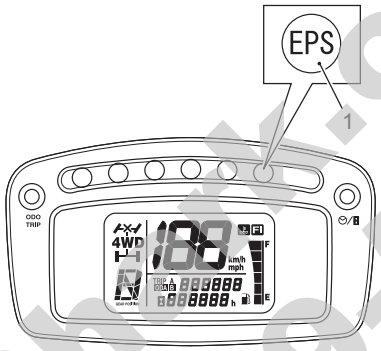
The P/S system in this vehicle is controlled by the EPS control unit. The EPS control unit has an self diagnostic system which detects a malfunction in this system. When diagnosing troubles, be sure to have full understanding of the outline of “Self Diagnostic System Description (LT-A750XP/ZK9) (Page 6C-5)” and each item in “Precautions in Diagnosing Troubles (LT-A750XP/ZK9) (Page 6C-1)”, and then execute diagnosis according to “EPS System Check (LT-A750XP/ZK9) (Page 6C-12)”.

Self Diagnostic System Description (LT-A750XP/ZK9)

B931G46301003

The EPS control unit performs the self diagnosis on the system and operates the “EPS” warning light (1) as follows.

- The “EPS” warning light lights when the ignition switch is turned to ON position (but the engine at stop) regardless of the condition of the P/S control system. This is only to check if the “EPS” warning light is operated properly.
- If the areas monitored by the EPS control unit is free from any trouble after the engine start (while engine is running), the “EPS” warning light turns OFF.
- When the EPS control unit detects a trouble which has occurred in the monitored areas the “EPS” warning light comes ON while the engine is running to warn the driver of such occurrence of the trouble and at the same time it stores the exact trouble area in memory inside of the EPS control unit.



I931H1630005-01

Fail-safe Function Description (LT-A750XP/ZK9)

B931G46301004

If malfunction occurs in the EPS system, this sets fail-safe relay OFF. Consequently, the indicator light ON, and no current will be applied to motor solenoid valve inactivating EPS and turning EPS indicator light ON. In this case, it functions as the normal steering. If malfunctions occurs while EPS is being activated, the fail-safe relay will be set OFF. Refer to “EPS Control Unit Diagram (LT-A750XP/ZK9) (Page 6C-7)”.

EPS Troubleshooting (LT-A750XP/ZK9)

B931G46304001

The EPS is equipped with a self-diagnosis function. The detected malfunction is stored as a diagnostic trouble code which causes the EPS indicator light to light up or flash in set patterns to indicate the malfunction. Diagnostic trouble codes saved in the memory remain stored even through the ignition switch is turned OFF and they cannot be deleted without performing the DTC erasing procedure. In order to repair the EPS correctly, ask the customer for the exact circumstances under which the malfunction occurred, then check the EPS indicator light and the output diagnostic trouble codes. Explain to the customer that depending on how the vehicle is operated, the EPS indicator light may light up even though the EPS is operating correctly.

Troubleshooting Procedure

Troubleshooting should be proceed as follows. If the order is performed incorrectly or any part is omitted, an error in misdiagnosis may result.

1) Gather information from the customer.
2) Perform the pre-diagnosis inspection. Refer to “Pre-diagnosis Inspection (LT-A750XP/ZK9) (Page 6C-10)”.
3) Inspect the EPS indicator light. Refer to “EPS System Check (LT-A750XP/ZK9) (Page 6C-12)”.
4) Output the DTCs stored in the EPS control unit. Refer to “DTC (Diagnostic Trouble Code) Output (LT-A750XP/ZK9) (Page 6C-19)”.
5) Perform appropriate troubleshooting procedures according to the DTCs output. Refer to “DTC Table (LT-A750XP/ZK9) (Page 6C-25)”.
   If troubleshooting procedures cannot be performed, try to determine the cause of the malfunction according to the information gathered in 1) through 4) and inspect the wiring. Refer to “EPS Wiring Diagram (LT-A750XP/ZK9) (Page 6C-6)” and “EPS Control Unit Diagram (LT-A750XP/ZK9) (Page 6C-7)”.

⚠ CAUTION

Each time a resistance is measured, the ignition switch should be set to OFF.

6) Inspect the EPS components. Refer to “EPS Motor Inspection (LT-A750XP/ZK9) (Page 6C-53)”.
7) Delete the DTCs and check the power steering operation. Refer to “DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)”.

Information Gathering
To properly diagnose a malfunction, one must not make guesses or assumptions about the circumstances that caused it. Proper diagnosis and repair require duplicating the situation in which the malfunction occurred. If a diagnosis is made without duplicating the malfunction, even an experienced service technician may make a misdiagnosis and not perform the servicing procedure correctly, resulting in the malfunction not being repaired. Therefore, in order to properly diagnose and repair the vehicle, the customer must be questioned about the conditions at the time that the malfunction occurred making “Information gathering” very important. In order that the information obtained from the customer to be used as a reference during troubleshooting, it is necessary to ask certain important questions concerning the malfunction. Therefore, a questionnaire has been created to improve the information-gathering procedure.

Pre-diagnosis Inspection (LT-A750XP/ZK9)

B931G46304002

The mechanical of the steering system should be inspected prior to performing any electrical checks. These inspections may find problems that the EPS could not detect; thus, shortening repair time.

Battery

Battery voltage inspection

1) Turn the ignition switch OFF.
2) Remove the seat. Refer to “Seat Removal and Installation in Section 9D in related manual”.
3) Measure the voltage between the (+) and (–) battery terminals using the multi circuit tester.
   If the voltage is less than 12.0 V, charge or replace the battery and inspect the charging system. Refer to “Battery Runs Down Quickly in Section 1J in related manual”.

DTC (Diagnostic Trouble Code) Output (LT-A750XP/ZK9)

B931G46304004

NOTE

- **Even through the EPS is operating correctly, a DTC is memorized in any of the following conditions.**
  - **Previous malfunctions were repaired, but the DTCs were not deleted.**
- **After carrying out DTC deleting and EPS operation check, explain to the customer that the EPS is operating correctly. Refer to "DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)".**

Use of Mode Select Switch

Connect the special tool to the mode select coupler to output the memorized DTCs on the EPS indicator light.

1) Turn the ignition switch OFF.
2) Remove the seat. Refer to "Seat Removal and Installation in Section 9D in related manual".
3) Connect the special tool to the mode select coupler (1).

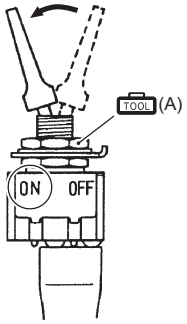
4) Switch the special tool to ON.



I931H1630028-01

5) Turn the ignition switch ON.
   The EPS indicator light starts flashing to indicate the DTC. Refer to "DTC Table (LT-A750XP/ZK9) (Page 6C-25)".

NOTE

- **If there is a DTC, the EPS indicator light keeps flashing cyclically and repeatedly.**
- **If there is no DTC, the EPS indicator light keeps lighting on.**
- **When outputting DTCs, never turn the ignition switch to headlight ON position or auxiliary headlight ON position in order to prevent the battery from discharging.**

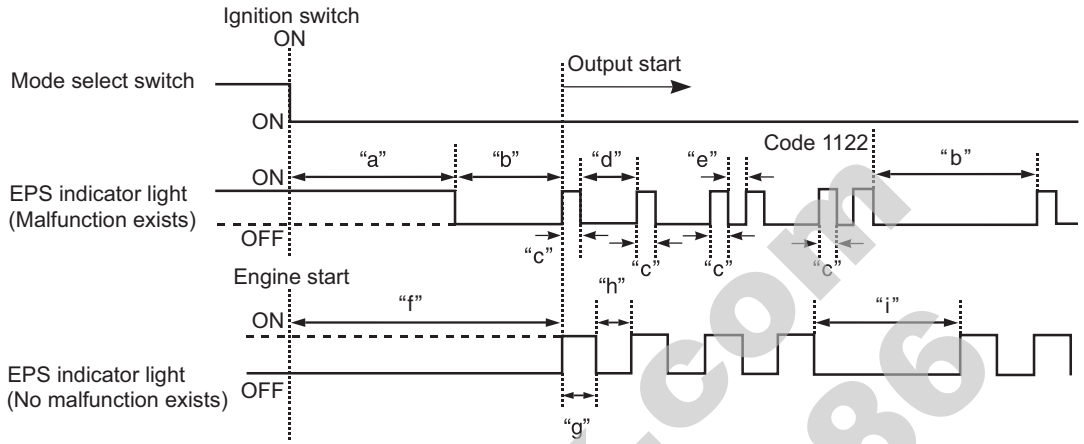
I931H1630029-01

6) Turn the ignition switch OFF and disconnect the special tool.

Understanding the DTC (Diagnostic Trouble Code)

A four-digit DTC is shown through the flashing pattern of the EPS indicator light. A number between 1 and 9 is represented by the number of times that the EPS indicator light lights up in interval of 0.3 seconds and the separation between the each digit are indicated by the light staying off for 1 seconds. In addition, the separation between the start code and the DTC is indicated by the light being off for 3 seconds. After the start code is displayed, DTCs appear from the smallest number code.

If no DTCs are memorized, the EPS indicator light keeps blinking by the four times at same interval.



I931H1630030-04

"a": Initial minimum light ON time (About 3 seconds)	"f": Indicator light OFF time (5 seconds)
"b": Error code interval (About 3 seconds)	"g": Normal code light ON time (1 seconds)
"c": Code light ON time (0.3 seconds)	"h": Normal code light OFF time (1 seconds)
"d": Main-sub code interval (1 seconds)	"i": Interval (3 seconds)
"e": Sub code (0.3 seconds)	

Use of SDS

NOTE

- **Don't disconnect couplers from EPS control unit, the battery cable from the battery, EPS control unit ground wire harness from the engine or main fuse before confirming the malfunction code (self-diagnostic trouble code) stored in memory. Such disconnection may erase the memorized information in EPS control unit memory.**
- **DTC stored in EPS control unit memory can be checked by the SDS.**

1) Remove the seat. Refer to "Seat Removal and Installation in Section 9D in related manual".

2) Set up the SDS tool. (Refer to the SDS operation manual for further details.)

Special tool

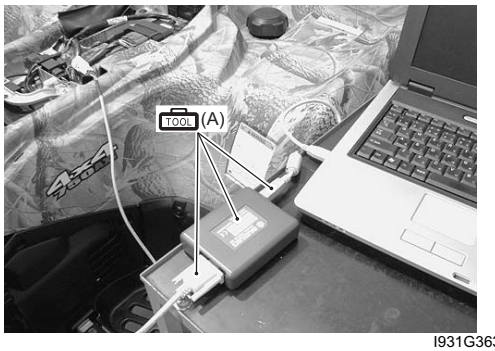
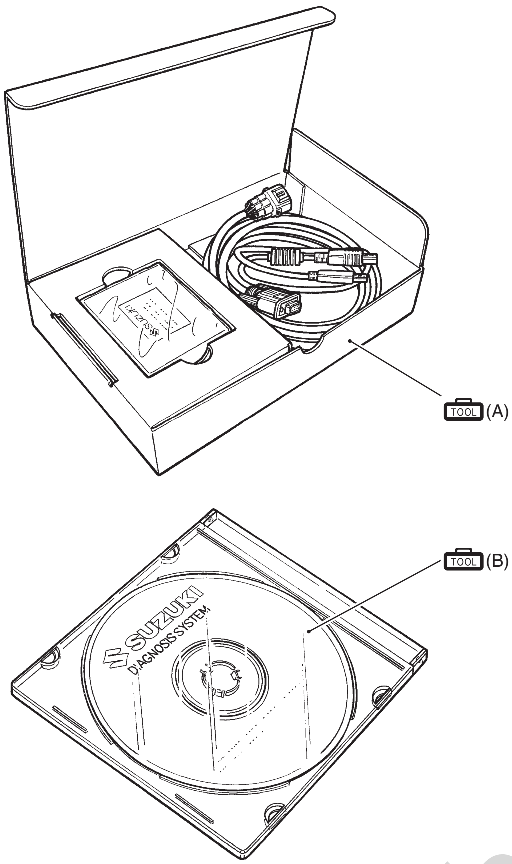
TOOL (B): 99565–01010–020 (CD-ROM Ver.20)



I931G3630019-01



I705H1110116-03

3) Read the DTC (Diagnostic Trouble Code) and show data when trouble (displaying data at the time of DTC) according to instructions displayed on SDS.

NOTE

- **Not only is SDS used for detecting Diagnostic Trouble Codes but also for reproducing and checking on screen the failure condition as described by customers using the trigger.**
- **How to use trigger. (Refer to the SDS operation manual for further details.)**
- **When DTC is checked, DTC "C1122" is displayed with ignition switch turned ON. However, if the engine is started and the display disappears, it is not a trouble.**

4) Close the SDS tool and turn the ignition switch OFF.

DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9)

B931G46304005

Use of Mode Select Switch

1) Remove the seat. Refer to "Seat Removal and Installation in Section 9D in related manual".

I931G3630020-01

2) Connect the special tool to the mode select coupler and output the DTCs.

Special tool
(A): 09930–82720 (Mode selection switch)

I931G3630021-01

3) While the DTCs are being output, set the special tool to OFF.

⚠ CAUTION

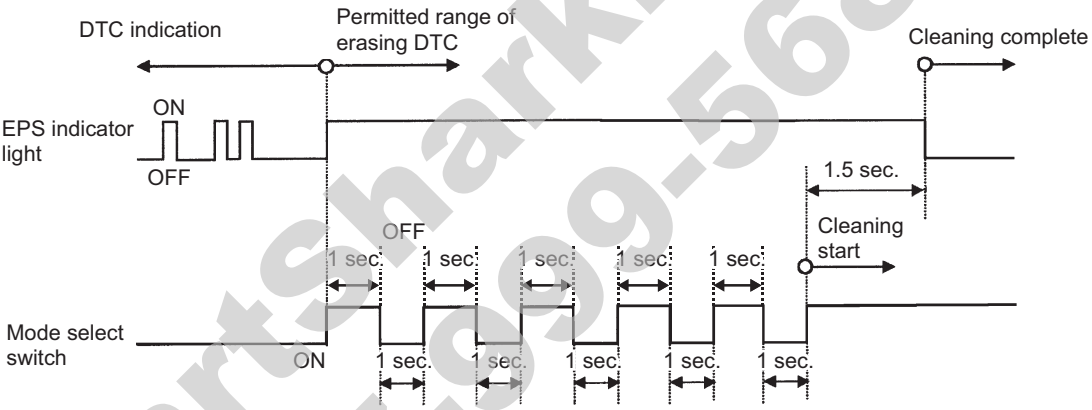
The DTC deletion mode starts 11.5 seconds after the switch is set to OFF.

I718H1450050-01

4) In the DTC deletion mode, switch the mode coupler switch OFF to ON five times or more within 10 seconds, each time leaving it at ON for more than 1 second.

I718H1450051-01

DTC Deleting Diagram



I931H1630035-04

5) After deleting the DTCs, repeat the code output procedure and make sure that no DTCs remain (the EPS indicator light no longer flashes).

NOTE

If any DTCs remain, perform the appropriate procedures, then delete the codes. If DTCs are left stored, confusion may occur and unnecessary repairs may be made.

6) Afterwards, start the engine and turn the handlebars to check that the EPS activates correctly.

7) Disconnect the mode select switch and reinstall the seat.

Use of SDS

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D in related manual”.

2) After repairing the trouble, turn OFF the ignition switch.

3) Set up the SDS tool. (Refer to the SDS operation manual for further details.)

Special tool

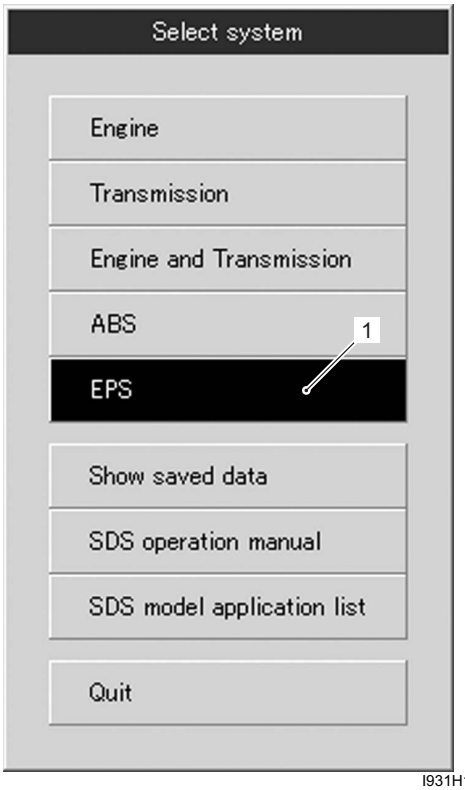
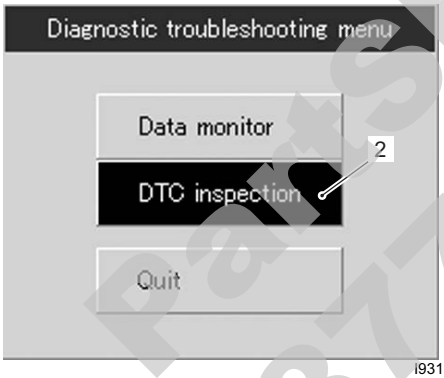
5) Click the “EPS” button (1).



I931H1630101-02

6) Click the “DTC inspection” button (2).



I931H1630103-01

7) Check the DTC.

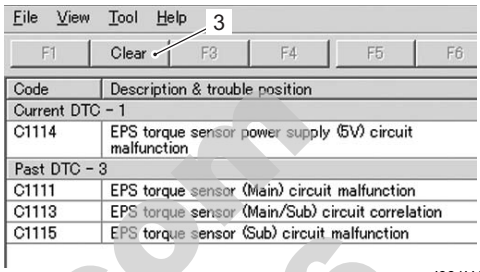
NOTE

The previous malfunction history code (Past DTC) still remains stored in the EPS control unit. Therefore, erase the history code memorized in the EPS control unit using SDS tool.

8) Click “Clear” (3) to delete history code (Past DTC).

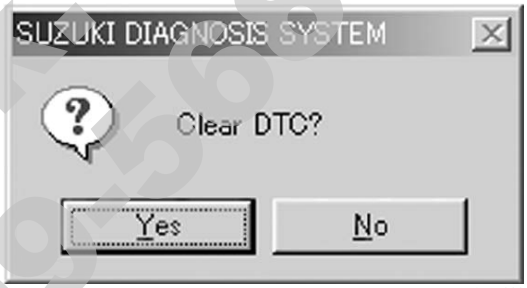
NOTE

The DTC is memorized in the EPS control unit also when the wire coupler of any sensor is disconnected. Therefore, when a wire coupler has been disconnected at the time of diagnosis, erase the stored malfunction history code using SDS.



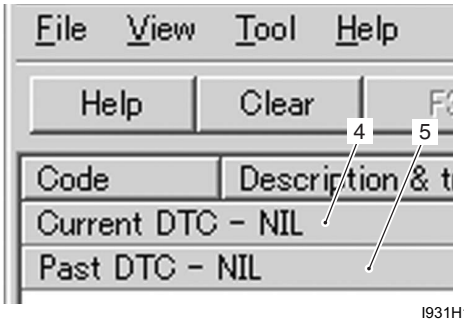
I931H1630036-02

9) Follow the displayed instructions.



I705H1110006-01

10) Check that both “Current DTC” (4) and “Past DTC” (5) are deleted (NIL).



I931H1630102-01

11) Close the SDS tool and turn the ignition switch OFF.

12) Disconnect the SDS tool and install the sheet.

13) Start the engine and the handlebars to check that the EPS activates correctly.

SDS Check (LT-A750XP/ZK9)

B931G46304006

Using SDS, take the sample of data from the new vehicle and at the time of periodic maintenance at your dealer. Save the data in the computer or by printing and filing the hard copies. The saved or filed data are useful for troubleshooting as they can be compared periodically with changes over time or failure conditions of the vehicle. For example, when a vehicle is brought in for service but the troubleshooting is difficult, comparison with the normal data that have been saved or filed can allow the specific EPS failure to be determined.

1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D in related manual”.
2) Set up the SDS tool. (Refer to “SDS operation manual for further details.)

NOTE

- **Before taking the sample of data, check and clear the Past DTC. Refer to “DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)”.**
- **A number of different data under a fixed condition as shown should be saved or filed as sample.**

DTC “C1114”: Torque Sensor Power Supply Circuit Malfunction (LT-A750XP/ZK9)

B931G46304010

Possible Cause
• Faulty torque sensor signal circuit. • Faulty torque sensor. • Faulty EPS control unit.

Troubleshooting

⚠ CAUTION

Never remove the torque sensor to prevent accident and damage.

NOTE

After repairing the trouble, clear the DTC using a SDS tool or mode coupler switch. Refer to “DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)”.

Step	Action	Yes	No
1	1) Turn the ignition switch OFF. 2) Check the EPS control unit power source couplers for loose or poor contact. If OK, measure the torque sensor input voltage.  I931G3630029-01 3) Disconnect the torque sensor coupler. 4) Turn the ignition switch ON. 5) Measure the voltage between R wire “A” and B wire “B”. DTC “C1121”: Vehicle Speed Signal Circuit Malfunction (LT-A750XP/ZK9)

B931G46304012

Possible Cause
• Faulty vehicle speed signal circuit.
• Faulty speed sensor.
• Faulty EPS control unit.

Troubleshooting

NOTE

After repairing the trouble, clear the DTC using a SDS tool or mode coupler switch. Refer to “DTC (Diagnostic Trouble Code) Deleting (LT-A750XP/ZK9) (Page 6C-21)”.

Step	Action	Yes	No
1	1) Turn the ignition switch OFF. 2) Check the EPS control unit connector for loose or poor contact. If OK, then check the vehicle speed signal lead wire continuity.  I931G3630031-01	Go to step 2.	Bl/B wire open.

Step	Action	Yes	No
1	3) Disconnect the EPS control unit coupler [B], speed sensor coupler [C] and combination meter coupler [A]. Refer to “Speed Sensor Removal and Installation in Section 9C in related manual” and “Combination Meter Removal and Installation in Section 9C in related manual”. 4) Check the continuity between the Bl/B wire of EPS control unit coupler [B] and Bl/B wire of speed sensor [C]. DTC “C1122”: Engine Speed Signal Circuit Malfunction (LT-A750XP/ZK9)

B931G46304013

Possible Cause
• Faulty engine speed signal circuit. • Faulty ECM. • Faulty EPS control unit.

Troubleshooting

NOTE

Start the engine after repairing the DTC and check that the indicator light is turned OFF. Refer to “Precautions in Diagnosing Troubles (LT-A750XP/ZK9) (Page 6C-1)”.

Step	Action	Yes	No
1	1) Setup the SDS tool (Refer to the SDS operation manual for further details.) or connect the mode select switch. 2) Click “Engine” and check the DTC code. *Is not DTC “C12 (P0335)” displayed?*	Go to step 2.	Inspect the CKP sensor. Refer to “DTC “C12” (P0335): CKP Sensor Circuit Malfunction in Section 1A in related manual”.

Step	Action	Yes	No
2	1) Turn the ignition switch OFF. 2) Check the EPS control unit coupler for loose or poor contact. If OK, then measure the engine speed signal lead wire continuity.  I931G3630031-01 3) Disconnect the EPS control unit coupler and ECM coupler. 4) Check the continuity between the W wire “A” and terminal “31”. **Special tool** **TOOL (A): 09900–25008 (Multi circuit tester set)** **TOOL (B): 09900–25009 (Needle-point probe set)** **Tester knob indication** **Continuity (•)))**  I931H1630052-02 *Is continuity OK?*	Go to step 3. DTC “C1141”, “C1142”, “C1143”, “C1145” EPS Motor Circuit Malfunction (LT-A750XP/ZK9)

B931G46304014

Possible Cause
• Faulty EPS motor circuit.
• Faulty EPS motor.
• EPS control unit malfunction.

Troubleshooting

Step	Action	Yes	No
1	1) Turn the ignition switch OFF. 2) Check the EPS motor coupler for loose or poor contact. If OK, measure the EPS motor voltage.  I931G3630036-01 3) Insert the needle-point probes to lead wire coupler. 4) Start the engine and turn the handlebars left turn. 5) Measure the voltage between R wire “A” and B wire “B”. **Special tool** **TOOL (A): 09900–25008 (Multi circuit tester set)** **TOOL (B): 09900–25009 (Needle-point probe set)** **Tester knob indication** **Voltage (⎓)** **EPS motor voltage** **Approx. 7.0 V**  I931H1630093-01  I931G3630037-01 *Is voltage OK?*	Go to step 2. DTC “C1153” EPS Control Unit Supply Voltage Circuit Malfunction (LT-A750XP/ZK9)

B931G46304015

Possible Cause
• Faulty regulator/rectifier.
• Faulty EPS control unit.
• Faulty wire harness, etc.

Troubleshooting

Step	Action	Yes	No
1	1) Remove the seat. Refer to “Seat Removal and Installation in Section 9D in related manual”. 2) Measure the voltage between the (+) and (–) battery terminals using the multi circuit tester. **Special tool** **TOOL (A): 09900–25008 (Multi circuit tester set)** **Tester knob indication** **Voltage (⎓)** **Battery voltage** **12.0 V and more**  I931G3630039-01 *Is the voltage over 12 V?*	Go to Step 2. DTC “C1152”, “C1154”, “C1155” EPS Control Unit Malfunction (LT-A750XP/ZK9)

B931G46304016

	Possible Cause
C1152	• Relay welding (EPS control unit internal circuit)
C1154	• Relay malfunction (EPS control unit internal circuit)
C1155	• EPS control unit malfunction

Troubleshooting

- Replace the EPS control unit. Refer to “EPS Control Unit Removal and Installation (LT-A750XP/ZK9) (Page 6C-48)”.

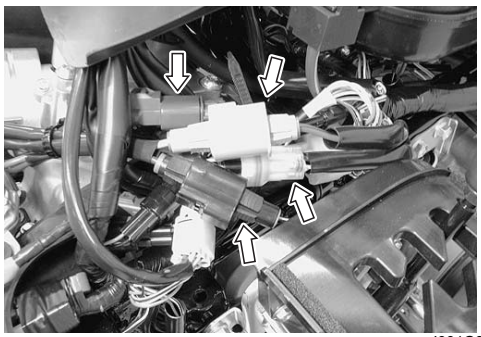
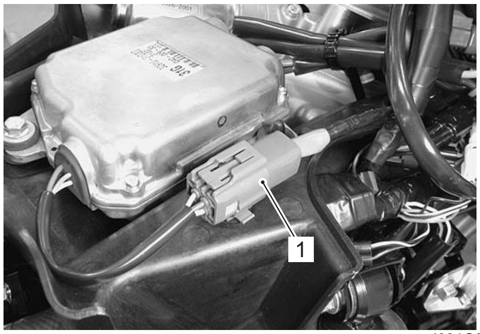
Removal

1) Disconnect the battery (–) lead wire. Refer to "Battery Removal and Installation (LT-A750XP/ZK9) in Section 1J (Page 1J-2)".
2) Remove the front fender. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D in related manual".
3) Disconnect the EPS control unit couplers.



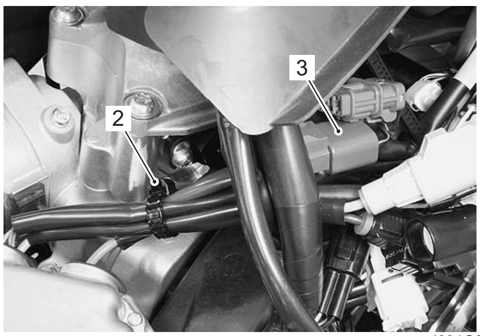
I931G3630041-01

4) Disconnect the torque sensor coupler (1).



I931G3630042-01

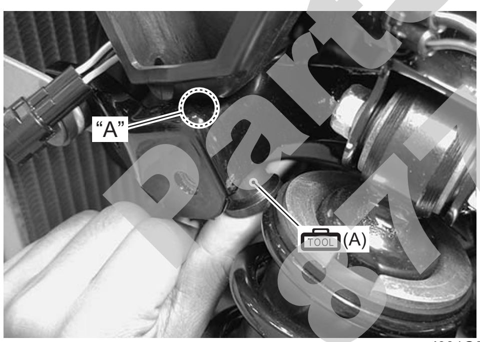
5) Remove the clamp (2) and release the EPS motor lead wire (3).



I931G3630043-01

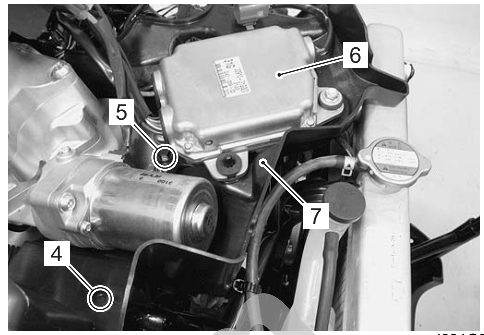
6) Release the clip part “A” of the EPS control unit plate with the special tool.

Special tool
TOOL (A): 09942–83110 (Clip remover)



I931G3630044-01

7) Remove the fastener (4) and bolt (5).
8) Remove the EPS control unit (6) along with the EPS control unit plate (7).



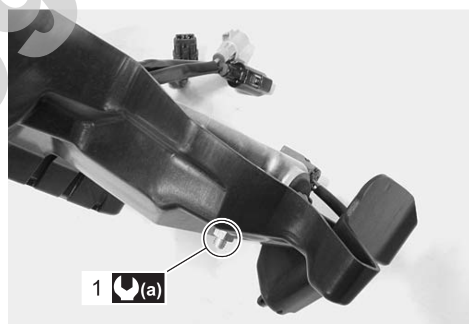
I931G3630045-01

9) Remove the EPS control unit (6) from the EPS control unit plate (7) as shown in the EPS control unit construction. Refer to “EPS Control Unit Construction (LT-A750XP/ZK9) (Page 6C-48)”.

Installation
Install the EPS control unit in the reverse order of removal. Pay attention to the following points:

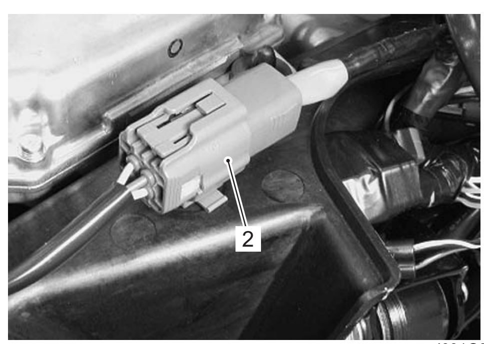
- Tighten the EPS control unit mounting nut (1) to the specified torque.

  Tightening torque
  EPS control unit mounting nut (a): 12 N·m (1.2 kgf-m, 8.5 lbf-ft)



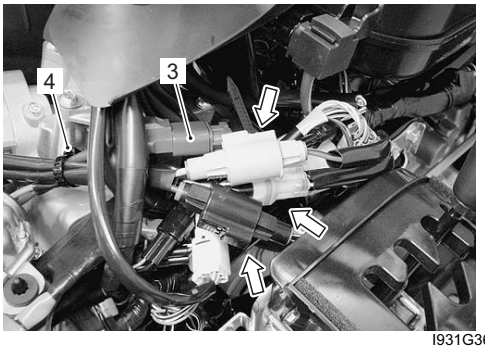
I931G3630046-01

- Connect the torque sensor lead wire (2).



I931G3630047-01

- Connect the EPS motor coupler (3) and clamp (4).
- Connect the other EPS control unit couplers.



I931G3630048-01

- Install the front fender. Refer to “Front Side Exterior Parts Removal and Installation in Section 9D in related manual”.

I931G3630056-01

13) Remove the EPS body assembly.

⚠ CAUTION

Never disassemble the EPS body assembly.

I931G3630057-02

Installation

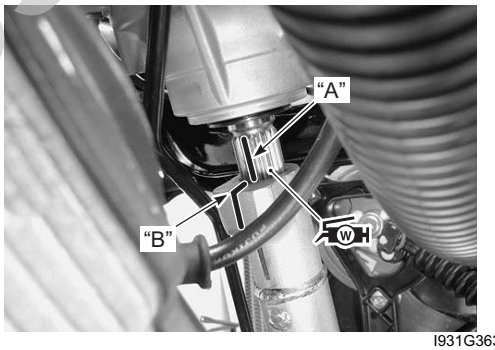
Refer to “Steering / Handlebars Assembly Construction (LT-A750XP/ZK9) in Section 6B (Page 6B-2)”.

Install the EPS body assembly in the reverse order of removal. Pay attention to the following points:

- Apply grease to the spline of the EPS body assembly.

  : Grease 99000–25160 (Water resistance grease or equivalent)

- When installing the EPS body assembly, align the marking “A” of the EPS output shaft and slide “B” of the steering shaft.



I931G3630058-02

- Install the cable guide (1) and tighten the bolts (2) to the specified torque.

  Tightening torque
  EPS body assembly mounting bolt (a): 26 N·m (2.6 kgf-m, 19.0 lbf-ft)

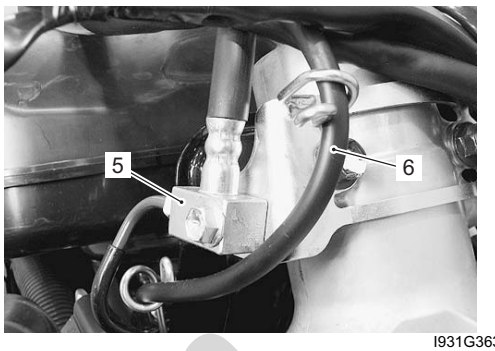
I931G3630061-03

- Install the front brake hose union (5) and throttle cable (6) to the cable guide.



I931G3630062-02

- Apply grease to the spline of the EPS body assembly.

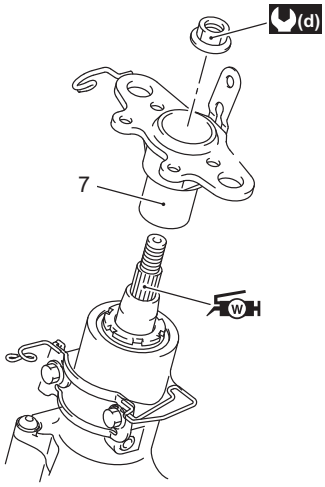
  W/H : Grease 99000–25160 (Water resistance grease or equivalent)

- Install the steering shaft plate (7) and tighten the steering shaft upper nut to the specified torque.

  ⚠ CAUTION

  - **Never use an impact wrench when tightening the steering shaft upper nut.**
  - **Never exceed the specified torque to prevent EPS body assembly damage.**

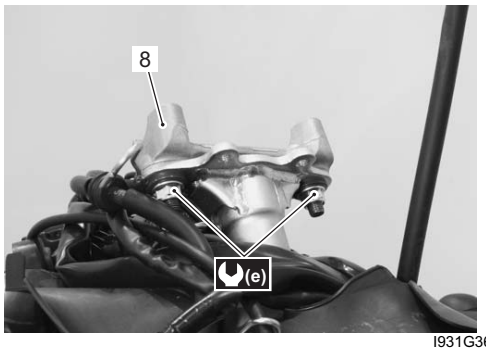
  Tightening torque
  Steering shaft upper nut (d): 120 N·m (12.0 kgf-m, 87.0 lbf-ft)



I931G3630072-01

- Install the handlebar holder (8) and tighten the nuts to the specified torque.

  Tightening torque
  Handlebar holder nut (e): 60 N·m (6.0 kgf-m, 43.5 lbf-ft)



I931G3630063-02

- Install the auxiliary headlight. Refer to "Auxiliary Headlight Removal and Installation in Section 9B in related manual".
- Install the front fender. Refer to "Front Side Exterior Parts Removal and Installation in Section 9D in related manual".
- Install the handlebars. Refer to "Handlebars Removal and Installation (LT-A750XP/ZK9) in Section 6B (Page 6B-3)".
- Install the combination meter. Refer to "Combination Meter Removal and Installation in Section 9C in related manual".

EPS Motor Inspection (LT-A750XP/ZK9)

B931G46306005

1) Disconnect the EPS motor coupler.
2) First, check for insulation with the tester between terminals "A" and "B".
   If continuity does not exist, replace the EPS body assembly with a new one.

2.	Clamp : Bind the wiring harness and hose with the clamp.	“B”:	Pass the wiring harness and cooling fan lead wire over the radiator hose.
3.	Clamp : Bind the wiring harness and cooling fan thermo switch with the clamp.	“C”:	To power source.
4.	Clamp : Bind the wiring harness and back up relay (For P-17) with the clamp.	“D”:	Pass the wiring harness under of the throttle cable.
5.	Clamp : Bind the EPS motor lead wire and EPS control unit lead wires.	“a”:	60 – 80 mm (2.4 – 3.2 in)
6.	EPS control unit	“b”:	20 – 30 mm (0.8 – 1.2 in)
7.	EPS motor	“c”:	10 – 15 mm (0.4 – 0.6 in)
8.	Ignition coil

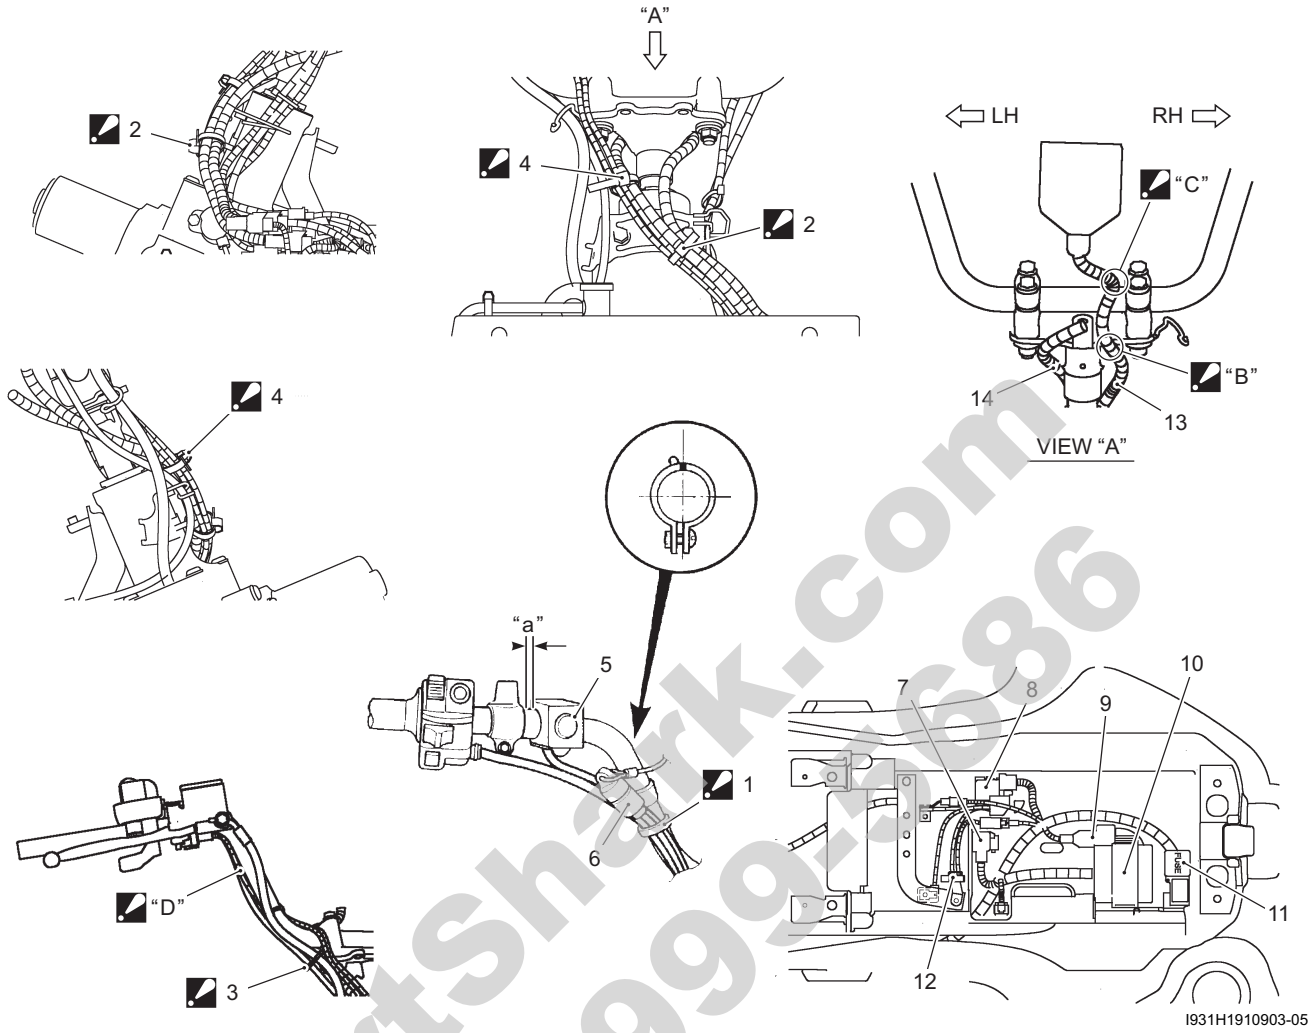
1. Starter motor	14. Injector coupler
2. Starter motor terminal	15. TP sensor coupler
3. Engine earth	16. ISC valve coupler
4. Clamp : Bind the wiring harness and rear brake cable with the clamp.	17. TO sensor
5. Clamp : Bind the wiring harness and diff-lock actuator lead wire with the clamp.	18. Horn (For P-17, 24)
6. Clamp : Bind the diff-lock actuator lead wire and rear brake switch lead wire with the clamp.	19. IAP sensor
7. Clamp : Bind the rear brake switch lead wire with the clamp.	"B": To rear fender top.
8. Clamp : Bind the wiring harness, generator lead wire and gear position switch lead wire.	"C": Slack the read wire.
9. Speed sensor lead wire.	"D": Pass the horn lead wire inside of the stay.
10. Clamp	"E": Pass the branch of left headlight lead wire over the radiator hose.
11. Clamp	(a) : 10 N·m (1.0 kgf-m, 7.0 lbf-ft)
12. Back up relay (For P-17)	(b) : 6 N·m (0.6 kgf-m, 4.5 lbf-ft)
13. ECT sensor coupler	



1. Clamp : Bind the left handlebar switch lead wire, rear brake lever switch lead wire, horn lead wire (For P-17, 24) and emergency switch lead wire (For P-17) with the clamp. Cut the tip of clamp after clamping.	10. ECM
2. Clamp : Bind the combination meter lead wire, 2WD/4WD/diff-lock switch lead wire, ignition switch lead wire, front brake switch lead wire, parking/rear brake lever switch lead wire, left handlebar switch lead wire, horn lead wire (For P-17, 24) and emergency switch lead wire (For P-17) with the clamp. Cut the tip of clamp after clamping.	11. Fuse box
3. Clamp : Bind the front brake switch lead wire and 2WD/4WD/diff-lock switch lead wire with the clamp. Cut the tip of clamp after clamping.	12. Fuse (EPS)
4. Clamp : Bind the combination meter lead wire, 2WD/4WD/diff-lock lead wire and front brake switch lead wire with the clamp.	13. Combination meter lead wire
5. Horn button (For P-17, 24)	14. Ignition switch lead wire
6. Emergency switch (For P-17)	"a": 10 – 15 mm (0.4 – 0.6 in)
7. Drive relay	"B": Pass the combination meter lead wire behind the upper bracket.
8. Starter relay	"C": Slack the combination meter lead wire under the combination meter.
9. Fuel pump relay	"D": Pass the front brake switch lead wire behind the handlebars.
