DSX-HSCS	Hot Swap Comm Server Software	Each	Alarm and Signal Systems	\$7,000.00	20%	\$5,600.00
	The DSX-HSCS program manages the operation of a Redundant Comm Server PC for the WinDSX SQL Software. It allows					
	two Comm Servers (the primary and backup PCs) to be online and ready at all times. The HSCS software monitors the					
	Primary Comm Server and when it fails brings the Backup Comm Server online in its place.					
	Note: For SQL Only.					
Access Level	Access Level Audit	Each	Alarm and Signal Systems	\$18,000.00	20%	\$14,400.00
Audit	This feature creates a log of all changes that are made to a card's access level assignment. This includes adding or removing					
	access levels to a card or by editing an access level directly. The software will create a log of all changes and can produce reports.					
	Hot Swap - Software:					
DSX-HSCS	Hot Swap Comm Server Software	Each	Alarm and Signal Systems	\$7,000.00	20%	\$5,600.00
	The DSX-HSCS program manages the operation of a Redundant Comm Server PC for the WinDSX SQL Software. It allows					
	two Comm Servers (the primary and backup PCs) to be online and ready at all times. The HSCS software monitors the					
	Primary Comm Server and when it fails brings the Backup Comm Server online in its place.					
DSX-SPS	Serial Port Switcher	Each	Alarm and Signal Systems	\$1,900.00	20%	\$1,520.00
	The DSX-SPS is the hardware required to switch physical serial port connections from the Primary Comm Server PC to the					
	Backup Comm Server PC. The DSX-SPS consists of a DSX-1040E rail mount enclosure, DSX-1040 PDP, the DSX-SPST					
	serial port switch trigger module, and a single DSX-2PC two port controller. The DSX-SPS provides everything necessary to					
	switch two comm ports.					
	<i>** For more than two Comm Ports use additional DSX-2PCs.</i>					
DSX-2PC	Two Port Controller	Each	Alarm and Signal Systems	\$490.00	20%	\$392.00
	Each DSX-2PC provides two switched serial ports. The DSX-SPS comes ready for two ports. Add up to 9 more DSX-2PCs					
	for a total of 20 ports.					
	The Backup Comm Server must have the same number of serial ports as the the Primary Comm Server plus 1 additional					
	serial port for the connection to the DSX-SPST Serial Port Switch Trigger Module.					
	PC Master:					
	Allows for LAN communications to each Slave or cluster of Slave Controllers instead of just the Master Controller.					
	This software allows a PC to emulate a Master Controller of a single location and communicate with slave panels using					
	TCP/IP over a LAN/WAN.					
	The Comm Server communicates to the PCM over the LAN. It downloads the Location data to the PCM as if it were a					
	Master Controller. The PCM then communicates and Polls the Slave panels just like a Master Controller. The only difference					
	is the Slave Controllers are connected to the Network using LAN Serial Devices such as the DSX LAN module.					
	The PCM can communicate with up to 63 Slave controllers each with its own LAN connection or multiple Slave Controllers					
	can be connected to the same LAN serial device. The PCM supervises the communication to these LAN Slave panels and					
	performs all global communication duties such as Linking and Anti-Passback.					
	Each PCM represents 1 Location. Multiple PCM can be used to represent Multiple Locations with diverse LAN and serial port					
	connected controllers.					
	Soft I/O:					

	Software provides a bridging interface between the DSX control panel network & various other devices and systems. Inputs and Outputs of other systems can be integrated and mapped into WinDSX through this interface.	Each	Alarm and Signal Systems	\$2,650.00	20%	\$2,120.00
