Flow Control Division

## Pressure Drop Chart

The curves given in the chart are valid for water at 20 °C. To read the pressure drop for other fluids the equivalent water volume flowrate must be calculated and used in the graph.

The values indicated in the chart refer to valves with horizontal flow. With vertical flows insignificant deviations occur only within the range of partial opening.

The chart and flow characteristics are applicable up to and including PN 40. Higher PN increase the zeta values and pressure drops at the same flowrates by approx. 20 %. The  $k_v$  values decrease accordingly.

$$\dot{V}_w = \dot{V} \cdot \sqrt{\frac{\rho}{1000}}$$

$\dot{V}_w$  = Equivalent water volume flow in [l/s] or [m³/h]

$\rho$  = Density of fluid (operating condition) in [kg/m³]

$\dot{V}$  = Volume of fluid (operating condition) in [l/s] or [m³/h]

## Enquiry Specification

NAF-Check Non-Return Valve  
Wafer design with extremely short overall length to DIN EN 558-1/-2, series 16 (K3)

## Order Specification

NAF-Check, type 526... DN...  
For flanges to DIN..., with(out) spring.

Fluid, flowrate, pressure and temperature.  
Type of pipe flanges.

## Flow characteristics

Installation in horizontal lines. Fluid: water at 20 °C.

Nominal size DN	Dual plate, fully open	
	Zeta values	$K_v$ value [m³/h]
40+50	5.1	44.3
65	3.6	89.4
