# *Ideas* for the Garden

## Lawn mowing technology of the future: Battery power for large lawn areas

The two battery powered lawn mowers of the BRILL LION product range offer ultimate freedom in the garden. They are noiseless and environmentally friendly – but without a power cord. They are powerful and keep their charge longer – but without the detrimental effects of CO<sub>2</sub> emissions or high running costs.

Lithium ion batteries have certain properties which make them ideal for the use in lawn mowers: no memory effect, low self-discharge and efficient DC motors with minimum loss of heat. In practice, this means lower running costs, longer service life of the battery, longer operating times and thus they are ideal for large areas of lawn – up to 20 % more than comparable models.

The BRILL LION mowers are very simple to handle: The battery can be removed easily and then connected to the supplied cord for recharging. A clearly visible LED display shows the charging status of the battery.

The two LION mowers combine the advantages of the lithium ion technology with the convincing features of two successful BRILL lawnmower ranges: BRILL evolution and BRILL RazorCut.

The distinguishing features of the **BRILL evolution LION 36** are the dual channel air system for an ideal cutting performance, the possibility of positioning it upright and the comfortable removal of grass cuttings. Plus: Under ideal conditions the lithium ion technology allows to cut an area of up to 400 sq m. Strong as a lion, but gentle to the lawn!

The new **RazorCut LION 38** offers the perfect symbiosis of the cutting technology of a cylinder mower and the latest technology in batteries. Thanks to its electrically driven blade cylinder, this mower is suited for up to 400 sq m of grass – just like the evolution LION. The reel blade allows the mower to cut the grass like scissors. The comfortable and elegant way to have an English lawn!

# BRILL evolution – the (R)evolution from BRILL

## This is what it stands for!

**Superior technology, convenient handling, dynamic design**

The **BRILL evolution** sets new standards in lawn mower technology. Innovative technology and functional design were the decisive factors in the development of the **evolution** series. The revolutionary space-saving concept is optimally tailored to today's requirements. When positioned upright, the **evolution** finds room in the smallest of spaces. The patented dual channel air system guarantees a perfect cut.

The **evolution** petrol mower is equipped with a special tank system, so that it can also be stored upright in a filled state. Particularly pleasing is the low weight of the petrol mowers. They only weigh slightly more than comparable electrical appliances. In this way mowing lawns becomes fun!

The **BRILL evolution LION** offers an outstanding mowing performance as well as all advantages of the successful BRILL evolution mowers: Cordless freedom, impressive operating times, less noise, emission-free working and low running costs. This is lawn mowing technology of the future.

Optionally with mulch kit

**The DuoAir Management**

A dual channel air system with effective cutting technology collects grass and sucks the lawn cuttings in an air flow, resulting in an ideal cutting performance even with the closest cutting height.

**More cleaner air for people with allergies**

A closed grass box effectively holds dust and pollen. This means that dirt is no longer swirled up and allergy sufferers can breathe a new sigh of relief.

**Always at the right height...**

The ideal position can always be attained thanks to the adjustable handle bars. The grass box which opens at the back can also be emptied without a change of grip.

**The upright position...**

A functional design makes the BRILL **evolution** a real space-saver. It is easy to carry or fit into even the smallest car boot. It shrinks in size if not in use. When positioned upright, it finds room in every corner.

**Getting a grip...**

The integrated ergonomical handles are a real relief. They can be used to lift and transport the BRILL **evolution** easily, in addition to placing it in the boot.

**Always close...**

The BRILL **evolution** can always be perfectly adapted to the right lawn height using the central, adjustable 7 position height settings. The deepest cutting height of 16 mm makes mowing lawns of golf course quality possible.

**Einfach praktisch**

The grass cuttings in the grass box can be easily removed without having to change your grip.

The closed grass box system protects people with allergies in the best possible way from dust and pollen.

**The control centre...**

Everything comes together cleanly and clearly – at the comfort panel with the useful cable carrier. Mowing with ease at long last!

**Well filled...**

The grass box level indicator of the BRILL **evolution** is a new practical thing. It can be easily read and you also know when it is time to empty the grass box.

### evolution mulching function

For the 41 and 42 series models a mulch box is available as a special accessory. This is inserted instead of the grass box and distributes the mown grass directly on to the lawn. In this way you fertilize your lawn and protect it from drying out.

### Practical cleaning...

Thanks to its upright position, it can be cleaned after use without difficulty.

There is even a storage bracket available as an accessory, making it possible to hang the **evolution** on a wall without difficulty.

# BRILL Hattrick – lawn care with fresh air cure

## Hattrick® The all-rounder

### Aerating, mowing, collecting – the multi-function machine that can do everything

Spring-clean for the lawn! The **Hattrick** aerates, mows and collects in one operation. The aerator roller on the front thoroughly removes thatch and moss from the lawn. It is equipped with robust, durable steel tines, which aerate the lawn as they rotate. The aerator roller is activated via the connection button.

The dual channel air system ensures an optimum mowing and collection performance under all conditions, so that the removed thatch and the grass clippings land safely in the large grass catcher.

The comfort panel with ergonomic handle guide and practical cable guide is clearly arranged and particularly pleasant to operate.

### Mulching with the BRILL MulchCut

When mulching the grass cuttings are finely cut and returned directly to the lawn and serve as a source of moisture and natural fertiliser. The Mulch Set is available as accessory. It is simply hooked into the collection chute in place of the grass box.

# brillencio – mowing lawns without side-effects

**Just  
right for  
people with  
allergies**

**Friendly to  
your ears**

**Kind to  
your back**

**Brilliant Features**

The **brillencio** from BRILL has literally been created for a relaxed lawn mowing. Its design took on fundamental requirements such as a noise prevention, comfortable handling and as far as possible, protection of those suffering from allergies from dust and pollen.

That is also what has emerged: friendly to your ears, just right for people suffering from allergies and kind to your back.

**Friendly to your ears as a matter of principle**

The silencer system integrated in the housing „swallows” the noise volume and at the same time deflects the exhaust gases from the engine directly towards the ground.

**Airspace – just right for people suffering from allergies**

The closed all-round retaining system prevents the ejection of grass, dust particles and pollen. People suffering from allergies can breathe a sigh of relief.

**Technology which is kind to your back**

The closed multi-function box covering the grass box at the rear provides noise insulation and optimises the air flow. **The folding mechanism of the handle bars enables the grass box to be removed whilst standing in an upright position.** The folding mechanism of the handle bars enables the grass box to be removed whilst standing in an upright position. A central and infinitely variable height adjustment of 30-80 cm provides ideal mowing positions.

**Magnesium housing – ultra light and unbreakable**

The housing of all 43 and 51 models is of ultra light, high impact-resistant magnesium – High-Tech is used in your garden!

**The closed silencer concept:** Emissions, dust particles and pollen are almost completely encapsulated in the multi-function box. The low-noise blade and the silencer which is integrated in the housing reduce the noise perception by up to 50%.

The **brillencio** enables the grass box to be removed from a standing position, thereby being kind to the back.

The aerodynamically optimised blade guarantees a clean cut.

The height adjustment is central and can be continuously adjusted from 30 to 80 mm.

Upon removing the grass box, the **brillencio** silent-mower becomes a powerful long grass mower.

The complete housing of all **brillencio** 43 and 51 models is made of the ultra light and highly impact-resistant material, magnesium.

# brillencio

- Housing with silencer
- Low-noise blade
- Removal of the grass box in a manner which is kind to your back
- Powerful long grass mower

# brillencio – mowing lawns without side-effects

## State-of-the-art materials

High impact resistance and extremely robust materials characterise the **brillencio**. The housing of the smaller models is made of high-quality PA/ABS plastic.

## Ready to start quickly – rapidly stored

Every **brillencio** is ready for work in an instant folded away again and stored so that it saves space. The compact design, the refined folding mechanism and the two integrated handles make it easy.

**Mg**

**Ultra-light – extremely stable** What has proved its worth in the aerospace and aeroplane technology is used in the **brillencio**. The housings made of magnesium are ultra-light, high impact resistant and robust.

**Runs very smoothly**

The long wheelbase means that the **brillencio** glides over the lawn pass after pass, stably and on track – attractive, clean cutting guaranteed!

**Perfect Balance**

The grass box is arranged in such a way on the **brillencio** that its weight is transferred to the rear axle when full.

**Convenient Vario-drive**

Several models save the gardener from having to push the mower because they have driven wheels. The Vario-drive with infinitely variable adjustable speed enables the **brillencio** also to handle large areas and lawn areas on slopes without difficulty.

### No blade of grass is spared

The **Steelline** product range is characterised by its robust steel deck, its powerful engines and its large cutting widths. The petrol mowers are equipped with big rear wheels for easy manoeuvrability. They show their versatility even on uneven ground and obtain a perfect cutting performance in high grass.

The powerful petrol mowers have a Briggs & Stratton engine. Three types are equipped with a 1-speed wheel drive of 3.5 km/h. The 52 model is supplied with side ejection and mulch kit as a standard feature.

The electric start enables the **Steelline 46 XL RE 6.0** to be switched on even more comfortably. The battery is recharged while mowing so you do not need an external charger in the course of the garden season.

#### Easily adjustable

The integrated spring system enables the cutting height to be conveniently set centrally to seven different heights from 30 to 70 respectively 80 millimetres.

#### Clean mowing

The grass box made of robust plastic holds 65 litres and can be removed easily.

#### Easy to manoeuvre

The extra large wheels with single-speed wheel drive ensure more grip and simple handling.

#### Easily visible

The practical level indicator shows when the grass box has to be emptied.

# BRILL Cylinder mowers – keeps you and your lawn fit

# BRILL Cylinder Mower

## The razor-sharp fitness programme

The classic lawn mower now in a modern design. Worthy of note is the modern shape of the sturdy and foldable handle bars in silver and grey with ergonomic foam rubber handles.

The large wheels with their special profile also ensure convenient working as does too the attractive "rear spoiler" which ejects the grass cuttings in a controlled manner. Mowing with the cylinder mower means precision cutting of each single blade of grass. Precision sharpened to a hundredth of a millimetre, blade cylinder and bottom blade of special hardened steel leave a lawn cut as if with scissors whereby the contactfree cutting technique – a BRILL invention – ensures quietness.

Mowing is even easier and more comfortable with the battery powered cylinder mower **RazorCut LION 38**. Due to its lithium ion technology it is ideal for areas up to 400 sq m – without cord, without emissions and without a lot of noise.

Weight	1.3 kg	

# RAZORCUT

**Battery-powered cylinder mower  
BRILL RazorCut LION 38**

**65082**

400 909 318 5386

25,2 V / 2,6 Ah

38 cm

blade cylinder with electric drive,  
5 blades

- maintenance-free because of anti-coiling device

- ergonomically shaped with foam rubber handle
- infinitely variable from 20 – 45 mm with monitoring scale on both sides
- Li-Ion Accu

safety switch

approx. 400 sq. m with fully charged battery available as accessory

86 dB(A)

ca. 11 kg

The cutting height adjustment of the RazoCut is infinitely variable from 14 to 45 millimetres or from 20 to 45 millimetres respectively.

It is as simple as that: If you want to change the battery, you can remove it with one grip.

Heat-treated cylinder blades ensure precise cut.

**BRILL battery for RazorCut LION**

Art no **65077**  
EAN Code 40 09093 185027

Two light emitting diodes indicate the battery charge condition. The LION battery is also suitable as a replacement for the old nickel-cadmium batteries just as the previous charger can be used for the new batteries.

# BRILL Lawn scarifiers – no problem with thatch and moss

## Your lawn breathes a sigh of relief!

The scarifying of the lawn is an important requirement for the obtaining of beautiful thick green grass. Only a powerful lawn scarifier effectively removes thatch, moss, cuttings and dead vegetation. Nutrients, air and water are otherwise unable to penetrate deep down to the roots of the grass. You gain the best results with the electric lawn scarifiers from BRILL.

With working widths of 30 to 36 cm and powerful electric motors from 1100 to 1400 watts, the BRILL electric scarifier is even able to remove thatch and moss from larger areas.

The BRILL lawn scarifier is also available as a powerful model with a petrol engine. With its wide working width of 40 cm, it guarantees efficient scarifying.

Height control

## And your lawn takes a deep breath...

## The BRILL lawn scarifier – clever technology:

- a compact design with functions easy to use
- central transport and parking position which can be operated from above
- infinitely variable height adjustment for the blade roller
- optimised discharge chute
- height-adjustable bars permitting ergonomically effective working
- carrying handles for easy transportation
- space-saving

# A beautiful, thick lawn needs air

### Ideal care

Scarifying is best carried out in the spring at the start of the period of growth and once again in the late autumn. The lawn aerator on the other hand can be used more often, because the interference is not so severe. Comparable to a vigorous raking, the rotating steel tines of the aerator roller scour through the space between the individual lawn plants. This means that excessive formation of thatch is prevented and the lawn remains healthy and vigorous over the entire year.

**2in1**

**Scarifying and aerating:  
two in one.**

## The relaxing way to cultivate the soil

BRILL Gardenboy 400 GB

The **BRILL Gardenboy** is the universal garden tool for preparing and looking after your beds. With its specially hardened steel prongs it scarifies the earth without mixing up the layer of humus in the top soil and the natural order of the useful micro-organisms. Thanks to its low weight and back-friendly ergonomic design the **BRILL Gardenboy** makes sure that the hard work required in looking after a garden becomes a pleasure. The **BRILL Gardenboy** – the innovative electric soil harrower for edge-trimming, scarifying, harrowing, loosening and weeding.

Art no		<b>65052</b>

Handle bars		Fixed
Lower handle		Infinitely adjustable and rotatable
Safety		Mechanic safety clutch as overload protection
Weight approx.		2.3 kg
Working depth	 cm	80 mm

# BRILL Shredder – compost with comfort

With the LH and ESK shredder, the cut material is drawn in by the rotating cutting wheel.

The 64 l collector box protects the blade access from below.

The indexing bolt guarantees safety. It prevents the unit starting on its own when undertaking relatively small pieces of assembly work.

## Crush tree cuttings...

**BRILL Shredders** turn hedge trimmings and tree cuttings into valuable shredded material in no time at all.

### The starter

As a powerful starter model, the MH model is a real fast-runner and works with the well proven flat blade technology.

### The power models

Innovative cutting techniques especially make the LH and ESK models quiet and especially easy to use.

### BRILL LH and ESK garden shredders

With the LH and ESK models, the shredder material is broken up by crushing and cutting, enabling it to rot more easily. **The collecting box fulfils an important additional function in the ESK model:** it is not only storage space for the shredded materials but it also forms a safety factor because it protects the discharge opening from access. Therefore, no-one can accidentally reach into the cutting mechanism from underneath while it is operating. If the box is removed, the unit switches off immediately. **The long distance between the filling hopper and the blade mechanism forms a safety factor in the 2300 ESK.**

### BRILL ProfiCut 2800 MH

This powerful universal shredder represents an energetic helper in the garden. Fitted with a 2.0 kW motor and a unique cutting mechanism, it chops up branches with a thickness of up to 5 cm without any problem. Safety is ensured by the large filling hopper with chips/slivers protection system as well as the automatic start-up safeguard. Its two large wheels allow the shredder to be transported easily.

The integrated toolbox for spare cutter and operating instructions is very practical.

Easily accessible cutting mechanism with directly driven flat cutter plate, crown knife and triangular cutters with three cutting edges.

# BRILL Lawn tractors – fun to drive in the garden

## Comfortable mowing of large areas

Optimized in respect of function and design, BRILL's lawn tractors now offer even more convenience and performance. The **Crossover** models have powerful engines and are optional equipped with hydrostatic travel drive, electric emptying of the grass box per rocker switch and an electromagnetic clutch for the cutter which enables the blade to be switched on in a simple manner. With cutting widths of 74, 92 and 102 cm the range permits even

large lawns to be mown comfortably and rapidly. The 92 and larger models have an asynchronous cutting mechanism with two suction-reinforced wing blades and ball-bearing-mounted V-belts. The powerful Briggs & Stratton or Honda engines ensure a high mowing performance. The extra large tyres on the 102 series mower give more driver comfort especially on difficult terrains.

#### Smooth running

Tractors with hydrostatic travel drive can be manoeuvred without jerks and steplessly per pedal.

#### Well lit

The standard fitting out with xenon lamps means that the ambient surroundings are well illuminated.

#### Convenient to operate

The central cutting height adjustment device is positioned directly next to the driver's seat.

#### The BRILL Mulch System

The lawn needs a great deal of moisture in the summer to prevent it drying out. Mulching proves to be extremely practical and effective, especially on large gardens. For the fine grass cuttings provide the lawn with moisture and fertiliser at the same time, in addition there is no need for any waste disposal.

# BRILL Lawn tractors – fun to drive in the garden

**POWERED by**  
**Honda**  
**Engines**

The BRILL Honda lawn tractors are equipped with a very efficient engine. They start easily, run smoothly and quietly and keep a clean cut even when mowing thick lawns.

## BRILL stands for quality and tradition

Already since the establishment of the company in the year 1873 the quality and efficiency of development and production have been the primary focus of BRILL. We started under modest working conditions in an on-site foundry in Wuppertal-Barmen. Today we have modern manufacturing plants as well as a highly developed logistics center at the company's site in Witten-Herbede.

For years our products and services and their reliability have been documented and confirmed with various safety test marks and awards by independent internationally recognized institutions.

To guarantee consistent production quality, the company has been **certified under DIN ISO 9001** since 1997.

That means that quality can be checked in all stages of production. That means proven quality for you.
