Tools to Make Your Life Easier

LASERS

Laser Targeting Systems single control panel with a magnet on the back allowing the laser to be mounted under the bridge, arm, or on the side of an embroidery machine. Laser runs on batteries and can be easily moved from one machine to another. Choose from 3 laser types.

LTS-041SPU	Magnetic Spot Tracing Laser	\$95.00
LTS-042SPU	Magnetic Line Tracing Laser	\$175.00
LTS-043SPU	Magnetic Cross Tracing Laser	\$205.00

LASER SYSTEMS FOR SCREEN PRINTING / HEAT TRANSFER

Laser systems to help you increase production time while minimizing mistakes. Load any garment quickly and accurately onto your automatic or manual press, direct-to-garment-printer, or modify the system for your embroidery hooping board. Laser Targeting Systems has everything you need to customize your system for your shop today.

Just choose how you would like to mount your system, the control panel, and the number and type of lasers you desire. It's that easy! Call us today to start designing your system.

LTS-001UPS	Floor Stand	\$150.00
LTS-0080ELS	Table Stand	\$80.00
LTS-003MBA	Mounting Bracket	\$80.00
LTS-011MPU	Manual Control Panel	\$210.00
LTS-021APU	Automatic Control Panel	\$210.00
LTS-015L	Line Laser	\$150.00
LTS-018C	Cross Laser	\$180.00

Laser Alignment for Embroidery Hooping, and Tracing

Customize a system for your shop today!

The Future of Alignment Technology

Never worry about hitting a hoop with the needle or presser foot using the Tracing Laser.

Hooping Board Systems bring the lines of the board on top of the garment for precise placement. With a laser system, you can easily find the center of your board, the center of your hoop, and line up your design on top of a pocket. Minimize mistakes and increase production time.

Laser Systems are also available for Screen Printing Presses and Heat Presses.

GAUGES

Towa	TM-1	Standard Bobbin Tension Gauge	\$64.95
Towa	TM-3	Jumbo Bobbin Tension Gauge	\$64.95
Tajima	TTG-TAJIMA	Upper Thread Tension Gauge	\$16.25

ORGAN NEEDLES

**INNOVATIVE TECHNOLOGY
WITH AN EYE TOWARDS
THE FUTURE**

While the needle is the least expensive component in any embroidery machine, it is the most important. High quality, ORGAN needles designed in cooperation with the machine builders assure maximum performance, quality, and economy.

ORGAN needles are manufactured from special high carbon, silicone rich steel. We use the latest state-of-the-art production techniques to insure highly polished eyes for dependable, smoother stitches, consistent quality and fewer thread breaks.

ORGAN assures you the *right* needles for all your embroidery jobs. ORGAN supplies the largest variety of needle types, sizes, eye configurations, point designs, and finishes for every embroidery task.. ORGAN assures you excellent quality needles, economical prices, and optimal performance.

COOL-SEW® NEEDLES

The **COOL-SEW** finish was developed to alleviate needle problems resulting from the following situations:

- (1) Heat Buildup in penetration of synthetic, chemically treated, or very dense materials
- (2) Materials or residue sticking to needle surface or in eye
- (3) Excessive sewing thread breakage due to friction in the needle eye

As a needle penetrates synthetic, chemically treated or very dense materials a great deal of friction may develop. The needle may get so hot as to actually melt or fuse the sewn material along the seam. The needle's heat may melt the synthetic sewing thread. When the machine stops, the melted residue may stick to the needle surfaces as it cools.

The nature of some materials makes them rather "sticky." Materials such as rubber, foam, and synthetic fillers stick to surfaces with which they make contact. They may stick to needles which penetrate through them, even at relative slow sewing speeds. The result may cause undesirable stitch appearances as these materials push through or pull up through needle holes.

Synthetic threads often have a higher friction coefficient than natural fiber threads such as cotton. Passing through the eye of a needle friction develops which causes the needle to heat up. As the speed of the thread passing through the eye of the needle increases, the heat of the needles rises, often to temperatures which will melt the synthetic sewing thread causing it to break.

Chemical coatings or treatments of threads and materials may cause troublesome sewing problems. Bonded layers, waterproofing, dyes, starches, adhesives, sizings, or other alterations to any fibers may result in needle heat-buildup, sticking problems, excessive thread breakage, and clogged needle eyes.

The **COOL-SEW** finish needle's surfaces, even in the eye, are resistant to sticking. Its non-stick finish has a very low friction coefficient which prevents excessive heat buildup and its resulting problems. Few, if any, materials stick to the surfaces of Cool-Sew needles.

When **Cool-Sew** needles are used under conditions described above you can expect neater stitches, less sewing thread breakage, less puckered stitches, less downtime, less defects, and increased productivity.

COOL-SEW needles are ideal for sewing through vinyl, synthetics, chemically treated materials, glued materials, rubberized goods, nylon, foam, dense materials, and with synthetic threads.

PD PERFECT DURABILITY NEEDLES

Organ Needle Company has managed to combine the functionality of sewing machine needles with the latest technology of ceramic coatings. These new **PD** (*Perfect Durability*) needles have titanium nitride layered on their surfaces to extend their productive life by as much as five times that of conventional needles.

Lasts Five Times Longer Than Chrome-Plated Needles

Productivity of automated and unmanned sewing equipment is limited by the life of their needles. **PD** titanium coated needles are significantly stronger than other needles while maintaining elasticity. This reduces needle breakage, bending and distortion. **PD** needles are more wear resistant than conventional chromium plated needles. **PD** needles provide *perfect* reliability and *durability* in prolonged stitching operations.

Stronger at the Point of the Needle

Organ's process for making **PD** needles also strengthens the point of the needle. The point of a needle is exposed to high pressures causing needle wear and breakage. The strength of the needle has been reinforced while maintaining a perfect shape in order to provide greater wear resistance and durability.

Test of Wear with a Chrome Plated Needle

Test of Wear with a PD Needle

Using PD needles means better quality stitches, less downtime, higher productivity And lower cost production.

Hooping Systems

EMS Clamping Systems

EMS HoopTech Clamps provide embroiderers with a solution for hooping difficult to hoop items like: Carhart jackets, anything leather, blankets, towels, bags, luggage, briefcases, CD cases, shoes, and more!

This spring loaded clamping device fits on to the machine just like a tubular hoop. Because it does not pinch material, it will clamp right over seams and zippers without damage!

Window sizes for the ICTCS 1 Clamping System

Window sizes for the ICTCS 2 Clamping System

Part#	Description	Price
-------	-------------	-------

NEW LARGE SIZE

ICTCS313X9	Extra Large Size 13" x 9" with Arms	\$599.95
------------	-------------------------------------	----------

SHOE CLAMP

ICTCS-SHOE	Shoe clamp chassis with adapter	\$389.95
------------	---------------------------------	----------

This clamp is spring loaded with one window piece, 2 3/4 x 1 1/2. Just turn the knob to open and close. It is designed to allow embroidery on the sides of athletic shoes or cleats, the tongue of a shoe, or the straps on a flip flop. Fits on most single head machines, attaches to the back of the machine with an adapter. Please specify machine when ordering.

SLIM LINE CLAMPING SYSTEMS

This system is designed for single head machines only. Attaches to the back of the machine with an adapter, please specify machine type when ordering. Fits on Tajima, Brother, Barudan, Happy, SWF, Melco, and Toyota.

Smaller Style
