# Soup Maker Hints and Tips

- When cooking in your Soup Maker, the timer must be set to at least 1 minute.
- The use of heated stock or stock made with boiling water will decrease the total time required from start to finish when making soup.
- For best results prepare all ingredients before starting the cooking process as this is very quick.
- The timer can be increased or decreased throughout the cooking process. To heat oil or melt butter, set the timer for the full cycle time and set the heat on low for around 30 seconds - 1 minute. Once heated, add remaining ingredients and stock if cooking soup. Bring to a vigorous boil on high for up to two minutes then return the settings to simmer.
- If the timer runs down to zero during cooking, a beep will sound. If your recipe requires further cooking, simply put the timer back on, reset the temperature and keep cooking.

The low setting can also be used for delicate foods that require lower temperatures for cooking, melting cheese or warming cream that has been added to the end of a recipe.

- The Soup Maker comes with 3 temperature settings;
  - Low is suitable for all browning, frying, sauteing and cooking most foods.
  - High is suitable for bringing liquids to boil or for cooking with a very high heat.
  - Simmer is for simmering soups and sauces until the vegetables are tender and ready for blending.
- To prevent sticking we recommend the use of a knob of butter and 1 tsp of oil when sauteing onions and garlic. For a lower calorie option use 1 tbsp water and 1 tbsp oil.
- Use the stir function throughout the cooking process, this will prevent foods from sticking to the base of the Soup Maker or from being over cooked and burning. We recommend using the stir function in short bursts, little and often. This will ensure even cooking without chopping the ingredients too much.

- When cooking in the Soup Maker, always ensure the lid is left on the glass jar. To add ingredients, remove the measuring cup from the lid and allow built up steam to be released to avoid scalding, then proceed to add ingredients, or set the temperature to simmer when adding larger quantities of ingredients, but always replace the lid once they have been added. Always add ingredients with care, the cooking plate gets very hot!
- The Soup Maker can either heat and stir or blend. It cannot blend whilst the heater is in use, this is a safety feature. If you need to blend foods, turn the timer off, this will de-activate the heater and then you will be able to blend.
- When blending hot ingredients, level 1 or 2 is all that is required to get a silky smooth liquid.
- If you prefer texture to be left in your recipe, use the pulse button in short bursts. Like the blend function, the pulse cannot be used during the cooking process, so turn the heat off before pulsing.
- When blending cold ingredients or crushing ice, level 3 or 4 will give you optimum results.
- If you have used the Soup Maker to cook and blend hot ingredients, allow the jar to come back to room temperature before blending very cold ingredients, which also applies in reverse, rinse a cold jar with warm water before adding hot ingredients. This will avoid damage to the glass jar.
- Never overfill the Soup Maker, these recipes are a guide, as vegetable sizes vary, always ensure the maximum capacity marked on the jar is not exceeded.
- For full care and use instructions, please see the instruction manual which comes with your Soup Maker.
