

Deck of Life

Instructions

How to Play

Request a card by pressing the “Deal Card” button.

The card that appears will offer three actions:

- Play – The card will be added to your history
- Discard – The card will be removed from your hand
- Find Group – The card will be added to the Looking For Group (LFG) panel

Once a card is in the LFG panel, you will be able to invite your friends to join your group. If they accept, they will be added to your group and their name will appear in the LFG panel.

To play the card as a group, click the “Play as Group” button in the LFG card.

How to Build

In order to install the game, clone the repository:

```
$ git clone https://github.com/raulgrell/WebProject
```

Edit the configuration file in `./config/default.js` – add the correct username, password and database name for your system.

Install the package and its dependencies

```
$ cd WebProject
```

```
$ npm install
```

To use the development server, launch the `dev:server` and `dev:app` scripts in separate terminals.

The server will restart on any changes, and the client app will automatically reload modules when they are changed.

```
$ npm run dev:server
```

```
$ npm run dev:app
```

The script will automatically create all non-existent database tables and populate them with initial data.

You can access the interface through your browser at **`http://localhost:3000`**
