Install Magento Extension

Add "Emipro_apichange" Magento extension at magento side, follow the following steps.

- Go to module zip file.
 - In that you will find extension named "Emipro_Apichange_for_magento2_v1.0.0.zip".
- Upload Extension :
 - Go to your Magento root directory
 - Extract extension zip file, and add 'app' folder it in magento root directory.

➤ Install Extension

- Go to Magento root directory and run following command:
- **php bin/magento setup:upgrade --keep-generated**
- **php bin/magento cache:clean**

Add Additional Parameter in odoo.conf file

For Odoo-Magento Connector, to execute job of import or export operation, We need to configure job runner. To configure job runner follow the following steps:

➤ **Add following parameters in odoo.conf file :**

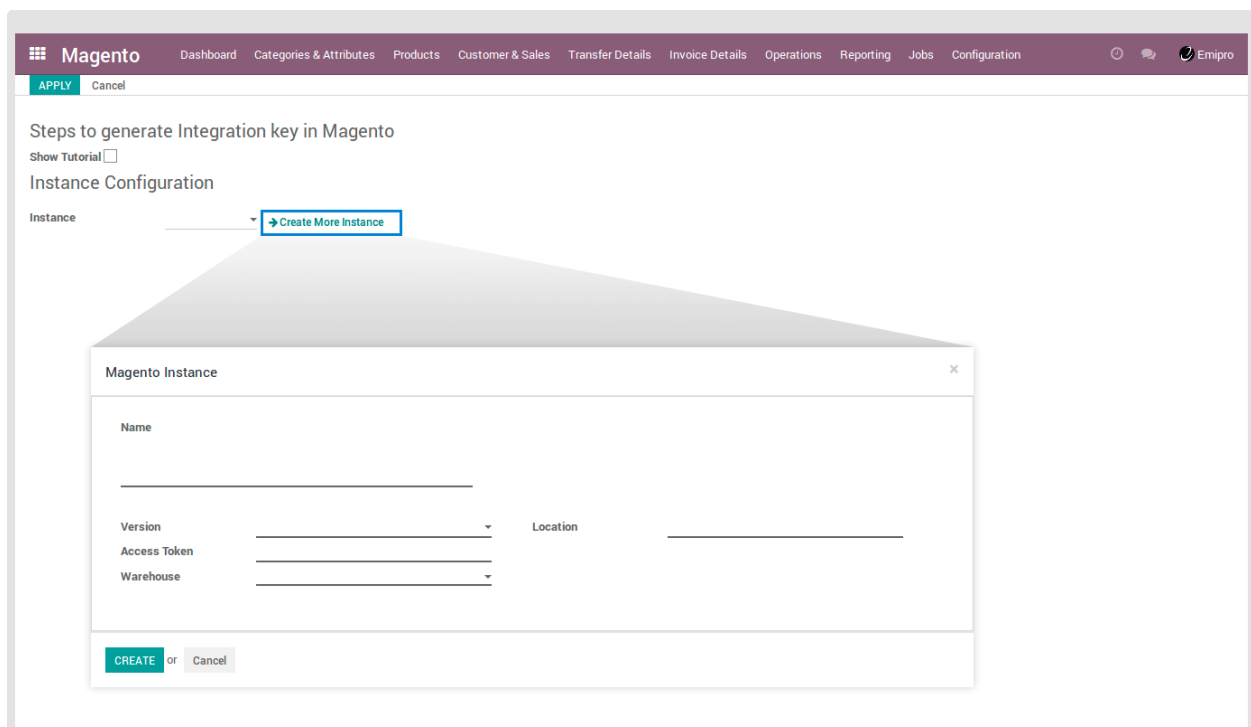

- [options-connector]
channels=root:1
 Magento:1
workers=5

➤ **Do following changes in /etc/init.d/odoo script :**

- Load odoo with option "--load=web,odoo_magento2_ept"
- **Example :** start-stop-daemon --start --quiet --pidfile \${PIDFILE} --chuid \${USER} --background --make-pidfile --exec \${DAEMON} -- \${DAEMON_OPTS} --load=web,odoo_magento2_ept

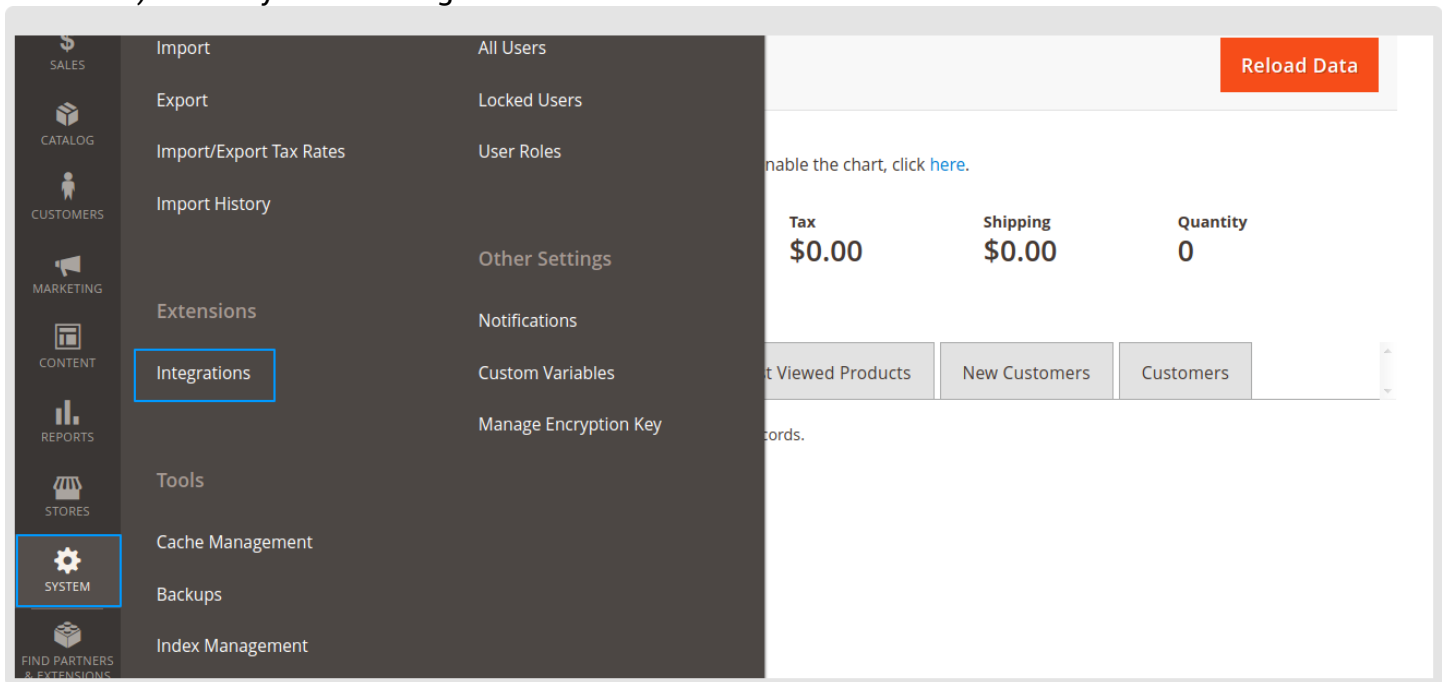

Create Magento Instance in Odoo

- After install Magento-Odoo Integration in your Odoo, You can see Magento menu in your Odoo, If Current user has rights as manager or User for Magento Connector.
- For use Magento-Odoo Integration we need to connect Magento Store with Odoo.
- You can Configure Magento Instance under Menu Magento >> Configurations >> Settings.
- There is one section called "Instance configuration",click on "Create More Instance",
- You can see the wizard for Instance configure.
- In that wizard add Magento2 details like version of magento, Magento Location, Access Token, Warehouse and click on "Create" Button.
- You can generate Access Token through following steps.

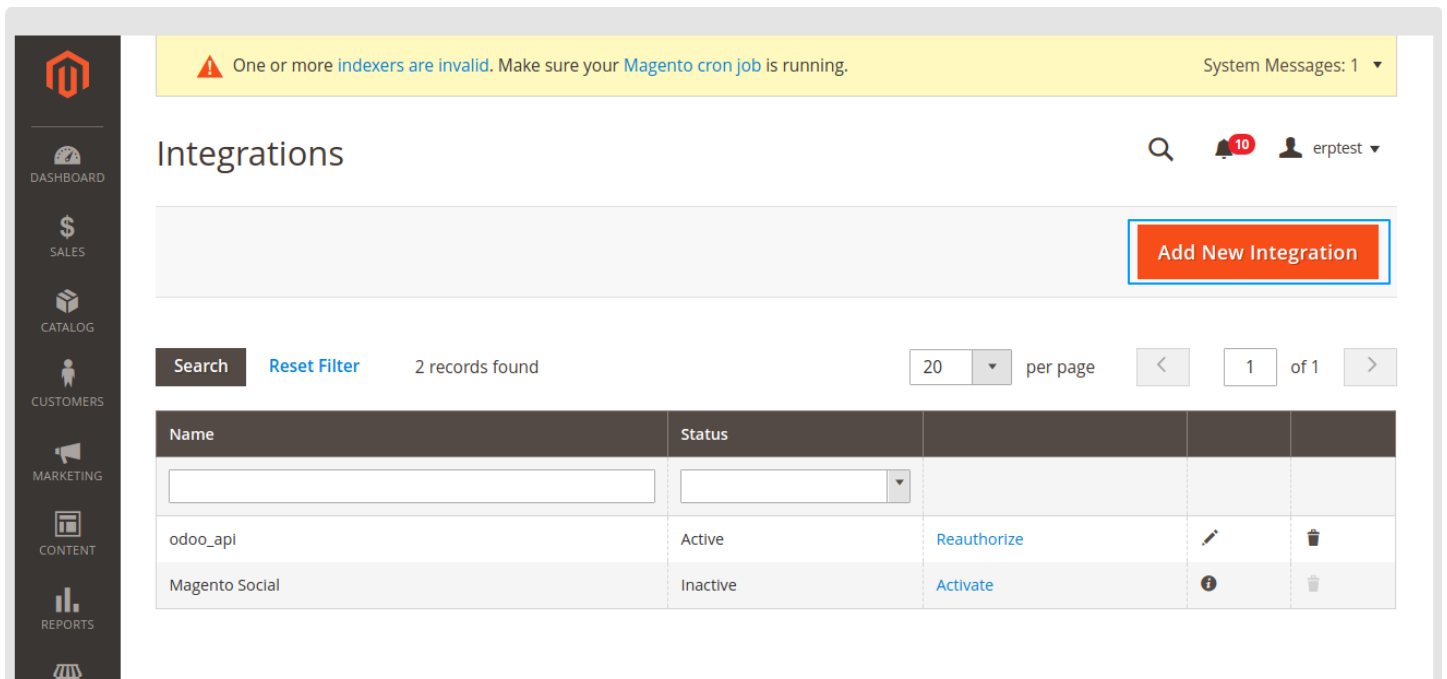

Generate Access Token On Magento

1) Go to System > Integration menu:

2) Click On button "Add New Integration":

3) Enter General Information like name for integration, Email And current user's password:

Edit "odoo_api" Integration

← Back **Save**

BASIC SETTINGS

- Integration Info
- API

General

Name *

Email

Callback URL

Enter URL where OAuth credentials can be sent when using OAuth for token exchange. We strongly recommend using https://.

Identity link URL

URL to redirect user to link their 3rd party account with this Magento integration credentials.

4) Go to API tab > and Select "ALL" In Resource access and Click on "Save" button to save Integration :

Edit "Test" Integration

← Back **Save**

[Account Activity](#) | [Report an Issue](#)

6) Click on "Allow" button in opened Pop up :

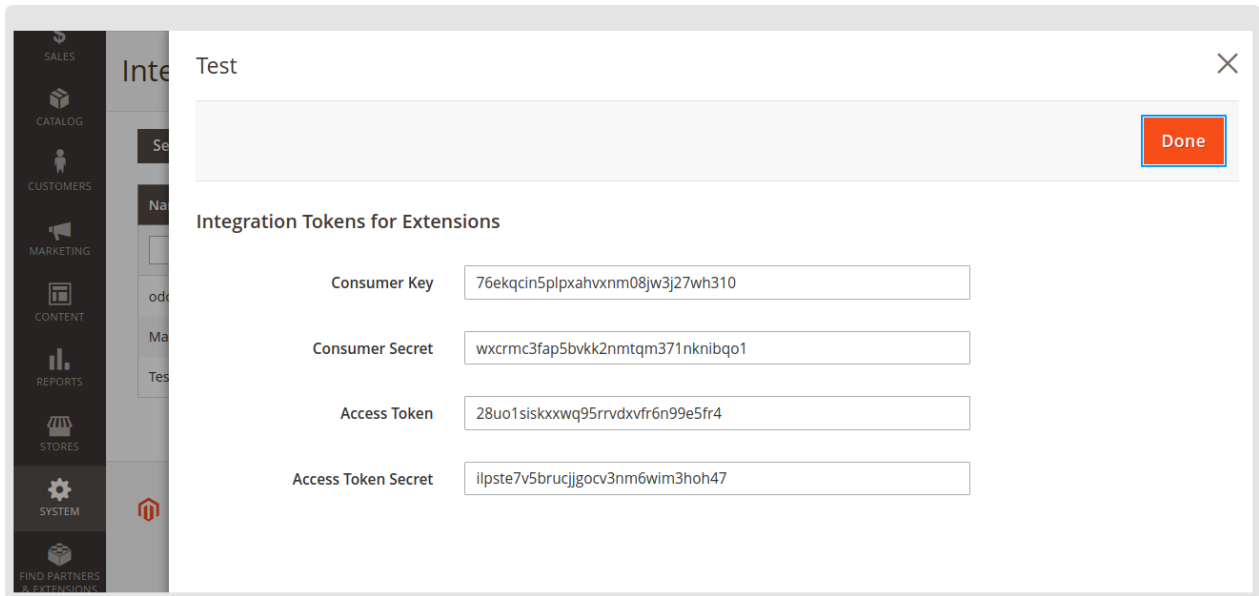

Test ✕

[Allow](#)

The integration you selected asks you to approve access to the following:

- API
- Dashboard
- Sales
 - Operations
 - Orders
 - Actions
 - Create
 - View
 - Send Order Email
 - Reorder
 - Edit
 - Cancel
 - Accept or Deny Payment
 - Capture
 - Invoice
 - Credit Memos

7) Save Access token and Click on "Done" To use Integration.

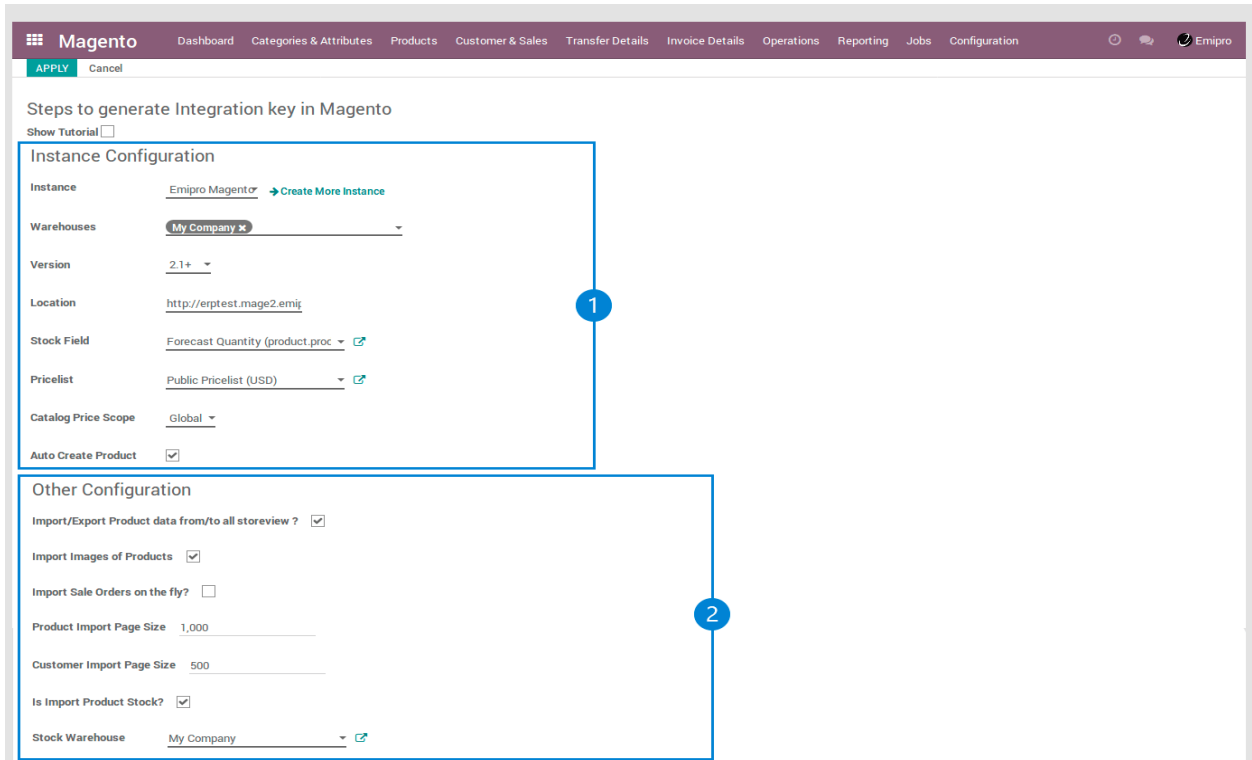

The screenshot shows a configuration window titled "Test" with a close button (X) in the top right corner. Below the title bar is a large empty text input field with a "Done" button to its right. Underneath, the section "Integration Tokens for Extensions" contains four rows of labels and text input fields:

Label	Value
Consumer Key	76ekqcin5plpxahvxnm08jw3j27wh310
Consumer Secret	wxcrmc3fap5bvkk2nmtqm371nknbqo1
Access Token	28uo1siskxxwq95rrvdxvfr6n99e5fr4
Access Token Secret	ilpste7v5brucjjgocv3nm6wim3hoh47

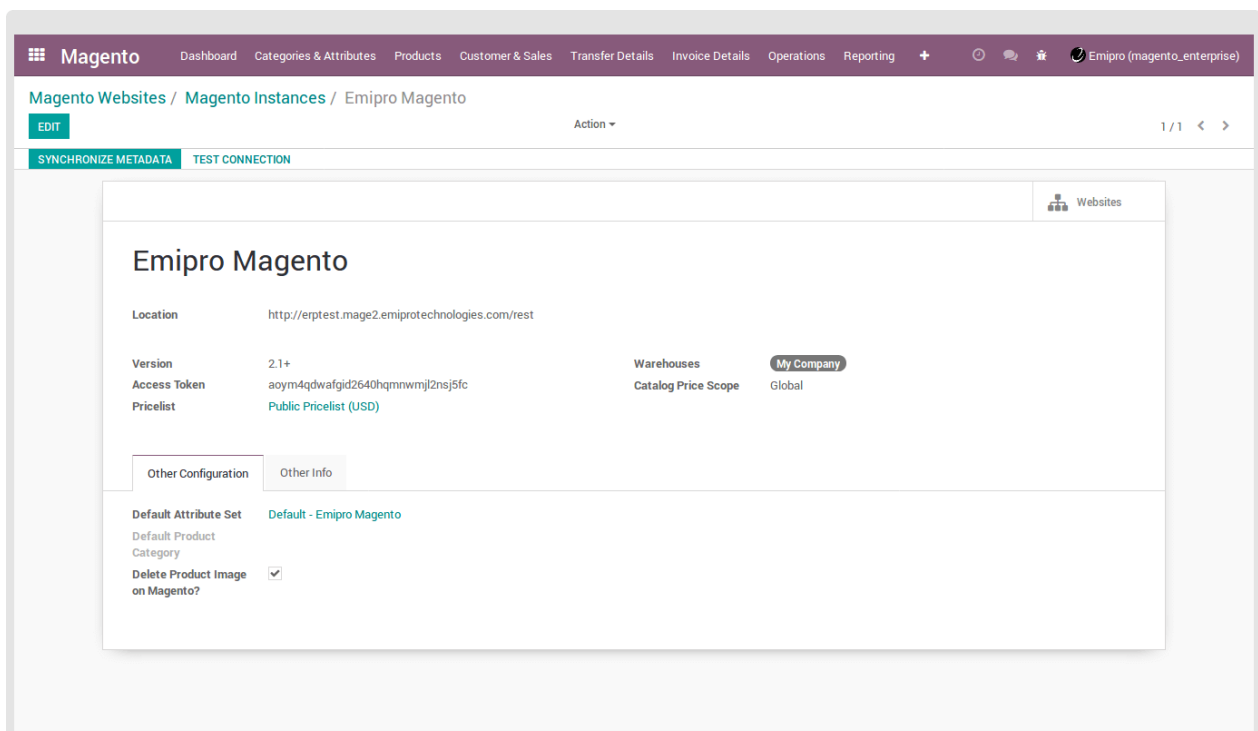

Configure Magento Instance

- According to the Magento structure, one Magento Instance have multiple websites, One website have multiple Stores and one store has multiple store views. And all have its own configuration parameters. Like website has configuration of different price and tax related options, the store has email notification related options, store view has language-related options. There are some parameters which are related to Magento Instance like the warehouse and main price list.
- In section of "Instance Configuration" configure following options:
 - **Catalog Price Scope** : Scope of product price at Magento.
 - **Pricelist** : Used for get/set product price if Catalog price scope is 'Global'.
 - **Auto Create Product** : If you want to create new product in Odoo if not found, At the time import Sale Order Or Product
 - **Import/Export basic info of Product** : This will import/export only basic information of product.(Ex. Name, price, SKU, categories etc..)
- In section of "Other Configuration" Configure following options:
 - **Import/Export Product data from/to all storeview** : Import product data (e.g Translated value of name,description,etc..) from all storeview if true else import data for only default storeview.
 - **Import Images of Products** :Import product images along with product from Magento while import product
 - **Import Sale Orders on the fly** :It Import all Sale Order directly without create Jobs, in this case system will create job in case of any failed transansactions
 - **Product Import Page Size** :While import products from Magento, if there are large no of products on Magento side, you can split product list in multiple partitions of x number of records to process in Odoo.
 - **Customer Import Page Size** :While import customers from Magento, you can split customer list in multiple partitions of x number records to process in Odoo.
 - **Is Import Product Stock** : It import product stock from Magento to Odoo.For that you need to select "**Stock Warehouse**" for stock.

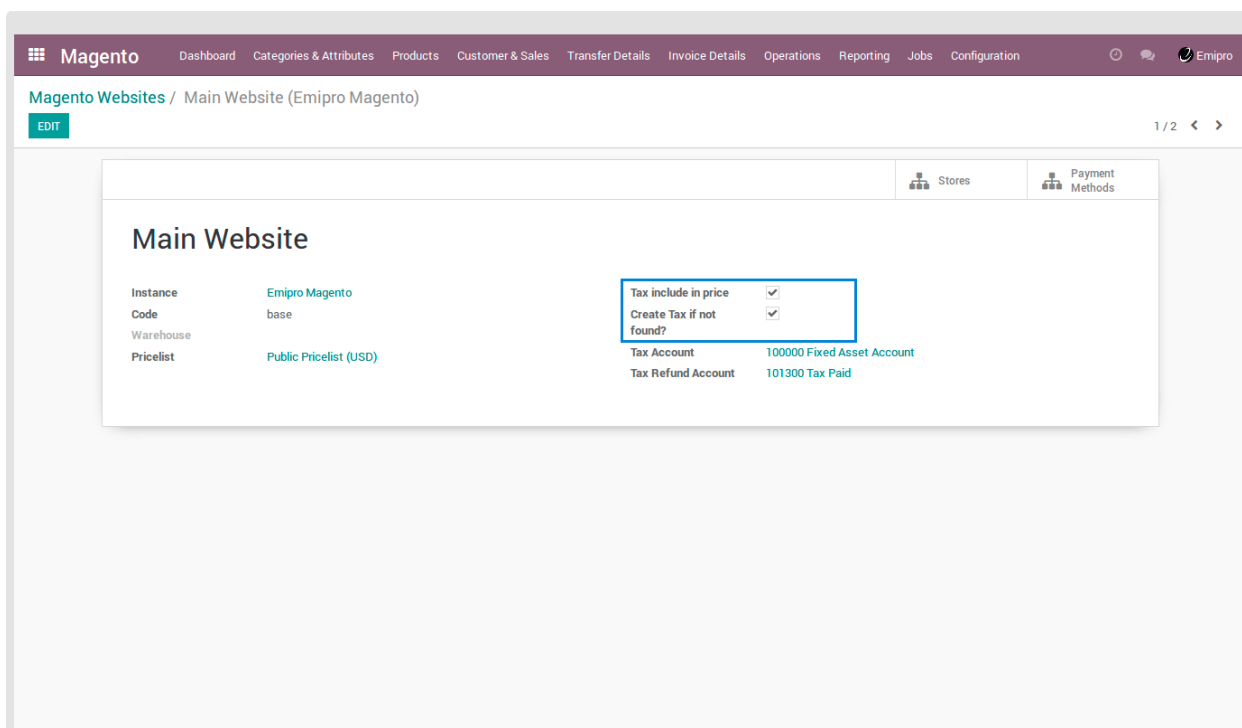

Instance Configuration

- Go to Magento >> Configuration >> Instance Details >> Instance, Here you can see the Instance which you configure.
- Open it and click on "Sync metadata", It will import all Websites, Stores, Storeviews and all product attribute set of Magento. It will also Import Payment Method code, and delivery method code in Odoo
- Here you need to add "Default Attribute Set", It will use as base attribute set while exporting any new attribute set.
- You can set "Default Product Category" after import Product Category. How to import product category that you can find in section **Perform Import/Export Operation**.
- **"Delete Product Image On Magento"**, When we delete Product Image in Odoo, Then It will delete on Magento or not.

Website Configuration

- Go to Magento >> Configuration >> Instance Details >> Websites.
- Website has configuration of different price and tax related options :
 - **Warehouse** : Warehouse to be used to deliver an order from this website.
 - **Tax include in price** : Magento Product Price is tax including or not
 - **Create Tax if not found** : While Import Order, If Order tax is not found in Odoo then it will create tax automatic. Here you need to give Tax account and Tax refund Account.
 - **Pricelist** : If "Catalog Price Scope" is website, system will get/set price based on this pricelist.

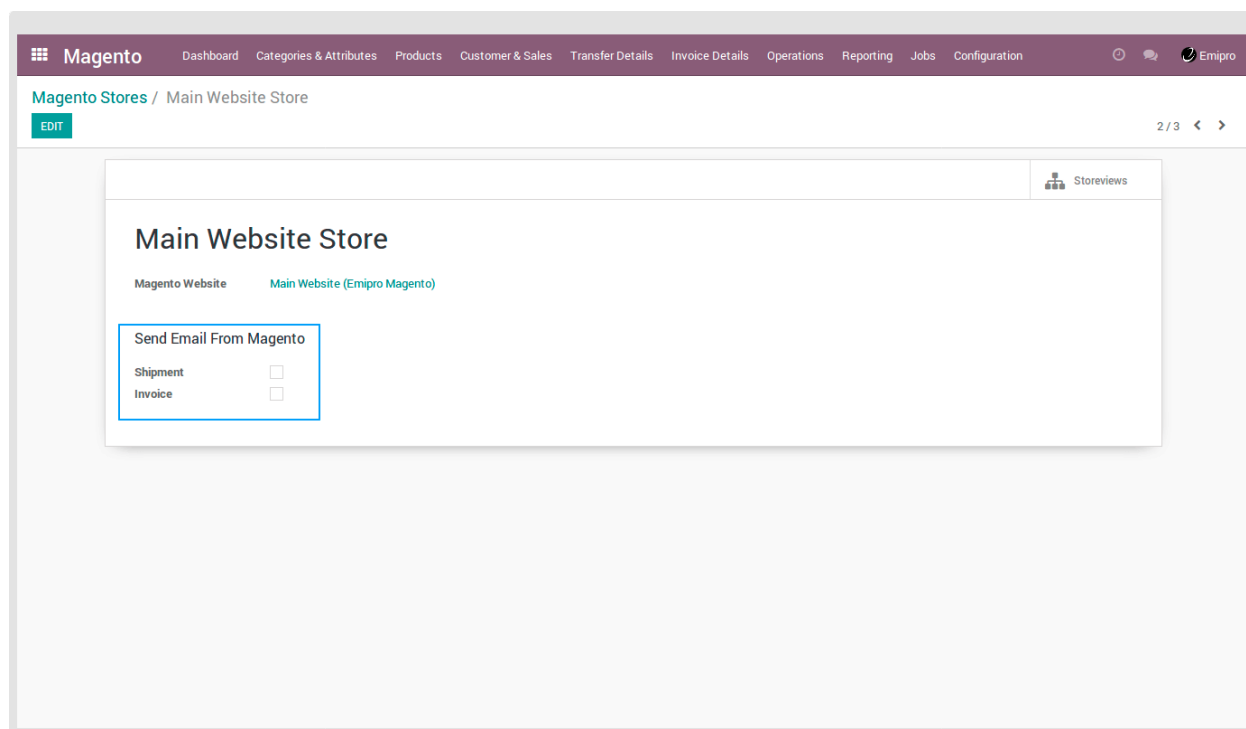

The screenshot displays the Magento Admin interface for configuring a website. The breadcrumb trail is 'Magento Websites / Main Website (Emipro Magento)'. The page title is 'Main Website'. The configuration is as follows:

Instance	Emipro Magento	Tax include in price	<input checked="" type="checkbox"/>
Code	base	Create Tax if not found?	<input checked="" type="checkbox"/>
Warehouse		Tax Account	100000 Fixed Asset Account
Pricelist	Public Pricelist (USD)	Tax Refund Account	101300 Tax Paid

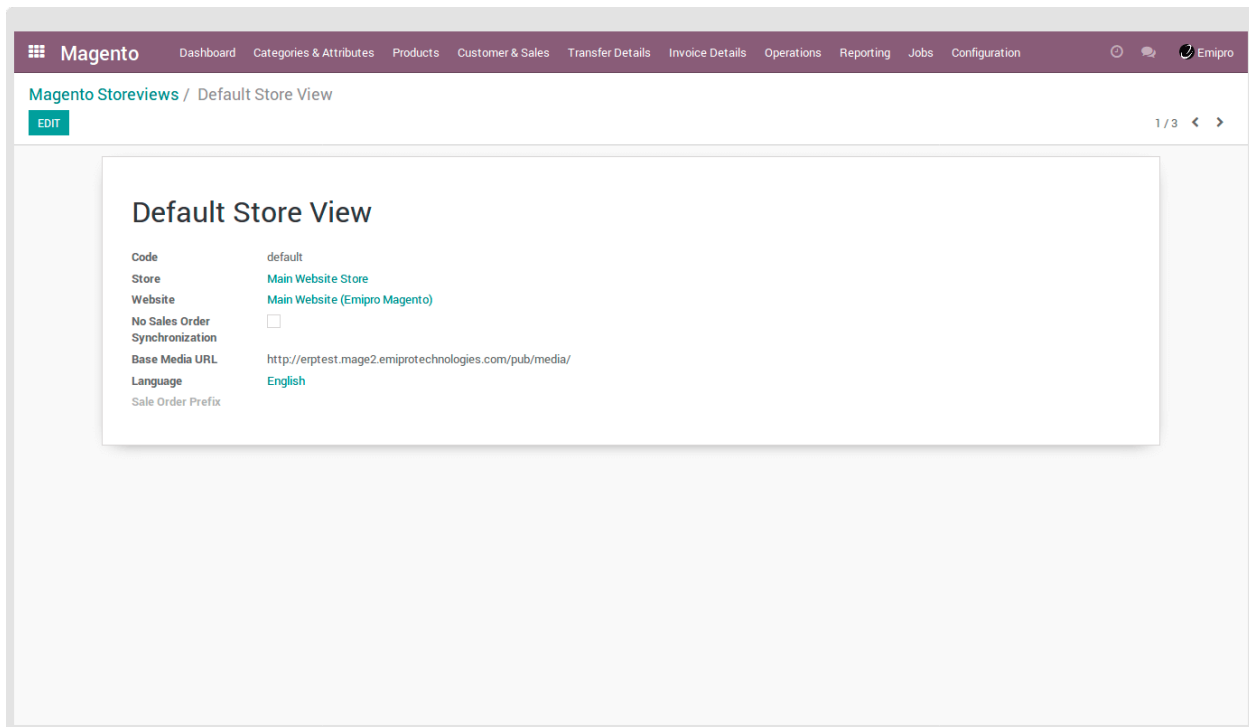

Store Configuration

- Store has Configuration related email notification.
- It will send email to customer from Magento once shipment or Invoice done.

Storeview Configuration

- Storeview contain configuration related language and sale prefix.
- While Sync metadata, If language found for storeview it will automatic set in storeview's language.
- **Sale Prefix** : While Import order, For specific storeview's Order,add this Prefix, In Sale Order reference.

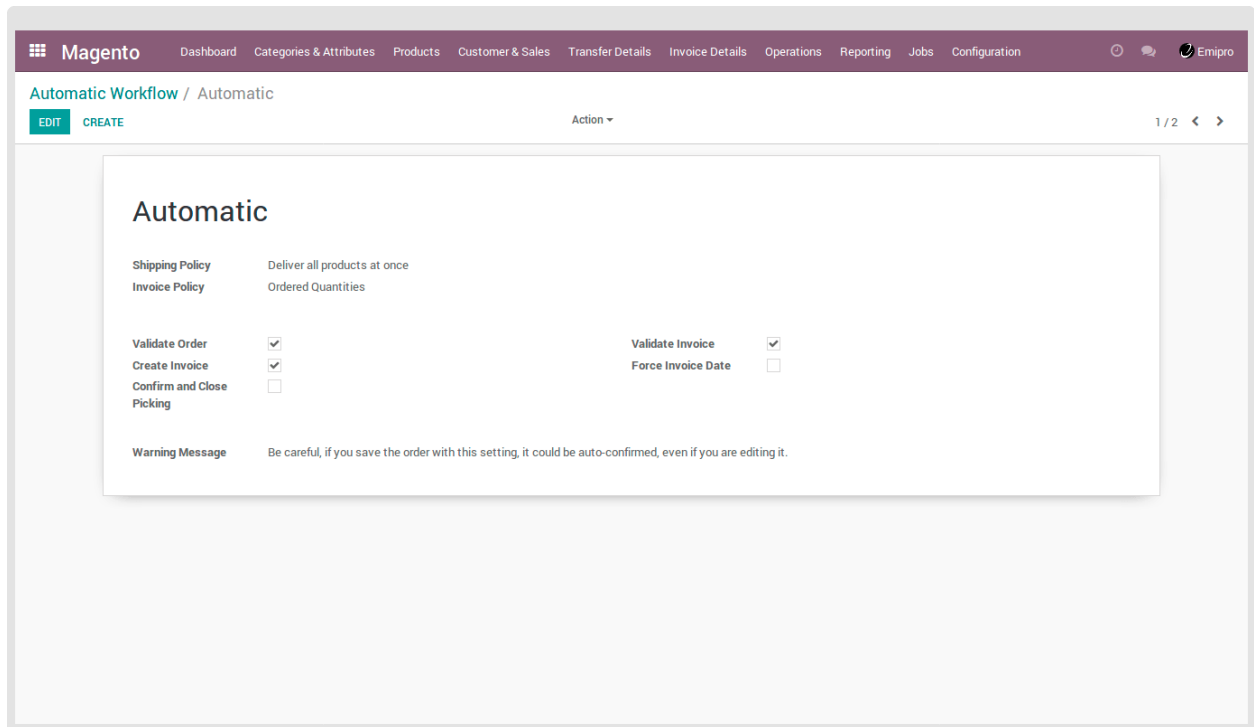

The screenshot displays the Magento Admin interface for configuring a store view. The breadcrumb trail is "Magento Storeviews / Default Store View". An "EDIT" button is visible in the top left corner of the configuration area. The configuration details are as follows:

Field	Value
Code	default
Store	Main Website Store
Website	Main Website (Emipro Magento)
No Sales Order Synchronization	<input type="checkbox"/>
Base Media URL	http://erptest.mage2.emiprotechnologies.com/pub/media/
Language	English
Sale Order Prefix	

Workflow Settings

- This is advisable to configure Automatic workflow before you start to sync Odoo with Magento. Because improper configuration of workflow leads you to runtime issues of sales order import.
- With Auto workflow user can choose what actions they want to do after order import, like create shipments, invoices create / validate. User can configure automatic workflow from Magento >> Configuration >> Automatic Workflow Menu.
 - **Invoice policy configuration** : User can configure invoice policy for sale orders from automatic workflow. This invoice policy will be apply to orders from workflow which is selected inside the order. There are two options for that invoice will be created based on delivery order or ordered quantity.
 - **Options to choose automatic actions** : With this feature user can configure automatic create or validate sale order and related invoice and shipments.
 - **Order validation** : In automatic workflow if "Validate Order" option is selected then order will automatically be confirmed.
 - **Create invoice** : If option "Create Invoice" is selected then automatic invoice created as per invoice policy of order.
 - **Validate invoice** : If option "Validate Invoice" is selected then automatically invoice will be validated.
 - **Confirm and close shipment** : if option "Confirm and Close Picking" is selected then confirm the shipment and close it.
 - **Force invoice date** : if this option is selected invoice will be created with order date.

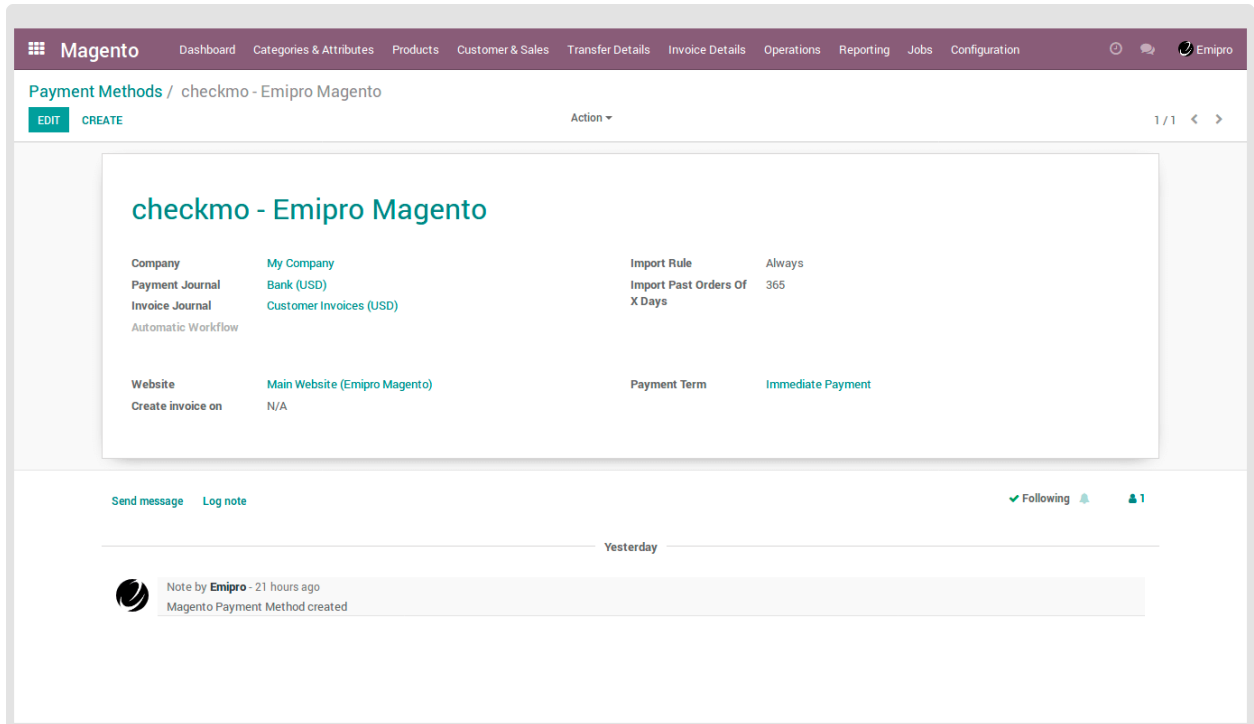

Payment Method Configuration

- This is the very important configuration to import sales order from Magento to Odoo. If this is not configured then order will not be imported. User has to create website-wise payment methods before to start sales order import process. In payment method user needs to set some parameters like Payment Journal, Invoice Journal, Automatic workflow, Create Invoice on etc.
- For Create Payment Method Go to Magento >> Configuration >> Payment Method, Click on create button.
 - For name of Payment method, Here you can find all the payment codes, which are available at Magento side.
 - **Import Rule** : Import Rule for Sale Order
 - ◆ **Always** : This Payment Method Order will always import
 - ◆ **Paid** : If Order is Paid On Magento then and then import
 - ◆ **Never** : This Payment Method Order will never imported
 - **Payment journal configuration** :
 - ◆ **Payment Journal** : When Payment of Order is created, it will be created in selected journal.
 - ◆ **Invoice Journal** : When Invoice is created, Invoice entries will be created in selected journal.
 - **Automatic process configuration** : All the automatic actions will be taken for the sales order which are linked up with the Magento, auto workflow will be selected from the payment methods and set into the sales order.
 - **Configuration when to export invoice to Magento** : User can control the invoice export flow by configuring "create invoice on" option in payment method, if user doesn't want to export invoices to Magento then simply need to set N/A options. The same way user can choose the export invoice trigger point either it's being while invoice getting paid or validated.

- **Other Configuration :**

- ◆ **Import Past Orders Of X Days :** For Import order of last X days.
- ◆ **Payment term :** Payment term for Sale Order.

Magento Instance wise auto schedule jobs configuration

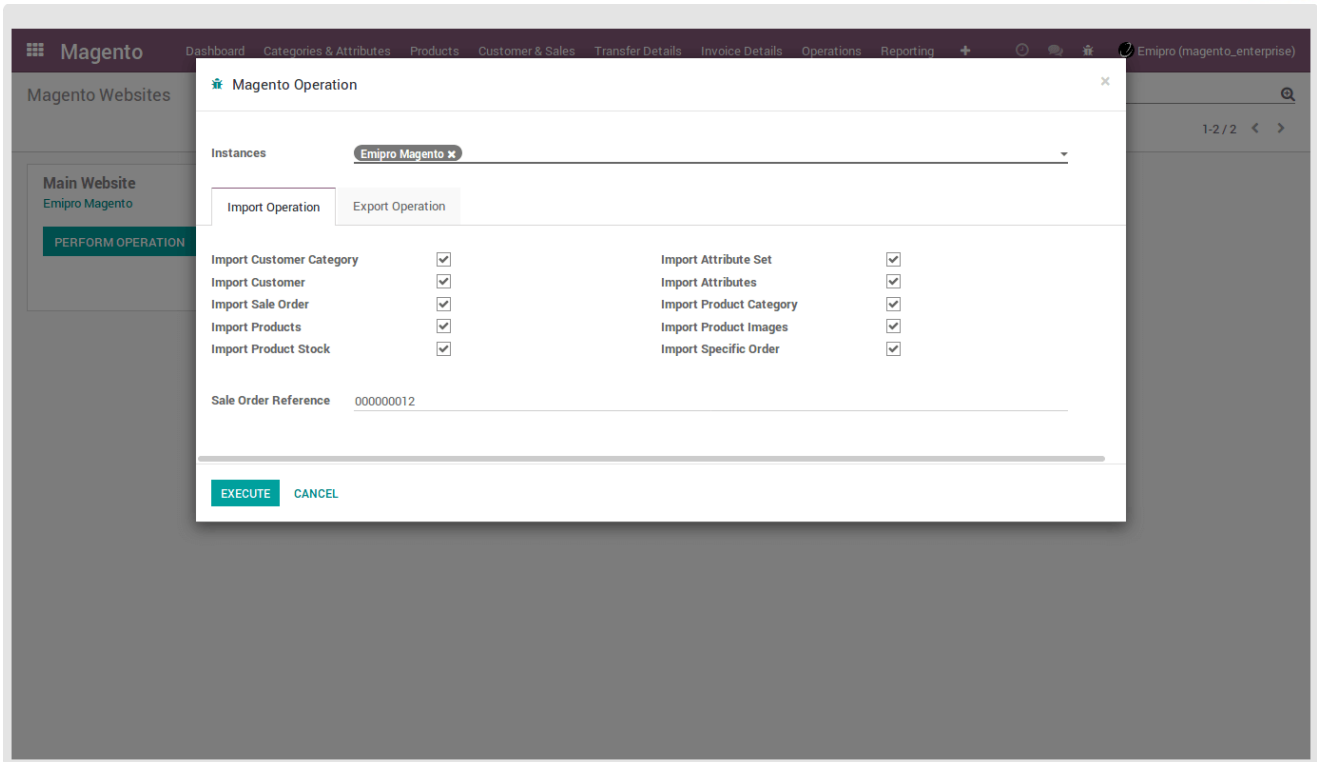

- Per each Magento Instance, you can set automatic jobs for importing customer groups, customers, product categories, products, sale orders, export product stock , export shipment, export invoice from Odoo to Magento etc.
- Those automated jobs are setup that can run at different timed intervals. To do this setting, you need to go to menu 'Magento >> Configuration >> Settings' and at each instance you can see these settings under the "Auto Cron Configuration" option. Once you set and click on Apply.

The screenshot displays the 'Auto Cron Configuration' section in the Magento Admin interface. The settings are as follows:

Job Name	Frequency	Interval	Last Run	Instance
Auto import customer groups?	<input checked="" type="checkbox"/>	1 Days	02/05/2018 12:10:40	Emipro
Auto import customers?	<input checked="" type="checkbox"/>	1 Days	02/06/2018 12:10:40	Emipro
Auto import product categories?	<input checked="" type="checkbox"/>	1 Days	02/13/2018 12:10:40	Emipro
Auto import products?	<input checked="" type="checkbox"/>	1 Days	02/14/2018 12:10:40	Emipro
Auto import sale orders?	<input checked="" type="checkbox"/>	3 Hours	02/06/2018 12:10:40	Emipro
Auto Export Product Stock?	<input checked="" type="checkbox"/>	5 Hours	02/13/2018 12:10:40	Emipro
Auto Export Shipment Information?	<input checked="" type="checkbox"/>	3 Hours	02/04/2018 12:10:40	Emipro
Auto Export Invoice?	<input checked="" type="checkbox"/>	3 Hours	02/07/2018 12:10:40	Emipro
