Console Stereo Amplifier

MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ company has created the ultimate in stereo sound.

Only **original MARANTZ parts** can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ equipment are generally available to our National Marantz Subsidiary or Agent.

ORDERING PARTS:

Parts can be ordered either by mail or by telex. In both cases, correct part number has to be specified. If you order by mail, fulfil MARANTZ order forms.

The following information must be supplied to eliminate delays in processing your order:

1. Complete address
2. Complete part numbers and quantities required
3. Description of parts
4. Model number for which part is required
5. Way of shipment
6. Signature: any order form or telex must be signed otherwise such part order will be considered as null and void.

PARTS ORDERING

Parts may be ordered at the following addresses:

TECHNICAL ASSISTANCE

Should you require any other technical support, do not hesitate to contact the Technical Department of MARANTZ EUROPE & Co.

Avenue Louise 326 - Bte. 32

B-1050 Brussels

Belgium

Telephone: (02) 6407830 (10 l)

Telex: 26602

Fax: (02) 649.29.20

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please, contact the nearest facility for the necessary assistance.

In case of difficulties, do not hesitate to contact the Technical Department at abovementioned address.

marantz®

INTRODUCTION

This service manual was prepared for use by Authorized Warranty Stations and contains service information for Marantz Model 1150D Stereophonic Receiver.

Servicing information and voltage data included in this manual are intended for use by the knowledgeable and experienced technician only. All instructions should be read carefully. No attempt should be made to proceed without a good understanding of the operation of the receiver.

The parts list furnishes information by which replacement parts may be ordered from the Marantz Company. A simple description is included for parts which can usually be obtained through local suppliers.

1. P.W. Board

As can be seen from the circuit diagram, the chassis of Model 1150D consists of the following units. Each unit mounted on a printed circuit board is described within the square enclosed by a bold dotted line on the circuit diagram.

1. Dolby Unit	Mounted on P.W. Board, P600
2. 400 Hz Tone and Meter Driver	Mounted on P.W. Board, PL01
3. Selector SW	Mounted on P.W. Board, PS01
4. Tape IN, OUT and DIN Socket	Mounted on P.W. Board, PV01
5. EQ Amplifier	Mounted on P.W. Board, P400
6. Buffer Amplifier	Mounted on P.W. Board, PD01
7. Tone Amplifier	Mounted on P.W. Board, PE01
8. Filter Assembly	Mounted on P.W. Board, PH01
9. Tone Control Volume	Mounted on P.W. Board, PF01
10. Main Amplifier	Mounted on P.W. Board, P700
11. Relay	Mounted on P.W. Board, PN01
12. Power Supply	Mounted on P.W. Board, P800

2. POWER AMPLIFIER ADJUSTMENT

2.1 Adjustment of Idling current

Connect VTVM between left channel J701 and J702. Adjust R742 until the meter reads 10 mV. Similarly, connect VTVM between right channel J701 and J702 and adjust R742 until the meter reads 10 mV.

2.2 DC-OFFSET adjustment

Connect VTVM to JN04 and JN10 (or ground) and adjust left channel R741 until the meter indication reaches 0 mV (± 5 mV). Similarly, connect VTVM to JN05 and JN10 (or ground) and adjust right channel R741 until the meter indication reaches 0 mV (± 5 mV).

3. POWER SUPPLY ADJUSTMENT

Connect a voltmeter between J805 and J810. Adjust R815 until meter indicates 43 VDC. Similarly connect a voltmeter between J816 and J810. Adjust R806 until meter indicates -43 VDC.

4. DOLBY ALIGNMENT PROCEDURES

An attachment plug is required to adjust the Dolby unit. Before beginning the adjustment, set the Selector Switch of the Model 1150D to AUX and feed a 5 kHz sine wave signal into the AUX input.

1.
 - a. Set the Dolby Switch to REC I.
 - b. Set the fixed semiresistor R654 so that the source voltage from FET (H612) reaches a maximum (+).
 - c. Short the terminals of J612 and J614 to the ground.
 - d. Apply a 5 kHz sine wave so that the reading at the terminal of J606 becomes 17.5 mV.
 - e. At this time, record the level of the output signal at the TAPE OUT.
 - f. With the ground of J612 removed, adjust the fixed semiresistor R660 so that the output level at the TAPE OUT rises 10 ± 0.25 dB.
 - g. At this time, again record the level of the output at the TAPE OUT.
 - h. With the ground of J614 removed, adjust the fixed semiresistor R654 so that the signal falls 2 ± 0.25 dB.
 - i. Again ground J614, and after checking the procedure in step f., remove the ground from J614.
 - j. Repeat the above adjustment for the other channel.
2.
 - a. Set the Dolby Switch to REC II.
 - b. Short the terminals of J612 and J614 to the ground.
 - c. Apply a 5 kHz sine wave so that a voltage of 44 mV results at the terminal of J606.
 - d. With the ground of J612 removed, check that the output level at TAPE OUT falls 10 ± 0.5 dB.
 - e. Remove the ground from the terminals of J612 and J614.
 - f. Check whether the output voltage at the TAPE OUT is 17.5 mV (± 0.5 dB).
3.
 - a. Set the Dolby Switch to PLAYBACK.
 - b. Set the fixed semiresistor R653 so that the source voltage from FET (H611) reaches a maximum (+).
 - c. Short the terminals of J611 and J613 to the ground.
 - d. Apply a 5 kHz sine wave so that the voltage at the terminal of J605 becomes 44 mV.
 - e. At this time, record the level reading of the Dolby Socket Pin No. 5.
 - f. With the ground of J611 removed, adjust the fixed semiresistor R659 so that the level of Pin No. 5 falls 10 ± 0.25 dB.
 - g. At this time, again record the level reading of Pin No. 5.
 - h. With the ground of J613 removed, adjust the fixed semiresistor R653 so that the level rises 2 ± 0.25 dB.
 - i. Again ground J613, and after checking the procedure in step f., remove the ground from J613.
 - j. Repeat the above adjustment for the other channel.

400 Hz TONE AND METER CALIBRATION

In order to adjust the Dolby level, set the Selector and Dolby NR Switch to AUX and PLAYBACK respectively, and use the TAPE OUT jack as the output jack. In addition, set the REC LEVEL and PLAY CAL. VR for Maximum F, C, and W.

When the 400 Hz TONE Push Switch is in the IN position, a 400 Hz sine wave will be produced, so that this output voltage should be adjusted to 580 mV at fixed semiresistor R611.

After checking that this is 580 mV when the TAPE OUT for both L and R channels and the Dolby NR Switch are in positions other than OFF, return the 400 Hz Tone Switch to the OFF position.

Next, apply a 400 Hz sine wave signal to the AUX INPUT, and adjust the input so that the voltage at the Dolby Socket Pin No. 5 (6) becomes 580 mV. At this time, adjust the fixed semi-resistor R628 so that the Dolby Level Meter indicates Dolby Level "0". Change the Meter Switch setting and repeat the adjustment procedures for the other channel.

ALIGNMENT PROCEDURES FOR DOLBY FM PRESET LEVEL CONTROLS

Set the Dolby NR Switch to Dolby FM and the Selector Switch to Tuner. Apply a 400 Hz, 580 mV sine wave signal to the Tuner Input. With the fixed semi-resistor for Dolby FM Preset Level, found on the rear panel, adjust so that the Dolby Level Meter indicates Dolby Level "0". Change the Meter Switch setting and repeat the adjustment procedures for the other channel.

5. TEST EQUIPMENT REQUIRED FOR SERVICING

Table 1 lists the test equipment required for servicing the Model 1150D Stereo Console Amplifier. The wattmeter, AC voltmeter, and variable autotransformer may be assembled as a test fixture as shown schematically in Figure 1. The load resistors and AC ammeter may be assembled into a second test fixture as shown in Figure 2.

Figure 1. AC Power Control Box Simplified Schematic

Table 1. Test Equipment Required for Servicing

Item	Manufacturer and Model No. (or equivalent)	Function
Distortion Analyzer	Hewlett Packard, Model 331A or 333A	Measures distortion and voltage of amplifier output.
Audio Oscillator	Weston Model CVO-100P (NOTE: Less than 0.02 percent residual distortion is required.)	Sinewave and squarewave signal source.
Oscilloscope	Tektronix, Model 503, Data, Model 555	Waveform analysis and troubleshooting.
VTVM	RCA Senior Volt-Ohmyst, Model WV-98C	Voltage and resistance measurements.
AC Wattmeter	Simpson, Model 390	Monitors primary power consumption of amplifier.
AC Ammeter (0 to 10 amps)	Commercial Grade	Monitors amplifier output under short circuit condition.
Line Voltmeter (0 to 150 vac)	Commercial Grade	Monitors potential of primary power to amplifier.
Variable Autotransformer (0 to 140 vac, 10 amps)	Powerstat, Model 116B	Adjusts level of primary power to amplifier.
Shorting Plug	Use phono plug with 600 ohms across center pin and shell.	Shorts amplifier input to eliminate noise pickup.
Power Supply Bleeder Resistor (10 ohms at 1W)	Commercial Grade	Discharges power supply filter capacitors prior to disassembly or resistance measurements.
Output Load Resistor (8 $\pm$ 0.5%, 250W)	Commercial Grade	Provides 8-ohm load for amplifier output termination.
Output Load Resistor (4 $\pm$ 5%, 250W)	Commercial Grade	Provides 4-ohm load for amplifier output termination.
Output Load Capacitor (0.5 mfd)	Mylar	Provides capacitive load for instability checks.
AC Power Control Box	Optional Item. Fabricate in accordance with Figure 1.	Monitors and controls primary power for amplifier.
Amplifier Output Load Box	Optional Item. Fabricate in accordance with Figure 2.	Provides various amplifier loads and can monitor shorted output.

Figure 2. Amplifier Output Load Box Simplified Schematic

6. EXPLANATION OF THE DOLBY PROCESSING CHART

This chart shows the condition of the signals available at the speakers (SPKRS) and at the TAPE MONITOR OUT terminals as a function of different control settings.

To understand the chart refer to the symbols below:

Represents a signal which has not been applied to either Record or Playback Dolby circuits. The relative amplitudes of all audio frequencies remain unaltered at all levels.

Represents a signal which has been processed by the Dolby Record circuit. The relative amplitude of the high frequencies is increased at low signal levels.

Represents a signal which has been processed by the Dolby Playback circuit. The relative amplitude of the high frequencies is decreased at low signal levels.

Represents a signal which has been processed by both the Record and the Playback Dolby circuits.

These circuits are complementary. Therefore, relative amplitudes of all audio frequencies are restored to their original values.

SIGNAL	DOLBY SW 	DOLBY FM						PLAY						OFF						RECORD

Frequency Response @ 1 Watt Output	5 Hz to 50 kHz ± 1 dB
Intermodulation Distortion	Less than 0.1%

Preamplifier Section:

Total Harmonic Distortion at Rated Output Level	0.05%
Intermodulation Distortion (SMPTE)	0.02%

Frequency Response:

Phono (Maximum variation from RIAA Standard)	20 Hz to 20 kHz ± 0.5 dB
Tape or Aux	15 Hz to 50 kHz ± 1 dB

Signal to Noise Ratio (at rated output)

Aux Input (0.775 V input level)	88 dB
Phono Input (7.5 mV input level)	78 dB

PHONO:

Dynamic Range	111 dB
NOTE: Dynamic Range is the ratio in dB of the phono overload (300 mV) to equivalent input noise (0.85 μ V).	

Equivalent Input Noise	0.85 μ V
Input Overload @ 1 kHz, 0.1% THD	300 mV

Input Sensitivities (for rated output)

Mic	1.8 mV
Phono	1.8 mV
Tape or Aux	180 mV
Main In	1.5 V

Input Impedances:

Mic	10 k-ohms
Phono	47 k-ohms
Tape or Aux	100 k-ohms
Main In	75 k-ohms

Tape Output Level

(Ref.: 7.75 mV @ phono input)	775 mV
-------------------------------------	--------

GENERAL:

Power Requirements	110, 120, 220, 240V AC 50 Hz
Idling Power Consumption	30 Watts (Nominal)
Consumption at Rated Power	300 Watts (Nominal)
Maximum Power Consumption	480 Watts (Nominal)
Cabinet Dimensions-Height	14.4 cm
Width	37.6 cm
Depth	30.1 cm
Weight	14.8 kg

VOLTAGE CONVERSION

This Model is equipped with a universal power transformer to permit operation at 110, 120, 220 and 240 V AC 50/60 Hz.

To convert the unit to the required voltage, set the plug as illustrated so that you can adjust the voltage as required.

CAUTION: DISCONNECT POWER SUPPLY CORD FROM AC OUTLET BEFORE CONVERTING VOLTAGE.

Figure 37. Voltage Conversion Chart
