Summary of Changes

June 29, 1999 Version 1.0 Initial Release. Changes since last draft:

- Changed "EGS" to "ESP" and "EDC" to "LDC" throughout the guideline. Removed "NJ Definitions" and replaced it with "LDC Definitions" and "ESP Definitions" in the Notes section.
- Added "How to use the implementation guideline" page. In addition, changed all headers to the true X12 definition. Also corrected the Table on Page 4 to reflect X12 definitions and added the words "X12 Structure" to the title on that page.

July 1, 1999 Version 1.1

- Removed Code 77 from the BPT07 and modified code F to indicate that it is used when the customer account finals in addition to if the customer switched to a new ESP.
- Clarified that Document Due Date is not provided for cancel transaction.
- Added "Must Use" to MEA07 per the data dictionary.
- Added "... if the LDC reads the meter" to the requirements for the PTD*BB Loop.

October 1, 1999
Version 1.1a

• Add Delaware Use for Conectiv

• Add BPT04 code to indicate this

- Add BPT04 code to indicate this is for Summary Data only for an Interval customer.
- Added clarification to use of DTM*649 to indicate it should only be used for Bill Ready. It is not valid for Rate Ready or Dual Billing.

November 4, 1999 Version 1.2 This is a FINAL version for Pennsylvania and New Jersey

November ??, 1999 Draft version 1.2MD1

- Add Maryland use to document the changes were added to the version 1.2 of the regional standards
- Added Table of Contents
- Added Data Dictionary

December 23, 1999

Version 1.2MD2

January 17, 2000

Version 1.2MD3

April 20, 2000

Version 1.2MD4

- Clarified use of X4 code for Maryland
- Noted that BGE can only provide billed demand
- Clarified setting of DTM*649 for ESP consolidated bill
- Clarified REF*45 is only used when LDC sends transaction.
- Clarified APS use of REF*45 in MD
- Incorporate PA Change Control X015 to add X5 as a valid value for BPT04
- Removed comment on mandatory use of PTD*BD loop for PA by 3/2000. This is being discussed as part of PA Change Control X018. While it is not determined if there are cases when this loop may be needed, it was agreed that it will not be mandatory by 3/2000.
- Add PA Notes Section
- Add MD Notes Section

May 17, 2000 Version 1.2MD5 • Incorporate PA Change Control X023 – allow PM loop to be optional on a cancellation

May 30, 2000

Version 1.2MD6

June 26, 2000 Version 1.2MD7

- Incorporate PA Change Control X018 remove BD loop. PA decided this loop would not be used, and PA was the only state that intended to use this loop.
- Added clarity to Meter Multiplier and Transformer Loss Multiplier definitions in Data Dictionary
- Added clarity to example titles

August 14, 2000 Version 1.2MD8

- Add NJ Notes Section
- Add Note for PSE&G on BPT07
- Added NJ Note for MEA05

September 10, 2000 Version 1.3 This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware (Conectiv only).

Deleted:

October 19, 2001 Version 1.3rev01

December 13, 2001 Version 1.3rev02

> January 9, 2002 Version 2.0

- Incorporate Delaware Electric Coop (DEC) information for Delaware
- Incorporate PA Change Control 038 change all references of PPL to PPL EU.
- Add clarification to NJ Notes section for PSE&G regarding support of detail interval data (summary level not an option). Also add PSE&G clarification on cancel / rebills for supplier other than supplier of record. Remove note indicating PSE&G does not support cross reference to the 810.
- Incorporate SMECO specific data for MD (MD Change Control 003)

This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware.

General Notes

PTD Loops Definition

The PTD Loops are required. Some are used individually, others are used in pairs. This section describes the purpose of each PTD loop. Depending on the characteristics of the account, there may be a different number of loops.

<u>Monthly Billed Summary Information</u> (PTD=BB): This loop is always required for every type of account if the LDC reads the meter.

Monthly Billed Summary (PTD01=BB): One PTD per Account - Data obtained from the billing system to reflect the billing data for this account.

<u>Metered Services Information</u> (PTD01 = SU and PM) – These loops are used to convey the usage for metered data, at both a detail level by meter by unit of measure (PTD01=PM) and for some units of measure, at a summary level for all meters (PTD01=SU).

Metered Services Summary (PTD01=SU): Summing to the account level by kWh and KVARH. Data is obtained from the metering system. For every PTD01=SU, there must be a PTD01=PM. The PTD01=SU loop will NEVER be provided for kW or KVAR.

Metered Services Detail (PTD01=PM): One or more PTDs, one for each unit of measure for each meter. Data is obtained from the metering system. In the case of one meter reporting one unit of measure (kWh), the PTD01=PM will be the same as the PTD01=SU and both must be provided. If you have two meters and each meter measures kW and kWh, you will send one PTD SU Loop. The kWh readings from Meter 1 and Meter 2 will be summed and provided in one PTD SU Loop.

<u>Unmetered Services Information</u> (PTD01 = BC) – This loop is used to convey the usage for any unmetered portion of an account. This information must be provided at the summary level (PTD01=BC).

Unmetered Services Summary (PTD01=BC): Total Consumption for all unmetered services at the account level. Even though some of the consumption may be estimated, the consumption is reported as actual for unmetered services. The summary is required at this time for Unmetered Services.

Cancellations

- The MEA is an optional segment on a cancellation.
- Cancel 867s will be by metering period, i.e. same as the original 867's. Rebills may be for multiple periods.
- The "from" and "to" dates on the cancel must match exactly with the original usage.
- On a cancellation, the signs are not reversed (don't change positive usage to negative usage). Quantities will not be negative on Cancels. Cancels should be interpreted as negative consumption.
- The consumption sent in the cancel must match the consumption sent in the original transaction.
- Cancels must be sent at the same level of detail as the original usage.
 - PA: Cancels must include all account and summary information, however, it is optional to include the PM loops.

Restatements

- In order to restate usage for a period, the metering party must first completely cancel all usage for that period; then send the full set of restatement transactions.
- If you receive a cancellation, you will not necessarily receive a restatement (i.e. if the data was sent to you in error in the first place).
- The "from" and "to" dates on the restatement transactions do not have to match the corresponding original or cancel transactions for the same period.
- Restatements across multiple cycles may match original from and to dates or may cross bill cycles.
- An 867 cancel can be followed by an 867 original the next month. The metering period would include the metering period from the cancelled and the current usage.

Reporting of usage if supplier is not providing 100% of generation

The usage information provided in the 867 is the total usage not the prorated information. Meter reading party will always send total consumption rounded to nearest kWh.

LDC Definitions:

The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:

- EDC Electric Distribution Company (Pennsylvania, Delaware)
- LDC Local Distribution Company (New Jersey)
- EC Electric Company (Maryland)

ESP Definitions:

The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym:

- EGS Electric Generation Supplier (Pennsylvania)
- TPS Third Party Supplier (New Jersey)
- ES Electric Supplier (Delaware)
- ES Electricity Supplier (Maryland)

Cross Reference Number between 867, 810, and 820

There is a cross reference between billing related documents.

- 867 BPT02 This document establishes the cross reference number.
- 810 BIG05 This document must have the cross reference number from the respective 867.
- 820 REF6O (letter O) When making the other party whole, the 820 to the non-billing party must also include the cross reference number from 867/810 document.

Total Usage is sent, even if supplier is not providing 100% of load.

The usage information provided in the 867 is the total usage not the prorated information. Meter reading party will always send total consumption rounded to nearest kWh. It is the obligation of the receiving party to apply their participation percentage to the total provided to determine their actual obligation. If the decimal is .50000 or less, it will go to the lower whole number; if the decimal is .50001 or greater, it will go to the next higher whole number).

Version 2.0

What document is sent if supplier elects NOT to receive detail interval data?

Pennsylvania Notes

If a supplier elects to receive only summary level information for an interval account, they will receive an 867MU document.

The 867IU document will be used when interval detail and summary level data is being sent.

Pennsylvania:

As of November 1999, not all companies will be offering sending both interval detail and interval summary information. Listed below are the plans, by utility, of the document to be used in November. By March 2000, all companies plan to use an 867IU to provide interval details, when applicable.

- Allegheny Detail not supported via EDI. Will send an 867 IU with BB and SU loops only. Interval data will be available via their website.
- Duquesne Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- GPU Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- PECO Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X4").
- Penn Power Detail not supported via EDI. Will send an 867 MU with BB, SU, and PM loops. Interval detail will be available on their website.
- PPL EU Detail not supported via EDI. Will be providing 867IU with BB and SU loops. Interval detail will be available on their website.
- UGI No interval customers.

New Jersey Notes

What document is sent if receive detail interval

supplier elects NOT to data?

> Cancel / Rebill when supplier is no longer active supplier

The standard method for interval accounts is to always pass interval data. The "summary" level was discussed in general in the working group, but no direction had been determined.

- GPU GPU will allow the summary option under the same guidelines they use in PA. GPU will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- PSE&G will not support supplier having a choice to receive summary only.

PSE&G cannot provide consolidated billing for ESP's who are not supplier of record at the time the cancel / rebill is processed. The process for Cancel/ Rebill for an ESP who is not customer's current supplier of record is:

- PSE&G will cancel charges from 810(s) that correspond to the original 867(s) being canceled.
- Send 867(s) cancel
- Send 867(s) rebill noting that customer billing option is DUAL.
- PSE&G will issue an 820 and reduce a future payment by the amount of the canceled 810(s) (on the scheduled date of the 820).
- TPS must Dual bill customer for the rebilled 867(s).

Maryland Notes

What document is sent if supplier elects NOT to receive detail interval data?

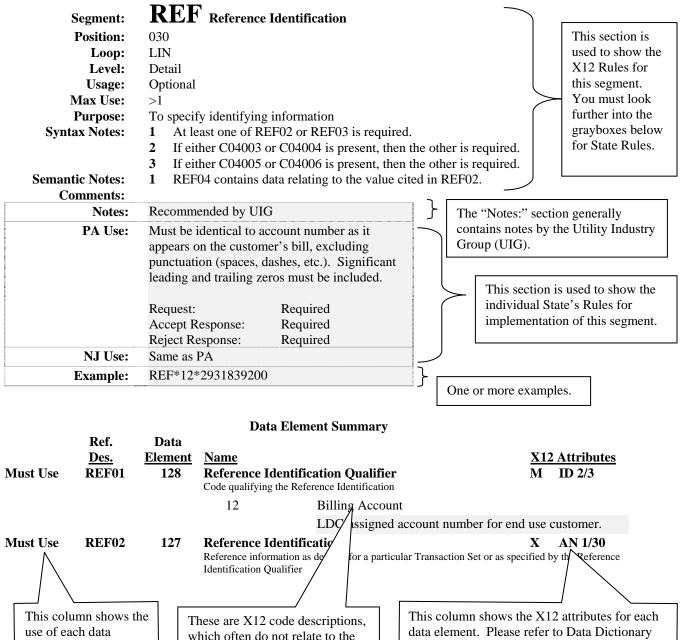

If a supplier elects to receive only summary level information for an interval account, they will receive an 867MU document.

Note: Conectiv will not support supplier having a choice to receive summary only when the market opens.

If a supplier elects to receive detail and summary level information for an interval account, this is what they will receive, by utility.

- Conectiv Supplier will receive 867IU for all accounts.
- BGE Supplier will receive 867MU for summary, and detail will be posted on their website
- PEPCO Supplier will receive 867MU for summary, and detail will be posted on their website
- Allegheny Supplier will receive 867MU with BB and SU loops only for summary. Detail will be posted on their website.
- SMECO will send monthly usage transactions for all monthly read customers, and will send summary interval usage for all hourly-read customers. Summary interval usage will be sent through an 867MU transaction with an "X4" PTD loop. Details interval data will be provided on the web.

How to Use the Implementation Guideline

element. If state rules differ, this will show "Conditional" and the conditions will be explained in the appropriate grayboxes.

which often do not relate to the information we are trying to send. Unfortunately, X12 cannot keep up with our code needs so we often change the meanings of existing codes. See graybox for the UIG or state definitions.

for individual state rules.

M = Mandatory, O= Optional, X = Conditional

Segment: ST Transaction Set Header

Position: 010

Loop:

Level: Heading Usage: Mandatory

Max Use:

Purpose: To indicate the start of a transaction set and to assign a control number

Syntax Notes:

Semantic Notes: 1 The transaction set identifier (ST01) is used by the translation routines of the

interchange partners to select the appropriate transaction set definition (e.g., 810

selects the Invoice Transaction Set).

Comments:

PA Use:	Required	
NJ Use:	NJ Use: Required	
DE Use: Required		
MD Use: Required		
Example:	ST*867*00000001	

Must Use	Ref. <u>Des.</u> ST01	Data Element 143	Name Transaction	Set Identifier Code	<u>Att</u>	ributes ID 3/3
Nage ese	5101	143		dentifying a Transaction Set Product Transfer and Resale Report	171	ID 3/3
Must Use	ST02	329	Identifying contr	Set Control Number rol number that must be unique within the transaction set of or a transaction set	M function	AN 4/9 nal group assigned

Segment: **BPT** Beginning Segment for Product Transfer and Resale

Position: 020

Loop:

Level: Heading Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of the Product Transfer and Resale Report Transaction Set and

transmit identifying data

Syntax Notes: 1 If either BPT05 or BPT06 is present, then the other is required.

Semantic Notes: 1 BPT02 identifies the transfer/resale number.

2 BPT03 identifies the transfer/resale date.
3 BPT08 identifies the transfer/resale time.

4 BPT09 is used when it is necessary to reference a Previous Report Number.

			KJ	Meter Changeout when Meter Agent C Usage	Chang	es – Monthly ▼

Monthly Usage

Deleted:

For monthly metered customers only (not interval metered customers)

X4 Summary Report (defined for PA and MD)

For interval metered customers, when only summary data

is being sent at the ACCOUNT level.

PA Note: Some utilities may not be able to comply with this until later since this was added so close to the 4010 implementation date. If the utilities can not comply day 1,

the utility will send the code of "DD"

MD Note: Use of the "X4" code on the 867MU indicates

the interval detail will be provided on the web.

X5 Restricted Report

For interval metered customers, when only summary data

is being sent at the METER level.

PA Note: Mandatory implementation date is June 2000.

Conditional BPT07 306 Action Code

O AN 1/2

Code indicating type of action

F Final – Indicates Final Usage for specific ESP.

Condition: Code to indicate this is the final usage data being sent for this customer. Either the customer account is final with the LDC or the customer switched to a new ESP.

NJ PSE&G: PSE&G only sends "F" on a customer account final. They do not send an "F" on a customer switch.

Conditional BPT09 127 Reference Identification

O AN 1/30

Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier

Condition: When this is a cancellation of usage, that is BPT01 = 01, this element is required and should contain the transaction identification number from BPT02 of the transaction that is being cancelled.

DTM Date/Time Reference (649=Document Due Date) **Segment:**

Position: 050

Loop:

Level: Heading Usage: Optional Max Use: 10

Purpose: To specify pertinent dates and times

Syntax Notes: At least one of DTM02 DTM03 or DTM05 is required.

If DTM04 is present, then DTM03 is required.

If either DTM05 or DTM06 is present, then the other is required. 3

Semantic Notes:

Comments:

Notes:	Required for Bill Ready Consolidated Billing where the meter reading party sends an 867						
	to the non-billing party, who calculates their own portion of the bill and sends the 810 to						
	the billing party. Must be expressed in Eastern Prevailing Time. Not provided on cancel						
	transaction.						
PA Use:	Required for Bill Ready, not used in Rate Ready or Dual Billing						
	Note: For ESP Consolidated Billing, the document due date will be set according to the						
	specific LDC bill ready implementation.						
NJ Use:	Required for Bill Ready, not used in Rate Ready or Dual Billing						
DE Use:	Required for Bill Ready, not used in Rate Ready or Dual Billing						
MD Use:	Required for Bill Ready, not used in Rate Ready or Dual Billing						
Examples:	DTM*649*19990131*2359

Segment: QTY Quantity

Position: 110
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 1

Max Use:

Purpose: To specify quantity information

Syntax Notes: 1 At least one of QTY02 or QTY04 is required.

2 Only one of QTY02 or QTY04 may be present.

Semantic Notes: 1 QTY04 is used when the quantity is non-numeric.

Comments:

Comments.							
Notes:	There will be one QTY loop for each of the QTY03 Units of Measurement listed below						
	for each meter that is measured on this account.						
	If there are 2 meters on the account, and one measures KWH and KW, and the other						
	measures just KWH, there will be 3 PTD01=PM loops.						
	If a meter measures total usage, as well as on-peak and off-peak, there will be three QTY						
	loops sent within one PTD01=PM loop. The MEA segment that follows each QTY will						
	specify which time of use the QTY applies to.						
PA Use:	Required if there are metered services on the account.						
NJ Use:	Same as PA						
DE Use:	Same as PA						
MD Use:	Same as PA						
Example:	QTY*QD*22348*KH						
	QTY*QD*14*K1 (If meter measures both, you will have two QTY loops)						

	Ref.	Data

			KH	Kilowatt Hour (kWh)		

Segment: MEA Measurements

Position: 160
Loop: QTY
Level: Detail
Usage: Optional
Max Use: 40

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances,

and weights (See Figures Appendix for example of use of C001)

Syntax Notes: 1 At least one of MEA03 MEA05 MEA06 or MEA08 is required.

2 If MEA05 is present, then MEA04 is required.3 If MEA06 is present, then MEA04 is required.

4 If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

5 Only one of MEA08 or MEA03 may be present.

Semantic Notes: 1 MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

Comments: 1 When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed, use MEA05 as the

negative (-) value and MEA06 as the positive (+) value.

Notes:	The MEA segment is sent for each QTY loop. The MEA will indicate the "time of use"						
	at applies to the QTY. If meter readings are included in the MEA, they will indicate the						
	"time of use" that the meter readings apply to.						
PA Use:	Required (optional on a cancellation)						
NJ Use:	Same as PA						
DE Use:	Same as PA						
MD Use:	Same as PA						
Examples:	MEA*AA*PRQ*22348*KH***51						
_	MEA*AA*PRQ*14*K1***51 (If meter measures multiple things, you need to send						
	multiple QTY loops, one for each unit of measurement).

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances,

and weights (See Figures Appendix for example of use of C001)

Syntax Notes: 1 At least one of MEA03 MEA05 MEA06 or MEA08 is required.

2 If MEA05 is present, then MEA04 is required.3 If MEA06 is present, then MEA04 is required.

4 If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

5 Only one of MEA08 or MEA03 may be present.

Semantic Notes: 1 MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

Comments: 1 When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed, use MEA05 as the

negative (-) value and MEA06 as the positive (+) value.

	negative (-) value and MEA06 as the positive (+) value.						
PA Use:	PA Use: Required if it is available to the meter agent and it is used in the calculation of the						
	customer's bill. This is only relevant and should only ever be sent with Demand (K1). If						
	not present with a demand quantity, it should be assumed to be 1.						
	Note: If the BPT04="X4" indicating this document is being sent for an interval account at						
	the account level, this segment will be not be used.						
NJ Use:	Same as PA						
DE Use:	Same as PA						
MD Use:	Same as PA

SE Transaction Set Trailer **Segment:**

Position: 030

Loop:

Level: Summary Usage: Mandatory

Max Use:

Purpose: To indicate the end of the transaction set and provide the count of the transmitted

segments (including the beginning (ST) and ending (SE) segments)

Syntax Notes: Semantic Notes:

Comments: SE is the last segment of each transaction set.

001111101	2 52 is the last segment of each transaction set.
PA Use:	Required
NJ Use:	Required
DE Use:	Required
MD Use:	Required
Example:	SE*28*000000001

Must Use	Ref. <u>Des.</u> SE01	Data Element 96	Name Number of Included Segments Total number of segments included in a transaction set including ST and S	$\overline{\mathbf{M}}$	ributes No 1/10 nents
Must Use	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set f by the originator for a transaction set	M unction	AN 4/9 nal group assigned

Examples:

General Note:

For the detail portion, you may send your PTD loops in any order; this is a function of ANSI. The indicator in the PTD loop tells what information is contained in the loop. A translator's mapper will map the loop according to your instructions.

Example 1 - One Meter - On/off peak:

Following example is for an account with one meter. Meter multiplier is 2, Power factor is 1.9999, and no transformer loss. The meter measures on and off peak consumption, and the meter readings are at the on / off peak consumption level. The meter also measures on and off peak demand.

- Total consumption is 100 KWH (60 on peak / 40 off-peak). Demand: On peak 4.7, Off peak 4.1 (billed 4.7).
- This example includes the Summary loop which summarizes kWh (and KVARH, if it existed), and the Monthly Billed Summary for billed kWh, kW (and kvarh if relevant).
