# NOTE

# Chapter 1: Introduction

---

## 1.1 - Congratulations

You have purchased one of the most powerful server solutions. The Tempest i5100X (S5375) is a flexible Intel® platform for multiple applications, based on Intel® 5100 MCH and ICH9R chipsets.

Designed to support two Intel® 5100/5200/5400 Series processors and 32GB DDR2-533/667 DIMM memory, and featured with integrated 82573L and 82573 (L/V) LAN controllers, built-in 32MB XGI Z9S video plus six SATA2 ports, the S5375 offers exceptional performance and versatile solution for your server / Workstation.

Remember to visit TYAN's Website at <http://www.tyan.com>. There you can find information on all of TYAN's products with FAQs, online manuals and BIOS upgrades.

## 1.2 - Hardware Specifications

### Processors

- Dual LGA771 sockets
- Supports up to two (2) Intel® 5100/5200/5400 Series processors
- 1.33 / 1.06 GHz FSB
- VRD 11.0

### Chipset

- Intel® 5100 (San Clemente) MCH
- ICH9R South Bridge
- PXH-V 64-bit PCI Hub (S5375AG2NR only)
- Winbond 83627DHG Super I/O chip

### Memory

- Eight (8) 240-pin DDR2 DIMM sockets
- Supports Registered ECC DIMMs
- Maximum of 32GB of DDR2 DIMM 533/667 (up to 8 ranks)

### Optional Modules

- Optional TYAN® M3295-2/M3296 SMDC support

### System Management

- Winbond W83793G Hardware Monitor ASIC
- CPU thermal & voltage monitor support
- 2-pin chassis intrusion header
- Two (2) 4-pin CPU fan headers with tachometer monitoring and smart FAN control
- Three (3) 4-pin system fan headers with tachometer monitoring, and support smart FAN control

### Back Panel I/O Ports

- Stacked PS/2 Mouse & Keyboard ports
- Stacked two (2) USB 2.0 ports
- One (1) 9-pin COM port
- One (1) 15-pin VGA port
- Two (2) RJ45 10/100/1000 ports with activity LED
- One (1) RJ45 10/100 port with activity LED

### Integrated LAN Controllers

- 82573L + 82573V or two 82573V

## **Expansion Slots**

### **\*S5375AG2NR**

- One (1) PCI-E x16 slot w/ x16 signal
- One (1) PCI-E x8 slot w/ x8 signal
- Two (2) PCI-X 1.0 64/133 slots
- Two (2) 32/33 PCI 2.2 slots (PCI device component height limit = 9.2mm)
- Total six slots

### **\*S5375G2NR-1U**

- One (1) PCI-E x16 slot w/ x16 signal
- One (1) 32/33 PCI 2.2 slot (PCI device component height limit = 9.2mm)
- Total two slots

## **Integrated I/O**

- Six (6) SATA (3Gb/s) ports
- Six (6) USB 2.0 ports (two at rear, and four via headers)
- Two (2) COM ports (1 at rear, 1 via cable)
- TYAN<sup>®</sup> 2x9 front panel pin header
- TYAN<sup>®</sup> 2x6 front panel pin header for LAN LED and ID LED/Switch
- 2x7 pin Fan header
- One (1) SO-DIMM connector for optional TYAN<sup>®</sup> SMDC M3295-2 / M3296

## **Integrated SATA Controller (ICH9R)**

- Supports six (6) SATA2 ports running at 3.0Gb/s
- RAID 0/1/5/10 capable (Windows OS only)

## **Integrated Audio (S5375AG2NR only)**

- HD Audio supported
- Realtek ALC262 controller
- Front panel audio header (2x5 pin)
- CD\_IN, AUX headers (4-pin configuration)

## **Integrated Video Controller**

- XGI Z9S
- 32MB DDR2 frame buffer memory

## **BIOS**

- AMI BIOS on 8Mbit Flash ROM
- Serial Console Redirect
- PXE via Ethernet, USB device boot
- PnP, DMI 2.0, WfM 2.0 Power Management
- User-configurable H/W monitoring
- Auto-configuration of hard disk types
- Multiple boot options
- 48-bit LBA support

## **Form Factor**

- CEB footprint (10.5" x 12")

## **Power**

- ATX 12V
- Universal 24-pin +8-pin power connectors

## **Regulatory**

- FCC Class B (DoC)
- CE (DoC)
- BSMI (optional)

## Chapter 2: Board Installation

---

You are now ready to install your motherboard. The mounting hole pattern of the Tempest i5100X S5375 matches the SSI CEB specification. Before continuing with installation, confirm that your chassis supports an SSI CEB motherboard.

### How to install our products right... the first time

The first thing you should do is reading this user's manual. It contains important information that will make configuration and setup much easier. Here are some precautions you should take when installing your motherboard:

- (1) Ground yourself properly before removing your motherboard from the antistatic bag. Unplug the power from your computer power supply and then touch a safely grounded object to release static charge (i.e. power supply case). For the safest conditions, TYAN® recommends wearing a static safety wrist strap.
- (2) Hold the motherboard by its edges and do not touch the bottom of the board, or flex the board in any way.
- (3) Avoid touching the motherboard components, IC chips, connectors, memory modules, and leads.
- (4) Place the motherboard on a grounded antistatic surface or on the antistatic bag that the board was shipped in.
- (5) Inspect the board for damage.

The following pages include details on how to install your motherboard into your chassis, as well as installing the processor, memory, disk drives and cables.

**NOTE****DO NOT APPLY POWER TO THE BOARD IF IT HAS BEEN DAMAGED.**

## 2.1- Board Image

**Tempest i5100X S5375AG2NR**

This picture is representative of the latest board revision available at the time of publishing. The board you receive may or may not look exactly like the above picture.

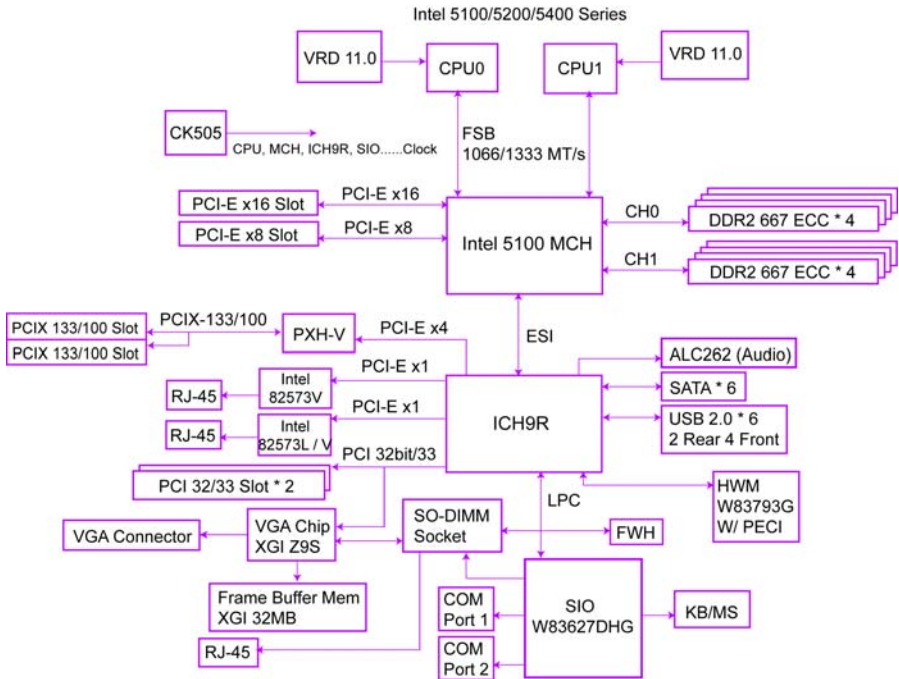

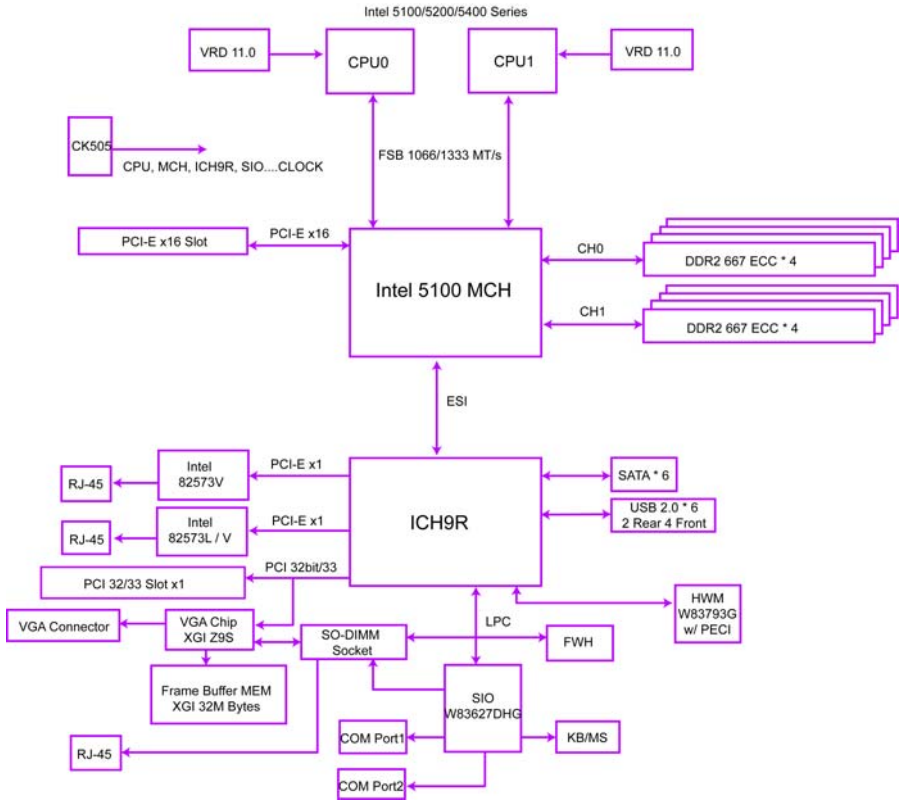

### **Tempest i5100X S5375G2NR-1U**

This picture is representative of the latest board revision available at the time of publishing. The board you receive may or may not look exactly like the above picture.

## 2.2 - Block Diagram

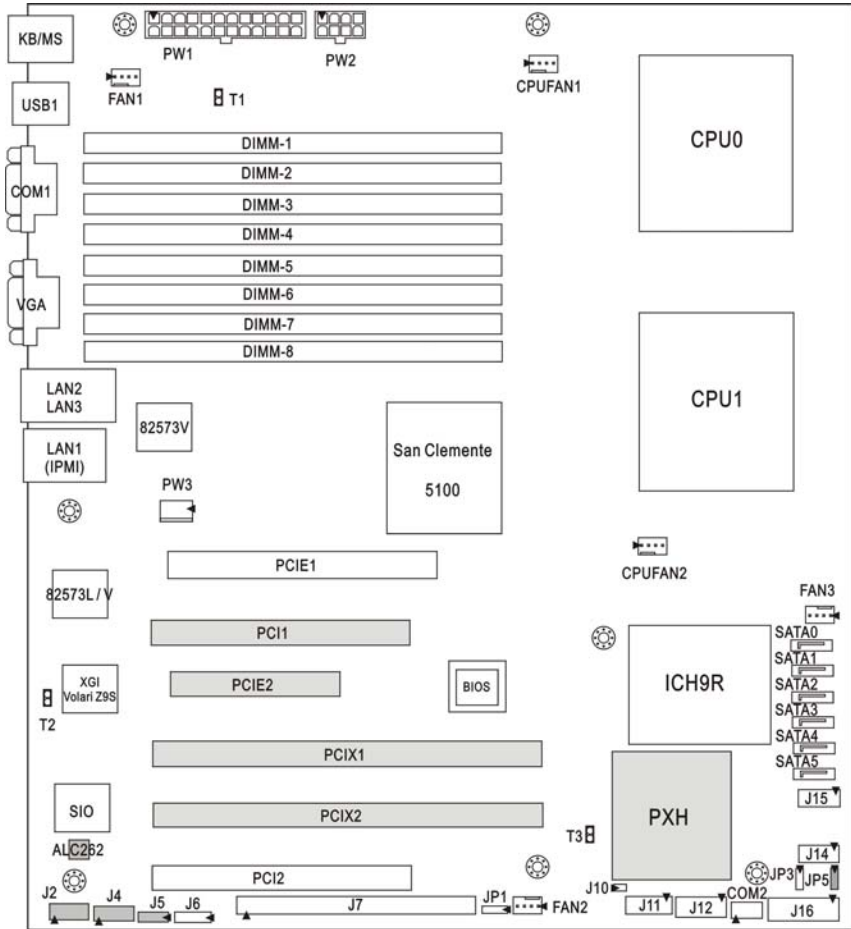

Tempest i5100X S5375AG2NR Block Diagram

**Tempest i5100X S5375G2NR-1U Block Diagram**

## 2.3 - Board Parts, Jumpers and Connectors

Gray blocks are for S5375AG2NR only.

This diagram is representative of the latest board revision available at the time of publishing. The board you receive may not look exactly like the above diagram.

### Jumper Legend

	<b>OPEN</b> - Jumper OFF, without jumper cover
	<b>CLOSED</b> – Jumper ON, with jumper cover

<b>Jumper/Connector</b>	<b>Function</b>
J2	CD_IN Connector
J4	Front Panel Audio Connector
J5	AUX_IN Connector
J6	IPMB Connector

	<table border="1"> <tbody> <tr> <td>7</td> <td>GND</td> </tr> <tr> <td>6</td> <td>RXP</td> </tr> <tr> <td>5</td> <td>RXN</td> </tr> <tr> <td>4</td> <td>GND</td> </tr> <tr> <td>3</td> <td>TXN</td> </tr> <tr> <td>2</td> <td>TXP</td> </tr> <tr> <td>1</td> <td>GND</td> </tr> </tbody> </table>	7	GND	6	RXP	5	RXN	4	GND	3	TXN	2	TXP	1	GND	<p>Connects to the Serial ATA ready drives via the Serial ATA cable.</p>
7	GND															
6	RXP															
5	RXN															
4	GND															
3	TXN															
2	TXP															
1	GND															

## COM2: COM2 Header

Use these pin definitions to connect a port to COM2.

*\*TYAN<sup>®</sup> does not provide cables for this header. It is designed for barebone use only.*

Pin	Signal	Pin	Signal
1	DCD	2	DSR
3	RX	4	RTS
5	TX	6	CTS
7	DTR	8	RI
9	GND	10	NC

## J11: Fan Board Connector for Barebone

*It is designed for barebone use only.*

Pin	Signal	Pin	Signal
1	CPU0-TACH	2	SYS4-TACH
3	CPU1-TACH	4	SYS5-TACH
5	FAN3-TACH	6	SYS6-TACH
7	FAN1-TACH	8	SYS7-TACH
9	FAN2-TACH	10	SYS8-TACH
11	GND	12	KEY
13	GND	14	HMO-FANPWM1

## J12: TYFP2 Connector for Barebone

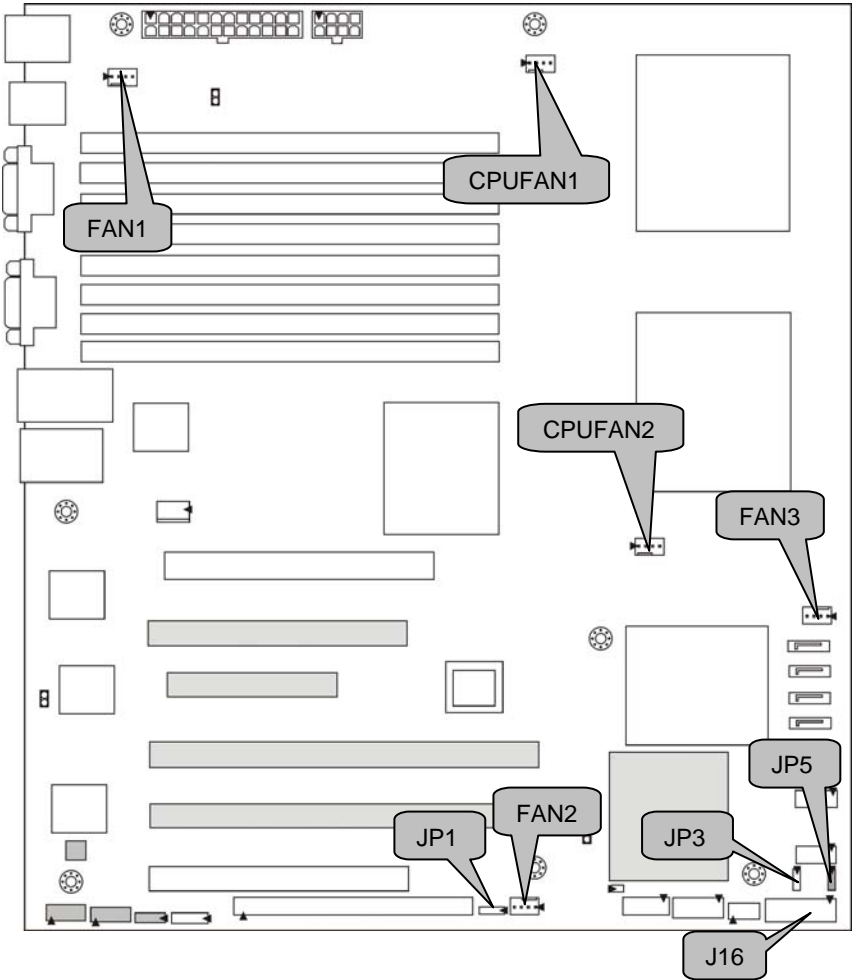

*It is designed for barebone use only.*

Pin	Signal	Pin	Signal
1	LAN1 LED+	2	LAN1 LED-
3	LAN2 LED+	4	LAN2 LED-
5	NC	6	NC
7	ID LED+	8	ID LED-
9	ID SW+	10	ID SW-
11	Key	12	Reserved

## J14/J15: USB Front Panel Connector

Pin 1	USBPWR	Pin 2	USBPWR
Pin 3	USB 4-	Pin 4	USB 2-
Pin 5	USB 4+	Pin 6	USB 2+
Pin 7	GND	Pin 8	GND
Pin 9	KEY	Pin 10	GND

**JP5: PCI-X Speed Select Jumper (S5375AG2NR only)**

<p>1 <input type="checkbox"/></p> <p>3 <input type="checkbox"/></p>	<p>Pin 1-2 Closed: 133MHz (<b>Default</b>)</p>
<p>1 <input type="checkbox"/></p> <p>3 <input type="checkbox"/></p>	<p>Pin 2-3 Closed: 100MHz max.</p>

## J16: Front Panel Header

The Front Panel Header is used to connect some control or signal wires from motherboard to chassis, such as HDD LED, power LED, power button, and reset button.

HDDLED+	1	2	PWR LED+
HDDLED-	3	4	PWR LED-
GND	5	6	PWR SW+
Reset+	7	8	PWR SW-
VCC5	9	10	Warning LED+
NMI	11	12	Warning LED-
VCC3_SBY	13	14	Key
SMBus Data	15	16	GND
SMBus Clock	17	18	INTRU#

## FAN1/FAN2/FAN3/CPUFAN1/CPUFAN2: 4-pin Fan Connector

		<p>Use this header to connect the cooling fan to your motherboard to keep the system at optimum performance levels.</p>
--	--	---

## JP1: VGA Enable/Disable Jumper

	Pin 1-2 Closed: Enable ( <b>Default</b> )
	Pin 2-3 Closed: Disable

## JP3: Clear CMOS Jumper

<p><b>Normal (Default)</b></p>	<p>Use this jumper when you forgot your system/setup password or need to clear system BIOS setting.</p> <p>How to clear the CMOS data</p> <ul style="list-style-type: none"> <li>- Power off system and <b>disconnect power supply from AC source</b></li> <li>- Use jumper cap to close Pin_2 and 3 for several seconds to Clear CMOS</li> <li>- Replace jumper cap to close Pin_1 and 2</li> <li>- Reconnect power supply to AC source</li> </ul> <p>Power on system</p>
<p><b>Clear</b></p>	

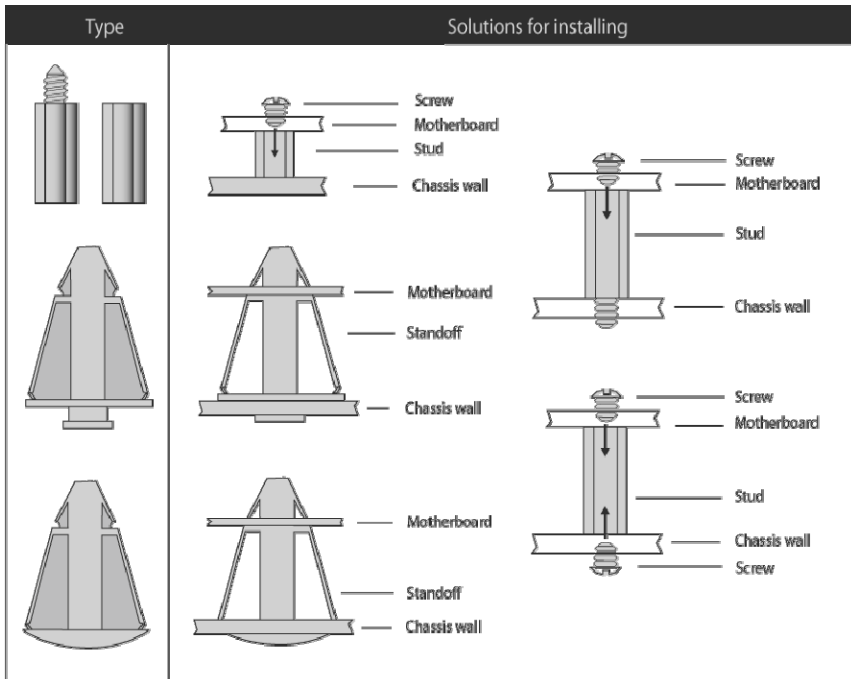

## 2.4 - Tips on Installing Motherboard in Chassis

Before installing your motherboard, make sure your chassis has the necessary motherboard support studs installed. These studs are usually metal and are gold in color. Usually, the chassis manufacturer will pre-install the support studs. If you are unsure of stud placement, simply lay the motherboard inside the chassis and align the screw holes of the motherboard to the studs inside the case. If there are any studs missing, you will know right away since the motherboard will not be able to be securely installed.

Some chassis' include plastic studs instead of metal. Although the plastic studs are usable, TYAN® recommends using metal studs with screws that will fasten the motherboard more securely in place.

Below is a chart detailing what the most common motherboard studs look like and how they should be installed.

Mounting the Motherboard

## 2.5 - Installing the Processor(s)

Your Tempest i5100X S5375 supports the latest processor technologies from Intel. Check the TYAN® website for latest processor support:

<http://www.tyan.com>

### Processor Installation (LGA771 Socket)

The processor should be installed carefully. Make sure you are wearing an antistatic strap and handle the processor as little as possible. Please note that both processors of the **same type and frequency** are required for optimal system performance.

Follow these instructions to install your processor.

1. Locate the processor socket on the motherboard and lift the protective cover off as shown.

### **WARNING:**

This new processor socket designed by Intel is easy to be damaged. The processor has to be installed very carefully to prevent the contact pins of the socket from breaking. It is strongly recommended the processor installation job to be handled by the experienced technician.

2. Pull the locking lever out of it's locked position and let it spring into the open position.

3. Lift the metal cover to expose the socket interior and place the socket in as shown.

Pin 1

4. Close the cover and return the locking lever to its locked position.

5. Repeat this procedure for the second processor socket.
6. Turn the board upside down and insert the heat sink spring mechanism as shown.

7. Turn the board the right way up again and screw the heat sink into place.

8. Repeat this procedure for the second processor.

### **Cooling Fan Installation**

After you have installed the processor, the heatsink should be installed to ensure that the processor runs efficiently and does not overheat. Use the heatsink supplied for best results.

Follow these instructions to install the heatsink shown.

1. Apply some (a little will work, more doesn't equal better performance) thermal compound to the top of the processor. Try and apply a thin, even layer over the top of the processor.
2. Align the heatsink with the four holes around the processor socket.
3. Press the heatsink down until the four screws are securely seated in the holes.
4. Use screw drive to secure the four screws.

### **CPU VRD Heat Dispersion Notice**

#### **INSTALL FAN INTO CHASSIS TO LET AIR FLOW IN!!!**

-To ensure that the board runs efficiently and does not overheat, make sure there is air flow around the CPU VRD (as shown) to help disperse the heat generated around the CPU.

## 2.6 - Installing the Memory

Before installing memory, ensure that the memory you have is compatible with the motherboard and processor. Only DDR2-667/533 DIMM modules are required. Check the TYAN® Web site at: [www.tyan.com](http://www.tyan.com) for details of the type of memory recommended for your motherboard.

The following diagram shows common types of DDR2 memory modules.

Key points to note before installing memory:

- Only DDR2-667/533 memory modules are supported.
- All installed memory will automatically be detected and no jumpers or settings need changing.
- The Tempest i5100X S5375 supports up to 32GB of memory.
- All memory must be of the **same type and density**.

The following chart outlines the suggested rules for populating memory.

		Single Channel								Dual Channel			
		Channel 0				Channel 1				Channel 0 & 1			
Single Rank Memory	DIMM1	x	x	x	x					x	x	x	x
	DIMM2					x	x	x	x	x	x	x	x
	DIMM3				x								x
	DIMM4								x				x
	DIMM5		x	x	x						x	x	x
	DIMM6					x	x	x			x	x	x
	DIMM7			x	x							x	x
	DIMM8						x	x				x	x
Dual Rank Memory	DIMM1	x		x						x		x	
	DIMM2					x		x		x		x	
	DIMM3												
	DIMM4												
	DIMM5			x								x	
	DIMM6							x				x	
	DIMM7												
	DIMM8												

**NOTE:** Only DIMM1, DIMM2, DIMM5 and DIMM6 slots support Dual Rank memory modules.

## Memory Installation Procedure

Follow these instructions to install memory modules into the Tempest i5100X S5375.

1. Press the locking levers in the direction shown in the following illustration.

2. Align the memory module with the socket. The memory module is keyed to fit only one way in the socket.

3. Seat the module firmly into the socket by gently pressing down until it sits flush with the socket. The locking levers pop up into place.

## 2.7 - Attaching Drive Cables

### Attaching Serial ATA Cables

The Tempest i5100X S5375 is also equipped with 6 Serial ATA (SATA) channels.

Connections for these drives are also very simple.

There is no need to set Master/Slave jumpers on SATA drives.

TYAN® has supplied two SATA cables and one SATA power adapter. If you are in need of other cables or power adapters please contact your place of purchase.

**The following pictures illustrate how to connect an SATA drive**

## 2.8 - Installing Add-In Cards

Before installing add-in cards, it's helpful to know if they are fully compatible with your motherboard. For this reason, we've provided the diagrams below, showing the slots that appear on your motherboard.

PCI-E x16 slot (w/ x16 bus)

PCI 32/33MHz slot

PCI-E x8 slot (w/ x8 bus)

PCI-X 64/133MHz slots

PCI 32/33MHz slot

Simply find the appropriate slot for your add-in card and insert the card firmly. Do not force any add-in cards into any slots if they do not seat in place. It is better to try another slot or return the faulty card rather than damaging both the motherboard and the add-in card.

### NOTE

**YOU MUST ALWAYS** unplug the power connector from the motherboard before performing system hardware changes. Otherwise you may damage the board and/or expansion device.

## 2.9 - Installing Optional SO-DIMM modules

Your S5375 motherboard is equipped with an optional proprietary SO-DIMM connector. The 200-pin vertical SO-DIMM connector can be used for **TYAN® M3295-2/M3296** expansion card to provide such features as additional TYAN® SMD C module support. For details of available expansions cards, visit the TYAN® website at <http://www.tyan.com>.

To install a SO-DIMM expansion card:

1. Open the spring levers as shown.

2. Insert the SO-DIMM card as shown, making sure that the card is the right way up. The card will fit in only one way and the screw holes in the card should line up exactly with the mounting posts on the motherboard.

3. Push the SO-DIMM card down into place and make sure the spring levers click into place as shown.

**NOTE:** The SO-DIMM expansion cards will fit in the slot only one way. Make sure that you align the slot in the card with the key in the card slot.

4. Removal of a SO-DIMM card is a reversal of the installation procedure. Push out the spring levers as shown and pull the card out of the socket.

## 2.10 - Connecting External Devices

The following diagrams will detail the rear port stack for this S5375 motherboard:

**NOTE:** Peripheral devices can be plugged straight into any of these ports but software may be required to complete the installation.

### Onboard LAN LED Color Definition

The three onboard Ethernet ports have green and yellow LEDs to indicate LAN status. The chart below illustrates the different LED states.

10/100/1000 Mbps LAN Link/Activity LED Scheme			
		Left LED	Right LED
10 Mbps	Link	Slow Blinking Green	Off
	Active	Blinking Green	Off
100 Mbps	Link	Slow Blinking Green	Green
	Active	Blinking Green	Green
1000 Mbps	Link	Slow Blinking Green	Orange
	Active	Blinking Green	Orange
No Link		Off	Off

## 2.11 - Installing the Power Supply

There are two power connectors on your Tempest i5100X S5375. The Tempest i5100X S5375 requires 2 power inputs.

- 24-pin (PW1)
- 8-pin (PW2)

**NOTE:** Please be aware that ATX 2.x, ATX12V and ATXGES power supplies may **not** be compatible with the board and can damage the motherboard and/or CPU(s).

1 x 24-pin 12V Power Connector

1 x 8-pin 12V Power Connector

1 x 4-pin 12V/5V Power Connector (PW3, aux. power supply for TYAN<sup>®</sup> Riser Card M2061)

### Applying power to the board:

1. Connect the 12V 8-pin power connector.
2. Connect the EPS/12V 24-pin power connector.
3. Connect the 4-pin aux. power connector for TYAN<sup>®</sup> Riser Card M2061.
4. Connect power cable to power supply and power outlet.

#### NOTE

**YOU MUST** unplug the power supply before plugging the power cables to motherboard connectors.

## 2.12 - Finishing up

Congratulations on making it this far! You're finished setting up the hardware aspect of your computer. Before closing up your chassis, make sure that all cables and wires are connected properly, especially IDE cables and most importantly, jumpers. You may have difficulty powering on your system if the motherboard jumpers are not set correctly.

In the rare circumstance that you have experienced difficulty, you can find help by asking your vendor for assistance. If they are not available for assistance, please find setup information and documentation online at our website or by **calling your vendor's support line.**

# Chapter 3: BIOS Setup

---

## About the BIOS

The BIOS is the basic input/output system, the firmware on the motherboard that enables your hardware to interface with your software. The BIOS determines what a computer can do without accessing programs from a disk. The BIOS contains all the code required to control the keyboard, display screen, disk drives, serial communications, and a number of miscellaneous functions. This chapter describes the various BIOS settings that can be used to configure your system.

The BIOS section of this manual is subject to change without notice and is provided for reference purposes only. The settings and configurations of the BIOS are current at the time of print and are subject to change, and therefore may not match exactly what is displayed on screen.

This section describes the BIOS setup program. The setup program lets you modify basic configuration settings. The settings are then stored in a dedicated, battery-backed memory (called NVRAM) that retains the information even when the power is turned off.

To start the BIOS setup utility:

1. Turn on or reboot your system.
2. Press <Del> during POST (<F4> on remote console) to start the BIOS setup utility.

## BIOS Menu Bar

The menu bar at the top of the windows lists these selections:

Main	To configure basic system setups
Advanced	To configure the advanced chipset features
PCI/PnP	To configure legacy Plug & Play or PCI settings
Boot	To configure system boot order
Security	To configure user and supervisor passwords
Chipset	To configure chipset management features
Exit	To exit setup utility

## Setup Basics

The table below shows how to navigate in the setup program using the keyboard.

Key	Function
<F1>	General help window
<ESC>	Exit current menu
← → arrow keys	Select a different menu
↑ or ↓ arrow keys	Move cursor up/down
<Tab> or <Shift-Tab>	Cycle cursor up/down
<Home> or <End>	Move cursor to top/bottom of the window
<PgUp> or <PgDn>	Move cursor to next/previous page
<->	Select the previous value/setting of the field
<+>	Select the next value/setting of the field
<F8>	Load Fail Safe default configuration values of the menu
<F9>	Load the Optimal default configuration values of the menu
<F10>	Save and exit
<Enter>	Execute command or select submenu

## Getting Help

Press [**F1**] to display a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window, press [**ESC**].

## In Case of Problems

If you have trouble booting your computer after making and saving the changes with the BIOS setup program, you can restart the computer by holding the power button down until the computer shuts off (usually within 4 seconds); resetting by pressing CTRL-ALT-DEL; or clearing the CMOS.

The best advice is to only alter settings that you thoroughly understand. In particular, do not change settings in the Chipset section unless you are absolutely sure of what you are doing. The Chipset defaults have been carefully chosen either by TYAN<sup>®</sup> or your system manufacturer for best performance and reliability. Even a seemingly small change to the Chipset setup options may cause the system to become unstable or unusable.

**NOTE:** The following pages provide the details of BIOS menu. Please be noticed that the BIOS menu are continually changing due to the BIOS updating. The BIOS menu provided are the most updated when this manual is written. Please visit TYAN<sup>®</sup>'s website at <http://www.tyan.com> for the information of BIOS updating.

### 3.1 BIOS Main Menu

The Main BIOS Menu is the first screen that you can navigate. The Main BIOS setup menu screen has two main frames. The left frame displays all the options that can be configured. "Grayed-out" options cannot be configured, options in blue can be changed.

The right frame displays the key legend. Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often, a text message will accompany it.

BIOS Setup Utility	
Main	Advanced PCI/PnP Boot Security Chipset Exit
System Overview	Use [ENTER], [TAB] or [SHIFT-TAB] to select a field
AMIBIOS Version : 08.00.14 Build Date : 09/10/07 ID : 0AAAA000  Processor Intel® Xeon® CPU 5130 @2.00GHz Speed : 1999 MHz Count : 2  System Memory Size : 512 MB  System Time [04:08:25] System Date [Tue 01/01/2002]	Use [+] or [-] to configure system time.  ← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit

Feature	Option	Description
<b>Main</b>		
System Time	HH : MM : SS	Set the system time
System Date	MM : DD : YYYY	Set the system date

### 3.2 Advanced Menu

You can select any of the items in the left frame of the screen, such as Super I/O Configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screen is shown below. The sub menus are described on the following pages.

BIOS Setup Utility	
Main	<b>Advanced</b>
PCI/PnP	Boot
Security	Chipset
	Exit
Advanced Settings	
<p>WARNING: Setting wrong values in below sections may cause system to malfunction.</p> <ul style="list-style-type: none"> <li>▶ CPU Configuration</li> <li>▶ IDE Configuration</li> <li>▶ Super IO Configuration</li> <li>▶ USB Configuration</li> <li>▶ ACPI Configuration</li> <li>▶ AHCI Configuration</li> <li>▶ APM Configuration</li> <li>▶ Event Log Configuration</li> <li>▶ Hardware Health Configuration</li> <li>▶ Remote Access Configuration</li> </ul>	<p>Options for CPU</p> <p>← → Select Screen            ↑ ↓ Select Item            Enter Go to Sub Screen            F1 General Help            F10 Save and Exit            ESC Exit</p>

Feature	Option	Description
<b>Advanced Settings</b>

Hardware Health Configuration	<b>Menu Item</b>	Configure/monitor the Hardware Health
Remote Access Configuration	<b>Menu Item</b>	Configure Remote Access

### 3.2.1 CPU Configuration

You can use this screen to view CPU Configuration Menu. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. The settings are described on the following pages.

BIOS Setup Utility		
Main	Advanced	PCI/PnP Boot Security Chipset Exit
<b>Configure advanced CPU settings</b> Module Version: 3F.00		
Manufacturer: Intel Intel® Xeon® CPU: 5130 @2.00GHz Frequency: 1.99GHz FSB Speed: 1332MHz Cache L1: 64KB Cache L2: 4096KB Ratio Status: Unlocked (Min:06, Max:06) Ratio Actual Value: 6		← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit
<b>Ratio CMOS Setting</b>	[6]	
C1E Support	[Disabled]	
Hardware Prefetcher	[Enabled]	
Adjacent Cache Line Prefetch	[Enabled]	
Max CPUID Value Limit	[Disabled]	
Virtualization Technology	[Enabled]	
Execute-Disable Bit Capability	[Enabled]	
Core Multi-Processing	[Enabled]	
Intel® SpeedStep™ Tech	[Enabled]	

Feature	Option	Description
<b>CPU Configuration</b>		
Manufacturer	Read only	Displays information about CPU
Intel® Xeon® CPU		
Frequency		
FSB Speed		
Cache L1		
Cache L2		
Ratio Status		
Ratio Actual Value		
Ratio CMOS Setting	According to CPU ratio	It allows users to select the ratio of CPU frequency to front side bus. The default is auto-detected by BIOS. Use [+] or [-] to adjust values.

C1E Support	Enabled	Enable or disable the C1 Enhanced mode
	<b>Disabled</b>	
Hardware Prefetcher	<b>Enabled</b>	When enabled, the processor's hardware prefetcher will be enabled and allowed to automatically prefetch data and code for the processor. When disabled, the processor's hardware prefetcher will be disabled.
	Disabled	
Adjacent Cache Line Prefetch	<b>Enabled</b>	When enabled, the processor will retrieve the currently requested cache line, as well as the subsequent cache line. When disabled, the processor will only retrieve the currently requested cache line.
	Disabled	
Max CPUID Value Limit	Enabled	When enabled, the processor will limit the maximum CPUID input value to <b>03h</b> when queried, even if the processor supports a higher CPUID input value. When disabled, the processor will return the actual maximum CPUID input value of the processor when queried. It is recommended that you leave it at the default setting of Disabled.
	<b>Disabled</b>	
Virtualization Technology	<b>Enabled</b>	Intel Virtualization Technology is a set of platform features that support virtualization of platform hardware and multiple software environments. When enabled, it offers data center managers the ability to consolidate multiple workloads on one physical server system.
	Disabled	
Execute-Disable Bit Capability	<b>Enabled</b>	Intel's Execute Disable Bit functionality can help prevent certain classes of malicious buffer overflow attacks when combined with a supporting operating system. Execute Disable Bit allows the processor to classify areas in memory by where application code can execute and where it cannot. When a malicious worm attempts to insert code in the buffer, the processor disables code execution, preventing damage and worm propagation.
	Disabled	

Core Multi-Processing	<b>Enabled</b>	When disabled, it disables one execution core.
	Disabled	
Intel® SpeedStep™ Tech	<b>Enabled</b>	Enhanced Intel SpeedStep technology allows the system to dynamically adjust processor voltage and core frequency, which can result in decreased average power consumption and decreased average heat production.
	Disabled	

### 3.2.2 IDE Configuration Sub-Menu

You can use this screen to select options for the IDE Configuration Settings. Use the up and down <Arrow> keys to select an item. Use the <Plus> and <Minus> keys to change the value of the selected option.

BIOS Setup Utility		
Main	<b>Advanced</b>	PCI/PnP Boot Security Chipset Exit
<b>IDE Configuration</b>		Select whether the IDE channels should be initialized in Compatible or Enhanced mode of operation.  ← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit
<b>SATA Configuration</b> Configure SATA as  ▶ SATA0 (3M) ▶ SATA1 (4M) ▶ SATA2 (3S) ▶ SATA3 (4S) ▶ SATA4 (PM) ▶ SATA5 (SM)  Hard Disk Write Protect IDE Detect Time Out (Sec)	[Enhanced] [IDE]  [Disabled] [35]	

Feature	Option	Description
<b>IDE Configuration</b>		
SATA Configuration	<b>Enhanced</b>	This defines the operation mode of SATA channel.
	Compatible	
Configure SATA as	<b>IDE</b>	Select legacy IDE, RAID or AHCI as the SATA interface.
	RAID	
	AHCI	
Hard Disk Write Protect	<b>Disabled</b>	Enable/Disable device write protection. This will be effective only if device is accessed through BIOS.
	Enabled	
IDE Detect Time Out (Sec)	<b>0~35</b> (at 5 interval)	Select the time out value for detecting ATA/ATAPI device(s).

### 3.2.2.1 SATA0 ~ SATA5 Sub-Menu

BIOS Setup Utility	
Main	Advanced PCI/PnP Boot Security Chipset Exit
<b>SATA0</b>	
Device: Not Detected	← → Select Screen ↑ ↓ Select Item +/- Change Option Tab Select Field F1 General Help F10 Save and Exit ESC Exit
Type [Auto] LBA /Large Mode [Auto] Block (Multi-Sector Transfer) [Auto] PIO Mode [Auto] DMA Mode [Auto] S.M.A.R.T. [Auto] 32 Bit Data Transfer [Enabled]	

Feature	Option	Description
<b>SATA0</b>		
Type	<b>Auto</b>	Selects the type of device connected to the system.
	Not Installed	
	CD/DVD	
	ARMD	
LBA/Large Mode	<b>Auto</b>	Auto: Enabled LBA Mode if the device supports it and the device is not already formatted with LBA Mode disabled.
	Disabled	Disabled: Disabled LBA Mode.
Block (Multi-Sector Transfer)	<b>Auto</b>	Disabled: The Data transfer from and to the device occurs one sector at a time.
	Disabled	Auto: The Data transfer from and to the device occurs multiple sectors at a time if the device supports it.
PIO Mode	<b>Auto</b>	Selects the PIO Mode. Select Auto to enhance hard disk performance by optimizing the hard disk timing.
	0~4 (at 1 interval)	
DMA Mode	<b>Auto</b>	Selects DMA Mode. Auto: Auto detected.
S.M.A.R.T.	<b>Auto</b>	S.M.A.R.T (Self-Monitoring Analysis and Reporting Technology) is a utility that monitors your disk status to predict hard disk failure.
	Disabled	
	Enabled	
32Bit Data Transfer	<b>Enabled</b>	Enables 32-bit to maximize the IDE hard disk data transfer rate.
	Disabled	

### 3.2.3 Super IO Configuration Sub-Menu

You can use this screen to select options for the Super I/O settings. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option

BIOS Setup Utility		
Main	<b>Advanced</b>	PC/PnP Boot Security Chipset Exit
<b>Configure Win627DHG Super IO Chipset</b>		Allows BIOS to select Serial Port1 Base Address.
Serial Port1 Address	[3F8/IRQ4]	← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit
Serial Port2 Address	[2F8/IRQ3]	
Watchdog Mode	[Disabled]	

Feature	Option	Description
<b>Configure Win627DHG Super IO Chipset</b>		
Serial Port1 Address	<b>3F8 IRQ4</b>	Allow BIOS to select Serial Port1 Base Addresses.
	3E8 IRQ4	
	2E8 IRQ3	
	2F8 IRQ3	
	Disabled	
Serial Port2 Address	3F8 IRQ4	Allow BIOS to select Serial Port2 Base Addresses.
	3E8 IRQ4	
	2E8 IRQ3	
	<b>2F8 IRQ3</b>	
	Disabled	
Watchdog Mode	<b>Disabled</b>	POST: Watchdog timer counting, start at Power on, stop at OS Boot OS: Start at OS Boot Power on: Start at power on
	POST	
	OS	
	Power ON	

### 3.2.4 USB Configuration Sub-Menu

You can use this screen to view the USB Configuration Menu. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. The settings are described on the following pages.

BIOS Setup Utility	
Main	<b>Advanced</b> PCI/PnP Boot Security Chipset Exit
<b>USB Configuration</b>	Enables support for legacy USB. AUTO option disables legacy support if no USB devices are connected.
Module Version – x.xx.x – xx.x	
USB Devices Enabled: 1 Drive	
Legacy USB Support <span style="float: right;">[Enabled]</span>	← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit
Port 64/60 Emulation	
USB 2.0 Controller Mode	
BIOS EHCI Hand-Off	
Hotplug USB FDD Support	
▶ USB Mass Storage Device Configuration	

Feature	Option	Description
<b>USB Configuration</b>		
Legacy USB Support	Disabled	Enables support for legacy USB. AUTO option disables legacy support if no USB devices are connected.
	Auto	
	<b>Enabled</b>	
Port 64/60 Emulation	Enabled	This feature allows you to enable emulation of I/O ports 64h and 60h so that there is full PS/2 legacy support for USB keyboards and mice.
	<b>Disabled</b>	
USB 2.0 Controller Mode	<b>Hi Speed</b>	Configure the USB 2.0 controller in Hi Speed (480 Mbps) or Full Speed (12Mbps).
	Full Speed	
BIOS EHCI Hand-Off	<b>Enabled</b>	This is a work around for OSes without EHCI hand-off support. The EHCI ownership change should claim by EHCI driver.
	Disabled	
Hotplug USB FDD Support	Enabled	Enable or disable hotplug USB floppy support
	Disabled	
	<b>Auto</b>	

### 3.2.4.1 USB Mass Storage Device Configuration Sub-Menu

BIOS Setup Utility		
Main	Advanced	PCI/PnP Boot Security Chipset Exit
<b>USB Mass Storage Device Configuration</b>		
USB Mass Storage Reset Delay	[20 Sec]	← → Select Screen ↑ ↓ Select Item +/- Change Option Tab Select Field F1 General Help F10 Save and Exit ESC Exit
Device #1	USB Flash Disk	
Emulation Type	[Auto]	

Feature	Option	Description
<b>USB Mass Storage Device Configuration</b>		
USB Mass Storage Reset Delay	10 Sec	It enables you to set the number of seconds the POST waits for the USB mass storage device after the start unit command is sent.
	<b>20 Sec</b>	
	30 Sec	
	40 Sec	
Device #1	Read only	
Emulation Type	<b>Auto</b>	If Auto, USB devices less than 530 MB will be emulated as Floppy and remaining as hard drive. Forced FDD option can be used to force a HDD formatted drive to boot as FDD (Ex. ZIP drive).
	Floppy	
	Forced	
	FDD	
	Hard Disk	
	CDROM	

### 3.2.5 ACPI Configuration Sub-Menu

Use this screen to select options for ACPI. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. A description of the selected item appears on the right side of the screen. The settings are described on this page. The screen is shown below.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	Boot	Security	Chipset	Exit
<b>ACPI Settings</b>		Enable ACPI Configuration settings				
▶ <a href="#">Advanced ACPI Configuration</a>		← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit				
▶ Chipset ACPI Configuration						

### 3.2.5.1 Advanced ACPI Configuration Sub-Menu

BIOS Setup Utility		
Main	<b>Advanced</b>	PCI/PnP Boot Security Chipset Exit
<b>Advanced ACPI Configuration</b>		
<b>ACPI Version Features</b> ACPI APIC support AMI OEMB table Headless mode	<b>[ACPI v3.0]</b> [Enabled] [Enabled] [Disabled]	← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit

Feature	Option	Description
<b>Advanced ACPI Configuration</b>		
ACPI Version Features	<b>ACPI v3.0</b>	Set this value to allow or prevent the system to be compliant with the ACPI 2.0 specification.
	ACPI v2.0	
	ACPI v1.0	
ACPI APIC Support	<b>Enabled</b>	This option allows you to define whether or not to enable APIC features.
	Disabled	
AMI OEMB table	<b>Enabled</b>	Set this value to allow the ACPI BIOS to add a pointer to an OEMB table in the Root System Description Table (RSDT) table. Note: OEMB table is used to pass POST data to the AMI code during ACPI O/S operations.
	Disabled	
Headless mode	Enabled	Enable or disable Headless operation mode through ACPI.
	<b>Disabled</b>	

### 3.2.5.2 Chipset ACPI Configuration Sub-Menu

BIOS Setup Utility		
Main	Advanced	PCI/PnP Boot Security Chipset Exit
<b>South Bridge ACPI Configuration</b>		← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit
Energy Lake Feature	[Disabled]	
ACPI APIC SCI IRQ	[Disabled]	

Feature	Option	Description
<b>South Bridge ACPI Configuration</b>		
Energy Lake Feature	Disabled	Allow you to configure Intel's Energy Lake power management technology. If you are running a Media Center you can install the Intel VIIV software to get the correct driver; otherwise disable the Energy Lake feature in BIOS (it relates purely to Intel's Quick Resume feature, which is generally useless).
	Enabled	
ACPI APIC SCI IRQ	Disabled	Enable / Disable ACPI APIC SCI IRQ
	Enabled	

### 3.2.6 AHCI Configuration Sub-Menu

You can use this screen to view the AHCI Configuration Menu. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. The settings are described on the following pages.

BIOS Setup Utility	
Main	<b>Advanced</b>

Ambient2 Temp. (Near PXH)	:xx C/ xxx F	
Ambient3 Temp. (Near VGA)	:xx C/ xxx F	
CPUFAN1 Speed	:xxxx RPM	
CPUFAN2 Speed	:xxxx RPM	
FAN1 Speed	:xxxx RPM	
FAN2 Speed	:xxxx RPM	
FAN3 Speed	:xxxx RPM	

Feature	Option	Description
<b>Hardware Health Configuration</b>		
H/W Health Function	Enabled	Enables Hardware Health Monitoring Device.
	Disabled	
Auto FAN Control	Disabled	FAN power duty cycle is auto dynamic programmed in selected temperature range. Disabled: Fan Power On.
	Enabled	Enabled: Fan Power Duty Cycle=50%(32°C)-100%(0°C), see max (CPU0, CPU1)
PWM Minimal Duty Cycle	50%	This item allows you to set minimum PWM Duty Cycle. Note: This item is hidden and will appear when <b>Auto FAN Power Control</b> is set to [Enabled].
	40%	
	30%	
	0%	
Fan Fail LED Indicator	Disabled	Enabled: Any FAN speed less than 800 RPM, the FAN Fail LED will be lighted.
	Enabled	

### 3.2.9.1 Mainboard Voltages Report Sub-Menu

BIOS Setup Utility	
Main	<b>Advanced</b> PCI/PnP    Boot    Security    Chipset    Exit
<b>Board Voltages Event Monitoring</b>	
CPU0 Vcore	: x.xxx V
CPU1 Vcore	: x.xxx V
12V	: x.xxx V
3.3V	: x.xxx V
-12V	: x.xxx V
VBat	: x.xxx V
Vdimm	: x.xxx V
1.5V	: x.xxx V
3.3Vsb	: x.xxx V
5V	: x.xxx V
	← → Select Screen ↑ ↓ Select Item +/- Change Option Tab Select Field F1 General Help F10 Save and Exit ESC Exit

Read only. It can not be modified in user mode.

### 3.2.10 Remote Access Configuration Sub-Menu

You can use this screen to view the Remote Access Configuration Menu. This feature allows access to the Server remotely via serial port. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. The settings are described on the following pages.

BIOS Setup Utility		
Main	<b>Advanced</b>	PCI/PnP Boot Security Chipset Exit
<b>Configure Remote Access type and parameters</b>		Select remote access type.
Remote Access	[Disabled]	← → Select Screen ↑ ↓ Select Item +/- Change Field F1 General Help F10 Save and Exit ESC Exit
Serial Port Number	[COM1]	
Base Address, IRQ	[3F8h, 4]	
Serial Port Mode	[115200 8, n, 1]	
Flow Control	[None]	
Redirection After BIOS POST	[Always]	
Terminal Type	[ANSI]	
VT-UTF8 Combo Key Support	[Enabled]	
Sredir Memory Display Delay	[No Delay]	

Feature	Option	Description
<b>Configure Remote Access type and parameters</b>		
Remote Access	Enabled	Enables remote access to system through serial port.
	<b>Disabled</b>	
Serial Port Number	<b>COM1</b>	Select Serial Port for console redirection. Make sure the selected port is enabled.
	COM2	
Base Address, IRQ	Read only	
Serial Port Mode	<b>115200 8,n,1</b>	Select Serial Port settings.
	57600 8,n,1	
	38400 8,n,1	
	19200 8,n,1	
	9600 8,n,1	

Flow Control	<b>None</b>	Select Flow Control for console redirection.
	Hardware	
	Software	
Redirection After BIOS POST	Disabled	Disable: Turns off the redirection after POST Boot Loader: Redirection is active during POST and during Boot Loader. Always: Redirection is always active. <Some OSs may not work if set to Always>
	Boot Loader	
	<b>Always</b>	
Terminal Type	<b>ANSI</b>	Select the target terminal type.
	VT100	
	VT-UTF8	
VT-UTF8 Combo Key Support	<b>Enabled</b>	Enable VT-UTF8 Combination key Support for ANSI/VT100 terminals.
	Disabled	
Sredir Memory Display Delay	<b>No Delay</b>	Gives the delay in seconds to display memory information
	Delay 1 Sec	
	Delay 2 Sec	
	Delay 4 Sec	

### 3.3 PCI PnP Menu

You can use this screen to view PnP (Plug & Play) BIOS Configuration Menu. This menu allows the user to configure how the BIOS assigns resources & resolves conflicts. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option. The settings are described on the following pages.

BIOS Setup Utility						
Main	Advanced	<b>PCI/PnP</b>	Boot	Security	Chipset	Exit
<b>Advanced PCI/PnP Settings</b>			Clear NVRAM during System Boot.			
WARNING: Setting wrong values in below sections may cause system to malfunction.						
Clear NVRAM		[No]	← → Select Screen			
Plug & Play O/S		[No]	↑ ↓ Select Item			
PCI Latency Timer		[64]	+/- Change Option			
Allocate IRQ to PCI VGA		[Yes]	F1 General Help			
Palette Snooping		[Disabled]	F10 Save and Exit			
PCI IDE BusMaster		[Enabled]	ESC Exit			

Feature	Option	Description
<b>Advanced PCI/PnP Settings</b>		
Clear NVRAM	No	Clears NVRAM during system Boot.
	Yes	
Plug & Play OS	Yes	No: lets the BIOS configure all the devices in the system. Yes: lets the operating system configure Plug and Play (PnP) devices not required for boot if your system has a Plug and Play operating system.
	No	
PCI Latency Timer	32	This setting controls how many PCI clocks each PCI device can hold the bus before another PCI device takes over. When set to higher values, every PCI device can conduct transactions for a longer time and thus improve the effective PCI bandwidth. Values in units of PCI clocks for PCI device latency timer register.
	<b>64</b>	
	96	
	128	
	160	
	192	
	224	
248		

Allocate IRQ to PCI VGA	<b>Yes</b>	Yes: assigns IRQ to PCI VGA card if card requests IRQ.
	No	
Palette Snooping	<b>Disabled</b>	This is the default setting and should not be changed unless the VGA card manufacturer requires Palette Snooping to be Enabled. Enabled: informs the PCI devices that an ISA graphics device is installed in the system so the card will function correctly.
	Enabled	
PCI IDE BusMaster	Disabled	Enabled: BIOS uses PCI bus mastering for reading / writing to IDE drives.
	<b>Enabled</b>	

### 3.4 Boot Menu

You can display Boot Setup option by highlighting it using the Arrow (↑/↓) keys and pressing Enter. The settings are described on the following pages.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	<b>Boot</b>	Security	Chipset	Exit
<b>Boot Settings</b>				Configures settings during System Boot.		
<ul style="list-style-type: none"> <li>▶ <a href="#">Boot Settings Configuration</a></li> <li>▶ Boot Device Priority</li> <li>▶ Removable Drives</li> </ul>				← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit		

#### 3.4.1 Boot Settings Configuration Sub-Menu

Use this screen to select options for the Boot Settings Configuration. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	<b>Boot</b>	Security	Chipset	Exit
<b>Boot Settings Configuration</b>				Allows BIOS to skip certain tests while booting. This will decrease the time needed to boot the system.		
<ul style="list-style-type: none"> <li><a href="#">Quick Boot</a> [Disabled]</li> <li>Quiet Boot [Disabled]</li> <li>AddOn ROM Display Mode [Force BIOS]</li> <li>Bootup Num-Lock [On]</li> <li>PS/2 Mouse Support [Auto]</li> <li>Wait for 'F1' if Error [Enabled]</li> <li>Hit 'DEL' Message Display [Enabled]</li> <li>Interrupt 19 Capture [Enabled]</li> <li>Keyboard Error Report [Disabled]</li> <li>Endless Boot [Disabled]</li> </ul>				← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit		

Feature	Option	Description
<b>Boot Settings Configuration</b>		
Quick Boot	Enabled	This option allows user bypass BIOS self test during POST.
	<b>Disabled</b>	
Quiet Boot	<b>Disabled</b>	Disabled: displays normal POST messages. Enabled: displays OEM log instead of POST messages.
	Enabled	
Add On ROM Display Mode	<b>Force BIOS</b>	Allows user to force BIOS/Option ROM of add-on cards to be displayed during quiet boot.
	Keep Current	
Bootup Num-Lock	<b>On</b>	Selects Power-on state for Numlock.
	Off	
PS/2 Mouse Support	Enabled	Selects support for PS/2 Mouse.
	Disabled	
	<b>Auto</b>	
Wait for 'F1' If Error	<b>Enabled</b>	Waits for F1 key to be present if error occurs.
	Disabled	
Hit 'DEL' Message Display	<b>Enabled</b>	Displays "Press DEL to run Setup" in POST.
	Disabled	
Interrupt 19 Capture	Disabled	Enabled: allows option ROMs to trap interrupt 19.
	<b>Enabled</b>	
Keyboard Error Report	<b>Disabled</b>	Enable / Disable Keyboard error report.
	Enabled	
Endless Boot	<b>Disabled</b>	Enable/Disable endless loop boot from BBS table.
	Enabled	

### 3.4.2 Boot Device Priority

Use this screen to select options for the Boot Device Priority. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option.

BIOS Setup Utility	
Main	Advanced PCI/PnP <b>Boot</b> Security Chipset Exit
<b>Boot Device Priority</b>	Specifies the boot sequence from the available devices.
1st Boot Device	[xx,xxx-xxxxx:xxx]
2nd Boot Device	[xx,xxx-xxxxx:xxx]
3rd Boot Device	[xx,xxx-xxxxx:xxx]
	A device enclosed in parenthesis has been disabled in the corresponding type menu.
	← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit

Feature	Option	Description
<b>Boot Device Priority</b>		
1st Boot Device 2nd Boot Device 3rd Boot Device	xx,xxx-xxxxx:xxx	Settings for boot priority. These can be customized depending on your preference.
	xx,xxx-xxxxx:xxx	
	Disabled	

### 3.4.3 Removable Drives

Use this screen to select options for the Removable Drives. Use the up and down arrow (↑/↓) keys to select an item. Use the Plus and Minus (+/-) keys to change the value of the selected option.

BIOS Setup Utility	
Main	Advanced PCI/PnP <b>Boot</b> Security Chipset Exit
<b>Removable Drives</b>	Specifies the boot sequence from the available devices.
1st Drive [xxxxxxx]	← → Select Screen ↑ ↓ Select Item +/- Change Option F1 General Help F10 Save and Exit ESC Exit

Feature	Option	Description
<b>Removable Drives</b>		
1st Drive	xx,xxx-xxxxx:xxx	Specifies the boot sequence from the available devices.
	Disabled	

### 3.5 Security Menu

The system can be configured so that all users must enter a password every time the system boots or when BIOS Setup is entered, using either the Supervisor password or User password. The Supervisor and User passwords activate two different levels of password security. If you select password support, you are prompted for a one to six character password. Type the password on the keyboard. The password does not appear on the screen when typed. Make sure you write it down. If you forget it, you must clear CMOS and reconfigure.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	Boot	<b>Security</b>	Chipset	Exit
<b>Security Settings</b>				Install or change the password.		
Supervisor Password : Not Installed User Password : Not Installed				← → Select Screen ↑ ↓ Select Item		
Change Supervisor Password Change User Password				+/- Change Option F1 General Help F10 Save and Exit ESC Exit		
Boot Sector Virus Protection			[Disabled]			

Feature	Option	Description
<b>Security Settings</b>		
Supervisor Password:	<b>Not Installed</b>	If the password has been set, Installed displays. If no password is set, Not Installed displays.
	Installed	
User Password:	<b>Not Installed</b>	If the password has been set, Installed displays. If no password is set, Not Installed displays.
	Installed	
Change Supervisor Password	—	Selects this option to change or install Supervisor Password.
Change User Password	—	Selects this option to change or install User Password.
Boot Sector Virus Protection	<b>Disabled</b>	When it is set to [Enabled], BIOS will issue a virus warning message and beep if a write to the boot sector or the partition table of the HDD is attempted.
	Enabled	

### 3.6 Chipset Menu

This menu allows the user to customize functions of the AMD Chipsets. North Bridge configuration contains options for Memory & CPU settings. Select a menu by highlighting it using the Arrow (↑/↓) keys and pressing Enter. The settings are described on the following pages.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	Boot	Security	<b>Chipset</b>	Exit
<b>Advanced Chipset Settings</b>					Options for NB	
WARNING: Setting wrong values in below sections may cause system to malfunction.  ▶ North Bridge Configuration ▶ South Bridge Configuration					← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit	

### 3.6.1 North Bridge Configuration Sub-Menu

This menu gives options for customizing North Bridge Chipset settings. Select a menu by highlighting it using the Arrow (↑/↓) keys and pressing Enter. The settings are described on the following pages.

BIOS Setup Utility		
Main	Advanced	PCI/PnP Boot Security <b>Chipset</b> Exit
<b>North Bridge Chipset Configuration</b>		
Hyper-Threading Function	[Enabled]	← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit
Crystal Beach / DMA	[Disabled]	
MCH Channel Mode	[Channel Interleave]	
Patrol Scrubbing	[Enabled]	
Demand Scrubbing	[Enabled]	
Boots Graphic Adapter Priority	[Auto]	
Read Completion Coalescing	[Auto]	

Feature	Option	Description
<b>North Bridge Chipset Configuration</b>		
Hyper-Threading Function	<b>Enabled</b>	Enable or disable hyper-threading functionality
	Disabled	
Crystal Beach / DMA	<b>Disabled</b>	Crystal Beach / DMA configuration
	Enabled	
MCH Channel Mode	Channel Sequencing	Sequencing: allocates address channel 0 then 1. Interleaving: interleaves channel across channels.
	Channel Interleave	
Patrol Scrubbing	<b>Enabled</b>	ECC patrol scrubbing enabled / disabled
	Disabled	
Demand Scrubbing	<b>Enabled</b>	ECC demand scrubbing enabled / disabled
	Disabled	
Boots Graphic Adapter Priority	<b>Auto</b>	Select which graphic controller to use as the primary boot device.
	Onboard VGA	
Read Completion Coalescing	Disabled	Read returns of > 64B
	Enabled	
	<b>Auto</b>	

### 3.6.2 South Bridge Configuration Sub-Menu

This menu gives options for customizing South Bridge Chipset settings. Select a menu by highlighting it using the Arrow (↑/↓) keys and pressing Enter. The settings are described on the following pages.

BIOS Setup Utility		
Main	Advanced	PCI/PnP Boot Security <b>Chipset</b> Exit
<b>South Bridge Chipset Configuration</b>		
HDA Controller	[Enabled]	← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit
SMBUS Controller	[Enabled]	
SLP_S4# Min. Assertion Width	[1~2 seconds]	
Restore on AC Power Loss	[Power Off]	
Onboard VGA	[Enabled]	
Lan1	[Enabled]	
Lan2	[Enabled]	
Chassis Intrusion Detect	[Disabled]	

Feature	Option	Description
<b>South Bridge Chipset Configuration</b>		
HDA Controller (S5375AG2NR only)	<b>Enabled</b>	Enable or disable HDA controller
	Disabled	
SMBUS Controller	<b>Enabled</b>	Enable or disable SMBUS controller
	Disabled	
SLP_S4# Min. Assertion Width	4-5 seconds	Select Timing for SLP_S4#
	3-4 seconds	
	2-3 seconds	
	<b>1-2 seconds</b>	
Restore on AC Power Loss	<b>Power Off</b>	Configure how the system board responds to a power failure.
	Power On	
	Last State	
Onboard VGA	<b>Enabled</b>	Enable or disable Onboard VGA controller
	Disabled	
Lan1/Lan2	Disabled	Enable or disable LAN1/LAN2
	<b>Enabled</b>	
Chassis Intrusion Detect	<b>Disabled</b>	Enable/Disable the function of chassis intrusion detect. When chassis open event is detected, BIOS will record the event.
	Enabled	

### 3.7 Exit Menu

You can display an Exit BIOS Setup option by highlighting it Arrow (↑/↓) keys and pressing Enter.

BIOS Setup Utility						
Main	Advanced	PCI/PnP	Boot	Security	Chipset	Exit
<b>Exit Options</b>				Exit system setup after saving the changes.		
<a href="#">Save Changes and Exit</a> Discard Changes and Exit Discard Charges  Load Optimal Defaults Load Failsafe Defaults				F10 key can be used for this operation.  ← → Select Screen ↑ ↓ Select Item Enter Go to Sub Screen F1 General Help F10 Save and Exit ESC Exit		

#### Save Changes and Exit

Use this option to exit setup utility and re-boot.  
 All new selections you have made are stored into CMOS.  
 System will use the new settings to boot up.

#### Discard Changes and Exit

Use this option to exit setup utility and re-boot.  
 All new selections you have made are not stored into CMOS.  
 System will use the old settings to boot up.

#### Discard Changes

Use this option to restore all new setup values that you have made but not saved into CMOS.

#### Load Optimal Defaults

Use this option to load default performance setup values.  
 Use this option when system CMOS values have been corrupted or modified incorrectly.

#### Load Failsafe Defaults

Use this option to load all default failsafe setup values.  
 Use this option when troubleshooting.

# NOTE

# Chapter 4: Diagnostics

---

**NOTE:** if you experience problems with setting up your system, always check the following things in the following order:

## Memory, Video, CPU

By checking these items, you will most likely find out what the problem might have been when setting up your system. For more information on troubleshooting, check the TYAN® website at: <http://www.tyan.com>.

### 4.1 Beep Codes

Fatal errors, which halt the boot process, are communicated through two kinds of audible beeps.

- Eight short beeps: It indicates that a video error has occurred.
- A single long beep repeatedly: It indicates that a DRAM error has occurred.

The most common type of error is a memory error.

Before contacting your vendor or TYAN® Technical Support, be sure that you note as much as you can about the beep code length and order that you experience. Also, be ready with information regarding add-in cards, drives and O/S to speed the support process and come to a quicker solution.

### 4.2 Flash Utility

Every BIOS file is unique for the motherboard it was designed for. For Flash Utilities, BIOS downloads, and information on how to properly use the Flash Utility with your motherboard, please check the TYAN® web site: <http://www.tyan.com/>

**NOTE:** Please be aware that by flashing your BIOS, you agree that in the event of a BIOS flash failure, you must contact your dealer for a replacement BIOS. There are no exceptions. TYAN® does not have a policy for replacing BIOS chips directly with end users. In no event will TYAN® be held responsible for damages done by the end user.

### 4.3 AMIBIOS Post Code

The POST code checkpoints are the largest set of checkpoints during the BIOS pre-boot process. The following table describes the type of checkpoints that may occur during the POST portion of the BIOS:

Checkpoint	Description
03	Disable NMI, Parity, video for EGA, and DMA controllers. Initialize BIOS, POST, Runtime data area. Also initialize BIOS modules on POST entry and GPNV area. Initialized CMOS as mentioned in the Kernel Variable "wCMOSFlags."
04	Check CMOS diagnostic byte to determine if battery power is OK and CMOS checksum is OK. Verify CMOS checksum manually by reading storage area. If the CMOS checksum is bad, update CMOS with power-on default values and clear passwords. Initialize status register A. Initializes data variables that are based on CMOS setup questions. Initializes both the 8259 compatible PICs in the system
05	Initializes the interrupt controlling hardware (generally PIC) and interrupt vector table.
06	Do R/W test to CH-2 count reg. Initialize CH-0 as system timer. Install the POSTINT1Ch handler. Enable IRQ-0 in PIC for system timer interrupt. Traps INT1Ch vector to "POSTINT1ChHandlerBlock."
08	Initializes the CPU. The BAT test is being done on KBC. Program the keyboard controller command byte is being done after Auto detection of KB/MS using AMI KB-5.
0A	Initializes the 8042 compatible Key Board Controller.
0B	Detects the presence of PS/2 mouse.
0C	Detects the presence of Keyboard in KBC port.
0E	Testing and initialization of different Input Devices. Also, update the Kernel Variables. Traps the INT09h vector, so that the POST INT09h handler gets control for IRQ1. Uncompress all available language, BIOS logo, and Silent logo modules.
13	Early POST initialization of chipset registers.
24	Uncompress and initialize any platform specific BIOS modules.
30	Initialize System Management Interrupt.
2A	Initializes different devices through DIM. See <i>DIM Code Checkpoints</i> section of document for more information.
2C	Initializes different devices. Detects and initializes the video adapter installed in the system that have optional ROMs.
2E	Initializes all the output devices.
31	Allocate memory for ADM module and uncompress it. Give control to ADM module for initialization. Initialize language and font modules for ADM. Activate ADM module.
33	Initializes the silent boot module. Set the window for displaying text information.
37	Displaying sign-on message, CPU information, setup key message, and any OEM specific information.

Checkpoint	Description
38	Initializes different devices through DIM. See <i>DIM Code Checkpoints</i> section of document for more information.
39	Initializes DMAC-1 & DMAC-2.
3A	Initialize RTC date/time.
3B	Test for total memory installed in the system. Also, Check for DEL or ESC keys to limit memory test. Display total memory in the system.
3C	Mid POST initialization of chipset registers.
40	Detect different devices (Parallel ports, serial ports, and coprocessor in CPU, ... etc.) successfully installed in the system and update the BDA, EBDA...etc.
50	Programming the memory hole or any kind of implementation that needs an adjustment in system RAM size if needed.
52	Updates CMOS memory size from memory found in memory test. Allocates memory for Extended BIOS Data Area from base memory.
60	Initializes NUM-LOCK status and programs the KBD typematic rate.
75	Initialize Int-13 and prepare for IPL detection.
78	Initializes IPL devices controlled by BIOS and option ROMs.
7A	Initializes remaining option ROMs.
7C	Generate and write contents of ESCD in NVRam.
84	Log errors encountered during POST.
85	Display errors to the user and gets the user response for error.
87	Execute BIOS setup if needed / requested.
8C	Late POST initialization of chipset registers.
8E	Program the peripheral parameters. Enable/Disable NMI as selected
90	Late POST initialization of system management interrupt.
A0	Check boot password if installed.
A1	Clean-up work needed before booting to OS.
A2	Takes care of runtime image preparation for different BIOS modules. Fill the free area in F000h segment with 0FFh. Initializes the Microsoft IRQ Routing Table. Prepares the runtime language module. Disables the system configuration display if needed.
A4	Initialize runtime language module.
A7	Displays the system configuration screen if enabled. Initialize the CPU's before boot, which includes the programming of the MTRR's.
A8	Prepare CPU for OS boot including final MTRR values.
A9	Wait for user input at config display if needed.
AA	Uninstall POST INT1Ch vector and INT09h vector. Deinitializes the ADM module.
AB	Prepare BBS for Int 19 boot.
AC	End of POST initialization of chipset registers.
B1	Save system context for ACPI.
00	Passes control to OS Loader (typically INT19h).

# NOTE

# Appendix: SMDC Information

---

## Overview

TYAN® Server Management Daughter Card (SMDC) is a powerful yet cost-efficient solution for high-end server management hardware packages. TYAN®'s goal is to provide remote system monitoring and control even when the operating system is absent or simply fails. This empowers TYAN®'s server board with advanced industrial-standard features.

TYAN® SMDC is a snap-in card that provides essential server management solution. It enables any IT Manager by providing multi-interfaces to access the hardware remotely and perform **monitor**, **control** and **diagnose** activities effectively.

TYAN® SMDC is not a peripheral card. Unlike regular peripheral card such as AGP card, Network card or SCSI card, SMDC does not require any hardware specific driver. As long as a standby power comes into the system, SMDC will begin looking after the system.

TYAN® SMDC provides diversified methods to communicate with the hardware. IT manager has the flexibility to choose among *Keyboard Controller Style (KCS)*, *Block Transfer (BT)* style, Intelligent Chassis Management Bus (ICMB), Intelligent Platform Management Bus (IPMB), Emergency Management Port (EMP) and standard IPMI-Over-LAN communication as defined in latest IPMI 1.5 specification.

TYAN® SMDC is compatible with all IPMI-compliance software as well as TYAN® System Operator™ (TSO) software package.

By adding SMDC, TYAN®'s server board becomes a highly manageable and IPMI compatible system with all the advanced features suggesting in IPMI Spec.

More detailed information on TYAN®'s SMDC card can be found on our website: <http://www.tyan.com>

## Features of TYAN® Server Management

Monitor various system components remotely  
-such as fans, processor temperature, and more

Remote power on and power off

Console redirect  
-the ability to view system remotely

Alert and error actions  
-such as audible beep, e-mail, power down and reboot

SMDC runs on stand-by power  
-the SMDC will continue to function, even if the system is not powered on

## How SMDC and TSO Work

The brief descriptions below will help explain how these items function.

	<p>Agent – a system with SMDC installed The SMDC is installed in the Agent system that uses a compatible/supported TYAN® motherboard.</p>
	<p>Manager – manages the Agent The Manger is set up to manage the Agent that has the SMDC. The Manager and Agent should be located in the same place.</p>
	<p>Console – communicates with Manager The Console is used to monitor and control the Agent through the Manager.</p>

# Glossary

---

---

**ACPI (Advanced Configuration and Power Interface):** a power management specification that allows the operating system to control the amount of power distributed to the computer's devices. Devices not in use can be turned off, reducing unnecessary power expenditure.

**AGP (Accelerated Graphics Port):** a PCI-based interface which was designed specifically for demands of 3D graphics applications. The 32-bit AGP channel directly links the graphics controller to the main memory. While the channel runs at only 66 MHz, it supports data transmission during both the rising and falling ends of the clock cycle, yielding an effective speed of 133 MHz.

**ATAPI (AT Attachment Packet Interface):** also known as IDE or ATA; a drive implementation that includes the disk controller on the device itself. It allows CD-ROMs and tape drives to be configured as master or slave devices, just like HDDs.

**ATX:** the form factor designed to replace the AT form factor. It improves on the AT design by rotating the board 90 degrees, so that the IDE connectors are closer to the drive bays, and the CPU is closer to the power supply and cooling fan. The keyboard, mouse, USB, serial, and parallel ports are built-in.

**Bandwidth:** refers to carrying capacity. The greater the bandwidth, the more data the bus, phone line, or other electrical path, can carry. Greater bandwidth, then, also results in greater speed.

**BBS (BIOS Boot Specification):** is a feature within the BIOS that creates, prioritizes, and maintains a list of all Initial Program Load (IPL) devices, and then stores that list in NVRAM. IPL devices have the ability to load and execute an OS, as well as provide the ability to return to the BIOS if the OS load process fails for some reason. At that point, the next IPL device is called upon to attempt loading of the OS.

**BIOS (Basic Input/Output System):** the program that resides in the ROM chip, and provides the basic instructions for controlling your computer's hardware. Both the operating system and application software use BIOS routines to ensure compatibility.

**Buffer:** a portion of RAM which is used to temporarily store data, usually from an application, though it is also used when printing, and in most keyboard drivers. The CPU can manipulate data in a buffer before copying it, all at once, to a disk drive. While this improves system performance --- reading to or writing from a disk drive a single time is much faster than doing so repeatedly --- there is also the possibility of losing your data should the system crash. Information stored in a buffer is temporarily stored, not permanently saved.

**Bus:** a data pathway. The term is used especially to refer to the connection between the processor and system memory, and between the processor and PCI or ISA local buses.

**Bus mastering:** allows peripheral devices and IDEs to access the system memory without going through the CPU (similar to DMA channels).

**Cache:** a temporary storage area for data that will be needed often by an application. Using a cache lowers data access times, since the needed information is stored in the SRAM instead of in the slow DRAM. Note that the cache is also much smaller than your regular memory: a typical cache size is 512KB, while you may have as much as 4GB of regular memory.

**Cache size:** refers to the physical size of the cache onboard. This should not be confused with the cacheable area, which is the total amount of memory which can be scanned by the system in search of data to put into the cache. A typical setup would be a cache size of 512KB, and a cacheable area of 512MB. In this case, up to 512KB of the main memory onboard is capable of being cached. However, only 512KB of this memory will be in the cache at any given moment. Any main memory above 512MB could never be cached.

**Closed and open jumpers:** jumpers and jumper pins are active when they are “on” or “closed”, and inactive when they are “off” or “open”.

**CMOS (Complementary Metal-Oxide Semiconductors):** chips that hold the basic startup information for the BIOS.

**COM port:** another name for the serial port, which is called as such because it transmits the eight bits of a byte of data along one wire, and receives data on another single wire (that is, the data is transmitted in serial form, one bit after another). Parallel ports transmit the bits of a byte on eight different wires at the same time (that is, in parallel form, eight bits at the same time).

**DDR (Double Data Rate):** is a technology designed to double the clock speed of the memory. It activates output on both the rising and falling edge of the system clock rather than on just the rising edge, potentially doubling output.

**DIMM (Dual In-line Memory Module):** faster and more capacious form of RAM than SIMMs, and do not need to be installed in pairs.

**DIMM bank:** sometimes called DIMM sockets, because the physical slot and the logical unit are the same. That is, one DIMM module fits into one DIMM socket, which is capable of acting as a memory bank.

**DMA (Direct Memory Access):** channels that are similar to IRQs. DMA channels allow hardware devices (like soundcards or keyboards) to access the main memory without involving the CPU. This frees up CPU resources for other tasks. As with

IRQs, it is vital that you do not double up devices on a single line. Plug-n-Play devices will take care of this for you.

**Doze mode:** in this mode, only the CPU's speed is slowed.

**DRAM (Dynamic RAM):** widely available, very affordable form of RAM which has the unfortunate tendency to lose data if it is not recharged regularly (every few milliseconds). This refresh requirement makes DRAM three to ten times slower than non-recharged RAM such as SRAM.

**ECC (Error Correction Code or Error Checking and Correcting):** allows data to be checked for errors during run-time. Errors can subsequently be corrected at the same time that they're found.

**EEPROM (Electrically Erasable Programmable ROM):** also called Flash BIOS, is a ROM chip which can, unlike normal ROM, be updated. This allows you to keep up with changes in the BIOS programs without having to buy a new chip. TYAN<sup>®</sup>'s BIOS updates can be found at <http://www.tyan.com>

**ESCD (Extended System Configuration Data):** a format for storing information about Plug-n-Play devices in the system BIOS. This information helps properly configure the system each time it boots.

**Fault-tolerance:** a term describing a system where one component can quickly be replaced without causing a loss of service, such as in a RAID system.

**Firmware:** low-level software that controls the system hardware.

**Form factor:** an industry term for the size, shape, power supply type, and external connector type of the Personal Computer Board (PCB) or motherboard. The standard form factors are the AT and ATX, although TYAN<sup>®</sup> also makes some Baby-AT and ATX Footprint boards.

**Global timer:** onboard hardware timer, such as the Real-Time Clock (RTC).

**Handshaking:** a process where two devices initiate communications. One device, typically the server, sends a message to another device, typically a client, in order to request establishment of a communications channel. The two devices will then exchange messages back and forth in order to settle on a communications protocol.

**HDD:** stands for Hard Disk Drive, a type of fixed drive.

**H-SYNC:** controls the horizontal synchronization/properties of the monitor.

**IC (Integrated Circuit):** the formal name for the computer chip.

**IDE (Integrated Device/Drive Electronics):** a simple, self-contained HDD interface. It can handle drives up to 8.4 GB in size. Almost all IDEs sold now are in fact

Enhanced IDEs (EIDEs), with maximum capacity determined by the hardware controller.

**I/O (Input/Output):** the connection between your computer and another piece of hardware (mouse, keyboard, etc.)

**Initial Program Load (IPL):** a feature built into BBS-compliant devices, describing those devices as capable of loading and executing an OS, as well as being able to provide control back to the BIOS if the loading attempt fails.

**IPL:** see Initial Program Load.

**IRQ (Interrupt Request):** an electronic request that runs from a hardware device to the CPU. The interrupt controller assigns priorities to incoming requests and delivers them to the CPU. It is important that there is only one device hooked up to each IRQ line; doubling up devices on IRQ lines can lock up your system. Plug-n-Play operating systems can take care of these details for you.

**ISA (Industry Standard Architecture):** a slower 8- or 16-bit bus (data pathway).

**Latency:** the amount of time that one part of a system spends waiting for another part to catch up. This is most common when the system sends data out to a peripheral device, and it waiting for the peripheral to send some data back (peripherals tend to be slower than onboard system components).

**Mirroring:** see RAID.

**NVRAM:** ROM and EEPROM are both examples of Non-Volatile RAM, memory that holds its data without power. DRAM, in contrast, is volatile.

**OEMs (Original Equipment Manufacturers):** Compaq or IBM package other companies' motherboards and hardware inside their case and sell them.

**Parallel port:** transmits the bits of a byte on eight different wires at the same time (that is, in parallel form, eight bits at the same time).

**PCI (Peripheral Component Interconnect):** a 32 or 64-bit local bus (data pathway) which is faster than the ISA bus. Local buses are those which operate within a single system (as opposed to a network bus, which connects multiple systems).

**PCI PIO (PCI Programmable Input/Output) modes:** the data transfer modes used by IDE drives. These modes use the CPU for data transfer (in contrast, DMA channels do not). PCI refers to the type of bus used by these modes to communicate with the CPU.

**PCI-to-PCI bridge:** allows you to connect multiple PCI devices onto one PCI slot.

**Pipeline burst SRAM:** a type of RAM that can maintain it's data as long as power is provided to the memory chips. In this configuration, SRAM requests are pipelined,

which means that larger packets of data are sent to the memory at one time, and acted upon quickly. This type of SRAM operates at bus speeds higher than 66MHz.

**PM timers (Power Management timers):** software timers that count down the number of seconds or minutes until the system times out and enters sleep, suspend, or doze mode.

**PnP (Plug-n-Play):** a design standard that has become ascendant in the industry. Plug-n-Play devices require little set-up to use. Novice end users can simply plug them into a computer that is running on a Plug-n-Play aware operating system (such as Windows 98), and go to work. Devices and operating systems that are not Plug-n-Play require you to reconfigure your system each time you add or change any part of your hardware.

**RAID (Redundant Array of Independent Disks):** a way for the same data to be stored in different places on many hard drives. By using this method, the data is stored redundantly, also the multiple hard drives will appear as a single drive to the operating system. RAID level 0 is known as striping, where data is striped (or overlapped) across multiple hard drives, but offers no fault-tolerance. RAID level 1 is known as mirroring, which stores the data within at least two hard drives, but does not stripe. RAID level 1 also allows for faster access time and fault-tolerance, since either hard drive can be read at the same time. RAID level 0+1 is both striping and mirroring, providing fault-tolerance, striping, and faster access all at the same time.

**RAIDIOS:** stands for RAID I/O Steering, a type of RAID technology from Intel. RAIDIOS is a specification used to enable an embedded I/O controller, embedded on the motherboard, to be used as just an I/O controller or to be the I/O component of a hardware RAID subsystem. The RAIDIOS circuit allows an I/O Processor (either embedded on the motherboard or on an add-in card) to configure the I/O controller and service the I/O controller's interrupts. The I/O controller and the I/O Processor together are two of the primary components of a hardware RAID subsystem.

**RAM (Random Access Memory):** technically refers to a type of memory where any byte can be accessed without touching the adjacent data, is often used to refer to the system's main memory. This memory is available to any program running on the computer.

**ROM (Read-Only Memory):** a storage chip which contains the BIOS; the basic instructions required to boot the computer and start up the operating system.

**SATA (Serial ATA):** is an evolutionary replacement for the Parallel ATA physical storage interface. Serial ATA is a drop-in solution in that it is compatible with today's software and operating systems. It will provide for systems which are easier to design, with cables that are simpler to route and install, smaller cable connectors, and lower voltage requirements.

**SDRAM (Synchronous Dynamic RAM):** called as such because it can keep two sets of memory addresses open simultaneously. By transferring data alternately from one set of addresses and then the other, SDRAM cuts down on the delays associated with non-synchronous RAM, which must close one address bank before opening the next.

**Serial port:** called as such because it transmits the eight bits of a byte of data along one wire, and receives data on another single wire (that is, the data is transmitted in serial form, one bit after another).

**SIMM (Single In-line Memory Module):** formally the most common form of RAM for motherboards. They must be installed in pairs, and do not have the carrying capacity or the speed of DIMM modules.

**Sleep/Suspend mode:** in this mode, all devices except the CPU shut down.

**SRAM (Static RAM):** unlike DRAM, this type of RAM does not need to be refreshed in order to prevent data loss. Thus, it is faster and more expensive.

**SSI (Server System Infrastructure):** an industry initiative intended to provide ready-to-use design specifications for common server hardware elements (chassis, power supplies, and racks) to promote and support server industry growth.

**Standby mode:** in this mode, the video and hard drives shut down; all other devices continue to operate normally.

**Striping:** see RAID

**UltraDMA-33/66/100:** a fast version of the old DMA channel. UltraDMA is also called UltraATA. Without proper UltraDMA controller, your system cannot take advantage of higher data transfer rates of the new UltraDMA/UltraATA hard drives.

**USB (Universal Serial Bus):** a versatile port. This one port type can function as a serial, parallel, mouse, keyboard or joystick port. It is fast enough to support video transfer, and is capable of supporting up to 127 daisy-chained peripheral devices.

**VGA (Video Graphics Array):** the PC video display standard

**V-SYNC:** controls the vertical scanning properties of the monitor.

**ZIF Socket (Zero Insertion Force socket):** these sockets make it possible to insert CPUs without damaging the sensitive CPU pins. The CPU is lightly placed in an open ZIF socket, and a lever is pulled down. This shifts the processor over and down, guiding into the board and locking it into place.

# Technical Support

---

If a problem arises with your system, you should turn to your dealer for help first. Your system has most likely been configured by them, and they should have the best idea of what hardware and software your system contains. Furthermore, if you purchased your system from a dealer near you, you can bring your system to them to have it serviced instead of attempting to do so yourself (which can have expensive consequences).

## Help Resources:

1. See the beep codes section of this manual.
2. See the TYAN<sup>®</sup> website for FAQ's, bulletins, driver updates, and other information: <http://www.tyan.com>
3. Contact your dealer for help BEFORE calling TYAN<sup>®</sup>.
4. Check the TYAN<sup>®</sup> user group:  
[alt.comp.periphs.mainboard.TYAN](mailto:alt.comp.periphs.mainboard.TYAN)

## Returning Merchandise for Service

During the warranty period, contact your distributor or system vendor FIRST for any product problems. This warranty only covers normal customer use and does not cover damages incurred during shipping or failure due to the alteration, misuse, abuse, or improper maintenance of products.

**NOTE:** A receipt or copy of your invoice marked with the date of purchase is required before any warranty service can be rendered. You may obtain service by calling the manufacturer for a Return Merchandise Authorization (RMA) number. The RMA number should be prominently displayed on the outside of the shipping carton and the package should be mailed prepaid. TYAN<sup>®</sup> will pay to have the board shipped back to you.

### Notice for the USA

Compliance Information Statement (Declaration of Conformity Procedure) DoC

FCC Part 15: This device complies with part 15 of the FCC Rules

Operation is subject to the following conditions:

This device may not cause harmful interference, and  
This device must accept any interference received including interference that may cause undesired operation. If this equipment does cause harmful interference to

radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and the receiver.

Plug the equipment into an outlet on a circuit different from that of the receiver.

Consult the dealer on an experienced radio/television technician for help.

### **Notice for Canada**

This apparatus complies with the Class B limits for radio interference as specified in the Canadian Department of Communications Radio Interference Regulations. (Cet appareil est conforme aux normes de Classe B d'interference radio tel que specifie par le Ministere Canadien des Communications dans les reglements d'ineteference radio.)

Notice for Europe (CE Mark)

This product is in conformity with the Council Directive 89/336/EEC, 92/31/EEC (EMC).

**CAUTION:** Lithium battery included with this board. Do not puncture, mutilate, or dispose of battery in fire. Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by manufacturer. Dispose of used battery according to manufacturer instructions and in accordance with your local regulations.
