## Diagnostic Procedure

### 1. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Turn ignition switch "ON".

4. Check voltage between fuel level sensor unit and fuel pump terminal 4 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B3, M16
- Harness connectors M59, F27
- Harness for open or short between ECM and fuel level sensor unit and fuel pump

>> Repair harness or connector.

### 3. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between fuel level sensor unit and fuel pump terminal 5 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 4.  
 NG >> Repair open circuit or short to power in harness or connector.

### 4. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-255, "Component Inspection"](#).

OK or NG

- OK >> GO TO 5.  
 NG >> Replace fuel level sensor unit.

**5. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**FUEL TANK TEMPERATURE SENSOR**

UBS003QU

1. Remove fuel level sensor unit.
2. Check resistance between fuel level sensor unit and fuel pump terminals 4 and 5 by heating with hot water or heat gun as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

UBS003QV

**Removal and Installation**  
**FUEL TANK TEMPERATURE SENSOR**

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

DTC P0182, P0183 FTT SENSOR

PF2:22630

Component Description

UBS003QW

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

\*: These data are reference values and are measured between ECM terminal 107 (Fuel tank temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

UBS003QX

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0182 0182	Fuel tank temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.)
P0183 0183	Fuel tank temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	● Fuel tank temperature sensor

DTC Confirmation Procedure

UBS003QY

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-258, "Diagnostic Procedure"](#)

**WITH GST**

Follow the procedure "With CONSULT-II" above.

### Component Inspection

#### FUEL TANK TEMPERATURE SENSOR

UBS003R1

1. Remove fuel level sensor unit.
2. Check resistance between fuel level sensor unit and fuel pump terminals 4 and 5 by heating with hot water or heat gun as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

UBS003R2

### Removal and Installation

#### FUEL TANK TEMPERATURE SENSOR

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

**DTC P0222, P0223 TP SENSOR**

PF16119

**Component Description**

UBS003RB

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003RC

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> <li>Shift lever: D (A/T model) 1st (M/T model)</li> </ul>	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

\*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

**On Board Diagnosis Logic**

UBS003RD

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The TP sensor 1 circuit is open or shorted.) (APP sensor 2 circuit is shorted.)</li> <li>Electric throttle control actuator (TP sensor 1)</li> <li>Accelerator pedal position sensor (APP sensor 2)</li> </ul>
P0223 0223	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

**FAIL-SAFE MODE**

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

**DTC Confirmation Procedure**

UBS003RE

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".

# DTC P0222, P0223 TP SENSOR

[QG18DE (ULEV)]

2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-263, "Diagnostic Procedure"](#).

91	R/G	Sensor power supply (Accelerator pedal posi- tion sensor)	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

### 1. RETIGHTEN GROUND SCREWS

UBS003RG

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-I

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch "ON".

3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 3.

## 3. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-II

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 1 and ECM terminal 47. Refer to Wiring Diagram.

**Continuity should exist.**

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace open circuit.

## 4. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-III

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
47	Electric throttle control actuator terminal 1	<a href="#">EC-262</a>
91	APP sensor terminal 1	<a href="#">EC-513</a>

OK or NG

- OK >> GO TO 5.  
 NG >> Repair short to ground or short to power in harness or connectors.

## 5. CHECK APP SENSOR

Refer to [EC-517](#).

OK or NG

- OK >> GO TO 11.  
 NG >> GO TO 6.

**6. REPLACE ACCELERATOR PEDAL ASSEMBLY**

1. Replace accelerator pedal assembly.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**7. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 50 and electric throttle control actuator terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK THROTTLE POSITION SENSOR**

Refer to [EC-266, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> GO TO 10.

**10. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**11. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**THROTTLE POSITION SENSOR**

1. Reconnect all harness connectors disconnected.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Turn ignition switch "ON".
4. Set selector lever to "D" position (A/T models) or "1st" position (M/T models).
5. Check voltage between ECM terminals 50 (TP sensor 1 signal), 69 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
50 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
69 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
8. Perform [EC-53, "Idle Air Volume Learning"](#) .

**Remove and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "Removal and Installation"](#) .

# DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

[QG18DE (ULEV)]

## DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

PFP:00000

### On Board Diagnosis Logic

UBS001H5

When a misfire occurs, engine speed will fluctuate (vary). If the engine speed fluctuates enough to cause the crankshaft position sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire

The misfire detection logic consists of the following two conditions.

- One Trip Detection Logic (Three Way Catalyst Damage)**  
 On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.  
 When a misfire condition occurs, the ECM monitors the crankshaft position sensor (POS) signal every 200 engine revolutions for a change.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.  
 If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on.  
 If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
- Two Trip Detection Logic (Exhaust quality deterioration)**  
 For misfire conditions that will not cause damage to the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the crankshaft position sensor (POS) signal every 1,000 engine revolutions.  
 A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	<ul style="list-style-type: none"> <li>● Improper spark plug</li> <li>● Insufficient compression</li> </ul>
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	<ul style="list-style-type: none"> <li>● Incorrect fuel pressure</li> <li>● The injector circuit is open or shorted</li> </ul>
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	<ul style="list-style-type: none"> <li>● Fuel injectors</li> <li>● Intake air leak</li> </ul>
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	<ul style="list-style-type: none"> <li>● The ignition signal circuit is open or shorted</li> </ul>
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	<ul style="list-style-type: none"> <li>● Lack of fuel</li> <li>● Drive plate or flywheel</li> <li>● Heated oxygen sensor 1</li> <li>● Incorrect PCV hose connection</li> </ul>

### On Board Diagnosis Logic

UBS001H6

### DTC Confirmation Procedure

UBS001H7

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

## WITH CONSULT-II

1. Turn ignition switch "ON", and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine again and drive at 1,500 to 3,000 rpm for at least 3 minutes.  
Hold the accelerator pedal as steady as possible.

### NOTE:

Refer to the freeze frame data for the test driving conditions.

5. If 1st trip DTC is detected, go to [EC-268, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

Follow the procedure "With CONSULT-II" above.

## Diagnostic Procedure

UBS001H8

### 1. CHECK FOR INTAKE AIR LEAK

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

#### OK or NG

OK >> GO TO 2.

NG >> Discover air leak location and repair.

### 2. CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

#### OK or NG

OK >> GO TO 3.

NG >> Repair or replace it.

### 3. PERFORM POWER BALANCE TEST

 **With CONSULT-II**

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
2. Is there any cylinder which does not produce a momentary engine speed drop?

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

 **Without CONSULT-II**

When disconnecting each injector harness connector one at a time, is there any cylinder which does not produce a momentary engine speed drop?

Yes or No

- Yes >> GO TO 4.  
 No >> GO TO 7.

### 4. CHECK INJECTOR

Does each injector make an operating sound at idle?

Yes or No

- Yes >> GO TO 5.  
 No >> Check injector(s) and circuit(s). Refer to [EC-547](#).

## 5. CHECK IGNITION SPARK

1. Turn Ignition switch "OFF".
2. Disconnect ignition wire from spark plug.
3. Connect a known-good spark plug to the ignition wire.
4. Place end of spark plug against a suitable ground and crank engine.
5. Check for spark.

### OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 6.

## 6. CHECK SPARK PLUGS

Remove the spark plugs and check for fouling, etc.

### OK or NG

- OK >> GO TO 7.  
 NG >> Repair or replace spark plug(s) with standard type one(s). For spark plug type, refer to [MA-16, "ENGINE MAINTENANCE \(QG18DE ENGINE\)"](#).

## 7. CHECK COMPRESSION PRESSURE

Refer to [EM-52, "CHECKING COMPRESSION PRESSURE"](#).

Check compression pressure.

**Standard:** 1,324 kPa (13.5 kg/cm<sup>2</sup>, 192 psi)/300 rpm

**Minimum:** 1,157 kPa (11.8 kg/cm<sup>2</sup>, 168 psi)/300 rpm

**Difference between each cylinder:** 98 kPa (1.0 kg/cm<sup>2</sup>, 14 psi)/300 rpm

### OK or NG

- OK >> GO TO 8.  
 NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

## 8. CHECK FUEL PRESSURE

1. Install any parts removed.
2. Release fuel pressure to zero. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#).
3. Install fuel pressure gauge and check fuel pressure.

**At idle:** Approx. 350 kPa (3.57 kg/cm<sup>2</sup>, 51 psi)

### OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 9.

## 9. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit Refer to [EC-553, "FUEL PUMP"](#) .
- Fuel pressure regulator Refer to [EC-56, "Fuel Pressure Check"](#) .
- Fuel lines.
- Fuel filter for clogging

>> Repair or replace.

## 10. CHECK IGNITION TIMING

Check the following items. Refer to [EC-88, "Basic Inspection"](#) .

Items	Specifications
Target idle speed	M/T: 650 ± 50 rpm
	A/T: 800 ± 50 rpm (in "P" or "N" position)
Ignition timing	M/T: 7 ± 5° BTDC
	A/T: 18 ± 5° BTDC (in "P" or "N" position)

OK or NG

OK >> GO TO 11.

NG >> Adjust ignition timing.

## 11. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-205, "Component Inspection"](#) .

OK or NG

OK >> GO TO 12.

NG >> Replace heated oxygen sensor 1.

## 12. CHECK MASS AIR FLOW SENSOR

 **With CONSULT-II**

Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**at idling: 1.4 - 4.0 g-m/sec**

**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

 **With GST**

Check mass air flow sensor signal in MODE 1 with GST.

**at idling: 1.4 - 4.0 g-m/sec**

**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

**rpm:**

OK or NG

OK >> GO TO 13.

NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-163, "DTC P0101 MAF SENSOR"](#) .

## 13. CHECK SYMPTOM MATRIX CHART

Check items on the rough idle symptom in [EC-93, "Symptom Matrix Chart"](#) .

OK or NG

OK >> GO TO 14.

NG >> Repair or replace.

---

**14. ERASE THE 1ST TRIP DTC**

---

Some tests may cause a 1st trip DTC to be set.

Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

>> GO TO 15.

---

**15. CHECK INTERMITTENT INCIDENT**

---

Perform [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**DTC P0327, P0328 KS**

PF2:22060

**Component Description**

UBS001H9

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

**On Board Diagnosis Logic**

UBS006GE

The MIL will not light up for these diagnosis.

DTC No.	Trouble Diagnosis Name	DTC Detected Condition	Possible Cause
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Knock sensor</li> </ul>
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

**DTC Confirmation Procedure**

UBS001HB

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and run it for at least 5 seconds at idle speed.
3. If DTC is detected, go to [EC-275, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "With CONSULT-II" above.

Wiring Diagram

EC-KS-01

: DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
15	W	Knock sensor	[Engine is running] ● Idle speed	Approximately 2.5V

**Diagnostic Procedure**

UBS001HD

**1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-I**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check resistance between ECM terminal 15 and engine ground. Refer to Wiring Diagram.

**NOTE:**

It is necessary to use an ohmmeter which can measure more than 10 MΩ.

**Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 2.

**2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-II**

1. Disconnect knock sensor harness connector.
2. Check harness continuity between ECM terminal 15 and knock sensor terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 3.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**3. CHECK KNOCK SENSOR**

Refer to [EC-276, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 5.
- NG >> Replace knock sensor.

#### 4. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 5.

#### 5. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

#### Component Inspection KNOCK SENSOR

UBS001HE

1. Disconnect knock sensor harness connector.
2. Check resistance between terminal 1 and ground.

**NOTE:**

Use an ohmmeter which can measure more than 10 MΩ.

**Resistance:** 530 - 590 kΩ [at 20°C (68°F)]

**CAUTION:**

Discard any knock sensors that have been dropped or physically damaged. Use only new ones.

BBI A0311E

UBS001HF

#### Removal and Installation KNOCK SENSOR

Refer to [EM-67, "CYLINDER BLOCK"](#) .

**DTC P0335 CKP SENSOR (POS)**

PF:23731

**Component Description**

UBS001HG

The crankshaft position sensor (POS) is located on the cylinder block rear housing facing the gear teeth (cogs) of the signal plate at the end of the crankshaft. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

UBS006FQ

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK POWER SUPPLY

1. Disconnect crankshaft position sensor (POS) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between crankshaft position sensor (POS) terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between crankshaft position sensor (POS) and ECM
- Harness for open or short between crankshaft position sensor (POS) and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between crankshaft position sensor (POS) terminal and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for and short to ground and short to power.

OK or NG

- OK >> GO TO 5.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 5. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 13 and crankshaft position sensor (POS) terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK CRANKSHAFT POSITION SENSOR (POS)**

Refer to [EC-282, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace crankshaft position sensor (POS).

**7. CHECK GEAR TOOTH**

Visually check for chipping signal plate gear tooth.

OK or NG

- OK >> GO TO 8.
- NG >> Replace the signal plate.

**8. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
CRANKSHAFT POSITION SENSOR (POS)**

UBS006FR

1. Loosen the fixing bolt of the sensor.
2. Disconnect crankshaft position sensor (POS) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

PBIB0563E

5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance $\Omega$ [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or $\infty$
3 (+) - 2 (-)	
2 (+) - 1 (-)	

6. If NG, replace crankshaft position sensor (POS).

CRANKSHAFT POSITION SENSOR (POS)**

UBS006FS

Refer to [EM-67, "CYLINDER BLOCK"](#) .

DTC P0340 CMP SENSOR (PHASE)

PF2:23731

Component Description

UBS001HN

The camshaft position sensor (PHASE) senses the retraction with intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.

When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

## Diagnostic Procedure

UBS001HR

### 1. CHECK STARTING SYSTEM

Does the engine turn over?  
(Does the starter motor operate?)

Yes or No

Yes >> GO TO 2.

No >> Check starting system. (Refer to [SC-9, "STARTING SYSTEM"](#) .)

### 2. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 3.

### 3. CHECK POWER SUPPLY

1. Disconnect camshaft position sensor (PHASE) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between camshaft position sensor (PHASE) terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between camshaft position sensor (PHASE) and ECM relay
- Harness for open or short between camshaft position sensor (PHASE) and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 5. CHECK INPUT SIGNAL CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between camshaft position sensor (PHASE) terminal 2 and ECM terminal 14. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK GROUND CIRCUIT**

1. Turn ignition switch "OFF".
2. Check harness continuity between camshaft position sensor (PHASE) terminal 1 and engine ground. Refer to the Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to power in harness or connectors.

**7. CHECK CAMSHAFT POSITION SENSOR (PHASE)**

Refer to [EC-287, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace camshaft position sensor (PHASE).

**8. CHECK CAMSHAFT (INTAKE)**

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 9.

NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

**9. CHECK INTERMITTENT INCIDENT**

Perform [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
CAMSHAFT POSITION SENSOR (PHASE)**

UBS006FT

1. Loosen the fixing bolt of the sensor.
2. Disconnect camshaft position sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

## DTC P0340 CMP SENSOR (PHASE)

[QG18DE (ULEV)]

5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance $\Omega$ [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or $\infty$
3 (+) - 2 (-)	
2 (+) - 1 (-)	

UBS001HT

### Removal and Installation CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EM-39, "TIMING CHAIN"](#) .

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (ULEV)]

## DTC P0420 THREE WAY CATALYST FUNCTION

PFP:20905

### On Board Diagnosis Logic

UBS006CU

The ECM monitors the switching frequency ratio of heated oxygen sensors 1 and 2.

A three way catalyst (manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of heated oxygen sensors 1 and 2 approaches a specified limit value, the three way catalyst (manifold) malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420	Catalyst system efficiency below threshold	<ul style="list-style-type: none"> <li>● Three way catalyst (manifold) does not operate properly.</li> <li>● Three way catalyst (manifold) does not have enough oxygen storage capacity.</li> </ul>	<ul style="list-style-type: none"> <li>● Three way catalyst (Manifold)</li> <li>● Exhaust tube</li> <li>● Intake air leaks</li> <li>● Fuel injectors</li> <li>● Fuel injector leaks</li> <li>● Spark plug</li> <li>● Improper ignition timing</li> </ul>

### DTC Confirmation Procedure

UBS006CV

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

#### TESTING CONDITION:

- Open engine hood before conducting the following procedure.
  - Do not hold engine speed for more than the specified minutes below.
1. Start engine and warm it up to the normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  4. Let engine idle for one minute.
  5. Select "DTC & SRT CONFIRMATION" then "SRT WORK SUPPORT" mode with CONSULT-II.
  6. Start engine.
  7. Rev engine up to 2,000 to 3,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely. If "INCMP" of "CATALYST" changed to "COMPLT", go to step 7.
  8. Wait 5 seconds at idle.

B/FUEL SCHDL	XXX msec

PBIB0567E

- a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle)  
b. Turn ignition switch "ON" and select "COOLAN TEMP/S" in "DATA MONITOR" mode with CONSULT-II.  
c. Start engine and warm it up while monitoring "COOLAN TEMP/S" indication on CONSULT-II.  
d. When "COOLAN TEMP/S" indication reaches to 70°C(158°F), go to step 3.

DATA MONITOR	
MONITOR	NO DTC
COOLAN TEMP/S	XXX °C

SEF013Y

10. Select "SELF-DIAG RESULTS" mode with CONSULT-II.  
11. Confirm that the 1st trip DTC is not detected.  
If the 1st trip DTC is detected, go to [EC-291, "Diagnostic Procedure"](#).

SELF DIAG RESULTS	
DTC RESULTS	TIME
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	

SEF535Z

## Overall Function Check

UBS006CW

Use this procedure to check the overall function of the three way catalyst (Manifold). During this check, a DTC might not be confirmed.

### CAUTION:

Always drive vehicle at a safe speed.

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (ULEV)]

- Set voltmeters probes between ECM terminal 35 (HO2S1 signal) and engine ground, and ECM terminal 74 (HO2S2 signal) and engine ground.
- Keep engine speed at 2,000 rpm constant under no load.

- Make sure that the voltage switching frequency (high & low) between ECM terminal 74 and engine ground is very less than that of ECM terminal 35 and engine ground.

**Switching frequency ratio = A/B**

**A: Heated oxygen sensor 2 voltage switching frequency**

**B: Heated oxygen sensor 1 voltage switching frequency**

**This ratio should be less than 0.75.**

If the ratio is greater than above, it means three way catalyst does not operate properly. Go to [EC-291, "Diagnostic Procedure"](#).

**NOTE:**

If the voltage at terminal 35 does not switch periodically more than 5 times within 10 seconds at step 7, perform trouble diagnosis for "DTC P0133" first. (See [EC-211](#).)

## Diagnostic Procedure

### 1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dent.

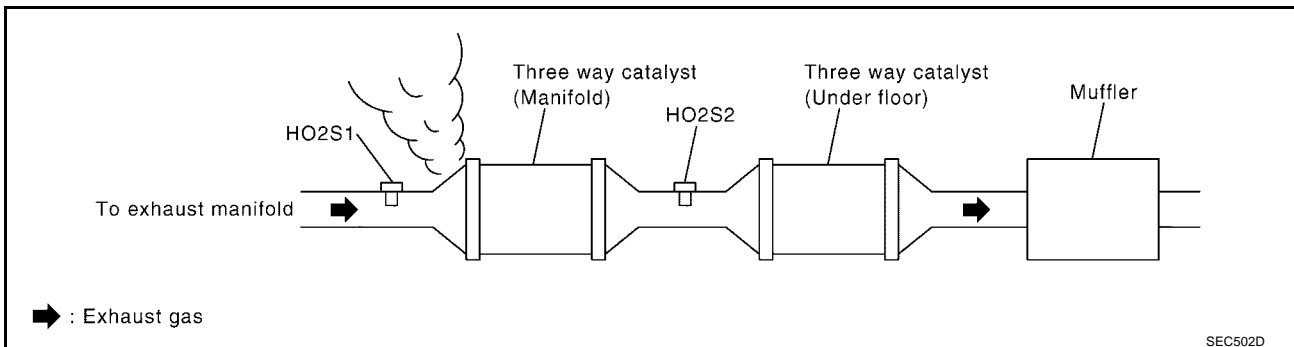

OK or NG

OK >> GO TO 2.

NG >> Repair or replace.

### 2. CHECK EXHAUST GAS LEAK

- Start engine and run it at idle.
- Listen for an exhaust gas leak before the three way catalyst (manifold).

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

## 3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

## 4. CHECK IGNITION TIMING

Check the following items. Refer to [EC-88, "Basic Inspection"](#) .

Items	Specifications	
Ignition timing	A/T	18° ± 5° BTDC (in "P" or "N" position)
	M/T	7° ± 5° BTDC
Target idle speed	A/T	800 ± 50 rpm (in "P" or "N" position)
	M/T	650 ± 50 rpm

OK or NG

- OK >> GO TO 5.
- NG >> Follow the "Basic Inspection".

## 5. CHECK INJECTORS

1. Refer to Wiring Diagram for Injectors, [EC-548](#) .
2. Stop engine and then turn ignition switch "ON".
3. Check voltage between ECM terminals 22, 23, 41, 42 and ground with CONSULT-II or tester.

**Battery voltage should exist.**

OK or NG

- OK >> GO TO 6.
- NG >> Perform [EC-550, "Diagnostic Procedure"](#) .

## 6. CHECK IGNITION SPARK

1. Turn ignition switch "OFF".
2. Disconnect ignition coil assembly from rocker cover.
3. Connect a known-good spark plug to the ignition coil assembly.
4. Place end of spark plug against a suitable ground and crank engine.
5. Check for spark.

OK or NG

- OK >> GO TO 7.
- NG >> Check ignition coil with power transistor and their circuit. Refer to [EC-535, "IGNITION SIGNAL"](#) .

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (ULEV)]

## 7. CHECK INJECTOR

1. Turn ignition switch "OFF".
2. Remove injector assembly.  
Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#) .  
Keep fuel hose and all injectors connected to injector gallery.
3. Disconnect all ignition coil harness connectors.
4. Turn ignition switch "ON".  
Make sure fuel does not drip from injector.

### OK or NG

OK (Does not drip.)>>GO TO 8.

NG (Drips.)>>Replace the injector(s) from which fuel is dripping.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

Trouble is fixed.>>**INSPECTION END**

Trouble is not fixed.>>Replace three way catalyst (manifold).

DTC P0441 EVAP CONTROL SYSTEM

PF1:14950

System Description

UBS001IU

NOTE:

If DTC P0441 is displayed with other DTC such as P2122, P2123, P2127, P2128, P2138 first perform trouble diagnosis for other DTC.

PBIB1209E

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

UBS006GI

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, malfunction is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0441 0441	EVAP control system incorrect purge flow	EVAP control system does not operate properly, EVAP control system has a leak between intake manifold and EVAP control system pressure sensor.	<ul style="list-style-type: none"> <li>● EVAP canister purge volume control solenoid valve stuck closed</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Loose, disconnected or improper connection of rubber tube</li> <li>● Blocked rubber tube</li> <li>● Cracked EVAP canister</li> <li>● EVAP canister purge volume control solenoid valve circuit</li> <li>● Accelerator pedal position sensor</li> <li>● Blocked purge port</li> <li>● EVAP canister vent control valve</li> </ul>

DTC Confirmation Procedure

UBS001IX

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

For best results, perform test at a temperature of 0°C (32°F) or more.

**Ⓟ WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and let it idle for at least 70 seconds.
4. Select "PURG FLOW P0441" of "EVAPORATIVE SYSTEM" in "DTC CONFIRMATION" mode with CONSULT-II.
5. Touch "START".  
If "COMPLETED" is displayed, go to step 7.
6. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take at least 35 seconds.)

Selector lever	Suitable position
Vehicle speed	32 - 120 km/h (20 - 75 MPH)
ENG SPEED	500 - 3,800 rpm
B/FUEL SCHDL	1.0 - 8.2 msec
Engine coolant temperature	More than 70°C (158°F)

If "TESTING" is not changed for a long time, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-297, "Diagnostic Procedure"](#).

**Overall Function Check**

UBS0011Y

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a DTC might not be confirmed.

**Ⓟ WITH GST**

1. Lift up drive wheels.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Start engine and wait at least 70 seconds.
5. Set voltmeter probes to ECM terminals 32 (EVAP control system pressure sensor signal) and ground.
6. Check EVAP control system pressure sensor value at idle speed and note it.
7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Gear position	Any position other than "P", "N" or "R"

## DTC P0441 EVAP CONTROL SYSTEM

[QG18DE (ULEV)]

---

8. Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (measured at step 6) for at least 1 second.
9. If NG, go to [EC-297, "Diagnostic Procedure"](#) .

**Diagnostic Procedure**

**1. CHECK EVAP CANISTER**

1. Turn ignition switch "OFF".
2. Check EVAP canister for cracks.

**OK or NG**

- OK (With CONSULT-II)>>GO TO 2.
- OK (Without CONSULT-II)>>GO TO 3.
- NG >> Replace EVAP canister.

**2. CHECK PURGE FLOW**

**Ⓜ With CONSULT-II**

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
2. Start engine and let it idle.

3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II.
4. Rev engine up to 2,000 rpm.
5. Touch "Qd" and "Qu" on CONSULT-II screen to adjust "PURG VOL CONT/V" opening and check vacuum existence.

PURG VOL CONT/V	VACUUM
100.0%	Should exist
0.0%	Should not exist

**OK or NG**

- OK >> GO TO 7.
- NG >> GO TO 4.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

### 3. CHECK PURGE FLOW

⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum gauge indication when revving engine up to 2,000 rpm.

Vacuum should exist.

6. Release the accelerator pedal fully and let idle.

Vacuum should not exist.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 4.

### 4. CHECK EVAP PURGE LINE

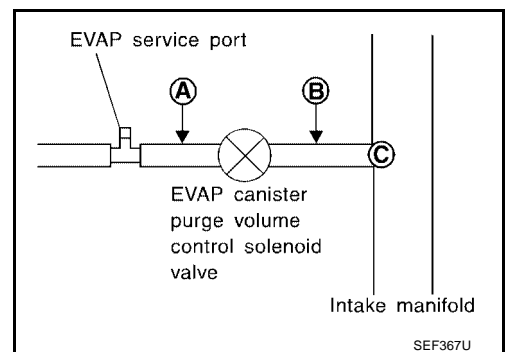

1. Turn ignition switch "OFF".
2. Check EVAP purge line for improper connection or disconnection. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

- OK >> GO TO 5.
- NG >> Repair it.

### 5. CHECK EVAP PURGE HOSE AND PURGE PORT

1. Disconnect purge hoses connected to EVAP service port **A** and EVAP canister purge volume control solenoid valve **B** .
2. Blow air into each hose and EVAP purge port **C** .

3. Check that air flows freely.

OK or NG

- OK (With CONSULT-II)>>GO TO 6.
- OK (Without CONSULT-II)>>GO TO 7.
- NG >> Repair or clean hoses and/or purge port.

**6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

**With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-316, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace EVAP canister purge volume control solenoid valve.

**8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR**

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 9.
- NG >> Replace EVAP control system pressure sensor.

**9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR FUNCTION**

Refer to "DTC Confirmation Procedure" for DTC P0452 [EC-324](#) , P0453 [EC-330](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace EVAP control system pressure sensor.

**10. CHECK RUBBER TUBE FOR CLOGGING**

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 11.
- NG >> Clean the rubber tube using an air blower.

**11. CHECK EVAP CANISTER VENT CONTROL VALVE**

Refer to [EC-322, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 12.
- NG >> Replace EVAP canister vent control valve.

## 12. CHECK EVAP PURGE LINE

---

Inspect EVAP purge line (pipe and rubber tube). Check for evidence of leaks.  
Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

- OK >> GO TO 13.
- NG >> Replace it.

## 13. CLEAN EVAP PURGE LINE

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 14.

## 14. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

DTC P0442 EVAP CONTROL SYSTEM

PF14950

On Board Diagnosis Logic

UBS001J0

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum. If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following "Vacuum test" conditions. The EVAP canister vent control valve is closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve will then be opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

# DTC P0442 EVAP CONTROL SYSTEM

[QG18DE (ULEV)]

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0442 0442	EVAP control system small leak detected (negative pressure)	EVAP control system has a leak, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Fuel level sensor and the circuit</li> <li>● Refueling control valve</li> <li>● ORVR system leaks</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS001J2

**CAUTION:**

Never remove fuel filler cap during the DTC confirmation procedure.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Open engine hood before conducting following procedure.
- Always perform test at a temperature of 0 to 30°C (32 to 86°F).

 **WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Check the following conditions are met.

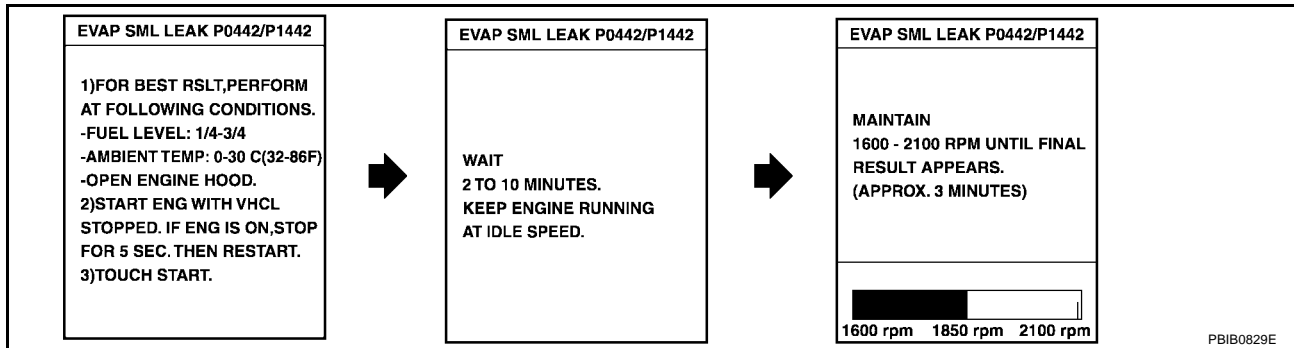

**COOLAN TEMP/S: 0 - 70°C (32 - 158°F)**

**INT/A TEMP SE: More than -20°C (-4°F)**

# DTC P0442 EVAP CONTROL SYSTEM

[QG18DE (ULEV)]

5. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
Follow the instruction displayed.

## NOTE:

- If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-88, "Basic Inspection"](#).
- Make sure that EVAP hoses are connected to the EVAP canister purge volume control solenoid valve properly.

6. Make sure that "OK" is displayed.  
If "NG" is displayed, refer to [EC-304, "Diagnostic Procedure"](#).

## WITH GST

### NOTE:

Be sure to read the explanation of "Driving Pattern" on [EC-68](#) before driving vehicle.

1. Start engine.
2. Drive vehicle according to [EC-68, "Driving Pattern"](#).
3. Stop vehicle.
4. Select "MODE 1" with GST.
  - If SRT of EVAP system is not set yet, go to the following step.
  - If SRT of EVAP system is set, the result will be OK.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Start engine.  
**It is not necessary to cool engine down before driving.**
7. Drive vehicle again according to the [EC-68, "Driving Pattern"](#).
8. Stop vehicle.
9. Select "MODE 3" with GST.
  - If P0442 is displayed on the screen, go to [EC-304, "Diagnostic Procedure"](#).
  - If P0441 is displayed on the screen, go to "Diagnostic Procedure" for DTC P0441, [EC-297](#).
  - If P0441, P0442 are not displayed on the screen, go to the following step.
10. Select "MODE 1" with GST.
  - If SRT of EVAP system is set, the result will be OK.
  - If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

#### OK or NG

- OK >> GO TO 2.  
NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

#### OK or NG

- OK >> GO TO 3.  
NG >> ● Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
● Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

#### OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

**4. CHECK FUEL TANK VACUUM RELIEF VALVE**

1. Wipe valve housing clean.
2. Check valve opening pressure and vacuum.

**Pressure:** 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)

**Vacuum:** -6.0 to -3.4 kPa (-0.061 to -0.035 kg/cm<sup>2</sup> , -0.87 to -0.48 psi)

**CAUTION:**

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

OK or NG

OK >> GO TO 5.

NG >> Replace fuel filler cap with a genuine one.

## 5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

Models with CONSULT-II>>>GO TO 6.

Models without CONSULT-II>>>GO TO 7.

**6. CHECK FOR EVAP LEAK**

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#)

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**7. CHECK FOR EVAP LEAK**

**Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT**

Refer to [EC-312, "DTC Confirmation Procedure"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

**9. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 10.
- No (With CONSULT-II)>>GO TO 12.
- No (Without CONSULT-II)>>GO TO 13.

**10. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- >> Repair hose or replace EVAP canister.

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

Ⓟ **With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %

PBIB0828E

**13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**⊗ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 14.

**14. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-34, "Vacuum Hose Drawing"](#).

OK or NG

- OK (With CONSULT-II)>>GO TO 15.
- OK (Without CONSULT-II)>>GO TO 16.
- NG >> Repair or reconnect the hose.

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

**Ⓜ With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBI0828E

**16. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-316, "Component Inspection"](#).

OK or NG

- OK >> GO TO 17.
- NG >> Replace EVAP canister purge volume control solenoid valve.

**17. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-255, "Component Inspection"](#).

OK or NG

- OK >> GO TO 18.
- NG >> Replace fuel level sensor unit.

---

**18. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

---

Refer to [EC-329, "Component Inspection"](#) .

**OK or NG**

- OK >> GO TO 19.
- NG >> Replace EVAP control system pressure sensor.

---

**19. CHECK EVAP PURGE LINE**

---

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to [EC-583, "EVAPORATIVE EMISSION SYSTEM"](#) .

**OK or NG**

- OK >> GO TO 20.
- NG >> Repair or reconnect the hose.

---

**20. CLEAN EVAP PURGE LINE**

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 21.

---

**21. CHECK EVAP/ORVR VAPOR LINE**

---

Check EVAP/ORVR vapor line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-590, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

**OK or NG**

- OK >> GO TO 22.
- NG >> Repair or replace hoses and tubes.

---

**22. CHECK SIGNAL LINE AND RECIRCULATION LINE**

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

**OK or NG**

- OK >> GO TO 23.
- NG >> Repair or replace hoses, tubes or filler neck tube.

---

**23. CHECK REFUELING EVAP VAPOR CUT VALVE**

---

Refer to [EC-593, "Component Inspection"](#) .

**OK or NG**

- OK >> GO TO 24.
- NG >> Replace refueling EVAP vapor cut valve with fuel tank.

---

**24. CHECK FUEL LEVEL SENSOR**

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

**OK or NG**

- OK >> GO TO 25.
- NG >> Replace fuel level sensor unit.

---

**25. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[QG18DE (ULEV)]

## DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PF1:14920

### Description SYSTEM DESCRIPTION

UBS001J5

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*2		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Closed throttle position		
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Vehicle speed signal*1	Vehicle speed		

\*1: This signal is sent to the ECM through CAN communication line.

\*2: The ECM determines the start signal status by the signals of engine speed and battery voltage.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

## Diagnostic Procedure

UBS001JB

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

## 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM relay

>> Repair harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 45 and EVAP canister purge volume control solenoid valve terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-II)>>GO TO 4.

OK (Without CONSULT-II)>>GO TO 5.

NG >> Repair open circuit or short to ground and short to power in harness or connectors.

## 4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

## 5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-316, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace EVAP canister purge volume control solenoid valve.

## 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

PBIB0150E

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

## DTC P0447 EVAP CANISTER VENT CONTROL VALVE

PF14935

### Component Description

UBS001JD

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnoses.

			[Ignition switch "OFF"] ● 5 seconds passed after turning ignition switch "OFF"	BATTERY VOLTAGE (11 - 14V)
117	L/Y	EVAP canister vent control valve	[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)
119 120	R/G R/G	Power supply for ECM	[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS001JJ

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.

No >> GO TO 3.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE CIRCUIT

Ⓢ **With CONSULT-II**

- Turn ignition switch "OFF" and then turn "ON".
- Select "VENT CONTROL/V" in "ACTIVE TEST" mode with CONSULT-II.
- Touch "ON/OFF" on CONSULT-II screen.
- Check for operating sound of the valve.  
**Clicking noise should be heard.**

OK or NG

OK >> GO TO 7.

NG >> GO TO 3.

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 (B1)	XXX V

PBIB0834E

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

## 3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister vent control valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister vent control valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness connectors M14, B1
- Fuse block (J/B) connector E22
- 15A fuse
- Harness for open or short between EVAP canister vent control valve and fuse

>> Repair harness or connectors.

## 5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 117 and EVAP canister vent control valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B3, M16
- Harness connectors M59, F27
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 8.

NG >> Clean the rubber tube using an air blower.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-322, "Component Inspection"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace EVAP canister vent control valve.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS001JK

#### Ⓟ With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".
5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.

PBIB1033E

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE [QG18DE (ULEV)]

6. Check air passage continuity and operation delay time.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
ON	No
OFF	Yes

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.

8. Perform Test No. 5 again.

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
H02S1 (B1)	XXX V

PBIB0834E

**⊗ Without CONSULT-II**

- Remove EVAP canister vent control valve from EVAP canister.
- Check portion **B** of EVAP canister vent control valve for being rusted.

3. Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
12V direct current supply between terminals 1 and 2	No
OFF	Yes

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.

5. Perform Test No. 3 again.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

## DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

PFV:25085

### Component Description

UBS003RJ

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003RK

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

### On Board Diagnosis Logic

UBS003RL

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0452 0452	EVAP control system pressure sensor low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● EVAP control system pressure sensor</li> </ul>

#### NOTE:

If DTC P0452 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455](#).

### DTC Confirmation Procedure

UBS003RM

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

UBS003RN

## Wiring Diagram

EC-PRE/SE-01

Refer to the following.

- (F24) - JOINT CONNECTOR
- (F57) - ELECTRICAL UNITS

BBWA0786E

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
32	L	EVAP control system pressure sensor	[Ignition switch "ON"]	Approximately 4.4V
48	R/W	Sensors' power supply	[Ignition switch "ON"]	Approximately 5V
67	B/W	Sensors' ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V

## Diagnostic Procedure

UBS003RO

### 1. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace harness connector.

### 3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "ON".
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

## [QG18DE (ULEV)]

---

### 4. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair harness or connectors.

### 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Check harness continuity between EVAP control system pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

### 6. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Joint connector-1
- Harness for open or short between EVAP control system pressure sensor and ECM
- Harness for open or short between EVAP control system pressure sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 32 and EVAP control system pressure sensor terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

### 8. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

## 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-329, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace EVAP control system pressure sensor.

## 10. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CONTROL SYSTEM PRESSURE SENSOR

UBS003RP

1. Remove EVAP control system pressure sensor with its harness connector connected.
2. Remove EVAP control system pressure sensor from EVAP canister.  
**Do not reuse the O-ring, replace it with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch "ON" and check output voltage between ECM terminal 32 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

**CAUTION:**

- Always calibrate the vacuum pump gauge when using it.
  - Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).
5. If NG, replace EVAP control system pressure sensor.

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

## DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

PF2:25085

### Component Description

UBS003RQ

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003RR

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

### On Board Diagnosis Logic

UBS003RS

#### NOTE:

If DTC P0453 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0453 0453	EVAP control system pressure sensor high input	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● EVAP control system pressure sensor</li> <li>● EVAP canister vent control valve</li> <li>● EVAP canister</li> </ul>

### DTC Confirmation Procedure

UBS003RT

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

## WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "DATA MONITOR" mode with CONSULT-II.
5. Make sure that "FUEL T/TEMP SE" is more than 0°C (32°F).
6. Start engine and wait at least 20 seconds.
7. If 1st trip DTC is detected, go to [EC-333, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
FUEL T/TMP SE	XXX °C

SEF194Y

## WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Check that voltage between ECM terminal 107 (Fuel tank temperature sensor signal) and ground is less than 4.2V.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and wait at least 20 seconds.
5. Select "MODE 7" with GST.  
If 1st trip DTC is detected, go to [EC-333, "Diagnostic Procedure"](#)

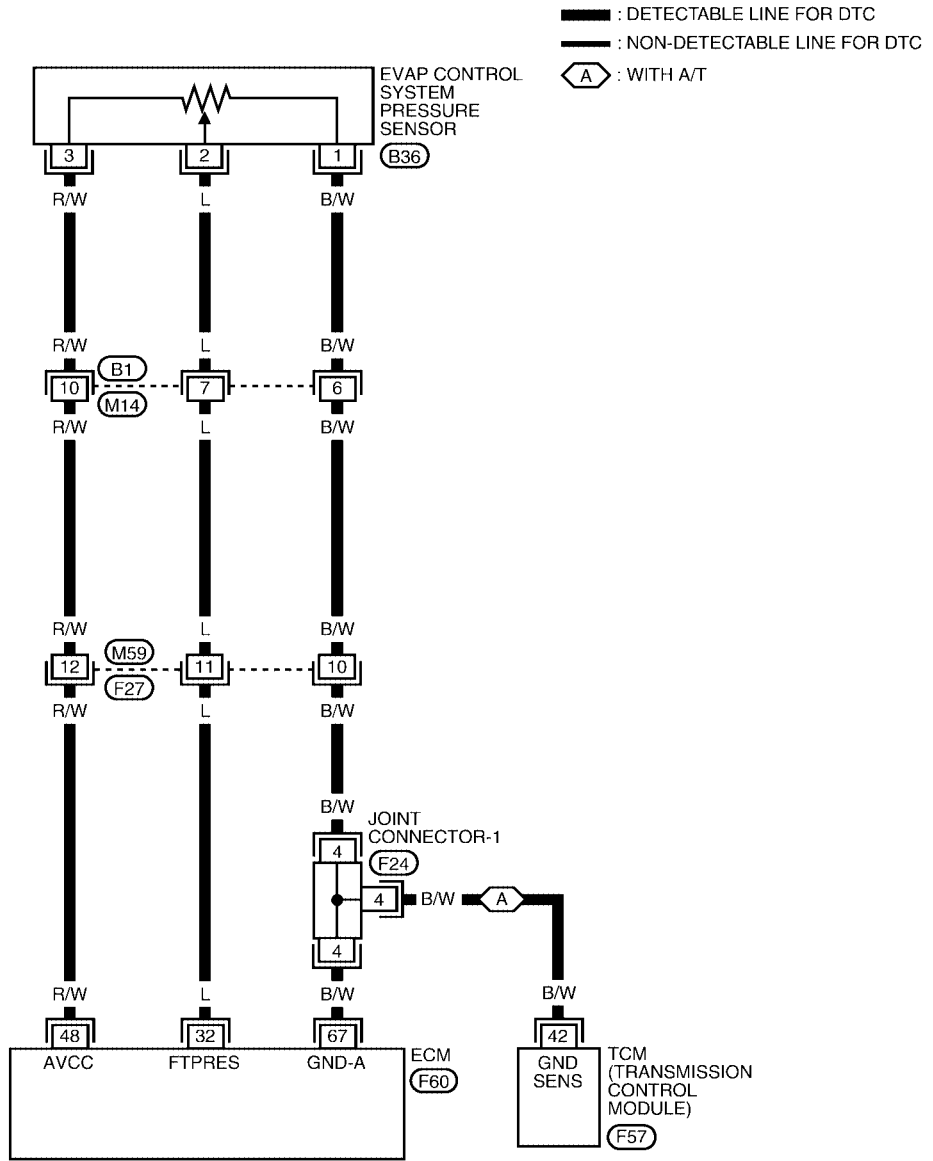

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

## Wiring Diagram

UBS003RU

### EC-PRE/SE-01

Refer to the following.

- (F24) - JOINT CONNECTOR
- (F57) - ELECTRICAL UNITS

BBWA0786E

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
32	L	EVAP control system pressure sensor	[Ignition switch "ON"]	Approximately 1.8 - 4.8V
48	R/W	Sensors' power supply	[Ignition switch "ON"]	Approximately 5V
67	B/W	Sensors' ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V

## Diagnostic Procedure

UBS003RV

### 1. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace harness connector.

### 3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "ON".
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

## [QG18DE (ULEV)]

---

### 4. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair harness or connectors.

### 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Check harness continuity between EVAP control system pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

### 6. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Joint connector-1
- Harness for open or short between EVAP control system pressure sensor and ECM
- Harness for open or short between EVAP control system pressure sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 32 and EVAP control system pressure sensor terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

### 8. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

## [QG18DE (ULEV)]

### 9. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 10.

NG >> Clean the rubber tube using an air blower.

### 10. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-322, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> Replace EVAP canister vent control valve.

### 11. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-337, "Component Inspection"](#) .

OK or NG

OK >> GO TO 12.

NG >> Replace EVAP control system pressure sensor.

### 12. CHECK RUBBER TUBE

Check obstructed rubber tube connected to EVAP canister vent control valve.

OK or NG

OK >> GO TO 13.

NG >> Clean rubber tube using an air blower, repair or replace rubber tube.

### 13. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

OK or NG

OK >> GO TO 14.

NG >> GO TO 16.

### 14. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

OK >> GO TO 16.

NG >> GO TO 15.

## 15. DETECT MALFUNCTIONING PART

---

Check the following.

- EVAP canister for damage

>> Repair hose or replace EVAP canister.

## 16. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

DTC P0455 EVAP CONTROL SYSTEM

PF1:14950

On Board Diagnosis Logic

UBS001JT

This diagnosis detects a very large leak (fuel filler cap fell off, etc.) in the EVAP system between the fuel tank and the EVAP canister purge volume control solenoid valve.

PBIB1209E

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0455 0455	EVAP control system gross leak detected	EVAP control system has a very large leak such as fuel filler cap fell off, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent.</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged.</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling EVAP vapor cut valve</li> <li>● ORVR system leaks</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

**CAUTION:**

Never remove fuel filler cap during the DTC Confirmation Procedure.

**NOTE:**

- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

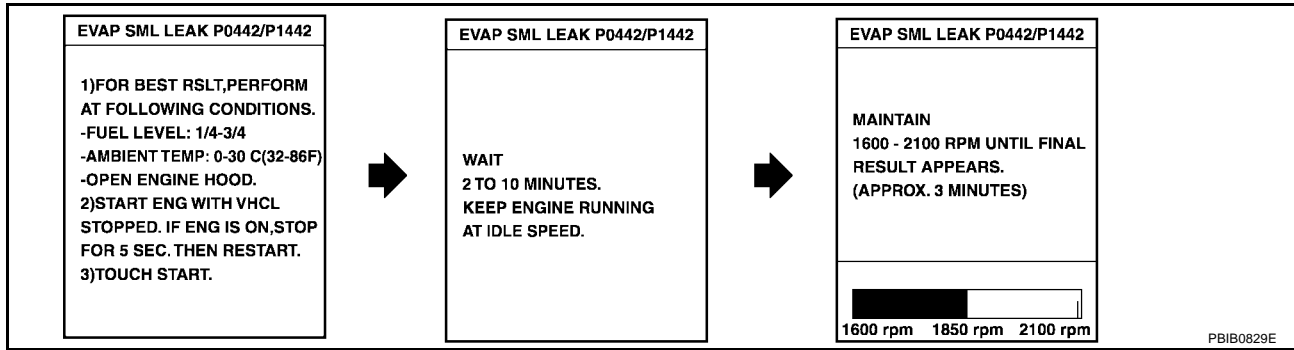

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Open engine hood before conducting the following procedure.

**WITH CONSULT-II**

1. Tighten fuel filler cap securely until ratcheting sound is heard.
2. Turn ignition switch "ON".
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
5. Make sure that the following conditions are met.  
**COOLAN TEMP/S: 0 - 70°C (32 - 158°F)**  
**INT/A TEMP SE: 0 - 60°C (32 - 140°F)**
6. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
 Follow the instruction displayed.

**NOTE:**

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-88, "Basic Inspection"](#).

7. Make sure that "OK" is displayed.  
 If "NG" is displayed, select "SELF-DIAG RESULTS" mode with CONSULT-II and make sure that "EVAP GROSS LEAK [P0455]" is displayed. If it is displayed, refer to [EC-340, "Diagnostic Procedure"](#).  
 If P0442 is displayed, perform "Diagnostic Procedure" for DTC P0442, [EC-304](#).

**WITH GST**

**NOTE:**

Be sure to read the explanation of "Driving Pattern" on [EC-68](#) before driving vehicle.

1. Start engine.

2. Drive vehicle according to [EC-68, "Driving Pattern"](#) .
3. Stop vehicle.
4. Select "MODE 1" with GST.
  - If SRT of EVAP system is not set yet, go to the following step.
  - If SRT of EVAP system is set, the result will be OK.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Start engine.  
**It is not necessary to cool engine down before driving.**
7. Drive vehicle again according to the [EC-68, "Driving Pattern"](#) .
8. Stop vehicle.
9. Select "MODE 3" with GST.
  - If P0455 is displayed on the screen, go to [EC-340, "Diagnostic Procedure"](#) .
  - If P0442 is displayed on the screen, go to "Diagnostic Procedure", for DTC P0442, [EC-304](#) .
  - If P0441 is displayed on the screen, go to "Diagnostic Procedure" for DTC P0441, [EC-297](#) .
  - If P0441, P0442 and P0455 are not displayed on the screen, go to the following step.
10. Select "MODE 1" with GST.
  - If SRT of EVAP system is set, the result will be OK.
  - If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

UBS001JW

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

#### OK or NG

- OK >> GO TO 2.  
 NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

#### OK or NG

- OK >> GO TO 3.  
 NG >> ● Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
 ● Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

#### OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

**4. CHECK FUEL TANK VACUUM RELIEF VALVE**

1. Wipe clean valve housing.
2. Check valve opening pressure and vacuum.

**Pressure:**

**15.3 - 20.0 kPa**

**(0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)**

**Vacuum:**

**-6.0 to -3.4 kPa**

**(-0.061 to -0.035 kg/cm<sup>2</sup> , -0.87 to -0.48 psi)**

**CAUTION:**

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

OK or NG

- OK >> GO TO 5.
- NG >> Replace fuel filler cap with a genuine one.

**5. CHECK EVAP PURGE LINE**

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks, improper connection or disconnection.

Refer to [EC-583, "EVAPORATIVE EMISSION SYSTEM"](#) .

OK or NG

- OK >> GO TO 6.
- NG >> Repair or reconnect the hose.

**6. CLEAN EVAP PURGE LINE**

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 7.

**7. CHECK EVAP CANISTER VENT CONTROL VALVE**

Check the following.

- EVAP canister vent control is installed properly.  
Refer to [EC-587, "Removal and Installation"](#) .
- EVAP canister vent control valve.  
Refer to [EC-322, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace EVAP canister vent control valve and O-ring.

### 8. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

#### NOTE:

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

Models with CONSULT-II>>>GO TO 9.

Models without CONSULT-II>>>GO TO 10.

9. CHECK FOR EVAP LEAK

 With CONSULT-II

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#)

OK or NG

- OK >> GO TO 11.
- NG >> Repair or replace.

10. CHECK FOR EVAP LEAK

 Without CONSULT-II

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK >> GO TO 12.
- NG >> Repair or replace.

## 11. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 14.  
 NG >> GO TO 15.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

## 12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 13.

## 13. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to [EC-34, "Vacuum Hose Drawing"](#) .

OK or NG

- OK (With CONSULT-II)>>GO TO 14.  
 OK (Without CONSULT-II)>>GO TO 15.  
 NG >> Repair or reconnect the hose.

## 14. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

 **With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 16.  
 NG >> GO TO 15.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-316, "Component Inspection"](#) .

OK or NG

OK >> GO TO 16.

NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-255, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace fuel level sensor unit.

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

Refer to [EC-337, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

**18. CHECK EVAP/ORVR LINE.**

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-590, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 19.

NG >> Repair or replace hoses and tubes.

**19. CHECK SIGNAL LINE AND RECIRCULATION LINE**

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 20.

NG >> Repair or replace hoses, tubes or filler neck tube.

**20. CHECK REFUELING EVAP VAPOR CUT VALVE**

Refer to [EC-593, "Component Inspection"](#) .

OK or NG

OK >> GO TO 21.

NG >> Replace refueling EVAP vapor cut valve with fuel tank.

**21. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

DTC P0456 EVAP CONTROL SYSTEM

PF14950

On Board Diagnosis Logic

UBS003V6

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the intake manifold vacuum in the same way as conventional EVAP small leak diagnosis.

If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected.

If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected.

If ECM judges there are no leaks, the diagnosis will be OK.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0456 0456	Evaporative emission control system very small leak (negative pressure check)	<ul style="list-style-type: none"> <li>● EVAP system has a very small leak.</li> <li>● EVAP system does not operate properly.</li> </ul>	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling EVAP vapor cut valve</li> <li>● ORVR system leaks</li> <li>● Fuel level sensor and the circuit</li> <li>● Foreign matter caught in EVAP canister purge volume control solenoid valve</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS003V7

**NOTE:**

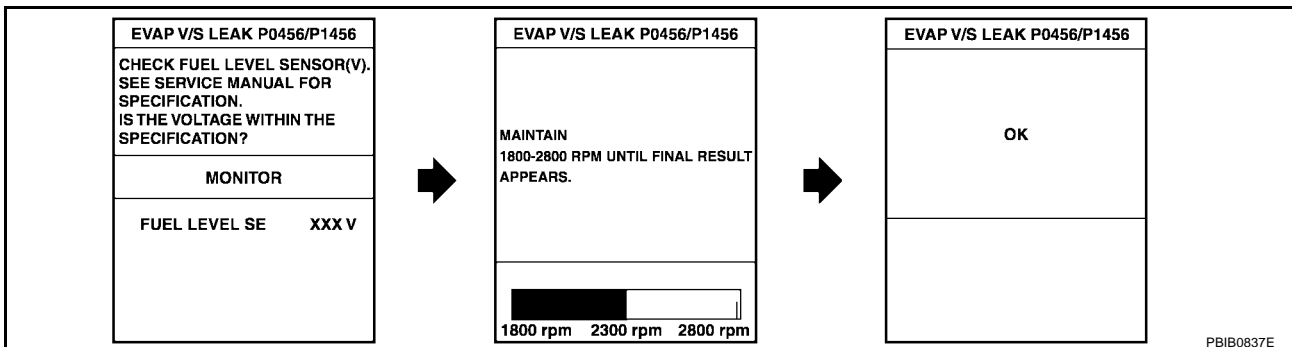

- If DTC P0456 is displayed with P0442, first perform trouble diagnosis for DTC P0456.
- After repair, make sure that the hoses and clips are installed properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Open engine hood before conducting following procedure.
- If any of following conditions are met just before the DTC confirmation procedure, leave the vehicle for more than 1 hour.
  - Fuel filler cap is removed.
  - Refilled or drained the fuel.
  - EVAP component parts is/are removed.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Make sure the following conditions are met.
  - FUEL LEVEL SE: 0.25 - 1.15V**
  - COOLAN TEMP/S: 0 - 32°C (32 - 90°F)**
  - FUEL T/TMP SE: 0 - 35°C (32 - 95°F)**
  - INT A/TEMP SE: More than 0°C (32°F)**
 If NG, turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle) or refilling/draining fuel until the output voltage condition of the "FUEL LEVEL SE" meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Select "EVAP V/S LEAK P0456/P1456" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
Follow the instruction displayed.

6. Make sure that "OK" is displayed. If "NG" is displayed, refer to [EC-348, "Diagnostic Procedure"](#).

**NOTE:**

- If the engine speed cannot be maintained within the range displayed on CONSULT-II screen, go to [EC-88, "Basic Inspection"](#).
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

## Overall Function Check

### WITH GST

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a DTC might not be confirmed.

**CAUTION:**

- Never use compressed air, doing so may damage the EVAP system.
- Do not start engine.
- Do not exceeded 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi).

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Set the pressure pump and a hose.
3. Also set a vacuum gauge via 3-way connector and a hose.
4. Turn ignition switch "ON".
5. Connect GST and select MODE 8.
6. Using MODE 8 control the EVAP canister vent control valve (close) and vacuum cut valve bypass valve (open).
7. Apply pressure and make sure the following conditions are satisfied.

**Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg)**

**Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg).**

If NG, go to [EC-348, "Diagnostic Procedure"](#) .

If OK, go to next step.

8. Disconnect GST.
9. Start engine and warm it up to normal operating temperature.
10. Turn ignition switch "OFF" and wait at least 10 seconds.
11. Restart engine and let it idle for 90 seconds.
12. Keep engine speed at 2,000 rpm for 30 seconds.
13. Turn ignition switch "OFF".

**NOTE:**

For more information, refer to GST instruction manual.

## Diagnostic Procedure

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.
- NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK >> GO TO 3.
- NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.
- 2. Retighten until ratcheting sound is heard.

**3. CHECK FUEL FILLER CAP FUNCTION**

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

**4. CHECK FUEL TANK VACUUM RELIEF VALVE**

Refer to [EC-1849, "Component Inspection"](#).

OK or NG

- OK >> GO TO 5.
- NG >> Replace fuel filler cap with a genuine one.

**5. INSTALL THE PRESSURE PUMP**

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II >> GO TO 6.  
Models without CONSULT-II >> GO TO 7.

## 6. CHECK FOR EVAP LEAK

### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

#### NOTE:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

#### OK or NG

- OK >> GO TO 8.  
NG >> Repair or replace.

## 7. CHECK FOR EVAP LEAK

### Without CONSULT-II

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

#### NOTE:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

#### OK or NG

- OK >> GO TO 8.  
NG >> Repair or replace.

**8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT**

Refer to [EC-1693, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

**9. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 10.
- No (With CONSULT-II)>>GO TO 12.
- No (Without CONSULT-II)>>GO TO 13.

**10. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- >> Repair hose or replace EVAP canister.

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**Ⓟ With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION****⊗ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 16.  
 NG >> GO TO 14.

**14. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#) .

OK or NG

- OK >> GO TO 15.  
 NG >> Repair or reconnect the hose.

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-316, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 16.  
 NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-255, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 17.  
 NG >> Replace fuel level sensor unit.

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

Refer to [EC-329, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.  
 NG >> Replace EVAP control system pressure sensor.

**18. CHECK EVAP PURGE LINE**

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to [EC-583, "EVAPORATIVE EMISSION SYSTEM"](#) .

OK or NG

- OK >> GO TO 19.  
 NG >> Repair or reconnect the hose.

**19. CLEAN EVAP PURGE LINE**

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

---

**20. CHECK EVAP/ORVR LINE**

---

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-590, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 21.

NG >> Repair or replace hoses and tubes.

---

**21. CHECK SIGNAL LINE AND RECIRCULATION LINE**

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses, tubes or filler neck tube.

---

**22. CHECK REFUELING EVAP VAPOR CUT VALVE**

---

Refer to [EC-593, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling EVAP vapor cut valve with fuel tank.

---

**23. CHECK FUEL LEVEL SENSOR**

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

---

**24. CHECK INTERMITTENT INCIDENT**

**DTC P0460 FUEL LEVEL SENSOR**

**Component Description**

UBS001K1

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal according to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

**On Board Diagnosis Logic**

UBS006GL

**NOTE:**

If DTC P0460 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0460 0460	Fuel level sensor circuit noise	Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

**DTC Confirmation Procedure**

UBS001K4

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and wait maximum of 2 consecutive minutes.
4. If 1st trip DTC is detected, go to [EC-355, "Diagnostic Procedure"](#)

**DTC P0461 FUEL LEVEL SENSOR**

**Component Description**

UBS001K7

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal according to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

PBIB1218E

**On Board Diagnosis Logic**

UBS006GM

**NOTE:**

If DTC P0461 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long distance.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

**Overall Function Check**

UBS001KA

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

**WARNING:**

When performing following procedure, be sure to observe the handling of the fuel. Refer to [FL-2, "FUEL SYSTEM"](#).

**TESTING CONDITION:**

Before starting overall function check, preparation of draining fuel and refilling fuel is required.

**WITH CONSULT-II**

**NOTE:**

Start from step 11, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-56, "FUEL PRESSURE RELEASE"](#).
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch "OFF" and wait at least 10 seconds then turn "ON".
6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT-II.
7. Check "FUEL LEVEL SE" output voltage and note it.
8. Select "FUEL PUMP" in "ACTIVE TEST" mode with CONSULT-II.
9. Touch "ON" and drain fuel approximately 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) and stop it.
10. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
11. Check "FUEL LEVEL SE" output voltage and note it.

DTC P0462, P0463 FUEL LEVEL SENSOR

PFP:25060

Component Description

UBS001KB

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal according to the ECM through CAN communication line.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

UBS006GN

NOTE:

If DTC P0462, P0463 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

ECM receives two signals from the fuel level sensor circuit.

One is fuel level sensor power supply circuit, and the other is fuel level sensor ground circuit.

This diagnosis indicates the former, to detect open or short circuit malfunction.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0462 0462	Fuel level sensor circuit low input	An excessively low voltage is sent from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>
P0463 0463	Fuel level sensor circuit high input	An excessively high voltage is sent from the sensor is sent to ECM.	

DTC Confirmation Procedure

UBS001KE

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at ignition switch "ON".

WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-360, "Diagnostic Procedure"](#)

WITH GST

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

UBS001KG

### 1. CHECK FUEL GAUGE OPERATION

---

Refer to [DI-16, "Meter/Gauge Operation and Odo/Trip Meter Segment Check in Diagnosis Mode"](#) .

OK or NG

OK >> GO TO 2.

NG >> Follow the instruction of [DI-16, "Meter/Gauge Operation and Odo/Trip Meter Segment Check in Diagnosis Mode"](#) .

### 2. CHECK FUEL LEVEL SENSOR AND CIRCUIT

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace malfunctioning parts.

### 3. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## Removal and Installation FUEL LEVEL SENSOR

UBS006IT

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

DTC P0500 VSS

PF0:32702

Description

UBS001KH

NOTE:

If DTC P0500 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

The vehicle speed sensor is installed in the transaxle. It contains a pulse generator which provides a vehicle speed signal to the combination meter. The combination meter then sends a signal to the ECM through CAN communication line.

On Board Diagnosis Logic

UBS006GO

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	<ul style="list-style-type: none"> <li>● Harness or connectors (The vehicle speed sensor circuit is open or shorted)</li> <li>● Harness or connectors (The CAN communication line is open or shorted.)</li> <li>● Vehicle speed sensor</li> </ul>

DTC Confirmation Procedure

UBS001KJ

**CAUTION:**

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

This procedure may be conducted in the shop with the drive wheels lifted or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

**WITH CONSULT-II**

1. Start engine
2. Read "VHCL SPEED SE" in "DATA MONITOR" mode with CONSULT-II. The vehicle speed on CONSULT-II should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
3. If NG, go to [EC-362, "Diagnostic Procedure"](#). If OK, go to following step.
4. Select "DATA MONITOR" mode with CONSULT-II.
5. Warm engine up to normal operating temperature.
6. Maintain the following conditions for at least 60 consecutive seconds.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
B/FUEL SCHDL	XXX msec
PW/ST SIGNAL	OFF
VHCL SPEED SE	XXX km/h

SEF196Y

ENG SPEED	1,800 rpm (A/T models) 2,200 rpm (M/T models)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	More than 4.8 msec
Selector lever	Suitable position
PW/ST SIGNAL	OFF

7. If 1st trip DTC is detected, go to [EC-362, "Diagnostic Procedure"](#).

Overall Function Check

UBS001KK

Use this procedure to check the overall function of the vehicle speed signal circuit. During this check, a 1st trip DTC might not be confirmed.

**WITH GST**

1. Lift up drive wheels.

- 
2. Start engine.
  3. Read vehicle speed sensor signal in "MODE 1" with GST.  
The vehicle speed sensor on GST should be able to exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
  4. If NG, go to [EC-362, "Diagnostic Procedure"](#) .

## **Diagnostic Procedure**

UBS001KM

### **1. CHECK VEHICLE SPEED SENSOR CIRCUIT**

---

Refer to [DI-3, "METERS AND GAUGES"](#) .

#### OK or NG

- OK >> GO TO 2.  
NG >> Repair or replace.

### **2. CHECK COMBINATION METER**

---

Check combination meter function.  
Refer to [DI-8, "Combination Meter"](#) .

>> **INSPECTION END**

DTC P0506 ISC SYSTEM

Description

UBS006CY

NOTE:

If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

UBS006CZ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0506 0506	Idle speed control system RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	<ul style="list-style-type: none"> <li>● Electric throttle control actuator</li> <li>● Intake air leak</li> </ul>

DTC Confirmation Procedure

UBS006D0

NOTE:

- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform “Idle Air Volume Learning”, [EC-53](#), before conducting “DTC Confirmation Procedure”. For the target idle speed, refer to the “Service Data and Specifications (SDS)”, [EC-600](#).

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above -10°C (14°F).

 WITH CONSULT-II

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch “OFF” and wait at least 10 seconds.
4. Turn ignition switch “ON” again and select “DATA MONITOR” mode with CONSULT-II.
5. Start engine and run it for at least 1 minute at idle speed.
6. If 1st trip DTC is detected, go to [EC-364, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

 WITH GST

Follow the procedure “WITH CONSULT-II” above.

---

**Diagnostic Procedure****1. CHECK INTAKE AIR LEAK**

---

1. Start engine and let it idle.
2. Listen for an intake air leak after the mass air flow sensor.

**OK or NG**

- OK >> GO TO 2.  
NG >> Discover air leak location and repair.

**2. REPLACE ECM**

---

1. Stop engine.
2. Replace ECM.
3. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
4. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
5. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

**DTC P0507 ISC SYSTEM**

PFP:23781

**Description**

UBS006D2

**NOTE:**

**If DTC P0507 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.**

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

**On Board Diagnosis Logic**

UBS006D3

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0507 0507	Idle speed control system RPM higher than expected	The idle speed is more than the target idle speed by 200 rpm or more.	<ul style="list-style-type: none"> <li>● Electric throttle control actuator</li> <li>● Intake air leak</li> <li>● PCV system</li> </ul>

**DTC Confirmation Procedure**

UBS006D4

**NOTE:**

- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.
- **If the target idle speed is out of the specified value, perform “Idle Air Volume Learning”, [EC-53](#), before conducting “DTC Confirmation Procedure”. For the target idle speed, refer to the “Service Data and Specifications (SDS)”, [EC-600](#).**

**TESTING CONDITION:**

- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**
- **Always perform the test at a temperature above -10°C (14°F).**

**WITH CONSULT-II**

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch “OFF” and wait at least 10 seconds.
4. Turn ignition switch “ON” again and select “DATA MONITOR” mode with CONSULT-II.
5. Start engine and run it for at least 1 minute at idle speed.
6. If 1st trip DTC is detected, go to [EC-366, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

5. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

**DTC P0550 PSP SENSOR**

PFP:49763

**Component Description**

UBS003RX

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load. This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003RY

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PW/ST SIGNAL	<ul style="list-style-type: none"> <li>Engine: After warming up, idle the engine</li> </ul>	Steering wheel is in neutral position. (Forward direction)	OFF
		Steering wheel is turned.	ON

**On Board Diagnosis Logic**

UBS003RZ

The MIL will not light up for this diagnosis.

**NOTE:**

If DTC P0550 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0550 0550	Power steering pressure sensor circuit	An excessively low or high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted)</li> <li>Power steering pressure sensor</li> </ul>

**DTC Confirmation Procedure**

UBS003S0

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-369, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

# DTC P0550 PSP SENSOR

[QG18DE (ULEV)]

UBS003S1

## Wiring Diagram

EC-PS/SEN-01

-  : DETECTABLE LINE FOR DTC
-  : NON-DETECTABLE LINE FOR DTC
-  : WITH A/T

Refer to the following.

-  - JOINT CONNECTOR
-  - ELECTRICAL UNITS

BBWA0787E

# DTC P0550 PSP SENSOR

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
12	P	Power steering pressure sensor	[Engine is running] ● Steering wheel is being turned.	0.5 - 4.0V
			[Engine is running] ● Steering wheel is not being turned.	0.4 - 0.8V
67	B/W	Sensors' ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V
68	G/R	Sensors' power supply	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

UBS003S2

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. CHECK PSP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect PSP sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between PSP sensor terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness connectors.

---

### 3. CHECK PSP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Check harness continuity between PSP sensor terminal 3 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- |    |             |
|----|-------------|
| OK | >> GO TO 5. |
| NG | >> GO TO 4. |

---

### 4. DETECT MALFUNCTIONING PART

---

Check the following.

- Joint connector-1
- Harness for open or short between power steering pressure sensor and ECM
- Harness for open or short between power steering pressure sensor and TCM

>> Repair open circuit or short to power in harness or connectors.

---

### 5. CHECK PSP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 12 and PSP sensor terminal 2.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- |    |   |
|----|---|
| OK | >> GO TO 6.   |
| NG | >> Repair open circuit or short to ground or short to power in harness or connectors. |

---

### 6. CHECK PSP SENSOR

---

Refer to [EC-371, "Component Inspection"](#) .

OK or NG

- |    |                        |
|----|------------------------|
| OK | >> GO TO 7.            |
| NG | >> Replace PSP sensor. |

---

### 7. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection POWER STEERING PRESSURE SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and let it idle.
3. Check voltage between ECM terminal 12 and ground under the following conditions.

Condition	Voltage
Steering wheel is being turned fully.	0.5 - 4.0V
Steering wheel is not being turned.	0.4 - 0.8V

**DTC P0605 ECM**

PF2:23710

**Component Description**

UBS001L9

The ECM consists of a microcomputer and connector for signal input and output and for power supply. The ECM controls the engine.

**On Board Diagnosis Logic**

UBS006GP

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEP-ROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

**FAIL-SAFE MODE**

ECM enters fail-safe mode when malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

**DTC Confirmation Procedure**

UBS006GQ

Perform "PROCEDURE FOR MALFUNCTION A" first. If the DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION B". If there is no problem on "PROCEDURE FOR MALFUNCTION B", perform "PROCEDURE FOR MALFUNCTION C".

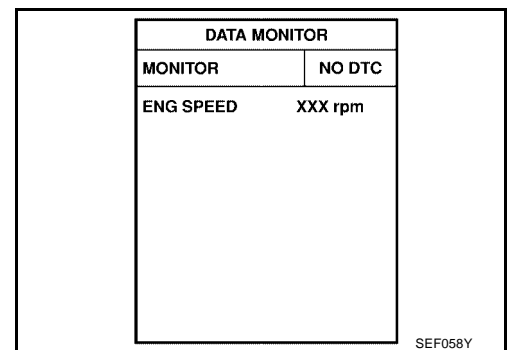

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**PROCEDURE FOR MALFUNCTION A**

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If DTC is detected, go to [EC-373, "Diagnostic Procedure"](#).

**With GST**

Follow the procedure "With CONSULT-II" above.

**PROCEDURE FOR MALFUNCTION B**

**With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
4. If 1st trip DTC is detected, go to [EC-373, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
121	W/L	Power supply for ECM (Buck-up)	[Ignition switch "OFF"]	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS003S8

### 1. CHECK ECM POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check voltage between ECM terminal 121 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- 10A fuse
- Harness for open or short between ECM and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

#### 4. PERFORM DTC CONFIRMATION PROCEDURE

---

 **With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "SELF DIAG RESULTS" mode with CONSULT-II.
3. Touch "ERASE".
4. **Perform "DTC Confirmation Procedure"**.  
See [EC-375](#) .
5. Is the 1st trip DTC P1065 displayed again?

 **With GST**

1. Turn ignition switch "ON".
2. Select MODE 4 with GST.
3. Touch "ERASE".
4. **Perform "DTC Confirmation Procedure"**.  
See [EC-375](#) .
5. Is the 1st trip DTC P1065 displayed again?

Yes or No

Yes >> GO TO 5.

No >> **INSPECTION END**

---

#### 5. REPLACE ECM

---

1. Replace ECM.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

**DTC P1102 MAF SENSOR**

PF2:22680

**Component Description**

UBS003S9

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003SA

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.0 - 1.7V
		2,500 rpm 1.5 - 2.4V
CAL/LD VALUE	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 20.0 - 35.5%
		2,500 rpm 12.0 - 27.0%
MASS AIRFLOW	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.4 - 4.0 g-m/s
		2,500 rpm 5.0 - 10.0 g-m/s

**On Board Diagnosis Logic**

UBS003SB

This self-diagnosis has the one trip detection logic.

**NOTE:**

If DTC P1102 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1102 1102	Mass air flow sensor circuit range/performance problem	A voltage from the sensor is constantly approx.1.0V when engine is running.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>

**FAIL-SAFE MODE**

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**④ WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and wait at least 5 seconds.
4. If DTC is detected, go to [EC-382, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC

Follow the procedure "With CONSULT-II" above.

# DTC P1102 MAF SENSOR

[QG18DE (ULEV)]

UBS003SD

## Wiring Diagram

EC-MAFS-01

Refer to the following.

- (F24) - JOINT CONNECTOR
- (F57) - ELECTRICAL UNITS

BBWA0774E

# DTC P1102 MAF SENSOR

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
48	R/W	Sensor power supply (Mass air flow sensor)	[Ignition switch "ON"]	Approximately 5V
51	L/R	Mass air flow sensor	[Engine is running] <ul style="list-style-type: none"><li>● Warm-up condition</li><li>● Idle speed</li></ul>	1.0 - 1.7V
			[Engine is running] <ul style="list-style-type: none"><li>● Warm-up condition</li><li>● Engine speed is 2,500 rpm.</li></ul>	1.5 - 2.1V
67	B/W	Sensor ground (Mass air flow sensor)	[Engine is running] <ul style="list-style-type: none"><li>● Warm-up condition</li><li>● Idle speed</li></ul>	Approximately 0V

## Diagnostic Procedure

UBS003SE

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. CHECK MAF SENSOR POWER SUPPLY CIRCUIT**

1. Disconnect MAF sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

**3. DETECT MALFUNCTIONING PART**

Check the following.

- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Joint connector-1.
- Harness for open or short between mass air flow sensor and ECM.
- Harness for open or short between mass air flow sensor and TCM.

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 51 and MAF sensor terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK MASS AIR FLOW SENSOR**

Refer to [EC-384, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace mass air flow sensor.

**8. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection  
MASS AIR FLOW SENSOR**

UBS003SF

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.1
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for liner voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.
  - a. Turn ignition switch "OFF".
  - b. Disconnect mass air flow sensor harness connector and reconnect it again.
  - c. Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

DTC P1111 IVT CONTROL SOLENOID VALVE

Description  
SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

\*: This signal is sent to the ECM through CAN communication line.

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

COMPONENT DESCRIPTION

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

# DTC P1111 IVT CONTROL SOLENOID VALVE

[QG18DE (ULEV)]

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V SOL (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Shift lever: N</li> <li>● Air conditioner switch: OFF</li> <li>● No-load</li> </ul>	Idle	0% - 2%

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection INTAKE VALVE TIMING CONTROL SOLENOID VALVE

UBS0057S

1. Disconnect intake valve timing control solenoid valve harness connector.
2. Check resistance between intake valve timing control solenoid valve terminals 1 and 2 under the following conditions.

Terminals	Resistance
1 and 2	Approximately 8Ω at 20°C (68°F)
1 or 2 and ground	$\infty\Omega$ (Continuity should not exist)

MBIB0027E  
UBS0057T

### Removal and Installation INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EM-39, "TIMING CHAIN"](#) .

# DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

[QG18DE (ULEV)]

## DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

PF16119

### Component Description

UBS003SH

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS003SI

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1121 1121	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detects the throttle valve is stuck open. <b>This self-diagnosis has the one trip detection logic.</b>	

### FAIL-SAFE MODE

When the malfunction A or B is detected in the two consecutive trips, the ECM enters fail-safe mode and MIL lights up.

When the malfunction C is detected even in the 1st trip, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle control actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.

### DTC Confirmation Procedure

UBS003SJ

#### NOTE:

- Perform "PROCEDURE FOR MALFUNCTION A AND B" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION C".
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR MALFUNCTION A AND B

##### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Shift selector lever to "D" position (A/T), "1st" position (M/T) and wait at least 2 seconds.
4. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
5. If 1st trip DTC is detected, go to [EC-391, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

##### With GST

Follow the procedure "With CONSULT-II" above.

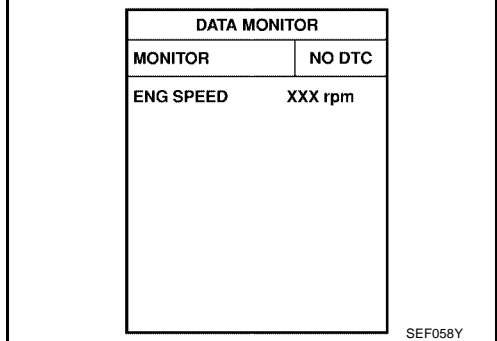

# DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

## [QG18DE (ULEV)]

### PROCEDURE FOR MALFUNCTION C

#### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Shift selector lever to "D" position (A/T), "1st" position (M/T) and wait at least 2 seconds.
4. Shift selector lever to "N" or "P" position (A/T), Neutral position (M/T).
5. Start engine and let it idle for 3 seconds.
6. If DTC is detected, go to [EC-391, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### With GST

Follow the procedure "With CONSULT-II" above.

### Diagnostic Procedure

UBS003SK

#### 1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if a foreign matter is caught between the throttle valve and the housing.

#### OK or NG

- OK >> GO TO 2.  
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

#### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (ULEV)]

## DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

PF16119

### Description

UBS003SM

#### NOTE:

If DTC P1122 is displayed with DTC P1121 or 1126, first perform the trouble diagnosis for DTC P1121 or P1126. Refer to [EC-390](#) or [EC-399](#).

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS003SN

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1122 1122	Electric throttle control performance problem	Electric throttle control function does not operate properly.	<ul style="list-style-type: none"><li>● Harness or connectors (Throttle control motor circuit is open or shorted.)</li><li>● Harness or connectors (Throttle control motor relay circuit is open or shorted.)</li><li>● Electric throttle control actuator</li><li>● Throttle control motor relay</li></ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS003SO

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON" and wait at least 2 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to [EC-394, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (ULEV)]

## 2. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT

Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 3.

## 3. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect throttle control motor relay.

3. Check voltage between throttle control motor relay terminals 2, 5 and ground.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- 15A fuse
- Harness for open or short between throttle control motor relay and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 3 and throttle control motor relay terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.

NG >> Repair open circuit or short to power in harness or connectors.

## 6. CHECK THROTTLE CONTROL MOTOR RELAY OUTPUT SIGNAL CIRCUIT

1. Check continuity between ECM terminal 104 and throttle control motor relay terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK THROTTLE CONTROL MOTOR RELAY

Refer to [EC-397, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace throttle control motor relay.

## 8. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch "OFF".
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals.  
Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	4	Should exist
	5	Should not exist
6	4	Should not exist
	5	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (ULEV)]

## 9. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.

OK or NG

OK >> GO TO 10.

NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

## 10. CHECK THROTTLE CONTROL MOTOR

Refer to [EC-397, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> GO TO 12.

## 11. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

OK >> GO TO 12.

NG >> Repair or replace harness or connectors.

## 12. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

### Component Inspection THROTTLE CONTROL MOTOR RELAY

UBS003SR

1. Apply 12V direct current between relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

3. If NG, replace throttle control motor relay.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (ULEV)]

## THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

**Resistance: Approximately 1 - 15  $\Omega$  [at 25 °C (77°F)]**

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
5. Perform [EC-53, "Idle Air Volume Learning"](#) .

UBS003SS

## Removal and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to [EM-12, "Removal and Installation"](#) .

# DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY [QG18DE (ULEV)]

## DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

PF16119

### Component Description

UBS003ST

Power supply for the Throttle Control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003SU

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

### On Board Diagnosis Logic

UBS003SV

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1124 1124	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor relay circuit is shorted.)</li> <li>● Throttle control motor relay</li> </ul>
P1126 1126	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor relay circuit is open.)</li> <li>● Throttle control motor relay</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS003SW

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR DTC P1124

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

##### Ⓟ With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.

# DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY [QG18DE (ULEV)]

## 3. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 3 and throttle control motor relay terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE CONTROL MOTOR RELAY OUTPUT SIGNAL CIRCUIT

1. Check continuity between ECM terminal 104 and throttle control motor relay terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 5. CHECK THROTTLE CONTROL MOTOR RELAY

Refer to [EC-403, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace throttle control motor relay.

## 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection THROTTLE CONTROL MOTOR RELAY

UBS003SZ

1. Apply 12V direct current between relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

3. If NG, replace throttle control motor relay.

PBIB0098E

### Removal and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

UBS006IN

Refer to [EM-12, "Removal and Installation"](#) .

## DTC P1128 THROTTLE CONTROL MOTOR

PFP:16119

### Component Description

UBS003T0

The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS003T1

**This self-diagnosis has the one trip detection logic.**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1128 1128	Throttle control motor circuit short	ECM detects short in both circuits between ECM and throttle control motor.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor circuit is shorted.)</li> <li>● Electric throttle control actuator (Throttle control motor)</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS003T2

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON" and wait at least 2 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to [EC-406, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1128 THROTTLE CONTROL MOTOR

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
4	P	Throttle control motor (Close)	<p><b>[Ignition switch "ON"]</b></p> <ul style="list-style-type: none"> <li>● Shift lever position is "D" (A/T model)</li> <li>● Shift lever position is "1st" (M/T model)</li> <li>● Accelerator pedal is releasing</li> </ul>	<p>0 - 14V★</p>  <p>PBIB0534E</p>
5	L	Throttle control motor (Open)	<p><b>[Ignition switch "ON"]</b></p> <ul style="list-style-type: none"> <li>● Shift lever position is "D" (A/T model)</li> <li>● Shift lever position is "1st" (M/T model)</li> <li>● Accelerator pedal is depressing</li> </ul>	<p>0 - 14V★</p>  <p>PBIB0533E</p>

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS00374

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

# DTC P1128 THROTTLE CONTROL MOTOR

[QG18DE (ULEV)]

## 2. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch "OFF".
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	4	Should exist
	5	Should not exist
6	4	Should not exist
	5	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 3. CHECK THROTTLE CONTROL MOTOR

Refer to [EC-407, "Component Inspection"](#).

OK or NG

OK >> GO TO 4.

NG >> GO TO 5.

## 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

OK or NG

OK >> GO TO 5.

NG >> Repair or replace harness or connectors.

## 5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#).
3. Perform [EC-53, "Idle Air Volume Learning"](#).

>> INSPECTION END

### Component Inspection THROTTLE CONTROL MOTOR

UBS00375

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

**Resistance: Approximately 1 - 15  $\Omega$  [at 25 °C (77°F)]**

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform [EC-53, "Throttle Valve Closed Position Learning"](#).
5. Perform [EC-53, "Idle Air Volume Learning"](#).

---

**Removal and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

UBS003T6

Refer to [EM-12, "Removal and Installation"](#) .

**DTC P1143 HO2S1**

PFP:22690

UBS003VB

**Component Description**

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003VC

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS003VD

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high and whether the “lean” output is sufficiently low. When both the outputs are shifting to the lean side, the malfunction will be detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1143 1143	Heated oxygen sensor 1 lean shift monitoring	The maximum and minimum voltage from the sensor are not reached to the specified voltages.	<ul style="list-style-type: none"> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform at a temperature above –10°C (14°F).
- Before performing following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P1143” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

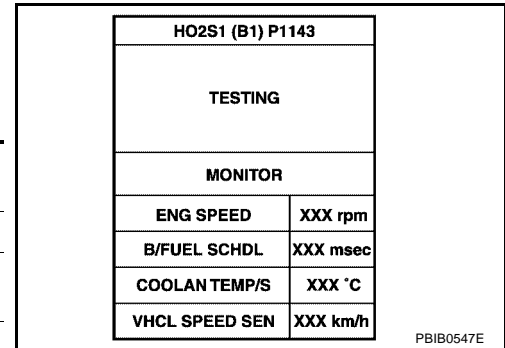

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 50 seconds or more.)

ENG SPEED	1,350 - 2,700 rpm (A/T models) 1,450 - 3,200 rpm (M/T models)
Vehicle speed	Less than 100 km/h (62 MPH)
B/FUEL SCHDL	2.4 - 12.5 msec (A/T models) 2.0 - 10.0 msec (M/T models)
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to [EC-411, "Diagnostic Procedure"](#).

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1(B1) signal] and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.
  - The maximum voltage is over 0.6V at least one time.
  - The minimum voltage is over 0.1V at least one time.
4. If NG, go to [EC-411, "Diagnostic Procedure"](#) .

UBS003VG

**Diagnostic Procedure**

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. RETIGHTEN HEATED OXYGEN SENSOR 1**

Loosen and retighten heated oxygen sensor 1.

**Tightening torque:**

**40 - 60 N·m (4.1 - 6.1 kg·m, 30 - 44 ft·lb)**

>> GO TO 3.

### 3. CLEAR THE SELF-LEARNING DATA

#### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

#### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171. Refer to [EC-238](#).
- No >> GO TO 4.

### 4. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-156, "Component Inspection"](#).

OK or NG

- OK >> GO TO 5.
- NG >> Replace heated oxygen sensor 1.

### 5. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-413, "Component Inspection"](#).

OK or NG

- OK >> GO TO 6.
- NG >> Replace heated oxygen sensor 1.

### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

For circuit, refer to [EC-203, "Wiring Diagram"](#).

>> INSPECTION END

## DTC P1143 HO2S1

[QG18DE (ULEV)]

2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
  - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
  - The maximum voltage is over 0.6V at least one time.
  - The minimum voltage is below 0.3V at least one time.
  - The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V  
2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

### Removal and Installation HEATED OXYGEN SENSOR 1

UBS003VI

Refer to [EM-12, "Removal and Installation"](#) .

**DTC P1144 HO2S1**

PFP:22690

**Component Description**

UBS003VJ

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003VK

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS003VL

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high. The “lean” output is sufficiently low. When both the outputs are shifting to the rich side, the malfunction will be detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1144 1144	Heated oxygen sensor 1 rich shift monitoring	The maximum and minimum voltages from the sensor are beyond the specified voltages.	<ul style="list-style-type: none"> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform at a temperature above –10°C (14°F).
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 5 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P1144” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

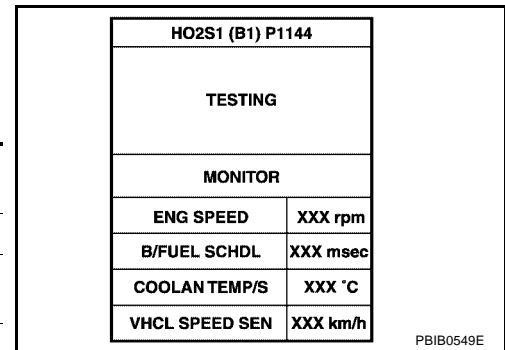

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 50 seconds or more.)

ENG SPEED	1,350 - 2,700 rpm (A/T models) 1,450 - 3,200 rpm (M/T models)
Vehicle speed	Less than 100 km/h (62 MPH)
B/FUEL SCHDL	2.4 - 12.5 msec (A/T models) 2.0 - 10.0 msec (M/T models)
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to [EC-417, "Diagnostic Procedure"](#).

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1(B1) signal] and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.
  - The maximum voltage is below 0.8V at least one time.
  - The minimum voltage is below 0.35V at least one time.
4. If NG, go to [EC-417, "Diagnostic Procedure"](#) .

UBS003VO

**Diagnostic Procedure**

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. RETIGHTEN HEATED OXYGEN SENSOR 1**

Loosen and retighten heated oxygen sensor 1.

**Tightening torque: 40 - 60 N·m (4.1 - 6.1 kg-m, 30 - 44 ft-lb)**

>> GO TO 3.

### 3. CLEAR THE SELF-LEARNING DATA

**With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

**Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-245](#).
- No >> GO TO 4.

### 4. CHECK HO2S1 CONNECTOR FOR WATER

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 harness connector.
3. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace harness or connectors.

### 5. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-156, "Component Inspection"](#).

OK or NG

- OK >> GO TO 6.
- NG >> Replace heated oxygen sensor 1.

- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
  - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
  - The maximum voltage is over 0.6V at least one time.
  - The minimum voltage is below 0.3V at least one time.
  - The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V  
 2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
HEATED OXYGEN SENSOR 1**

Refer to [EM-12, "Removal and Installation"](#).

UBS003VQ

**DTC P1146 HO2S2**

PF2:226A0

**Component Description**

UBS006D6

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.

Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS006D7

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS006D8

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1146 1146	Heated oxygen sensor 2 minimum voltage monitoring	The minimum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> </ul>

**DTC Confirmation Procedure**

UBS006D9

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Open engine hood before conducting following procedure.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minutes.
6. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).
7. Open engine hood.
8. Select "HO2S2 (B1) P1146" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
9. Start engine and following the instruction of CONSULT-II.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

SEF189Y

10. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
If "NG" is displayed, go to [EC-424, "Diagnostic Procedure"](#).  
If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Return to step 1.

**Overall Function Check**

UBS006DA

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minutes.
5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
(Depress and release accelerator pedal as soon as possible.)  
**The voltage should be below 0.52V at least once during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.52V at least once during this procedure.**
8. If NG, go to [EC-424, "Diagnostic Procedure"](#).

Wiring Diagram

EC-HO2S2-01

: DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
74	R/L	Heated oxygen sensor 2	<p><b>[Engine is running]</b></p> <ul style="list-style-type: none"> <li>● <b>Warm-up condition</b></li> <li>● Engine speed is 2,000 rpm after the following conditions are met.</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	0 - Approximately 1.0V
78	B	Heated oxygen sensor ground	<p><b>[Engine is running]</b></p> <ul style="list-style-type: none"> <li>● Idle speed</li> </ul>	Approximately 0V

**Diagnostic Procedure**

UBS006DC

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

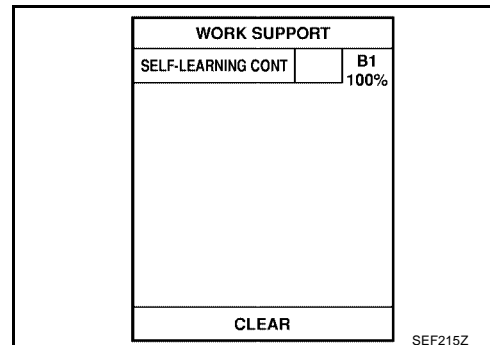

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-245](#) .  
No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-426, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

#### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 2

UBS006DD

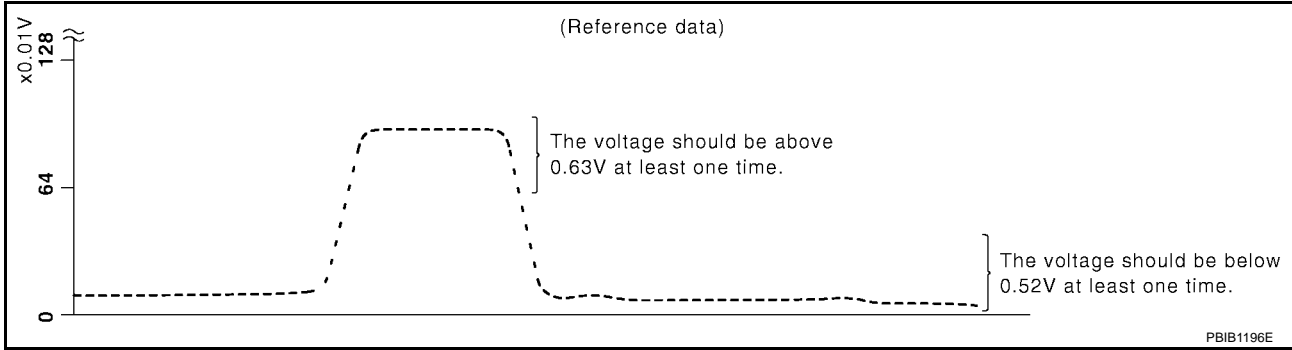

#### With CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle and wait until 2 minutes have passed from starting the engine.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**  
**If the voltage is above 0.63V at step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.52V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 2**

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

UBS006DE

**DTC P1147 HO2S2**

**Component Description**

UBS006DF

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas. Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2. This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS006DG

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS006DH

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1147 1147	Heated oxygen sensor 2 maximum voltage monitoring	The maximum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

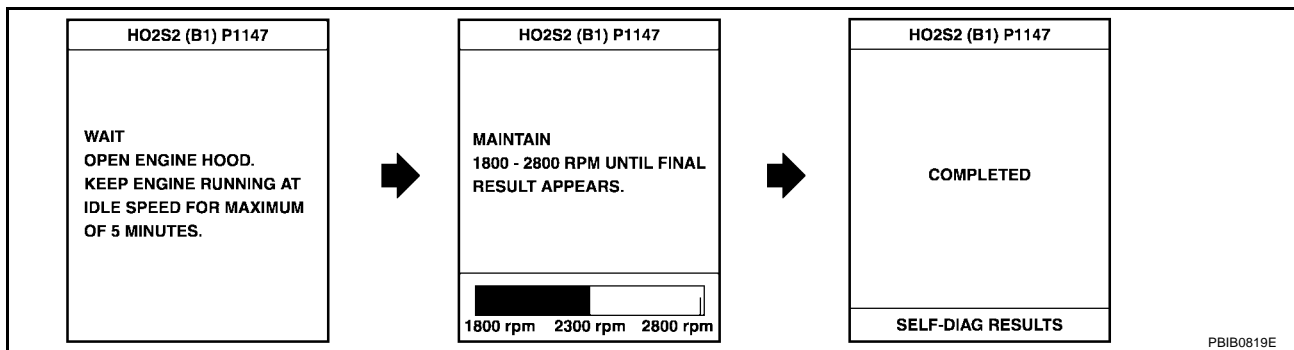

Open engine hood before conducting following procedure.

**WITH CONSULT-II**

1. Turn ignition switch “ON” and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch “OFF” and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minute.
6. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when “COOLANT TEMP/S” indication reaches to 70°C (158°F)
7. Select “HO2S2 (B1) P1147” of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT-II.
8. Start engine and following the instruction of CONSULT-II.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

SEF189Y

9. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.  
If “NG” is displayed, go to [EC-432, "Diagnostic Procedure"](#).  
If “CAN NOT BE DIAGNOSED” is displayed, perform the following.
  - a. Turn ignition switch “OFF” and leave the vehicle in a cool place (soak the vehicle).
  - b. Return to step 1.

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 [HO2S2 (B1) signal] and engine ground.

UBS006DN

## DTC P1148 CLOSED LOOP CONTROL

PFP:22690

### On Board Diagnosis Logic

UBS0057U

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1148 1148	Closed loop control function	The closed loop control function does not operate even when vehicle is driving in the specified condition.	<ul style="list-style-type: none"> <li>● The heated oxygen sensor 1 circuit is open or shorted.</li> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor heater</li> </ul>

### DTC Confirmation Procedure

UBS0057V

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Never raise engine speed above 3,600 rpm during the "DTC Confirmation Procedure". If the engine speed limit is exceeded, retry the procedure from step 2.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Hold engine speed at 2,000 rpm and check one of the following.
  - "HO2S1 (B1)" voltage should go above 0.70V at least once.
  - "HO2S1 (B1)" voltage should go below 0.21V at least once.
 If the check result is NG, perform [EC-437, "Diagnostic Procedure"](#).  
 If the check result is OK, perform the following step.
4. Let engine idle at least 5 minutes.
5. Maintain the following condition at least 50 consecutive seconds.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
B/FUEL SCHDL	XXX msec
COOLANT TEMP/S	XXX °C
HO2S1 (B1)	XXX V
VHCL SPEED SE	XXX km/h

SEF682Y

B/FUEL SCHDL	2.4 msec or more (A/T models) 2.0 msec or more (M/T models)
ENG SPEED	More than 1,700 rpm (A/T models) More than 2,050 rpm (M/T models)
Selector lever	Suitable position
VHCL SPEED SE	More than 70 km/h (43 MPH)

During this test, P0134 may be displayed on CONSULT-II screen.

6. If DTC is detected, go to [EC-437, "Diagnostic Procedure"](#).

### Overall Function Check

UBS0057W

Use this procedure to check the overall function of the closed loop control. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.

# DTC P1148 CLOSED LOOP CONTROL

[QG18DE (ULEV)]

2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no-load.
  - The voltage should go above 0.70V at least once.
  - The voltage should go below 0.21V at least once.
4. If NG, go to [EC-437, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

Perform trouble diagnosis for "DTC P0133", [EC-211](#) .

UBS0057X

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (ULEV)]

## DTC P1217 ENGINE OVER TEMPERATURE

PF0:00000

### System Description COOLING FAN CONTROL

UBS001MV

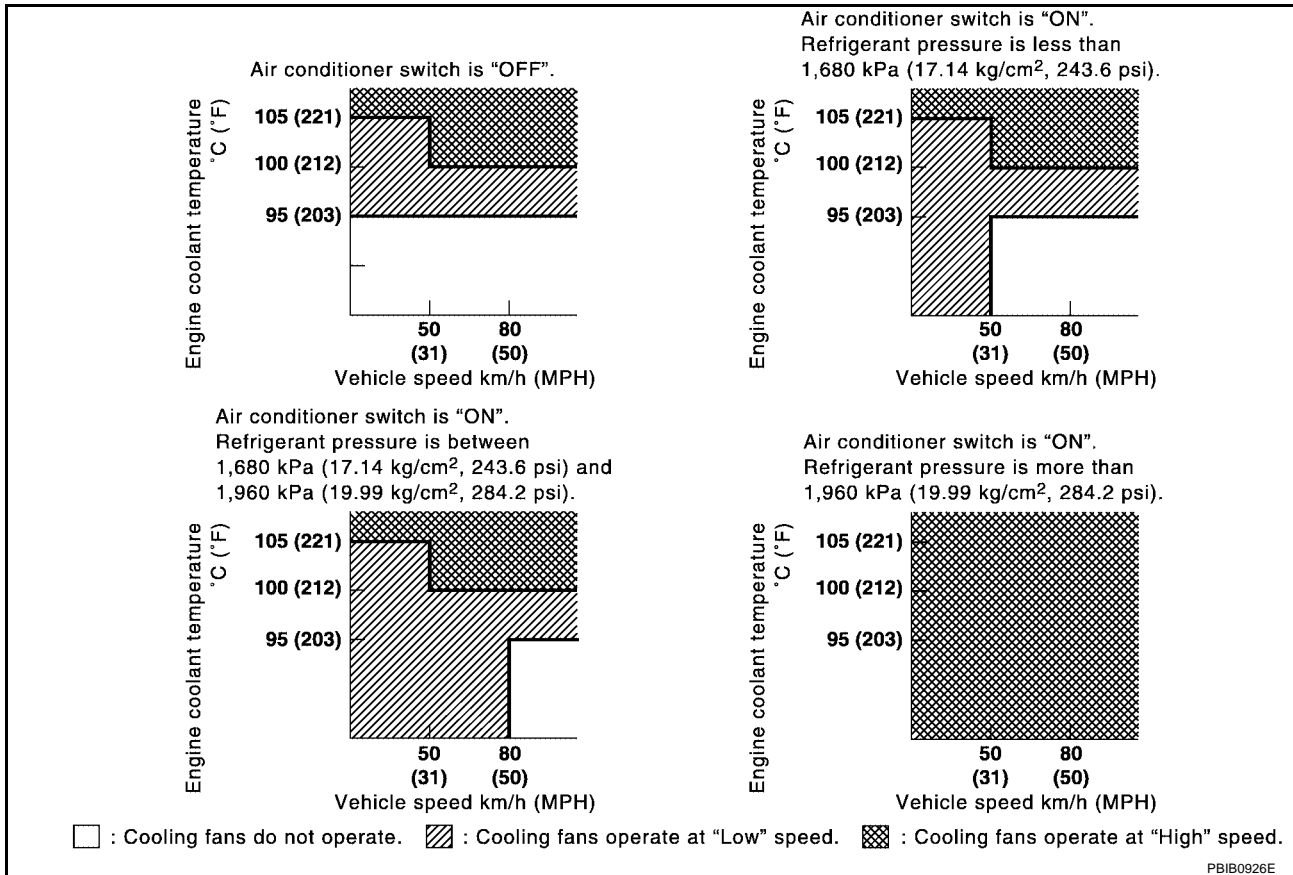

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1		
Battery	Battery voltage*1		
Vehicle speed signal	Vehicle speed*2	Cooling fan control	Cooling fan relay(s)
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch	Air conditioner "ON" signal		
Refrigerant pressure sensor	Refrigerant pressure		

\*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: These signals are sent to the ECM through CAN communication line.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

### OPERATION

### CONSULT-II Reference Value in Data Monitor Mode

UBS001MV

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF
		Air conditioner switch: ON (Compressor operates)
		OFF
		ON

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (ULEV)]

MONITOR ITEM	CONDITION		SPECIFICATION
COOLING FAN	<ul style="list-style-type: none"> <li>After warming up engine, idle the engine.</li> <li>Air conditioner switch: OFF</li> </ul>	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (219°F)	LOW
		Engine coolant temperature is 105°C (221°F) or more	HIGH

## On Board Diagnosis Logic

UBS006GS

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise. When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

**This self-diagnosis has the one trip detection logic.**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1217 1217	Engine over temperature (Overheat)	<ul style="list-style-type: none"> <li>Cooling fan does not operate properly (Overheat).</li> <li>Cooling fan system does not operate properly (Overheat).</li> <li>Engine coolant was not added to the system using the proper filling method.</li> </ul>	<ul style="list-style-type: none"> <li>Harness or connectors (The cooling fan circuit is open or shorted.)</li> <li>Cooling fan</li> <li>Radiator hose</li> <li>Radiator</li> <li>Radiator cap</li> <li>Water pump</li> <li>Thermostat</li> </ul> <p>For more information, refer to <a href="#">EC-1662</a>, "Main 12 Causes of Overheating".</p>

### CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to [MA-16](#), "Changing Engine Coolant". Also, replace the engine oil. Refer to [LU-17](#), "Changing Engine Oil".

- Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14](#), "Anti-freeze Coolant Mixture Ratio".
- After refilling coolant, run engine to ensure that no water-flow noise is emitted.

## Overall Function Check

UBS001MY

Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.

Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

### WITH CONSULT-II

- Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-442](#), "Diagnostic Procedure".
- Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-442](#), "Diagnostic Procedure".
- Turn ignition switch "ON".

SEF621W

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (ULEV)]

4. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
5. If the results are NG, go to [EC-442, "Diagnostic Procedure"](#).

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLANT TEMP/S	XXX °C

SEF646X

## WITH GST

1. Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-442, "Diagnostic Procedure"](#).
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-442, "Diagnostic Procedure"](#).
3. Start engine.  
**Be careful not to overheat engine.**
4. Set temperature control lever to full cold position.
5. Turn air conditioner switch "ON".
6. Turn blower fan switch "ON".
7. Run engine at idle for a few minutes with air conditioner operating.  
**Be careful not to overheat engine.**
8. Make sure that cooling fan operates at low speed.  
If NG, go to [EC-442, "Diagnostic Procedure"](#).  
If OK, go to the following step.
9. Turn ignition switch "OFF".
10. Turn air conditioner switch and blower fan switch "OFF".
11. Disconnect engine coolant temperature sensor harness connector.
12. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
13. Restart engine and make sure that cooling fan operates at higher speed than low speed.  
**Be careful not to overheat engine.**
14. If NG, go to [EC-442, "Diagnostic Procedure"](#).

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 4.

### 2. CHECK COOLING FAN LOW SPEED OPERATION

 **With CONSULT-II**

1. Disconnect cooling fan relay-2.
2. Turn ignition switch "ON".

3. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
4. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

- OK >> GO TO 3.
- NG >> Check cooling fan low speed control circuit. (Go to [EC-446, "PROCEDURE A"](#) .)

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLAN TEMP/S	XXX °C

SEF646X

### 3. CHECK COOLING FAN HIGH SPEED OPERATION

 **With CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relay-2.
3. Disconnect cooling fan relay-1.
4. Turn ignition switch "ON".
5. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
6. Make sure that cooling fan-1 operates at higher speed than low speed.

OK or NG

- OK >> GO TO 6.
- NG >> Check cooling fan high speed control circuit. (Go to [EC-448, "PROCEDURE B"](#) .)

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLAN TEMP/S	XXX °C

SEF646X

### 4. CHECK COOLING FAN LOW SPEED OPERATION

⊗ **Without CONSULT-II**

1. Disconnect cooling fan relay-2.
2. Start engine and let it idle.
3. Set temperature lever at full cold position.
4. Turn air conditioner switch "ON".
5. Turn blower fan switch "ON".

6. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

OK >> GO TO 5.

NG >> Check cooling fan low speed control circuit. (Go to [EC-446, "PROCEDURE A"](#) .)

### 5. CHECK COOLING FAN HIGH SPEED OPERATION

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relay-2.
3. Disconnect cooling fan relay-1.
4. Turn air conditioner switch and blower fan switch "OFF".
5. Disconnect engine coolant temperature sensor harness connector.
6. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
7. Restart engine and make sure that cooling fan-1 operate at higher speed than low speed.

OK or NG

OK >> GO TO 6.

NG >> Check cooling fan high speed control circuit. (Go to [EC-448, "PROCEDURE B"](#) .)

## 6. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

**Testing pressure:** 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)

### CAUTION:

Higher than the specified pressure may cause radiator damage.  
Pressure should not drop.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following for leaks.

- Hose
- Radiator
- Water pump (Refer to [CO-9, "WATER PUMP"](#) .)

>> Repair or replace.

## 8. CHECK RADIATOR CAP

Apply pressure to cap with a tester and check radiator cap relief pressure.

**Radiator cap relief pressure:**

59 - 98 kPa (0.6 - 1.0 kg/cm<sup>2</sup> , 9 - 14 psi)

OK or NG

- OK >> GO TO 9.  
NG >> Replace radiator cap.

**9. CHECK THERMOSTAT**

1. Remove thermostat.
2. Check valve seating condition at normal room temperatures.  
**It should seat tightly.**
3. Check valve opening temperature and valve lift.

**Valve opening temperature:**

**76.5°C (170°F) [standard]**

**Valve lift:**

**More than 9 mm/90°C (0.35 in/194°F)**

4. Check if valve is closed at 5°C (9°F) below valve opening temperature. For details, refer to [CO-11. "THERMOSTAT AND THERMOSTAT HOUSING"](#).

OK or NG

OK >> GO TO 10.

NG >> Replace thermostat

**10. CHECK ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [EC-185. "Component Inspection"](#).

OK or NG

OK >> GO TO 11.

NG >> Replace engine coolant temperature sensor.

**11. CHECK MAIN 12 CAUSES**

If the cause cannot be isolated, go to [EC-449. "Main 12 Causes of Overheating"](#).

>> **INSPECTION END**

## PROCEDURE A

### 1. CHECK COOLING FAN POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-1.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-1 terminals 1, 3, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- 40A fusible links
- Harness for open or short between cooling fan relay-1 and fuse
- Harness for open or short between cooling fan relay-1 and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK COOLING FAN GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-1 terminal 5 and cooling fan motor-1 terminal 1, cooling fan motor-1 terminal 4 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between cooling fan relay-1 terminal 7 and cooling fan motor-2 terminal 2, cooling fan motor-2 terminal 1 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK COOLING FAN OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 13 and cooling fan relay-1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-1 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK COOLING FAN RELAY-1**

Refer to [EC-450, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
NG >> Replace cooling fan relay.

**7. CHECK COOLING FAN MOTORS-1 AND -2**

Refer to [EC-450, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace cooling fan motors.

**8. CHECK INTERMITTENT INCIDENT**

Perform [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## PROCEDURE B

### 1. CHECK COOLING FAN POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-2.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-2 terminals 1, 3 and ground with CONSULT-II or tester.

OK or NG

- OK    >> GO TO 3.  
 NG    >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- 40A fusible link
- Harness for open or short between cooling fan relay-2 and fuse
- Harness for open or short between cooling fan relay-2 and fusible link

>> Repair harness or connectors.

### 3. CHECK COOLING FAN GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-2 terminal 5 and cooling fan motor-1 terminal 2, cooling fan relay-2 terminal 6 and cooling fan motor-1 terminal 3, cooling fan relay-2 terminal 7 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK    >> GO TO 4.  
 NG    >> Repair open circuit or short to ground or short to power in harness or connectors.

### 4. CHECK COOLING FAN OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 12 and cooling fan relay-2 terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK    >> GO TO 6.  
 NG    >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-2 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK COOLING FAN RELAY-2**

Refer to [EC-450, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace cooling fan relays.

**7. CHECK COOLING FAN MOTORS-1 AND -2**

Refer to [EC-450, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace cooling fan motors.

**8. CHECK INTERMITTENT INCIDENT**

Perform [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

## Component Inspection COOLING FAN RELAYS-1 AND -2

UBS001N2

Check continuity between terminals 3 and 5, 6 and 7.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

If NG, replace relay.

### COOLING FAN MOTOR-1

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Speed	Terminals	
		(+)	(-)
Cooling fan motor	Low	1	4
	High	1, 2	3, 4

Cooling fan motor should operate.

If NG, replace cooling fan motor.

### COOLING FAN MOTOR-2

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Terminals	
	(+)	(-)
Cooling fan motor	2	1

Cooling fan motor should operate.

If NG, replace cooling fan motor.

**DTC P1225 TP SENSOR**

**Component Description**

Electric Throttle Control Actuator consists of throttle control motor, acceleration pedal position sensor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement. The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

**On Board Diagnosis Logic**

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance problem	Closed throttle position learning value is excessively low.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

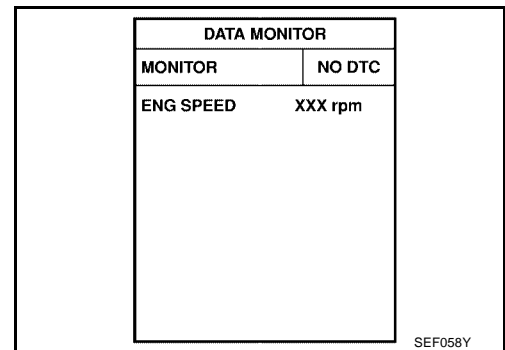

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Turn ignition switch "ON".
5. If 1st trip DTC is detected, go to [EC-452, "Diagnostic Procedure"](#)

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure****1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY**

1. Turn ignition switch "OFF".
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.  
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

**2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**Removal and Installation  
ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "Removal and Installation"](#) .

**DTC P1226 TP SENSOR**

**Component Description**

Electric Throttle Control Actuator consists of throttle control motor, acceleration pedal position sensor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement. The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

**On Board Diagnosis Logic**

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1226 1226	Closed throttle position learning performance problem	Closed throttle position learning is not performed successfully, repeatedly.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Repeat steps 3 and 4, 32 times.
6. If 1st trip DTC is detected, go to [EC-454, "Diagnostic Procedure"](#)

**WITH GST**

Follow the procedure "With CONSULT-II" above.

**Diagnostic Procedure****1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY**

1. Turn ignition switch "OFF".
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.  
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

**2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**Removal and Installation  
ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "Removal and Installation"](#) .

## DTC P1229 SENSOR POWER SUPPLY

PFP:16119

### On Board Diagnosis Logic

UBS0040I

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1229 1229	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	<ul style="list-style-type: none"> <li>● Harness or connectors (APP sensor 1 circuit is shorted.) (Mass air flow sensor is shorted.) (PSP sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.)</li> <li>● Accelerator pedal position sensor (APP sensor 1)</li> <li>● Power steering pressure sensor</li> <li>● Mass air flow sensor</li> <li>● Refrigerant pressure sensor</li> <li>● EVAP control system pressure sensor</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS0040J

#### NOTE:

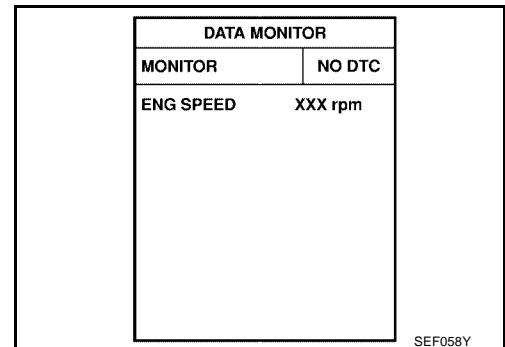

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-457, "Diagnostic Procedure"](#) .

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1229 SENSOR POWER SUPPLY

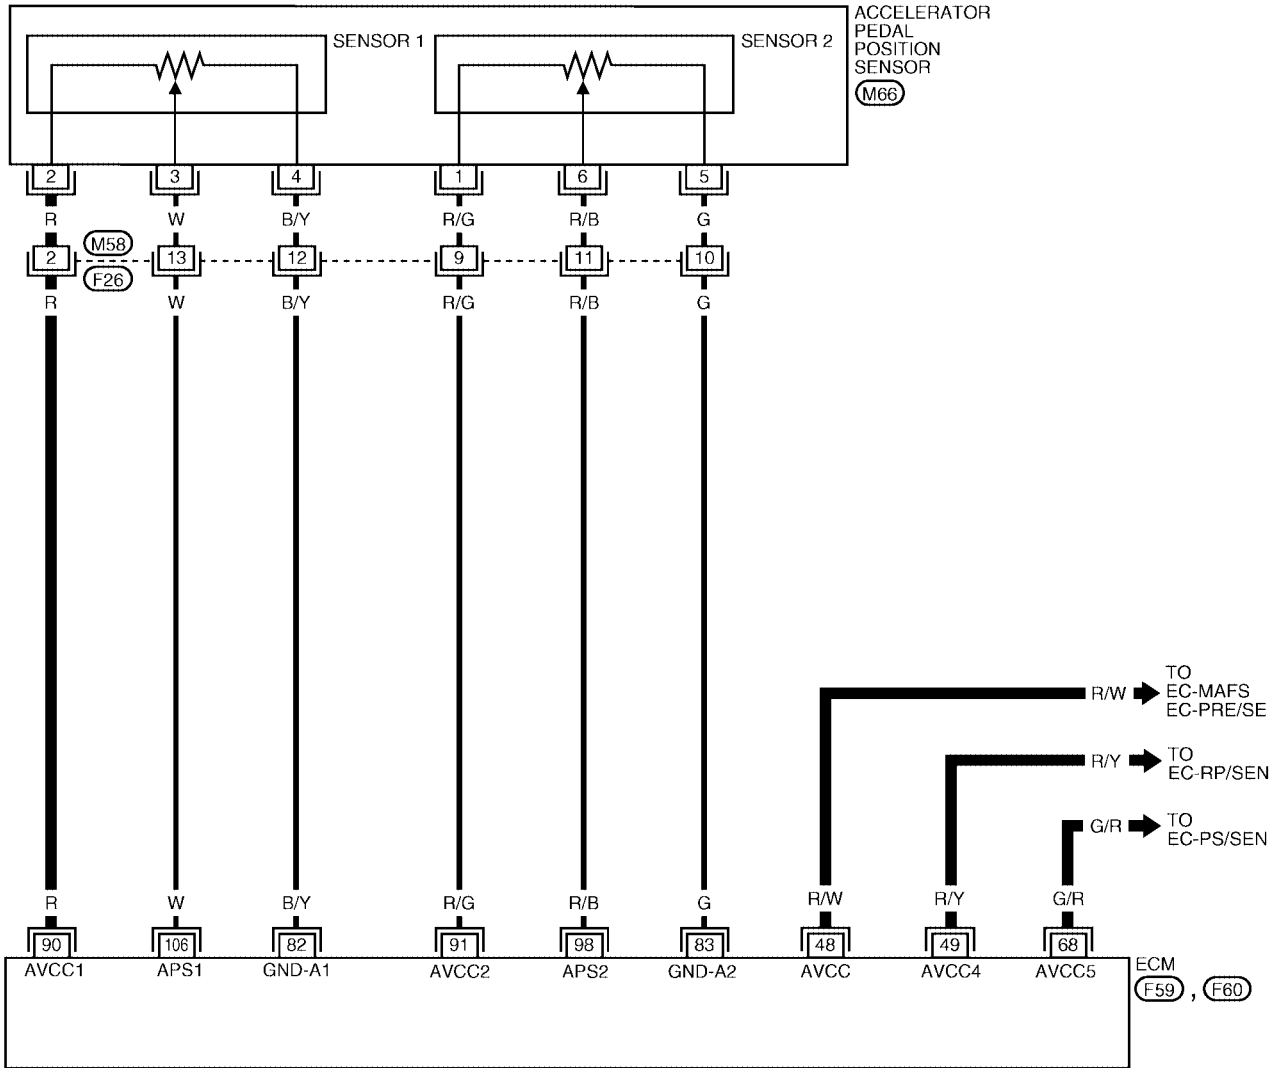

[QG18DE (ULEV)]

UBS0040K

## Wiring Diagram

EC-APPS1-01

: DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

BBWA1385E

# DTC P1229 SENSOR POWER SUPPLY

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
48	R/W	Sensor power supply	[Ignition switch "ON"]	Approximately 5V
49	R/Y	Sensor power supply (Refrigerant pressure sensor)	[Ignition switch "ON"]	Approximately 5V
68	G/R	Sensor power supply (Power steering pressure sensor)	[Ignition switch "ON"]	Approximately 5V
90	R	Sensor power supply (Accelerator pedal position sensor 1)	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

UBS0040L

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK ACCELERATOR PEDAL POSITION SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminal 2 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 3.

## 3. CHECK SENSOR POWER SUPPLY CIRCUITS

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
90	APP sensor terminal 2	<a href="#">EC-506</a>
48	Mass air flow sensor terminal 2	<a href="#">EC-166</a>
48	EVAP control system pressure sensor terminal 3	<a href="#">EC-326</a>
49	Refrigerant pressure sensor terminal 1	<a href="#">EC-560</a>
68	PSP sensor terminal 1	<a href="#">EC-368</a>

OK or NG

- OK >> GO TO 4.
- NG >> Repair short to ground or short to power in harness or connectors.

## 4. CHECK COMPONENTS

Check the following.

- Refrigerant pressure sensor (Refer to [MTC-55, "Electrical Component Inspection"](#) .)
- Power steering pressure sensor (Refer to [EC-371, "Component Inspection"](#) .)
- EVAP control system pressure sensor (Refer to [EC-329, "Component Inspection"](#) .)
- Mass air flow sensor (Refer to [EC-170, "Component Inspection"](#) .)

OK or NG

- OK >> GO TO 7.
- NG >> Replace malfunctioning component.

---

**5. CHECK APP SENSOR**

---

Refer to [EC-509, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

---

**6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

---

1. Replace electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

---

**7. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

## DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

### Description SYSTEM DESCRIPTION

UBS001NE

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Fuel tank temperature sensor	Fuel temperature in fuel tank		
Vehicle speed signal*2	Vehicle speed		

\*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor bypass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001NF

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PURG VOL C/V	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch "OFF"</li> <li>● Shift lever: "N"</li> <li>● No-load</li> </ul>	Idle (Vehicle stopped)	0%

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

UBS006GT

## On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1444 1444	EVAP canister purge volume control solenoid valve	The canister purge flow is detected during the specified driving conditions, even when EVAP canister purge volume control solenoid valve is completely closed.	<ul style="list-style-type: none"> <li>● EVAP control system pressure sensor</li> <li>● EVAP canister purge volume control solenoid valve (The valve is stuck open.)</li> <li>● EVAP canister vent control valve</li> <li>● EVAP canister</li> <li>● Hoses (Hoses are connected incorrectly or clogged.)</li> </ul>

## DTC Confirmation Procedure

UBS001NI

### NOTE:

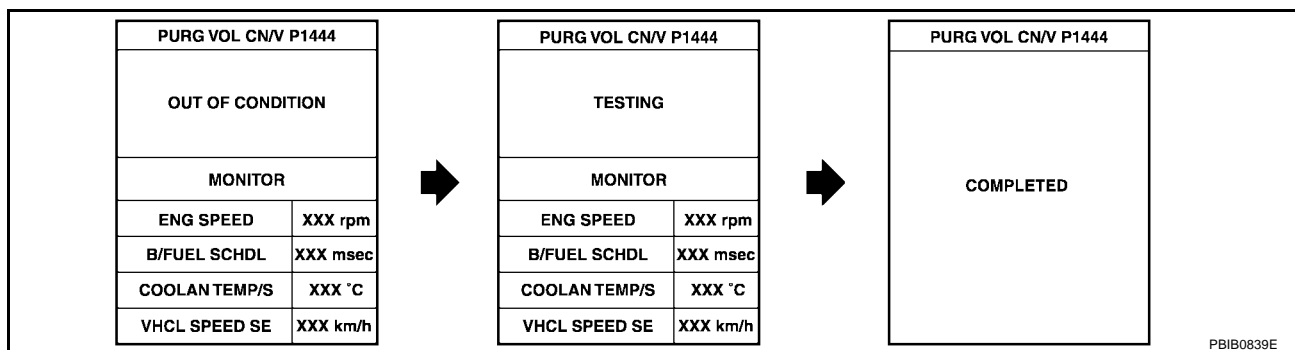

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

**For best results, perform test at a temperature of 0°C (32°F) or more.**

#### WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "PURG VOL CN/V P1444" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.
5. Touch "START".

6. Start engine and let it idle until "TESTING" on CONSULT-II changes to "COMPLETED". (It will take for approximately 10 seconds.)

**If "TESTING" is not displayed after 5 minutes, retry from step 2.**

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-464, "Diagnostic Procedure"](#).

#### WITH GST

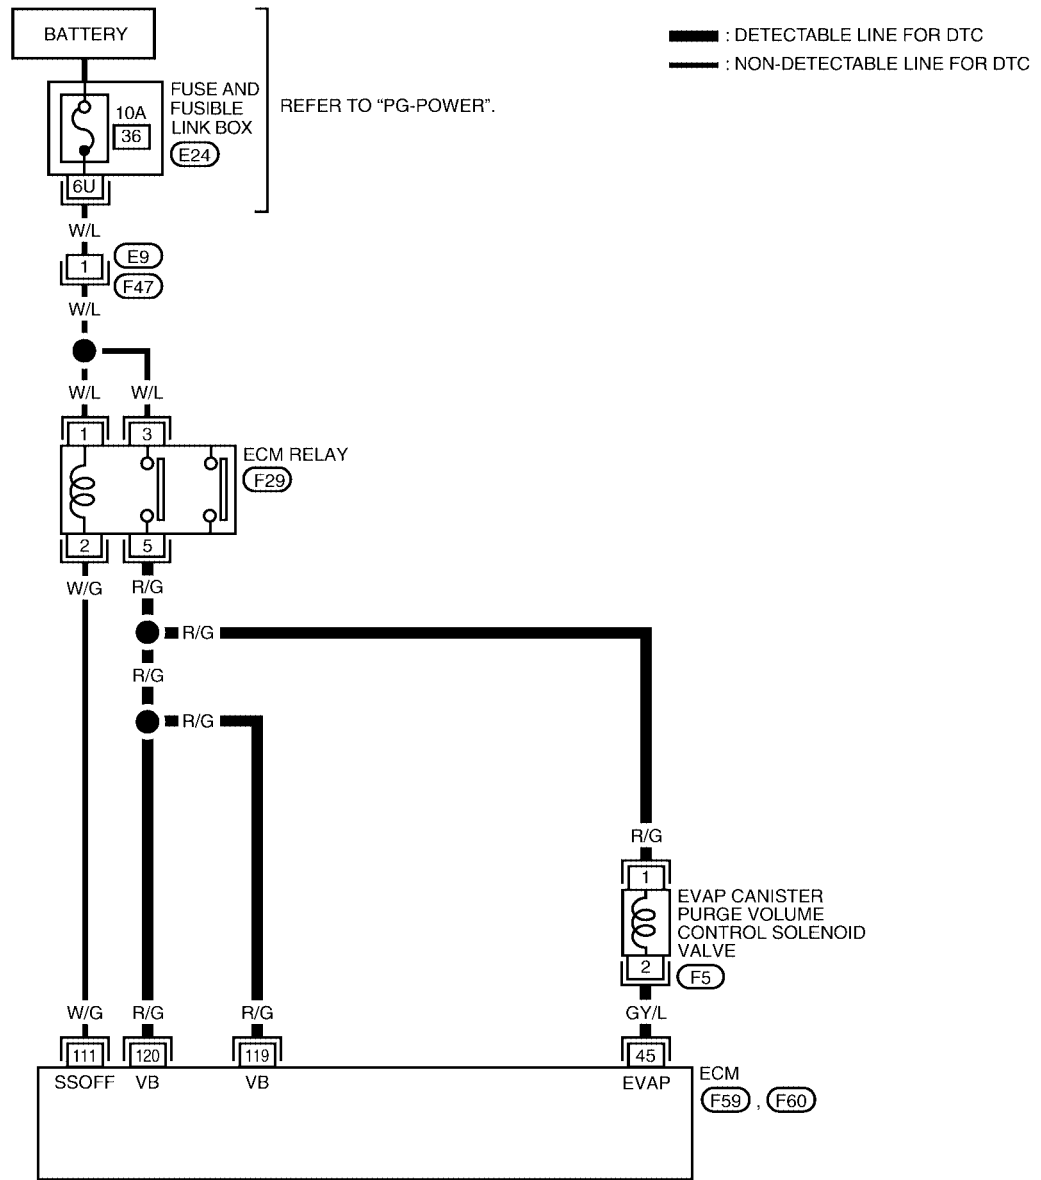

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and let it idle for at least 20 seconds.
4. Select "MODE 7" with GST.
5. If 1st trip DTC is detected, go to [EC-464, "Diagnostic Procedure"](#).

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

UBS001NJ

## Wiring Diagram

EC-PGC/V-01

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

UBS001NK

## Diagnostic Procedure

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and engine ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- 10A fuse
- Harness for open or short between EVAP canister purge volume control solenoid valve and fuse
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair harness or connectors.

### 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 45 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

## 4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 5.  
NG >> Replace EVAP control system pressure sensor.

## 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-337, "Component Inspection"](#) .

OK or NG

- OK (With CONSULT-II)>>GO TO 6.  
OK (Without CONSULT-II)>>GO TO 7.  
NG >> Replace EVAP control system pressure sensor.

## 6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

 **With CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect harness connectors disconnected.
3. Start engine.
4. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

## 7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-466, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace EVAP canister purge volume control solenoid valve.

## 8. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 9.  
NG >> Clean the rubber tube using an air blower.

## 9. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-472, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.  
NG >> Replace EVAP canister vent control valve.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

## 10. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

OK or NG

- OK >> GO TO 11.  
 NG >> GO TO 14.

## 11. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK >> GO TO 13.  
 NG >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage

>> Repair hose or replace EVAP canister.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

UBS001NL

Ⓟ With CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100.0%	Yes
0.0%	No

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (ULEV)]

**⊗ Without CONSULT-II**

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

## DTC P1446 EVAP CANISTER VENT CONTROL VALVE

PF14935

### Component Description

UBS001NM

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnosis.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001NN

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

### On Board Diagnosis Logic

UBS006GU

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1446 1446	EVAP canister vent control valve close	EVAP canister vent control valve remains closed under specified driving conditions.	<ul style="list-style-type: none"> <li>● EVAP canister vent control valve</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Blocked rubber tube to EVAP canister vent control valve</li> <li>● EVAP canister is saturated with water</li> </ul>

### DTC Confirmation Procedure

UBS001NQ

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### Ⓟ WITH CONSULT-II

1. Turn ignition switch "ON" and wait at least 5 seconds.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Start engine and let it idle for at least 1 minute.
5. Repeat next procedures 3 times.
  - a. Increase the engine speed up to 3,000 to 3,500 rpm and keep it for 2 minutes and 50 seconds to 3 minutes.  
**Never exceed 3 minutes.**
  - b. Fully released accelerator pedal and keep engine idle for about 5 seconds.
6. If 1st trip DTC is detected, go to [EC-471, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

If 1st trip DTC is not detected, go to the next step.

7. Repeat next procedure 20 times.
  - a. Quickly increase the engine speed up to 4,000 to 4,500 rpm or more and keep it for 25 to 30 seconds.
  - b. Fully released accelerator pedal and keep engine idle for at least 35 seconds.

8. If 1st trip DTC is detected, go to [EC-471, "Diagnostic Procedure"](#) .

## WITH GST

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

UBS001NS

### 1. CHECK RUBBER TUBE

1. Turn ignition switch "OFF".
2. Disconnect rubber tube connected to EVAP canister vent control valve.
3. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 2.  
NG >> Clean rubber tube using an air blower.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-472, "Component Inspection"](#).

OK or NG

- OK >> GO TO 3.  
NG >> Replace EVAP canister vent control valve.

### 3. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 6.

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

## 4. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage

>> Repair hose or replace EVAP canister.

## 6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 7.
- NG >> Replace EVAP control system pressure sensor.

## 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-337, "Component Inspection"](#).

OK or NG

- OK >> GO TO 8.
- NG >> Replace EVAP control system pressure sensor.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

>> INSPECTION END

## Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS001NT

Ⓟ With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (ULEV)]

5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
6. Check air passage continuity and operation delay time.

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes

**Operation takes less than 1 second.**

**Make sure new O-ring is installed properly.**

If NG, go to next step.

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform step 5 again.

⊗ **Without CONSULT-II**

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 (B1)	XXX V

PBIB0834E

3. Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	No
OFF	Yes

**Operation takes less than 1 second.**

**Make sure new O-ring is installed properly.**

If NG, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform step 3 again.

**DTC P1564 ASCD STEERING SWITCH**

**Component Description**

UBS0040M

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [EC-598, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0040N

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAIN SW	● Ignition switch: ON	CRUISE switch: Depressed	ON
		CRUISE switch: Released	OFF
CANCEL SW	● Ignition switch: ON	CANCEL switch: Depressed	ON
		CANCEL switch: Released	OFF
RESUME/ACC SW	● Ignition switch: ON	ACCEL/RES switch: Depressed	ON

## Diagnostic Procedure

### 1. CHECK ASCD STEERING SWITCH CIRCUIT

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "MAIN SW", "RESUME/ACC SW", "SET SW" and "CANCEL SW" in "DATA MONITOR" mode with CONSULT-II.
3. Check each item indication under the following conditions.

Switch	Monitor item	Condition	Indication
CRUISE	MAIN SW	Pressed	ON
		Released	OFF
COAST/SET	SET SW	Pressed	ON
		Released	OFF
ACCEL/RES	RESUME/ACC SW	Pressed	ON
		Released	OFF
CANCEL	CANCEL SW	Pressed	ON
		Released	OFF

DATA MONITOR	
MONITOR	NO DTC
MAIN SW	OFF
CANCEL SW	OFF
RESUME/ACC SW	OFF
SET SW	OFF

SEC006D

#### Without CONSULT-II

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 99 and ground with pressing each button.

Switch	Condition	Voltage [V]
CRUISE SW	Pressed	Approx. 0
	Released	Approx. 4
COAST/SET SW	Pressed	Approx. 2
	Released	Approx. 4
ACCEL/RES SW	Pressed	Approx. 3
	Released	Approx. 4
CANCEL SW	Pressed	Approx. 1
	Released	Approx. 4

#### OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 2.

### 2. CHECK ASCD STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ASCD steering switch harness connector.
3. Check harness continuity between ASCD steering switch terminal 1 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M59, F27
- Harness connectors M401, M102
- Joint connector-1
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to power in harness or connectors.

### 4. CHECK ASCD STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 99 and ASCD steering switch terminal 4. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M59, F27
- Harness connectors M401, M102
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 6. CHECK ASCD STEERING SWITCH

---

Refer to [EC-480, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace steering wheel.

### 7. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P1564 ASCD STEERING SWITCH

[QG18DE (ULEV)]

UBS0040S

## Component Inspection ASC D STEERING SWITCH

1. Disconnect ASCD steering switch.
2. Check continuity between ASCD steering switch terminals 1 and 4 with pushing each switch.

Switch	Condition	Resistance [kΩ]
CRUISE SW	Pressed	Approx. 0
	Released	Approx. 4.0
COAST/SET SW	Pressed	Approx. 0.7

DTC P1572 ASCD BRAKE SWITCH

PFP:25320

Component Description

UBS0040T

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal).

Refer to [EC-598](#), "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-II Reference Value in Data Monitor Mode

UBS0040U

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW 1 (ASCD brake switch)	● Ignition switch: ON	● Brake pedal fully released	ON
		● Brake pedal depressed	OFF
BRAKE SW 2 (stop lamp switch)	● Ignition switch: ON	● Brake pedal fully released	OFF
		● Brake pedal depressed	ON

On Board Diagnosis Logic

UBS0040V

This self-diagnosis has the one trip detection logic.

The MIL will not light up for this diagnosis.

NOTE:

- If DTC P1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-372](#)
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition		Possible Cause
P1572 1572	ASCD brake switch	A)	● When the vehicle speed is above 30km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The stop lamp switch circuit is shorted.)</li> <li>● Harness or connectors (The ASCD brake switch circuit is shorted.)</li> </ul>
		B)	● ASCD brake switch signal is not sent to ECM for extremely long time while the vehicle is driving	<ul style="list-style-type: none"> <li>● Harness or connectors (The ASCD clutch switch circuit is shorted.) (M/T models)</li> <li>● Stop lamp switch</li> <li>● ASCD brake switch</li> <li>● ASCD clutch switch (M/T models)</li> <li>● Incorrect stop lamp switch installation</li> <li>● Incorrect ASCD brake switch installation</li> <li>● Incorrect ASCD clutch switch installation (M/T models)</li> <li>● ECM</li> </ul>

DTC Confirmation Procedure

UBS0040W

**CAUTION:**

Always drive vehicle at a safe speed.

# DTC P1572 ASCD BRAKE SWITCH

[QG18DE (ULEV)]

## NOTE:

- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.
- Procedure for malfunction B is not described here. It takes extremely long time to complete procedure for malfunction B. By performing procedure for malfunction A, the incident that causes malfunction B can be detected.

## TESTING CONDITION:

Steps 4 and 5 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

### WITH CONSULT-II

1. Start engine.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Press CRUISE switch and make sure that CRUISE indicator lights up.
4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position

If 1st trip DTC is detected, go to [EC-484, "Diagnostic Procedure"](#)

If 1st trip DTC is not detected, go to the following step.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
VHCL SPEED SE	XXX km/h
CRUISE LAMP	ON
BRAKE SW 1	ON
BRAKE SW 2	OFF

PBIB2386E

5. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position
Driving location	Depress the brake pedal for more than five seconds so as not to come off from the above-mentioned vehicle speed.

6. If 1st trip DTC is detected, go to [EC-484, "Diagnostic Procedure"](#).

### WITH GST

101	R/G	Stop lamp switch	[Ignition switch "ON"] ● Brake pedal is fully released	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is depressed	BATTERY VOLTAGE (11 - 14V)
108	P/L	ASCD brake switch	[Ignition switch "ON"] ● Brake pedal is depressed	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is fully released	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS0040Y

### 1. CHECK OVERALL FUNCTION-I

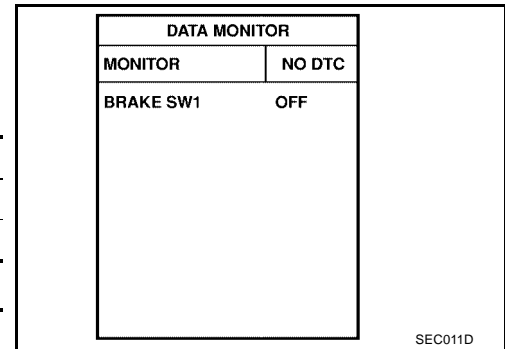

**With CONSULT-II**

- Turn ignition switch "ON".
- Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
- Check "BRAKE SW1" indication under the following conditions.  
**M/T models**

CONDITION	INDICATION
When clutch pedal or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

**A/T models**

CONDITION	INDICATION
When brake pedal is depressed	OFF
When brake pedal is fully released	ON

**Without CONSULT-II**

- Turn ignition switch "ON".
- Check voltage between ECM terminal 108 and ground under the following conditions.  
**M/T models**

CONDITION	VOLTAGE
When clutch pedal or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

**A/T models**

CONDITION	VOLTAGE
When brake pedal is depressed	Approximately 0V
When brake pedal is fully released	Battery voltage

**OK or NG**

- OK >> GO TO 2.
- NG (M/T models) >>GO TO 3.
- NG (A/T models) >>GO TO 4.

## 2. CHECK OVERALL FUNCTION-II

**With CONSULT-II**

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

**Without CONSULT-II**

Check voltage between ECM terminal 101 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

OK or NG

- OK >> GO TO 18.
- NG >> GO TO 13.

## 3. CHECK ASCD CLUTCH SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

## 4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models)>>GO TO 6.
- OK (A/T models)>>GO TO 7.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.  
NG >> GO TO 8.

---

**8. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**9. CHECK ASCD BRAKE SWITCH**

---

Refer to [EC-489, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD brake switch.

---

**10. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

---

**11. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**12. CHECK ASCD CLUTCH SWITCH**

---

Refer to [EC-489, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD clutch switch.

### 13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal + (M/T models) or 1 (A/T models) and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

### 14. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

**15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 101 and stop lamp switch terminal – (M/T models) or 2 (A/T models).  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

**16. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**17. CHECK STOP LAMP SWITCH**

Refer to [EC-489, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace stop lamp switch.

**18. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
ASC D BRAKE SWITCH**

UBS0040Z

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Check harness continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should exist.
When brake pedal is depressed.	Should not exist.

If NG, adjust ASCD brake switch installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#) , and perform step 3 again.

**ASC D CLUTCH SWITCH (FOR M/T MODELS)**

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.

# DTC P1572 ASCD BRAKE SWITCH

[QG18DE (ULEV)]

- Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When clutch pedal is fully released.	Should exist.
When clutch pedal is depressed.	Should not exist.

If NG, adjust ASCD clutch switch installation, refer to [CL-6](#), "[CLUTCH SYSTEM](#)", and perform step 3 again.

## STOP LAMP SWITCH

### M/T Models

- Turn ignition switch "OFF".
- Disconnect stop lamp switch harness connector.
- Check harness continuity between stop lamp switch terminals + and - under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

### A/T Models

- Turn ignition switch "OFF".
- Disconnect stop lamp switch harness connector.
- Check harness continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

## DTC P1574 ASCD VEHICLE SPEED SENSOR

PFP:31036

### Component Description

UBS00410

The ECM receives two vehicle speed sensor signals via CAN communication line. One is sent from combination meter, and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to [EC-598, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for ASCD functions.

### On Board Diagnosis Logic

UBS00411

This self-diagnosis has the one trip detection logic.  
The MIL will not light up for this diagnosis.

**NOTE:**

- If DTC P1574 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#) .
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to [EC-361, "DTC P0500 VSS"](#)
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-372, "DTC P0605 ECM"](#)

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 1574	ASCD vehicle speed sensor	ECM detects a difference between two vehicle speed signals is out of the specified range.	<ul style="list-style-type: none"> <li>● Harness or connectors (The CAN communication line is open or shorted.)</li> <li>● Combination meter</li> <li>● Wheel sensor</li> <li>● TCM</li> <li>● ECM</li> </ul>

### DTC Confirmation Procedure

UBS00412

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

**Step 3 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

**WITH CONSULT-II**

1. Start engine.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Drive the vehicle at more than 40 km/h (25 MPH).
4. If DTC is detected, go to [EC-492, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

---

### Diagnostic Procedure

#### 1. CHECK DTC WITH TCM

---

Check DTC with TCM. Refer to [AT-38](#) .

OK or NG

OK >> GO TO 2.

NG >> Perform trouble shooting relevant to DTC indicated.

#### 2. CHECK COMBINATION METER

---

Check combination meter function.

Refer to [DI-8, "Combination Meter"](#) .

>> **INSPECTION END**

DTC P1706 PNP SWITCH

PFP:32006

Component Description

UBS0010U

When the gear position is “P” (A/T models only) or “N”, park/neutral position (PNP) switch is “ON”.  
ECM detects the park/neutral position when continuity with ground exists.

CONSULT-II Reference Value in Data Monitor Mode

UBS0010V

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T model) Neutral (M/T model)	ON
		Shift lever: Except above	OFF

On Board Diagnosis Logic

UBS006HA

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1706 1706	Park/neutral position switch	The signal of the park/neutral position (PNP) switch is not changed in the process of engine starting and driving.	<ul style="list-style-type: none"> <li>● Harness or connectors [The park/neutral position (PNP) switch circuit is open or shorted.]</li> <li>● Park/neutral position (PNP) switch</li> </ul>

DTC Confirmation Procedure

UBS006IF

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “P/N POSI SW” in “DATA MONITOR” mode with CONSULT-II. Then check the “P/N POSI SW” signal under the following conditions.

Position (Selector lever)	Known-good signal
“N” and “P” position	ON
Except the above position	OFF

If NG, go to [EC-496, "Diagnostic Procedure"](#) .  
If OK, go to following step.

3. Select “DATA MONITOR” mode with CONSULT-II.
4. Start engine and warm it up to normal operating temperature.

# DTC P1706 PNP SWITCH

[QG18DE (ULEV)]

5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	More than 1,550 rpm (A/T models) More than 1,850 rpm (M/T models)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	More than 3.0 msec (A/T models) More than 2.2 msec (M/T models)
VHCL SPEED SE	More than 64 km/h (40 MPH)
Selector lever	Suitable position

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
P/N POSI SW	OFF
B/FUEL SCHDL	XXX msec

SEF213Y

6. If 1st trip DTC is detected, go to [EC-496, "Diagnostic Procedure"](#)

## Overall Function Check

UBS0061G

Use this procedure to check the overall function of the park/neutral position (PNP) switch circuit. During this check, a 1st trip DTC might not be confirmed.

### WITH GST

- Turn ignition switch "ON".
- Check voltage between ECM terminal 102 (PNP switch signal) and ground under the following conditions.

Condition (Gear position)	Voltage V (Known-good data)
"P" (A/T models only) and "N" position	Approx. 0
Except the above position	A/T models: Battery voltage M/T models: Approximately 5V

3. If NG, go to [EC-496, "Diagnostic Procedure"](#) .

# DTC P1706 PNP SWITCH

[QG18DE (ULEV)]

UBS0061H

BBWA0304E

# DTC P1706 PNP SWITCH

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
102	G/OR	PNP switch	<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"><li>Shift lever position is "P" or "N" (A/T models), "Neutral" (M/T models).</li></ul>	Approximately 0V
			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"><li>Except the above gear position</li></ul>	<b>A/T models</b> BATTERY VOLTAGE (11 - 14V) <b>M/T models</b> Approximately 5V

## Diagnostic Procedure

UBS006II

### 1. CHECK GROUND CIRCUIT

- Turn ignition switch "OFF".
- Disconnect PNP switch harness connector.
- Check harness continuity between PNP switch terminal 2 and ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

- Also check harness for short to power.

OK or NG

OK >> GO TO 2.

NG >> Repair open circuit or short to power in harness or connectors.

### 2. CHECK INPUT SIGNAL CIRCUIT

- Disconnect ECM harness connector.
- Check harness continuity between ECM terminal 102 and PNP switch terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

- Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to power in harness or connectors.

### 3. CHECK PNP SWITCH

Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) (A/T models), [MT-13, "POSITION SWITCH"](#) (M/T models).

OK or NG

OK >> GO TO 4.

NG >> Replace PNP switch.

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**DTC P1805 BRAKE SWITCH**

PFP:25320

**Description**

UBS00414

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS00415

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

**On Board Diagnosis Logic**

UBS00416

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for an extremely long time while the vehicle is driving.	<ul style="list-style-type: none"> <li>● Harness or connectors (Stop lamp switch circuit is open or shorted.)</li> <li>● Stop lamp switch</li> </ul>

**FALI-SAFE MODE**

When the malfunction is detected, the ECM enters fail-safe mode.

Engine operating condition in fail-safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range. Therefore, acceleration will be poor.	
	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

**DTC Confirmation Procedure**

UBS00417

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-II.
4. Select "DATA MONITOR" mode with CONSULT-II.
5. If 1st trip DTC is detected, go to [EC-499, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

[QG18DE (ULEV)]

UBS00418

## Wiring Diagram

### EC-BRK/SW-01

BBWA0305E

# DTC P1805 BRAKE SWITCH

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	R/G	Stop lamp switch	[Ignition switch "ON"] ● Brake pedal is fully released	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is depressed	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS00419

### 1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch "OFF".
2. Check the stop lamp when depressing and releasing the brake pedal.

Brake pedal	Stop lamp
Fully released	Not illuminated
Depressed	Illuminated

**OK or NG**

- OK >> GO TO 4.
- NG >> GO TO 2.

## 2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.

2. Check voltage between stop lamp switch terminal 1 (A/T models) or + (M/T models) and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector M2
- Harness for open and short between stop lamp switch and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect stop lamp switch harness connector.
4. Check harness continuity between ECM terminal 101 and stop lamp switch terminal 2 (A/T models) or - (M/T models). Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK STOP LAMP SWITCH**

Refer to [EC-501, "Component Inspection"](#) .

OK or NG

OK >> GO TO 7.

NG >> Replace stop lamp switch.

**7. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
STOP LAMP SWITCH**

UBS0041A

**A/T Models**

1. Disconnect stop lamp switch harness connector.

# DTC P1805 BRAKE SWITCH

2. Check continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

3. If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 2 again.

## M/T Models

1. Disconnect stop lamp switch harness connector.

2. Check continuity between stop lamp switch terminals + and - under the following conditions.

Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

3. If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 2 again.

DTC P2122, P2123 APP SENSOR

PFP:18002

Component Description

UBS003ZC

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

UBS003ZD

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.65 - 0.87V
		Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN2*	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.56 - 0.96V
		Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	● Ignition switch: ON	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

\*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal

On Board Diagnosis Logic

UBS003ZE

These self-diagnoses have the one trip detection logic.

NOTE:

If DTC P2122 or P2123 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455, "DTC P1229 SENSOR POWER SUPPLY"](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	● Harness or connectors (The APP sensor 1 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 1)
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

UBS003ZF

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

## DTC P2122, P2123 APP SENSOR

[QG18DE (ULEV)]

---

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-507, "Diagnostic Procedure"](#) .

			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"> <li>● Engine stopped</li> <li>● Accelerator pedal fully depressed</li> </ul>	More than 4.3V

## Diagnostic Procedure

UBS003ZH

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminal 2 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between APP sensor terminal 4 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK APP SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 106 and APP sensor terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK APP SENSOR**

Refer to [EC-509, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.  
NG >> GO TO 9.

**9. REPLACE ACCELERATOR PEDAL ASSEMBLY**

1. Replace accelerator pedal assembly.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

**10. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection

#### ACCELERATOR PEDAL POSITION SENSOR

UBS003Z1

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch "ON".

## DTC P2122, P2123 APP SENSOR

[QG18DE (ULEV)]

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.65 - 0.87V
	Fully depressed	More than 4.3V
98 (Accelerator pedal position sensor 2)	Fully released	0.28 - 0.48V
	Fully depressed	More than 2.0V

4. If NG, replace accelerator pedal assembly.
5. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
6. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
7. Perform [EC-53, "Idle Air Volume Learning"](#) .

### Removal and Installation ACCELERATOR PEDAL

UBS003ZJ

Refer to [ACC-2, "ACCELERATOR CONTROL SYSTEM"](#) .

DTC P2127, P2128 APP SENSOR

PFP:18002

Component Description

UBS0040A

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

UBS0040B

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.65 - 0.87V
		Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN2*	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.56 - 0.96V
		Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	● Ignition switch: ON	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

\*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS0040C

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1227 1227	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The APP sensor 2 circuit is open or shorted.) (TP sensor circuit is shorted.)</li> <li>● Accelerator pedal position sensor (Accelerator pedal position sensor 2)</li> <li>● Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>
P1228 1228	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

UBS0040D

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-514, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

UBS0040F

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-I**

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 2.5V**

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 3.

**3. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-II**

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 1 and ECM terminal 91. Refer to Wiring Diagram.

**Continuity should exist.**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

**4. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open between ECM and accelerator pedal position sensor

>> Repair or replace open circuit.

**5. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-III**

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
91	APP sensor terminal 1	<a href="#">EC-513</a>
47	Electric throttle control actuator terminal 1	<a href="#">EC-188</a>

OK or NG

---

## 9. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 10. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 98 and APP sensor terminal 6.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

---

## 11. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK APP SENSOR

Refer to [EC-517, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 14.
- NG >> GO TO 13.

## 13. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

## 14. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection ACCELERATOR PEDAL POSITION SENSOR

UBS0040G

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch "ON".
3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.65 - 0.87V
	Fully depressed	More than 4.3V
98 (Accelerator pedal position sensor 2)	Fully released	0.28 - 0.48V

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminal 2 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-I

Check voltage between APP sensor terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 5.

**5. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-II**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 1 and ECM terminal 91.  
Refer to Wiring Diagram.

**Continuity should exist.**

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

**6. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open between ECM and accelerator pedal position sensor

>> Repair or replace open circuit.

**7. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-III**

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
91	APP sensor terminal 1	<a href="#">EC-513</a>
47	Electric throttle control actuator terminal 1	<a href="#">EC-188</a>

OK or NG

- OK >> GO TO 8.
- NG >> Repair short to ground or short to power in harness or connectors.

**8. CHECK THROTTLE POSITION SENSOR**

Refer to [EC-192, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 9.

**9. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

---

## 10. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Check harness continuity between ECM terminal 82 and APP sensor terminals 4, ECM terminal 83 and APP sensor terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

---

## 11. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 12. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 106 and APP sensor terminal 3, ECM terminal 98 and APP sensor terminal 6.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 14.  
NG >> GO TO 13.

---

## 13. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors EM58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 14. CHECK APP SENSOR

---

Refer to [EC-534, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 16.  
NG >> GO TO 15.

---

**15. REPLACE ACCELERATOR PEDAL ASSEMBLY**

---

1. Replace accelerator pedal assembly.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**16. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

K

L

M

**Component Inspection**

**ACCELERATOR PEDAL POSITION SENSOR**

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch "ON".
3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.65 - 0.87V
	Fully depressed	More than 4.3V
98 (Accelerator pedal position sensor 2)	Fully released	0.28 - 0.48V
	Fully depressed	More than 2.0V

4. If NG, replace accelerator pedal assembly and go to next step.
5. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
6. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
7. Perform [EC-53, "Idle Air Volume Learning"](#) .

**Removal and Installation**

**ACCELERATOR PEDAL**

Refer to [ACC-2, "ACCELERATOR CONTROL SYSTEM"](#) .

### IGNITION SIGNAL

PFP:22448

UBS0057Y

#### Component Description

#### IGNITION COIL & POWER TRANSISTOR

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns on and off the ignition coil primary circuit. This on-off operation induces the proper high voltage in the coil secondary circuit.

## Diagnostic Procedure

### 1. CHECK ENGINE START

Turn ignition switch "OFF", and restart engine.

**Is engine running?**

Yes or No

- Yes (With CONSULT-II)>>GO TO 2.
- Yes (Without CONSULT-II)>>GO TO 3.
- No >> GO TO 4.

### 2. CHECK OVERALL FUNCTION

 With CONSULT-II

- Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
- Make sure that each circuit produces a momentary engine speed drop.

OK or NG

- OK >> INSPECTION END
- NG >> GO TO 10.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

## 3. CHECK OVERALL FUNCTION

### ⊗ Without CONSULT-II

1. Let engine idle.
2. Read the voltage signal between ECM terminals 60, 61, 79, 80 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

PBIB0521E

PBIB1204E

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 10.

## 4. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

1. Turn ignition switch "ON".
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

- OK >> GO TO 5.  
 NG >> Go to [EC-138. "POWER SUPPLY CIRCUIT FOR ECM"](#)

MBIB0034E

## 5. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Turn ignition switch "ON".
4. Check voltage between condenser terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 6.

PBIB0624E

**6. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-III**

1. Turn ignition switch "OFF".
2. Disconnect ECM relay.
3. Check harness continuity between ECM relay terminal 7 and condenser terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-IV**

Check voltage between ECM relay terminal 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

OK >> GO TO 9.

NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- 15A fuse
- Harness for open or short between ECM relay and battery

>> Repair or replace harness or connectors.

**9. CHECK ECM RELAY**

Refer to [EC-545, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace ECM relay.

**10. CHECK CONDENSER GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Check harness continuity between condenser terminal 2 and ground.  
Refer to Wiring diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 11.

NG >> Repair open circuit or short to power in harness or connector.

## 11. CHECK CONDENSER

Refer to [EC-545, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 12.
- NG >> Replace condenser.

## 12. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-V

1. Turn ignition switch "OFF".
2. Reconnect all harness connectors disconnected.
3. Disconnect ignition coil harness connector.
4. Turn ignition switch "ON".

5. Check voltage between ignition coil terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 14.
- NG >> GO TO 13.

## 13. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between ignition coil and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 14. CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ignition coil terminal 2 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 15.
- NG >> Repair open circuit or short to power in harness or connectors.

## 15. CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 61, 62, 80, 81 and ignition coil terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 16.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 16. CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to [EC-545, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace ignition coil with power transistor.

## 17. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection ECM RELAY

UBS006GX

1. Apply 12V direct current between ECM relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
OFF	No

3. If NG, replace ECM relay.

### CONDENSER

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Check resistance between condenser terminals 1 and 2.

**Resistance: Above 1 MΩ at 25°C (77°F)**

### IGNITION COIL WITH POWER TRANSISTOR

1. Turn ignition switch "OFF".
2. Disconnect ignition coil harness connector.

# IGNITION SIGNAL

[QG18DE (ULEV)]

3. Check resistance between ignition coil terminals as follows.

Terminal No.	Resistance $\Omega$ [at 25°C (77°F)]
3 and 1	Except 0 or $\infty$
3 and 2	Except 0
1 and 2	

UBS00582

## Removal and Installation IGNITION COIL WITH POWER TRANSISTOR

Refer to [EM-12, "Removal and Installation"](#) .

## INJECTOR

PFP:16600

UBS001P1

### Component Description

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the injector circuit, the coil in the injector is energized. The energized coil pulls the needle valve back and allows fuel to flow through the injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

### CONSULT-II Reference Value in Data Monitor Mode

### Component Inspection INJECTOR

UBS001P5

1. Disconnect injector harness connector.
2. Check resistance between terminals as shown in the figure.

**Resistance: 13.5 - 17.5Ω [at 20°C (68°F)]**

UBS001P6

### Removal and Installation INJECTOR

Refer to [EM-12, "Removal and Installation"](#) .

# FUEL PUMP

[QG18DE (ULEV)]

## FUEL PUMP

PF1:17042

### Description SYSTEM DESCRIPTION

UBS006IU

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

\*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned on to improve engine startability. If the ECM receives a 180° signal from the camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to perform. If the 180° signal is not received when the ignition switch is on, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch is turned to ON.	Operates for 5 seconds
Engine running and cranking	Operates
When engine is stopped	Stops in 1 second
Except as shown above	Stops

### COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001PC

MONITOR ITEM	CONDITION	SPECIFICATION

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
113	B/P	Fuel pump relay	[Ignition switch "ON"] ● For 1 second after turning ignition switch "ON"	0 - 1.0V
			[Engine is running] [Ignition switch "ON"] ● More than 1 second after turning ignition switch "ON".	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS001PE

### 1. CHECK OVERALL FUNCTION

- Turn ignition switch "ON".
- Pinch fuel feed hose with fingers.  
**Fuel pressure pulsation should be felt on the fuel feed hose for 5 seconds after ignition switch is turned "ON".**

OK or NG

- OK >> INSPECTION END
- NG >> GO TO 2.

### 2. CHECK POWER SUPPLY-I

- Turn ignition switch "OFF".
- Disconnect fuel pump relay.
- Turn ignition switch "ON".
- Check voltage between fuel pump relay terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector B4
- 10A fuse
- Harness for open or short between fuse and fuel pump relay

>> Repair harness or connectors.

## 4. CHECK POWER SUPPLY-II

Check voltage between fuel pump relay terminal 5 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector B4

# REFRIGERANT PRESSURE SENSOR

[QG18DE (ULEV)]

## Wiring Diagram

UBS001PO

EC-RP/SEN-01

Refer to the following.

- (F24) - JOINT CONNECTOR
- (F57) - ELECTRICAL UNITS

BBWA0798E

# REFRIGERANT PRESSURE SENSOR

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
49	R/Y	Sensor power supply (Refrigerant pressure sensor)	[Ignition switch "ON"]	Approximately 5V
67	B/W	Sensor ground (Refrigerant pressure sensor)	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V
70	L	Refrigerant pressure sensor	[Engine is running] ● Warm-up condition ● Both A/C switch and blower switch are "ON". (Compressor operates.)	1.0 - 4.0V

## Diagnostic Procedure

UBS001PP

### 1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower switch "ON".
3. Check voltage between ECM terminal 70 and ground with CONSULT-II or tester.

**Voltage: 1.0 - 4.0V**

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 2.

PBIB1205E

## 2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn A/C switch and blower switch "OFF".
2. Stop engine.
3. Disconnect refrigerant pressure sensor harness connector.
4. Turn ignition switch "ON".

5. Check voltage between refrigerant pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair harness or connectors.

## 4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between refrigerant pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- Joint connector-1
- Harness for open or short between ECM and refrigerant pressure sensor
- Harness for open or short between TCM (Transmission control module) and refrigerant pressure sensor

>> Repair open circuit or short to power in harness or connectors.

**6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 70 and refrigerant pressure sensor terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK REFRIGERANT PRESSURE SENSOR**

Refer to [MTC-15, "Refrigerant Pressure Sensor"](#) .

OK or NG

- OK >> GO TO 9.  
NG >> Replace refrigerant pressure sensor.

**9. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# ELECTRICAL LOAD SIGNAL

[QG18DE (ULEV)]

## ELECTRICAL LOAD SIGNAL

PF2:25350

96	Y/G	Electrical load signal (Heater fan signal)	<b>[Engine is running]</b> ● Heater fan switch "ON"	Approximately 0V
			<b>[Engine is running]</b> ● Heater fan switch "OFF"	Approximately 5V

## Diagnostic Procedure

UBS001PS

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 4.

### 2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II

 **With CONSULT-II**

1. Turn ignition switch "ON".
2. Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Lighting switch "ON" at 1st or 2nd position	ON
Lighting switch "OFF"	OFF

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 6.

DATA MONITOR	
MONITORING	NO DTC
LOAD SIGNAL	ON

PBIB0103E

**3. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-III**

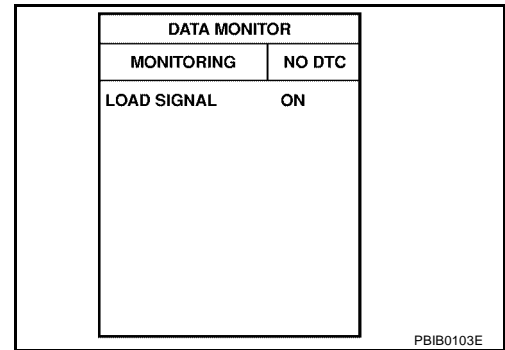

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Fan control switch "ON"	ON
Fan control switch "OFF"	OFF

**OK or NG**

- OK >> **INSPECTION END**  
 NG >> GO TO 7.

**4. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II**

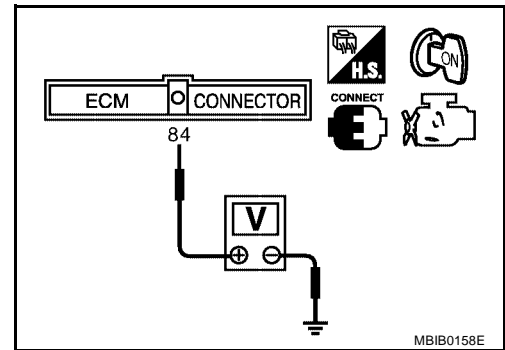

**Without CONSULT-II**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 84 and ground under the following conditions.

Condition	Voltage
Lighting switch "ON" at 2nd position	Battery voltage
Lighting switch "OFF"	0V

**OK or NG**

- OK >> GO TO 5.  
 NG >> GO TO 6.

**5. CHECK FAN CONTROL SWITCH CIRCUIT OVERALL FUNCTION-III**

**Without CONSULT-II**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 96 and ground under the following conditions.

Condition	Voltage
Fan control switch "ON"	0V
Fan control switch "OFF"	5V

**OK or NG**

- OK >> **INSPECTION END**  
 NG >> GO TO 7.

## 6. CHECK HEADLAMP FUNCTION

1. Start engine.
2. Turn the lighting switch "ON" at 2nd position.
3. Check that headlamp are illuminated.

OK or NG

OK >> GO TO 8.

NG >> Refer to [LT-6, "HEADLAMP \(FOR USA\)"](#) or [LT-10, "HEADLAMP \(FOR CANADA\) — DAYTIME LIGHT SYSTEM —"](#).

## 7. CHECK FAN CONTROL FUNCTION

1. Start engine.
2. Turn "ON" the fan control switch.
3. Check the blower fan motor. Does the blower fan motor activate?

YES or NO

YES >> GO TO 10.

NO >> Refer to [MTC-46, "BLOWER MOTOR"](#).

## 8. CHECK HEADLAMP INPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect combination switch harness connectors (Models for USA), daytime light control unit harness connector (Models for Canada).
4. Check harness continuity between ECM terminal 84 and combination switch terminal 12 or daytime light control unit terminal 6 under the following conditions.

Condition	Continuity
1	Should not exist.
2	Should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.

NG >> GO TO 9.

---

## 9. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M20, E109 (Models for Canada)
- Harness connectors M59, F27
- Harness connectors E108, M19 (Models for USA)
- Fuse block M1, E103
- Diode M52
- Diode M55
- Harness for open and short between ECM and combination switch or daytime light control unit

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 10. CHECK FAN CONTROL CIRCUIT FOR OPEN OR SHORT

---

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect fan control switch harness connector.
4. Check harness continuity between ECM terminal 96 and fan control switch terminal 6.

**Continuity should exist.**

5. Check harness continuity between fan control switch terminal 5 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.

NG >> GO TO 11.

---

## 11. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M59, F27
- Harness for open and short between ECM and fan control switch
- Harness for open or short between fan control switch and body ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 12. CHECK INTERMITTENT INCIDENT

---

Perform [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## ASC D BRAKE SWITCH

UBS0041B

### Component Description

When depress on the brake pedal, ASC D brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal)

Refer to [EC-598, "AUTOMATIC SPEED CONTROL DEVICE \(ASC D\)"](#) for the ASC D function.

### CONSULT-II Reference Value in Data Monitor Mode

UBS0041C

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW 1 (ASC D brake switch)	● Ignition switch: ON	● Brake pedal fully released	ON
		● Brake pedal depressed	OFF
BRAKE SW 2 (stop lamp switch)	● Ignition switch: ON	● Brake pedal fully released	OFF
		● Brake pedal depressed	ON

# ASC D BRAKE SWITCH

[QG18DE (ULEV)]

BBWA0316E

# ASCD BRAKE SWITCH

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	R/G	Stop lamp switch	[Ignition switch "ON"] ● Brake pedal is fully released	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is depressed	BATTERY VOLTAGE (11 - 14V)
108	P/L	ASCD brake switch	[Ignition switch "ON"] ● Brake pedal is depressed	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is fully released	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS006GY

### 1. CHECK OVERALL FUNCTION-I

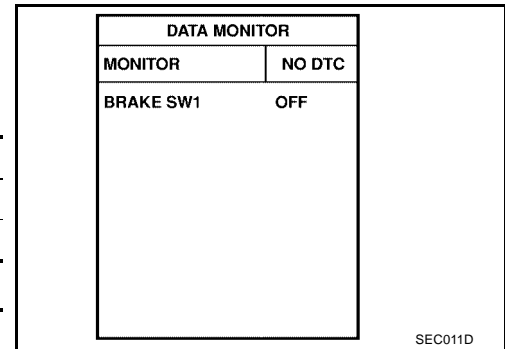

**With CONSULT-II**

- Turn ignition switch "ON".
- Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
- Check "BRAKE SW1" indication under the following conditions.  
**M/T models**

CONDITION	INDICATION
When clutch pedal or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

**A/T models**

CONDITION	INDICATION
When brake pedal is depressed	OFF
When brake pedal is fully released	ON

**Without CONSULT-II**

- Turn ignition switch "ON".
- Check voltage between ECM terminal 108 and ground under the following conditions.  
**M/T models**

CONDITION	VOLTAGE
When clutch pedal or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

**A/T models**

CONDITION	VOLTAGE
When brake pedal is depressed	Approximately 0V
When brake pedal is fully released	Battery voltage

**OK or NG**

- OK >> GO TO 2.
- NG (M/T models) >>GO TO 3.
- NG (A/T models) >>GO TO 4.

# ASCD BRAKE SWITCH

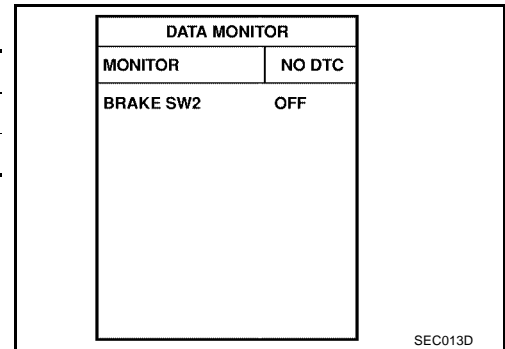

[QG18DE (ULEV)]

## 2. CHECK OVERALL FUNCTION-II

### With CONSULT-II

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

### Without CONSULT-II

Check voltage between ECM terminal 101 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 13.

## 3. CHECK ASCD CLUTCH SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

## 4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models) >> GO TO 6.
- OK (A/T models) >> GO TO 7.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.  
NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK ASCD BRAKE SWITCH**

Refer to [EC-577, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD brake switch.

**10. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**12. CHECK ASCD CLUTCH SWITCH**

Refer to [EC-577, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD clutch switch.

## 13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal + (M/T models) or 1 (A/T models) and ground with CONSULT -II or tester.

**Voltage: Battery voltage**

### OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

## 14. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

**15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 101 and stop lamp switch terminal – (M/T models) or 2 (A/T models).  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

**16. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**17. CHECK STOP LAMP SWITCH**

Refer to [EC-577, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace stop lamp switch.

**18. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
ASCD BRAKE SWITCH**

UBS0061P

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Check harness continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should exist.
When brake pedal is depressed.	Should not exist.

If NG, adjust ASCD brake switch installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#) , and perform step 3 again.

**ASCD CLUTCH SWITCH (FOR M/T MODELS)**

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.

# ASCD BRAKE SWITCH

[QG18DE (ULEV)]

3. Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When clutch pedal is fully released.	Should exist.
When clutch pedal is depressed.	Should not exist.

If NG, adjust ASCD clutch switch installation, refer to [CL-6](#), "[CLUTCH SYSTEM](#)", and perform step 3 again.

## STOP LAMP SWITCH

### M/T Models

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between stop lamp switch terminals + and - under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

### A/T Models

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

**ASCD INDICATOR**

PFP:24814

**Component Description**

UBS0041F

ASCD indicator lamp illuminates to indicate ASCD operation status. Lamp has two indicators, CRUISE and SET, and is integrated in combination meter.

CRUISE indicator illuminates when CRUISE switch on ASCD steering switch is turned ON to indicated that ASCD system is ready for operation.

SET indicator illuminates when following conditions are met.

- CRUISE indicator is illuminated.
- SET switch on ASCD steering switch is turned ON while vehicle speed is within the range of ASCD setting.

SET indicator remains lit during ASCD control.

Refer to [EC-598, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0041G

Specification data are reference value.

MONITOR ITEM	CONDITION		SPECIFICATION
CRUISE LAMP	● Ignition switch: ON	● CRUISE switch pressed	ON
		● CRUISE switch released	OFF
SET LAMP	● CRUISE switch: ON ● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)	● COAST/SET switch pressed	ON
		● COAST/SET switch released	OFF

# ASC D INDICATOR

## Wiring Diagram

### EC-ASCIND-01

-  : DETECTABLE LINE FOR DTC
-  : NON-DETECTABLE LINE FOR DTC
-  : DATA LINE

BBWA0433E

## Diagnostic Procedure

### 1. CHECK OVERALL FUNCTION

Check ASCD indicator under the following conditions.

ASCD INDICATOR	CONDITION	SPECIFICATION	
CRUISE LAMP	<ul style="list-style-type: none"> <li>● Ignition switch: ON</li> </ul>	<ul style="list-style-type: none"> <li>● CRUISE switch pressed</li> </ul>	ON
		<ul style="list-style-type: none"> <li>● CRUISE switch released</li> </ul>	OFF
SET LAMP	<ul style="list-style-type: none"> <li>● CRUISE switch: ON</li> <li>● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)</li> </ul>	<ul style="list-style-type: none"> <li>● COAST/SET switch pressed</li> </ul>	ON
		<ul style="list-style-type: none"> <li>● COAST/SET switch released</li> </ul>	OFF

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 2.

### 2. CHECK DTC

Check that DTC U1000 or U1001 is not displayed.

OK or NG

- OK >> Perform trouble diagnoses for DTC U1000, U1001, refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#) .
- NG >> GO TO 3.

### 3. CHECK COMBINATION METER OPERATION

Does combination meter operate normally?

Yes or No

- Yes >> GO TO 4.
- No >> Check combination meter circuit. Refer to [DI-8, "Combination Meter"](#) .

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

## EVAPORATIVE EMISSION SYSTEM

PFP:14950

### Description SYSTEM DESCRIPTION

UBS001PU

PBIB1262E

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating.

EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.

EVAP canister purge control solenoid valve also shuts off the vapor purge line during decelerating and idling.

# EVAPORATIVE EMISSION SYSTEM

[QG18DE (ULEV)]

## EVAPORATIVE EMISSION LINE DRAWING

**NOTE :** Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

### Component Inspection EVAP CANISTER

Check EVAP canister as follows:

1. Block port **B** .
2. Blow air into port **A** and check that it flows freely out of port **C** .
3. Release blocked port **B** .
4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports **A** and **C** .
5. Block port **A** and **B** .
6. Apply pressure to port **C** and check that there is no leakage.

PBIB1212E

### FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

1. Wipe clean valve housing.

SEF445Y

2. Check valve opening pressure and vacuum.

**Pressure:** 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)

**Vacuum:** -6.0 to -3.4 kPa (-0.061 to -0.035 kg/cm<sup>2</sup> , -0.87 to -0.48 psi)

3. If out of specification, replace fuel filler cap as an assembly.

**CAUTION:**

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

SEF943S

### EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-316](#) .

### FUEL TANK TEMPERATURE SENSOR

Refer to [EC-255](#) .

### EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-322](#) .

### EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-329](#) .

### EVAP SERVICE PORT

Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.

### Removal and Installation EVAP CANISTER

Tighten EVAP canister as shown in the figure.

### EVAP CANISTER VENT CONTROL VALVE

1. Turn EVAP canister vent control valve counterclockwise.
2. Remove the EVAP canister vent control valve.

**Do not reuse the O-ring, replace it with a new one.**

### How to Detect Fuel Vapor Leakage

#### CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in EVAP system.

#### NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.

### Ⓟ WITH CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump and hose to the EVAP service port adapter.
3. Turn ignition switch "ON".
4. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT MODE" with CONSULT-II.
5. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.

6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
7. Remove EVAP service port adapter and hose with pressure pump.

8. Locate the leak using a leak detector. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#).

### ⓧ WITHOUT CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

# EVAPORATIVE EMISSION SYSTEM

[QG18DE (ULEV)]

3. Apply battery voltage to between the terminals of EVAP canister vent control valve to make a closed EVAP system.
4. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm<sup>2</sup> , 0.2 to 0.4 psi).
5. Remove EVAP service port adapter and hose with pressure pump.
6. Locate the leak using a leak detector. Refer to [EC-584, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

## ON BOARD REFUELING VAPOR RECOVERY (ORVR)

PFP:00032

## System Description

UBS00377

PBIB1268E

From the beginning of refueling, the fuel tank pressure goes up. When the pressure reaches the setting value of the refueling control valve (RCV) opening pressure, the RCV is opened. After RCV opens, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve, RCV and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

The RCV is always closed during driving and the evaporative emission control system is operated the same as conventional system.

**WARNING:**

When conducting inspections below, be sure to observe the following:

- Put a “CAUTION: INFLAMMABLE” sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO<sub>2</sub> fire extinguisher.

**CAUTION:**

- Before removing fuel line parts, carry out the following procedures:
  - Put drained fuel in an explosion-proof container and put lid on securely.
  - Release fuel pressure from fuel line. Refer to “Fuel Pressure Release”, [EC-56](#).
  - Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Do not kink or twist hose and tube when they are installed.
- Do not tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connection.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

UBS00378

## Diagnostic Procedure

**SYMPTOM: FUEL ODOR FROM EVAP CANISTER IS STRONG.**

### 1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Weigh the EVAP canister with EVAP canister vent control valve attached.  
The weight should be less than 1.9 kg (4.2 lb).

OK or NG

- OK >> GO TO 2.  
NG >> GO TO 3.

### 2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 3.  
No >> GO TO 6.

### 3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> Repair or replace EVAP hose.

### 4. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-593, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 5.  
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

### 5. CHECK REFUELING CONTROL VALVE

Refer to [EC-593, "Component Inspection"](#) .

OK or NG

- OK >> **INSPECTION END**  
NG >> Replace refueling control valve with fuel tank.

**SYMPTOM: CANNOT REFUEL/FUEL ODOR FROM THE FUEL FILLER OPENING IS STRONG WHILE REFUELING.**

### 1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Weigh the EVAP canister with EVAP canister vent control valve attached.  
The weight should be less than 1.9 kg (4.2 lb).

OK or NG

- OK >> GO TO 2.  
NG >> GO TO 3.

### 2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 3.
- No >> GO TO 6.

### 3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

### 4. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling control valve for clogging, kink, looseness and improper connection.

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace hoses and tubes.

### 5. CHECK FILLER NECK TUBE

Check recirculation line for clogging, dents and cracks.

OK or NG

- OK >> GO TO 6.
- NG >> Replace filler neck tube.

### 6. CHECK REFUELING CONTROL VALVE

Refer to [EC-593, "Component Inspection"](#).

OK or NG

- OK >> GO TO 7.
- NG >> Replace refueling control valve with fuel tank.

### 7. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-593, "Component Inspection"](#).

OK or NG

- OK >> GO TO 8.
- NG >> Replace refueling EVAP vapor cut valve with fuel tank.

### 8. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

OK or NG

- OK >> GO TO 9.
- NG >> Replace fuel filler tube.

**9. CHECK ONE-WAY FUEL VALVE-I**

Check one-way valve for clogging.

OK or NG

OK >> GO TO 10.

NG >> Repair or replace one-way fuel valve with fuel tank.

**10. CHECK ONE-WAY FUEL VALVE-II**

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.  
When a stick is inserted, the valve should open, when removing stick it should close.

**Do not drop any material into the tank.**

OK or NG

OK >> **INSPECTION END**

NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

### Component Inspection

#### REFUELING EVAP VAPOR CUT VALVE

Ⓟ **With CONSULT-II**

1. Remove fuel tank. Refer to [FL-7, "FUEL TANK"](#).
2. Drain fuel from the tank as follows:
  - a. Remove fuel feed hose located on the fuel gauge retainer.
  - b. Connect a spare fuel hose, one side to fuel gauge retainer where the hose was removed and the other side to a fuel container.
  - c. Drain fuel using "FUEL PUMP RELAY" in "ACTIVE TEST" mode with CONSULT-II.
3. Check refueling EVAP vapor cut valve for being stuck to close as follows.  
Blow air into the refueling EVAP vapor cut valve (from hose end B), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.
  - a. Connect vacuum pump to hose ends A and B using a suitable 3-way connector.
  - b. Remove fuel gauge retainer with fuel gauge unit.  
**Always replace O-ring with new one.**
  - c. Put fuel tank upside down.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (ULEV)]

- d. Apply vacuum pressure to hose end [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

PBIB1221E

## ⊗ Without CONSULT-II

1. Remove fuel tank. Refer to [FL-7, "FUEL TANK"](#).
2. Drain fuel from the tank as follows:
  - a. Remove fuel gauge retainer.
  - b. Drain fuel from the tank using a handy pump into a fuel container.
3. Check refueling EVAP vapor cut valve for being stuck to close as follows.  
Blow air into the refueling EVAP vapor cut valve (from hose end B), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.
  - a. Connect vacuum pump to hose ends A and B using a suitable 3-way connector.
  - b. Remove fuel gauge retainer with fuel gauge unit.  
**Always replace O-ring with new one.**
  - c. Put fuel tank upside down.
  - d. Apply vacuum pressure to hose end [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

PBIB1221E

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (ULEV)]

## REFUELING CONTROL VALVE

1. Remove fuel filler cap.
2. Check air into continuity between hose ends A and B.  
Blow air into the hose end B. Air should flow freely into the fuel tank.
3. Blow air into hose end A and check there is no leakage.
4. Apply pressure to both hose ends A and B [20 kPa (150 mmHg, 5,91 inHg)] using a pressure pump and a suitable 3-way connector. Check that there is no leakage.

POSITIVE CRANKCASE VENTILATION

PF1:11810

Description

UBS001Q0

This system returns blow-by gas to the intake collector.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold.

During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve.

Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air.

The ventilating air is then drawn from the air duct into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover.

Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the intake collector under all conditions.

Inspection

PCV (POSITIVE CRANKCASE VENTILATION) VALVE

UBS001Q1

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over the valve inlet.

### VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

# AUTOMATIC SPEED CONTROL DEVICE (ASCD)

[QG18DE (ULEV)]

## AUTOMATIC SPEED CONTROL DEVICE (ASCD)

PF1:18930

### System Description INPUT/OUTPUT SIGNAL CHART

UBS0041J

Sensor	Input signal to ECM	ECM function	Actuator
ASCD brake switch	Brake pedal operation	ASCD vehicle speed control	Electric throttle control actuator
Stop lamp switch	Brake pedal operation		
ASCD steering switch	ASCD steering switch operation		
Park/Neutral position (PNP) switch	Gear position		
Combination meter	Vehicle speed		
TCM	Powertrain revolution		

### BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).

ECM controls throttle angle of electric throttle control actuator to regulate engine speed.

Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.

### SET OPERATION

Press ASCD CRUISE switch (Main switch). (The CRUISE indicator in combination meter illuminates.)

When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET switch. (Then SET indicator in combination meter illuminates.)

### ACCEL OPERATION

If the RESUME/ACCEL switch is depressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.

And then ASCD will keep the new set speed.

### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is depressed
- More than 2 switches at ASCD steering switch are depressed at the same time (Set speed will be cleared.).
- Brake pedal is depressed
- Clutch pedal is depressed or gear position is changed to the neutral position (M/T models)
- Selector lever is changed to "N", "P", "R" position (A/T models).
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

- Engine coolant temperature is slightly higher than the normal operating temperature: CRUISE lamp may blink slowly.

When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by depressing SET switch or RESUME switch.

- Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

### COAST OPERATION

When the SET/COAST switch is depressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

# AUTOMATIC SPEED CONTROL DEVICE (ASCD)

[QG18DE (ULEV)]

## RESUME OPERATION

When the RESUME/ACCEL switch is depressed after cancel operation other than depressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released.
- A/T selector lever is in other than P and N positions (A/T models)
- Clutch pedal is released (M/T models)
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SEA J2012.

\*3: In Diagnostic Test Mode II (Self-diagnostic results), these numbers are controlled by NISSAN.

\*4: When engine is running.

\*5: The troubleshooting for this DTC needs CONSULT-II.

\*6: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.

**PRECAUTIONS**

PF0:00001

**Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”**

UBS001QL

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**On Board Diagnostic (OBD) System of Engine and A/T**

UBS001QM

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

**CAUTION:**

- Be sure to turn the ignition switch “OFF” and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to EL section, “Description”, “HARNESS CONNECTOR”.
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission Control Module) before returning the vehicle to the customer.

**Precautions**

UBS001QN

- Always use a 12 volt battery as power source.
- Do not attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the engine control system harness connector, turn ignition switch OFF and disconnect negative battery terminal. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned off.
- Before removing parts, turn off ignition switch and then disconnect battery ground cable.

# PRECAUTIONS

[QG18DE (SULEV)]

- Do not disassemble ECM.
- If a battery terminal is disconnected, the memory will return to the ECM value.  
The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.

- When connecting engine control system harness connector, fasten it securely with a lever as far as it will go as shown at right.

- When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).  
Make sure that there are not any bends or breaks on ECM pin terminals when connecting pin connectors.

- Securely connect engine control system harness connectors.  
A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform Terminals and Reference Value inspection and make sure ECM functions properly. Refer to [EC-686](#).

## PRECAUTIONS

[QG18DE (SULEV)]

- After performing each TROUBLE DIAGNOSIS, perform “Overall Function Check” or “DTC Confirmation Procedure”.  
The DTC should not be displayed in the “DTC Confirmation Procedure” if the repair is completed. The “Overall Function Check” should be a good result if the repair is completed.

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the body ground.
- Handle mass air flow sensor carefully to avoid damage.
- Do not disassemble mass air flow sensor.
- Do not clean mass air flow sensor with any type of detergent.
- Even a slight leak in the air intake system can cause serious problems.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

- Do not operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

- Do not depress accelerator pedal when starting.
- Immediately after starting, do not rev up engine unnecessarily.
- Do not rev up engine just prior to shutdown.

## PRECAUTIONS

[QG18DE (SULEV)]

- When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.
- Keep the antenna as far as possible from the electronic control units.
- Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.
- Adjust the antenna and feeder line so that the standing-wave ratio can be kept smaller.
- Be sure to ground the radio to vehicle body.

### Wiring Diagrams and Trouble Diagnosis

When you read Wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#).
- [PG-2, "POWER SUPPLY ROUTING"](#). for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#).
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#).

## Commercial Service Tools

UBS001QQ

Tool name	Description
Leak detector i.e.: (J41416)	Locating the EVAP leak  <p style="text-align: center;">NT703</p>
EVAP service port adapter i.e.: (J41413-OBD)	Applying positive pressure through EVAP service port  <p style="text-align: center;">NT704</p>
Oxygen sensor thread cleaner i.e.: (J-43897-18) (J-43897-12)	Reconditioning the exhaust system threads before installing a new oxygen sensor or A/F sensor. Use with anti-seize lubricant shown below. <b>a: J-43897-18 18 mm with 1.5 mm pitch dia., for Zirconia Oxygen Sensor or A/F sensor</b> <b>b: J-43897-12 12 mm with 1.25 mm pitch dia., for Titania Oxygen Sensor</b>  <p style="text-align: center;">NT778</p>
Anti-seize lubricant i.e.: (Permatex™ 133AR or equivalent meeting MIL specification MIL-A-907)	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads.  <p style="text-align: center;">NT779</p>

		ON BOARD DIAGNOSIS for EVAP system	<ul style="list-style-type: none"> <li>● EVAP canister vent control valve</li> </ul>

\*1: These sensors are not used to control the engine system. They are used only for the on board diagnosis.

\*2: This sensor is not used to control the engine system under normal conditions.

\*3: These input signals are sent to the ECM through CAN communication line.

## Multiport Fuel Injection (MFI) System INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed* <sup>3</sup> and piston number	Fuel injection & mixture ratio control	Injector
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
PNP switch	Gear position		
Vehicle speed signal* <sup>2</sup>	Vehicle speed		
Ignition switch	Start signal		
Air conditioner switch	Air conditioner operation		
Knock sensor	Engine knocking condition		
Electrical load	Electrical load signal		
Battery	Battery voltage* <sup>3</sup>		
Power steering pressure sensor	Power steering operation		
Heated oxygen sensor 2* <sup>1</sup>	Density of oxygen in exhaust gas		

\*1: Under normal conditions, this sensor is not for engine control operation.

\*2: This signal is sent to the ECM through CAN communication line.

\*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

### SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the camshaft position sensor and the mass air flow sensor.

### VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from "N" to "D" (A/T models only)
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation
- During high vehicle speed operation
- Extremely high engine coolant temperature

**MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)**

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst can then better reduce CO, HC and NO<sub>x</sub> emissions. This system uses an air fuel ratio (A/F) sensor 1 in the exhaust manifold to monitor if the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about the air fuel ratio (A/F) sensor 1, refer to [EC-1033](#). This maintains the mixture ratio within the stoichiometric range (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst. Even if the switching characteristics of the A/F sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

**Open Loop Control**

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of A/F sensor 1 or its circuit
- Insufficient activation of A/F sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from “N” to “D” (A/T models)
- When starting the engine

**MIXTURE RATIO SELF-LEARNING CONTROL**

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from A/F sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot film) and characteristic changes during operation (i.e., injector clogging) directly affect mixture ratio.

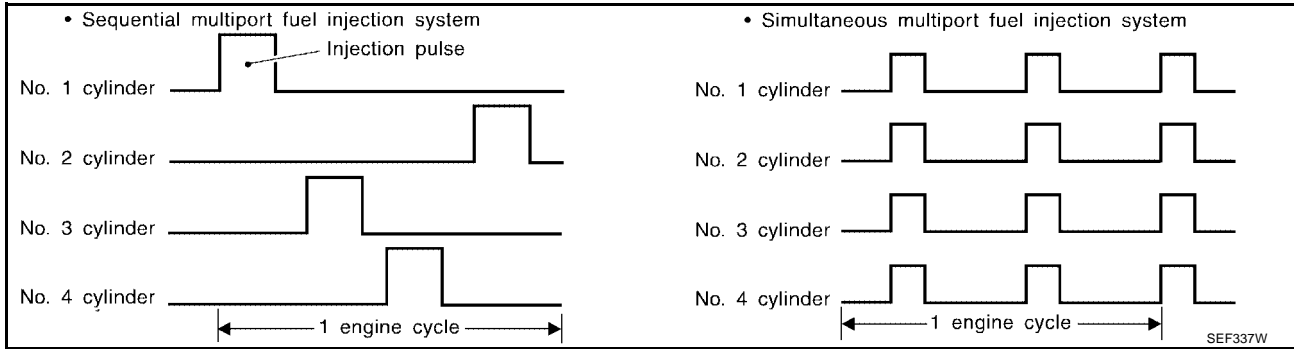

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.

“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.

“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from A/F sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

“Long term fuel trim” is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

**FUEL INJECTION TIMING**

Two types of systems are used.

**Sequential Multiport Fuel Injection System**

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

**Simultaneous Multiport Fuel Injection System**

Fuel is injected simultaneously into all four cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The four injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

**FUEL SHUT-OFF**

Fuel to each cylinder is cut off during deceleration or operation of the engine at excessively high speeds.

**Electronic Ignition (EI) System INPUT/OUTPUT SIGNAL CHART**

UBS001QU

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed*2 and piston number	Ignition timing control	Power transistor
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Vehicle speed signal*1	Vehicle speed		
Knock sensor	Engine knocking		
PNP switch	Gear position		
Battery	Battery voltage*2		

\*1: This signal sent to the ECM through CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

**SYSTEM DESCRIPTION**

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM. This data forms the map shown above.

The ECM receives information such as the injection pulse width and camshaft position sensor signal. Computing this information, ignition signals are transmitted to the power transistor.

e.g., N: 1,800 rpm, Tp: 1.50 msec

A°BTDC

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting

- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions.

If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

## Air Conditioning Cut Control INPUT/OUTPUT SIGNAL CHART

*UBS001QV*

Sensor	Input Signal to ECM	ECM function	Actuator
Air conditioner switch	Air conditioner "ON" signal	Air conditioner cut control	Air conditioner relay
PNP switch	Neutral position		
Throttle position sensor	Throttle valve opening angle		
Accelerator pedal position sensor	Accelerator pedal position		
Camshaft position sensor (PHASE)	Engine speed* <sup>1</sup>		
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage* <sup>1</sup>		
Refrigerant pressure sensor	Refrigerant pressure		
Power steering pressure sensor	Power steering operation		

\*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

## SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When the refrigerant pressure is excessively high or low.

## Fuel Cut Control (at No Load & High Engine Speed) INPUT/OUTPUT SIGNAL CHART

*UBS001QW*

Sensor	Input Signal to ECM	ECM function	Actuator
Vehicle speed signal* <sup>1</sup>	Vehicle speed	Fuel cut control	Injectors
PNP switch	Neutral position		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS)	Engine speed		
Camshaft position sensor (PHASE)			

\*1: This signal is sent to the ECM through CAN communication line.

## SYSTEM DESCRIPTION

If the engine speed is above 2,500 rpm with no load, (for example, in Neutral and engine speed over 2,500 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed. Fuel cut will operate until the engine speed reaches 2,000 rpm, then fuel cut is cancelled.

**NOTE:**

This function is different from deceleration control listed under [EC-617, "Multiport Fuel Injection \(MFI\) System"](#).

## CAN communication SYSTEM DESCRIPTION

UBS003W9

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

**BASIC SERVICE PROCEDURE**

**Idle Speed and Ignition Timing Check**  
**IDLE SPEED**

**Using CONSULT-II**

 **With CONSULT-II**

Check idle speed in "DATA MONITOR" mode with CONSULT-II.

 **With GST**

Check idle speed in "MODE 1" with GST.

**IGNITION TIMING**

Any of following two methods may be used.

**Method A**

1. Slide the harness protector off ignition coil No. 1 to clear the wires.
2. Attach timing light to the wires as shown in the figure.
3. Check ignition timing.

**Method B**

1. Remove No. 1 ignition coil.

A  
EC  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

- Connect No. 1 ignition coil and No. 1 spark plug with suitable high-tension wire as shown, and attach timing light clamp to this wire.

- Check ignition timing.

### Idle Speed/Ignition Timing/Idle Mixture Ratio Adjustment

UBS001QY

#### PREPARATION

- Make sure that the following parts are in good order.
  - Battery
  - Ignition system
  - Engine oil and coolant levels
  - Fuses
  - ECM harness connector
  - Vacuum hoses
  - Air intake system (Oil filler cap, oil level gauge, etc.)
  - Fuel pressure
  - Engine compression
  - Throttle valve
  - EVAP system
- On models equipped with air conditioner, checks should be carried out while the air conditioner is "OFF".
- On models equipped with automatic transaxle, when checking idle speed, ignition timing and mixture ratio, checks should be carried out while shift lever is in "P" or "N" position.
- When measuring "CO" percentage, insert probe more than 40 cm (15.7 in) into tail pipe.
- Turn off headlamps, heater blower, rear window defogger.
- Keep front wheels pointed straight ahead.
- Make the check after the cooling fan has stopped.

## OVERALL INSPECTION SEQUENCE

**NOTE:**

If a vehicle contains a part which is operating outside of design specifications with no MIL illumination, the part shall not be replaced prior to emission testing unless it is determined that the part has been tampered with or abused in such a way that the diagnostic system cannot reasonably be expected to detect the resulting malfunction.

PBIB1206E

## INSPECTION PROCEDURE

### 1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
  - Throttle valve and throttle position sensor operation
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

**3. CHECK TARGET IDLE SPEED**

**With CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**Without CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**OK or NG**

- OK >> GO TO 10.
- NG >> GO TO 4.

**4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Stop engine.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#).

>> GO TO 5.

**5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-634, "Throttle Valve Closed Position Learning"](#).

>> GO TO 6.

**6. PERFORM IDLE AIR VOLUME LEARNING**

Perform [EC-635, "Idle Air Volume Learning"](#) .

**Is Idle Air Volume Learning carried out successfully?**

Yes or No

Yes >> GO TO 7.

No >> 1. Follow the construction of "Idle Air Volume Learning".  
2. GO TO 4.

**7. CHECK TARGET IDLE SPEED AGAIN****Ⓟ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 10.

NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-842](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-836](#) .

OK or NG

OK >> GO TO 9.

NG >> 1. Repair or replace.  
2. GO TO 4.

**9. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

**10. CHECK IGNITION TIMING**

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK (With CONSULT-II)>>GO TO 19.

OK (Without CONSULT-II)>>GO TO 20.

NG >> GO TO 11.

**11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Stop engine.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

**12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

**13. PERFORM IDLE AIR VOLUME LEARNING**

## 17. DETECT MALFUNCTIONING PART

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-842](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-836](#) .

OK or NG

- OK >> GO TO 18.  
NG >> 1. Repair or replace.  
2. GO TO 4.

---

## 18. CHECK ECM FUNCTION

---

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

---

## 19. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION

---

 **With CONSULT-II**

1. Turn off the ignition key and keep the key off more than 10 seconds.
2. Start engine and warm it up to normal operating temperature.
3. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in “D” position with “OD” OFF (A/T) or 4th position (M/T).

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

4. Set “OD” ON, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

5. Repeat steps 2 to 3 five times.
6. Stop the vehicle and connect CONSULT-II to the vehicle.
7. Make sure that no 1st trip DTC is displayed in “SELF-DIAG RESULTS” mode.

OK or NG

- OK >> **INSPECTION END**  
NG >> GO TO 21.

**20. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION**

⊗ **Without CONSULT-II**

1. Turn off the ignition key and keep the key off more than 10 seconds.
2. Start engine and warm it up to normal operating temperature.
3. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in "D" position with "OD" OFF (A/T) or 4th position (M/T).

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

4. Set "OD" ON, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

5. Repeat steps 2 to 3 five times.
6. Stop the vehicle and turn ignition switch "OFF".
7. Stop vehicle and connect GST to the vehicle.
8. Make sure that no DTC is displayed.

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 21.

**21. CHECK AIR FUEL RATIO (A/F) SENSOR 1 (BANK 1) HARNESS**

1. Turn ignition switch "OFF" and disconnect battery ground cable.
2. Disconnect ECM harness connector.
3. Check harness continuity between the following terminals. Refer to Wiring Diagram.

ECM Terminal	A/F sensor 1 terminal
16	1
35	5
56	6
75	2

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 22.
- NG >> 1. Repair or replace harness between ECM and A/F sensor 1.  
2. GO TO 4.

**22. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Reconnect ECM harness connector.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 23.

**23. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 24.

## 24. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-635, "Idle Air Volume Learning"](#) .

Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes (With CONSULT-II)>>GO TO 25.

Yes (Without CONSULT-II)>>GO TO 26.

No >> 1. Follow the construction of "Idle Air Volume Learning".  
2. GO TO 4.

## 25. CHECK "CO"%

### Ⓜ With CONSULT-II

1. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
2. Turn ignition switch "OFF", wait at least 10 seconds and then turn "ON".
3. Select "ENG COOLANT TEMP" in "ACTIVE TEST" mode.
4. Set "ENG COOLANT TEMP" to 5°C (41°F) by touching "DWN" and "Qd".
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 3 – 11% and engine runs smoothly.**

OK or NG

OK >> GO TO 28.

NG >> GO TO 27.

ACTIVE TEST	
ENG COOLANT TEMP	XXX °C
MONITOR	
ENG SPEED	XXX rpm
INJ PULSE-B1	XXX msec
IGN TIMING	XXX BTDC

SEF172Y

## 26. CHECK "CO"%

### ⊗ Without CONSULT-II

1. Start engine and warm it up until engine coolant temperature indicator points to the middle of gauge.
2. Turn ignition switch "OFF".
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect a resistor (4.4 kΩ) between terminals of engine coolant temperature sensor harness connector.
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 3 – 11% and engine runs smoothly.**

7. After checking "CO"% , turn ignition switch "OFF", disconnect the resistor from the terminals of engine coolant temperature sensor harness connector, and then connect engine coolant temperature sensor harness connector to engine coolant temperature sensor.

OK or NG

OK >> GO TO 28.

NG >> GO TO 27.

## 27. RECONNECT AIR FUEL RATIO (A/F) SENSOR 1 HARNESS CONNECTOR

1. Turn ignition switch "OFF".
2. Reconnect A/F sensor 1 harness connector.

>> GO TO 31.

**28. REPLACE HEATED OXYGEN SENSOR 1**

1. Stop engine.
2. Replace A/F sensor 1.

With CONSULT-II>>GO TO 29.  
Without CONSULT-II>>GO TO 30.

**29. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION**

**Ⓜ With CONSULT-II**

1. Turn off the ignition key and keep the key off more than 10 seconds.
2. Start engine and warm it up to normal operating temperature.
3. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in “D” position with “OD” OFF (A/T) or 4th position (M/T).

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

4. Set “OD” ON, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

5. Repeat steps 2 to 3 five times.
6. Stop the vehicle and connect CONSULT-II to the vehicle.
7. Make sure that no 1st trip DTC is displayed in “SELF-DIAG RESULTS” mode.

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 31.

**30. CHECK AIR FUEL RATIO (A/F) SENSOR 1 FUNCTION**

**Ⓧ Without CONSULT-II**

1. Turn off the ignition key and keep the key off more than 10 seconds.
2. Start engine and warm it up to normal operating temperature.
3. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in “D” position with “OD” OFF (A/T) or 4th position (M/T).

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

4. Set “OD” ON, then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

5. Repeat steps 2 to 3 five times.
6. Stop the vehicle and turn ignition switch “OFF”.
7. Stop vehicle and connect GST to the vehicle.
8. Make sure that no DTC is displayed.

## 31. DETECT MALFUNCTIONING PART

Check the following.

- Check fuel pressure regulator and repair or replace if necessary. Refer to [EC-637, "Fuel Pressure Check"](#).
- Check mass air flow sensor and its circuit, and repair or replace if necessary. Refer to [EC-740](#) , [EC-748](#) and [EC-940](#) .
- Check injector and its circuit, and repair or replace if necessary. Refer to [EC-1168](#) .
- Check engine coolant temperature sensor and its circuit, and repair or replace if necessary. Refer to [EC-760](#) and [EC-772](#) .

OK or NG

OK >> GO TO 33.

NG >> 1. Repair or replace.

2. GO TO 32.

## 32. ERASE UNNECESSARY DTC

After this inspection, unnecessary DTC might be displayed.

Erase the stored memory in ECM and TCM. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) and [AT-40](#) .

>> GO TO 4.

## 33. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

### Accelerator Pedal Released Position Learning DESCRIPTION

UBS006IE

"Accelerator Pedal Released Position Learning" is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

#### OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch "ON" and wait at least 2 seconds.
3. Turn ignition switch "OFF" wait at least 10 seconds.
4. Turn ignition switch "ON" and wait at least 2 seconds.
5. Turn ignition switch "OFF" wait at least 10 seconds.

### Throttle Valve Closed Position Learning DESCRIPTION

UBS001QZ

"Throttle Valve Closed Position Learning" is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator of ECM is disconnected.

#### OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch "ON".
3. Turn ignition switch "OFF" wait at least 10 seconds.  
Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

### Idle Air Volume Learning DESCRIPTION

"Idle Air Volume Learning" is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

### PREPARATION

Before performing "Idle Air Volume Learning", make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 95°C (158 - 203°F)
- PNP switch: ON
- Electric load switch: OFF  
(Air conditioner, headlamp, rear window defogger)  
**On vehicles equipped with daytime light systems, set lighting switch to the 1st position to light only small lamps.**
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up  
For models with CONSULT-II, drive vehicle until "FLUID TEMP SE" in "DATA MONITOR" mode of "A/T" system indicates less than 0.9V.  
For models without CONSULT-II, drive vehicle for 10 minutes.

### OPERATION PROCEDURE

#### ④ With CONSULT-II

1. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic "PREPARATION" (previously mentioned) are in good order.
5. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.

6. Touch "START" and wait 20 seconds.

## DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

1. Check that throttle valve is fully closed.
2. Check PCV valve operation.
3. Check that downstream of throttle valve is free from air leakage.
4. When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.  
It is useful to perform [EC-716, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"](#).
5. If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform "Idle air volume learning" all over again:
  - Engine stalls.
  - Erroneous idle.

## Fuel Pressure Check

### FUEL PRESSURE RELEASE

UBS001R0

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.

#### NOTE:

Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because B15 models do not have fuel return system.

#### Ⓟ With CONSULT-II

1. Start engine.
2. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode with CONSULT-II.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch "OFF".

#### ⓧ Without CONSULT-II

1. Remove fuse for fuel pump.
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch "OFF" and reconnect fuel pump fuse.

## FUEL PRESSURE CHECK

- When reconnecting fuel line, always use new clamps.
- Make sure that clamp screws do not contact adjacent parts.
- Use a torque driver to tighten clamps.
- Use Fuel Pressure Gauge Kit J-44321 to check fuel pressure.
- Do not perform fuel pressure check with electrical systems operating (i.e. lights, rear defogger, A/C switch, etc.). Fuel pressure gauge may indicate false readings due to varying engine loads and changes in manifold vacuum.

1. Release fuel pressure to zero.
2. Disconnect fuel hose from fuel feed tube (engine side) using fuel tube quick connect removal tool.
3. Release quick connector and disconnect fuel hose from fuel feed tube (underbody side). Remove fuel hose assembly.

**CAUTION:**

**Do not install hose clamps over flared portions of fuel feed tubes or damage to fuel feed tubes may result.**

4. Install fuel pressure gauge from kit J-44321 between fuel tubes using hose and clamps from kit.
5. Turn ignition switch "ON" and check for fuel leakage.
6. Start engine and read the indication on fuel pressure gauge.

**At idle speed:**

**Approximately 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

If results are unsatisfactory, check for fuel leakage in fuel line between fuel tank and injector, and check fuel filter for clogging.

If fuel line and fuel filter are OK, replace fuel pressure regulator. Refer to [EC-1168](#) .

## ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

### Introduction

UBS001R1

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	SAE Mode
Diagnostic Trouble Code (DTC)	Mode 3 of SAE J1979
Freeze Frame data	Mode 2 of SAE J1979
System Readiness Test (SRT) code	Mode 1 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Mode 7 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Mode 6 of SAE J1979
Carbration ID	Mode 9 of SAE J1979

The above information can be checked using procedures listed in the table below.

X: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	Test value
CONSULT-II	×	×	×	×	×	—
GST	×	×*1	×	—	×	×
ECM	×	×*2	—	—	—	—

\*1: 1st trip DTCs for self-diagnoses concerning SRT items cannot be shown on the GST display.

\*2: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to [EC-668](#) )

### Two Trip Detection Logic

UBS001R2

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time as when the DTC is stored. <2nd trip> The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

X: Applicable —: Not applicable

Items	MIL				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip display- ing	2nd trip display- ing	1st trip display- ing	2nd trip display- ing
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	×	—	—	—	—	—	×	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	—	—	×	—	—	×	—	—
One trip detection diagnoses (Refer to <a href="#">EC-1008</a> )	—	×	—	—	×	—	×	—
Except above	—	—	—	×	—	×	×	—

When there is an open circuit on MIL circuit, the ECM can not warn the driver by lighting MIL up when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses is continuously detected as NG for 5-trips, ECM warns the driver that engine control system has trouble and MIL circuit is open by means of operating fail-safe function.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

The fail-safe function also operate when above diagnoses except MIL circuit and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode

Engine speed will not rise more then 2,500 rpm due to the fuel cut.

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012.

\*3: In Diagnostic Test Mode II (Self-diagnostic results), these numbers are controlled by NISSAN.

\*4: SRT code will not be set if the self-diagnostic result is NG.

\*5: These are not displayed with GST.

\*6: When the fail-safe operations for both self-diagnoses occur at the same time, the MIL illuminates.

\*7: The trouble shooting for these DTCs needs CONSULT-II.

## DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION", [EC-651](#).

For malfunctions in which 1st trip DTCs are displayed, refer to [EC-643](#). These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.

1st trip DTC is specified in Mode 7 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in "Work Flow" procedure Step II, refer to [EC-662](#). Then perform "DTC Confirmation Procedure" or "Overall Function Check" to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

### How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

 **With CONSULT-II**

 **With GST**

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P0350, P0705, P0750, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST does not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be "0".

If a 1st trip DTC is stored in the ECM, the time data will be "[1t]".

DTC display	SELF DIAG RESULTS		1st trip DTC display	SELF DIAG RESULTS	
	DTC RESULTS	TIME		DTC RESULTS	TIME
	CKP SEN/CIRCUIT [P0335]	0		CKP SEN/CIRCUIT [P0335]	1t

PBIB0911E

### FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed and absolute pressure at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see [EC-700](#).

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in “HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION”, [EC-651](#).

## SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Mode 1 of SAE J1979.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating “INCMP”, use the information in this Service Manual to set the SRT to “CMPLT”.

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate “CMPLT” for each application system. Once set as “CMPLT”, the SRT status remains “CMPLT” until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate “INCMP” for these items.

### NOTE:

The SRT will also indicate “INCMP” if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates “CMPLT” for all test items, the inspector will continue with the emissions test. However, if the SRT indicates “INCMP” for one or more of the SRT items the vehicle is returned to the customer untested.

### NOTE:

If MIL is “ON” during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates “CMPLT” for all test items. Therefore, it is important to check SRT (“CMPLT”) and DTC (No DTCs) before the inspection.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

## SRT Item

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

SRT item (CONSULT-II indication)	Performance Priority*1	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420
EVAP SYSTEM	1	EVAP control system	P0442
	—	EVAP control system	P1442
	2	EVAP control system	P0441
HO2S	2	Air fuel ratio (A/F) sensor 1	P1271
		Air fuel ratio (A/F) sensor 1	P1272
		Air fuel ratio (A/F) sensor 1	P1273
		Air fuel ratio (A/F) sensor 1	P1274
		Air fuel ratio (A/F) sensor 1	P1276
		Air fuel ratio (A/F) sensor 1	P1278, P1279
		Heated oxygen sensor 2	P0138
		Heated oxygen sensor 2	P0139
		Heated oxygen sensor 2	P1146
HO2S HTR	2	Air fuel ratio (A/F) sensor heater	P1031, P1032
		Heated oxygen sensor 2 heater	P0037

\*1: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the performance priority for models with CONSULT-II.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

## SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example						
		Diagnosis	Ignition cycle					
			← ON →	OFF	← ON →	OFF	← ON →	OFF
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)		
		P0402	OK (1)	— (1)	— (1)	OK (2)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"		
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)		
		P0402	— (0)	— (0)	OK (1)	— (1)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"		
NG exists	Case 3	P0400	OK	OK	—	—		
		P0402	—	—	—	—		
		P1402	NG	—	NG	NG (Consecutive NG)		
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL "ON")		
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"		

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses show OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above

When all SRT related self-diagnoses show OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above

If one or more SRT related self-diagnoses show NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to "CMPLT" of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

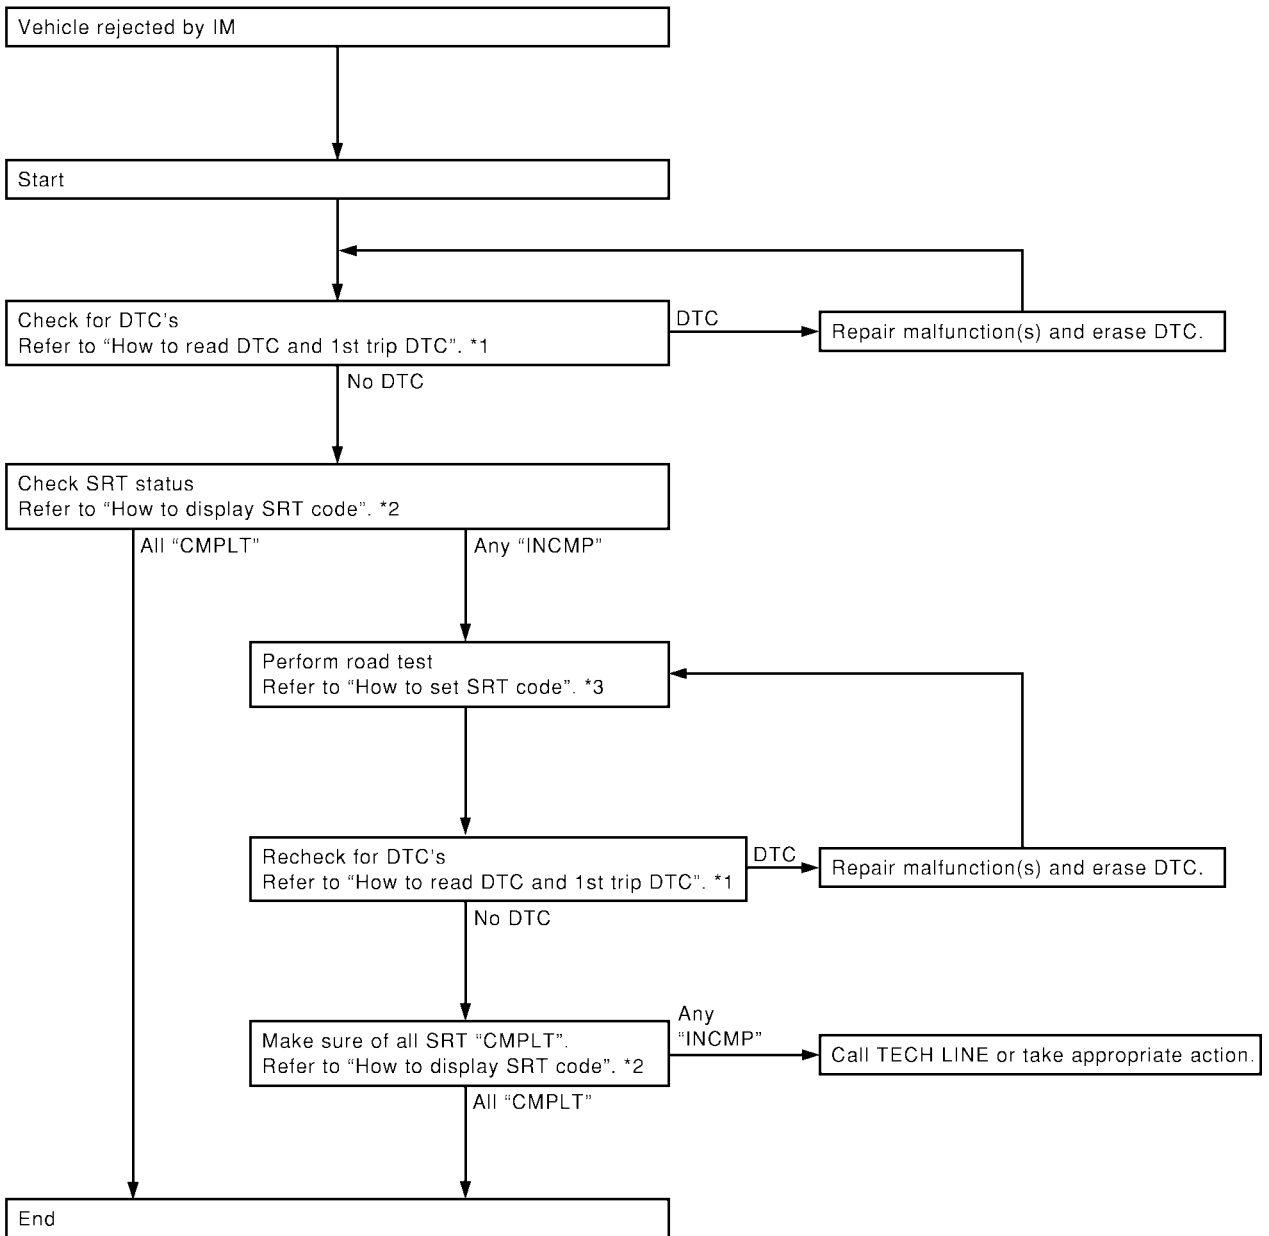

**NOTE:**

SRT can be set as "CMPLT" together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

## SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence on the next page.

SEP170Z

## How to Display SRT Code

### With CONSULT-II

Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

### With GST

Selecting Mode 1 with GST (Generic Scan Tool)

A sample of CONSULT-II display for SRT code is shown below.

"INCMP" means the self-diagnosis is incomplete and SRT is not set. "CMPLT" means the self-diagnosis is complete and SRT is set.

SRT STATUS	
CATALYST	CMPLT
EVAP SYSTEM	INCMP
HO2S HTR	CMPLT
HO2S	CMPLT

SEF935Z

### How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

#### **With CONSULT-II**

Perform corresponding DTC Confirmation Procedure one by one based on “Performance Priority” in the table on [EC-645](#).

#### **Without CONSULT-II**

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

Driving Pattern

**Note: Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws. Refer to next page for more information and explanation of chart.**

**Driving pattern**

PBIB1182E

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.  
Zone A refers to the range where the time required for the diagnosis under normal conditions\* is the shortest.  
Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

\*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.  
Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:

- The engine is started at the engine coolant temperature of -10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 73 and ground is 3.0 - 4.3V).**
- The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 73 and ground is lower than 1.4V).**
- The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 107 and ground is less than 4.1V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- The driving pattern outlined in \*<sup>2</sup> must be repeated at least 3 times.

Pattern 4:

- Tests are performed after the engine has been operated for at least 17 minutes.
- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

\*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

\*2: Operate the vehicle in the following driving pattern.

- Decelerate vehicle to 0 km/h (0 MPH) and let engine idle.
- Repeat driving pattern shown below at least 10 times.  
- **During acceleration, hold the accelerator pedal as steady as possible.**

\*3: Checking the vehicle speed with GST is advised.

### Suggested Transmission Gear Position for A/T Models

Set the selector lever in the "D" position with the overdrive switch turned ON.

### Suggested Upshift Speeds for M/T Models

Shown below are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

Gear change	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:	For quick acceleration in low altitude areas and high altitude areas [over 1,219 m (4,000 ft)]:
	ACCEL shift point km/h (MPH)	km/h (MPH)
1st to 2nd	24 (15)	24 (15)
2nd to 3rd	40 (25)	40 (25)
3rd to 4th	65 (40)	65 (40)
4th to 5th	75 (45)	75 (45)

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (SULEV)]

## Suggested Maximum Speed in Each Gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.

Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits and drive according to the road conditions to ensure safe operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

Gear	km/h (MPH)
1st	48 (30)
2nd	84 (52)
3rd	128 (80)
4th	—
5th	—

## TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Mode 6 of SAE J1979.

The test value is a parameter used to determine whether a system/circuit diagnostic test is “OK” or “NG” while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

Items for which these data (test value and test limit) are displayed are the same as SRT code items (15 test items).

These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

X: Applicable —: Not applicable

SRT item	Self-diagnostic test item	Test value (GST display)		Test limit	Application
		TID	CID		
CATALYST	Three way catalyst function	01H	01H	Max.	×
		02H	81H	Min.	×
EVAP SYSTEM	EVAP control system (Small leak)	05H	03H	Max.	×
	EVAP control system purge flow monitoring	06H	83H	Min.	×
HO2S	A/F sensor 1	43H	0EH	Max.	×
		44H	8EH	Min.	×
		45H	8EH	Min.	×
	Heated oxygen sensor 2	19H	86H	Min.	×
		1AH	86H	Min.	×
		1BH	06H	Max.	×
		1CH	06H	Max.	×
HO2S HTR	A/F sensor 1 heater	57H	10H	Max.	×
		58H	90H	Min.	×
	Heated oxygen sensor 2 heater	2DH	0AH	Max.	×
		2EH	8AH	Min.	×

## HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

### Ⓟ How to Erase DTC (With CONSULT-II)

#### NOTE:

If the DTC is not for A/T related items (see [EC-602](#)), skip steps 2 through 4.

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 10 seconds and then turn it “ON” (engine stopped) again.
2. Turn CONSULT-II “ON” and touch “A/T”.
3. Touch “SELF-DIAG RESULTS”.
4. Touch “ERASE”. [The DTC in the TCM (Transmission control module) will be erased.] Then touch “BACK” twice.

5. Touch "ENGINE".
  6. Touch "SELF-DIAG RESULTS".
  7. Touch "ERASE". (The DTC in the ECM will be erased.)
- If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

The emission related diagnostic information in the ECM can be erased by selecting "ERASE" in the "SELF-DIAG RESULTS" mode with CONSULT-II.

### **How to Erase DTC (With GST)**

The emission related diagnostic information in the ECM can be erased by selecting Mode 4 with GST.

**NOTE:**

**If the DTC is not for A/T related items (see EC-602 ), skip step 2.**

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
  2. Perform "SELF-DIAGNOSTIC PROCEDURE (Without CONSULT-II)" in AT section titled "TROUBLE DIAGNOSIS", "Self-diagnosis". (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
  3. Select Mode 4 with GST (Generic Scan Tool).
- **If the battery is disconnected, the emission-related diagnostic information will be lost after approx. 24 hours.**
  - **The following data are cleared when the ECM memory is erased.**
    1. Diagnostic trouble codes
    2. 1st trip diagnostic trouble codes
    3. Freeze frame data

4. 1st trip freeze frame data
5. System readiness test (SRT) codes
6. Test values
7. Others

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

## Malfunction Indicator Lamp (MIL) DESCRIPTION

UBS001R5

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check.
  - If the MIL does not light up, refer to [DI-27, "WARNING LAMPS"](#).
2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

## ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following three functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in "ON" position  Engine stopped 	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running 	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. <ul style="list-style-type: none"> <li>● "Misfire (Possible three way catalyst damage)"</li> <li>● "One trip detection diagnoses"</li> </ul>
Mode II	Ignition switch in "ON" position  Engine stopped 	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting MIL up when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit and demands the driver to repair the trouble.

Engine operating condition in fail-safe mode

Engine speed will not rise more than 2,500 rpm due to the fuel cut

## MIL Flashing Without DTC

If the ECM is in Diagnostic Test Mode II, MIL may flash when engine is running. In this case, check ECM diagnostic test mode. [EC-654, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .

How to switch the diagnostic test (function) modes, and details of the above functions are described later. [EC-654, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .

The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

## HOW TO SWITCH DIAGNOSTIC TEST MODE

### NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- Always ECM returns to Diagnostic Test Mode I after ignition switch is turned "OFF".

### How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch "ON" and wait 3 seconds.
2. Repeat the following procedure quickly five times within 5 seconds.
  - a. Fully depress the accelerator pedal.
  - b. Fully release the accelerator pedal.
3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.
4. Fully release the accelerator pedal.  
ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

### How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to [EC-655, "DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS"](#) .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.  
The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

## DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to [DI-27, "WARNING LAMPS"](#) .

## DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

MIL	Condition
ON	When the malfunction is detected or the ECM's CPU is malfunctioning.
OFF	No malfunction.

## DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes. The “zero” is indicated by the number of ten flashes. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle.

A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-second OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC “0000” refers to no malfunction. (See [EC-602, "INDEX FOR DTC"](#) )

### How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

- If the battery is disconnected, the DTC will be lost from the backup memory after approx 24 hours.
- Be careful not to erase the stored memory before starting trouble diagnoses.

## OBD System Operation Chart

### RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to “Two Trip Detection Logic” on [EC-639](#).
- The MIL will go off after the vehicle is driven 3 times with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The “TIME” in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-II will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in “OK” for the 2nd trip.

### SUMMARY CHART

Items	Fuel Injection System	Misfire	Other
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)

For details about patterns “B” and “C” under “Fuel Injection System” and “Misfire”, see [EC-649](#).

For details about patterns “A” and “B” under “Other”, see [EC-649](#).

\*1: Clear timing is at the moment OK is detected.

\*2: Clear timing is when the same malfunction is detected in the 2nd trip.

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR "MIS-FIRE" <EXHAUST QUALITY DETERIORATION>, "FUEL INJECTION SYSTEM"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

\*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

## EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

### Driving Pattern B

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MIL will go off when the B counter reaches 3. (\*<sup>2</sup> in “OBD SYSTEM OPERATION CHART”)

### Driving Pattern C

Driving pattern C means the vehicle operation as follows:

1. The following conditions should be satisfied at the same time:

Engine speed: (Engine speed in the freeze frame data)  $\pm 375$  rpm

Calculated load value: (Calculated load value in the freeze frame data)  $\times (1 \pm 0.1)$  [%]

Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), “T” should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), “T” should be higher than or equal to 70°C (158°F).

Example:

If the stored freeze frame data is as follows:

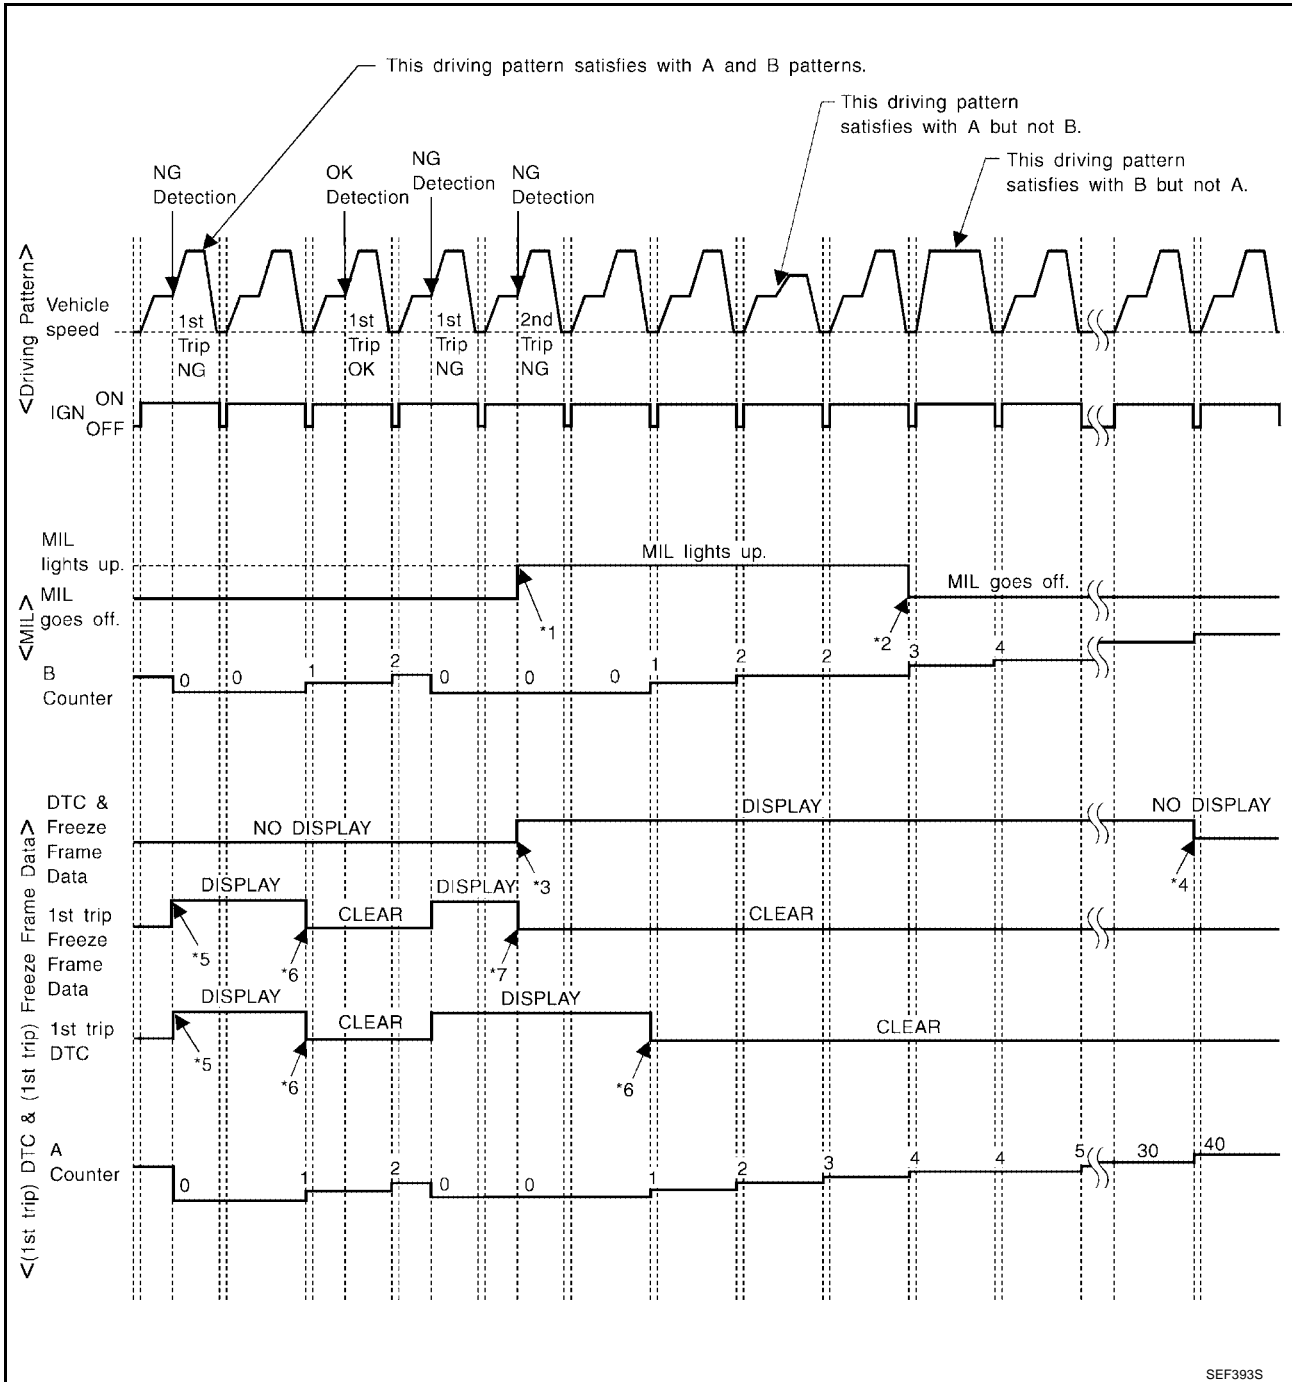

Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)

To be satisfied with driving pattern C, the vehicle should run under the following conditions:

Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.
- The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

## EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

### Driving Pattern A

- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.

### Driving Pattern B

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (\*2 in "OBD SYSTEM OPERATION CHART").

**TROUBLE DIAGNOSIS**

**Trouble Diagnosis Introduction**  
**INTRODUCTION**

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.

It is much more difficult to diagnose a incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the [EC-662](#).

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "Diagnostic Worksheet" like the example on next page should be used.

Start your diagnosis by looking for "conventional" malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

# TROUBLE DIAGNOSIS

[QG18DE (SULEV)]

## WORK FLOW

PBIB1043E

\*1: If time data of "SELF-DIAG RESULTS" is other than "0" or "1t", refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

\*2: If the incident cannot be duplicated, refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

\*3: If the on board diagnostic system cannot be performed, check main power supply and ground circuit. Refer to [EC-721, "POWER SUPPLY CIRCUIT FOR ECM"](#).

\*4: If the malfunctioning part cannot be found, refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

\*5: [EC-649](#)

\*6: [EC-716](#)

# TROUBLE DIAGNOSIS

[QG18DE (SULEV)]

## DESCRIPTION FOR WORK FLOW

STEP	DESCRIPTION FOR WORK FLOW	A
STEP I	Get detailed information about the conditions and the environment when the incident/symptom occurred using the <a href="#">EC-664. "DIAGNOSTIC WORKSHEET"</a> .	EC
STEP II	Before confirming the concern, check and write down (print out using CONSULT-II or Generic Scan Tool) the (1st trip) Diagnostic Trouble Code (DTC) and the (1st trip) freeze frame data, then erase the code and the data. (Refer to <a href="#">EC-639</a> .) The (1st trip) DTC and the (1st trip) freeze frame data can be used when duplicating the incident at STEP III & IV. Study the relationship between the cause, specified by (1st trip) DTC, and the symptom described by the customer. (The "Symptom Matrix Chart" will be useful. See <a href="#">EC-674</a> .) Also check related service bulletins for information.	C
STEP III	Try to confirm the symptom and under what conditions the incident occurs. The "DIAGNOSTIC WORK SHEET" and the freeze frame data are useful to verify the incident. Connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform INCIDENT SIMULATION TESTS. (Refer to <a href="#">GI-26. "How to Perform Efficient Diagnosis for an Electrical Incident"</a> .) If the malfunction code is detected, skip STEP IV and perform STEP V.	D E
STEP IV	Try to detect the (1st trip) Diagnostic Trouble Code by driving in (or performing) The "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE". Check and read the (1st trip) DTC and (1st trip) freeze frame data by using CONSULT-II or Generic Scan Tool. During the (1st trip) DTC verification, be sure to connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform INCIDENT SIMULATION TESTS. (Refer to <a href="#">GI-26. "How to Perform Efficient Diagnosis for an Electrical Incident"</a> .) In case the "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" is not available, perform the "OVERALL FUNCTION CHECK" instead. The (1st trip) DTC cannot be displayed by this check, however, this simplified "check" is an effective alternative. The "NG" result of the "OVERALL FUNCTION CHECK" is the same as the (1st trip) DTC detection.	F G H
STEP V	Take the appropriate action based on the results of STEP I through IV. If the malfunction code is indicated, proceed to TROUBLE DIAGNOSIS FOR DTC PXXXX. If the normal code is indicated, proceed to the BASIC INSPECTION. (Refer to <a href="#">EC-669</a> .) If CONSULT-II is available, perform "DATA MONITOR (SPEC)" mode with CONSULT-II and proceed to the <a href="#">EC-716. "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"</a> . If malfunction is detected, proceed to "REPAIR/REPLACE". Then perform inspections according to the Symptom Matrix Chart. (Refer to <a href="#">EC-674</a> .)	I J
STEP VI	Identify where to begin diagnosis based on the relationship study between symptom and possible causes. Inspect the system for mechanical binding, loose connectors or wiring damage using (tracing) "Harness Layouts". Gently shake the related connectors, components or wiring harness with CONSULT-II set in "DATA MONITOR (AUTO TRIG)" mode. Check the voltage of the related ECM terminals or monitor the output data from the related sensors with CONSULT-II. Refer to <a href="#">EC-686</a> . The "DIAGNOSTIC PROCEDURE" in EC section contains a description based on open circuit inspection. A short circuit inspection is also required for the circuit check in the DIAGNOSTIC PROCEDURE. For details, refer to GI section ("HOW TO PERFORM EFFICIENT DIAGNOSIS FOR AN ELECTRICAL INCIDENT", "Circuit Inspection"). Repair or replace the malfunction parts. If malfunctioning part cannot be detected, perform <a href="#">EC-720. "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> .	K L M
STEP VII	Once you have repaired the circuit or replaced a component, you need to run the engine in the same conditions and circumstances which resulted in the customer's initial complaint. Perform the "DTC CONFIRMATION PROCEDURE" and confirm the normal code [DTC No. P0000 or 0505] is detected. If the incident is still detected in the final check, perform STEP VI by using a different method from the previous one. Before returning the vehicle to the customer, be sure to erase the unnecessary (already fixed) (1st trip) DTC in ECM and TCM (Transmission control module). (Refer to <a href="#">EC-640</a> .)	

**DIAGNOSTIC WORKSHEET****Description**

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make trouble-shooting faster and more accurate.

In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the malfunction indicator lamp to come on steady or blink and DTC to be detected. Example:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

**KEY POINTS**

**WHAT** ..... Vehicle & engine model

Symptoms

SEF907L

**DTC Inspection Priority Chart**

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

**NOTE:**

If DTC U1000 and/or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-728](#) .

Priority	Detected items (DTC)
1	<ul style="list-style-type: none"> <li>● U1000, U1001 CAN communication line</li> <li>● P0101, P0102, P0103, P1102 MAF sensor</li> <li>● P0112, P0113, P0127 IAT sensor</li> <li>● P0117, P0118, P0125 ECT sensor</li> <li>● P0122, P0123 TP sensor</li> <li>● P0128 Thermostat function</li> <li>● P0181, P0182, P0183 FTT sensor</li> <li>● P0327, P0328 Knock sensor</li> <li>● P0335 Crankshaft position sensor (POS)</li> <li>● P0340 Camshaft position sensor (PHASE)</li> <li>● P0460, P0461, P0462, P1463 Fuel level sensor</li> <li>● P0500 Vehicle speed sensor</li> <li>● P0605 ECM</li> <li>● P0705 Park/Neutral position (PNP) switch</li> <li>● P1229 Sensor power supply</li> <li>● P1706 Park/Neutral position (PNP) switch</li> <li>● P2122, P2123, P2127, P2128, P2138 Accelerator pedal position sensor</li> </ul>

# TROUBLE DIAGNOSIS

[QG18DE (SULEV)]

UBS001R9

## Fail-safe Chart

- When the DTC listed below is detected, the ECM enters fail-safe mode and the MIL lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode								
P0102 P0103 P1102	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.								
P0117 P0118	Engine coolant temperature sensor circuit	<p>Engine coolant temperature will be determined by ECM based on the time after turning ignition switch "ON" or "START". CONSULT-II displays the engine coolant temperature decided by ECM.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Condition</th> <th style="width: 50%;">Engine coolant temperature decided (CONSULT-II display)</th> </tr> </thead> <tbody> <tr> <td>Just as ignition switch is turned ON or Start</td> <td style="text-align: center;">40°C (104°F)</td> </tr> <tr> <td>More than approx. 4 minutes after ignition ON or Start</td> <td style="text-align: center;">80°C (176°F)</td> </tr> <tr> <td>Except as shown above</td> <td style="text-align: center;">40 - 80°C (104 - 176°F) (Depends on the time)</td> </tr> </tbody> </table> <p>When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.</p>	Condition	Engine coolant temperature decided (CONSULT-II display)	Just as ignition switch is turned ON or Start	40°C (104°F)	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
Condition	Engine coolant temperature decided (CONSULT-II display)									
Just as ignition switch is turned ON or Start	40°C (104°F)									
More than approx. 4 minutes after ignition ON or Start	80°C (176°F)									
Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)									
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	<p>The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.</p>								
P1121	Electric throttle control actuator (ECM detect the throttle valve is stuck open.)	<p>While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.</p>								
P1122	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1124 P1126	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1128	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1129	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	<p>The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.</p>								

- When there is an open circuit on MIL circuit, the ECM can not warn the driver by lighting MIL up when there is malfunction on engine control system.  
Therefore, when Electrical controlled throttle and part of ECM related diagnoses is continuously detected as NG for 5-trips, ECM warns the driver that engine control system has malfunction and MIL circuit is open by means of operating fail-safe function.  
The fail-safe function also operates when above diagnoses except MIL circuit and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut.
--	---

### Basic Inspection

#### 1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
  6. Make sure that no DTC is displayed with CONSULT-II or GST.
- OK or NG**
- OK    >> GO TO 3.  
 NG    >> GO TO 2.

#### 2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

### 3. CHECK TARGET IDLE SPEED

#### With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### Without CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 9.  
NG >> GO TO 4.

### 4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#).

>> GO TO 5.

### 5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-634, "Throttle Valve Closed Position Learning"](#).

>> GO TO 6.

**6. PERFORM IDLE AIR VOLUME LEARNING**

Refer to [EC-635, "Idle Air Volume Learning"](#) .

Is "Idle Air Volume Learning" carried out successfully?

Yes or No

Yes >> GO TO 7.

No >> 1. Follow the construction of "Idle Air Volume Learning".  
2. GO TO 4.

**7. CHECK TARGET IDLE SPEED AGAIN**

**Ⓜ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 10.

NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-842](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-836](#) .

OK or NG

OK >> GO TO 9.

NG >> 1. Repair or replace.  
2. GO TO 4.

**9. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

**10. CHECK IGNITION TIMING**

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 11.

**11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

---

1. Stop engine.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

**12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

---

Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

**13. PERFORM IDLE AIR VOLUME LEARNING**

---

Refer to [EC-635, "Idle Air Volume Learning"](#) .

Is "Idle Air Volume Learning" carried out successfully?

Yes or No

Yes >> GO TO 14.

No >> 1. Follow the construction of "Idle Air Volume Learning".  
2. GO TO 4.

**14. CHECK TARGET IDLE SPEED AGAIN**

---

 **With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 15.

NG >> GO TO 17.

**15. CHECK IGNITION TIMING AGAIN**

---

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 16.

---

**16. CHECK TIMING CHAIN INSTALLATION**

---

Check timing chain installation. Refer to [EM-45, "INSTALLATION"](#) .

**OK or NG**

- OK >> GO TO 17.  
NG >> 1. Repair the timing chain installation.  
2. GO TO 4.

---

**17. DETECT MALFUNCTIONING PART**

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-842](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-836](#) .

**OK or NG**

- OK >> GO TO 18.  
NG >> 1. Repair or replace.  
2. GO TO 4.

---

**18. CHECK ECM FUNCTION**

---

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

ECM Harness Connector Terminal Layout

UBS001RE

MBIB0045E

ECM Terminals and Reference Value  
PREPARATION

UBS0067T

1. ECM is located in the right side of the cowl top (behind the strut tower).  
For this inspection:
2. Remove ECM harness protector.

BBA0191E

3. When disconnecting ECM harness connector, loosen it with levers as far as they will go as show at right.
4. Connect a bread-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
  - Use extreme care not to touch 2 pins at one time.
  - Data is for comparison and may not be exact.

BBA0138E

ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

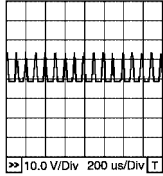

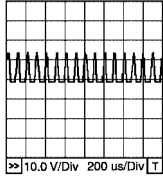

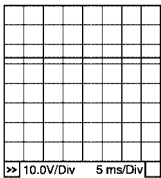

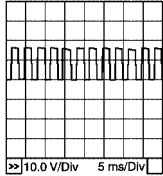

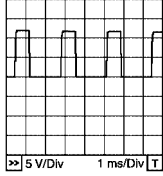

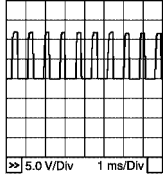

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

UBS001RG

## CONSULT-II Function FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*1
Data monitor	Input/Output data in the ECM can be read.
Data monitor (SPEC)	Input/Output specification of the Basic fuel schedule, AFM, A/F feedback control value and the other data monitor items can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
Function test	Conducted by CONSULT-II instead of a technician to determine each system is "OK" or "NG".
ECM part number	ECM part number can be read.

\*1 The following emission-related diagnostic information is cleared when the ECM memory is erased.

1. Diagnostic trouble codes
2. 1st trip diagnostic trouble codes
3. Freeze frame data
4. 1st trip freeze frame data
5. System readiness test (SRT) codes
6. Test values
7. Others

X: Applicable

\*1: This item includes 1st trip DTCs.

\*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to [EC-640](#).

## CONSULT-II INSPECTION PROCEDURE

### CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

1. Turn ignition switch OFF.
2. Connect CONSULT-II and "CONSULT-II CONVERTER" to data link connector, which is located under LH dash panel near the fuse box cover.

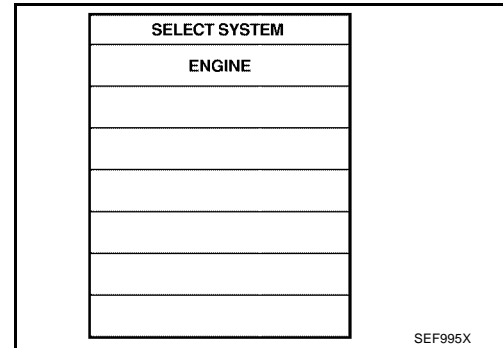

# TROUBLE DIAGNOSIS

[QG18DE (SULEV)]

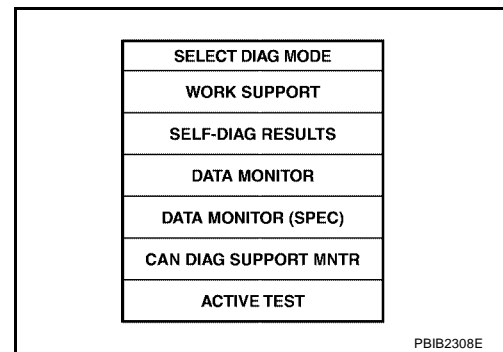

3. Turn ignition switch ON.
4. Touch "START".

5. Touch "ENGINE".

6. Perform each diagnostic test mode according to each service procedure.
- For further information, see the CONSULT-II Operation Manual.**

\*: DTC P1442 and P1456 does not apply to B15 models but appears in DTC Work Support Mode screen.

## REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA)

### Description

CONSULT-II has two kinds of triggers and they can be selected by touching "SETTING" in "DATA MONITOR" mode.

1. "AUTO TRIG" (Automatic trigger):

- The malfunction will be identified on the CONSULT-II screen in real time.

In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.

At the moment a malfunction is detected by ECM, "MONITOR" in "DATA MONITOR" screen is changed to "Recording Data... xx%" as shown at left, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, "REAL-TIME DIAG" screen is displayed. If "STOP" is touched on the screen during "Recording Data... xx%", "REAL-TIME DIAG" screen is also displayed.

The recording time after the malfunction detection and the recording speed can be changed by "TRIGGER POINT" and "Recording Speed". Refer to CONSULT-II OPERATION MANUAL.

2. "MANU TRIG" (Manual trigger):

- DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.

DATA MONITOR can be performed continuously even though a malfunction is detected.

Use these triggers as follows:

DATA MONITOR	
Recording Data...11%	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
VHCL SPEED SE	XXX km/h

SEF705Y

SET RECORDING CONDITION	
AUTO TRIG	
MANU TRIG	
TRIGGER POINT	
RECORDING SPEED	
MIN	MAX
/64 /32 /16 /8 /4 /2 FULL	/64 /32 /16 /8 /4 /2 FULL

SEF707X

### Operation

1. "AUTO TRIG"

- While trying to detect the DTC/1st trip DTC by performing the "DTC Confirmation Procedure", be sure to select to "DATA MONITOR (AUTO TRIG)" mode. You can confirm the malfunction at the moment it is detected.
- While narrowing down the possible causes, CONSULT-II should be set in "DATA MONITOR (AUTO TRIG)" mode, especially in case the incident is intermittent.  
When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the "DTC Confirmation Procedure", the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "Incident Simulation Tests".)

2. "MANU TRIG"

K  
L  
M

# TROUBLE DIAGNOSIS

[QG18DE (SULEV)]

- If the malfunction is displayed as soon as “DATA MONITOR” is selected, reset CONSULT-II to “MANU TRIG”. By selecting “MANU TRIG” you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

PBIB0197E

### Generic Scan Tool (GST) DESCRIPTION

Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained on the next page. ISO9141 is used as the protocol. The name "GST" or "Generic Scan Tool" is used in this service manual.

### FUNCTION

Diagnostic test mode		Function
MODE 1	READINESS TESTS	This mode gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
MODE 2	(FREEZE DATA)	This mode gains access to emission-related data value which were stored by ECM during the freeze frame. [For details, refer to "Freeze Frame Data" <a href="#">EC-643</a> .]
MODE 3	DTCs	This mode gains access to emission-related power train trouble codes which were stored by ECM.
MODE 4	CLEAR DIAG INFO	This mode can clear all emission-related diagnostic information. This includes: <ul style="list-style-type: none"> <li>● Clear number of diagnostic trouble codes (MODE 1)</li> <li>● Clear diagnostic trouble codes (MODE 3)</li> <li>● Clear trouble code for freeze frame data (MODE 1)</li> <li>● Clear freeze frame data (MODE 2)</li> <li>● Reset status of system monitoring test (MODE 1)</li> <li>● Clear on board monitoring test results (MODE 6 and 7)</li> </ul>
MODE 6	(ON BOARD TESTS)	This mode accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
MODE 7	(ON BOARD TESTS)	This mode enables the off board test drive to obtain test results for emission-related powertrain components/systems that are continuously monitored during normal driving conditions.
MODE 8	—	This mode can close EVAP system in ignition switch "ON" position (Engine stopped). When this mode is performed, following parts can be opened or closed. <ul style="list-style-type: none"> <li>● EVAP canister vent control valve open</li> <li>● Vacuum cut valve bypass valve closed</li> </ul> In the following conditions, this mode cannot function. <ul style="list-style-type: none"> <li>● Low ambient temperature</li> <li>● Low battery voltage</li> <li>● Engine running</li> <li>● Ignition switch "OFF"</li> <li>● Low fuel temperature</li> <li>● Too much pressure is applied to EVAP system</li> </ul>
MODE 9	(CALIBRATION ID)	This mode enables the off-board test device to request specific vehicle information such as Vehicle Identification Number (VIN) and Calibration IDs.

## GST INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect GST to data link connector for GST which is located under LH dash panel near the fuse box cover.

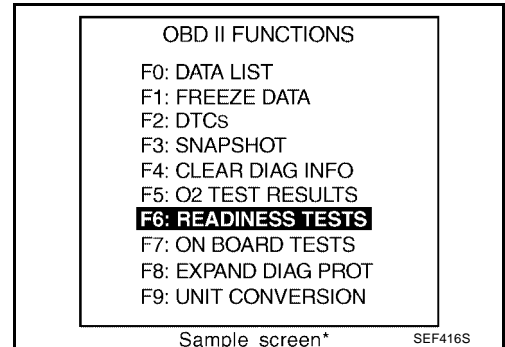

3. Turn ignition switch ON.
4. Enter the program according to instruction on the screen or in the operation manual.

(\*: Regarding GST screens in this section, sample screens are shown.)

5. Perform each diagnostic mode according to each service procedure.

**For further information, see the GST Operation Manual of the tool maker.**

## CONSULT-II Reference Value in Data Monitor Mode

UBS001R1

Remarks:

- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.

\* Specification data may not be directly related to their components signals/values/operations.

(i.e., Adjust ignition timing with a timing light before monitoring IGN TIMING. Specification data might be displayed even when ignition timing is not adjusted to specification. This IGN TIMING monitors the data calculated by the ECM according to the input signals from the camshaft position sensor and other ignition timing related sensors.)

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	<ul style="list-style-type: none"> <li>● Tachometer: Connect</li> <li>● Run engine and compare tachometer indication with the CONSULT-II value.</li> </ul>	Almost the same speed as the CONSULT-II value.

SET LAMP	● Ignition switch: ON	SET Lamp: Illuminated	ON
		SET Lamp: Not illuminated	OFF

\*: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

## Major Sensor Reference Graph in Data Monitor Mode

The following are the major sensor reference graphs in "DATA MONITOR" mode.

### CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

Below is the data for "CLSD THL POS", "ACCEL SEN 1" and "THRTL SEN 1" when depressing the accelerator pedal with the ignition switch "ON" and with selector lever in "D" position.

The signal of "ACCEL SEN 1" and "THRTL SEN 1" should rise gradually without any intermittent drop or rise after "CLSD THL POS" is changed from "ON" to "OFF".

PBIB0198E

### ENG SPEED, MAS A/F SE-B1, THRTL POS SEN, HO2S2 (B1), INJ PULSE-B1

Below is the data for "ENG SPEED", "MAS A/F SE-B1", "THRTL POS SEN", "HO2S2 (B1/B2)" and "INJ PULSE" when revving engine quickly up to 4,800 rpm under no load after warming up engine to normal operating temperature.

Each value is for reference, the exact value may vary.

SEF241Y

EC  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

- "THRTL POS SEN" should increase while depressing the accelerator pedal and should decrease while releasing it.

- "HO2S2 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.

- "INJ PULSE-B1" should increase when depressing the accelerator pedal and should decrease when the pedal is released.

# TROUBLE DIAGNOSIS - SPECIFICATION VALUE

[QG18DE (SULEV)]

## TROUBLE DIAGNOSIS - SPECIFICATION VALUE

PFP:00031

### Description

UBS001RK

The specification (SP) value indicates the tolerance of the value that is displayed in "DATA MONITOR (SPEC)" mode of CONSULT-II during normal operation of the Engine Control System. When the value in "DATA MONITOR (SPEC)" mode is within the SP value, the Engine Control System is confirmed OK. When the value in "DATA MONITOR (SPEC)" mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1 (The signal voltage of the mass air flow sensor)

### Testing Condition

UBS001RL

- Vehicle driven distance: More than 5,000 km (3,017 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm<sup>2</sup> , 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up\*1
- Electrical load: Not applied\*2
- Engine speed: Idle

\*1: For A/T or CVT models, after the engine is warmed up to normal operating temperature, drive vehicle until "FLUID TEMP SE" (A/T or CVT fluid temperature sensor signal) indicates more than 60°C (140°F). For MT models, drive vehicle for 5 minutes after the engine is warmed up to normal operating temperature.

\*2: Rear window defogger switch, air conditioner switch, lighting switch are "OFF". Cooling fans are not operating. Steering wheel is straight ahead.

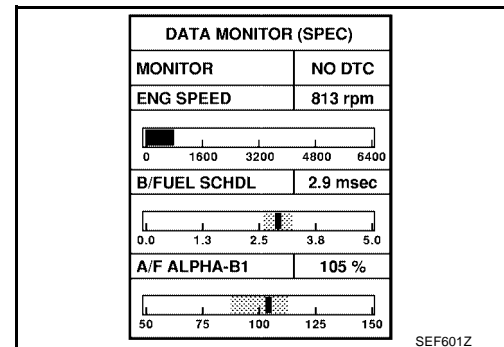

### Inspection Procedure

UBS001RM

#### NOTE:

Perform "DATA MONITOR (SPEC)" mode in maximum scale display.

1. Perform [EC-669, "Basic Inspection"](#) .
2. Confirm that the testing conditions indicated above are met.
3. Select "B/FUEL SCHDL", "A/F ALPHA-B1" and "MAS A/F SE-B1" in "DATA MONITOR (SPEC)" mode with CONSULT-II.
4. Make sure that monitor items are within the SP value.
5. If NG, go to [EC-717, "Diagnostic Procedure"](#) .

# TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

[QG18DE (SULEV)]

## TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

PFP:00006

### Description

UBS001RO

Intermittent incidents (I/I) may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on DTC (1st trip) visits. Realize also that the most frequent cause of I/I occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

### Common I/I Report Situations

STEP in Work Flow	Situation
II	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than "0" or "1t".
III	The symptom described by the customer does not recur.
IV	(1st trip) DTC data does not appear during the DTC CONFIRMATION PROCEDURE.
VI	The TROUBLE DIAGNOSIS for PXXXX does not indicate the malfunctioning area.

### Diagnostic Procedure

UBS001RP

#### 1. INSPECTION START

Erase (1st trip) DTCs. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).

>> GO TO 2.

#### 2. CHECK GROUND TERMINALS

Check ground terminals for corroding or loose connection. Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "GROUND INSPECTION".

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

#### 3. SEARCH FOR ELECTRICAL INCIDENT

Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "Incident Simulation Tests".

OK or NG

OK >> GO TO 4.

NG >> Repair or replace.

#### 4. CHECK CONNECTOR TERMINALS

Refer to [GI-23, "How to Check Terminal"](#), "How to Check Enlarged Contact Spring of Terminal".

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace connector.

# POWER SUPPLY CIRCUIT FOR ECM

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	B	ECM ground	<b>[Engine is running]</b> ● Idle speed	Engine ground
109	B/R	Ignition switch	<b>[Ignition switch "OFF"]</b>	0V
			<b>[Ignition switch "ON"]</b>	BATTERY VOLTAGE (11 - 14V)
111	W/G	ECM relay (Self shut-off)	<b>[Engine is running]</b> <b>[Ignition switch "OFF"]</b> ● For 5 seconds after turning ignition switch "OFF"	0 - 1.0V
			<b>[Ignition switch "OFF"]</b> ● 5 seconds passed after turning ignition switch "OFF"	BATTERY VOLTAGE (11 - 14V)
115 116	B B	ECM ground	<b>[Engine is running]</b> ● Idle speed	Engine ground
119 120	R/G R/G	Power supply for ECM	<b>[Ignition switch "ON"]</b>	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS001RR

### 1. INSPECTION START

Start engine.

**Is engine running?**

Yes or No

- Yes >> GO TO 9.
- No >> GO TO 2.

### 2. CHECK ECM POWER SUPPLY-I

1. Turn ignition switch "OFF" and then "ON".
2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

MBIB0015E

---

### 3. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Harness connectors M19, E108
- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ECM and 10A fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

### 4. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116, and engine ground.  
Refer to WIRING DIAGRAM.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

---

### 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors F26, M58
- Joint connector-1
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

A

EC

C

D

E

F

G

H

I

J

K

L

M

**6. CHECK ECM POWER SUPPLY-II**

1. Disconnect ECM relay.

2. Check voltage between ECM relay terminals 1, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- Fuse and fusible link box connectors E22, E24
- 10A fuse
- 15A fuse
- Harness for open or short between ECM relay and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK ECM OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 111 and ECM relay terminal 2.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> Go to [EC-1156, "IGNITION SIGNAL"](#).
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK ECM POWER SUPPLY-III**

1. Stop engine.
2. Check voltage between ECM terminal 121 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 11.
- NG >> GO TO 10.

**10. DETECT MALFUNCTIONING PART**

Check the harness for open or short between ECM and harness connector F47.

>> Repair harness or connectors.

**11. CHECK POWER SUPPLY-III**

1. Turn ignition switch "ON" and then "OFF".
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

**Voltage: After turning ignition switch "OFF", battery voltage will exist for a few seconds, then drop to approximately 0V.**

OK or NG

- OK >> GO TO 17.
- NG (Battery voltage does not exist.)>>GO TO 12.
- NG (Battery voltage exists for more than a few seconds.)>>GO TO 14.

## 12. CHECK VOLTAGE BETWEEN ECM RELAY AND GROUND

1. Disconnect ECM harness connector.
2. Disconnect ECM relay.

3. Check voltage between ECM relay terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 14.  
 NG >> GO TO 13.

## 13. DETECT MALFUNCTIONING PART

Check the harness for open or short between ECM relay and harness connector F47.

>> Repair harness or connectors.

## 14. CHECK HARNESS CONTINUITY BETWEEN ECM RELAY AND ECM

1. Check harness continuity between ECM terminals 119, 120 and ECM relay terminal 5.  
 Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 15.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 15. CHECK OUTPUT SIGNAL CIRCUIT

1. Check harness continuity between ECM terminal 111 and ECM relay terminal 2.  
 Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 16.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**16. CHECK ECM RELAY**

1. Apply 12V direct current between ECM relay terminals 1 and 2.
2. Check continuity between ECM relay terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
OFF	No

OK or NG

- OK >> GO TO 17.
- NG >> Replace ECM relay.

**17. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116, and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 19.
- NG >> GO TO 18

**18. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F26, M58
- Joint connector-1
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

**19. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC U1000, U1001 CAN COMMUNICATION LINE

[QG18DE (SULEV)]

## DTC U1000, U1001 CAN COMMUNICATION LINE

PF:23710

### Description

UBS003WA

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### On Board Diagnosis Logic

UBS003WB

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000*2 1000*2	CAN communication line	<ul style="list-style-type: none"><li>● ECM cannot communicate to other control units.</li><li>● ECM cannot communicate for more than the specified time.</li></ul>	<ul style="list-style-type: none"><li>● Harness or connectors (CAN communication line is open or shorted)</li></ul>
U1001*1 1001*1			

\*1: The MIL will not light up for this diagnosis.

\*2: This self-diagnosis has the one trip detection logic.

### DTC Confirmation Procedure

UBS003WC

1. Turn ignition switch "ON" and wait at least 3 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If 1st trip DTC is detected, go to [EC-730, "Diagnostic Procedure"](#).

DTC P0011 IVT CONTROL

PFP:23796

Description  
SYSTEM DESCRIPTION

UBS0067U

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

\*: This signal is sent to the ECM through CAN communication line.

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

UBS0067V

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No-load	Idle -5° - 5°C
	When revving engine up to 2,000 rpm quickly	Approx. 0° - 30°C
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No-load	Idle 0% - 2%
	When revving engine up to 2,000 rpm quickly	Approx. 0% - 80%

## On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0011 0011	Intake valve timing control performance	There is a gap between angle of target and phase-control angle degree.	<ul style="list-style-type: none"> <li>● Crankshaft position sensor (POS)</li> <li>● Camshaft position sensor (PHASE)</li> <li>● Accumulation of debris to the signal pick-up portion of the camshaft</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function

### DTC Confirmation Procedure

#### CAUTION:

Always drive at a safe speed.

#### NOTE:

- If DTC P0011 is displayed with DTC P1111, first perform trouble diagnosis for “DTC P1111”. See [EC-947, "DTC P1111 IVT CONTROL SOLENOID VALVE"](#) .
- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

#### WITH CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds.  
Hold the accelerator pedal as steady as possible.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

PBIB0164E

VHCL SPEED SE	100 - 120 km/h (63 - 75 MPH)
ENG SPEED	2,000 - 4,000 rpm
COOLAN TEMP/S	60 - 120°C (140 - 248°F)
B/FUEL SCHDL	More than 3.38 msec
Selector lever	A/T models: “D” position M/T models: 5th position

4. Stop vehicle with engine running and let engine idle for 10 seconds.
5. If 1st trip DTC is detected, go to [EC-150, "Diagnostic Procedure"](#) .  
If 1st trip DTC is not detected, go to next step.
6. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLANT TEMPS	70 - 105°C (176 - 194°F)
Selector lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

7. If 1st trip DTC is detected, go to [EC-950, "Diagnostic Procedure"](#) .

#### WITH GST

Follow the procedure “WITH CONSULT-II” above.

**Diagnostic Procedure****1. CHECK CRANKSHAFT POSITION SENSOR (POS)**

Refer to [EC-841, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 2.
- NG >> Replace crankshaft position sensor (POS).

**2. CHECK CAMSHAFT POSITION SENSOR (PHASE)**

Refer to [EC-847, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 3.
- NG >> Replace camshaft position sensor (PHASE).

**3. CHECK CAMSHAFT (INTAKE)**

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

- OK >> GO TO 4.
- NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

**4. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

For wiring diagram refer to [EC-838, "Wiring Diagram"](#) for CKP sensor (POS) and [EC-843, "Wiring Diagram"](#) for CMP sensor (PHASE).

>> INSPECTION END

**DTC P0037, P0038 HO2S2 HEATER**

PF226A0

**Description  
SYSTEM DESCRIPTION**

UBS0067Z

Sensor	Input Signal to ECM	ECM Function	Actuator
Camshaft position sensor (PHASE)	Engine speed	Heated oxygen sensor 2 heater control	Heated oxygen sensor 2 heater
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

**OPERATION**

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600	OFF
<ul style="list-style-type: none"> <li>Below 3,600 rpm after the following conditions are met.</li> <li>Engine: After warming up</li> <li>Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	ON

## Diagnostic Procedure

UBS00684

### 1. CHECK HO2S2 POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Turn ignition switch "ON".

4. Check voltage between HO2S2 terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

---

## 2. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Harness connectors E108, M19
- Fuse block (J/B) connector M1
- 15A fuse
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 3. CHECK HO2S2 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 25 and HO2S2 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK HEATED OXYGEN SENSOR 2 HEATER

---

Refer to [EC-739, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace heated oxygen sensor 2.

---

## 5. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection**  
**HEATED OXYGEN SENSOR 2 HEATER**

1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
2 and 3	2.3 - 4.3 $\Omega$ at 25°C (77°F)
1 and 2, 3, 4	$\infty \Omega$
4 and 1, 2, 3	(Continuity should not exist)

2. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

BBIA0312E

**DTC P0101 MAF SENSOR**

PF2:22680

**Component Description**

UBS003M1

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003M2

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	1.0 - 1.7V
	2,500 rpm	1.5 - 2.4V
CAL/LD VALUE	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	20.0 - 35.5%
	2,500 rpm	12.0 - 30.0%
MASS AIRFLOW	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	1.4 - 4.0 g·m/s
	2,500 rpm	5.0 - 10.0 g·m/s

**On Board Diagnosis Logic**

UBS003M3

This self-diagnosis has the one trip detection logic.

**NOTE:**

If DTC P0101 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455, "DTC P1229 SENSOR POWER SUPPLY"](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0101 0101	Mass air flow sensor circuit range/performance problem	A) A high voltage from the sensor is sent to ECM under light load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>
		B) A low voltage from the sensor is sent to ECM under heavy load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air leaks</li> <li>● Mass air flow sensor</li> </ul>

**DTC Confirmation Procedure**

UBS003M4

Perform "PROCEDURE FOR MALFUNCTION A" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION "B".

### PROCEDURE FOR MALFUNCTION A

#### NOTE:

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch "ON") instead of running engine at idle speed.

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and warm it up to normal operating temperature.
4. Run engine for at least 10 seconds at idle speed.
5. If DTC is detected, go to [EC-744, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLANT TEMP/S	XXX °C

SEF174Y

#### With GST

Follow the procedure "With CONSULT-II" above.

### PROCEDURE FOR MALFUNCTION B

#### CAUTION:

Always driver vehicle at a safe speed.

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Start engine and warm it up to normal operating temperature.  
**If engine cannot be started, go to [EC-744, "Diagnostic Procedure"](#) .**
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Check the voltage of "MAS A/F SE-B1" with "DATA MONITOR".
5. Increases engine speed to about 4,000 rpm.
6. Monitor the linear voltage rise in response to engine speed increases.  
If NG, go to [EC-744, "Diagnostic Procedure"](#) .  
If OK, go to following step.

# DTC P0101 MAF SENSOR

[QG18DE (SULEV)]

7. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	More than 2,000 rpm
THRTL POS SEN	More than 3.0V
Selector lever	Suitable position
Driving location	Driving vehicle uphill (Increased engine load) will help maintain the driving conditions required for this test.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
THRTL POS SEN	XXX V

SEF719Y

8. If DTC is detected, go to [EC-744, "Diagnostic Procedure"](#) .

## Overall Function Check

UBS003M5

Use this procedure to check the overall function of the mass air flow sensor circuit. During this check, a DTC might not be confirmed.

### PROCEDURE FOR MALFUNCTION B

#### With GST

1. Turn ignition switch "ON".
2. Start engine and warm it up to normal operating temperature.
3. Select "MODE 1" with GST.
4. Check the mass air flow sensor signal with "MODE 1".
5. Check for linear mass air flow rise in response to increases to about 4,000 rpm in engine speed.
6. If NG, go to [EC-744, "Diagnostic Procedure"](#) .

CALC LOAD	20%
COOLANT TEMP	95°C

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
48	R/W	Sensors' power supply	[Ignition switch "ON"]	Approximately 5V
51	L/R	Mass air flow sensor	[Engine is running] ● Warm-up condition ● Idle speed	1.0 - 1.7V
			[Engine is running] ● Warm-up condition ● Engine speed is 2,500 rpm.	1.5 - 2.1V
67	B/W	Mass air flow sensor ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V
111	W/G	ECM relay (Self shut-off)	[Engine is running] [Ignition switch "OFF"] ● For 5 seconds after turning ignition switch "OFF"	0 - 1.0V
			[Ignition switch "OFF"] ● 5 seconds passed after turning ignition switch "OFF"	BATTERY VOLTAGE (11 - 14V)
119 120	R/G R/G	Power supply for ECM	[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS003M7

### 1. INSPECTION START

Which malfunction (A or B) is duplicated?

A or B

- A >> GO TO 3.
- B >> GO TO 2.

### 2. CHECK INTAKE SYSTEM

Check the following for connections.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and collector

OK or NG

- OK >> GO TO 3.
- NG >> Reconnect the parts.

### 3. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 4.

### 4. CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between ECM relay and mass air flow sensor
- Harness for open or short between mass air flow sensor and ECM

>> Repair harness or connectors.

---

**6. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

---

**7. DETECT MALFUNCTIONING PART**

---

Check the following.

- Joint connector-1
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and TCM

>> Repair harness or connectors.

---

**8. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 51.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.  
NG >> Repair open circuit or short to ground or short or short to power in harness or connectors.

---

**9. CHECK MASS AIR FLOW SENSOR**

---

Refer to [EC-747, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.  
NG >> Replace mass air flow sensor.

---

**10. CHECK INTERMITTENT INCIDENT**

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection MASS AIR FLOW SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Conditions	Voltage V
Ignition switch "ON" (Engine stopped.)	Less than 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.1
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for linear voltage rise in response to increases to about 4,000 rpm in engine speed.

4. If the voltage is out of specification, proceed the following.
  - Turn ignition switch "OFF".
  - Disconnect mass air flow sensor harness connector and reconnect it again.
  - Perform step 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

**DTC P0102, P0103 MAF SENSOR**

PF:22680

**Component Description**

UBS003MA

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003MB

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	1.0 - 1.7V
	2,500 rpm	1.5 - 2.1V
CAL/LD VALUE	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	20.0 - 35.5%
	2,500 rpm	12.0 - 30.0%
MASS AIRFLOW	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: "OFF"</li> <li>● Shift lever: "N" (A/T), Neutral (M/T)</li> <li>● No-load</li> </ul> Idle	1.4 - 4.0 g·m/s
	2,500 rpm	5.0 - 10.0 g·m/s

**On Board Diagnosis Logic**

UBS003MC

These self-diagnoses have the one trip detection logic.

**NOTE:**

If DTC P0102 or P0103 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-1028](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0102 0102	Mass air flow sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air leaks</li> <li>● Mass air flow sensor</li> </ul>
P0103 0103	Mass air flow sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>

**FAIL-SAFE MODE**

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.

**DTC Confirmation Procedure**

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**PROCEDURE FOR DTC P0102**

 **With CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If DTC is detected, go to [EC-758, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

 **With GST**

Follow the procedure “With CONSULT-II” above.

**PROCEDURE FOR DTC P0103**

 **With CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and wait 5 seconds at most.
4. If DTC is detected, go to [EC-758, "Diagnostic Procedure"](#) .  
If DTC is not detected, go to next step.
5. Start engine and wait at least 5 seconds.
6. If DTC is detected, go to [EC-758, "Diagnostic Procedure"](#) .

NG >> Replace mass air flow sensor.

**10. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection MASS AIR FLOW SENSOR

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Conditions	Voltage V
Ignition switch "ON" (Engine stopped.)	Less than 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.4
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for linear voltage rise in response to increases to about 4,000 rpm in engine speed.

4. If the voltage is out of specification, proceed the following.
  - Turn ignition switch "OFF".
  - Disconnect mass air flow sensor harness connector and reconnect it again.
  - Perform step 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

DTC P0112, P0113 IAT SENSOR

PF0:22630

Component Description

UBS003MJ

The intake air temperature sensor is built-into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

UBS003MK

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause

## DTC P0117, P0118 ECT SENSOR

### Component Description

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 73 (Engine coolant temperature sensor) and ground.

### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may damage the ECM's transistor. Use ground other than ECM, such as body ground.**

### On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Engine coolant temperature sensor</li> </ul>
P0118 0118	Engine coolant temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

# DTC P0117, P0118 ECT SENSOR

[QG18DE (SULEV)]

## FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode	
Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch "ON" or "START". CONSULT-II displays the engine coolant temperature decided by ECM.	
	Condition	Engine coolant temperature decided (CONSULT-II display)
	Just as ignition switch is turned ON or Start	40°C (104°F)
	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)
	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while the engine is running.		

## DTC Confirmation Procedure

UBS001T4

DTC P0122, P0123 TP SENSOR

PF16119

Component Description

UBS00687

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

UBS00688

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	More than 0.36V
	● Shift lever D: (A/T model) 1st: (M/T model)	Accelerator pedal: Fully depressed	Less than 4.75V

\*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS00689

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The TP sensor 2 circuit is open or shorted.) (APP sensor 2 circuit is shorted.)</li> <li>● Electric throttle control actuator (TP sensor 2)</li> <li>● Accelerator pedal position sensor (APP sensor)</li> </ul>
P0123 0123	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-768, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC

## Wiring Diagram

EC-TPS2-01

BBWA1380E

# DTC P0122, P0123 TP SENSOR

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	B	Sensor power supply (Throttle position sensor)	[Ignition switch "ON"]	Approximately 5V
50	W	Throttle position sensor 1	[Ignition switch "ON"]	More than 0.36V
			[Ignition switch "ON"]	Less than 4.75V
66	R	Sensor ground (Throttle position sensor)	[Engine is running]	Approximately 0V
69	G	Throttle position sensor 2	[Ignition switch "ON"]	Less than 4.75V
			[Ignition switch "ON"]	More than 0.36V
91	R/G	Sensors power supply (Accelerator pedal position sensor 2)	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

UBS0068C

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT-I**

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch "ON".

3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 3.

**3. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT-II**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 1 and ECM terminal 47. Refer to Wiring Diagram.

**Continuity should exist.**

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace open circuit.

**4. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT-III**

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
47	Electric throttle control actuator terminal 1	<a href="#">EC-767</a>
91	APP sensor terminal 1	<a href="#">EC-1134</a>

OK or NG

- OK >> GO TO 5.
- NG >> Repair short to ground or short to power in harness or connectors.

**5. CHECK APP SENSOR**

Refer to [EC-1132, "DTC P2127, P2128 APP SENSOR"](#) .

OK or NG

- OK >> GO TO 11.
- NG >> GO TO 6.

---

**6. REPLACE ACCELERATOR PEDAL ASSEMBLY**

---

1. Replace accelerator pedal assembly.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

---

**7. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**8. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Check harness continuity between ECM terminal 69 and electric throttle control actuator terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**9. CHECK THROTTLE POSITION SENSOR**

---

Refer to [EC-771, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> GO TO 10.

---

**10. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

---

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

---

**11. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**THROTTLE POSITION SENSOR**

1. Reconnect all harness connectors disconnected.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Turn ignition switch "ON".
4. Set selector lever to "D" position (A/T models) or "1st" position (M/T models).
5. Check voltage between ECM terminals 50 (TP sensor 1 signal), 69 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
50 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
69 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
8. Perform [EC-635, "Idle Air Volume Learning"](#) .

**Remove and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "Removal and Installation"](#) .

### DTC P0125 ECT SENSOR

#### Component Description

**NOTE:**

If DTC P0125 is displayed with P0117, P0118, first perform trouble diagnosis for DTC P0117, P0118, [EC-760](#).

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

#### <Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 73 (Engine coolant temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may damage the ECM's transistor. Use ground other than ECM, such as body ground.

#### On Board Diagnosis Logic

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0125 0125	Insufficient engine coolant temperature for closed loop fuel control	<ul style="list-style-type: none"> <li>● Voltage sent to ECM from the sensor is not practical, even when some time has passed after starting the engine.</li> <li>● Engine coolant temperature is insufficient for closed loop fuel control.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (High resistance in the circuit)</li> <li>● Engine coolant temperature sensor</li> <li>● Thermostat</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Be careful not to overheat engine.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Check that "COOLAN TEMP/S" is above 15°C (59°F).  
**If it is above 15°C (59°F), the test result will be OK. If it is below 15°C (59°F), go to following step.**
4. Start engine and run it for 65 minutes at idle speed.  
**If "COOLAN TEMP/S" increases to more than 15°C (59°F) within 65 minutes, stop engine because the test result will be OK.**
5. If DTC is detected, go to [EC-773, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

**WITH GST**

Follow the procedure "With CONSULT-II" above.

**Diagnostic Procedure**

**1. CHECK ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [EC-773, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 2.
- NG >> Replace engine coolant temperature sensor.

**2. CHECK THERMOSTAT OPERATION**

When the engine is cooled [lower than 75°C (167°F)], grasp lower radiator hose and confirm the engine coolant does not flow.

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace thermostat. Refer to [CO-11, "THERMOSTAT AND THERMOSTAT HOUSING"](#) .

**3. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
ENGINE COOLANT TEMPERATURE SENSOR**

Check resistance as shown in the figure.

# DTC P0125 ECT SENSOR

[QG18DE (SULEV)]

## <Reference data>

Temperature °C (°F)	Resistance kΩ
20 (68)	2.1 - 2.9
50 (122)	0.68 - 1.0
90 (194)	0.236 - 0.260

If NG, replace engine coolant temperature sensor.

UBS001TO

## Removal and Installation ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EM-12, "OUTER COMPONENT PARTS"](#).

**DTC P0127 IAT SENSOR**

PF2:22630

**Component Description**

UBS003N6

The intake air temperature sensor is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

**<Reference data>**

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

**On Board Diagnosis Logic**

UBS003N7

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0127 0127	Intake air temperature too high	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signal from engine coolant temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Intake air temperature sensor</li> </ul>

**DTC Confirmation Procedure**

UBS003N8

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**CAUTION:**

Always drive vehicle at a safe speed.

**TESTING CONDITION:**

This test may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

**WITH CONSULT-II**

1. Wait until engine coolant temperature is less than 90°C (194°F)
  - a. Turn ignition switch "ON".
  - b. Select "DATA MONITOR" mode with CONSULT-II.
  - c. Check the engine coolant temperature.
  - d. If the engine coolant temperature is not less than 90°C (194°F), turn ignition switch "OFF" and cool down engine.
    - Perform the following steps before engine coolant temperature is above 90°C (194°F).
2. Turn ignition switch "ON".
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Start engine.
5. Hold vehicle speed at more than 70 km/h (43 MPH) for 100 consecutive seconds.
6. If 1st trip DTC is detected, go to [EC-776, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

**DTC P0128 THERMOSTAT FUNCTION**

**On Board Diagnosis Logic**

UBS001TP

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.

This is due to a leak in the seal or the thermostat stuck open.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0128 0128	Thermostat function	The engine coolant temperature does not reach to specified temperature even though the engine has run long enough.	<ul style="list-style-type: none"> <li>● Thermostat</li> <li>● Leakage from sealing portion of thermostat</li> <li>● Engine coolant temperature sensor</li> </ul>

**DTC Confirmation Procedure**

UBS001TR

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- For best results, perform at ambient temperature of **-10°C (14°F) or higher.**
- For best results, perform at engine coolant temperature of **-10°C (14°F) to 68°C (154°F).**

 **WITH CONSULT-II**

1. Replace thermostat with new one. Refer to [CO-11, "THERMOSTAT AND THERMOSTAT HOUSING"](#) . Use only a genuine NISSAN thermostat as a replacement. If an incorrect thermostat is used, the MIL may come on.
2. Turn ignition switch “ON”.
3. Select “COOLAN TEMP/S” in “DATA MONITOR” mode with CONSULT-II.
4. Check that the “COOLAN TEMP/S” is above 68°C (154°F).  
If it is below 68°C (154°F), go to following step.  
If it is above 68°C (154°F), stop engine and cool down the engine to less than 60°C (140°F), then retry from step 1.
5. Drive vehicle for 10 consecutive minutes under the following conditions.

VHCL SPEED SE	80 - 120 km/h (50 - 75 MPH)
---------------	-----------------------------

If 1st trip DTC is detected, go to [EC-778, "Diagnostic Procedure"](#) .

 **WITH GST**

1. Follow the procedure “WITH CONSULT-II” above.

**Diagnostic Procedure**

UBS001TS

**1. CHECK ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [EC-779, "Component Inspection"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> Replace engine coolant temperature sensor.

# DTC P0128 THERMOSTAT FUNCTION

[QG18DE (SULEV)]

UBS00611

## Component Inspection ENGINE COOLANT TEMPERATURE SENSOR

Check resistance as shown in the figure.

### <Reference data>

Temperature °C (°F)	Resistance kΩ
20 (68)	2.1 - 2.9
50 (122)	0.68 - 1.0
90 (194)	0.236 - 0.260

If NG, replace engine coolant temperature sensor.

UBS001TT

## Removal and Installation ENGINE COOLANT TEMPERATURE SENSOR

Refer to [CO-11, "THERMOSTAT AND THERMOSTAT HOUSING"](#).

**DTC P0138 HO2S2**

**Component Description**

UBS0068F

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0068G

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly 0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS0068H

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of rear heated oxygen sensor 2, ECM monitors whether the or not the voltage is too high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0138 0138 (Bank 1)	Heated oxygen sensor 2 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> </ul>

**DTC Confirmation Procedure****CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for two minutes.
6. If 1st trip DTC is detected, go to [EC-783, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-802](#).
- No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**5. CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-785, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

**6. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
HEATED OXYGEN SENSOR 2**

UBS0068L

**With CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.70V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.18V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed at between 3,500 to 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.70V at least once during this procedure.**  
**If the voltage is above 0.70V at step 6, step 7 is not necessary.**
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd" gear position (M/T).  
**The voltage should be below 0.18V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 2**

Refer to [EX-3, "EXHAUST SYSTEM"](#) .

UBS0068M

**DTC P0139 HO2S2**

**Component Description**

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	LEAN ↔ RICH

**On Board Diagnosis Logic**

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0139 0139	Heated oxygen sensor 2 circuit slow response	It takes more time for the sensor to respond between rich and lean than the specified time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

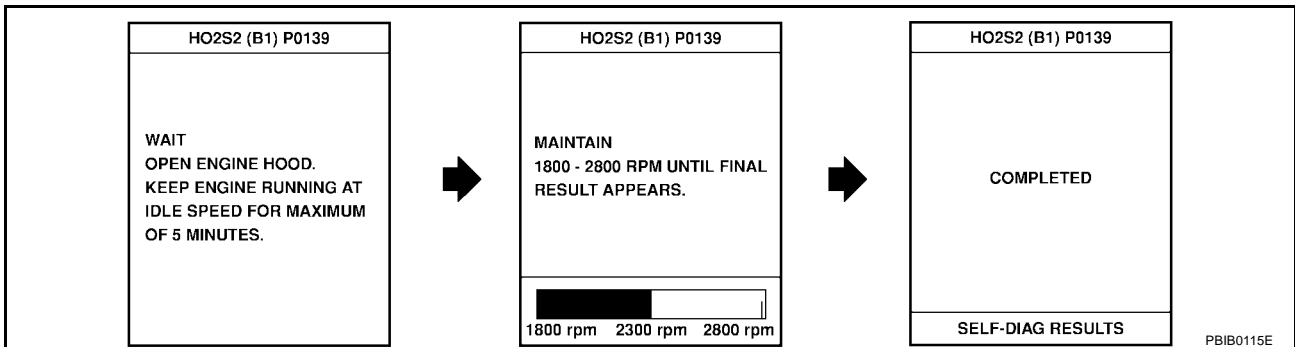

For the best results, perform “DTC WORK SUPPORT” at a temperature of 0 to 30°C (32 to 86°F)

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

SEF189Y

5. Select “HO2S2 (B1) P0139” of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.  
 If “NG” is displayed, refer to [EC-791](#).  
 If “CAN NOT BE DIAGNOSED” is displayed, perform the following.
  - a. Turn ignition switch “OFF” and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch “ON” and select “COOLANTEMP/S” in “DATA MONITOR” mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring “COOLANTEMP/S” indication on CONSULT-II.
  - d. When “COOLANTEMP/S” indication reaches to 70°C (158°F), go to step 3.

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.

## DTC P0139 HO2S2

[QG18DE (SULEV)]

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
(Depress and release accelerator pedal as soon as possible.)  
**A change of voltage should be more than 0.06V for 1 second during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd" gear position (M/T).  
**A change of voltage should be more than 0.06V for 1 second during this procedure.**
8. If NG, go to [EC-791, "Diagnostic Procedure"](#) .

**Diagnostic Procedure**

UBS0068T

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171 or P0172. Refer to [EC-795](#) or [EC-802](#).
- No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**5. CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-793, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

**6. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
HEATED OXYGEN SENSOR 2**

UBS0068U

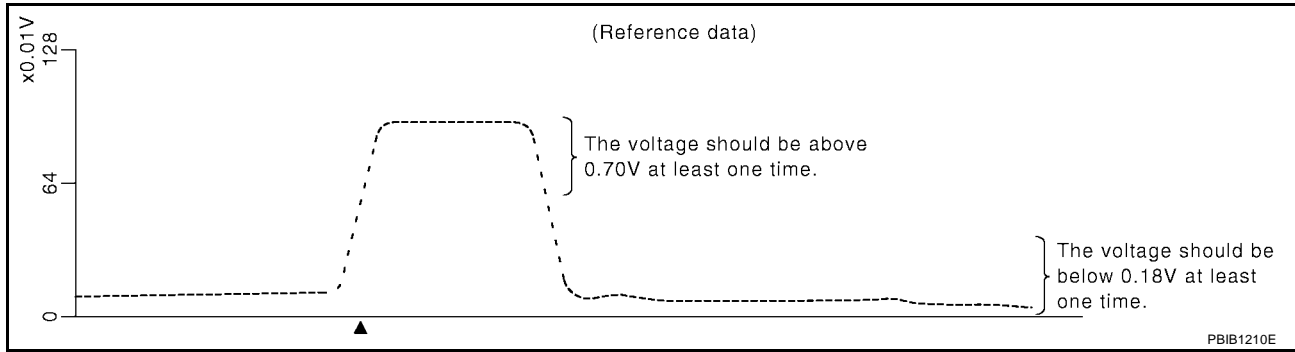

**With CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.70V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.18V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.70V at least once during this procedure.**  
**If the voltage is above 0.70V at step 6, step 7 is not necessary.**
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in 3rd gear position.  
**The voltage should be below 0.18V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

# DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

PF16600

### On Board Diagnosis Logic

UBS001UU

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the air fuel ratio (A/F) sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection & mixture ratio control	Injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P0171 0171	Fuel injection system too learn	<ul style="list-style-type: none"> <li>Fuel injection system does not operate properly.</li> <li>The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.)</li> </ul>	<ul style="list-style-type: none"> <li>Intake air leaks</li> <li>Air fuel ratio (A/F) sensor 1</li> <li>Injectors</li> <li>Exhaust gas leaks</li> <li>Incorrect fuel pressure</li> <li>Lack of fuel</li> <li>Mass air flow sensor</li> <li>Incorrect PCV hose connection</li> </ul>

### DTC Confirmation Procedure

UBS001UV

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### Ⓟ WITH CONSULT-II

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- Clear the self-learning control coefficient by touching "CLEAR".
- Select "DATA MONITOR" mode with CONSULT-II.

WORK SUPPORT	
SELF-LEARNING CONT	B1 100%
CLEAR

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

6. Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-798, "Diagnostic Procedure"](#).
7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction.
8. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-798, "Diagnostic Procedure"](#). If engine does not start, visually check for exhaust and intake air leak.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 3 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 7" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and run it for at least 10 minutes at idle speed.
8. Select "MODE 7" with GST. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-798, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 8, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-798, "Diagnostic Procedure"](#). If engine does not start, visually check for exhaust and intake air leak.

## Diagnostic Procedure

### 1. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (manifold).

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace.

### 2. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Listen for an intake air leak after the mass air flow sensor.
2. Check PCV hose connection.

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace.

### 3. CHECK AIR FUEL RATIO (A/F) SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect A/F sensor 1 harness connector and ECM harness connector.
3. Check harness continuity between ECM terminals and A/F sensor 1 terminals as follows. Refer to Wiring Diagram.

ECM terminal	A/F sensor 1
16	1
35	5
56	6
75	2

**Continuity should exist.**

4. Check harness continuity between ECM terminals 16, 35, 56, 75 and ground, or A/F sensor 1 terminals 1, 2, 5, 6 and ground. Refer to Wiring Diagram.

**Continuity should not exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK FUEL PRESSURE**

1. Release fuel pressure to zero.  
Refer to [EC-638](#) .
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-637, "Fuel Pressure Check"](#) .

**At idling: 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Fuel pump and circuit Refer to [EC-1174](#) .
- Fuel lines. Refer to [MA-19, "Checking Fuel Lines"](#) .
- Fuel filter for clogging

OK or NG

OK >> Replace fuel pressure regulator.

NG >> Repair or replace.

**6. CHECK MASS AIR FLOW SENSOR**

 **With CONSULT-II**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**at idling: 1.4 - 4.0 g-m/sec**  
**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**at idling: 1.4 - 4.0 g-m/sec**  
**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

OK or NG

OK >> GO TO 7.

NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-740](#) .

## 7. CHECK FUNCTION OF INJECTORS

### With CONSULT-II

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

### Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.  
**Clicking noise should be heard.**

### OK or NG

- OK >> GO TO 8.
- NG >> Perform trouble diagnosis for [EC-1168, "INJECTOR"](#).

## 8. REMOVE INJECTOR

1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
2. Turn ignition switch "OFF".
3. Remove injector with fuel tube assembly. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#). Keep fuel hose and all injectors connected to injector gallery. The injector harness connectors should remain connected.

>> GO TO 9.

# DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

## 9. CHECK INJECTOR

1. Disconnect all ignition wires.
2. Place pans or saucers under each injector.
3. Crank engine for about 3 seconds. Make sure that fuel sprays out from injectors.

**Fuel should be sprayed evenly for each cylinder.**

### OK or NG

OK >> GO TO 10.

NG >> Replace injectors from which fuel does not spray out.  
Always replace O-ring with new one.

## 10. CHECK INTERMITTENT INCIDENT

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

### DTC Confirmation Procedure

UBS001UZ

#### NOTE:

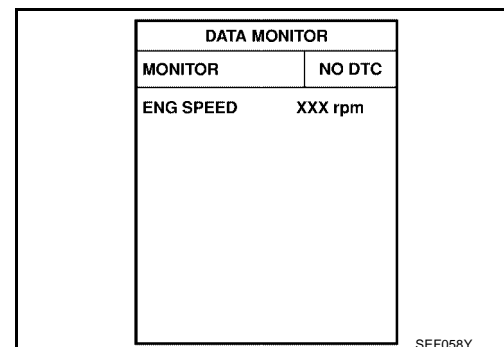

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- Clear the self-learning control coefficient by touching "CLEAR" or "START".
- Select "DATA MONITOR" mode with CONSULT-II.

- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-805, "Diagnostic Procedure"](#).
- If it is difficult to start engine at step 6, the fuel injection system has a malfunction.
- Crank engine while depressing accelerator pedal. If engine starts, go to [EC-805, "Diagnostic Procedure"](#). If engine does not start, remove ignition plugs and check for fouling, etc.

# DTC P0172 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

## WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 3 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 7" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and run it for at least 10 minutes at idle speed.
8. Select "MODE 7" with GST. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-805, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 8, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal.  
If engine starts, go to [EC-805, "Diagnostic Procedure"](#). If engine does not start, remove ignition plugs and check for fouling, etc.

## Wiring Diagram

EC-FUEL-01

BBWA0799E

### Diagnostic Procedure

#### 1. CHECK FOR EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (manifold).

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace.

#### 2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect A/F sensor 1 harness connector and ECM harness connector.
3. Check harness continuity between ECM terminals and A/F sensor 1 terminals as follows. Refer to Wiring Diagram.

ECM terminal	A/F sensor 1
16	1
35	5
56	6
75	2

**Continuity should exist.**

4. Check harness continuity between ECM terminals 16, 35, 56, 75 and ground, or A/F sensor 1 terminals 1, 2, 5, 6 and ground. Refer to Wiring Diagram.

**Continuity should not exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 3.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 3. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-637](#).
2. Install fuel pressure gauge and check fuel pressure.

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

---

#### 4. DETECT MALFUNCTIONING PART

---

Check the following.

- Fuel pump and circuit (Refer to [EC-1174](#) .)

OK or NG

- OK >> Replace fuel pressure regulator.  
NG >> Repair or replace.

---

#### 5. CHECK MASS AIR FLOW SENSOR

---

 **With CONSULT-II**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**at idling : 1.4 - 4.0 g-m/sec**  
**at 2,500 rpm : 5.0 - 10.0 g-m/sec**

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**at idling : 1.4 - 4.0 g-m/sec**  
**at 2,500 rpm : 5.0 - 10.0 g-m/sec**

OK or NG

- OK >> GO TO 6.  
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-740](#) .

# DTC P0172 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

## 6. CHECK FUNCTION OF INJECTORS

### With CONSULT-II

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

### Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.  
**Clicking noise should be heard.**

### OK or NG

- OK >> GO TO 7.
- NG >> Perform trouble diagnosis for "Injector", [EC-1168](#).

## 7. REMOVE INJECTOR

1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
2. Turn ignition switch "OFF".
3. Remove injector assembly. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#).  
Keep fuel hose and all injectors connected to injector gallery.

>> GO TO 8.

## 8. CHECK INJECTOR

1. Disconnect all injector harness connectors.
2. Disconnect all ignition coil harness connectors.
3. Prepare pans or saucers under each injectors.
4. Crank engine for about 3 seconds.  
Make sure fuel does not drip from injector.

### OK or NG

- OK (Does not drip)>>GO TO 9.
- NG (Drips)>>Replace the injectors from which fuel is dripping. Always replace O-ring with new one.

## DTC P0172 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (SULEV)]

---

### 9. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### DTC P0181 FTT SENSOR

#### Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

#### <Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

\*: These data are reference values and are measured between ECM terminal 107 (Fuel tank temperature sensor) and ground.

#### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may damage the ECM's transistor. Use ground other than ECM, such as body ground.**

#### On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0181 0181	Fuel tank temperature sensor circuit range/performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel tank temperature sensor</li> </ul>

#### DTC Confirmation Procedure

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 10 seconds.  
If 1st trip DTC is detected, go to .  
If the result is OK, go to following step.
4. Check "COOLAN TEMP/S" signal.  
If the signal is less than 60°C (140°F), the result will be OK.  
If the signal is above 60°C (140°F), go to the following step.
5. Cool engine down until "COOLAN TEMP/S" signal is less than 60°C (140°F).
6. Wait at least 10 seconds.
7. If 1st trip DTC is detected, go to [EC-812. "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	DTC

## Diagnostic Procedure

### 1. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Turn ignition switch "ON".

4. Check voltage between fuel level sensor unit and fuel pump terminal 4 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness connectors B3, M16
- Harness for open or short between ECM and fuel level sensor unit and fuel pump

>> Repair harness or connector.

### 3. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between fuel level sensor unit and fuel pump terminal 5 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to power in harness or connectors.

### 4. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to, [EC-813, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel level sensor unit.

**5. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

DTC P0222, P0223 TP SENSOR

Component Description

UBS003WN

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

UBS003WO

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> <li>Shift lever D: (A/T model) 1st: (M/T model)</li> </ul>	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

\*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS003WP

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The TP sensor 1 circuit is open or shorted.) (APP sensor 2 circuit is shorted.)</li> <li>Electric throttle control actuator (TP sensor 1)</li> <li>Accelerator pedal position sensor (APP sensor 2)</li> </ul>
P0223 0223	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-821, "Diagnostic Procedure"](#) .

# DTC P0222, P0223 TP SENSOR

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	B	Sensor power supply (Throttle position sensor)	[Ignition switch "ON"]	Approximately 5V
50	W	Throttle position sensor 1	[Ignition switch "ON"]	More than 0.36V
			[Ignition switch "ON"]	Less than 4.75V
66	R	Sensor ground (Throttle position sensor)	[Engine is running]	Approximately 0V
69	G	Throttle position sensor 2	[Ignition switch "ON"]	Less than 4.75V
			[Ignition switch "ON"]	More than 0.36V
91	R/G	Sensor power supply (Accelerator pedal position sensor)	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-I

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch "ON".

3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 3.

## 3. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-II

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 1 and ECM terminal 47. Refer to Wiring Diagram.

**Continuity should exist.**

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace open circuit.

## 4. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-III

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
47	Electric throttle control actuator terminal 1	<a href="#">EC-262</a>
91	APP sensor terminal 1	<a href="#">EC-513</a>

OK or NG

- OK >> GO TO 5.  
 NG >> Repair short to ground or short to power in harness or connectors.

## 5. CHECK APP SENSOR

Refer to [EC-517](#) .

OK or NG

- OK >> GO TO 11.  
 NG >> GO TO 6.

**6. REPLACE ACCELERATOR PEDAL ASSEMBLY**

1. Replace accelerator pedal assembly.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-53, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**7. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 50 and electric throttle control actuator terminal 4. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK THROTTLE POSITION SENSOR**

Refer to [EC-824, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> GO TO 10.

**10. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**11. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**THROTTLE POSITION SENSOR**

1. Reconnect all harness connectors disconnected.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Turn ignition switch "ON".
4. Set selector lever to "D" position (A/T models) or "1st" position (M/T models).
5. Check voltage between ECM terminals 50 (TP sensor 1 signal), 69 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
50 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
69 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
8. Perform [EC-635, "Idle Air Volume Learning"](#) .

**Removal and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "OUTER COMPONENT PARTS"](#) .

# DTC P0300 - P0304 NO. 4 - 1 CYLINDER MISFIRE, MULTIPLE CYLINDER MISFIRE

[QG18DE (SULEV)]

## DTC P0300 - P0304 NO. 4 - 1 CYLINDER MISFIRE, MULTIPLE CYLINDER MISFIRE

PF0:00020

### On Board Diagnosis Logic

UBS001VI

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire

The misfire detection logic consists of the following two conditions.

- One Trip Detection Logic (Three Way Catalyst Damage)**  
 On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.  
 When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.  
 If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on.  
 If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
- Two Trip Detection Logic (Exhaust quality deterioration)**  
 For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.  
 A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	<ul style="list-style-type: none"> <li>● Improper spark plug</li> <li>● Insufficient compression</li> </ul>
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	<ul style="list-style-type: none"> <li>● Incorrect fuel pressure</li> <li>● The injector circuit is open or shorted</li> </ul>
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	<ul style="list-style-type: none"> <li>● Injectors</li> <li>● Intake air leak</li> </ul>
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	<ul style="list-style-type: none"> <li>● The ignition signal circuit is open or shorted</li> </ul>
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	<ul style="list-style-type: none"> <li>● Lack of fuel</li> <li>● Drive plate</li> <li>● Air fuel ratio (A/F) sensor 1</li> <li>● Incorrect PCV hose connection</li> </ul>

## DTC Confirmation Procedure

### CAUTION:

Always drive vehicle at a safe speed.

### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### ② WITH CONSULT-II

1. Turn ignition switch "ON", and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine again and drive at 1,500 to 3,000 rpm for at least 3 minutes.

**Hold the accelerator pedal as steady as possible.**

### NOTE:

**Refer to the freeze frame data for the test driving conditions.**

5. If 1st trip DTC is detected, go to [EC-826, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

PBIB0164E

### ③ WITH GST

Follow the procedure "With CONSULT-II" above.

## Diagnostic Procedure

### 1. CHECK FOR INTAKE AIR LEAK

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

#### OK or NG

- OK >> GO TO 2.  
 NG >> Discover air leak location and repair.

### 2. CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, TWC (Manifold three way catalyst) and muffler for dents.

#### OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace it.

### 3. PERFORM POWER BALANCE TEST

 **With CONSULT-II**

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
2. Is there any cylinder which does not produce a momentary engine speed drop?

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

 **Without CONSULT-II**

When disconnecting each injector harness connector one at a time, is there any cylinder which does not produce a momentary engine speed drop?

Yes or No

- Yes >> GO TO 4.
- No >> GO TO 7.

### 4. CHECK INJECTOR

Does each injector make an operating sound at idle?

Yes or No

- Yes >> GO TO 5.
- No >> Check injector(s) and circuit(s). Refer to [EC-1168](#).

## 5. CHECK IGNITION SPARK

1. Remove ignition coil assembly from rocker cover.
2. Remove spark plug from ignition coil assembly.
3. Connect a known good spark plug to ignition coil.
4. Place end of spark plug against a suitable ground crank engine.
5. Check for spark.

### OK or NG

- OK >> GO TO 6.  
NG >> Check ignition coil, power transistor and their circuits.  
Refer to [EC-1156, "IGNITION SIGNAL"](#) .

## 6. CHECK SPARK PLUGS

Check the spark plugs and check for fouling, etc.

### OK or NG

- OK >> GO TO 7.  
NG >> Repair or replace spark plug (s) with standard type one (s). For spark plug type ignition coil. Refer to [EM-12](#) .

## 7. CHECK COMPRESSION PRESSURE

Refer to [EM-52, "CHECKING COMPRESSION PRESSURE"](#) .

Check compression pressure.

<b>Standard:</b>	<b>1,324 kPa (13.5 kg/cm<sup>2</sup> , 192 psi)/300 rpm</b>
<b>Minimum:</b>	<b>1,128 kPa (11.5 kg/cm<sup>2</sup> , 164 psi)/300 rpm</b>
<b>Difference between each cylinder:</b>	<b>98 kPa (1.0 kg/cm<sup>2</sup> , 14 psi)/300 rpm</b>

### OK or NG

- OK >> GO TO 8.  
NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

## 8. CHECK FUEL PRESSURE

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to [EC-637, "FUEL PRESSURE RELEASE"](#) .
3. Install fuel pressure gauge and check fuel pressure.

**At idle: Approx. 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 9.

## 9. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit (Refer to [EC-1174, "FUEL PUMP"](#) .)
- Fuel pressure regulator (Refer to [FL-3](#) .)
- Fuel lines (Refer to [MA-19, "Checking Fuel Lines"](#) .)
- Fuel filter for clogging

>> Repair or replace.

## 10. CHECK IGNITION TIMING

Perform [EC-669, "Basic Inspection"](#) .

Items	Specifications	
	Target idle speed	A/T
M/T		650 ± 50 rpm
Ignition timing	A/T	18 ± 5°BTDC (in "P" or "N" position)
	M/T	7 ± 5°BTDC

OK or NG

- OK >> GO TO 11.  
 NG >> Adjust ignition timing.

## 11. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector and A/F sensor 1 harness connector.
3. Check harness continuity between the following terminals. Refer to "Wiring Diagram".

ECM terminal	A/F sensor 1 terminal
16	1
35	5
56	6
75	2

**Continuity should exist.**

4. Check harness continuity between ECM terminals 16, 35, 56, 75 or A/F sensor 1 terminals 1, 2, 5, 6 and ground. Refer to Wiring Diagram.

**Continuity should not exist.**

5. Also check harness for short to power.

OK or NG

OK >> GO TO 12.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK A/F SENSOR 1 HEATER

Refer to [EC-935, "Component Inspection"](#).

OK or NG

OK >> GO TO 13.

NG >> Replace A/F sensor 1.

## 13. CHECK MASS AIR FLOW SENSOR

**With CONSULT-II**

Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**at idling: 1.4 - 4.0 g-m/sec**

**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

**With GST**

Check mass air flow sensor signal in MODE 1 with GST.

**at idling: 1.4 - 4.0 g-m/sec**

**at 2,500 rpm: 5.0 - 10.0 g-m/sec**

OK or NG

OK >> GO TO 15.

NG >> GO TO 14.

## 14. CHECK CONNECTORS

Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds.

Refer to [EC-740, "DTC P0101 MAF SENSOR"](#), [EC-748, "DTC P0102, P0103 MAF SENSOR"](#) and [EC-940, "DTC P1102 MAF SENSOR"](#).

OK or NG

OK >> GO TO 15.

NG >> Repair or replace it.

---

## 15. CHECK SYMPTOM MATRIX CHART

---

Check items on the rough idle symptom in [EC-674, "Symptom Matrix Chart"](#) .

OK or NG

OK >> GO TO 16.

NG >> Repair or replace.

---

## 16. ERASE THE 1ST TRIP DTC

---

Some tests may cause a 1st trip DTC to be set.

Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

>> GO TO 17.

---

## 17. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**DTC P0327, P0328 KS**

**Component Description**

UBS001VL

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

SEF598K

**On Board Diagnosis Logic**

UBS001VM

The MIL will not light up for these diagnoses.

DTC No.	Trouble Diagnosis Name	DTC Detected Condition	Possible Cause
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Knock sensor</li> </ul>
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

**DTC Confirmation Procedure**

UBS001VN

**NOTE:**

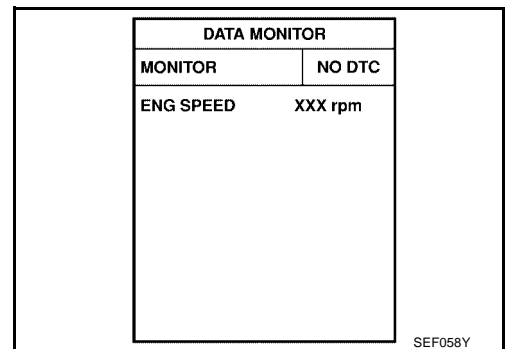

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to [EC-834, "Diagnostic Procedure"](#)

SEF058Y

**WITH GST**

Follow the procedure "With CONSULT-II" above.

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

>> INSPECTION END

#### Component Inspection KNOCK SENSOR

UBS001VQ

Use an ohmmeter which can measure more than 10 MΩ.

1. Disconnect knock sensor harness connector.
2. Check resistance between terminal 1 and ground.

**Resistance: 530 - 590 kΩ [at 20°C (68°F)]**

#### CAUTION:

Discard any knock sensors that have been dropped or physically damaged. Use only new ones.

UBS001VR

#### Removal and Installation KNOCK SENSOR

Refer to [EM-67, "CYLINDER BLOCK"](#).

**DTC P0335 CKP SENSOR (POS)**

**Component Description**

UBS001VS

The crankshaft position sensor (POS) is located on the cylinder block rear housing facing the gear teeth (cogs) of the signal plate at the end of the crankshaft. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

PBIB0562E

UBS001VW

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK POWER SUPPLY

1. Disconnect crankshaft position (CKP) sensor (POS) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between CKP sensor (POS) harness connector terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open and short between ECM and crankshaft position sensor (POS)
- Harness for open or short between ECM relay and crankshaft position sensor (POS)

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between CKP sensor (POS) terminal 1 and engine ground. Refer to the wiring diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 5.  
NG >> Repair open circuit or short to power in harness or connectors.

## 5. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 13 and CKP sensor (POS) terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK CRANKSHAFT POSITION SENSOR (POS)**

Refer to [EC-841, "Component Inspection"](#) .

## DTC P0340 CMP SENSOR (PHASE)

### Component Description

UBS001VZ

The camshaft position sensor (PHASE) senses the retraction with intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position. When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

PBIB0562E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS001W3

### 1. CHECK STARTING SYSTEM

Turn ignition switch to "START" position.

**Does the engine turn over?**

**Does the starter motor operate?**

Yes or No

Yes >> GO TO 2.

No >> Check starting system. (Refer to [SC-9, "STARTING SYSTEM"](#) .)

### 2. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 3.

### 3. CHECK CMP SENSOR (PHASE) POWER SUPPLY CIRCUIT

1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between CMP sensor (PHASE) terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between camshaft position sensor (PHASE) and ECM relay
- Harness for open or short between camshaft position sensor (PHASE) and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 5. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between (CMP) sensor (PHASE) terminal 1 and engine ground. Refer to the wiring diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 6.  
NG >> Repair open circuit or short to power in harness or connectors.

### 6. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between CMP sensor (PHASE) terminal 2 and ECM terminal 14. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-847, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace camshaft position sensor (PHASE).

## 8. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

- OK >> GO TO 9.
- NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

## 9. CHECK INTERMITTENT INCIDENT

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**CAMSHAFT POSITION SENSOR (PHASE)**

1. Loosen the fixing bolt of the sensor.
2. Disconnect camshaft position sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

PBIB0563E

5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance $\Omega$ [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or $\infty$
3 (+) - 2 (-)	
2 (+) - 1 (-)

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (SULEV)]

## DTC P0420 THREE WAY CATALYST FUNCTION

PF2:20905

### On Board Diagnosis Logic

UBS001WZ

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2.

A three way catalyst (manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst (manifold) malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420	Catalyst system efficiency below threshold	<ul style="list-style-type: none"> <li>• Three way catalyst 1 does not operate properly.</li> <li>• Three way catalyst 1 does not have enough oxygen storage capacity.</li> </ul>	<ul style="list-style-type: none"> <li>• Three way catalyst (manifold)</li> <li>• Exhaust tube</li> <li>• Intake air leaks</li> <li>• Fuel injectors</li> <li>• Fuel injector leaks</li> <li>• Spark plug</li> <li>• Improper ignition timing</li> </ul>

### DTC Confirmation Procedure

UBS001X0

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### Ⓟ WITH CONSULT-II

#### TESTING CONDITION:

**Do not hold engine speed for more than the specified minutes below.**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minute.
6. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
7. Open engine hood.

SELF DIAG RESULTS	
DTC RESULTS	TIME
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	

SEF535Z

## Overall Function Check

UBS001X1

Use this procedure to check the overall function of the three way catalyst (manifold). During this check, a 1st trip DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Open engine hood.
6. Set voltmeter probe between ECM terminal 74 and ground.
7. Keep engine speed at 2,500 rpm constant under no load.
8. Make sure that the voltage does not vary for more than 5 seconds.

If the voltage fluctuation cycle takes less than 5 seconds, go to [EC-850, "Diagnostic Procedure"](#).

- 1 cycle: 0.6 - 1.0 V → 0 - 0.3 V → 0.6 - 1.0 V

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (SULEV)]

UBS001X2

## Diagnostic Procedure

### 1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dent.

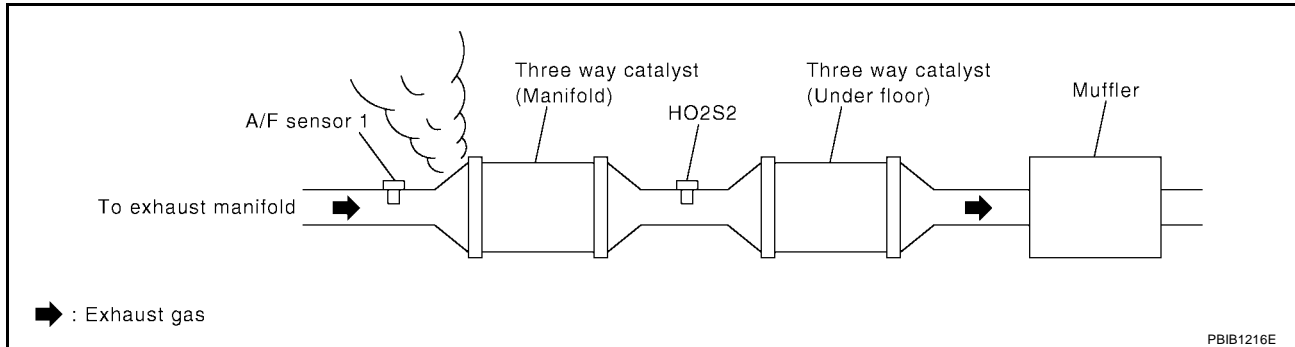

OK or NG

OK >> GO TO 2.

NG >> Repair or replace.

### 2. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before the three way catalyst (manifold).

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

### 3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 4.

NG >> Repair or replace.

### 4. CHECK IGNITION TIMING

Check for ignition timing. Refer to [EC-669, "Basic Inspection"](#).

Items	Specifications	
Target idle speed	A/T	800 ± 50 rpm (in "P" or "N" position)
	M/T	650 ± 50 rpm
Ignition timing	A/T	18 ± 5°BTDC (in "P" or "N" position)
	M/T	7 ± 5°BTDC

OK or NG

OK >> GO TO 5.

NG >> Follow the "Basic Inspection".

# DTC P0420 THREE WAY CATALYST FUNCTION

[QG18DE (SULEV)]

## 5. CHECK INJECTORS

1. Refer to Wiring Diagram for Injectors, [EC-1169](#) .
2. Stop engine and then turn ignition switch "ON".
3. Check voltage between ECM terminals 22, 23, 41, 42 and ground with CONSULT-II or tester.

**Battery voltage should exist.**

OK or NG

OK >> GO TO 6.

NG >> Perform "Diagnostic Procedure" INJECTOR, [EC-1169](#) .

## 6. CHECK IGNITION SPARK

1. Turn ignition switch "OFF".
2. Disconnect ignition coil assembly from rocker cover.
3. Connect a known-good spark plug to the ignition coil assembly.
4. Place end of spark plug against a suitable ground and crank engine.
5. Check for spark.

OK or NG

OK >> GO TO 7.

NG >> Check ignition coil with power transistor and their circuit.

## 7. CHECK INJECTOR

1. Turn ignition switch "OFF".
2. Remove injector assembly. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#) . Keep fuel hose and all injectors connected to injector gallery.
3. Disconnect ignition coil assembly harness connector.
4. Turn ignition switch "ON". Make sure fuel does not drip from injector.

OK or NG

OK (Does not drip)>>GO TO 8.

NG (Drips)>>Replace the injector(s) from which fuel is dripping.

## 8. CHECK INTERMITTENT INCIDENT

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

Trouble is fixed>>**INSPECTION END**

Trouble is not fixed>>Replace three way catalyst (manifold).

DTC P0441 EVAP CONTROL SYSTEM

PF1:14950

System Description

UBS001X3

NOTE:

If DTC P0441 is displayed with other DTC such as P2122, P2123 P2127, P2128, P2138, first perform trouble diagnosis for other DTC.

PBIB1209E

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

UBS001X4

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a malfunction is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0441 0441	EVAP control system incorrect purge flow	EVAP control system does not operate properly, EVAP control system has a leak between intake manifold and EVAP control system pressure sensor.	<ul style="list-style-type: none"> <li>● EVAP canister purge volume control solenoid valve stuck closed</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Loose, disconnected or improper connection of rubber tube</li> <li>● Blocked rubber tube</li> <li>● Cracked EVAP canister</li> <li>● EVAP canister purge volume control solenoid valve circuit</li> <li>● Accelerator pedal position sensor</li> <li>● Blocked purge port</li> <li>● EVAP canister vent control valve</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Always perform test at a temperature of 0°C (32°F) or more.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Start engine and let it idle for at least 70 seconds.
4. Select “PURG FLOW P0441” of “EVAPORATIVE SYSTEM” in “DTC CONFIRMATION” mode with CONSULT-II.
5. Touch “START”.  
If “COMPLETED” is displayed, go to step 7.
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take at least 35 seconds.)

Selector lever	Suitable position
Vehicle speed	32 - 120 km/h (20 - 75 MPH)
ENG SPEED	500 - 3,800 rpm
B/FUEL SCHDL	1.0 - 8.2 msec
Engine coolant temperature	More than 70°C (158°F)

If “TESTING” is not changed for a long time, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to [EC-854, "Diagnostic Procedure"](#).

**Overall Function Check**

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a 1st trip DTC might not be confirmed.

**WITH GST**

1. Lift up drive wheels.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch “OFF”, wait at least 10 seconds.
4. Start engine and wait at least 70 seconds.

# DTC P0441 EVAP CONTROL SYSTEM

[QG18DE (SULEV)]

5. Set voltmeter probes to ECM terminals 32 (EVAP control system pressure sensor signal) and ground.
6. Check EVAP control system pressure sensor value at idle speed and note it.
7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Gear position	Any position other than "P", "N" or "R"

8. Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (measured at step 6) for at least 1 second.
9. If NG, go to [EC-854, "Diagnostic Procedure"](#).

## Diagnostic Procedure

UBS001X8

### 1. CHECK EVAP CANISTER

1. Turn ignition switch "OFF".
2. Check EVAP canister for cracks.

#### OK or NG

- OK (With CONSULT-II)>>GO TO 2.
- OK (Without CONSULT-II)>>GO TO 3.
- NG >> Replace EVAP canister.

### 2. CHECK PURGE FLOW

#### With CONSULT-II

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
2. Start engine and let it idle.
3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II.
4. Rev engine up to 2,000 rpm.

5. Touch "Qd" and "Qu" on CONSULT-II screen to adjust "PURG VOL CONT/V" opening and check vacuum existence.

PURG VOL CONT/V	VACUUM
100.0%	Should exist.
0.0%	should not exist.

#### OK or NG

- OK >> GO TO 7.
- NG >> GO TO 4.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X.XX V

PBIB0721E

### 3. CHECK PURGE FLOW

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum gauge indication when revving engine up to 2,000 rpm.

**Vacuum should exist.**

6. Release the accelerator pedal fully and let idle.

**Vacuum should not exist.**

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 4.

### 4. CHECK EVAP PURGE LINE

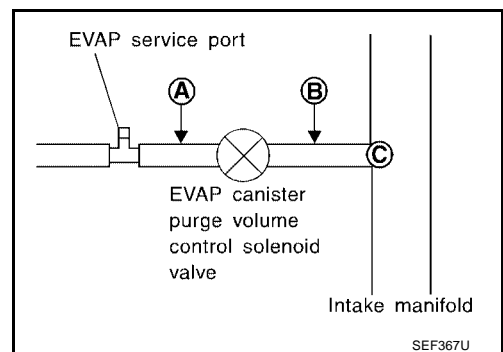

1. Turn ignition switch "OFF".
2. Check EVAP purge line for improper connection or disconnection. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK >> GO TO 5.
- NG >> Repair it.

### 5. CHECK EVAP PURGE HOSE AND PURGE PORT

1. Disconnect purge hoses connected to EVAP service port **A** and EVAP canister purge volume control solenoid valve **B**.
2. Blow air into each hose and EVAP purge port **C**.

3. Check that air flows freely.

OK or NG

- OK (With CONSULT-II)>>GO TO 6.
- OK (Without CONSULT-II)>>GO TO 7.
- NG >> Repair or clean hoses and/or purge port.

**6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

**With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X.XX V

PBIB0721E

**7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-867](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace EVAP canister purge volume control solenoid valve.

**8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR**

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

OK or NG

- OK >> GO TO 9.
- NG >> Replace EVAP control system pressure sensor.

**9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR FUNCTION**

Refer to "DTC Confirmation Procedure" for DTC P0452, [EC-880](#) P0453, [EC-886](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace EVAP control system pressure sensor.

**10. CHECK RUBBER TUBE FOR CLOGGING**

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 11.
- NG >> Clean the rubber tube using an air blower.

**11. CHECK EVAP CANISTER VENT CONTROL VALVE**

Refer to [EC-878](#) .

OK or NG

- OK >> GO TO 12.
- NG >> Replace EVAP canister vent control valve.

---

**12. CHECK EVAP PURGE LINE**

---

Inspect EVAP purge line (pipe and rubber tube). Check for evidence of leaks.  
Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

- OK >> GO TO 13.
- NG >> Replace it.

---

**13. CLEAN EVAP PURGE LINE**

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 14.

---

**14. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

DTC P0442 EVAP CONTROL SYSTEM

PF14950

On Board Diagnosis Logic

UBS001X9

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum. If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following "Vacuum test" conditions. The EVAP canister vent control valve is closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve will then be opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

PBIB1209E

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0442 0442	EVAP control system small leak detected (negative pressure)	EVAP control system has a leak, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Fuel level sensor and the circuit</li> <li>● Refueling EVAP vapor cut valve</li> <li>● ORVR system leaks</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS001XB

**NOTE:**

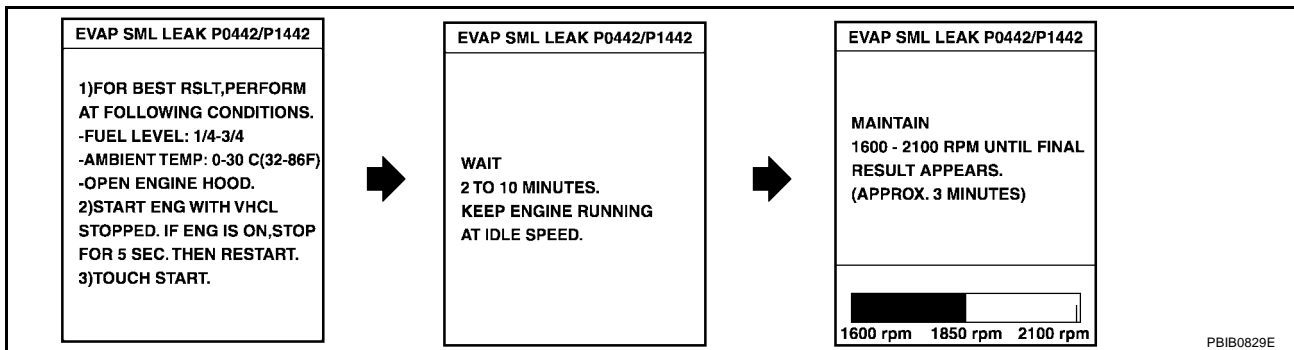

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Perform “DTC WORK SUPPORT” when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Always perform test at a temperature of 0 to 30°C (32 to 86°F).
- Open engine hood before conducting following procedure.

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “DATA MONITOR” mode with CONSULT-II.
4. Check the following conditions are met.  
**COOLAN TEMP/S: 0 - 70°C (32 - 158°F)**  
**INT/A TEMP SE: 0 - 60°C (32 - 140°F)**
5. Select “EVAP SML LEAK P0442/P1442” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-II.  
 Follow the instruction displayed.

**NOTE:**

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-669, "Basic Inspection"](#).

6. Make sure that “OK” is displayed.  
 If “NG” is displayed, refer to [EC-860, "Diagnostic Procedure"](#).

**NOTE:**

**Make sure that EVAP hoses are connected to the EVAP canister purge volume control solenoid valve properly.**

**WITH GST**

**NOTE:**

Be sure to read the explanation of “Driving Pattern” on [EC-649](#) before driving vehicle.

1. Start engine.

2. Drive vehicle according to “Driving Pattern”, [EC-649](#) .
3. Stop vehicle.
4. Select “MODE 1” with GST.
  - If SRT of EVAP system is not set yet, go to the following step.
  - If SRT of EVAP system is set, the result will be OK.
5. Turn ignition switch “OFF” and wait at least 10 seconds.
6. Start engine.  
**It is not necessary to cool engine down before driving.**
7. Drive vehicle again according to the “Driving Pattern”, [EC-649](#) .
8. Stop vehicle.
9. Select “MODE 3” with GST.
  - If P0442 is displayed on the screen, go to [EC-860, "Diagnostic Procedure"](#) .
  - If P0441 is displayed on the screen, go to “Diagnostic Procedure” for DTC P0441, [EC-854](#) .
  - If P0442 and P0441 are not displayed on the screen, go to the following step.
10. Select “MODE 1” with GST.
  - If SRT of EVAP system is set, the result will be OK.
  - If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

UBS001XC

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch “OFF”.
2. Check for genuine NISSAN fuel filler cap design.

#### OK or NG

- OK     >> GO TO 2.  
 NG     >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

#### OK or NG

- OK     >> GO TO 3.  
 NG     >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
           2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

#### OK or NG

- OK     >> GO TO 5.  
 NG     >> GO TO 4.

**4. CHECK FUEL TANK VACUUM RELIEF VALVE**

1. Wipe clean valve housing.
2. Check valve opening pressure and vacuum.

**Pressure:**

**15.3 - 20.0 kPa (0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)**

**Vacuum:**

**-6.0 to -3.3 kPa (-0.061 to -0.035 kg/cm<sup>2</sup> , -0.87 to -0.50 psi)**

**CAUTION:**

**Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.**

**OK or NG**

OK >> GO TO 5.

NG >> Replace fuel filler cap with a genuine one.

## 5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**NOTE:**

Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

Models with CONSULT-II>>GO TO 6.  
Models without CONSULT-II>>GO TO 7.

## 6. CHECK FOR EVAP LEAK

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**7. CHECK FOR EVAP LEAK**

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- **Never use compressed air or a high pressure pump.**
- **Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.**

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace.

**8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT**

Refer to [EC-859, "DTC Confirmation Procedure"](#) .

OK or NG

- OK >> GO TO 9.  
 NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

**9. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 10.  
 No (With CONSULT-II)>>GO TO 12.  
 No (Without CONSULT-II)>>GO TO 13.

## 10. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose connected to EVAP canister for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vuuccum should exist.**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X. XX V

PBIB0726E

## 13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 14.

**14. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

OK >> GO TO 15.

NG >> Repair or reconnect the hose.

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-872, "Component Inspection"](#).

OK or NG

OK >> GO TO 16.

NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-813, "Component Inspection"](#).

OK or NG

OK >> GO TO 17.

NG >> Replace fuel level sensor unit.

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

Refer to [EC-885, "Component Inspection"](#).

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

**18. CHECK EVAP PURGE LINE**

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to [EC-1205, "EVAPORATIVE EMISSION SYSTEM"](#).

OK or NG

OK >> GO TO 19.

NG >> Repair or reconnect the hose.

**19. CLEAN EVAP PURGE LINE**

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

**20. CHECK EVAP/ORVR LINE**

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1212, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#).

OK or NG

OK >> GO TO 21.

NG >> Repair or replace hoses and tubes.

**21. CHECK SIGNAL LINE AND RECIRCULATION LINE**

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses, tubes or filler neck tube.

---

## 22. CHECK REFUELING EVAP VAPOR CUT VALVE

---

Refer to [EC-1215, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling EVAP vapor cut valve with fuel tank.

---

## 23. CHECK FUEL LEVEL SENSOR

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

---

## 24. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[QG18DE (SULEV)]

## DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

### Description SYSTEM DESCRIPTION

UBS001XD

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*2		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Air fuel ratio (A/F) sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Vehicle speed signal*1	Vehicle speed		

\*1: This signal is sent to the ECM through CAN communication line.

\*2: The ECM determines the start signal status by the signal of engine speed and battery voltage.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001XE

Specification data are reference values.

## DTC Confirmation Procedure

*UBS001XH*

### NOTE:

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

**Before performing the following procedure, confirm battery voltage is more than 11V at idle.**

### WITH CONSULT-II

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 13 seconds.
4. If 1st trip DTC is detected, go to [EC-870, "Diagnostic Procedure"](#)

## Diagnostic Procedure

UBS001XJ

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

## 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM relay.

>> Repair harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 45 and EVAP canister purge volume control solenoid valve terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-II)>>GO TO 4.

OK (Without CONSULT-II)>>GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **With CONSULT-II**

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

ACTIVE TEST	
PURG VOL CONT/V	XXX %

## 5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-872, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace EVAP canister purge volume control solenoid valve.

## 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[QG18DE (SULEV)]

UBS006J

## Component Inspection

### EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

#### With CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100.0%	Yes
0.0%	No

#### Without CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

## Removal and Installation

### EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EM-12, "OUTER COMPONENT PARTS"](#).

UBS006K

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

## DTC P0447 EVAP CANISTER VENT CONTROL VALVE

PF14935

### Component Description

UBS001XK

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnoses.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001XL

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

### On Board Diagnosis Logic

## 3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister vent control valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister vent control valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F27, M59
- Harness connectors B1, M4
- Harness for open or short between EVAP canister vent control valve and ECM relay

>> Repair harness or connectors.

## 5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 117 and EVAP canister vent control valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B3, M16
- Harness connectors M59, F27
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 8.

NG >> Clean the rubber tube using an air blower.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-878, "Component Inspection"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace EVAP canister vent control valve.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS00613

#### Ⓟ With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.  
If NG, replace EVAP canister vent control valve.  
If OK, go to next step.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

# DTC P0447 EVAP CANISTER VENT CONTROL VALVE [QG18DE (SULEV)]

5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
6. Check air passage continuity and operation delay time.  
**Make sure new O-ring is installed properly.**

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes

**Operation takes less than 1 second.**

If NG, replace EVAP canister vent control valve.  
If OK, go to next step.

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform step 6 again.

⊗ **Without CONSULT-II**

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X.XX V

PBIB0721E

3. Check air passage continuity and operation delay time under the following conditions.  
**Make sure new O-ring is installed properly.**

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	No
OFF	Yes

**Operation takes less than 1 second.**

If NG, replace EVAP canister vent control valve.  
If OK, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform step 3 again.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (SULEV)]

## DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

PF2:25085

### Component Description

UBS003NR

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003NS

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

### On Board Diagnosis Logic

UBS003NT

#### NOTE:

If DTC P0452 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-1028](#).

## DTC Confirmation Procedure

### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

Always perform test at a temperature of 0°C (32°F) or more.

#### WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "DATA MONITOR" mode with CONSULT-II.
5. Make sure that "FUEL T/TEMP SE" is more than 0°C (32°F).
6. Start engine and wait at least 20 seconds.
7. If 1st trip DTC is detected, go to [EC-883, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
FUEL T/TMP SE	XXX °C

SEF194Y

#### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Check that voltage between ECM terminal 107 (Fuel tank temperature sensor signal) and ground is less than 4.2V.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and wait at least 20 seconds.
5. Select "MODE 7" with GST.
6. If 1st trip DTC is detected, go to [EC-883, "Diagnostic Procedure"](#)

## Diagnostic Procedure

UBS003NX

### 1. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check sensor harness connector for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace harness connector.

### 3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "ON".
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (SULEV)]

---

## 4. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair harness or connectors.

## 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Check harness continuity between EVAP control system pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Joint connector-1
- Harness for open or short between EVAP control system pressure sensor and TCM
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 32 and EVAP control system pressure sensor terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR [QG18DE (SULEV)]

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between ECM and EVAP control system pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-885, "Component Inspection"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace EVAP control system pressure sensor.

## 10. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CONTROL SYSTEM PRESSURE SENSOR

UBS00614

1. Remove EVAP control system pressure sensor with its harness connector connected.
2. Remove EVAP control system pressure sensor from EVAP canister.  
**Do not reuse the O-ring, replace it with a new one.**
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch "ON" and check output voltage between ECM terminal 32 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

#### CAUTION:

- Always calibrate the vacuum pump gauge when using it.
- Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).

5. If NG, replace EVAP control system pressure sensor.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0455 0455	EVAP control system gross leak detected	EVAP control system has a very large leak such as fuel filler cap fell off, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent.</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged.</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling EVAP vapor cut valve</li> <li>● ORVR system leaks</li> </ul>

## DTC Confirmation Procedure

**CAUTION:**

Never remove fuel filler cap during the DTC Confirmation Procedure.

**NOTE:**

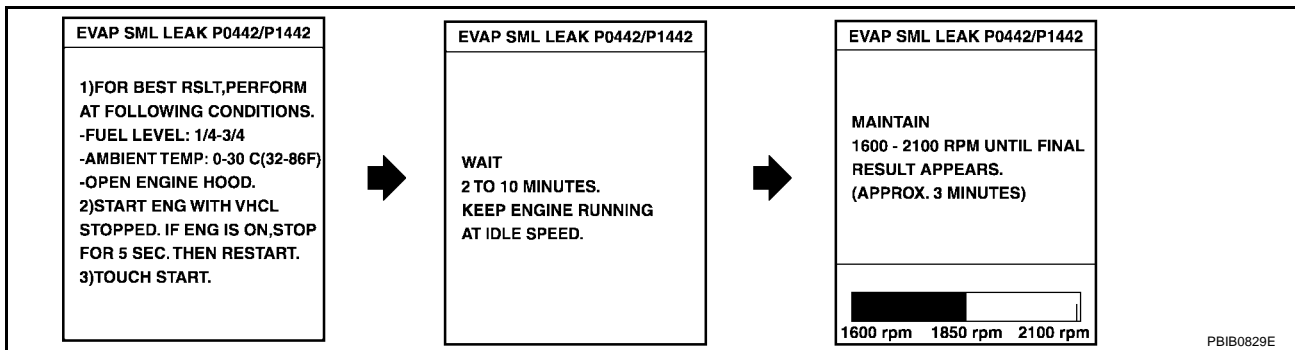

- Make sure that EVAP hose are connected to EVAP canister purge volume control solenoid valve properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Open engine hood before conducting the following procedure.

**WITH CONSULT-II**

1. Tighten fuel filler cap securely until ratcheting sound is heard.
2. Turn ignition switch "ON".
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
5. Make sure that the following conditions are met.  
**COOLANT TEMP/S: 0 - 70°C (32 - 158°F)**  
**INT/A TEMP SE: 0 - 60°C (32 - 140°F)**
6. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
 Follow the instruction displayed.

**NOTE:**

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-669, "Basic Inspection"](#).

7. Make sure that "OK" is displayed.  
 If "NG" is displayed, select "SELF-DIAG RESULTS" mode with CONSULT-II and make sure that "EVAP GROSS LEAK [P0455]" is displayed. If it is displayed, refer to [EC-895, "Diagnostic Procedure"](#).  
 If P0442 is displayed, perform "Diagnostic Procedure" for DTC P0442, [EC-860](#).

**WITH GST**

**NOTE:**

Be sure to read the explanation of "Driving Pattern" on [EC-649](#) before driving vehicle.

1. Start engine.
2. Drive vehicle according to "Driving Pattern", [EC-649](#) .
3. Stop vehicle.
4. Select "MODE 1" with GST.
  - If SRT of EVAP system is not set yet, go to the following step.
  - If SRT of EVAP system is set, the result will be OK.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Start engine.
 

**It is not necessary to cool engine down before driving.**
7. Drive vehicle again according to the "Driving Pattern", [EC-649](#) .
8. Stop vehicle.
9. Select "MODE 3" with GST.
  - If P0455 is displayed on the screen, go to [EC-895, "Diagnostic Procedure"](#) .
  - If P0442 is displayed on the screen, go to "Diagnostic Procedure", for DTC P0442, [EC-860](#) .
  - If P0441 is displayed on the screen, go to "Diagnostic Procedure" for DTC P0441, [EC-854](#) .
  - If P0441, P0442 and P0455 are not displayed on the screen, go to the following step.
10. Select "MODE 1" with GST.
  - If SRT of EVAP system is set, the result will be OK.
  - If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

UBS001Y1

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK     >> GO TO 2.  
 NG     >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK     >> GO TO 3.  
 NG     >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
           2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK     >> GO TO 5.  
 NG     >> GO TO 4.

#### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

1. Wipe clean valve housing.
2. Check valve opening pressure and vacuum.

**Pressure:**

**15.3 - 20.0 kPa**

**(0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)**

**Vacuum:**

**-6.0 to -3.4 kPa**

**(-0.061 to -0.035 kg/cm<sup>2</sup> , -0.87 to -0.48 psi)**

**CAUTION:**

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

OK or NG

- OK >> GO TO 5.
- NG >> Replace fuel filler cap with a genuine one.

#### 5. CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks, improper connection or disconnection.

Refer to [EC-1205, "EVAPORATIVE EMISSION SYSTEM"](#) .

OK or NG

- OK >> GO TO 6.
- NG >> Repair or reconnect the hose.

#### 6. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 7.

#### 7. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control is installed properly.  
Refer to [EC-1209, "Removal and Installation"](#)
- EVAP canister vent control valve.  
Refer to [EC-878, "Component Inspection"](#)

OK or NG

- OK >> GO TO 8.
- NG >> Repair or replace EVAP canister vent control valve and O-ring.

**8. INSTALL THE PRESSURE PUMP**

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II>>GO TO 9.  
Models without CONSULT-II>>GO TO 10.

**9. CHECK FOR EVAP LEAK**

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details.

Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

- OK >> GO TO 11.
- NG >> Repair or replace.

10. CHECK FOR EVAP LEAK

⊗ Without CONSULT-II

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

NOTE:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK >> GO TO 12.  
 NG >> Repair or replace.

11. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

Ⓜ With CONSULT-II

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

- OK >> GO TO 14.  
 NG >> GO TO 13.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X. XX V

PBIB0726E

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 13.

**13. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK (With CONSULT-II)>>GO TO 14.
- OK (Without CONSULT-II)>>GO TO 15.
- NG >> Repair or reconnect the hose.

**14. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Ⓜ **With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 15.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X. XX V

PBIB0721E

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-872, "Component Inspection"](#).

OK or NG

- OK >> GO TO 16.
- NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-813, "Component Inspection"](#).

OK or NG

- OK >> GO TO 17.
- NG >> Replace fuel level sensor unit.

---

## 17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

---

Refer to [EC-885, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace EVAP control system pressure sensor.

---

## 18. CHECK EVAP/ORVR VAPOR LINE

---

Check refueling EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1212, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

- OK >> GO TO 19.
- >> Repair or replace hoses and tubes.

---

## 19. CHECK SIGNAL LINE AND RECIRCULATION LINE

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

- OK >> GO TO 20.
- >> Repair or replace hoses, tubes or filler neck tube.

---

## 20. CHECK REFUELING EVAP VAPOR CUT VALVE

---

Refer to [EC-1215, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 21.
- >> Replace refueling EVAP vapor cut valve with fuel tank.

---

## 21. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

DTC P0456 EVAP CONTROL SYSTEM

PF1:14950

On Board Diagnosis Logic

UBS0068W

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the intake manifold vacuum in the same way as conventional EVAP small leak diagnosis.

If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected.

If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected.

If ECM judges there are no leaks, the diagnosis will be OK.

PBIB1209E

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0456 0456	Evaporative emission control system very small leak (negative pressure check)	<ul style="list-style-type: none"> <li>● EVAP system has a very small leak.</li> <li>● EVAP system does not operate properly.</li> </ul>	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling EVAP vapor cut valve</li> <li>● ORVR system leaks</li> <li>● Fuel level sensor and the circuit</li> <li>● Foreign matter caught in EVAP canister purge volume control solenoid valve</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS0068X

**NOTE:**

- If DTC P0456 is displayed with P0442, perform first trouble diagnosis for DTC P0456.
- After repair, make sure that the hoses and clips are installed properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Open engine hood before conducting following procedure.
- If any of following conditions are met just before the DTC confirmation procedure, leave the vehicle for more than 1 hour.
  - Fuel filler cap is removed.
  - Refilled or drained the fuel.
  - EVAP component parts is/are removed.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Make sure the following conditions are met.  
**FUEL LEVEL SE: 0.25 - 1.4V**  
**COOLAN TEMP/S: 0 - 32°C (32 - 90°F)**  
**FUEL T/TMP SE: 0 - 35°C (32 - 95°F)**  
**INT A/TEMP SE: More than 0°C (32°F)**  
 If NG, turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle) or refilling/draining fuel until the output voltage condition of the "FUEL LEVEL SE" meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Select "EVAP V/S LEAK P0456/P1456" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
 Follow the instruction displayed.

6. Make sure that "OK" is displayed.  
 If "NG" is displayed, refer to [EC-904, "Diagnostic Procedure"](#).

**NOTE:**

- If the engine speed cannot be maintained within the range displayed on CONSULT-II screen, go to [EC-669, "Basic Inspection"](#).
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

**Overall Function Check****WITH GST**

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a DTC might not be confirmed.

**CAUTION:**

- Never use compressed air, doing so may damage the EVAP system.
  - Do not start engine.
  - Do not exceeded 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi).
1. Attach the EVAP service port adapter securely to the EVAP service port.

2. Set the pressure pump and a hose.
3. Also set a vacuum gauge via 3-way connector and a hose.
4. Turn ignition switch "ON".
5. Connect GST and select mode 8.
6. Using mode 8 control the EVAP canister vent control valve (close).
7. Apply pressure and make sure the following conditions are satisfied.

**Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg)**

**Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg).**

If NG, go to [EC-904, "Diagnostic Procedure"](#) .

If OK, go to next step.

8. Disconnect GST.
9. Start engine and warm it up to normal operating temperature.
10. Turn ignition switch "OFF" and wait at least 10 seconds.
11. Restart engine and let it idle for 90 seconds.
12. Keep engine speed at 2,000 rpm for 30 seconds.
13. Turn ignition switch "OFF".

**NOTE:**

**For more information, refer to GST instruction manual.**

### Diagnostic Procedure

#### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

##### OK or NG

- OK >> GO TO 2.  
NG >> Replace with genuine NISSAN fuel filler cap.

#### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

##### OK or NG

- OK >> GO TO 3.  
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
2. Retighten until ratcheting sound is heard.

#### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

##### OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

#### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-1208, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FILLER CAP\)"](#).

##### OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel filler cap with a genuine one.

## 5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II>>GO TO 6.

Models without CONSULT-II>>GO TO 7.

**6. CHECK FOR EVAP LEAK**

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**7. CHECK FOR EVAP LEAK**

**Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**8. CHECK EVAP CANISTER VENT CONTROL VALVE**

Check the following.

- EVAP canister vent control valve is installed properly. Refer to [EC-1209, "Removal and Installation"](#)
- EVAP canister vent control valve (Refer to [EC-878, "Component Inspection"](#))

OK or NG

OK >> GO TO 9.

NG >> Repair or replace EVAP canister vent control valve and O-ring.

**9. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 10.

No (With CONSULT-II)>>GO TO 12.

No (Without CONSULT-II)>>GO TO 13.

**10. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

OK (With CONSULT-II)>>GO TO 12.

OK (Without CONSULT-II)>>GO TO 13.

NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

### With CONSULT-II

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X. XX V

PBIB0721E

#### OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 14.

## 13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

### Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

#### OK or NG

- OK >> GO TO 16.  
 NG >> GO TO 14.

## 14. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to [EC-615, "Vacuum Hose Drawing"](#).

#### OK or NG

- OK >> GO TO 15.  
 NG >> Repair or reconnect the hose.

## 15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-872, "Component Inspection"](#).

#### OK or NG

- OK >> GO TO 16.  
 NG >> Replace EVAP canister purge volume control solenoid valve.

## 16. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to [EC-813, "Component Inspection"](#).

#### OK or NG

- OK >> GO TO 17.  
 NG >> Replace fuel level sensor unit.

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

Refer to [EC-885, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

**18. CHECK EVAP PURGE LINE**

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

OK >> GO TO 19.

NG >> Repair or reconnect the hose.

**19. CLEAN EVAP PURGE LINE**

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

**20. CHECK EVAP/ORVR LINE**

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1212, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses and tubes.

**21. CHECK SIGNAL LINE AND RECIRCULATION LINE**

Check signal line recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hose, tube or filler neck tube.

**22. CHECK REFUELING EVAP VAPOR CUT VALVE**

Refer to [EC-1215, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling EVAP vapor cut valve with fuel tank.

**23. CHECK FUEL LEVEL SENSOR**

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

**24. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**DTC P0460 FUEL LEVEL SENSOR**

**Component Description**

UBS001Y2

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal to the ECM through CAN communication line. It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

PBIB1218E

**On Board Diagnostic Logic**

UBS001Y3

**NOTE:**

If DTC P0460 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to “DTC U1000, U1001 CAN COMMUNICATION LINE”, [EC-728](#).

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0460 0460	Fuel level sensor circuit noise	Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

**DTC Confirmation Procedure**

UBS001Y5

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and wait maximum of 2 consecutive minutes.
4. If 1st trip DTC is detected, go to [EC-911, "Diagnostic Procedure"](#)

## DTC P0461 FUEL LEVEL SENSOR

### Component Description

UBS001Y8

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal to the ECM through CAN communication line. It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

PBIB1218E

### On Board Diagnostic Logic

UBS001Y9

#### NOTE:

If DTC P0461 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to "DTC U1000, U1001 CAN COMMUNICATION LINE", [EC-728](#).

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long distance.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

### Overall Function Check

UBS001YB

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

#### WARNING:

When performing following procedure, be sure to observe the handling of the fuel. Refer to [FL-2, "FUEL SYSTEM"](#).

#### TESTING CONDITION:

Before starting overall function check, preparation of draining fuel and refilling fuel is required.

#### WITH CONSULT-II

#### NOTE:

Start from step 11, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-637, "FUEL PRESSURE RELEASE"](#).
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch "OFF" and wait at least 10 seconds then turn "ON".
6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT-II.
7. Check "FUEL LEVEL SE" output voltage and note it.
8. Select "FUEL PUMP" in "ACTIVE TEST" mode with CONSULT-II.
9. Touch "ON" and drain fuel approximately 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) and stop it.
10. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
11. Check "FUEL LEVEL SE" output voltage and note it.

DATA MONITOR	
MONITOR	NO DTC
FUEL T/TMP SE	XXX °C
FUEL LEVEL SE	XXX V

SEP195Y

12. Check "FUEL LEVEL SE" output voltage and confirm whether the voltage changes more than 0.03V during step 7 to 11.  
If NG, go to "Diagnostic Procedure" [EC-913](#) .

 **WITH GST**

**NOTE:**

Start from step 8, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-637, "FUEL PRESSURE RELEASE"](#) .
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch "ON".
6. Drain fuel by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) from the fuel tank using proper equipment.
7. Confirm that the fuel gauge indication varies.
8. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
9. Confirm that the fuel gauge indication varies.
10. If NG, go to "Diagnostic Procedure", [EC-913](#) .

**Diagnostic Procedure**

UBS006J0

**1. CHECK FUEL GAUGE OPERATION**

Refer to [FL-3](#)

OK or NG

- OK >> GO TO 2.  
NG >> Follow the instruction of [DI-16](#) .

**2. CHECK FUEL LEVEL SENSOR AND CIRCUIT**

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

- OK >> GO TO 3.  
NG >> Repair or replace malfunctioning parts.

**3. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Removal and Installation**  
**FUEL LEVEL SENSOR**

UBS006J1

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

**DTC P0462, P0463 FUEL LEVEL SENSOR**

PFP:25060

**Component Description**

UBS001YC

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the combination meter. The combination meter sends the fuel level sensor signal to the ECM through CAN communication. It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

PBIB1218E

**On Board Diagnostic Logic**

UBS001YD

**NOTE:**

If DTC P0462 or P0463 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to “DTC U1000, U1001 CAN COMMUNICATION LINE”, [EC-728](#).

ECM receives two signals from the fuel level sensor circuit.

One is fuel level sensor power supply circuit, and the other is fuel level sensor ground circuit.

This diagnosis indicates the former, to detect open or short circuit malfunction.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0462 0462	Fuel level sensor circuit low input	An excessively low voltage is sent from the sensor to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>
P0463 0463	Fuel level sensor circuit high input	An excessively high voltage is sent from the sensor to ECM.	

**DTC Confirmation Procedure**

UBS001YF

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 11V at ignition switch “ON”.

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-915, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
FUEL T/TMP SE	XXX °C
FUEL LEVEL SE	XXX V

SEF195Y

**WITH GST**

Follow the procedure “WITH CONSULT-II” above.

**Diagnostic Procedure****1. CHECK FUEL GAUGE OPERATION**

Refer to [DI-16, "Meter/Gauge Operation and Odo/Trip Meter Segment Check in Diagnosis Mode"](#) .

OK or NG

OK >> GO TO 2.

NG >> Follow the instruction of "METER AND GAUGES". Refer to [DI-16, "Meter/Gauge Operation and Odo/Trip Meter Segment Check in Diagnosis Mode"](#) .

**2. CHECK FUEL LEVEL SENSOR AND CIRCUIT**

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace malfunctioning parts.

**3. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Removal and Installation  
FUEL LEVEL SENSOR**

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

DTC P0500 VSS

PF:32702

Component Description

UBS001YI

NOTE:

If DTC P0500 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-728, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

The vehicle speed sensor is installed in the transaxle. It contains a pulse generator which provides a vehicle speed signal to the combination meter. The combination meter then sends a signal to the ECM through CAN communication line.

On Board Diagnosis Logic

UBS001YJ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	<ul style="list-style-type: none"> <li>● Harness or connectors (The CAN communication line is open or shorted)</li> <li>● Harness or connectors (The vehicle speed signal circuit is open or shorted)</li> <li>● Vehicle speed sensor</li> <li>● Combination meter</li> </ul>

DTC Confirmation Procedure

UBS001YK

**CAUTION:**

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Steps 1 and 2 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

 WITH CONSULT-II

1. Start engine (TCS switch "OFF").
2. Read "VHCL SPEED SE" in "DATA MONITOR" mode with CONSULT-II. The vehicle speed on CONSULT-II should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.  
If NG, go to [EC-917, "Diagnostic Procedure"](#).  
If OK, go to following step.
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Warm engine up to normal operating temperature.
5. Maintain the following conditions for at least 50 consecutive seconds.

ENG SPEED	1,800 - 6,000 rpm (A/T) 2,000 - 6,000 rpm (M/T)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	More then 4.8 msec
Selector lever	Except "P" or "N" position
PW/ST SIGNAL	OFF

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
B/FUEL SCHDL	XXX msec
PW/ST SIGNAL	OFF
VHCL SPEED SE	XXX km/h

SEF196Y

6. If 1st trip DTC is detected, go to [EC-917, "Diagnostic Procedure"](#)

Overall Function Check

UBS001YL

Use this procedure to check the overall function of the vehicle speed signal circuit. During this check, a 1st trip DTC might not be confirmed.

 WITH GST

1. Lift up drive wheels.

2. Start engine.
3. Read vehicle speed sensor signal in "MODE 1" with GST.  
The vehicle speed sensor on GST should be able to exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
4. If NG, go to [EC-917, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

UBS001YN

### 1. CHECK VEHICLE SPEED SENSOR CIRCUIT

Refer to [DI-3, "METERS AND GAUGES"](#) .

#### OK or NG

- OK >> GO TO 2.  
NG >> Repair or replace.

### 2. CHECK COMBINATION METER

Check combination meter function.  
Refer to [DI-8, "Combination Meter"](#) .

**DTC P0506 ISC SYSTEM**

**Description**

UBS0030C

**NOTE:**

**If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.**

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

**On Board Diagnosis Logic**

UBS0030E

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0506 0506	Idle speed control system RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	<ul style="list-style-type: none"> <li>● Electric throttle control actuator</li> <li>● Intake air leak</li> </ul>

**DTC Confirmation Procedure**

UBS0030F

**NOTE:**

- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.
- **If the target idle speed is out of the specified value, perform “Idle Air Volume Learning”, [EC-635](#), before conducting “DTC Confirmation Procedure”. For the target idle speed, refer to the “Service Data and Specifications (SDS)”, [EC-1222](#).**

**TESTING CONDITION:**

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above -10°C (14°F).

**WITH CONSULT-II**

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch “OFF” and wait at least 10 seconds.
4. Turn ignition switch “ON” again and select “DATA MONITOR” mode with CONSULT-II.
5. Start engine and run it for at least 1 minute at idle speed.
6. If 1st trip DTC is detected, go to [EC-919](#).

**DTC P0550 PSP SENSOR**

**Component Description**

UBS003WV

Power steering pressure (PSP) sensor is installed to the power steering high-pressure tube and detects a power steering load. This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003WV

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PW/ST SIGNAL	<ul style="list-style-type: none"> <li>Engine: After warming up, idle the engine</li> </ul>	Steering wheel is in neutral position. (Forward direction)	OFF
		Steering wheel is turned.	ON

**On Board Diagnosis Logic**

UBS003WX

The MIL will not light up for this diagnosis.

**NOTE:**

If DTC P0550 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-1028](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0550 0550	Power steering pressure sensor circuit	An excessively low or high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted.)</li> <li>Power steering pressure sensor</li> </ul>

**DTC Confirmation Procedure**

UBS003WY

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

- Turn ignition switch "ON".
- Select "DATA MONITOR" mode with CONSULT-II.
- Start engine and let it idle for at least 5 seconds.
- If 1st trip DTC is detected, go to [EC-924, "Diagnostic Procedure"](#).

BBWA0787E

# DTC P0550 PSP SENSOR

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
12	P	Power steering pressure sensor	[Engine is running] ● Steering wheel is being turned.	0.5 - 4.0V
			[Engine is running] ● Steering wheel is not being turned.	0.4 - 0.8V
67	B/W	Sensor ground (Power steering pressure sensor)	[Engine is running] ● Idle speed	Approximately 0V
68	G/R	Sensor power supply (Power steering pressure sensor)	[Ignition switch "ON"]	Approximately 5V

## Diagnostic Procedure

UBS003X0

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK PSP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect PSP sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between PSP sensor terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 3. CHECK PSP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between PSP sensor terminal 3 and engine ground.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-1
- Harness for open or short between power steering pressure sensor and ECM
- Harness for open or short between power steering pressure sensor and TCM

>> Repair open circuit or short to power in harness or connectors.

## 5. CHECK PSP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 12 and PSP sensor terminal 2.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK PSP SENSOR**

Refer to [EC-926, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
 NG >> Replace PSP sensor.

**7. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection POWER STEERING PRESSURE SENSOR

UBS003X1

1. Reconnect all harness connectors disconnected.
2. Start engine and let it idle.
3. Check voltage between ECM terminal 12 and ground under the following conditions.

Condition	Voltage
Steering wheel is being turned fully.	0.5 - 4.0V
Steering wheel is not being turned.	0.4 - 0.8V

DTC P0605 ECM

PF2:23710

Component Description

UBS006FV

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

PBIB1164E

UBS006FW

On Board Diagnosis Logic

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEP-ROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

FAIL-SAFE MODE

ECM enters in fail-safe mode when the malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

UBS006FX

Perform "PROCEDURE FOR MALFUNCTION A" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION B". If there is no problem on "PROCEDURE FOR MALFUNCTION B", perform "PROCEDURE FOR MALFUNCTION C".

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

With CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If 1st trip DTC is detected, go to [EC-928, "Diagnostic Procedure"](#)

SEF058Y

With GST

Follow the procedure "With CONSULT-II" above.

**PROCEDURE FOR MALFUNCTION B****With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
4. If 1st trip DTC is detected, go to [EC-928, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**With GST**

Follow the procedure "With CONSULT-II" above.

**PROCEDURE FOR MALFUNCTION C****With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
4. Repeat step 3 for, 32 times.
5. If 1st trip DTC is detected, go to [EC-928, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

### Description SYSTEM DESCRIPTION

UBS001ZB

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Air fuel ratio (A/F) sensor 1 heater control	Air fuel ratio (A/F) sensor 1 heater
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF duty control of the A/F sensor 1 heater corresponding to the engine operating condition to keep the temperature of A/F sensor 1 element at the specified range.

### CONSULT-II Reference Value in Data Monitor Mode

UBS001ZC

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
A/F S1 HTR (B1)	● Engine: After warming up, idle the engine	0 - 100%

### On Board Diagnosis Logic

UBS001ZD

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1031 1031 (Bank 1)	Air fuel ratio (A/F) sensor 1 heater control circuit low	The current amperage in the heated air fuel ratio (A/F) sensor 1 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the heated air fuel ratio (A/F) sensor 1 heater.)	<ul style="list-style-type: none"> <li>● Harness or connectors (The heated A/F sensor 1 heater circuit is open or shorted.)</li> <li>● Heater A/F sensor 1 heater</li> </ul>
P1032 1032 (Bank 1)	Air fuel ratio (A/F) sensor 1 heater control circuit high	The current amperage in the heated air fuel ratio (A/F) sensor 1 heater circuit is out of the normal range. (An excessively high voltage signal is sent to ECM through the heated air fuel ratio (A/F) sensor 1 heater.)	<ul style="list-style-type: none"> <li>● Harness or connectors (The heated A/F sensor 1 heater circuit is shorted.)</li> <li>● Heater A/F sensor 1 heater</li> </ul>

### DTC Confirmation Procedure

UBS001ZE

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.**

**With CONSULT-II**

#### Ⓜ WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and run it for at least 10 seconds at idle speed.
3. If 1st trip DTC is detected, go to [EC-933, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

1. Start engine and run it for at least 10 seconds at idle speed.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and run it for at least 10 seconds at idle speed.
  4. Select "MODE 3" with GST.
  5. If DTC is detected, go to [EC-933, "Diagnostic Procedure"](#) .
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

# DTC P1031, P1032 A/F SENSOR HEATER

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	R	A/F sensor 1 heater	<p>[Engine is running]</p> <ul style="list-style-type: none"> <li>• Warm-up condition</li> <li>• Idle speed</li> </ul>	Approximately 5V

## Diagnostic Procedure

UBS001ZG

### 1. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

3. Disconnect air fuel ratio (A/F) sensor 1 harness connector.
4. Turn ignition switch "ON".

5. Check voltage between A/F sensor 1 terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

---

## 2. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M19, E108
- Harness connectors E9, F47
- Fuse block (J/B) connector M1
- 15A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

---

## 3. CHECK A/F SENSOR 1 HEATER OUTPUT SIGNAL CIRCUIT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 2 and A/F sensor 1 terminal 4. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK A/F SENSOR 1 HEATER

---

Refer to [EC-935, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace A/F sensor 1.

---

## 5. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

OK >> Replace A/F sensor 1.

NG >> Repair or replace.

**Component Inspection****AIR FUEL RATIO (A/F) SENSOR 1 HEATER**

Check resistance between terminals 3 and 4.

**Resistance: 2.3 - 4.3Ω at 25°C (77°F)**

Check continuity between terminals 3 and 1, 2, 5, 6, terminals 4 and 1, 2, 5, 6.

**Continuity should not exist.**

If NG, replace the A/F sensor 1.

**CAUTION:**

- Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new A/F sensor, clean exhaust system threads using Heated Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation****AIR FUEL RATIO SENSOR HEATER**

Refer to [EM-12, "Removal and Installation"](#).

**DTC P1065 ECM POWER SUPPLY**

PF2:23710

**Component Description**

UBS003X2

Battery voltage is supplied to the ECM even when the ignition switch is turned OFF for the ECM memory function of the DTC memory, the air-fuel ratio feedback compensation value memory, the idle air volume learning value memory, etc.

**DTC P1102 MAF SENSOR**

**Component Description**

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: "N" (A/T), Neutral (M/T) ● No-load	Idle 1.0 - 1.7V
		2,500 rpm 1.5 - 2.4V
CAL/LD VALUE	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: "N" (A/T), Neutral (M/T) ● No-load	Idle 20.0 - 35.5%
		2,500 rpm 12.0 - 27.0%

### Component Inspection MASS AIR FLOW SENSOR

1. Turn ignition switch "ON".
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Conditions	Voltage V
Ignition switch "ON" (Engine stopped.)	Less than 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.4
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for linear voltage rise in response to increases to about 4,000 rpm in engine speed.

4. If the voltage is out of specification, proceed the following.
  - Turn ignition switch "OFF".
  - Disconnect mass air flow sensor harness connector and reconnect it again.
  - Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

DTC P1111 IVT CONTROL SOLENOID VALVE

Description  
SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

\*: This signal is sent to the ECM through CAN communication line.

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

COMPONENT DESCRIPTION

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

# DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

**[QG18DE (SULEV)]**

## DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

PF1:16119

### Component Description

UBS003X7

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS003X8

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1121 1121	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detects the throttle valve is stuck open. <b>This self-diagnosis has the one trip detection logic.</b>	

### FAIL-SAFE MODE

When the malfunction A or B is detected in the two consecutive trip, the ECM enters fail-safe mode and the MIL lights up.

When the malfunction C is detected even in the 1st trip, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle control actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.

### DTC Confirmation Procedure

UBS003X9

#### NOTE:

- Perform "PROCEDURE FOR MALFUNCTION A AND B" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION C".
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR MALFUNCTION A AND B

##### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Shift selector lever to "D" position (A/T), "1st" position (M/T) and wait at least 2 seconds.
4. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
5. If 1st trip DTC is detected, go to [EC-953, "Diagnostic Procedure"](#)

#### With GST

Follow the procedure "With CONSULT-II" above.

### Diagnostic Procedure

UBS003XA

#### 1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if a foreign matter is caught between the throttle valve and the housing.

#### OK or NG

- OK >> GO TO 2.  
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

#### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

## [QG18DE (SULEV)]

### DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

PF1:16119

#### Description

UBS003XB

##### NOTE:

If DTC P1122 is displayed with DTC P1121 or 1126, first perform the trouble diagnosis for DTC P1121 or P1126. Refer to [EC-952](#) or [EC-961](#).

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

#### On Board Diagnosis Logic

UBS003XC

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1122 1122	Electric throttle control performance problem	Electric throttle control function does not operate properly.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor circuit is open or shorted)</li> <li>● Electric throttle control actuator</li> </ul>

#### FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

#### DTC Confirmation Procedure

UBS003XD

##### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

##### WITH CONSULT-II

1. Turn ignition switch "ON" and wait at least 2 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to [EC-956, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

## Diagnostic Procedure

UBS003XF

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF"
2. Loosen and retighten engine ground screws.

>> GO TO 2.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

## [QG18DE (SULEV)]

### 2. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT

Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 3.

### 3. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT

- Turn ignition switch "OFF".
- Disconnect throttle control motor relay.

- Check voltage between throttle control motor relay terminals 2, 5 and ground.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- 15A fuse
- Harness for open or short between throttle control motor relay and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (SULEV)]

## 5. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 3 and throttle control motor relay terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK THROTTLE CONTROL MOTOR RELAY OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check continuity between ECM terminal 104 and throttle control motor relay terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK THROTTLE CONTROL MOTOR RELAY

Refer to [EC-959, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> Replace throttle control motor relay.

## 8. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch "OFF".
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals.  
Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	4	Should exist
	5	Should not exist
6	4	Should not exist
	5	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION [QG18DE (SULEV)]

## 9. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.

OK or NG

- OK >> GO TO 10.  
 NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

## 10. CHECK THROTTLE CONTROL MOTOR

Refer to [EC-959, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 11.  
 NG >> GO TO 12.

## 11. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

- OK >> GO TO 12.  
 NG >> Repair or replace harness or connectors.

## 12. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

### Component Inspection THROTTLE CONTROL MOTOR RELAY

UBS006IL

1. Apply 12V direct current between relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

3. If NG, replace throttle control motor relay.

### THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.

## DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

[QG18DE (SULEV)]

2. Check resistance between terminals 3 and 6.

**Resistance: Approximately 1 - 15  $\Omega$  [at 25 °C (77°F)]**

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
5. Perform [EC-635, "Idle Air Volume Learning"](#) .

UBS006IM

### Removal and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to [EM-12, "OUTER COMPONENT PARTS"](#) .

# DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY [QG18DE (SULEV)]

## DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

PF16119

### Component Description

UBS003XI

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003XJ

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

### On Board Diagnosis Logic

UBS003XK

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1124 1124	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor relay circuit is shorted)</li> <li>● Throttle control motor relay</li> </ul>
P1126 1126	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor relay circuit is open)</li> <li>● Throttle control motor relay</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS003XL

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR DTC P1124

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

##### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If DTC is detected, go to [EC-964, "Diagnostic Procedure"](#).

### Removal and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

UBS003XU

Refer to [EM-12, "OUTER COMPONENT PARTS"](#) .

DTC P1132 SWIRL CONTROL VALVE

PFP:00000

Component Description

UBS00691

Swirl control valve consists of actuator and valve. The valve is installed in the intake manifold, and the actuator is connected to the rear end of the valve shaft.

The swirl control valve uses a step motor which has four winding phases. It operates according to the output pulse signal of the ECM. Two windings are turned ON and OFF in sequence. Each time an ON pulse is issued, the valve opens or closes. When no change in the control position is needed, the ECM does not issue the pulse signal. A certain voltage signal is issued so that the valve remains at that particular opening.

CONSULT-II Reference Value in Data Monitor Mode

UBS00692

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
SWL C/V (B1)	● Engine: Idle the engine	Engine coolant temperature is below 44°C (111°F)	0 - 5 step

UBS00698

# DTC P1137 SWIRL CONTROL VALVE CONTROL POSITION SENSOR [QG18DE (SULEV)]

## DTC P1137 SWIRL CONTROL VALVE CONTROL POSITION SENSOR

PFP:23731

### Component Description

UBS00699

Swirl control valve position sensor is installed on the intake manifold. The sensor is connected to the front end of the valve shaft of the swirl control valve.

The sensor responds to the valve shaft movement. This sensor is a kind of potentiometer which transforms the swirl control valve position into output voltage, and emits the voltage signal to the ECM.

## Diagnostic Procedure

### 1. CHECK SWIRL CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect swirl control valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between swirl control valve terminals 2, 5 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 2.
- NG >> Repair open circuit or short to ground or short to power in harness connectors.

### 2. CHECK SWIRL CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals and swirl control valve terminals as follows. Refer to Wiring Diagram.

ECM terminal	Swirl volume control valve
17	6
18	3
19	4
20	1

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

**Description  
SYSTEM DESCRIPTION**

Sensor	Input Signal to ECM	ECM function	Actuator
Throttle position sensor	Throttle position	Swirl control valve control	Swirl control valve
Battery	Battery voltage*		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*		
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Swirl control valve position sensor	Swirl control valve position		

\*: The ECM determines the start signal status by the signal of engine speed and battery voltage.

Swirl control valve has a valve portion in the intake passage of each cylinder. While idling and during low engine coolant temperature, the swirl control valve closes, Thus the velocity of the air in the intake passage increases, promoting the vaporization of the fuel and producing a swirl in the combustion chamber. Because of this operation, this system tends to increase the burning speed of the gas mixture, improve fuel consumption, and increase the stability in running conditions. Also, except when idling and during low engine coolant temperature, this system opens the swirl control valve. In this condition, this system tends to increase power by improving intake efficiency via reduction of intake flow resistance, intake flow. The swirl control valve is operated by the ECM.

Throttle position sensor (Idle position)	Engine coolant temperature	Swirl control valve
OFF	—	Open
ON	Above 45°C (113°F)	Open
	Below 44°C (111°F)	Close

**COMPONENT DESCRIPTION**

**Swirl Control Valve**

Swirl control valve consists of actuator and valve. The valve is installed in the intake manifold, and the actuator is connected to the rear end of the valve shaft. The swirl control valve uses a step motor which has four winding phases. It operates according to the output pulse signal of the ECM. Two windings are turned ON and OFF in sequence. Each time an ON pulse is issued, the valve opens or closes. When no change in the control position is needed, the ECM does not issue the pulse signal. A certain voltage signal is issued so that the valve remains at that particular opening.

## Swirl Control Valve Position Sensor

Swirl control valve position sensor is installed on the intake manifold. The sensor is connected to the front end of the valve shaft of the swirl control valve.

The sensor responds to the valve shaft movement. This sensor is a kind of potentiometer which transforms the swirl control valve position into output voltage, and emits the voltage signal to the ECM.

## CONSULT-II Reference Value in Data Monitor Mode

UBS0069I

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
SWL C/V (B1)	● Engine speed: Idle	Engine coolant temperature is below 44°C (111°F).	0 - 5 step
		Engine coolant temperature is above 45°C (113°F).	115 - 120 step

## DTC Confirmation Procedure

UBS0069L

### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 2 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for at least 10 seconds.
4. Turn ignition switch "OFF" and wait at least 10 seconds.
5. Turn ignition switch "ON" and wait at least 2 seconds.
6. Start engine and let it idle for at least 10 seconds.
7. Maintain engine speed at about 2,000 rpm for at least 10 seconds.
8. Turn ignition switch "OFF", wait at least 10 seconds and then turn "ON".  
If 1st trip DTC is detected, go to [EC-988, "Diagnostic Procedure"](#).  
If 1st trip DTC is not detected, go to next step.
9. Perform step 5 through 8 three times.

**DTC P1146 HO2S2**

**Component Description**

UBS0069P

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.

Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0069Q

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS0069R

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1146 1146	Heated oxygen sensor 2 minimum voltage monitoring	The minimum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> </ul>

## DTC Confirmation Procedure

### NOTE:

If "DTC confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### Ⓟ WITH CONSULT-II

#### TESTING CONDITION:

For the best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "HO2S2 (B1) P1146" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
If "NG" is displayed, refer to [EC-996. "Diagnostic Procedure"](#).  
If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch "ON" and select "COOLANTEMP/S" in "DATA MONITOR" mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring "COOLANEMP/S" indication on CONSULT-II.
  - d. When "COOLANTEMP/S" indication reaches to 70°C (158°F), go to step 3.

## Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

### Ⓟ WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.

## DTC P1146 HO2S2

[QG18DE (SULEV)]

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
(Depress and release accelerator pedal as soon as possible.)  
**The voltage should be below 0.18V at least once during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd" gear position (M/T).  
**The voltage should be below 0.18V at least once during this procedure.**
8. If NG, go to [EC-996, "Diagnostic Procedure"](#).

Wiring Diagram

EC-HO2S2-01

: DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

**Diagnostic Procedure**

UBS0069V

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-802](#) .  
No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-998, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

#### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 2

UBS0069W

#### With CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle and wait until 2 minutes have passed from starting the engine.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
A/F SEN1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S3 (B1)	XXX V

SEF519Z

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.70V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.18V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.70V at least once during this procedure.**  
**If the voltage is above 0.70V at step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd" gear position.  
**The voltage should be below 0.18V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation**  
**HEATED OXYGEN SENSOR 2**

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

UBS0069X

**DTC P1147 HO2S2**

**Component Description**

UBS0069Y

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas. Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2. This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0069Z

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS006A0

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1147 1147	Heated oxygen sensor 2 maximum voltage monitoring	The maximum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

## DTC Confirmation Procedure

### NOTE:

If "DTC confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### WITH CONSULT-II

#### TESTING CONDITION:

For the best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "HO2S2 (B1) P1147" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
If "NG" is displayed, refer to [EC-1004](#).  
If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch "ON" and select "COOLANTEMP/S" in "DATA MONITOR" mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring "COOLANEMP/S" indication on CONSULT-II.
  - d. When "COOLANTEMP/S" indication reaches to 70°C (158°F), go to step 3.

## Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.

## DTC P1147 HO2S2

[QG18DE (SULEV)]

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
(Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.70V at least once during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd" gear position (M/T).  
**The voltage should be above 0.70V at least once during this procedure.**
8. If NG, go to [EC-1004, "Diagnostic Procedure"](#).

Wiring Diagram

EC-HO2S2-01

: DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
74	R/L	Heated oxygen sensor 2	<p><b>[Engine is running]</b></p> <ul style="list-style-type: none"> <li>● <b>Warm-up condition</b></li> <li>● Revving engine from idle up to 3,000 rpm quickly after the following conditions are met.</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	0 - Approximately 1.0V
78	B	Sensor ground (Heated oxygen sensor)	<p><b>[Engine is running]</b></p> <ul style="list-style-type: none"> <li>● <b>Warm-up condition</b></li> <li>● Idle speed</li> </ul>	Approximately 0V

**Diagnostic Procedure**

UBS006A4

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171. Refer to [EC-795](#) .  
No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-1006, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

#### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 2

UBS006A5

#### With CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle one minute.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
A/F SEN1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S3 (B1)	XXX V

SEF519Z

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.70V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.18V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

(Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.70V at least once during this procedure.**

**If the voltage is above 0.70V at step 6, step 7 is not necessary.**

7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T) "3rd gear" position.  
**The voltage should be below 0.18V at least once during this procedure.**

8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 2**

UBS006A6

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

# DTC P1148 CLOSED LOOP CONTROL

[QG18DE (SULEV)]

## DTC P1148 CLOSED LOOP CONTROL

PFP:22690

### On Board Diagnosis Logic

UBS006A7

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1148 1148	Closed loop control function	The closed loop control function for bank 1 does not operate even when vehicle is driving in the specified condition.	<ul style="list-style-type: none"><li>● The air fuel ratio (A/F) sensor 1 circuit is open or shorted.</li><li>● Air fuel ratio (A/F) sensor 1</li><li>● Air fuel ratio (A/F) sensor 1 heater</li></ul>

DTC P1148 is displayed with another DTC for air fuel ratio (A/F) sensor 1. Perform the trouble diagnosis for the corresponding DTC.

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (SULEV)]

## DTC P1217 ENGINE OVER TEMPERATURE

PF0:0000

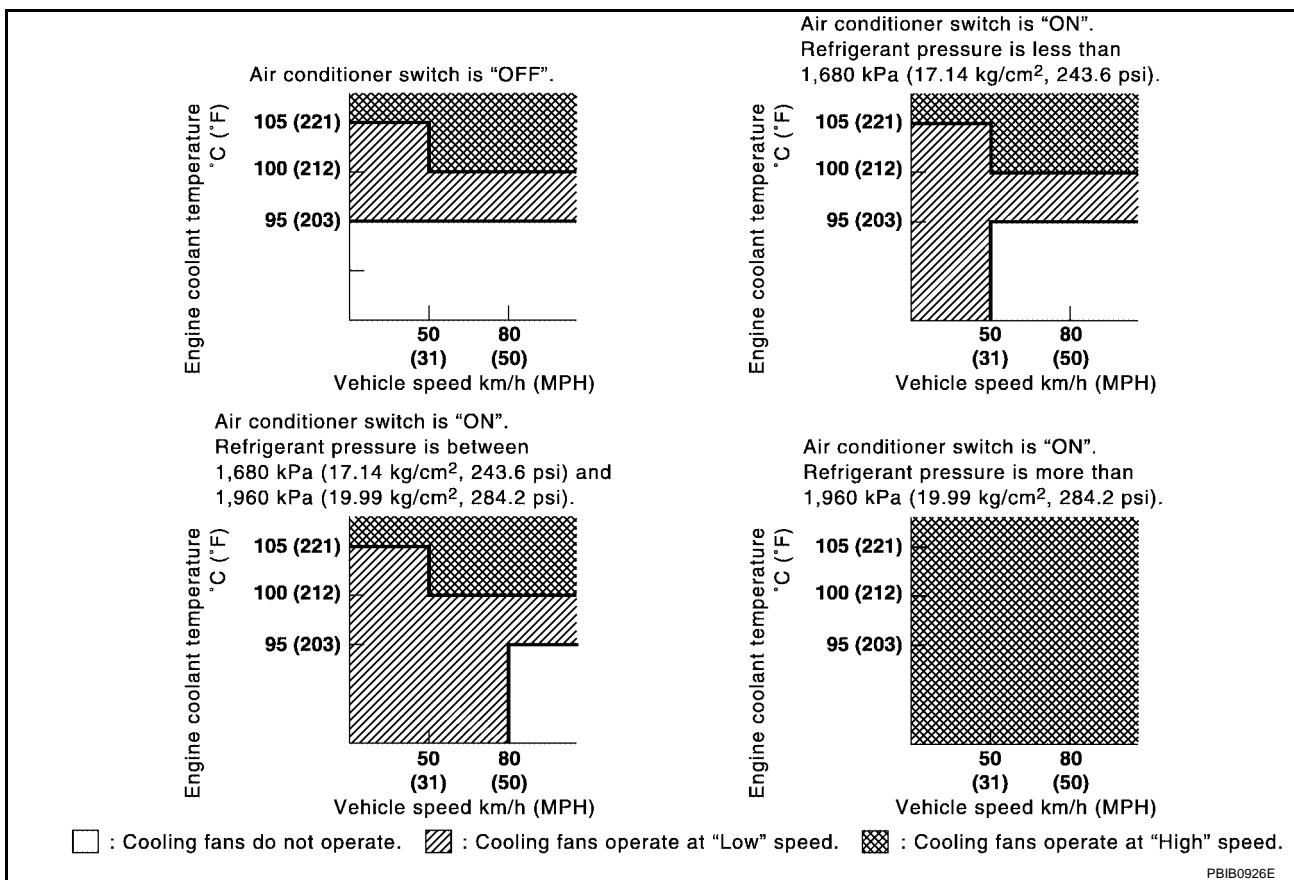

### System Description COOLING FAN CONTROL

UBS0021S

Sensor	Input Signal to ECM	ECM function	Actuator
Vehicle speed sensor	Vehicle speed	Cooling fan control	Cooling fan relay(s)
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch	Air conditioner "ON" signal		
Ignition switch	Start signal		
Refrigerant pressure sensor	Refrigerant pressure		

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

### OPERATION

### CONSULT-II Reference Value in Data Monitor Mode

UBS0021T

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	A/C switch "OFF"
		A/C switch: "ON" (Compressor operates)
		OFF
		ON

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (SULEV)]

MONITOR ITEM	CONDITION		SPECIFICATION
COOLING FAN	<ul style="list-style-type: none"> <li>After warming up engine, idle the engine.</li> <li>Air conditioner switch: OFF</li> </ul>	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (219°F)	LOW
		Engine coolant temperature is 105°C (221°F) or more	HIGH

## On Board Diagnosis Logic

UBS0021U

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise.

When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P1217 1217	Engine over temperature (Overheat)	<ul style="list-style-type: none"> <li>Cooling fan does not operate properly (Overheat).</li> <li>Cooling fan system does not operate properly (Overheat).</li> <li>Engine coolant was not added to the system using the proper filling method.</li> </ul>	<ul style="list-style-type: none"> <li>Harness or connectors (The cooling fan circuit is open or shorted.)</li> <li>Cooling fan</li> <li>Radiator hose</li> <li>Radiator</li> <li>Radiator cap</li> <li>Water pump</li> <li>Thermostat</li> </ul> <p>For more information, refer to <a href="#">EC-1021, "Main 12 Causes of Overheating"</a>.</p>

### CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to [MA-16, "Changing Engine Coolant"](#). Also, replace the engine oil. Refer to [MA-20, "Changing Engine Oil"](#).

- Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14, "Anti-freeze Coolant Mixture Ratio"](#).
- After refilling coolant, run engine to ensure that no water-flow noise is emitted.

## Overall Function Check

UBS0021V

Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.

Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

### WITH CONSULT-II

- Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-1013, "Diagnostic Procedure"](#).
- Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-1013, "Diagnostic Procedure"](#).
- Turn ignition switch "ON".

SEF621W

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (SULEV)]

4. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
5. If the results are NG, go to [EC-1013, "Diagnostic Procedure"](#).

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLANT TEMP/S	XXX °C

## WITH GST

1. Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-1013, "Diagnostic Procedure"](#).
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-1013, "Diagnostic Procedure"](#).
3. Start engine.  
**Be careful not to overheat engine.**
4. Set temperature control lever to full cold position.
5. Turn air conditioner switch "ON".
6. Turn blower fan switch "ON".
7. Run engine at idle for a few minutes with air conditioner operating.  
**Be careful not to overheat engine.**
8. Make sure that cooling fan operates at low speed.  
If NG, go to [EC-1013, "Diagnostic Procedure"](#).  
If OK, go to the following step.
9. Turn ignition switch "OFF".
10. Turn air conditioner switch and blower fan switch "OFF".
11. Disconnect engine coolant temperature sensor harness connector.
12. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
13. Restart engine and make sure that cooling fan operates at higher speed than low speed.  
**Be careful not to overheat engine.**
14. If NG, go to [EC-1013, "Diagnostic Procedure"](#).

## Diagnostic Procedure

UBS0021X

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.

No >> GO TO 4.

### 2. CHECK COOLING FAN LOW SPEED OPERATION

 **With CONSULT-II**

1. Disconnect cooling fan relay-2.
2. Turn ignition switch "ON".

3. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
4. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

OK >> GO TO 3.

NG >> Check cooling fan low speed control circuit. (Go to PROCEDURE A, [EC-1017](#).)

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLANT TEMP/S	XXX °C

SEF646X

# DTC P1217 ENGINE OVER TEMPERATURE

[QG18DE (SULEV)]

## 3. CHECK COOLING FAN HIGH SPEED OPERATION

### With CONSULT-II

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relay-2.
3. Turn ignition switch "ON".
4. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
5. Make sure that cooling fan-1 operates at high speed.

#### OK or NG

OK >> GO TO 6.

NG >> Check cooling fan high speed control circuit. (Go to PROCEDURE B, [EC-1020](#).)

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLAN TEMP/S	XXX °C

SEF646X

## 4. CHECK COOLING FAN LOW SPEED OPERATION

### Without CONSULT-II

1. Disconnect cooling fan relays-2.
2. Start engine and let it idle.
3. Set temperature lever at full cold position.
4. Turn air conditioner switch "ON".
5. Turn blower fan switch "ON".

6. Make sure that cooling fans-1 and -2 operate at low speed.

#### OK or NG

OK >> GO TO 5.

NG >> Check cooling fan low speed control circuit. (Go to PROCEDURE A, [EC-1017](#).)

**5. CHECK COOLING FAN HIGH SPEED OPERATION**

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relay-2.
3. Turn air conditioner switch and blower fan switch "OFF".
4. Disconnect engine coolant temperature sensor harness connector.
5. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
6. Restart engine and make sure that cooling fan-1 operates at high speed.

**OK or NG**

- OK >> GO TO 6.  
 NG >> Check cooling fan high speed control circuit. (Go to PROCEDURE B, [EC-1020](#) .)

**6. CHECK COOLING SYSTEM FOR LEAK**

Apply pressure to the cooling system with a tester, and check if the pressure drops.

**Testing pressure: 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)**

**CAUTION:**

Higher than the specified pressure may cause radiator damage. Pressure should not drop.

**OK or NG**

- OK >> GO TO 8.  
 NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following for leak.

- Hose
- Radiator
- Water pump (Refer to [CO-9, "WATER PUMP"](#) .)

>> Repair or replace.

**8. CHECK RADIATOR CAP**

Apply pressure to cap with a tester.

**Radiator cap relief pressure:**

**59 - 98 kPa (0.6 - 1.0 kg/cm<sup>2</sup> , 9 - 14 psi)**

OK or NG

OK >> GO TO 9.

NG >> Replace radiator cap.

**9. CHECK THERMOSTAT**

1. Check valve seating condition at normal room temperatures.

**It should seat tightly.**

2. Check valve opening temperature and valve lift.

**Valve opening temperature:**

**76.5°C (170°F) [standard]**

**Valve lift:**

**More than 9 mm/90°C (0.35 in/194°F)**

3. Check if valve is closed at 5°C (9°F) below valve opening temperature.

For details, refer to [CO-11, "THERMOSTAT AND THERMOSTAT HOUSING"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace thermostat.

**10. CHECK ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [EC-1022, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> Replace engine coolant temperature sensor.

**11. CHECK MAIN 12 CAUSES**

If the cause cannot be isolated, go to [EC-1021, "Main 12 Causes of Overheating"](#) .

**>> INSPECTION END**

## PROCEDURE A

**1. CHECK POWER SUPPLY**

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-1.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-1 terminals 1, 3, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

**2. DETECT MALFUNCTIONING PART**

Check the following.

- 10A fuse
- 40A fusible links
- Harness for open or short between cooling fan relay-1 and fuse
- Harness for open or short between cooling fan relay-1 and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 3. CHECK COOLING FAN GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-1 terminal 5 and cooling fan motor-1 terminal 1, cooling fan motor-1 terminal 4 and ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between cooling fan relay-1 terminal 7 and cooling fan motor-2 terminal 2, cooling fan motor-2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK OUTPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 97 and cooling fan relay-1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-1 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK COOLING FAN RELAY-1

Refer to [EC-1022, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace cooling fan relay.

## 7. CHECK COOLING FAN MOTORS-1 AND -2

Refer to [EC-1022, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace cooling fan motors.

## PROCEDURE B

### 1. CHECK COOLING FAN POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-2.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-2 terminals 1, 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK    >> GO TO 3.  
 NG    >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Fuse and fusible link box connector E25
- Fuse block (J/B) connector E103
- 10A fuse
- 40A fusible link
- Harness for open or short between cooling fan relay-2 and fuse
- Harness for open or short between cooling fan relay-2 and fusible link

>> Repair harness or connectors.

### 3. CHECK COOLING FAN GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-2 terminal 5 and cooling fan motor-1 terminal 2, cooling fan relay-2 terminal 6 and cooling fan motor-1 terminal 3, cooling fan relay-2 terminal 7 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK    >> GO TO 4.  
 NG    >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK COOLING FAN OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 89 and cooling fan relay-2 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-2 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK COOLING FAN RELAY-2

Refer to [EC-1022, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace cooling fan relays.

## 7. CHECK COOLING FAN MOTORS-1 AND -2

Refer to [EC-1022, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace cooling fan motors.

## 8. CHECK INTERMITTENT INCIDENT

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

**>> INSPECTION END**

**DTC P1225 TP SENSOR**

**Component Description**

UBS003Y7

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

**On Board Diagnosis Logic**

UBS003Y8

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance problem	Closed throttle position learning value is excessively low.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

**DTC Confirmation Procedure**

UBS003Y9

**NOTE:**

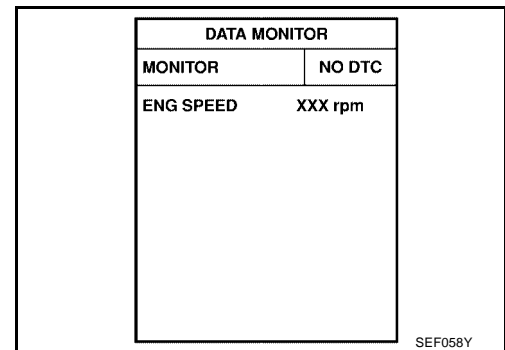

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Turn ignition switch "ON".
5. If 1st trip DTC is detected, go to [EC-1025, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure****1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY**

1. Turn ignition switch "OFF".
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.  
 NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

**2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**Removal and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-12, "OUTER COMPONENT PARTS"](#) .

**DTC P1226 TP SENSOR**

**Component Description**

UBS003YC

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

## DTC P1229 SENSOR POWER SUPPLY

PFP:16119

### On Board Diagnosis Logic

UBS006AB

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1229 1229	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	<ul style="list-style-type: none"> <li>● Harness or connectors (APP sensor 1 circuit is shorted.) (Mass air flow sensor is shorted.) (PSP sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.)</li> <li>● Accelerator pedal position sensor (APP sensor 1)</li> <li>● Power steering pressure sensor</li> <li>● Mass air flow sensor</li> <li>● Refrigerant pressure sensor</li> <li>● EVAP control system pressure sensor</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS006AC

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1030, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

>> INSPECTION END

DTC P1271 A/F SENSOR

PF2:22693

UBS00220

Component Description

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement  $\lambda = 1$ , but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide  $\lambda$  range ( $0.7 < \lambda < \text{air}$ ).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygen-pump cell so that the composition of the exhaust gas in the diffusion gap remains constant at  $\lambda = 1$ . Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

UBS00221

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
A/F SEN1 (B1)	<ul style="list-style-type: none"> <li>Engine: After warming up</li> <li>Maintaining engine speed at 2,000 rpm</li> </ul>	Fluctuates around 1.5V

On Board Diagnosis Logic

UBS00222

To judge the malfunction, the diagnosis checks that the A/F signal computed by ECM from the air fuel ratio (A/F) sensor 1 signal is not inordinately low.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P1271 1271	Air fuel ratio (A/F) sensor 1 circuit no activity detected	<ul style="list-style-type: none"> <li>The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 0V.</li> </ul>	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted.)</li> <li>Air fuel ratio (A/F) sensor 1</li> </ul>

DTC Confirmation Procedure

UBS00223

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

Ⓜ WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1)" in "DATA MONITOR" mode with CONSULT-II.

## Overall Function Check

UBS00224

Use this procedure to check the overall function of the front heated oxygen sensor circuit. During this check, a 1st trip DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in "D" position with "OD" OFF (A/T) or "3rd" position (M/T).

# DTC P1271 A/F SENSOR

[QG18DE (SULEV)]

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

3. Set "D" position with "OD" ON (A/T) or "4rd" position (M/T), then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

4. Repeat steps 2 to 3 five times.
5. Stop the vehicle and turn ignition switch "OFF".
6. Wait at least 10 seconds and restart engine.
7. Repeat steps 2 to 3 five times.
8. Stop the vehicle and connect GST to the vehicle.
9. Make sure that no DTC is displayed.  
If the DTC is displayed, go to [EC-1037, "Diagnostic Procedure"](#).

## Overall Function Check

UBS0022C

Use this procedure to check the overall function of the front heated oxygen sensor circuit. During this check, a 1st trip DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in "D" position with "OD" OFF (A/T) or "3rd" position (M/T).

# DTC P1272 A/F SENSOR

[QG18DE (SULEV)]

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

3. Set "D" position with "OD" ON (A/T) or "4th" position (M/T), then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

4. Repeat steps 2 to 3 five times.
5. Stop the vehicle and turn ignition switch "OFF".
6. Wait at least 10 seconds and restart engine.
7. Repeat steps 2 to 3 five times.
8. Stop the vehicle and connect GST to the vehicle.
9. Make sure that no DTC is displayed.  
If the DTC is displayed, go to [EC-1043, "Diagnostic Procedure"](#).

## Diagnostic Procedure

UBS0022E

### 1. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

3. Disconnect ECM harness connector and A/F sensor 1 harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

ECM terminal	A/F sensor terminal
16	1
35	5
56	6
75	2

**Continuity should exist.**

5. Check harness continuity between ECM terminals 16, 35, 56, 75 or A/F sensor 1 terminals 1, 2, 5, 6 and ground. Refer to Wiring Diagram.

**Continuity should not exist.**

6. Also check harness for short to power.

OK or NG

OK >> GO TO 2.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 2. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

### OK or NG

OK >> Replace A/F sensor 1.

NG >> Repair or replace.

### **Removal and Installation**

#### **AIR FUEL RATIO SENSOR**

UBS0022F

Refer to [EM-12, "Removal and Installation"](#) .

DTC P1273 A/F SENSOR

PF2:22693

UBS0022G

Component Description

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement  $\lambda = 1$ , but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide  $\lambda$  range ( $0.7 < \lambda < \text{air}$ ).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygen-pump cell so that the composition of the exhaust gas in the diffusion gap remains constant at  $\lambda = 1$ . Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

CONSULT-II Reference Value in Data Monitor Mode

UBS0022H

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 1.5V

On Board Diagnosis Logic

UBS0022I

To judge the malfunction, the A/F signal computed by ECM from the air fuel ratio (A/F) sensor 1 signal is monitored not to be shifted "lean" side or "rich" side. When the A/F signal is shifting to the lean side, the malfunction will be detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P1273 1273	Air fuel ratio (A/F) sensor 1 lean shift monitoring	● The output voltage computed by ECM from the A/F sensor 1 signal is shifted to the lean side for a specified period.	<ul style="list-style-type: none"> <li>● Air fuel ratio (A/F) sensor 1</li> <li>● Air fuel ratio (A/F) sensor heater 1</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

DTC Confirmation Procedure

UBS0022J

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "A/F SEN1 (B1) P1273" of "A/F SEN1" in "DTC WORK SUPPORT" mode.
3. Touch "START".

# DTC P1273 A/F SENSOR

[QG18DE (SULEV)]

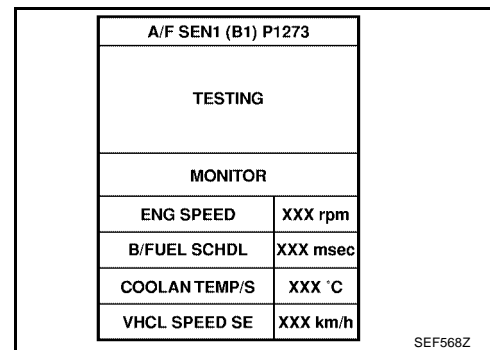

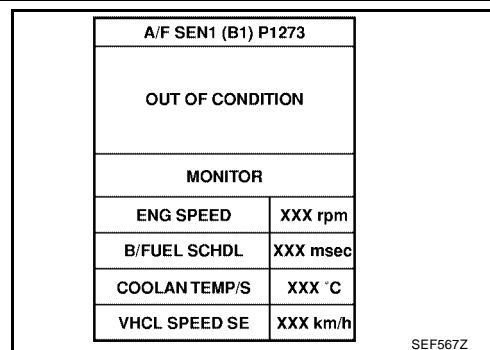

4. Maintain the following conditions continuously until "TESTING" changes to "COMPLETED". (It will take approximately 400 to 800 seconds.)

**NOTE:**

Keep the accelerator pedal as steady as possible.

ENG SPEED	Below 3,000 rpm
B/FUEL SCHDL	Below 9.0 msec
Selector lever	"P" or "N" position

If "TESTING" is not displayed after 20 minutes, retry from step 2.

5. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
If "NG" is displayed, go to [EC-1049, "Diagnostic Procedure"](#).

## Overall Function Check

UBS0022K

Use this procedure to check the overall function of the front heated oxygen sensor circuit. During this check, a 1st trip DTC might not be confirmed.

 **WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in "D" position with "OD" OFF (A/T) or "3rd" position (M/T).

**NOTE:**

Keep accelerator pedal as steady as possible during the cruising.

3. Set "D" position with "OD" ON (A/T) or "4th" position (M/T), then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

4. Repeat steps 2 to 3 five times.
5. Stop the vehicle and turn ignition switch "OFF".
6. Wait at least 10 seconds and restart engine.
7. Repeat steps 2 to 3 five times.
8. Stop the vehicle and connect GST to the vehicle.
9. Make sure that no DTC is displayed.

## Diagnostic Procedure

UBS0022M

### 1. RETIGHTEN AIR FUEL RATIO (A/F) SENSOR 1

1. Turn ignition switch "OFF".
2. Loosen and retighten the air fuel ratio (A/F) sensor 1.

**Tightening torque: 40 - 60 N-m (4.1 - 6.1 kg-m, 30 - 44 ft-lb)**

>> GO TO 2.

**2. CLEAR THE SELF-LEARNING DATA.**

**With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.

**Is the 1st trip DTC P0171 detected? Is it difficult to start engine?**

**Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 3 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure 1st trip DTC P0102 is displayed.
6. Erase the 1st trip DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.

**Is the 1st trip DTC P0171 detected? Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171. Refer to [EC-795](#) .
- No >> GO TO 3.

**3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector and A/F sensor 1 harness connector.
3. Check harness continuity between the following terminals. Refer to Wiring Diagram.

ECM terminal	A/F sensor terminal
16	1
35	5
56	6
75	2

**Continuity should exist.**

4. Check harness continuity between ECM terminals 16, 35, 56, 75 or A/F sensor 1 terminals 1, 2, 5, 6 and ground. Refer to Wiring Diagram.

**Continuity should not exist.**

5. Also check harness for short to power.

OK or NG

**DTC P1278 A/F SENSOR**

PDF:22693

UBS0030Z

**Component Description**

The A/F sensor is a planar dual-cell limit current sensor. The sensor element of the A/F sensor is the combination of a Nernst concentration cell (sensor cell) with an oxygen-pump cell, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement  $\lambda = 1$ , but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide  $\lambda$  range ( $0.7 < \lambda < \text{air}$ ).

The exhaust gas components diffuse through the diffusion gap at the electrode of the oxygen pump and Nernst concentration cell, where they are brought to thermodynamic balance.

An electronic circuit controls the pump current through the oxygen-pump cell so that the composition of the exhaust gas in the diffusion gap remains constant at  $\lambda = 1$ . Therefore, the A/F sensor is able to indicate air/fuel ratio by this pumping of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of 700 - 800°C (1,292 - 1,472°F).

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003P0

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
A/F SEN1 (B1)	<ul style="list-style-type: none"> <li>Engine: After warming up</li> </ul> Maintaining engine speed at 2,000 rpm	Fluctuates around 1.5V

**On Board Diagnosis Logic**

UBS003P1

To judge the malfunction of air fuel ratio (A/F) sensor 1, this diagnosis measures response time of the A/F signal computed by ECM from the air fuel ration (A/F) sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the air fuel ration (A/F) sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Perform [EC-635, "Idle Air Volume Learning"](#) . Make sure that "CMPLT" is displayed on CONSULT-II screen. If "INCMP" is displayed, follow the instruction for "Idle Air Volume Learning".
2. Select "A/F SEN1 (B1) P1278/P1279" of "A/F SEN1" in "DTC WORK SUPPORT" mode.
3. Touch "START".
4. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen.

ENG SPEED	1,500 - 3,000 rpm
Vehicle speed	70 - 120 km/h (43 - 75 MPH)
B/FUEL SCHDL	1.0 - 8.0 msec
Selector lever	<ul style="list-style-type: none"> <li>● "D" position with "OD" ON (A/T)</li> <li>● "4th" position (M/T)</li> </ul>

If "TESTING" is not displayed after 20 seconds, retry from step 2.

A/F SEN1 (B1) P1278/P1279	
OUT OF CONDITION	
MONITOR	
ENG SPEED	XXX rpm
B/FUEL SCHDL	XXX msec
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h

PBIB0756E

5. Following the instructions of CONSULT-II screen, set "D" position with "OD" OFF (A/T) or "3rd" position (M/T) and release accelerator pedal fully.

A/F SEN1 (B1) P1278/P1279	
TESTING	
SELECT 3RD GEAR AND THEN RELEASE ACCELERATOR PEDAL OFF	
MONITOR	
ENG SPEED	XXX rpm
B/FUEL SCHDL	XXX msec
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h

PBIB0757E

6. Make sure that "TESTING" changes to "COMPLETED".  
If "TESTING" changed to "OUT OF CONDITION", retry from step 6.
7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULT".  
If "NG" is displayed, go to [EC-1069, "Diagnostic Procedure"](#) .

A/F SEN1 (B1) P1278/P1279	
COMPLETED	

PBIB0758E

**Overall Function Check**

Use this procedure to check the overall function of the front heated oxygen sensor circuit. During this check, a 1st trip DTC might not be confirmed.

 **WITH GST**

1. Perform [EC-635, "Idle Air Volume Learning"](#) . Make sure the result is OK. If NG, follow the instruction for "Idle Air Volume Learning".
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in "D" position with "OD" OFF (A/T) or "3rd" position (M/T).

**NOTE:**

Keep the accelerator pedal as steady as possible during the cruising.

3. Set "D" position with "OD" ON (A/T) or "4th" position (M/T), then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).

**NOTE:**

Never apply brake during releasing the accelerator pedal.

4. Repeat steps 2 to 3 five times.
5. Stop the vehicle and turn ignition switch "OFF".
6. Wait at least 10 seconds and restart engine.
7. Repeat steps 2 to 3 five times.
8. Stop the vehicle and connect GST to the vehicle.
9. Make sure that no DTC is displayed.  
If the DTC is displayed, go to [EC-1069, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

UBS003P5

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. RETIGHTEN AIR FUEL RATIO (A/F) SENSOR 1

Loosen and retighten the air fuel ratio (A/F) sensor 1.

**Tightening torque: 40 - 60 N-m (4.1 - 6.1 kg-m, 30 - 44 ft-lb)**

>> GO TO 3.

### 3. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (manifold).

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

## 4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace.

## 5. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR" or "START".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected? Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 3 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure 1st trip DTC P0102 is displayed.
6. Erase the 1st trip DTC memory. Refer to [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected? Is it difficult to start engine?**

Yes or No

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (SULEV)]

## DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

### Description SYSTEM DESCRIPTION

UBS0023N

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed* and cylinder position	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Air fuel ratio (A/F) sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Fuel tank temperature sensor	Fuel temperature in fuel tank		
Vehicle speed sensor	Vehicle speed		

\*: ECM determines the start signal status by the signals of engine speed and battery voltage.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

## DTC Confirmation Procedure

UBS0023R

### NOTE:

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

**Always perform test at a temperature of 0°C (32°F) or more.**

### WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Turn ignition switch “ON”.
4. Select “PURG VOL CN/V P1444” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-II.
5. Touch “START”.

6. Start engine and let it idle until “TESTING” on CONSULT-II changes to “COMPLETED”. (It will take approximately 10 seconds.)  
**If “TESTING” is not displayed after 5 minutes, retry from step 2.**
7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to [EC-1085, "Diagnostic Procedure"](#).

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Start engine and let it idle for at least 20 seconds.
4. Select “MODE 7” with GST.
5. If 1st trip DTC is detected, go to [EC-1085, "Diagnostic Procedure"](#).

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (SULEV)]

UBS0023T

## Diagnostic Procedure

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and engine ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM relay
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair harness or connectors.

### 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 45 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (SULEV)]

## 4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 5.  
NG >> Replace EVAP control system pressure sensor.

## 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-885, "Component Inspection"](#).

OK or NG

- OK (With CONSULT-II)>>GO TO 6.  
OK (Without CONSULT-II)>>GO TO 7.  
NG >> Replace EVAP control system pressure sensor.

## 6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

 **With CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect harness connectors disconnected.
3. Start engine.
4. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
THRTL POS SEN	X. XX V

PBIB0721E

## 7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-892, "Component Inspection"](#).

OK or NG

- OK >> GO TO 8.  
NG >> Replace EVAP canister purge volume control solenoid valve.

## 8. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 9.  
NG >> Clean the rubber tube using an air blower.

## 9. CHECK EVAP CANISTER VENT CONTROL VALVE-II

Refer to [EC-878, "Component Inspection"](#).

OK or NG

- OK >> GO TO 11.  
NG >> Replace EVAP canister vent control valve.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (SULEV)]

## 10. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

OK or NG

- OK >> GO TO 11.  
NG >> GO TO 13.

## 11. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

- OK >> GO TO 13.  
NG >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

UBS0061B

Ⓟ With CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100.0%	Yes
0.0%	No

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QG18DE (SULEV)]

## ⊗ Without CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

## DTC P1446 EVAP CANISTER VENT CONTROL VALVE

PF14935

### Component Description

UBS0023U

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System" diagnoses.

### CONSULT-II Reference Value in Data Monitor Mode

UBS0023V

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

### On Board Diagnosis Logic

UBS0023W

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1446 1446	EVAP canister vent control valve close	EVAP canister vent control valve remains closed under specified driving conditions.	<ul style="list-style-type: none"> <li>● EVAP canister vent control valve</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Blocked rubber tube to EVAP canister vent control valve</li> <li>● EVAP canister is saturated with water</li> </ul>

### DTC Confirmation Procedure

UBS0023Y

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

## ④ WITH CONSULT-II

1. Turn ignition switch "ON" and wait at least 5 seconds.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Start engine and let it idle for at least 1 minute.
5. Repeat next procedures 3 times.
  - a. Increase the engine speed up to 3,000 to 3,500 rpm and keep it for 2 minutes and 50 seconds to 3 minutes.  
**Never exceed 3 minutes.**
  - b. Fully released accelerator pedal and keep engine idle for about 5 seconds.
6. If 1st trip DTC is detected, go to [EC-996, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

If 1st trip DTC is not detected, go to the next step.

7. Repeat next procedure 20 times.
  - a. Quickly increase the engine speed up to 4,000 to 4,500 rpm or more and keep it for 25 to 30 seconds.
  - b. Fully released accelerator pedal and keep engine idle for at least 35 seconds.

8. If 1st trip DTC is detected, go to [EC-996, "Diagnostic Procedure"](#).

## ④ WITH GST

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

UBS00240

### 1. CHECK RUBBER TUBE

1. Turn ignition switch "OFF".
2. Disconnect rubber tube connected to EVAP canister vent control valve.
3. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 2.  
NG >> Clean rubber tube using an air blower.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE-I

Refer to [EC-998, "Component Inspection"](#).

OK or NG

- OK >> GO TO 3.  
NG >> Replace EVAP canister vent control valve.

### 3. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

Yes or No

- Yes >> GO TO 4.  
No >> GO TO 6.

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

## 4. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.9 kg (4.2 lb).**

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

OK >> GO TO 7.

NG >> Replace EVAP control system pressure sensor.

## 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-892, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace EVAP control system pressure sensor.

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS006ID

Ⓟ With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.

# DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QG18DE (SULEV)]

2. Check portion **B** of EVAP canister vent control valve for being rusted.  
If NG, replace EVAP canister vent control valve.  
If OK, go to next step.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
6. Check air passage continuity and operation delay time.

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 (B1)	XXX V

**Operation takes less than 1 second.**

**Make sure new O-ring is installed properly.**

If NG, replace EVAP canister vent control valve.

If OK, go to next step.

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform step 5 again.

⊗ **Without CONSULT-II**

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

3. Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	No
OFF	Yes

**Operation takes less than 1 second.**

**Make sure new O-ring is installed properly.**

If NG, replace EVAP canister vent control valve.

If OK, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform step 3 again.

# DTC P1564 ASCD STEERING SWITCH

[QG18DE (SULEV)]

## DTC P1564 ASCD STEERING SWITCH

PF2:25551

### Component Description

UBS006AF

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [EC-1220, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

### CONSULT-II Reference Value in Data Monitor Mode

UBS006AG

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAIN SW	● Ignition switch: ON	CRUISE switch: Depressed	ON
		CRUISE switch: Released	OFF
CANCEL SW	● Ignition switch: ON	CRUISE switch: Depressed	ON
		CRUISE switch: Released	OFF
RESUME/ACC SW	● Ignition switch: ON	ACCEL/RES switch: Depressed	ON
		ACCEL/RES switch: Released	OFF
SET SW	● Ignition switch: ON	COAST/SET switch: Depressed	ON
		COAST/SET switch: Released	OFF

### On Board Diagnosis Logic

UBS006AH

This self-diagnosis has the one trip detection logic.  
The MIL will not light up for this diagnosis.

#### NOTE:

If DTC P1564 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-927](#).

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1564 1564	ASCD steering switch	<ul style="list-style-type: none"> <li>● An excessively high voltage signal from the ASCD steering switch is sent to ECM.</li> <li>● ECM detects that input signal from the ASCD steering switch is out of the specified range.</li> <li>● ECM detects that the ASCD steering switch is stuck ON.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (The switch circuit is open or shorted.)</li> <li>● ASCD steering switch</li> <li>● ECM</li> </ul>

### DTC Confirmation Procedure

UBS006AI

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 10 seconds.
4. Press "CRUISE" switch for at least 10 seconds, then release it and wait at least 10 seconds.
5. Press "ACCEL/RES" switch for at least 10 seconds, then release it and wait at least 10 seconds.

## DTC P1564 ASCD STEERING SWITCH

[QG18DE (SULEV)]

6. Press "COAST/SET" switch for at least 10 seconds, then release it and wait at least 10 seconds.
7. Press "CANCEL" switch for at least 10 seconds, then release it and wait at least 10 seconds.
8. If trip DTC is detected, go to [EC-1099, "Diagnostic Procedure"](#).

### WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1564 ASCD STEERING SWITCH

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"> <li>● ACCEL/RESUME switch is "ON".</li> </ul>	Approximately 3V

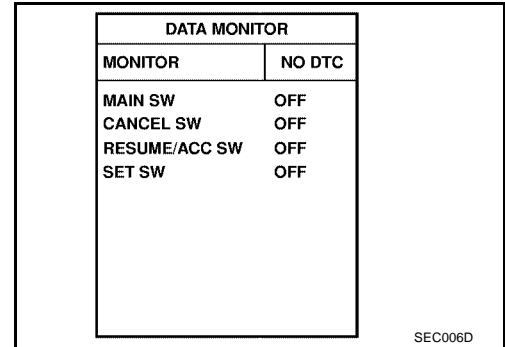

## Diagnostic Procedure

### 1. CHECK ASCD STEERING SWITCH CIRCUIT

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "MAIN SW", "RESUME/ACC SW", "SET SW" and "CANCEL SW" in "DATA MONITOR" mode with CONSULT-II.
3. Check each item indication under the following conditions.

Switch	Monitor item	Condition	Indication
CRUISE	MAIN SW	Pressed	ON
		Released	OFF
COAST/SET	SET SW	Pressed	ON
		Released	OFF
ACCEL/RES	RESUME/ACC SW	Pressed	ON
		Released	OFF
CANCEL	CANCEL SW	Pressed	ON
		Released	OFF

#### Without CONSULT-II

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 99 and ground with pressing each button.

Switch	Condition	Voltage [V]
CRUISE SW	Pressed	Approx. 0
	Released	Approx. 4
COAST/SET SW	Pressed	Approx. 2
	Released	Approx. 4
ACCEL/RES SW	Pressed	Approx. 3
	Released	Approx. 4
CANCEL SW	Pressed	Approx. 1
	Released	Approx. 4

#### OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 2.

### 2. CHECK ASCD STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ASCD steering switch harness connector.
3. Check harness continuity between switch terminal 1 and ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

---

## 3. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M401, M102
- Harness connectors M59, F27
- Joint connector-1
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to power in harness or connectors.

---

## 4. CHECK ASCD STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 99 and ASCD steering switch terminal 4. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

---

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M401, M102
- Harness connectors M59, F27
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 6. CHECK ASCD STEERING SWITCH

---

Refer to [EC-1101, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace ASCD steering switch.

---

## 7. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P1564 ASCD STEERING SWITCH

[QG18DE (SULEV)]

## DTC P1572 ASCD BRAKE SWITCH

PFP:25320

### Component Description

UBS006AM

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal). Refer to for the ASCD function [EC-1220, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) .

### CONSULT-II Reference Value in Data Monitor Mode

UBS006AN

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1	● Ignition switch: ON	Clutch pedal (M/T) and brake pedal: Fully released	ON
		Clutch pedal (M/T) and brake pedal: Slightly depressed	OFF
BRAKE SW2	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

### On Board Diagnosis Logic

UBS006AO

**This self-diagnosis has the one trip detection logic.**  
**The MIL will not light up for this diagnosis.**

**NOTE:**

- If DTC P1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-927](#).
- This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition		Possible Cause
P1572 1572	ASCD brake switch	A)	● When the vehicle speed is above 30km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The stop lamp switch circuit is shorted.)</li> <li>● Harness or connectors (The ASCD brake switch circuit is shorted.)</li> <li>● Harness or connectors (The ASCD clutch switch circuit is shorted.) (M/T models)</li> <li>● Stop lamp switch</li> <li>● ASCD brake switch</li> <li>● ASCD clutch switch (M/T models)</li> <li>● Incorrect stop lamp switch installation</li> <li>● Incorrect ASCD brake switch installation</li> <li>● Incorrect ASCD clutch switch installation (M/T models)</li> <li>● ECM</li> </ul>
		B)	● ASCD brake switch signal is not sent to ECM for extremely long time while the vehicle is driving	

## DTC Confirmation Procedure

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.
- Procedure for malfunction B is not described here. It takes extremely long time to complete procedure for malfunction B. By performing procedure for malfunction A, the incident that causes malfunction B can be detected.

**TESTING CONDITION:**

**Steps 4 and 5 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.**

**WITH CONSULT-II**

1. Start engine (TCS switch "OFF").
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Press CRUISE switch and make sure that CRUISE indicator lights up.
4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position

If 1st trip DTC is detected, go to [EC-1106, "Diagnostic Procedure"](#).

If 1st trip DTC is not detected, go to the following step.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
VHCL SPEED SE	XXX km/h
CRUISE LAMP	ON
BRAKE SW 1	ON
BRAKE SW 2	OFF

PBIB2386E

5. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position
Driving location	Depress the brake pedal for more than five seconds so as not to come off from the above-mentioned vehicle speed.

6. If 1st trip DTC is detected, go to [EC-1106, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

### 1. CHECK OVERALL FUNCTION-I

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
3. Check "BRAKE SW1" indication under the following conditions.

#### A/T models

CONDITION	INDICATION
When brake pedal is depress	OFF
When brake pedal is fully released	ON

#### M/T models

CONDITION	INDICATION
When clutch pedal and/or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

#### Without CONSULT-II

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 108 and ground under the following conditions.

#### A/T models

CONDITION	VOLTAGE
When brake pedal is depress	Approximately 0V
When brake pedal is fully released	Battery voltage

#### M/T models

CONDITION	VOLTAGE
When clutch pedal and/or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

#### OK or NG

- NG (A/T models) >>GO TO 4.

# DTC P1572 ASCD BRAKE SWITCH

[QG18DE (SULEV)]

## 2. CHECK OVERALL FUNCTION-II

### With CONSULT-II

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

### Without CONSULT-II

Check voltage between ECM terminal 101 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

OK or NG

- OK >> GO TO 18.
- NG >> GO TO 13.

## 3. CHECK ASCD CLUTCH SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

## 4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models)>>GO TO 6.
- OK (A/T models)>>GO TO 7.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.  
NG >> GO TO 8.

---

**8. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**9. CHECK ASCD BRAKE SWITCH**

---

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD brake switch.

---

**10. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

---

**11. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**12. CHECK ASCD CLUTCH SWITCH**

---

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD clutch switch.

### 13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal + (M/T models) or 1 (A/T models) and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

#### OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

### 14. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

**15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 101 and stop lamp switch terminal – (M/T models) or 2 (A/T models).  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

**16. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**17. CHECK STOP LAMP SWITCH**

Refer to [EC-1738, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace stop lamp switch.

**18. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection  
ASC D BRAKE SWITCH**

UBS006AS

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Check harness continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should exist.
When brake pedal is depressed.	Should not exist.

If NG, adjust ASCD brake switch installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#) , and perform step 3 again.

SEC023D

**ASC D CLUTCH SWITCH (FOR M/T MODELS)**

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Check harness continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

# DTC P1572 ASCD BRAKE SWITCH

[QG18DE (SULEV)]

Condition	Continuity
When clutch pedal is fully released.	Should exist.
When clutch pedal is depressed.	Should not exist.

If NG, adjust ASCD clutch switch installation, refer to [CL-6](#), "[CLUTCH SYSTEM](#)", and perform step 3 again.

## STOP LAMP SWITCH

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between stop lamp switch terminals 1 and 2 (A/T models), + and - (M/T models) under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

# DTC P1574 ASCD VEHICLE SPEED SENSOR

[QG18DE (SULEV)]

## DTC P1574 ASCD VEHICLE SPEED SENSOR

PF3:31036

### Component Description

UBS006AT

The ECM receives two vehicle speed sensor signals via CAN communication line. One is sent from combination meter, and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to [EC-1220, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for ASCD functions.

### On Board Diagnosis Logic

UBS006AU

This self-diagnosis has the one trip detection logic.  
The MIL will not light up for this diagnosis.

#### NOTE:

- If DTC P1574 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-728, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to [EC-916, "DTC P0500 VSS"](#).
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-927, "DTC P0605 ECM"](#).

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 1574	ASCD vehicle speed sensor	ECM detects a difference between two vehicle speed signals is out of the specified range.	<ul style="list-style-type: none"><li>● Harness or connectors (The CAN communication line is open or shorted.)</li><li>● Combination meter</li><li>● Vehicle speed sensor</li><li>● TCM</li><li>● ECM</li></ul>

### DTC Confirmation Procedure

UBS006AV

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Step 3 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

#### WITH CONSULT-II

1. Start engine (TCS switch "OFF").
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Drive the vehicle at more than 30 km/h (19 MPH).
4. If DTC is detected, go to [EC-1114, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1574 ASCD VEHICLE SPEED SENSOR

[QG18DE (SULEV)]

---

## Diagnostic Procedure

UBS006AW

### 1. CHECK DTC WITH TCM

---

Check DTC with TCM. Refer to [AT-38, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION"](#) .

OK or NG

OK >> GO TO 2.

NG >> Perform trouble shooting relevant to DTC indicated.

### 2. CHECK COMBINATION METER

---

Check combination meter function.

Refer to [DI-8, "Combination Meter"](#) .

>> **INSPECTION END**

**DTC P1706 PNP SWITCH**

**Component Description**

When the gear position is “P” or “N” (A/T models only), park/neutral position (PNP) switch is “ON”.  
ECM detects the park/neutral position when continuity with ground exists.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
P/N POSI SW	● Ignition switch: ON	Shift lever: “P” or “N” (A/T models) Neutral (M/T models)	ON
		Except above	OFF

**On Board Diagnosis Logic**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1706 1706	Park/neutral position switch	The signal of the park/neutral position (PNP) switch is not changed in the process of engine starting and driving.	<ul style="list-style-type: none"> <li>● Harness or connectors [The park/neutral position (PNP) switch circuit is open or shorted.]</li> <li>● Park/neutral position (PNP) switch</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

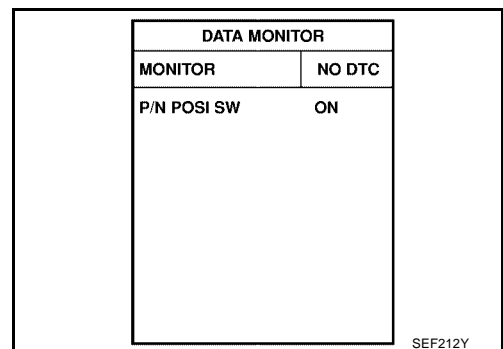

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “P/N POSI SW” in “DATA MONITOR” mode with CONSULT-II. Then check the “P/N POSI SW” signal under the following conditions.

Position (Selector lever)	Known good signal
“N” and “P” position	ON
Except the above position	OFF

If NG, go to [EC-1118, "Diagnostic Procedure"](#) .  
If OK, go to following step.

3. Select “DATA MONITOR” mode with CONSULT-II.
4. Start engine and warm it up to normal operating temperature.

# DTC P1706 PNP SWITCH

[QG18DE (SULEV)]

5. Maintain the following conditions for at least 50 consecutive seconds.

ENG SPEED	1,550 - 6,375 rpm (A/T) 1,850 - 6,375 rpm (M/T)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	3.0 - 31.8 msec (A/T) 2.2 - 31.8 msec (M/T)
VHCL SPEED SE	More than 64 km/h (40 MPH)
Selector lever	Suitable position

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
P/N POSI SW	OFF
B/FUEL SCHDL	XXX msec

SEF213Y

6. If 1st trip DTC is detected, go to [EC-1118, "Diagnostic Procedure"](#).

## Overall Function Check

UBS00253

Use this procedure to check the overall function of the park/neutral position switch circuit. During this check, a 1st trip DTC might not be confirmed.

### ⊗ WITHOUT CONSULT-II

- Turn ignition switch "ON".
- Check voltage between ECM terminal 102 (PNP switch signal) and ground under the following conditions.

Condition (Gear position)	Voltage (V) (Known-good data)
"P" (A/T only) and "N" position	Approx. 0
Except the above position	A/T models: Battery voltage M/T models: Approximately 5V

3. If NG, go to [EC-1118, "Diagnostic Procedure"](#).

# DTC P1706 PNP SWITCH

			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"><li>● Except the above gear position</li></ul>	<b>A/T models</b> BATTERY VOLTAGE (11 - 14V) <b>M/T models</b> Approximately 5V

## Diagnostic Procedure

UBS00255

### 1. CHECK GROUND CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect PNP switch harness connector.
3. Check harness continuity between PNP switch terminal 2 and ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 2.

NG >> Repair open circuit or short to power in harness or connectors.

### 2. CHECK INPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 102 and PNP switch terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK PNP SWITCH

Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) (A/T models) or [MT-78, "POSITION SWITCH"](#) (M/T models).

OK or NG

OK >> GO TO 4.

NG >> Replace PNP switch.

### 4. CHECK INTERMITTENT INCIDENT

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## DTC P1805 BRAKE SWITCH

PFP:25320

### Description

UBS003YH

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.

### CONSULT-II Reference Value in Data Monitor Mode

UBS003YI

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released OFF
		Brake pedal: Slightly depressed ON

### On Board Diagnosis Logic

UBS003YJ

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for an extremely long time while the vehicle is driving.	<ul style="list-style-type: none"> <li>● Harness or connectors (Stop lamp switch circuit is open or shorted.)</li> <li>● Stop lamp switch</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Engine operating condition in fail-safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range. Therefore, acceleration will be poor.	
	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

### DTC Confirmation Procedure

UBS003YK

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-II.
4. Select "DATA MONITOR" mode with CONSULT-II.
5. If 1st trip DTC is detected, go to [EC-1121, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	R/G	Stop lamp switch	[Ignition switch "ON"] ● Brake pedal fully released	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal depressed	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS003YM

### 1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch "OFF".
2. Check the stop lamp when depressing and releasing the brake pedal.

Brake pedal	Stop lamp
Fully released	Not illuminated
Depressed	Illuminated

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 2.

## 2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.

2. Check voltage between stop lamp switch terminal 1 (A/T models), + (M/T models) and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector M2
- Harness for open and short between stop lamp switch and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect stop lamp switch harness connector.
4. Check harness continuity between ECM terminal 101 and stop lamp switch terminal 2 (A/T models), – (M/T models). Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK STOP LAMP SWITCH**

Refer to [EC-1123, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace stop lamp switch.

**7. CHECK INTERMITTENT INCIDENT**

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
STOP LAMP SWITCH**

1. Disconnect stop lamp switch harness connector.

UBS003YN

## DTC P1805 BRAKE SWITCH

[QG18DE (SULEV)]

2. Check continuity between stop lamp switch terminals 1 and 2 (A/T models), + and – (M/T models) under the following conditions.

Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

If NG, adjust brake pedal installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#), and perform step 2 again.

DTC P2122, P2123 APP SENSOR

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.65 - 0.87V
		Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.56 - 0.96V
		Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Throttle valve: Idle position	ON
		Throttle valve: Slightly open	OFF

\*: Accelerator pedal sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

NOTE:

If DTC P2122 or P2123 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-1028, "DTC P1229 SENSOR POWER SUPPLY"](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	● Harness or connectors (The APP sensor 1 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 1)
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1129, "Diagnostic Procedure"](#) .

ACCELERATOR PEDAL**

UBS006B4

Refer to [ACC-2, "ACCELERATOR CONTROL SYSTEM"](#) .

DTC P2127, P2128 APP SENSOR

Component Description

UBS006H2

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

UBS006H3

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.65 - 0.87V
		Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.56 - 0.96V
		Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Throttle valve: Idle position	ON
		Throttle valve: Slightly open	OFF

\*: Accelerator pedal sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS006H4

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1227 1227	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The APP sensor 2 circuit is open or shorted.) (TP sensor circuit is shorted.)</li> <li>● Accelerator pedal position sensor (Accelerator pedal position sensor 2)</li> <li>● Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>
P1228 1228	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

**DTC Confirmation Procedure**

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1136, "Diagnostic Procedure"](#) .

2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Turn ignition switch "ON".
4. Set selector lever to "D" position (A/T models) or "1st" position (M/T models).
5. Check voltage between ECM terminals 50 (TP sensor 1 signal), 69 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
50 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
69 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
8. Perform [EC-635, "Idle Air Volume Learning"](#) .

### Removal and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to [EM-12, "Removal and Installation"](#) .

## DTC P2138 APP SENSOR

PFP:18002

### Component Description

UBS006BL

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

### CONSULT-II Reference Value in Data Monitor Mode

UBS006BM

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.65 - 0.87V
		Accelerator pedal: Fully depressed	More than 4.3V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.56 - 0.96V
		Accelerator pedal: Fully depressed	More than 4.0V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Throttle valve: Idle position	ON
		Throttle valve: Slightly open	OFF

\*: Accelerator pedal sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

### On Board Diagnosis Logic

UBS006BN

This self-diagnosis has the one trip detection logic.

#### NOTE:

If DTC P2138 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-1028](#)

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2138 2138	Accelerator pedal position sensor circuit range/performance problem	Rationally incorrect voltage is sent to ECM compared with the signals from APP sensor 1 and APP sensor 2.	<ul style="list-style-type: none"> <li>● Harness or connector (The APP sensor 1 and 2 circuit is open or shorted.) (TP sensor circuit is shorted)</li> <li>● Accelerator pedal position sensor 1 and 2</li> <li>● Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

### DTC Confirmation Procedure

**NOTE:**

**Continuity should exist.**

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

#### 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness for open between ECM and accelerator pedal position sensor

>> Repair or replace open circuit.

#### 7. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-III

Check the following.

- Harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
91	APP sensor terminal 1	<a href="#">EC-1134</a>
47	Electric throttle control actuator terminal 1	<a href="#">EC-767</a>

OK or NG

- OK >> GO TO 8.
- NG >> Repair short to ground or short to power in harness or connectors.

#### 8. CHECK THROTTLE POSITION SENSOR

Refer to [EC-771, "Component Inspection"](#).

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 9.

**9. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> **INSPECTION END**

**10. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 82 and APP sensor terminal 4, ECM terminal 83 and APP sensor terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**12. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 106 and APP sensor terminal 3, ECM terminal 98 and APP sensor terminal 6.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 14.  
NG >> GO TO 13.

**13. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**14. CHECK APP SENSOR**

Refer to [EC-1155, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 16.  
NG >> GO TO 15.

---

## 15. REPLACE ACCELERATOR PEDAL ASSEMBLY

---

1. Replace accelerator pedal assembly.
2. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .
3. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
4. Perform [EC-635, "Idle Air Volume Learning"](#) .

>> INSPECTION END

## 16. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**

**ACCELERATOR PEDAL POSITION SENSOR**

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch "ON".
3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.65 - 0.87V
	Fully depressed	More than 4.3V
98 (Accelerator pedal position sensor 2)	Fully released	0.28 - 0.48V
	Fully depressed	More than 2.0V

4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform [EC-634, "Accelerator Pedal Released Position Learning"](#) .
6. Perform [EC-634, "Throttle Valve Closed Position Learning"](#) .
7. Perform [EC-635, "Idle Air Volume Learning"](#) .

**Removal and Installation**

**ACCELERATOR PEDAL**

Refer to [ACC-2, "ACCELERATOR CONTROL SYSTEM"](#) .

### IGNITION SIGNAL

#### Component Description

#### IGNITION COIL & POWER TRANSISTOR

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns on and off the ignition coil primary circuit. This on-off operation induces the proper high voltage in the coil secondary circuit.

# IGNITION SIGNAL

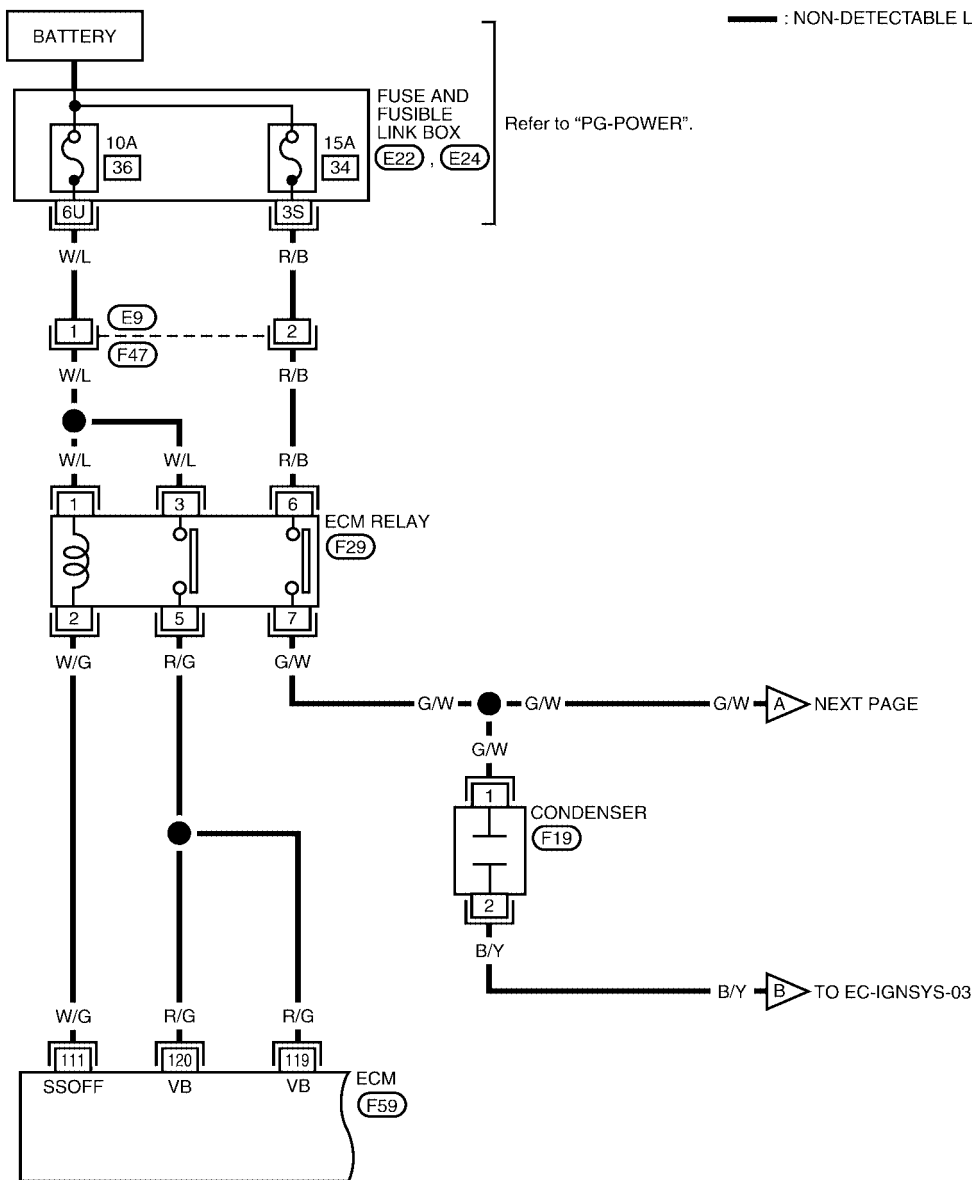

[QG18DE (SULEV)]

## Diagnostic Procedure

UBS006J7

### 1. CHECK ENGINE START

Turn ignition switch "OFF", and restart engine.

**Is engine running?**

Yes or No

Yes (With CONSULT-II)>>GO TO 2.

Yes (Without CONSULT-II)>>GO TO 3.

No >> GO TO 4.

### 2. CHECK OVERALL FUNCTION

④ **With CONSULT-II**

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.

2. Make sure that each circuit produces a momentary engine speed drop.

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 10.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

### 3. CHECK OVERALL FUNCTION

#### ⊗ Without CONSULT-II

1. Let engine idle.
2. Read the voltage signal between ECM terminals 61, 62, 80, 81 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

PBIB0521E

PBIB1204E

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 10.

### 4. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

1. Turn ignition switch "ON".
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.  
 NG >> Go to [EC-721, "POWER SUPPLY CIRCUIT FOR ECM"](#)

MBIB0034E

### 5. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Turn ignition switch "ON".
4. Check voltage between condenser terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 6.

PBIB0624E

## 6. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-III

1. Turn ignition switch "OFF".
2. Disconnect ECM relay.
3. Check harness continuity between ECM relay terminal 7 and condenser terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-IV

Check voltage between ECM relay terminal 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 9.  
 NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- 15A fuse
- Harness for open or short between ECM relay and battery

>> Repair or replace harness or connectors.

## 9. CHECK ECM RELAY

Refer to [EC-1166, "Component Inspection"](#).

OK or NG

- OK >> GO TO 17.  
 NG >> Replace ECM relay.

## 10. CHECK CONDENSER GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Check harness continuity between condenser terminal 2 and ground.  
Refer to Wiring diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

- OK >> GO TO 11.  
 NG >> Repair open circuit or short to power in harness or connector.

### 11. CHECK CONDENSER

Refer to [EC-1166, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 12.
- NG >> Replace condenser.

### 12. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-V

1. Turn ignition switch "OFF".
2. Reconnect all harness connectors disconnected.
3. Disconnect ignition coil harness connector.
4. Turn ignition switch "ON".

5. Check voltage between ignition coil terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 14.
- NG >> GO TO 13.

### 13. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between ignition coil and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 14. CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ignition coil terminal 2 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 15.
- NG >> Repair open circuit or short to power in harness or connectors.

## 15. CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 61, 62, 80, 81 and ignition coil terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 16.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 16. CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to [EC-1166, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace ignition coil with power transistor.

## 17. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection ECM RELAY

UBS006J8

1. Apply 12V direct current between ECM relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
OFF	No

3. If NG, replace ECM relay.

### CONDENSER

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.
3. Check resistance between condenser terminals 1 and 2.

**Resistance: Above 1 MΩ at 25°C (77°F)**

### IGNITION COIL WITH POWER TRANSISTOR

1. Turn ignition switch "OFF".
2. Disconnect ignition coil harness connector.

# IGNITION SIGNAL

[QG18DE (SULEV)]

3. Check resistance between ignition coil terminals as follows.

Terminal No.	Resistance $\Omega$ [at 25°C (77°F)]
3 and 1	Except 0 or $\infty$
3 and 2	Except 0
1 and 2	

## Removal and Installation IGNITION COIL WITH POWER TRANSISTOR

# INJECTOR

[QG18DE (SULEV)]

## INJECTOR

PF16600

### Component Description

UBS00256

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the injector circuit, the coil in the injector is energized. The energized coil pulls the needle valve back and allows fuel to flow through the injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

### CONSULT-II Reference Value in Data Monitor Mode

UBS00257

MONITOR ITEM	CONDITION	SPECIFICATION

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS00259

### 1. INSPECTION START

Turn ignition switch to "START".

**Is any cylinder ignited?**

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 3.

### 2. CHECK OVERALL FUNCTION

#### With CONSULT-II

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

#### Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.  
**Clicking noise should be heard.**

#### OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 3.

### 3. CHECK POWER SUPPLY CIRCUIT

1. Stop engine.
2. Disconnect injector harness connector.
3. Turn ignition switch "ON".
4. Check voltage between injector terminal 2 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

#### OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

---

#### 4. DETECT MALFUNCTIONING PART

---

Check the following.

- 10A fuse
- Harness connectors M19, E108
- Harness connectors E9, F47
- Harness connectors F12, F101
- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between injector and fuse

>> Repair harness or connectors.

---

#### 5. CHECK INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between injector harness connector terminal 1 and ECM terminals 22, 23, 41, 42.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.  
NG >> GO TO 6.

---

#### 6. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors F12, F101
- Harness for open or short between injector and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

#### 7. CHECK INJECTOR

---

Refer to [EC-1173, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace injector.

---

#### 8. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection

### INJECTOR

1. Disconnect injector harness connector.
2. Check resistance between terminals as shown in the figure.

**Resistance: 13.5 - 17.5 $\Omega$  [at 20°C (68°F)]**

# FUEL PUMP

[QG18DE (SULEV)]

PF17042

## FUEL PUMP

### System Description SYSTEM DESCRIPTION

UBS0025E

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

\*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned on to improve engine startability. If the ECM receives a 180° signal from the camshaft position sensor, it knows that the engine is rotating, and causes the pump to perform. If the 180° signal is not received when the ignition switch is on, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch is turned to ON.	Operates for 5 seconds
Engine running and cranking	Operates
When engine is stopped	Stops in 1 second
Except as shown above	Stops

### COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

### CONSULT-II Reference Value in Data Monitor Mode

UBS0025G

MONITOR ITEM	CONDITION	SPECIFICATION
FUEL PUMP RLY	<ul style="list-style-type: none"> <li>● Ignition switch is turned to ON (Operates for 5 seconds)</li> <li>● Engine running and cranking</li> <li>● When engine is stopped (Stops in 1 seconds)</li> </ul>	ON
	<ul style="list-style-type: none"> <li>● Except as shown above</li> </ul>	OFF

# FUEL PUMP

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
113	B/P	Fuel pump relay	[Ignition switch "ON"] ● For 1 second after turning ignition switch "ON"	0 - 1.0V
			[Engine is running] [Ignition switch "ON"] ● More than 1 second after turning ignition switch "ON".	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS0025I

### 1. CHECK OVERALL FUNCTION

1. Turn ignition switch "ON".
2. Pinch fuel feed hose with fingers.  
**Fuel pressure pulsation should be felt on the fuel feed hose for 5 seconds after ignition switch is turned "ON".**

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 2.

### 2. CHECK FUEL PUMP POWER SUPPLY CIRCUIT-1

1. Turn ignition switch "OFF".
2. Disconnect fuel pump relay.
3. Turn ignition switch "ON".

4. Check voltage between fuel pump relay terminals 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector B4
- Harness for open or short between fuse and fuel pump relay

>> Repair harness or connectors.

### 4. CHECK POWER SUPPLY-II

Check voltage between fuel pump relay terminal 5 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector B4
- 15A fuse
- Harness for open or short between fuse and fuel pump relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 6. CHECK POWER GROUND CIRCUIT AND GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Check harness continuity between fuel level sensor unit and fuel pump terminal 3 and body ground, fuel level sensor unit and fuel pump terminal 1 and fuel pump relay terminal 3. Refer to wiring diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

### 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between and fuel pump and body ground
- Harness for open or short between and fuel pump and fuel pump relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 8. CHECK OUTPUT SIGNAL CIRCUIT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 113 and fuel pump relay connector terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 10.  
NG >> GO TO 9.

---

## 9. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B3, M16
- Harness connector M58, F26
- Harness for open or short between ECM and fuel pump relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 10. CHECK FUEL PUMP RELAY

---

Refer to [EC-1179, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 11.  
NG >> Replace fuel pump relay.

---

## 11. CHECK FUEL PUMP

---

Refer to [EC-1179, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 12.  
NG >> Replace fuel pump.

---

## 12. CHECK INTERMITTENT INCIDENT

---

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# FUEL PUMP

[QG18DE (SULEV)]

UBS0025J

## Component Inspection FUEL PUMP RELAY

Check continuity between terminals 3 and 5.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

If NG, replace relay.

## FUEL PUMP

1. Disconnect fuel pump harness connector.
2. Check resistance between terminals 1 and 3.

**Resistance: 0.2 - 5.0Ω [at 25°C (77°F)]**

If NG, replace fuel pump.

# REFRIGERANT PRESSURE SENSOR

[QG18DE (SULEV)]

## REFRIGERANT PRESSURE SENSOR

PFP:92136

### Description

UBS0025R

The refrigerant pressure sensor is installed at the liquid tank of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

# REFRIGERANT PRESSURE SENSOR

[QG18DE (SULEV)]

UBS0025S

BBWA0798E

# REFRIGERANT PRESSURE SENSOR

[QG18DE (SULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
49	R/Y	Sensor power supply (Refrigerant pressure sensor)	[Ignition switch "ON"]	Approximately 5V
67	B/W	Sensor ground (Mass air flow sensor)	[Engine is running] <ul style="list-style-type: none"> <li>• Warm-up condition</li> <li>• Idle speed</li> </ul>	Approximately 0V
70	L	Refrigerant pressure sensor	[Engine is running] <ul style="list-style-type: none"> <li>• Warm-up condition</li> <li>• Both A/C switch and blower switch are "ON" (Compressor operates.)</li> </ul>	1.0 - 4.0V

## Diagnostic Procedure

UBS0025T

### 1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and fan control switch "ON".
3. Check voltage between ECM terminal 70 and ground with CONSULT-II or tester.

**Voltage: 1.0 - 4.0V**

OK or NG

- OK >> **INSPECTION END**
- NG >> **GO TO 2.**

## 2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn A/C switch and fan control switch "OFF".
2. Stop engine.
3. Disconnect refrigerant pressure sensor harness connector.
4. Turn ignition switch "ON".

5. Check voltage between refrigerant pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair harness or connectors.

## 4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between refrigerant pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

---

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Joint connector-1
- Harness for open or short between TCM (transmission control module) and refrigerant pressure sensor
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to power in harness or connectors.

---

## 6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 70 and refrigerant pressure sensor terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

---

## 7. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 8. CHECK REFRIGERANT PRESSURE SENSOR

---

Refer to [MTC-15, "Refrigerant Pressure Sensor"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace refrigerant pressure sensor.

---

## 9. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Removal and Installation REFRIGERANT PRESSURE SENSOR

Refer to [MTC-15, "REFRIGERATION SYSTEM"](#) .

			[Engine is running] ● Heater fan switch "OFF"	Approximately 5V

## Diagnostic Procedure

UBS0025W

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.

No >> GO TO 4.

### 2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-I

 **With CONSULT-II**

- Turn ignition switch "ON".
- Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Lighting switch "1ST" position	ON
Lighting switch "OFF"	OFF

OK or NG

OK >> GO TO 3.

NG >> GO TO 7.

DATA MONITOR	
MONITORING	NO DTC
LOAD SIGNAL	ON

PBIB0103E

### 3. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II

 **With CONSULT-II**

Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Lighting switch "2ND" and "HIGH" position	ON
Lighting switch "OFF"	OFF

OK or NG

OK >> GO TO 6.

NG >> GO TO 11.

DATA MONITOR	
MONITORING	NO DTC
LOAD SIGNAL	ON

PBIB0103E

## 4. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-I

⊗ **Without CONSULT-II**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 84 and ground under the following conditions.

Condition	Voltage
Lighting switch "1ST" position	BATTERY VOLTAGE
Lighting switch "OFF"	0V

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 7.

PBIB0674E

## 5. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II

⊗ **Without CONSULT-II**

Check voltage between ECM terminal 84 and ground under the following conditions.

Condition	Voltage
Lighting switch "2ND" and "HIGH" position	BATTERY VOLTAGE
Lighting switch "OFF"	0V

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 11.

PBIB0674E

## 6. CHECK FAN CONTROL SWITCH CIRCUIT OVERALL FUNCTION

Check voltage between ECM terminal 96 and ground under the following conditions.

Condition	Voltage
Fan control switch "ON"	BATTERY VOLTAGE
Fan control switch "OFF"	0V

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 15.

PBIB1219E

## 7. CHECK LIGHTING SWITCH 1ST POSITION CIRCUIT

1. Turn the lighting switch "1ST" position.
2. Check that any illumination lamp is illuminated.

OK or NG

- OK >> GO TO 8.  
 NG >> Refer to [LT-32. "ILLUMINATION"](#).

**8. CHECK LOAD SIGNAL INPUT SIGNAL CIRCUIT FOR OPEN OR SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect lighting switch harness connectors.
4. Check harness continuity between ECM terminal 84 and lighting switch terminal 12 under the following conditions.

CONDITION	CONTINUITY
1	Should not exist.
2	Should exist.

5. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 10.
- NG >> GO TO 9.

**9. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Fuse block (J/B) connectors M1, E103
- Diode-3
- Harness for open and short between ECM and lighting switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**10. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**11. CHECK HEADLAMP HIGH BEAM CIRCUIT**

1. Start engine.
2. Turn the lighting switch "2ND" and "HIGH" position.
3. Check that headlamp high beams are illuminated.

**OK or NG**

- OK >> GO TO 12.
- NG >> Refer to [LT-6, "HEADLAMP \(FOR USA\)"](#) .

**12. CHECK HEADLAMP HIGH BEAM INPUT SIGNAL CIRCUIT FOR OPEN OR SHORT**

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect lighting switch harness connector.
4. Check harness continuity between ECM terminal 84 and lighting switch terminal 9 under the following conditions.

PBIB1222E

CONDITION	CONTINUITY
1	Should not exist.
2	Should exist.

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 14.
- NG >> GO TO 13.

**13. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness connectors E109, M20
- Diode-3
- Harness for open and short between ECM and lighting switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**14. CHECK INTERMITTENT INCIDENT**

Perform [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**15. CHECK FAN CONTROL SWITCH CIRCUIT**

1. Start engine.
2. Turn the fan control switch "ON".
3. Check the blower fan motor. Is the blower fan motor operating?

Yes or No

- Yes >> GO TO 16.
- No >> Refer to [MTC-19, "TROUBLE DIAGNOSIS"](#) .

---

**16. CHECK FAN CONTROL SWITCH INPUT SIGNAL CIRCUIT FOR OPEN OR SHORT**

---

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect fan control switch harness connector.
4. Check harness continuity between ECM terminal 96 and fan control switch terminal 6.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 18.
- NG >> GO TO 17.

---

**17. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open and short between ECM and fan control switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**18. CHECK INTERMITTENT INCIDENT**

## ASC D BRAKE SWITCH

### Component Description

When the brake pedal is depressed, ASC D brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal)  
 Refer to [EC-1220, "AUTOMATIC SPEED CONTROL DEVICE \(ASC D\)"](#) for the ASC D function.

### CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1	● Ignition switch: ON	Clutch pedal (M/T) and brake pedal: Slightly depressed	ON
		Clutch pedal (M/T) and brake pedal: Slightly depressed	OFF
BRAKE SW2	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

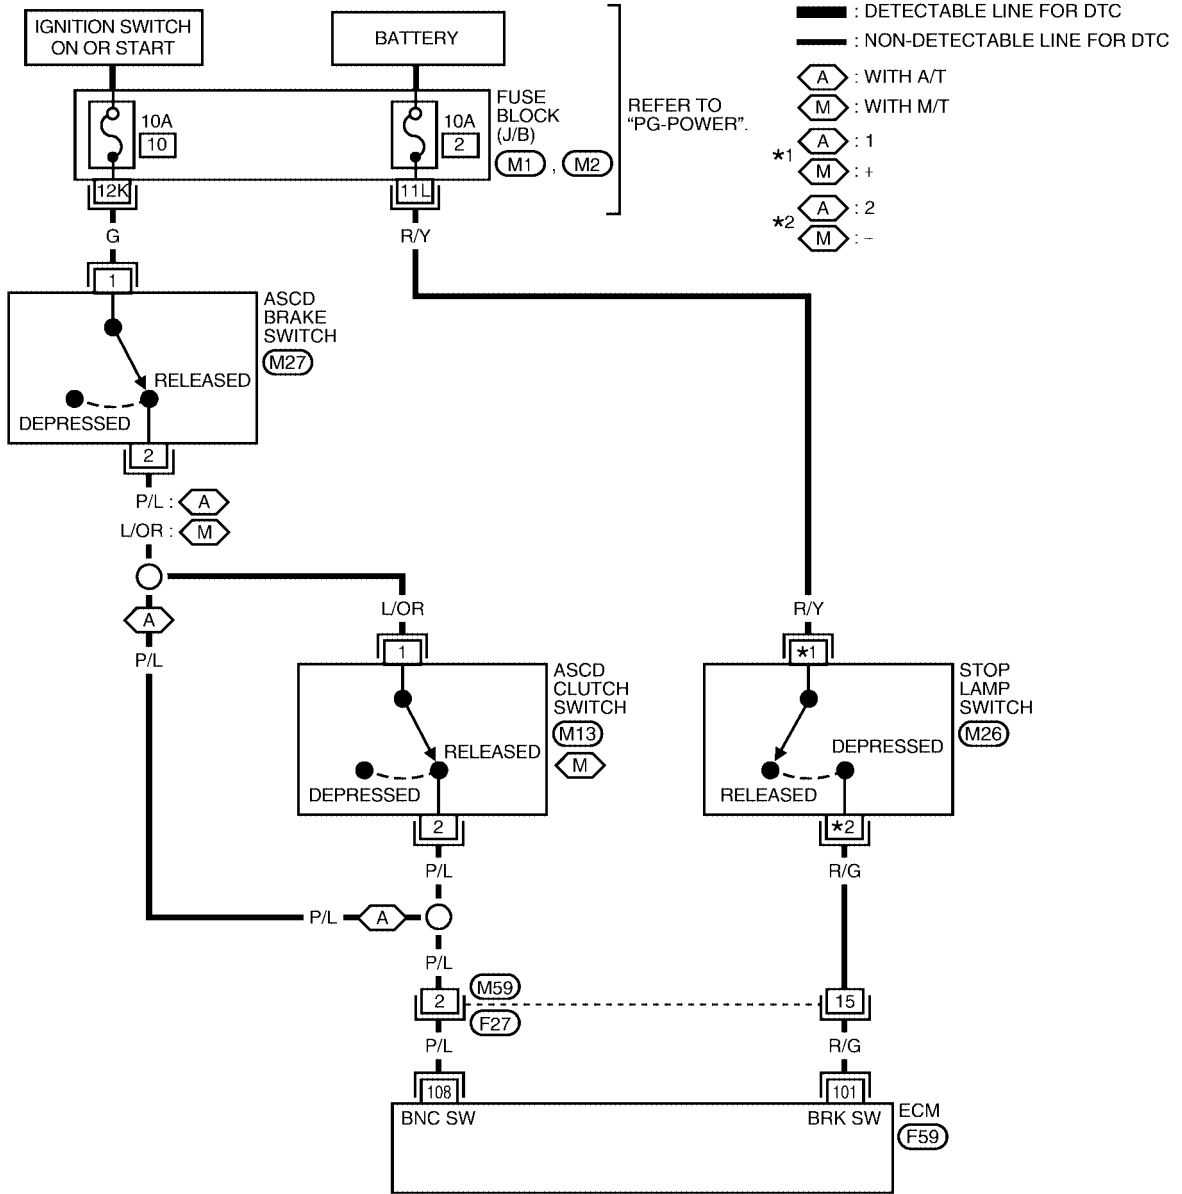

# ASCD BRAKE SWITCH

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	R/G	Stop lamp switch	[Ignition switch "ON"] ● Brake pedal is fully released	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is depressed	BATTERY VOLTAGE (11 - 14V)
108	P/L	ASCD brake switch	[Ignition switch "ON"] ● Brake pedal is depressed ● Clutch pedal is depressed (M/T models)	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is depressed ● Clutch pedal is depressed (M/T models)	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS006JD

### 1. CHECK OVERALL FUNCTION-I

**Ⓟ With CONSULT-II**

- Turn ignition switch "ON".
- Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
- Check "BRAKE SW1" indication under the following conditions.  
**M/T models**

CONDITION	INDICATION
When clutch pedal or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

**A/T models**

CONDITION	INDICATION
When brake pedal is depressed	OFF
When brake pedal is fully released	ON

**ⓧ Without CONSULT-II**

- Turn ignition switch "ON".
- Check voltage between ECM terminal 108 and ground under the following conditions.  
**M/T models**

CONDITION	VOLTAGE
When clutch pedal or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

**A/T models**

CONDITION	VOLTAGE
When brake pedal is depressed	Approximately 0V
When brake pedal is fully released	Battery voltage

OK or NG

OK >> GO TO 2.

NG (M/T models) >>GO TO 3.

NG (A/T models) >>GO TO 4.

# ASCD BRAKE SWITCH

[QG18DE (SULEV)]

## 2. CHECK OVERALL FUNCTION-II

### With CONSULT-II

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

### Without CONSULT-II

Check voltage between ECM terminal 101 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 13.

## 3. CHECK ASCD CLUTCH SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

## 4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models)>>GO TO 6.
- OK (A/T models)>>GO TO 7.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 9. CHECK ASCD BRAKE SWITCH

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.
- NG >> Replace ASCD brake switch.

## 10. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 108 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.
- NG >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK ASCD CLUTCH SWITCH

Refer to [EC-1199, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.
- NG >> Replace ASCD clutch switch.

### 13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal + (M/T models) or 1 (A/T models) and ground with CONSULT -II or tester.

**Voltage: Battery voltage**

#### OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

### 14. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 101 and stop lamp switch terminal – (M/T models) or 2 (A/T models).  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

## 16. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 17. CHECK STOP LAMP SWITCH

Refer to [EC-1199, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace stop lamp switch.

## 18. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

**>> INSPECTION END**

### Component Inspection ASCD BRAKE SWITCH

UBS006JE

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Check harness continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should exist.
When brake pedal is depressed.	Should not exist.

If NG, adjust ASCD brake switch installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#) , and perform step 3 again.

### ASCD CLUTCH SWITCH (FOR M/T MODELS)

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.

# ASCD BRAKE SWITCH

[QG18DE (SULEV)]

3. Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When clutch pedal is fully released.	Should exist.
When clutch pedal is depressed.	Should not exist.

If NG, adjust ASCD clutch switch installation, refer to [CL-23](#), "[CLUTCH SYSTEM](#)", and perform step 3 again.

## STOP LAMP SWITCH

### With M/T Models

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between stop lamp switch terminals + and - under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

### With A/T Models

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

## ASC D INDICATOR

PFP:24814

### Component Description

*UBS006BX*

ASC D indicator lamp illuminates to indicate ASC D operation status. Lamp has two indicators, CRUISE and SET, and is integrated in combination meter.

CRUISE indicator illuminates when CRUISE switch on ASC D steering switch is turned ON to indicated that ASC D system is ready for operation.

SET indicator illuminates when following conditions are met.

- CRUISE indicator is illuminated.
- SET switch on ASC D steering switch is turned ON while vehicle speed is within the range of ASC D setting.

SET indicator remains lit during ASC D control.

Refer to [EC-1220, "AUTOMATIC SPEED CONTROL DEVICE \(ASC D\)"](#) for the ASC D function.

### CONSULT-II Reference Value in Data Monitor Mode

*UBS006BY*

Specification data are reference value.

MONITOR ITEM	CONDITION		SPECIFICATION
CRUISE LAMP	● Ignition switch: ON	CRUISE Lamp: Illuminated	ON
		CRUISE Lamp: Not illuminated	OFF
SET LAMP	● Ignition switch: ON	SET Lamp: Illuminated	ON
		SET Lamp: Not illuminated	OFF

# ASC D INDICATOR

UBS006BZ

## Wiring Diagram

### EC-ASCIND-01

-  : DETECTABLE LINE FOR DTC
-  : NON-DETECTABLE LINE FOR DTC
-  : DATA LINE

BBWA0433E

## Diagnostic Procedure

### 1. CHECK OVERALL FUNCTION

Check ASCD indicator under the following conditions.

ASCD INDICATOR	CONDITION	SPECIFICATION	
CRUISE LAMP	● Ignition switch: ON	CRUISE Lamp: Illuminated	ON
		CRUISE Lamp: Not illuminated	OFF
SET LAMP	● Ignition switch: ON	SET Lamp: Illuminated	ON
		SET Lamp: Not illuminated	OFF

OK or NG

OK >> **INSPECTION END**  
 NG >> GO TO 2.

### 2. CHECK DTC

Check that DTC U1000 or U1001 is not displayed.

Yes or No

Yes >> Perform trouble diagnoses for DTC U1000, U1001, refer to [EC-728, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#) .  
 No >> GO TO 3.

### 3. CHECK COMBINATION METER OPERATION

Does combination meter operate normally?

Yes or No

Yes >> GO TO 4.  
 No >> Check combination meter circuit. Refer to [DI-8, "Combination Meter"](#) .

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-720, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## EVAPORATIVE EMISSION SYSTEM

PFP:14950

### Description SYSTEM DESCRIPTION

UBS0025Y

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.

EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

# EVAPORATIVE EMISSION SYSTEM

[QG18DE (SULEV)]

## EVAPORATIVE EMISSION LINE DRAWING

**NOTE:** Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

PBIB1180E

Refer to previous page

### INSTALLATION PRECAUTIONS:

- This hose can be reused, but do not remove it unless necessary.
- Remove any foreign matter (dust, sand, etc.) from the hose connection before installing.
- Apply oil to the O-ring before installing.
- Replace the hose assembly if the O-ring is scratched or cracked.

BBIA0177E

### Component Inspection EVAP CANISTER

Check EVAP canister as follows:

1. Block port **B** .
2. Blow air into port **A** and check that it flows freely out of port **C** .
3. Release blocked port **B** .
4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports **A** and **C** .
5. Block port **A** and **B** .
6. Apply pressure to port **C** and check that there is no leakage.

PBIB1212E

### FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

1. Wipe clean valve housing.

SEF445Y

2. Check valve opening pressure and vacuum.

**Pressure:** 15.3 - 20.0 kPa (0.156 - 0.204 kg/cm<sup>2</sup> , 2.22 - 2.90 psi)

**Vacuum:** -6.0 to -3.3 kPa (-0.061 to -0.034 kg/cm<sup>2</sup> , -0.87 to -0.48 psi)

3. If out of specification, replace fuel filler cap as an assembly.

**CAUTION:**

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

SEF943S

### EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-867, "DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE"](#) .

### FUEL TANK TEMPERATURE SENSOR

Refer to [EC-809, "DTC P0181 FTT SENSOR"](#) , [EC-814, "DTC P0182, P0183 FTT SENSOR"](#) .

### EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-873](#) .

### EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-880](#) .

### EVAP SERVICE PORT

Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.

UBS00617

### Removal and Installation EVAP CANISTER

Tighten EVAP canister as shown in the figure.

PBIB1214E

### EVAP CANISTER VENT CONTROL VALVE

1. Turn EVAP canister vent control valve counterclockwise.
2. Remove the EVAP canister vent control valve.

**Do not reuse the O-ring, replace it with a new one.**

PBIB1215E

### How to Detect Fuel Vapor Leakage

UBS00260

#### CAUTION:

- Never use compressed air or a high pressure pump.
- Do not start engine.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in EVAP system.

#### NOTE:

Improper installation of adapter to the service port may cause a leak.

### Ⓜ WITH CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump and hose.
3. Turn ignition switch "ON".
4. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
5. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.

6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
7. Remove the EVAP service port adapter and hose with pressure pump.

8. Locate the leak using a leak detector. Refer to [EC-1206](#), "[EVAPORATIVE EMISSION LINE DRAWING](#)".

### ⓧ WITHOUT CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

# EVAPORATIVE EMISSION SYSTEM

[QG18DE (SULEV)]

3. Apply battery voltage to between the terminals of EVAP canister vent control valve to make a closed EVAP system.
4. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm<sup>2</sup> , 0.2 to 0.4 psi).
5. Remove EVAP service port adapter and hose with pressure pump.
6. Locate the leak using a leak detector. Refer to [EC-1206, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (SULEV)]

## ON BOARD REFUELING VAPOR RECOVERY (ORVR)

PFP:00000

### System Description

UBS00261

From the beginning of refueling, the fuel tank pressure goes up. When the pressure reaches the setting value of the refueling control valve (RCV) opening pressure, the RCV is opened. After RCV opens, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve, RCV and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

The RCV is always closed during driving and the evaporative emission control system is operated the same as conventional system.

#### **WARNING:**

When conducting inspections below, be sure to observe the following:

- Put a "CAUTION: FLAMMABLE" sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO<sub>2</sub> fire extinguisher.

#### **CAUTION:**

- Before removing fuel line parts, carry out the following procedures:
  - Put drained fuel in an explosion-proof container and put lid on securely.
  - Release fuel pressure from fuel line. Refer to [EC-637, "FUEL PRESSURE RELEASE"](#).
  - Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Do not kink or twist hose and tube when they are installed.
- Do not tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connection.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

## Diagnostic Procedure

**SYMPTOM: FUEL ODOR FROM EVAP CANISTER IS STRONG.**

UBS00262

### 1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Weigh the EVAP canister with EVAP canister vent control valve attached.  
The weight should be less than 1.9 kg (4.2 lb).

OK or NG

OK >> GO TO 2.

NG >> GO TO 3.

### 2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 3.

No >> GO TO 5.

### 3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

### 5. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-1215, "Component Inspection"](#) .

OK or NG

OK >> **INSPECTION END**

NG >> Replace refueling EVAP vapor cut valve with fuel tank.

**SYMPTOM: CANNOT REFUEL/FUEL ODOR FROM THE FUEL FILLER OPENING IS STRONG WHILE REFUELING.**

### 1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Weigh the EVAP canister with EVAP canister vent control valve attached.  
The weight should be less than 1.9 kg (4.2 lb).

OK or NG

OK >> GO TO 2.

NG >> GO TO 3.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (SULEV)]

## 2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

- Yes >> GO TO 3.
- No >> GO TO 5.

## 3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

## 5. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling control valve for clogging, kink, looseness and improper connection.

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace hoses and tubes.

## 6. CHECK FILLER NECK TUBE

Check signal line and recirculation line for clogging, dents and cracks.

OK or NG

- OK >> GO TO 7.
- NG >> Replace filler neck tube.

## 7. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to [EC-1215, "Component Inspection"](#).

OK or NG

- OK >> GO TO 8.
- NG >> Replace refueling EVAP vapor cut valve with fuel tank.

## 8. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

OK or NG

- OK >> GO TO 9.
- NG >> Replace fuel filler tube.

**9. CHECK ONE-WAY FUEL VALVE-I**

Check one-way valve for clogging.

OK or NG

OK >> GO TO 10.

NG >> Repair or replace one-way fuel valve with fuel tank.

**10. CHECK ONE-WAY FUEL VALVE-II**

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.  
When a stick is inserted, the valve should open, when removing stick it should close.

**Do not drop any material into the tank.**

OK or NG

OK >> **INSPECTION END**

NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

UBS00618

### Component Inspection

#### REFUELING EVAP VAPOR CUT VALVE

#### Ⓟ With CONSULT-II

1. Remove fuel tank. Refer to [FL-7, "Removal and Installation"](#).
2. Drain fuel from the tank as follows:
  - Remove fuel feed hose located on the fuel level sensor unit retainer.
  - Connect a spare fuel hose, one side to fuel level sensor unit retainer where the hose was removed and the other side to a fuel container.
  - Drain fuel using "FUEL PUMP RELAY" in "ACTIVE TEST" mode with CONSULT-II.
3. Check refueling EVAP vapor cut valve for being stuck closed as follows.  
Blow air into the refueling EVAP vapor cut valve (from hose end **B**), and check that the air flows freely into the tank.
4. Check EVAP vapor cut valve for being stuck open as follows.
  - Connect vacuum pump to hose ends **A** and **B** using a suitable 3-way connector.
  - Remove fuel level sensor unit retainer with fuel level sensor unit.
  - Always replace O-ring with new one.**
  - Put fuel tank upside down.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (SULEV)]

- Apply vacuum pressure to both hose ends **A** and **B** [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel level sensor unit retainer remaining open and check that the pressure is applicable.

PBIB1221E

## ⊗ Without CONSULT-II

1. Remove fuel tank. Refer to [FL-7, "Removal and Installation"](#).
2. Drain fuel from the tank as follows:
  - Remove fuel level sensor unit retainer.
  - Drain fuel from the tank using a handy pump into a fuel container.
3. Check refueling EVAP vapor cut valve for being stuck closed as follows. Blow air into the refueling EVAP vapor cut valve (from hose end **B**), and check that the air flows freely into the tank.
4. Check EVAP vapor cut valve for being stuck open as follows.
  - Connect vacuum pump to hose ends **A** and **B** using a suitable 3-way connector.
  - Remove fuel level sensor unit retainer with fuel level sensor unit.  
**Always replace O-ring with new one.**
  - Put fuel tank upside down.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QG18DE (SULEV)]

- Apply vacuum pressure to both hose ends **A** and **B** [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel level sensor unit retainer remaining open and check that the pressure is applicable.

POSITIVE CRANKCASE VENTILATION

PF1:11810

Description

UBS00263

SEF921W

This system returns blow-by gas to the intake collector.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold.

During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve.

Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air.

The ventilating air is then drawn from the air duct into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover.

Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the intake collector under all conditions.

Component Inspection

PCV (POSITIVE CRANKCASE VENTILATION) VALVE

UBS00264

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over the valve inlet.

SEF244Q

# POSITIVE CRANKCASE VENTILATION

[QG18DE (SULEV)]

## VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

# AUTOMATIC SPEED CONTROL DEVICE (ASCD)

[QG18DE (SULEV)]

## AUTOMATIC SPEED CONTROL DEVICE (ASCD)

PF1:18930

### System Description INPUT/OUTPUT SIGNAL CHART

UBS006C1

Sensor	Input signal to ECM	ECM function	Actuator
ASCD brake switch	Brake pedal operation	ASCD vehicle speed control	Electric throttle control actuator
Stop lamp switch	Brake pedal operation		
ASCD clutch switch (M/T models)	Clutch pedal operation		
ASCD steering switch	ASCD steering switch operation		
Park/Neutral position (PNP) switch (A/T models)	Gear position		
Combination meter	Vehicle speed		
TCM	Powertrain revolution		

### BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).

ECM controls throttle angle of electric throttle control actuator to regulate engine speed.

Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.

### SET OPERATION

Press ASCD CRUISE switch (Main switch). (The CRUISE indicator in combination meter illuminates.)

When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET switch. (Then SET indicator in combination meter illuminates.)

### ACCEL OPERATION

If the RESUME/ACCEL switch is depressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.

And then ASCD will keep the new set speed.

### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is depressed
- More than 2 switches at ASCD steering switch are depressed at the same time (Set speed will be cleared.).
- Brake pedal is depressed
- Clutch pedal is depressed or gear position is changed to the neutral position (M/T models)
- Selector lever is changed to "N", "P", "R" position (A/T models).
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

- Engine coolant temperature is slightly higher than the normal operating temperature: CRUISE lamp may blink slowly.  
When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by depressing SET switch or RESUME switch.
- Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

### COAST OPERATION

When the SET/COAST switch is depressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

# AUTOMATIC SPEED CONTROL DEVICE (ASCD)

[QG18DE (SULEV)]

## RESUME OPERATION

When the RESUME/ACCEL switch is depressed after cancel operation other than depressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released.
- Clutch pedal is released (M/T models)
- A/T selector lever is in other than P and N position (A/T models)
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012.

\*3: In Diagnostic Test Mode II (Self-diagnostic results), these numbers are controlled by NISSAN.

\*4: When engine is running.

\*5: The troubleshooting for this DTC needs CONSULT-II.

\*6: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

UBS0026P

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### On Board Diagnostic (OBD) System of Engine and A/T

UBS0026Q

The ECM has an on board diagnostic system. It will light up the malfunction indicator (MIL) to warn the driver of a malfunction causing emission deterioration.

**CAUTION:**

- Be sure to turn the ignition switch OFF and disconnect the battery ground cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to [PG-46, "HARNESS CONNECTOR"](#).
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to the malfunction of the fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

### Precaution

UBS0026R

- Always use a 12 volt battery as power source.
- Do not attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect battery ground cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned off.
- Before removing parts, turn ignition switch OFF and then disconnect battery ground cable.

SEF289H

# PRECAUTIONS

[QR25DE]

- Do not disassemble ECM.
- If battery cable is disconnected, the memory will return to the initial ECM values.  
The ECM will now start to self-control at its initial values. Engine operation can vary slightly when the cable is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.

- When connecting ECM harness connector, fasten it securely with a lever as far as it will go as shown at right.

- When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).  
Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.

- Securely connect ECM harness connectors.  
A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform "ECM Terminals and Reference Value" inspection and make sure ECM functions properly. Refer to [EC-1307](#).
- Handle mass air flow sensor carefully to avoid damage.
- Do not disassemble mass air flow sensor.
- Do not clean mass air flow sensor with any type of detergent.
- Do not disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

## PRECAUTIONS

[QR25DE]

- After performing each TROUBLE DIAGNOSIS, perform “DTC Confirmation Procedure” or “Overall Function Check”.  
The DTC should not be displayed in the “DTC Confirmation Procedure” if the repair is completed. The “Overall Function Check” should be a good result if the repair is completed.

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

- Do not operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

# PRECAUTIONS

[QR25DE]

- Do not depress accelerator pedal when starting.
- Immediately after starting, do not rev up engine unnecessarily.
- Do not rev up engine just prior to shutdown.

- When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.
  - Keep the antenna as far as possible from the electronic control units.
  - Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.
  - Adjust the antenna and feeder line so that the standing-wave ratio can be kept smaller.
  - Be sure to ground the radio to vehicle body.

## Wiring Diagrams and Trouble Diagnosis

UBS0026S

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

\*1: These sensors are not used to control the engine system. They are used only for the on board diagnosis.

\*2: This sensor is not used to control the engine system under normal conditions.

\*3: The signal is sent to the ECM through CAN communication line.

## Multiport Fuel Injection (MFI) System INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed	Fuel injection & mixture ratio control	Fuel injectors
Camshaft position sensor (PHASE)	Engine speed and piston position		
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Heated oxygen sensor 1	Density of oxygen in exhaust gas		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Park/neutral position (PNP) switch	Gear position		
Ignition switch	Start signal		
Knock sensor	Engine knocking condition		
Battery	Battery voltage		
Power steering oil pressure switch	Power steering operation		
Heated oxygen sensor 2 *	Density of oxygen in exhaust gas		
Vehicle speed sensor	Vehicle speed		
Air conditioner switch	Air conditioner operation		

\*: Under normal conditions, this sensor is not for engine control operation.

### SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the crankshaft position sensor and the mass air flow sensor.

### VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

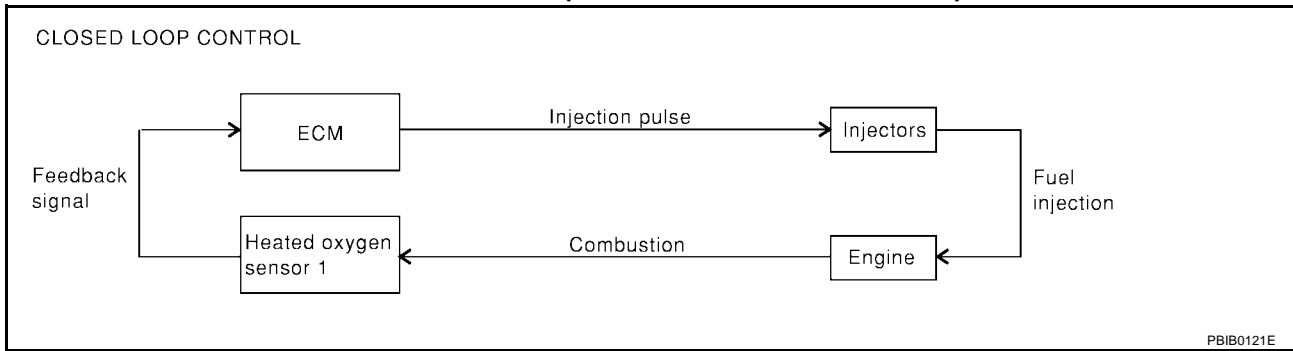

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from "N" to "D" (A/T models)
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

**MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)**

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst (manifold) can then better reduce CO, HC and NOx emissions. This system uses heated oxygen sensor 1 in the exhaust manifold to monitor if the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about heated oxygen sensor 1, refer to [EC-1406](#). This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst (manifold). Even if the switching characteristics of heated oxygen sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

**Open Loop Control**

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of heated oxygen sensor 1 or its circuit
- Insufficient activation of heated oxygen sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from “N” to “D” (A/T models)
- When starting the engine

**MIXTURE RATIO SELF-LEARNING CONTROL**

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from heated oxygen sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot film) and characteristic changes during operation (i.e., injector clogging) directly affect mixture ratio.

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.

“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.

“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from heated oxygen sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

“Long term fuel trim” is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

## FUEL INJECTION TIMING

Two types of systems are used.

### Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

### Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all four cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The four injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

### FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration or operation of the engine at excessively high speeds.

## Electronic Ignition (EI) System INPUT/OUTPUT SIGNAL CHART

UBS0026Z

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed	Ignition timing control	Power transistor
Camshaft position sensor (PHASE)	Engine speed and piston position		
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Ignition switch	Start signal		
Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage		
Vehicle speed sensor	Vehicle speed		

## SYSTEM DESCRIPTION

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM. This data forms the map shown.

The ECM receives information such as the injection pulse width and camshaft position sensor signal. Computing this information, ignition signals are transmitted to the power transistor.

e.g., N: 1,800 rpm, Tp: 1.50 msec

A °BTDC

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle

- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

## Air Conditioning Cut Control INPUT/OUTPUT SIGNAL CHART

UBS00270

Sensor	Input Signal to ECM	ECM function	Actuator
Air conditioner switch	Air conditioner "ON" signal	Air conditioner cut control	Air conditioner relay
Throttle position sensor	Throttle position		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Engine coolant temperature sensor	Engine coolant temperature		
Ignition switch	Start signal		
Refrigerant pressure sensor	Refrigerant pressure		
Power steering oil pressure switch	Power steering operation		
Vehicle speed sensor	Vehicle speed		

### SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

## Fuel Cut Control (at No Load and High Engine Speed) INPUT/OUTPUT SIGNAL CHART

UBS00271

Sensor	Input Signal to ECM	ECM function	Actuator
Park/neutral position (PNP) switch	Neutral position	Fuel cut control	Fuel injectors
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Vehicle speed sensor	Vehicle speed		

### SYSTEM DESCRIPTION

If the engine speed is above 1,800 rpm with no load (for example, in neutral and engine speed over 1,800 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed. Fuel cut will operate until the engine speed reaches 1,500 rpm, then fuel cut is cancelled.

#### NOTE:

This function is different from deceleration control listed under "Multiport Fuel Injection (MFI) System", [EC-1239](#).

## CAN communication SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

## INPUT/OUTPUT SIGNAL CHART

T: Transmit R: Receive

Signals	ECM	TCM
Accelerator pedal position signal	T	R
Output shaft revolution signal	R	T
A/T self-diagnosis signal	R	T
Wide open throttle position signal	T	R
Overdrive cancel signal	T	R

## BASIC SERVICE PROCEDURE

PFP:00018

### Idle Speed and Ignition Timing Check IDLE SPEED

UBS00273

#### With CONSULT-II

Check idle speed in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### With GST

Check idle speed in "MODE 1" with GST.

### IGNITION TIMING

Any of following two methods may be used.

#### Method A

1. Slide the harness protector off ignition coil No. 1 to clear the wires.
2. Attach timing light to the wires as shown in the figure.
3. Check ignition timing.

#### Method B

1. Remove No. 1 ignition coil.

# BASIC SERVICE PROCEDURE

[QR25DE]

2. Connect No. 1 ignition coil and No. 1 spark plug with suitable high-tension wire as shown, and attach timing light clamp to this wire.

3. Check ignition timing.

## Idle Speed/Ignition Timing/Idle Mixture Ratio Adjustment PREPARATION

UBS00274

1. Make sure that the following parts are in good order.
  - Battery
  - Ignition system
  - Engine oil and coolant levels
  - Fuses
  - ECM harness connector
  - Vacuum hoses
  - Air intake system (Oil filler cap, oil level gauge, etc.)
  - Fuel pressure
  - Engine compression
  - Throttle valve
  - Evaporative emission system
2. On air conditioner equipped models, checks should be carried out while the air conditioner is "OFF".
3. On automatic transmission equipped models, when checking idle rpm, ignition timing and mixture ratio, checks should be carried out while shift lever is in "N" position.
4. When measuring "CO" percentage, insert probe more than 40 cm (15.7 in) into tail pipe.
5. Turn off headlamps, heater blower, rear window defogger.

6. Keep front wheels pointed straight ahead.

## OVERALL INSPECTION SEQUENCE

**NOTE:**

If a vehicle contains a part which is operating outside of design specifications with no MIL illumination, the part shall not be replaced prior to emission testing unless it is determined that the part has been tampered with or abused in such a way that the diagnostic system cannot reasonably be expected to detect the resulting malfunction.

PBIB1054E

## INSPECTION PROCEDURE

### 1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

## 3. CHECK TARGET IDLE SPEED

### Ⓟ With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

### ⓧ Without CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

#### OK or NG

- OK    >> GO TO 10.
- NG    >> GO TO 4.

## 4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 5.

## 5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 6.

**6. PERFORM IDLE AIR VOLUME LEARNING**

Perform [EC-1255, "Idle Air Volume Learning"](#) .

Is the "Idle Air Volume Learning" carried out successfully?

Yes or No

Yes >> GO TO 7.

No >> 1. Follow the instruction of "Idle Air Volume Learning".

2. GO TO 4.

**7. CHECK TARGET IDLE SPEED AGAIN****Ⓔ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 10.

NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-1496](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-1490](#) .

OK or NG

OK >> GO TO 9.

NG >> 1. Repair or replace.

2. GO TO 4.

**9. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)
2. Perform initialization of NVIS (NATS) system and registration of NVIS (NATS) ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#) .

>> GO TO 4.

## 10. CHECK IGNITION TIMING

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 15 ± 5° BTDC**

**A/T: 15 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK (With CONSULT-II)>>GO TO 19.

OK (Without CONSULT-II)>>GO TO 20.

NG >> GO TO 11.

## 11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

## 12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

## 13. PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-1255, "Idle Air Volume Learning"](#) .

**Is the "Idle Air Volume Learning" carried out successfully?**

Yes or No

Yes >> GO TO 14.

No >> 1. Follow the construction of "Idle Air Volume Learning".

2. GO TO 4.

## 14. CHECK TARGET IDLE SPEED AGAIN

 **With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 15.

NG >> GO TO 17.

## 15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 15 ± 5° BTDC**

**A/T: 15 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK (With CONSULT-II)>>GO TO 19.

OK (Without CONSULT-II)>>GO TO 20.

NG >> GO TO 16.

## 16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to [EM-134, "TIMING CHAIN"](#) .

OK or NG

OK >> GO TO 17.

NG >> 1. Repair the timing chain installation.

2. GO TO 4.

## 17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-1496](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-1490](#) .

OK or NG

OK >> GO TO 18.

NG >> 1. Repair or replace.

2. GO TO 4.

## 18. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)
2. Perform initialization of NVIS (NATS) system and registration of NVIS (NATS) ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#) .

>> GO TO 4.

## 19. CHECK HEATED OXYGEN SENSOR 1 SIGNAL

 **With CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. See "HO2S1 MNTR (B1)" in "DATA MONITOR" mode.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the monitor fluctuates between LEAN and RICH more than 5 times during 10 seconds.

**1 time: RICH → LEAN → RICH**

**2 times: RICH → LEAN → RICH → LEAN → RICH**

OK or NG

OK >> **INSPECTION END**

NG (Monitor does not fluctuate.)>>GO TO 21.

NG (Monitor fluctuates less than 5 times.)>>GO TO 28.

SEF646Y

**20. CHECK HEATED OXYGEN SENSOR 1 SIGNAL**

---

**⊗ Without CONSULT-II**

1. Stop engine and set ECM to Self-diagnostic mode II (Heated oxygen sensor 1 monitor). Refer to [EC-1276, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#).
2. Start engine and run it at about 2,000 rpm for about 2 minutes under no-load.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the MIL comes on more than 5 times during 10 seconds.

OK or NGOK >> **INDPECTION END**

NG (MIL does not come on)&gt;&gt;GO TO 21.

NG (MIL comes on less than 5 times)&gt;&gt;GO TO 28.

**21. CHECK HEATED OXYGEN SENSOR 1 HARNESS**

---

1. Turn ignition switch "OFF" and disconnect battery ground cable.
2. Disconnect ECM harness connector.
3. Disconnect heated oxygen sensor 1 harness connector.
4. Check harness continuity between ECM terminal 92 and heated oxygen sensor 1 terminal 1. Refer to [EC-1408, "Wiring Diagram"](#).

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

OK &gt;&gt; GO TO 22.

NG &gt;&gt; 1. Repair or replace harness between ECM and heated oxygen sensor 1.

2. GO TO 4.

**22. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

---

1. Reconnect ECM harness connector.
2. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#).

&gt;&gt; GO TO 23.

**23. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

---

Perform [EC-1255, "Throttle Valve Closed Position Learning"](#).

&gt;&gt; GO TO 24.

**24. PERFORM IDLE AIR VOLUME LEARNING**

---

Refer to [EC-1255, "Idle Air Volume Learning"](#).**Is the "Idle Air Volume Learning" carried out successfully?**Yes or No

Yes (With CONSULT-II)&gt;&gt;GO TO 25.

Yes (Without CONSULT-II)&gt;&gt;GO TO 26.

No &gt;&gt; 1. Follow the construction of "Idle Air Volume Learning".

2. GO TO 4.

**25. CHECK "CO"%**

**With CONSULT-II**

1. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
2. Turn ignition switch "OFF", wait at least 10 seconds and then turn "ON".
3. Select "ENG COOLANT TEMP" in "ACTIVE TEST" mode.
4. Set "ENG COOLANT TEMP" to 5°C (41°F) by touching "DWN" and "Qd".
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 0.3 – 9.5% and engine runs smoothly.**

OK or NG

- OK >> GO TO 28.
- NG >> GO TO 27.

ACTIVE TEST	
ENG COOLANT TEMP	XXX °C
MONITOR	
ENG SPEED	XXX rpm
INJ PULSE-B1	XXX msec
IGN TIMING	XXX BTDC

SEF172Y

**26. CHECK "CO"%**

**Without CONSULT-II**

1. Start engine and warm it up until engine coolant temperature indicator points to the middle of gauge.
2. Turn ignition switch "OFF".
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect a resistor (4.4 kΩ) between terminals of engine coolant temperature sensor harness connector.
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 0.3 – 9.5% and engine runs smoothly.**

7. After checking "CO"%, turn ignition switch "OFF", disconnect the resistor from the terminals of engine coolant temperature sensor harness connector, and then connect engine coolant temperature sensor harness connector to engine coolant temperature sensor.

OK or NG

- OK >> GO TO 28.
- NG >> GO TO 27.

**27. RECONNECT HEATED OXYGEN SENSOR 1 HARNESS CONNECTOR**

1. Turn ignition switch "OFF".
2. Reconnect heated oxygen sensor 1 harness connector.

>> GO TO 31.

**28. REPLACE HEATED OXYGEN SENSOR 1**

1. Stop engine.
2. Replace heated oxygen sensor 1.

With CONSULT-II>>GO TO 29.  
Without CONSULT-II>>GO TO 30.

## 29. CHECK HEATED OXYGEN SENSOR 1 SIGNAL

### With CONSULT-II

1. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
2. See "HO2S1 MNTR (B1)" in "DATA MONITOR" mode.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the monitor fluctuates between LEAN and RICH more than 5 times during 10 seconds.

**1 time: RICH → LEAN → RICH**

**2 times: RICH → LEAN → RICH → LEAN → RICH**

#### OK or NG

- OK    >> GO TO 4.  
 NG    >> GO TO 31.

## 30. CHECK HEATED OXYGEN SENSOR 1 SIGNAL

### Without CONSULT-II

1. Set ECM to Self-diagnostic mode II (Heated oxygen sensor 1 monitor). Refer to [EC-1277, "How to Set Diagnostic Test Mode II \(Heated Oxygen Sensor 1 Monitor\)"](#) .
2. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the MIL comes on more than 5 times during 10 seconds.

#### OK or NG

- OK    >> GO TO 4.  
 NG    >> GO TO 31.

## 31. DETECT MALFUNCTIONING PART

Check the following.

- Check fuel pressure regulator and repair or replace if necessary. Refer to [EC-1257, "Fuel Pressure Check"](#) .
- Check mass air flow sensor and its circuit, and repair or replace if necessary. Refer to [EC-1368](#) , [EC-1375](#) and [EC-1594](#) .
- Check injector and its circuit, and repair or replace if necessary. Refer to [EC-1796](#) .
- Check engine coolant temperature sensor and its circuit, and repair or replace if necessary. Refer to [EC-1386](#) and [EC-1398](#) .

#### OK or NG

- OK    >> GO TO 33.  
 NG    >> 1. Repair or replace.  
       2. GO TO 32.

## 32. ERASE UNNECESSARY DTC

After this inspection, unnecessary DTC might be displayed.

Erase the stored memory in ECM and TCM. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

>> GO TO 4.

**33. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)
2. Perform initialization of NVIS (NATS) system and registration of NVIS (NATS) ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#).

>> GO TO 4.

**Accelerator Pedal Released Position Learning**

UBS00275

**DESCRIPTION**

"Accelerator Pedal Released Position Learning" is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

**OPERATION PROCEDURE**

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch "ON" and wait at least 2 seconds.
3. Turn ignition switch "OFF" wait at least 10 seconds.
4. Turn ignition switch "ON" and wait at least 2 seconds.
5. Turn ignition switch "OFF" wait at least 10 seconds.

**Throttle Valve Closed Position Learning**

UBS00276

**DESCRIPTION**

"Throttle Valve Closed Position Learning" is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

**OPERATION PROCEDURE**

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch "ON".
3. Turn ignition switch "OFF" wait at least 10 seconds.  
Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

**Idle Air Volume Learning**

UBS00277

**DESCRIPTION**

"Idle Air Volume Learning" is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

**PREPARATION**

Before performing "Idle Air Volume Learning", make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 95°C (158 - 203°F)
- PNP switch: ON
- Electric load switch: OFF  
(Air conditioner, headlamp, rear window defogger)  
**On vehicles equipped with daytime light systems, set lighting switch to the 1st position to light only small lamps.**
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up  
For A/T models with CONSULT-II, drive vehicle until "FLUID TEMP SE" in "DATA MONITOR" mode of "A/T" system indicates less than 0.9V.  
For A/T models without CONSULT-II and M/T models, drive vehicle for 10 minutes.

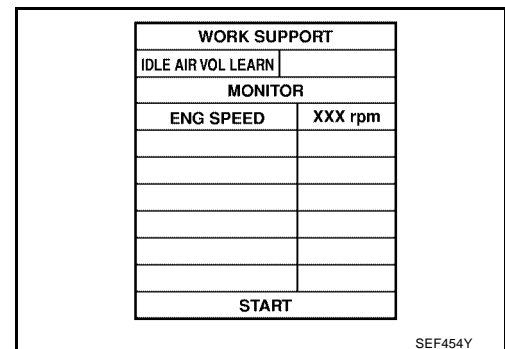

## OPERATION PROCEDURE

### ① With CONSULT-II

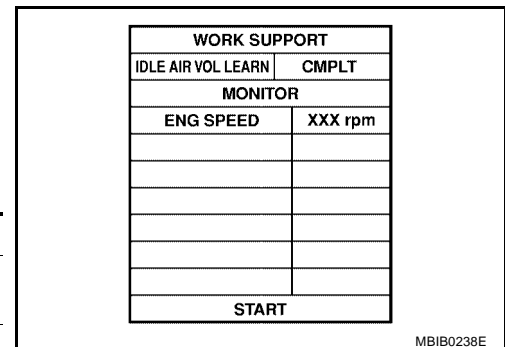

1. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic "PREPARATION" (previously mentioned) are in good order.
5. Select "IDLE AIR VOL LEARN" in "WORK SUPPORT" mode.

6. Touch "START" and wait 20 seconds.

7. Make sure that "CMPLT" is displayed on CONSULT-II screen. If "CMPLT" is not displayed, "Idle Air Volume Learning" will not be carried out successfully. In this case, find the cause of the incident by referring to the "Diagnostic Procedure" below.
8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	M/T: 700±50 rpm A/T: 700±50 rpm (in "P" or "N" position)
Ignition timing	M/T: 15±5° BTDC A/T: 15±5° BTDC (in "P" or "N" position)

### ⊗ Without CONSULT-II

#### NOTE:

- It is better to count the time accurately with a clock.
  - It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
1. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .
  2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
  3. Start engine and warm it up to normal operating temperature.
  4. Check that all items listed under the topic "PREPARATION" (previously mentioned) are in good order.
  5. Turn ignition switch "OFF" and wait at least 10 seconds.
  6. Confirm that accelerator pedal is fully released, turn ignition switch "ON" and wait 3 seconds.
  7. Repeat the following procedure quickly five times within 5 seconds.

- a. Fully depress the accelerator pedal.
- b. Fully release the accelerator pedal.
8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MIL goes off.
10. Start engine and let it idle.
11. Wait 20 seconds.

12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	M/T: 700±50 rpm A/T: 700±50 rpm (in "P" or "N" position)
Ignition timing	M/T: 15±5° BTDC A/T: 15±5° BTDC (in "P" or "N" position)

13. If idle speed and ignition timing are not within the specification, "Idle Air Volume Learning" will not be carried out successfully. In this case, find the cause of the incident by referring to the "Diagnostic Procedure" below.

## DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

1. Check that throttle valve is fully closed.
2. Check PCV valve operation.
3. Check that downstream of throttle valve is free from air leakage.
4. When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.  
It is useful to perform [EC-1337, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"](#).
5. If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform "Idle air volume learning" all over again:
  - Engine stalls.
  - Erroneous idle.

## Fuel Pressure Check FUEL PRESSURE RELEASE

UBS00278

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.

### NOTE:

Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because B15 models do not have fuel return system.

### Ⓟ With CONSULT-II

1. Turn ignition switch "ON".

# BASIC SERVICE PROCEDURE

[QR25DE]

2. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode with CONSULT-II.
3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch "OFF".

## ⊗ Without CONSULT-II

1. Remove fuel pump fuse.
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch "OFF".
5. Reinstall fuel pump fuse after servicing fuel system.

## FUEL PRESSURE CHECK

### CAUTION:

- The fuel hose connection method used when taking fuel pressure check must not be used for other purposes.
- Be careful not to scratch or put debris around connection area when servicing, so that the quick connector maintains sealability with O-rings inside.
- Do not perform fuel pressure check with electrical systems operating (i.e. lights, rear defogger, A/C switch, etc.). Fuel pressure gauge may indicate false readings due to varying engine loads and changes in manifold vacuum.

1. Release fuel pressure to zero. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#).
2. Prepare fuel hose and fuel hose clamp for fuel pressure check, and connect fuel pressure gauge.
  - Use suitable fuel hose for fuel pressure check (genuine NISSAN fuel hose without quick connector).
  - To avoid unnecessary force or tension to hose, use moderately long fuel hose for fuel pressure check.
  - Do not use the fuel hose for checking fuel pressure with damage or cracks on it.
  - Use fuel pressure gauge to check fuel pressure.
3. Remove fuel hose. Refer to [EM-105, "INTAKE MANIFOLD"](#).
  - Do not twist or kink fuel hose because it is plastic hose.
  - Do not remove fuel hose from quick connector.
  - Keep the original fuel hose to be free from intrusion of dust or foreign substances with a suitable cover.
4. Install the fuel pressure gauge as shown in the figure.
  - Wipe off oil or dirt from hose insertion part using cloth moistened with gasoline.
  - Apply proper amount of gasoline between top of the fuel tube and No.1 spool.
  - Insert fuel hose for fuel pressure check until it touches the No.1 spool on fuel tube.
  - Use NISSAN genuine hose clamp (part number: 16439 N4710 or 16439 40U00).
  - When reconnecting fuel line, always use new clamps.
  - When reconnecting fuel hose, check the original fuel hose for damage and abnormality.

# BASIC SERVICE PROCEDURE

[QR25DE]

- Use a torque driver to tighten clamps.
- Install hose clamp to the position within 1 - 2 mm (0.04 - 0.08 in).

### Tightening torque:

**1 - 1.5 N·m (0.1 - 0.15 kg·m, 9 - 13 in·lb.)**

- Make sure that clamp screw does not contact adjacent parts.
5. After connecting fuel hose for fuel pressure check, pull the hose with a force of approximately 98 N (10 kg, 22 lb.) to confirm fuel tube does not come off.
  6. Turn ignition switch "ON", and check for fuel leakage.
  7. Start engine and check for fuel leakage.
  8. Read the indication of fuel pressure gauge.
    - Do not perform fuel pressure check with system operating. Fuel pressure gauge may indicate false readings.
    - During fuel pressure check, confirm for fuel leakage from fuel connection every 3 minutes.

**At idling: Approximately 350 CPA (3.57 kg/cm<sup>2</sup> , 51 psi)**

9. If result is unsatisfactory, go to next step.
10. Check the following.
  - Fuel hoses and fuel tubes for clogging
  - Fuel filter for clogging
  - Fuel pump
  - Fuel pressure regulator for cloggingIf OK, replace fuel pressure regulator.  
If NG, repair or replace.

## ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

### Introduction

UBS00279

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	SAE Mode
Diagnostic Trouble Code (DTC)	Mode 3 of SAE J1979
Freeze Frame data	Mode 2 of SAE J1979
System Readiness Test (SRT) code	Mode 1 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Mode 7 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Mode 6 of SAE J1979
Calibration ID	Mode 9 of SAE J1979

The above information can be checked using procedures listed in the table below.

×: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	Test value
CONSULT-II	×	×	×	×	×	—
GST	×	×*1	×	—	×	×
ECM	×	×*2	—	—	—	—

\*1: 1st trip DTCs for self-diagnoses concerning SRT items cannot be shown on the GST display.

\*2: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to [EC-1290](#).)

### Two Trip Detection Logic

UBS0027A

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The "trip" in the "Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

Items	MIL				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip displaying	2nd trip displaying	1st trip displaying	2nd trip displaying
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	×	—	—	—	—	—	×	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	—	—	×	—	—	×	—	—
One trip detection diagnosis (refer to <a href="#">EC-1224</a> . "INDEX FOR DTC" )	—	×	—	—	×	—	—	—

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012.

\*3: SRT code will not be set if the self-diagnostic result is NG.

\*4: These are not displayed with GST.

\*5: The troubleshooting for this DTC needs CONSULT-II.

\*6: When the fail-safe operations for both self-diagnoses occur at the same time, the MIL illuminates.

## DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required

driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

For malfunctions in which 1st trip DTCs are displayed, refer to [EC-1261, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS"](#) . These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.

1st trip DTC is specified in Mode 7 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in "Work Flow" procedure Step II, refer to [EC-1285, "WORK FLOW"](#) . Then perform "DTC Confirmation Procedure" or "Overall Function Check" to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

## How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

 **WITH CONSULT-II**

 **WITH GST**

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P1148, P1706, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

 **NO TOOLS**

The number of blinks of the MIL in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0340, 1148, 1706, etc.

These DTCs are controlled by NISSAN.

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be "0".

If a 1st trip DTC is stored in the ECM, the time data will be "[1t]".

DTC display	SELF DIAG RESULTS		1st trip DTC display	SELF DIAG RESULTS	
	DTC RESULTS			DTC RESULTS	
	TIME			TIME	
	CKP SEN/CIRCUIT [P0335]	0		CKP SEN/CIRCUIT [P0335]	1t

PBIB0911E

## FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see [EC-1320, "Freeze Frame Data and 1st Trip Freeze Frame Data"](#) .

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in [EC-1261, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS"](#).

## SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Mode 1 of SAE J1979.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

### NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

### NOTE:

If MIL is "ON" during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT") and DTC (No DTCs) before the inspection.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

## SRT Item

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

SRT item (CONSULT-II indication)	Performance Priority*1	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420
EVAP SYSTEM	1	EVAP control system	P0442
	2	EVAP control system	P0456, P1456
	2	EVAP control system purge flow monitoring	P0441
HO2S	2	Heated oxygen sensor 1	P0132
		Heated oxygen sensor 1	P0133
		Heated oxygen sensor 1	P0134
		Heated oxygen sensor 1	P1143
		Heated oxygen sensor 1	P1144
		Heated oxygen sensor 2	P0138
		Heated oxygen sensor 2	P0139
		Heated oxygen sensor 2	P1146
		Heated oxygen sensor 2	P1147
HO2S HTR	2	Heated oxygen sensor 1 heater	P0031, P0032
		Heated oxygen sensor 2 heater	P0037, P0038

\*1: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-II.

## SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example							
		Diagnosis	Ignition cycle						
			← ON →	OFF	← ON →	OFF	← ON →	OFF	← ON →
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)			
		P0402	OK (1)	— (1)	— (1)	OK (2)			
		P1402	OK (1)	OK (2)	— (2)	— (2)			
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"			
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)			
		P0402	— (0)	— (0)	OK (1)	— (1)			
		P1402	OK (1)	OK (2)	— (2)	— (2)			
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"			
NG exists	Case 3	P0400	OK	OK	—	—			
		P0402	—	—	—	—			
		P1402	NG	—	NG	NG	NG (Consecutive NG)		
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL "ON")			
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"			

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above

When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above

If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to "CMPLT" of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

**NOTE:**

SRT can be set as "CMPLT" together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

## SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence on the next page.

## How to Display SRT Code

### WITH CONSULT-II

Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

A sample of CONSULT-II display for SRT code is shown at right.

"INCMP" means the self-diagnosis is incomplete and SRT is not set.

"CMPLT" means the self-diagnosis is complete and SRT is set.

### WITH GST

Selecting Mode 1 with GST (Generic Scan Tool)

SRT STATUS	
CATALYST	CMPLT
EVAP SYSTEM	INCMP
HO2S HTR	CMPLT
HO2S	CMPLT

SEF949Z

## How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

### WITH CONSULT-II

Perform corresponding DTC Confirmation Procedure one by one based on "Performance Priority" in the table on [EC-1266, "SRT Item"](#).

### WITHOUT CONSULT-II

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

## Driving Pattern

**Note: Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws. Refer to next page for more information and explanation of chart.**

### Driving pattern

PBIB0123E

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.  
Zone A refers to the range where the time, required for the diagnosis under normal conditions\*, is the shortest.  
Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

\*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.  
Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:

- **The engine is started at the engine coolant temperature of -10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 93 and ground is 3.0 - 4.3V).**
- **The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 93 and ground is lower than 1.4V).**
- **The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 70 and ground is less than 4.1V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- The driving pattern outlined in \*2 must be repeated at least 3 times.

Pattern 4:

- Tests are performed after the engine has been operated for at least 17 minutes.
- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

\*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

\*2: Operate the vehicle in the following driving pattern.

1. Decelerate vehicle to 0 km/h (0 MPH) and let engine idle.
2. Repeat driving pattern shown at right at least 10 times.  
- **During acceleration, hold the accelerator pedal as steady as possible.**

\*3: Checking the vehicle speed with GST is advised.

## Suggested Transmission Gear Position for A/T Models

Set the selector lever in the "D" position with the overdrive switch turned ON.

## Suggested Upshift Speeds for M/T Models

Shown below are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

## Model with 5-speed

Gear change	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:		For normal acceleration in high altitude areas [over 1,219 m (4,000 ft)]:
	ACCEL shift point km/h (MPH)	CRUISE shift point km/h (MPH)	km/h (MPH)
1st to 2nd	24 (15)	24 (15)	24 (15)
2nd to 3rd	40 (25)	29 (18)	40 (25)
3rd to 4th	58 (36)	48 (30)	64 (40)
4th to 5th	64 (40)	62 (39)	72 (45)

## Model with 6-speed

Gear change	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:		For normal acceleration in high altitude areas [over 1,219 m (4,000 ft)]:	
	ACCEL shift point km/h (MPH)	CRUISE shift point km/h (MPH)	ACCEL shift point km/h (MPH)	CRUISE shift point km/h (MPH)
1st to 2nd	26 (16)	16 (10)	26 (16)	24 (15)
2nd to 3rd	42 (26)	23 (14)	42 (26)	40 (25)
3rd to 4th	55 (34)	40 (25)	64 (40)	64 (40)
4th to 5th	66 (41)	60 (37)	72 (45)	72 (45)
5th to 6th	72 (45)	72 (45)	80 (50)	80 (50)

### Suggested Maximum Speed in Each Gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.

Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits and drive according to the road conditions to ensure safe operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

## Model with 5-speed

Gear	km/h (MPH)
1st	55 (35)
2nd	95 (60)
3rd	135 (85)
4th	—
5th	—

## Model with 6-speed

Gear	km/h (MPH)
1st	45 (25)
2nd	80 (50)
3rd	130 (80)
4th	—
5th	—
6th	—

### TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Mode 6 of SAE J1979.

The test value is a parameter used to determine whether a system/circuit diagnostic test is "OK" or "NG" while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

Items for which these data (test value and test limit) are displayed are the same as SRT code items (18 test items).

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

×: Applicable —: Not applicable

SRT item	Self-diagnostic test item	Test value (GST display)		Test limit	Application
		TID	CID		
CATALYST	Three way catalyst function	01H	01H	Max.	×
		02H	81H	Min.	×
EVAP SYSTEM	EVAP control system (Small leak)	05H	03H	Max.	×
	EVAP control system purge flow monitoring	06H	83H	Min.	×
	EVAP control system (Very small leak)	07H	03H	Max.	×
HO2S	Heated oxygen sensor 1	09H	04H	Max.	×
		0AH	84H	Min.	×
		0BH	04H	Max.	×
		0CH	04H	Max.	×
	Heated oxygen sensor 2	0DH	04H	Max.	×

	Heated oxygen sensor 2 heater	2DH	0AH	Max.	×
		2EH	8AH	Min.	×

## HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

### Ⓟ How to Erase DTC ( With CONSULT-II)

The emission related diagnostic information in the ECM can be erased by selecting “ERASE” in the “SELF-DIAG RESULTS” mode with CONSULT-II.

If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

#### NOTE:

**If the DTC is not for A/T related items (see [EC-1224](#) ), skip steps 2 through 4.**

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 10 seconds and then turn it “ON” (engine stopped) again.
2. Turn CONSULT-II “ON” and touch “A/T”.
3. Touch “SELF-DIAG RESULTS”.
4. Touch “ERASE”. [The DTC in the TCM (Transmission control module) will be erased.] Then touch “BACK” twice.
5. Touch “ENGINE”.
6. Touch “SELF-DIAG RESULTS”.

7. Touch "ERASE". (The DTC in the ECM will be erased.)

### How to Erase DTC ( With GST)

The emission related diagnostic information in the ECM can be erased by selecting Mode 4 with GST.

**NOTE:**

**If the DTC is not for A/T related items (see [EC-1224](#) ), skip step 2.**

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
2. Perform "SELF-DIAGNOSTIC PROCEDURE (Without CONSULT-II)" in AT section titled "TROUBLE DIAGNOSIS", "Self-diagnosis". (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with GST (Generic Scan Tool).

### How to Erase DTC ( No Tools)

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once.
  2. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
  3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to [EC-1276. "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .
- **If the battery is disconnected, the emission-related diagnostic information will be lost after approx. 24 hours.**
  - **The following data are cleared when the ECM memory is erased.**
    - Diagnostic trouble codes
    - 1st trip diagnostic trouble codes
    - Freeze frame data
    - 1st trip freeze frame data

- System readiness test (SRT) codes
- Test values
- Others

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

## NVIS (Nissan Vehicle Immobilizer System — NATS)

UBS0027C

- If the security indicator lights up with the ignition switch in the “ON” position or “NATS MALFUNCTION” is displayed on “SELF-DIAG RESULTS” screen, perform self-diagnostic results mode with CONSULT-II using NATS program card. Refer to [BL-95, "NVIS \(NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS\)"](#).
- Confirm no self-diagnostic results of NVIS (NATS) is displayed before touching “ERASE” in “SELF-DIAG RESULTS” mode with CONSULT-II.
- When replacing ECM, initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs must be carried out with CONSULT-II using NATS program card.

SELF DIAG RESULTS	
DTC RESULTS	TIME
NATS MALFUNCTION [P1610]	0

SEF543X

Therefore, be sure to receive all keys from vehicle owner. Regarding the procedures of NVIS (NATS) initialization and NVIS (NATS) ignition key ID registration, refer to CONSULT-II operation manual, IVIS/NVIS.

## Malfunction Indicator Lamp (MIL) DESCRIPTION

UBS0027D

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check. If the MIL does not light up, refer to [DI-27, "WARNING LAMPS"](#), or see [EC-1586](#).
2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

## ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following four functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in "ON" position  Engine stopped 	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running 	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. <ul style="list-style-type: none"> <li>● "Misfire (Possible three way catalyst damage)"</li> <li>● One trip detection diagnosis</li> </ul>
Mode II	Ignition switch in "ON" position  Engine stopped 	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.
	Engine running 	HEATED OXYGEN SENSOR 1 MONITOR	This function allows the fuel mixture condition (lean or rich), monitored by heated oxygen sensor 1, to be read.

### MIL Flashing Without DTC

If the ECM is in Diagnostic Test Mode II, MIL may flash when engine is running. In this case, check ECM diagnostic test mode. [EC-1276, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .

How to switch the diagnostic test (function) modes, and details of the above functions are described later. [EC-1276, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .

The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

### HOW TO SWITCH DIAGNOSTIC TEST MODE

#### NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- Always ECM returns to Diagnostic Test Mode I after ignition switch is turned "OFF".

## How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch "ON" and wait 3 seconds.
2. Repeat the following procedure quickly five times within 5 seconds.
  - a. Fully depress the accelerator pedal.
  - b. Fully release the accelerator pedal.
3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.
4. Fully release the accelerator pedal.  
ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

## How to Set Diagnostic Test Mode II (Heated Oxygen Sensor 1 Monitor)

1. Set the ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to [EC-1277, "How to Set Diagnostic Test Mode II \(Self-diagnostic Results\)"](#).
2. Start Engine.  
ECM has entered to Diagnostic Test Mode II (Heated oxygen sensor 1 monitor).

## How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to [EC-1277, "How to Set Diagnostic Test Mode II \(Self-diagnostic Results\)"](#).
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.  
The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

## DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to [DI-27, "WARNING LAMPS"](#) or see [EC-1586](#).

## DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

MIL	Condition
ON	When the malfunction is detected or the ECM's CPU is malfunctioning.
OFF	No malfunction.

These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

## DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes. The “zero” is indicated by the number of ten flashes. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle.

A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-second OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC “0000” refers to no malfunction. (See [EC-1224, "INDEX FOR DTC"](#) )

### How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to [EC-1277, "How to Erase Diagnostic Test Mode II \(Self-diagnostic Results\)"](#) .

- If the battery is disconnected, the DTC will be lost from the backup memory after approx 24 hours.
- Be careful not to erase the stored memory before starting trouble diagnoses.

### DIAGNOSTIC TEST MODE II — HEATED OXYGEN SENSOR 1 MONITOR

In this mode, the MIL displays the condition of the fuel mixture (lean or rich) which is monitored by the heated oxygen sensor 1.

MIL	Fuel mixture condition in the exhaust gas	Air fuel ratio feedback control condition
ON	Lean	Closed loop system
OFF	Rich	
*Remains ON or OFF	Any condition	Open loop system

\*: Maintains conditions just before switching to open loop.

To check the heated oxygen sensor 1 function, start engine in the Diagnostic Test Mode II and warm it up until engine coolant temperature indicator points to the middle of the gauge.

Next run engine at about 2,000 rpm for about 2 minutes under no-load conditions. Then make sure that the MIL comes ON more than 5 times within 10 seconds with engine running at 2,000 rpm under no-load.

### OBD System Operation Chart

#### RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

UBS0027E

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to [EC-1260, "Two Trip Detection Logic"](#) .

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

- The MIL will go off after the vehicle is driven 3 times with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset. A
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT-II will count the number of times the vehicle is driven. EC
- The 1st trip DTC is not displayed when the self-diagnosis results in "OK" for the 2nd trip. C

## SUMMARY CHART

Items	Fuel Injection System	Misfire	Other	
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)	D
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)	E
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)	
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)	F

For details about patterns "B" and "C" under "Fuel Injection System" and "Misfire", see [EC-1281](#) .

For details about patterns "A" and "B" under "Other", see [EC-1283](#) .

\*1: Clear timing is at the moment OK is detected. G

\*2: Clear timing is when the same malfunction is detected in the 2nd trip. H

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

\*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

## EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

### <Driving Pattern B>

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MIL will go off when the B counter reaches 3. (\*2 in “OBD SYSTEM OPERATION CHART”)

### <Driving Pattern C>

Driving pattern C means the vehicle operation as follows:

The following conditions should be satisfied at the same time:

Engine speed: (Engine speed in the freeze frame data)  $\pm 375$  rpm

Calculated load value: (Calculated load value in the freeze frame data)  $\times (1 \pm 0.1)$  [%]

Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), “T” should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), “T” should be higher than or equal to 70°C (158°F).

Example:

If the stored freeze frame data is as follows:

Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)

To be satisfied with driving pattern C, the vehicle should run under the following conditions:

Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of the vehicle conditions described above.
- The C counter will be counted up when the vehicle conditions described above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QR25DE]

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

## EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

### <Driving Pattern A>

- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.

### <Driving Pattern B>

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (\*2 in "OBD SYSTEM OPERATION CHART").

## TROUBLE DIAGNOSIS

### Trouble Diagnosis Introduction INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.

It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the "Work Flow" on [EC-1285](#).

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "Diagnostic Worksheet" like the example on [EC-1288](#) should be used.

Start your diagnosis by looking for "conventional" incidents first. This will help troubleshoot driveability incidents on an electronically controlled engine vehicle.

# TROUBLE DIAGNOSIS

[QR25DE]

## Description for Work Flow

STEP	DESCRIPTION
STEP I	Get detailed information about the conditions and the environment when the incident/symptom occurred using the "DIAGNOSTIC WORK SHEET", <a href="#">EC-1287</a> .
STEP II	Before confirming the concern, check and write down (print out using CONSULT-II or GST) the (1st trip) DTC and the (1st trip) freeze frame data, then erase the DTC and the data. (Refer to <a href="#">EC-1273</a> .) The (1st trip) DTC and the (1st trip) freeze frame data can be used when duplicating the incident at STEP III & IV. If the incident cannot be verified, perform <a href="#">EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . Study the relationship between the cause, specified by (1st trip) DTC, and the symptom described by the customer. (The "Symptom Matrix Chart" will be useful. See <a href="#">EC-1295</a> .) Also check related service bulletins for information.
STEP III	Try to confirm the symptom and under what conditions the incident occurs. The "DIAGNOSTIC WORK SHEET" and the freeze frame data are useful to verify the incident. Connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform <a href="#">EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . If the malfunction code is detected, skip STEP IV and perform STEP V.
STEP IV	Try to detect the (1st trip) DTC by driving in (or performing) the "DTC Confirmation Procedure". Check and read the (1st trip) DTC and (1st trip) freeze frame data by using CONSULT-II or GST. During the (1st trip) DTC verification, be sure to connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform <a href="#">EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . In case the "DTC Confirmation Procedure" is not available, perform the "Overall Function Check" instead. The (1st trip) DTC cannot be displayed by this check, however, this simplified "check" is an effective alternative. The "NG" result of the "Overall Function Check" is the same as the (1st trip) DTC detection.
STEP V	Take the appropriate action based on the results of STEP I through IV. If the malfunction code is indicated, proceed to TROUBLE DIAGNOSIS FOR DTC PXXXX. If the normal code is indicated, proceed to the BASIC INSPECTION. (Refer to <a href="#">EC-1291</a> .) If CONSULT-II is available, perform "DATA MONITOR (SPEC)" mode with CONSULT-II and proceed to the "TROUBLE DIAGNOSIS – SPECIFICATION VALUE". (Refer to <a href="#">EC-1337</a> .) (If malfunction is detected, proceed to "REPAIR/REPLACE".) Then perform inspections according to the Symptom Matrix Chart. (Refer to <a href="#">EC-1295</a> .)
STEP VI	Identify where to begin diagnosis based on the relationship study between symptom and possible causes. Inspect the system for mechanical binding, loose connectors or wiring damage using (tracing) "Harness Layouts". Gently shake the related connectors, components or wiring harness with CONSULT-II set in "DATA MONITOR (AUTO TRIG)" mode. Check the voltage of the related ECM terminals or monitor the output data from the related sensors with CONSULT-II. Refer to <a href="#">EC-1307</a> , <a href="#">EC-1331</a> . The "Diagnostic Procedure" in EC section contains a description based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to "Circuit Inspection" in <a href="#">GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"</a> . Repair or replace the malfunction parts. If malfunctioning part cannot be detected, perform <a href="#">EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> .
STEP VII	Once you have repaired the circuit or replaced a component, you need to run the engine in the same conditions and circumstances which resulted in the customer's initial complaint. Perform the "DTC Confirmation Procedure" and confirm the normal code [DTC No. P0000] is detected. If the incident is still detected in the final check, perform STEP VI by using a method different from the previous one. Before returning the vehicle to the customer, be sure to erase the unnecessary (already fixed) (1st trip) DTC in ECM and TCM (Transmission control module). (Refer to <a href="#">EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</a> and <a href="#">AT-430, "HOW TO ERASE DTC"</a> .)

## DIAGNOSTIC WORKSHEET

### Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about an incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the MIL to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

# TROUBLE DIAGNOSIS

[QR25DE]

UBS0027H

## Fail-safe Chart

The ECM enters fail-safe mode, if any of the following malfunctions is detected. When the ECM enters the fail-safe mode, the MIL illuminates.

DTC No.	Detected items	Engine operating condition in fail-safe mode								
P0102 P0103 P1102	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.								
P0117 P0118	Engine coolant temperature sensor circuit	<p>Engine coolant temperature will be determined by ECM based on the time after turning ignition switch "ON" or "START". CONSULT-II displays the engine coolant temperature decided by ECM.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Condition</th> <th style="width: 50%;">Engine coolant temperature decided (CONSULT-II display)</th> </tr> </thead> <tbody> <tr> <td>Just as ignition switch is turned ON or Start</td> <td style="text-align: center;">40°C (104°F)</td> </tr> <tr> <td>More than approx. 4 minutes after ignition ON or Start</td> <td style="text-align: center;">80°C (176°F)</td> </tr> <tr> <td>Except as shown above</td> <td style="text-align: center;">40 - 80°C (104 - 176°F) (Depends on the time)</td> </tr> </tbody> </table> <p>When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.</p>	Condition	Engine coolant temperature decided (CONSULT-II display)	Just as ignition switch is turned ON or Start	40°C (104°F)	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
Condition	Engine coolant temperature decided (CONSULT-II display)									
Just as ignition switch is turned ON or Start	40°C (104°F)									
More than approx. 4 minutes after ignition ON or Start	80°C (176°F)									
Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)									
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal operation. So, the acceleration will be poor.								
P1121	Electric throttle control actuator (ECM detects the throttle valve is stuck open.)	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.								
P1122	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1124 P1126	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1128	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1229	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal operation. So, the acceleration will be poor.								

**Basic Inspection****1. INSPECTION START**

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

**OK or NG**

- OK >> GO TO 3.  
NG >> GO TO 2.

**2. REPAIR OR REPLACE**

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

### 3. CHECK TARGET IDLE SPEED

#### With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### Without CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

#### OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 4.

### 4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 5.

### 5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 6.

**6. PERFORM IDLE AIR VOLUME LEARNING**

Refer to [EC-1255, "Idle Air Volume Learning"](#) .

Is the Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 7.

No >> 1. Follow the instruction of "Idle Air Volume Learning".

2. GO TO 4.

**7. CHECK TARGET IDLE SPEED AGAIN**

**Ⓜ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 10.

NG >> GO TO 8.

**8. DETECT MALFUNCTIONING PART**

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-1496](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-1490](#) .

OK or NG

OK >> GO TO 9.

NG >> 1. Repair or replace.

2. GO TO 4.

**9. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#) .

>> GO TO 4.

**10. CHECK IGNITION TIMING**

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 15 ± 5° BTDC**

**A/T: 15 ± 5° BTDC (in "P" or "N" position)**

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 11.

**11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

---

1. Stop engine.
2. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

**12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

---

Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

**13. PERFORM IDLE AIR VOLUME LEARNING**

---

Refer to [EC-1255, "Idle Air Volume Learning"](#) .

**Is the "Idle Air Volume Learning" carried out successfully?**

Yes or No

- Yes >> GO TO 14.  
 No >> 1. Follow the instruction of "Idle Air Volume Learning".  
 2. GO TO 4.

**14. CHECK TARGET IDLE SPEED AGAIN**

---

**Ⓟ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 700 ± 50 rpm**

**A/T: 700 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 17.

**15. CHECK IGNITION TIMING AGAIN**

---

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 15 ± 5° BTDC**

**A/T: 15 ± 5° BTDC (in "P" or "N" position)**

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 16.

**16. CHECK TIMING CHAIN INSTALLATION**

Check timing chain installation. Refer to [EM-134, "TIMING CHAIN"](#) .

OK or NG

- OK >> GO TO 17.
- NG >> 1. Repair the timing chain installation.  
2. GO TO 4.

**17. DETECT MALFUNCTIONING PART**

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-1496](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-1490](#) .

OK or NG

- OK >> GO TO 18.
- NG >> 1. Repair or replace.  
2. GO TO 4.

**18. CHECK ECM FUNCTION**

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#) .

>> GO TO 4.

ECM Harness Connector Terminal Layout

UBS0027M

SEF970W

ECM Terminals and Reference Value  
PREPARATION

UBS0027N

1. ECM is located in the right side of the cowl top (behind the strut tower).

For this inspection:

- Remove front strut tower bar. Refer to [FSU-5, "FRONT SUSPENSION ASSEMBLY"](#).
- Remove engine control harness bracket on the strut tower.

BBIA0099E

- Remove quick connector on the ventilation hose.

JEF096Y

- Remove ECM fixing bolts and pull it out all the way.

# TROUBLE DIAGNOSIS

[QR25DE]

- Remove ECM cover fixing bolts.

- Remove ECM fixing bolts.
- Remove ECM with the harness from the cover.

- Remove ECM harness protector.
- Perform all voltage measurements with the connector connected. Extend tester probe as shown to perform tests easily.
  - Open harness securing clip to make testing easier.
  - Use extreme care not to touch 2 pins at one time.
  - Data is for comparison and may not be exact.

## ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

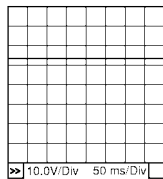

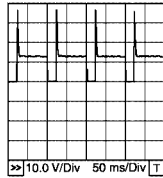

### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

## CONSULT-II Function FUNCTION

UBS00270

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*
Data monitor	Input/Output data in the ECM can be read.
Data monitor (SPEC)	Input/Output of the specification for Basic fuel schedule, AFM, A/F feedback control value and the other data monitor items can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
ECM part number	ECM part number can be read.

\*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

X: Applicable

\*1: This item includes 1st trip DTCs.

\*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to [EC-1264](#).

## CONSULT-II INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect "CONSULT-II" and "CONSULT-II CONVERTER" to data link connector, which is located under LH dash panel.
3. Turn ignition switch ON.

4. Touch "START (NISSAN BASED VHCL)".

5. Touch "ENGINE".  
If "ENGINE" is not indicated, go to [EC-582, "DATA LINK CONNECTOR"](#) .

6. Perform each diagnostic test mode according to each service procedure.  
**For further information, see the CONSULT-II Operation Manual.**

## WORK SUPPORT MODE

### Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	<ul style="list-style-type: none"> <li>FUEL PUMP WILL STOP BY TOUCHING "START" DURING IDLING.</li> <li>CRANK A FEW TIMES AFTER ENGINE STALLS.</li> </ul>	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	<ul style="list-style-type: none"> <li>THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.</li> </ul>	When learning the idle air volume
SELF-LEARNING CONT	<ul style="list-style-type: none"> <li>THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEFFICIENT.</li> </ul>	When clearing the coefficient of self-learning control value
EVAP SYSTEM CLOSE	<p>OPEN THE VACUUM CUT VALVE BYPASS VALVE AND CLOSE THE EVAP CANISTER VENT CONTROL VALVE IN ORDER TO MAKE EVAP SYSTEM CLOSE UNDER THE FOLLOWING CONDITIONS.</p> <ul style="list-style-type: none"> <li>IGN SW "ON"</li> <li>ENGINE NOT RUNNING</li> <li>AMBIENT TEMPERATURE IS ABOVE 0°C (32°F).</li> <li>NO VACUUM AND NO HIGH PRESSURE IN EVAP SYSTEM</li> <li>FUEL TANK TEMP. CHARGE BATTERY", EVEN IN USING CHARGED BATTERY.</b></p>	When detecting EVAP vapor leak point of EVAP system

# TROUBLE DIAGNOSIS

[QR25DE]

WORK ITEM	CONDITION	USAGE
TARGET IDLE RPM ADJ*	● IDLE CONDITION	When setting target idle speed
TARGET IGN TIM ADJ*	● IDLE CONDITION	When adjusting target ignition timing After adjustment, confirm target ignition timing with a timing light.

\*: This function is not necessary in the usual service procedure.

## SELF-DIAG RESULTS MODE

### Self Diagnostic Item

Regarding items of "DTC and 1st trip DTC", refer to [EC-1224, "INDEX FOR DTC"](#) .)

### Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	● The engine control component part/control system has a trouble code, it is displayed as "PXXXX". (Refer to <a href="#">EC-1224, "INDEX FOR DTC"</a> .)
FUEL SYS-B1	● "Fuel injection system status" at the moment a malfunction is detected is displayed. ● One mode in the following is displayed. "MODE 2": Open loop due to detected system malfunction "MODE 3": Open loop due to driving conditions (power enrichment, deceleration enrichment) "MODE 4": Closed loop - using oxygen sensor(s) as feedback for fuel control "MODE 5": Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	● The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	● The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRIM-B1 [%]	● "Long-term fuel trim" at the moment a malfunction is detected is displayed. ● The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRIM-B1 [%]	● "Short-term fuel trim" at the moment a malfunction is detected is displayed. ● The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.
ENGINE SPEED [rpm]	● The engine speed at the moment a malfunction is detected is displayed.
VHCL SPEED [km/h] or [mph]	● The vehicle speed at the moment a malfunction is detected is displayed.
B/FUEL SCHDL [msec]	● The base fuel schedule at the moment a malfunction is detected is displayed.
INT/A TEMP SE [°C] or [°F]	● The intake air temperature at the moment a malfunction is detected is displayed.

\*: The items are the same as those of 1st trip freeze frame data.

## REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA)

### Description

CONSULT-II has two kinds of triggers and they can be selected by touching "SETTING" in "DATA MONITOR" mode.

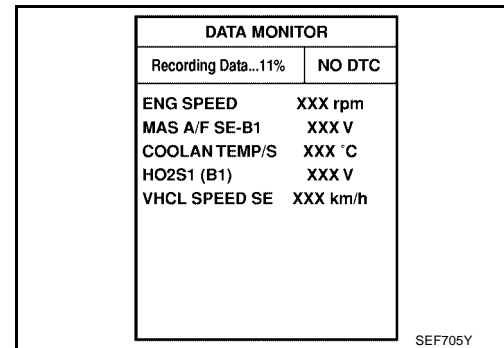

1. "AUTO TRIG" (Automatic trigger):

- The malfunction will be identified on the CONSULT-II screen in real time.

In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.

At the moment a malfunction is detected by ECM, "MONITOR" in "DATA MONITOR" screen is changed to "Recording Data ... xx%" as shown at right, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, "REAL-TIME DIAG" screen is displayed. If "STOP" is touched on the screen during "Recording Data ... xx%", "REAL-TIME DIAG" screen is also displayed.

The recording time after the malfunction detection and the recording speed can be changed by "TRIGGER POINT" and "Recording Speed". Refer to CONSULT-II OPERATION MANUAL.

2. "MANU TRIG" (Manual trigger):

- DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.

DATA MONITOR can be performed continuously even though a malfunction is detected.

### Operation

1. "AUTO TRIG"

- While trying to detect the DTC/1st trip DTC by performing the "DTC Confirmation Procedure", be sure to select to "DATA MONITOR (AUTO TRIG)" mode. You can confirm the malfunction at the moment it is detected.
- While narrowing down the possible causes, CONSULT-II should be set in "DATA MONITOR (AUTO TRIG)" mode, especially in case the incident is intermittent.  
When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the "DTC Confirmation Procedure", the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to "Incident Simulation Tests" in [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#) .)

2. "MANU TRIG"

- If the malfunction is displayed as soon as "DATA MONITOR" is selected, reset CONSULT-II to "MANU TRIG". By selecting "MANU TRIG" you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

PBIB0197E

## Generic Scan Tool (GST) Function DESCRIPTION

UBS0027P

Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained below. ISO9141 is used as the protocol. The name "GST" or "Generic Scan Tool" is used in this service manual.

SEF139P

## FUNCTION

Diagnostic test mode		Function
MODE 1	READINESS TESTS	This mode gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
MODE 2	(FREEZE DATA)	This mode gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to <a href="#">EC-1264, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"</a> .
MODE 3	DTCs	This mode gains access to emission-related power train trouble codes which were stored by ECM.

# TROUBLE DIAGNOSIS

[QR25DE]

Diagnostic test mode		Function
MODE 4	CLEAR DIAG INFO	This mode can clear all emission-related diagnostic information. This includes: <ul style="list-style-type: none"> <li>● Clear number of diagnostic trouble codes (MODE 1)</li> <li>● Clear diagnostic trouble codes (MODE 3)</li> <li>● Clear trouble code for freeze frame data (MODE 1)</li> <li>● Clear freeze frame data (MODE 2)</li> <li>● Reset status of system monitoring test (MODE 1)</li> <li>● Clear on board monitoring test results (MODE 6 and 7)</li> </ul>
MODE 6	(ON BOARD TESTS)	This mode accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
MODE 7	(ON BOARD TESTS)	This mode enables the off board test drive to obtain test results for emission-related powertrain components/systems that are continuously monitored during normal driving conditions.
MODE 8	—	This mode can close EVAP system in ignition switch "ON" position (Engine stopped). When this mode is performed, the following parts can be opened or closed. <ul style="list-style-type: none"> <li>● EVAP canister vent control valve open</li> <li>● Vacuum cut valve bypass valve closed</li> </ul> In the following conditions, this mode cannot function. <ul style="list-style-type: none"> <li>● Low ambient temperature</li> <li>● Low battery voltage</li> <li>● Engine running</li> <li>● Ignition switch "OFF"</li> <li>● Low fuel temperature</li> <li>● Too much pressure is applied to EVAP system</li> </ul>
MODE 9	(CALIBRATION ID)	This mode enables the off-board test device to request specific vehicle information such as Vehicle Identification Number (VIN) and Calibration IDs.

## GST INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect "GST" to data link connector, which is located under LH dash panel near the fuse box cover.
3. Turn ignition switch ON.

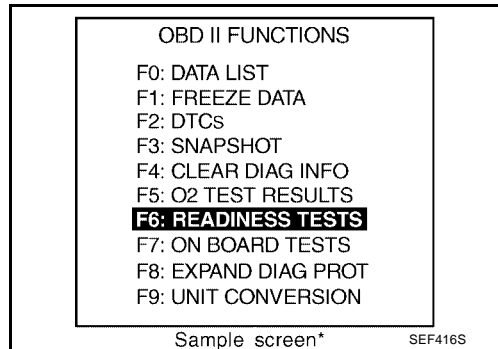

4. Enter the program according to instruction on the screen or in the operation manual.  
(\*: Regarding GST screens in this section, sample screens are shown.)

5. Perform each diagnostic mode according to each service procedure.

**For further information, see the GST Operation Manual of the tool maker.**

## CONSULT-II Reference Value in Data Monitor Mode

UBS0027Q

Remarks:

- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
- \* Specification data may not be directly related to their components signals/values/operations.

i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	<ul style="list-style-type: none"> <li>● Tachometer: Connect</li> <li>● Run engine and compare tachometer indication with the CONSULT-II value.</li> </ul>	Almost the same speed as the CONSULT-II value.

		CANCEL switch: Released	OFF
RESUME/ACC SW	● Ignition switch: ON	ACCEL/RES switch: Depressed	ON
		ACCEL/RES switch: Released	OFF
SET SW	● Ignition switch: ON	COAST/SET switch: Depressed	ON
		COAST/SET switch: Released	OFF
BRAKE SW1 (ASCD brake switch)	● Ignition switch: ON	Brake pedal: Fully released	ON
		Brake pedal: Slightly depressed	OFF
BRAKE SW2 (STOP lamp switch)	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON
CRUISE LAMP	● Ignition switch: ON	CRUISE switch is depressed at first time → second time	ON → OFF
SET LAMP	● CRUISE switch: ON ● When vehicle is between 40 km/h (25 MPH) and 144 km/h (89 MPH)	SET switch pressed	ON
		ASCD control is canceled.	OFF

★: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

## Major Sensor Reference Graph in Data Monitor Mode

UBS0027R

The following are the major sensor reference graphs in “DATA MONITOR” mode.

### CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

Below is the data for “CLSD THL POS”, “ACCEL SEN 1” and “THRTL SEN 1” when depressing the accelerator pedal with the ignition switch “ON” and with selector lever in “D” position (A/T models) or with shift lever in “1st” position (M/T models).

The signal of “ACCEL SEN 1” and “THRTL SEN 1” should rise gradually without any intermittent drop or rise after “CLSD THL POS” is changed from “ON” to “OFF”.

PBIB0198E

# TROUBLE DIAGNOSIS

[QR25DE]

## ENG SPEED, MAS A/F SE-B1, THRTL SEN 1, HO2S2 (B1), HO2S1 (B1), INJ PULSE-B1

Below is the data for "ENG SPEED", "MAS A/F SE-B1", "THRTL SEN 1", "HO2S2 (B1)", "HO2S1 (B1)" and "INJ PULSE-B1" when revving engine quickly up to 4,800 rpm under no load after warming up engine sufficiently.

Each value is for reference, the exact value may vary.

A

EC

C

D

E

F

G

H

I

J

K

L

M

- "THRTL SEN 1" should increase while depressing the accelerator pedal and should decrease while releasing it.

- "HO2S2 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.

- "HO2S1 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.

- "INJ PULSE-B1" should increase when depressing the accelerator pedal and should decrease when the pedal is released.

TRUBLE DIAGNOSIS - SPECIFICATION VALUE

PF0:00031

Description

UBS0027S

The specification (SP) value indicates the tolerance of the value that is displayed in "DATA MONITOR (SPEC)" mode of CONSULT-II during normal operation of the Engine Control System. When the value in "DATA MONITOR (SPEC)" mode is within the SP value, the Engine Control System is confirmed OK. When the value in "DATA MONITOR (SPEC)" mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1 (The signal voltage of the mass air flow sensor)

Testing Condition

UBS0027T

- Vehicle driven distance: More than 5,000 km (3,017 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm<sup>2</sup> , 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up\*1
- Electrical load: Not applied\*2
- Engine speed: Idle

\*1: For A/T models, after the engine is warmed up to normal operating temperature, drive vehicle until "FLUID TEMP SE" (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).

For M/T models, after the engine is warmed up to normal operating temperature, drive vehicle for 5 minutes.

\*2: Rear window defogger switch, air conditioner switch, lighting switch are "OFF". Steering wheel is straight ahead.

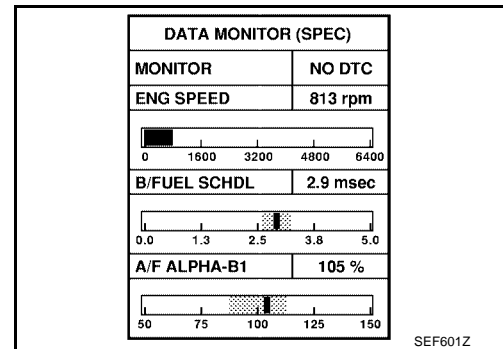

Inspection Procedure

UBS0027U

NOTE:

Perform "DATA MONITOR (SPEC)" mode in maximum scale display.

1. Perform [EC-1291, "Basic Inspection"](#) .
2. Confirm that the testing conditions indicated above are met.
3. Select "B/FUEL SCHDL", "A/F ALPHA-B1" and "MAS A/F SE-B1" in "DATA MONITOR (SPEC)" mode with CONSULT-II.
4. Make sure that monitor items are within the SP value.
5. If NG, go to [EC-1338, "Diagnostic Procedure"](#) .

**TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT****Description**

Intermittent incidents (I/I) may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of I/I occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

**Common I/I Report Situations**

STEP in Work Flow	Situation
II	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than "0" or "[1t]".
III	The symptom described by the customer does not recur.
IV	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
VI	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.

**Diagnostic Procedure****1. INSPECTION START**

Erase (1st trip) DTCs. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).

>> GO TO 2.

**2. CHECK GROUND TERMINALS**

Check ground terminals for corroding or loose connection.

Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "Incident Simulation Tests".

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

**3. SEARCH FOR ELECTRICAL INCIDENT**

Perform [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "Incident Simulation Tests".

OK or NG

OK >> GO TO 4.

NG >> Repair or replace.

**4. CHECK CONNECTOR TERMINALS**

Refer to [GI-23, "How to Check Terminal"](#), "HOW TO PROBE CONNECTORS", "How to Check Enlarged Contact Spring of Terminal".

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace connector.

# POWER SUPPLY CIRCUIT FOR ECM

# POWER SUPPLY CIRCUIT FOR ECM

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
59	B/R	ECM ground	[Engine is running] ● Idle speed	Engine ground
60	B			
106	B			
108	B			

## Diagnostic Procedure

UBS0027Z

### 1. INSPECTION START

Start engine.

**Is engine running?**

Yes or No

- Yes >> GO TO 9.
- No >> GO TO 2.

### 2. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Turn ignition switch "OFF" and then "ON".
2. Check voltage between ECM terminal 42 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

### 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M19, E108
- Harness connectors E10, F48
- Fuse block (J/B) connectors E102, M1
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair harness or connectors.

**4. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 59, 60, 106, 108 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Joint connector-3
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

**6. CHECK ECM POWER SUPPLY CIRCUIT-II**

1. Disconnect ECM relay.

2. Check voltage between ECM relay terminals 1, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- 15A fuses
- Fuse and fusible link box connectors E22, E24
- Harness for open or short between ECM relay and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 20 and ECM relay terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> Go to [EC-1777, "IGNITION SIGNAL"](#) .

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK ECM POWER SUPPLY CIRCUIT-II**

1. Stop engine.
2. Turn ignition switch "ON" and then "OFF".
3. Check voltage between ECM terminals 12, 109, 111 and ground with CONSULT-II or tester.

**Voltage: After turning ignition switch "OFF", battery voltage will exist for a few seconds, then drop approximately 0V.**

OK or NG

OK >> GO TO 14.

NG (Battery voltage does not exist.)>>GO TO 10.

NG (Battery voltage exists for more than a few seconds.)>>GO TO 13.

**10. CHECK ECM POWER SUPPLY CIRCUIT-III**

1. Disconnect ECM relay.

2. Check voltage between ECM relay terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

OK >> GO TO 12.

NG >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E9, F47
- Harness for open or short between ECM relay and 15A fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK HARNESS CONTINUITY BETWEEN ECM RELAY AND ECM FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals and ECM relay terminals as follows.  
Refer to Wiring Diagram.

ECM terminal	ECM relay terminal
12	7
109, 111	5

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 13.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 13. CHECK ECM RELAY

Refer to [EC-1349, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 14.
- NG >> Replace ECM relay.

## 14. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 59, 60, 106, 108 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 15.

## 15. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

16. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**ECM RELAY**

UBS00280

1. Apply 12V direct current between ECM relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
OFF	No

3. If NG, replace ECM relay.

## DTC U1000, U1001 CAN COMMUNICATION LINE

PFP:23710

### Description

UBS00281

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### On Board Diagnosis Logic

UBS00282

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000*1 1000	CAN communication line	<ul style="list-style-type: none"> <li>● ECM cannot communicate to other control units.</li> <li>● ECM cannot communicate for more than the specified time.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (CAN communication line is open or shorted)</li> </ul>
U1001*2 1001			

\*1: This self-diagnosis has the one trip detection.

\*2: The MIL will not light up for this diagnosis.

### DTC Confirmation Procedure

UBS00283

1. Turn ignition switch "ON" and wait at least 3 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If 1st trip DTC is detected, go to [EC-1352, "Diagnostic Procedure"](#) .

# DTC U1000, U1001 CAN COMMUNICATION LINE

**Diagnostic Procedure**

UBS00285

Go to [LAN-23, "CAN SYSTEM \(TYPE 3\)"](#)

DTC P0011 IVT CONTROL

Description  
SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed sensor	Vehicle speed		

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N ● Air conditioner switch: OFF ● No-load Idle	-5° - 5°CA
	2,000 rpm	Approx. 0° - 20°CA
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N ● Air conditioner switch: OFF ● No-load Idle	0% - 2%
	2,000 rpm	Approx. 25% - 60%

## On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0011 0011	Intake valve timing control performance	There is a gap between angle of target and phase-control angle degree.	<ul style="list-style-type: none"> <li>● Crankshaft position sensor (POS)</li> <li>● Camshaft position sensor (PHASE)</li> <li>● Accumulation of debris to the signal pick-up portion of the camshaft</li> </ul>

### FAIL-SAFE MODE

ECM enters in fail-safe mode when the malfunction is detected.

Detected items	Engine operating condition in fail-safe mode
Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function

### DTC Confirmation Procedure

#### CAUTION:

Always drive at a safe speed.

#### NOTE:

- If DTC P0011 is displayed with DTC P1111, first perform trouble diagnosis for “DTC P1111”. See [EC-1600](#).
- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

#### WITH CONSULT-II

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLANT TEMPS	70 - 105°C (158 - 221°F)
Selector lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLANT TEMP/S	XXX °C

SEF174Y

4. If 1st trip DTC is detected, go to [EC-1354, "Diagnostic Procedure"](#).

#### WITH GST

Follow the procedure “WITH CONSULT-II” above.

### Diagnostic Procedure

#### 1. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-1494, "Component Inspection"](#).

#### OK or NG

- OK >> GO TO 2.
- NG >> Replace crankshaft position sensor (POS).

## 2. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-1500, "Component Inspection"](#) .

OK or NG

OK >> GO TO 3.

NG >> Replace camshaft position sensor (PHASE).

## 3. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 4.

NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

## 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

For wiring diagram refer to CKP sensor (POS) [EC-1491](#) and CMP sensor (PHASE) [EC-1497](#) .

>> INSPECTION END

# DTC P0031, P0032 HO2S1 HEATER

[QR25DE]

## DTC P0031, P0032 HO2S1 HEATER

PF2:22690

### Description SYSTEM DESCRIPTION

UBS0028B

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Heated oxygen sensor 1 heater control	Heated oxygen sensor 1 heater
Engine coolant temperature sensor	Engine coolant temperature		

The ECM performs ON/OFF duty control of the heated oxygen sensor 1 heater corresponding to the engine speed and engine coolant temperature. The duty percent varies with engine coolant temperature when engine is started.

### OPERATION

Engine speed rpm	Heated oxygen sensor 1 heater
Above 3,600	OFF
Below 3,600	ON

### CONSULT-II Reference Value in Data Monitor Mode

UBS0028C

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION

### DTC Confirmation Procedure

UBS0028E

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

#### ④ WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

# DTC P0031, P0032 HO2S1 HEATER

[QR25DE]

3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Start engine and run it for at least 6 seconds at idle speed.
5. If 1st trip DTC is detected, go to [EC-1359, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

1. Start engine and warm it up to normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and run it for at least 6 seconds at idle speed.
  4. Turn ignition switch "OFF" and wait at least 10 seconds.
  5. Start engine and run it for at least 6 seconds at idle speed.
  6. Select "MODE 3" with GST.
  7. If DTC is detected, go to [EC-1359, "Diagnostic Procedure"](#).
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

# DTC P0031, P0032 HO2S1 HEATER

[QR25DE]

UBS0028F

## Wiring Diagram

EC-HO2S1H-01

REFER TO THE FOLLOWING.  
 (M1) - FUSE BLOCK - JUNCTION BOX (J/B)

BBWA0411E

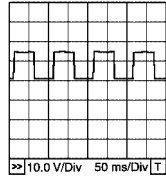

# DTC P0031, P0032 HO2S1 HEATER

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	R/L	Heated oxygen sensor 1 heater	[Engine is running] <ul style="list-style-type: none"> <li>● Warm-up condition.</li> <li>● Engine speed is below 3,600 rpm.</li> </ul>	Approximately 7.0V★  <small>PBIB0519E</small>
			[Engine is running] <ul style="list-style-type: none"> <li>● Engine speed is above 3,600 rpm.</li> </ul>	BATTERY VOLTAGE (11 - 14V)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS0028G

### 1. CHECK HO2S1 POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 harness connector.
3. Turn ignition switch "ON".

4. Check voltage between HO2S1 terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

---

## 2. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M19, E108
- Harness connectors E9, F47
- Fuse block (J/B) connector M1
- 15A fuse
- Harness for open or short between heated oxygen sensor 1 and fuse

>> Repair harness or connectors.

---

## 3. CHECK HO2S1 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 2 and HO2S1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK HEATED OXYGEN SENSOR 1 HEATER

---

Refer to [EC-1361, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace heated oxygen sensor 1.

---

## 5. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection**  
**HEATED OXYGEN SENSOR 1 HEATER**

1. Check resistance between HO2S1 terminals as follows.

Terminal No.	Resistance
2 and 3	3.3 - 4.0 Ω at 25°C (77°F)
1 and 2, 3, 4	∞ Ω (Continuity should not exist)
4 and 1, 2, 3	

2. If NG, replace heated oxygen sensor 1.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

SEF249Y

**Removal and Installation**

**DTC P0037, P0038 HO2S2 HEATER**

PF:226A0

**Description  
SYSTEM DESCRIPTION**

UBS0028J

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE)	Engine speed	Heated oxygen sensor 2 heater control	Heated oxygen sensor 2 heater
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

**OPERATION**

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600	OFF
Below 3,600 rpm after the following conditions are met. <ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	ON

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0028K

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 HTR (B1)	<ul style="list-style-type: none"> <li>● Engine speed: Below 3,600 rpm after the following conditions are met.</li> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	ON
	<ul style="list-style-type: none"> <li>● Engine speed: Above 3,600 rpm</li> </ul>	OFF

**On Board Diagnosis Logic**

UBS0028L

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0037 0037	Heated oxygen sensor 2 heater control circuit low	The current amperage in the heated oxygen sensor 2 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the heated oxygen sensor 2 heater.)	<ul style="list-style-type: none"> <li>● Harness or connectors (The heated oxygen sensor 2 heater circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2 heater</li> </ul>

(An excessively high voltage signal is sent to ECM through the heated oxygen sensor 2 heater.)	<ul style="list-style-type: none"> <li>● Harness or connectors (The heated oxygen sensor 2 heater circuit is shorted.)</li> <li>● Heated oxygen sensor 2 heater</li> </ul>

**DTC Confirmation Procedure**

UBS0028M

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

**Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.**

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.

# DTC P0037, P0038 HO2S2 HEATER

[QR25DE]

4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minute.
6. If 1st trip DTC is detected, go to [EC-1365, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

1. Start engine and warm it up to the normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  4. Let engine idle for one minute.
  5. Turn ignition switch "OFF" and wait at least 10 seconds.
  6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  7. Let engine idle for one minute.
  8. Select "MODE 3" with GST.
  9. If DTC is detected, go to [EC-1365, "Diagnostic Procedure"](#).
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

## Diagnostic Procedure

UBS00280

### 1. CHECK HO2S2 POWER SUPPLY CIRCUIT

- Turn ignition switch "OFF".
- Disconnect heated oxygen sensor 2 harness connector.
- Turn ignition switch "ON".

- Check voltage between HO2S2 terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

---

## 2. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M19, E108
- Harness connectors E9, F47
- Fuse block (J/B) connector M1
- 15A fuse
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 3. CHECK HO2S2 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 4 and HO2S2 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK HEATED OXYGEN SENSOR 2 HEATER

---

Refer to [EC-1367, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace heated oxygen sensor 2.

---

## 5. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection**  
**HEATED OXYGEN SENSOR 2 HEATER**

1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
2 and 3	3.3 - 4.0 Ω at 25°C (77°F)
1 and 2, 3, 4	∞ Ω (Continuity should not exist)
4 and 1, 2, 3	

2. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

SEF249Y

**DTC P0101 MAF SENSOR**

PF2:22680

**Component Description**

UBS0028R

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS0028S

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Air conditioner switch: OFF</li> <li>● Shift lever: N</li> <li>● No-load</li> </ul> Idle	Approx. 1.1 - 1.5V
	2,500 rpm	Approx. 1.6 - 2.0V
CAL/LD VALUE	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Shift lever: N</li> <li>● Air conditioner switch: OFF</li> <li>● No-load</li> </ul> Idle	10% - 35%
	2,500 rpm	10% - 35%

	2,500 rpm	4.0 - 10.0 g-m/s

**On Board Diagnosis Logic**

UBS0028T

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0101 0101	Mass air flow sensor circuit range/performance problem	A)	A high voltage from the sensor is sent to ECM under light load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>
		B)	A low voltage from the sensor is sent to ECM under heavy load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air leaks</li> <li>● Mass air flow sensor</li> </ul>

**DTC Confirmation Procedure**

UBS0028U

Perform "PROCEDURE FOR MALFUNCTION A" first.

If the DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION B".

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**PROCEDURE FOR MALFUNCTION A**

**NOTE:**

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch "ON") instead of running engine at idle speed.

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and warm it up to normal operating temperature.
4. Run engine for at least 10 seconds at idle speed.
5. If DTC is detected, go to [EC-1372, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC

## Diagnostic Procedure

UBS0028X

### 1. INSPECTION START

Which malfunction (A or B) is duplicated?

A or B

- A >> GO TO 3.
- B >> GO TO 2.

### 2. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct to intake manifold

OK or NG

- OK >> GO TO 3.
- NG >> Reconnect the parts.

### 3. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 4.

## 4. CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect MAF sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

**OK or NG**

- OK >> GO TO 6.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and ECM relay

>> Repair harness or connectors.

## 6. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and ECM terminal 80. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 7.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 72. Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK MASS AIR FLOW SENSOR**

Refer to [EC-1374, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace mass air flow sensor.

**9. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
MASS AIR FLOW SENSOR**

UBS0028Y

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 72 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.1 - 1.5
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm*	1.5 - 2.0 to Approx. 4.0

\*: Check for liner voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.
  - a. Turn ignition switch "OFF".
  - b. Disconnect mass air flow sensor harness connector and reconnect it again.
  - c. Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

**Removal and Installation  
MASS AIR FLOW SENSOR**

UBS0028Z

Refer to [EM-103, "AIR CLEANER AND AIR DUCT"](#) .

**DTC P0102, P0103 MAF SENSOR**

**Component Description**

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N ● No-load	Idle Approx. 1.1 - 1.5V
		2,500 rpm Approx. 1.6 - 2.0V

Check the following.

- Harness for open or short between ECM relay and mass air flow sensor
- Harness for open or short between mass air flow sensor and ECM

>> Repair harness or connectors.

**6. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and ECM terminal 80. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 72. Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK MASS AIR FLOW SENSOR

Refer to [EC-1380, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace mass air flow sensor.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection MASS AIR FLOW SENSOR

UBS00296

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 72 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.1 - 1.5
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm*	1.5 - 2.0 to Approx. 4.0

\*: Check for liner voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.
  - a. Turn ignition switch "OFF".
  - b. Disconnect mass air flow sensor harness connector and reconnect it again.
  - c. Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

### Removal and Installation MASS AIR FLOW SENSOR

UBS00297

Refer to [EM-103, "AIR CLEANER AND AIR DUCT"](#) .

DTC P0112, P0113 IAT SENSOR

Component Description

The intake air temperature sensor is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 84 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0112 0112	Intake air temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air temperature sensor</li> </ul>
P0113 0113	Intake air temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

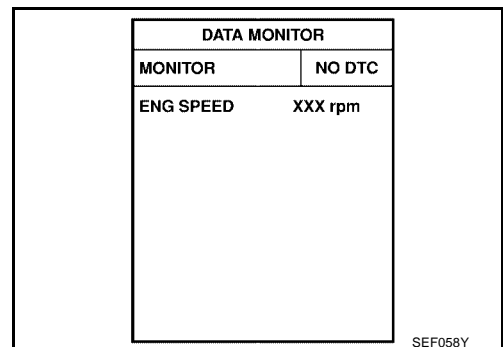

DTC Confirmation Procedure

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-1384, "Diagnostic Procedure"](#).

## DTC P0112, P0113 IAT SENSOR

## Wiring Diagram

EC-IATS-01

 : DETECTABLE LINE FOR DTC  
 : NON-DETECTABLE LINE FOR DTC

BBWA0214E

## Diagnostic Procedure

### 1. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect mass air flow sensor (intake air temperature sensor is built-into) harness connector.
3. Turn ignition switch "ON".

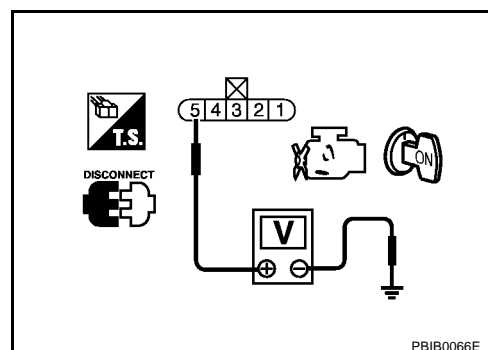

4. Check voltage between MAF sensor terminal 5 and ground.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 2.  
 NG >> Repair harness or connectors.

### 2. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between MAF sensor terminal 3 and ECM terminal 80. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 3.  
 NG >> Repair harness or connectors.

### 3. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to [EC-1385, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 4.  
 NG >> Replace mass air flow sensor (with intake air temperature sensor).

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

UBS0029D

**Component Inspection**  
**INTAKE AIR TEMPERATURE SENSOR**

1. Check resistance between intake air temperature sensor terminals 3 and 5 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1

2. If NG, replace mass air flow sensor (with intake air temperature sensor).

**Removal and Installation**  
**MASS AIR FLOW SENSOR**

Refer to [EM-103, "AIR CLEANER AND AIR DUCT"](#) .

## DTC P0117, P0118 ECT SENSOR

### Component Description

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 93 (Engine coolant temperature sensor) and ground.

### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

### On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Engine coolant temperature sensor</li> </ul>
P0118 0118	Engine coolant temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

### FAIL-SAFE MODE

When this malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

# DTC P0117, P0118 ECT SENSOR

[QR25DE]

Detected items	Engine operating condition in fail-safe mode	
Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch "ON" or "START". CONSULT-II displays the engine coolant temperature decided by ECM.	
	Condition	Engine coolant temperature decided (CONSULT-II display)
	Just as ignition switch is turned ON or Start	40°C (104°F)
	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)
	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.		

## DTC Confirmation Procedure

DTC P0122, P0123 TP SENSOR

Component Description

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL SEN1	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> </ul>	Accelerator pedal: Fully released
THRTL SEN2★	<ul style="list-style-type: none"> <li>Shift lever: D (A/T model) 1st(M/T model)</li> </ul>	Accelerator pedal: Fully depressed
		More than 0.36V
		Less than 4.75V

★: Throttle position sensor2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The TP sensor 2 circuit is open or shorted.)</li> </ul>
P0123 0123	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 2)</li> </ul>

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

# DTC P0122, P0123 TP SENSOR

[QR25DE]

## WITH CONSULT-II

1. Turn ignition switch "ON".

## DTC P0125 ECT SENSOR

PFP:22630

### Description

UBS0029M

**NOTE:**

If DTC P0125 is displayed with P0117 or P0118, first perform the trouble diagnosis for DTC P0117 or P0118. Refer to [EC-1386](#).

### COMPONENT DESCRIPTION

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 93 (Engine coolant temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

### On Board Diagnosis Logic

UBS0029N

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0125 0125	Insufficient engine coolant temperature for closed loop fuel control	<ul style="list-style-type: none"> <li>● Voltage sent to ECM from the sensor is not practical, even when some time has passed after starting the engine.</li> <li>● Engine coolant temperature is insufficient for closed loop fuel control.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (High resistance in the circuit)</li> <li>● Engine coolant temperature sensor</li> <li>● Thermostat</li> </ul>

### DTC Confirmation Procedure

UBS0029O

**CAUTION:**

Be careful not to overheat engine.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**Ⓟ WITH CONSULT-II**

1. Turn ignition switch "ON".

# DTC P0125 ECT SENSOR

[QR25DE]

2. Select "DATA MONITOR" mode with CONSULT-II.
3. Check that "COOLAN TEMP/S" is above 10°C (50°F).  
**If it is above 10°C (50°F), the test result will be OK.**  
**If it is below 10°C (50°F), go to following step.**
4. Start engine and run it for 65 minutes at idle speed.  
**If "COOLAN TEMP/S" increases to more than 10°C (50°F) within 65 minutes, stop engine because the test result will be OK.**
5. If DTC is detected, go to [EC-1399, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

UBS0029P

### 1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-1399, "Component Inspection"](#) .

OK or NG

OK >> GO TO 2.

NG >> Replace engine coolant temperature sensor.

### 2. CHECK THERMOSTAT OPERATION

When the engine is cold [lower than 70°C (158°F)] condition, grasp lower radiator hose and confirm the engine coolant does not flow.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace thermostat. Refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#) .

### 3. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## Component Inspection ENGINE COOLANT TEMPERATURE SENSOR

UBS0029Q

1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.

# DTC P0125 ECT SENSOR

[QR25DE]

## <Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 93 (Engine coolant temperature sensor) and ground.

2. If NG, replace engine coolant temperature sensor.

## Removal and Installation ENGINE COOLANT TEMPERATURE SENSOR

UBS0029R

Refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#).

**DTC P0127 IAT SENSOR**

**Component Description**

The intake air temperature sensor is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

**<Reference data>**

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 84 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

**On Board Diagnosis Logic**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0127 0127	Intake air temperature too high	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signal from engine coolant temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Intake air temperature sensor</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

This test may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

**Ⓟ WITH CONSULT-II**

1. Wait until engine coolant temperature is less than 90°C (194°F)
  - a. Turn ignition switch "ON".

- b. Select "DATA MONITOR" mode with CONSULT-II.
- c. Check the engine coolant temperature.
- d. If the engine coolant temperature is not less than 90°C (194°F), turn ignition switch "OFF" and cool down engine.
  - Perform the following steps before engine coolant temperature is above 90°C (194°F).
2. Turn ignition switch "ON".
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Start engine.
5. Hold vehicle speed at more than 70 km/h (43 MPH) for 100 consecutive seconds.
6. If 1st trip DTC is detected, go to [EC-1402, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "With CONSULT-II" above.

## Diagnostic Procedure

UBS0029V

### 1. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to [EC-1402, "Component Inspection"](#).

OK or NG

- OK >> GO TO 2.
- NG >> Replace mass air flow sensor (with intake air temperature sensor).

### 2. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

## DTC P0128 THERMOSTAT FUNCTION

PFP:21200

### On Board Diagnosis Logic

UBS0029Y

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.

This is due to a leak in the seal or the thermostat stuck open.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0128 0128	Thermostat function	The engine coolant temperature does not reach to specified temperature even though the engine has run long enough.	<ul style="list-style-type: none"> <li>● Thermostat</li> <li>● Leakage from sealing portion of thermostat</li> <li>● Engine coolant temperature sensor</li> </ul>

### DTC Confirmation Procedure

UBS0029Z

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- For best results, perform at ambient temperature of **-10°C (14°F) or higher.**
- For best results, perform at engine coolant temperature of **-10°C (14°F) to 68°C (154°F).**

**WITH CONSULT-II**

1. Replace thermostat with new one. Refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#) . Use only a genuine NISSAN thermostat as a replacement. If an incorrect thermostat is used, the MIL may come on.
2. Turn ignition switch “ON”.
3. Select “COOLAN TEMP/S” in “DATA MONITOR” mode with CONSULT-II.
4. Check that the “COOLAN TEMP/S” is above 68°C (154°F).  
If it is below 68°C (154°F), go to following step.  
If it is above 68°C (154°F), stop engine and cool down the engine to less than 68°C (154°F), then retry from step 2.
5. Drive vehicle for 10 consecutive minutes under the following conditions.

VHCL SPEED SE	80 - 120 km/h (50 - 75 MPH)
---------------	-----------------------------

DATA MONITOR	
MONITOR	NO DTC
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h

SEF176Y

If 1st trip DTC is detected, go to [EC-1404, "Diagnostic Procedure"](#) .

**WITH GST**

Follow the procedure “WITH CONSULT-II” above.

### Diagnostic Procedure

UBS002A0

#### 1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-1405, "Component Inspection"](#) .

OK or NG

- OK    >> **INSPECTION END**
- NG    >> Replace engine coolant temperature sensor.

UBS002A1

**Component Inspection**  
**ENGINE COOLANT TEMPERATURE SENSOR**

1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.

**<Reference data>**

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 93 (Engine coolant temperature sensor) and ground.

2. If NG, replace engine coolant temperature sensor.

**Removal and Installation**  
**ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#).

UBS002A2

**DTC P0132 HO2S1**

PFP:22690

**Component Description**

UBS002A3

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002A4

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS002A5

To judge the malfunction, the diagnosis checks that the heated oxygen sensor 1 output is not inordinately high.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0132 0132	Heated oxygen sensor 1 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> </ul>

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "DATA MONITOR" mode with CONSULT-II.
5. Restart engine and let it idle for 2 minutes.
6. If 1st trip DTC is detected, go to [EC-1409, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

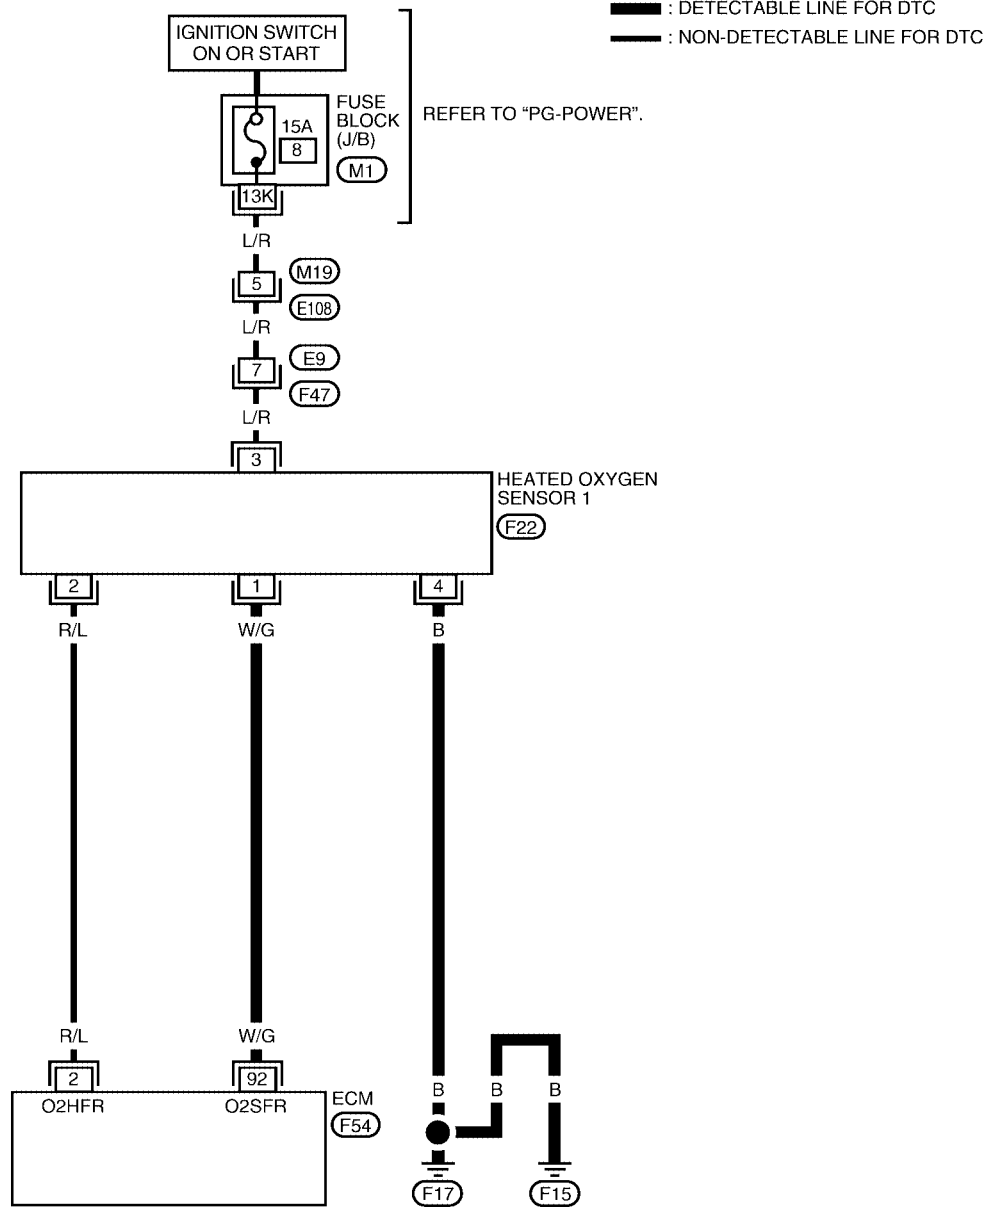

SEF174Y

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Restart engine and let it idle for 2 minutes.
  4. Turn ignition switch "OFF" and wait at least 10 seconds.
  5. Restart engine and let it idle for 2 minutes.
  6. Select "MODE 3" with GST.
  7. If DTC is detected, go to [EC-1409, "Diagnostic Procedure"](#) .
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

R means HO2S1 MNTR (B1) indicates RICH L means HO2S1 MNTR (B1) indicates LEAN	

SEF217YA

**DTC P0133 HO2S1**

PFP:22690

**Component Description**

UBS002AB

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002AC

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS002AD

To judge the malfunction of heated oxygen sensor 1, this diagnosis measures response time of heated oxygen sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and heated oxygen sensor 1 temperature index. Judgment is based on whether the compensated time (heated oxygen sensor 1 cycling time index) is inordinately long or not.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0133 0133	Heated oxygen sensor 1 circuit slow response	The response of the voltage signal from the sensor takes more than the specified time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> <li>● Exhaust gas leaks</li> <li>● PCV valve</li> <li>● Mass air flow sensor</li> </ul>

**DTC Confirmation Procedure**

UBS002AE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform at a temperature above  $-10^{\circ}\text{C}$  ( $14^{\circ}\text{F}$ ).
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P0133” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

HO2S1 (B1) P0133	
OUT OF CONDITION	
MONITOR	
ENG SPEED	XXX rpm

SEF339Z

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-1416, "Diagnostic Procedure"](#).

## Overall Function Check

UBS002AF

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 92 [HO2S1(B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
  - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.

**1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V**

**2 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V**

**times: → 0 - 0.3V**

4. If NG, go to [EC-1416, "Diagnostic Procedure"](#).

**Diagnostic Procedure**

UBS002AH

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. RETIGHTEN HEATED OXYGEN SENSOR 1**

Loosen and retighten heated oxygen sensor 1.

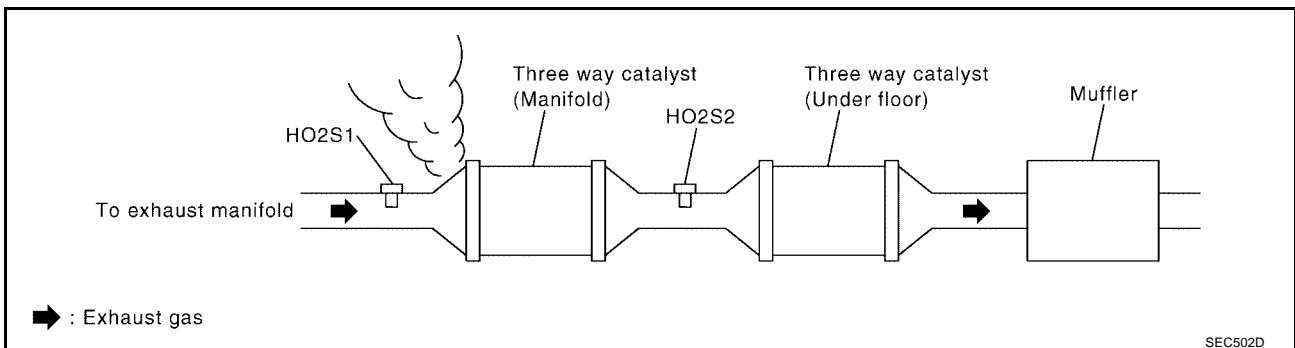

**Tightening torque: 40 - 50 N·m (4.1 - 5.1 kg·m, 30 - 37 ft·lb)**

>> GO TO 3.

**3. CHECK FOR EXHAUST AIR LEAK**

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (Manifold).

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

## 4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

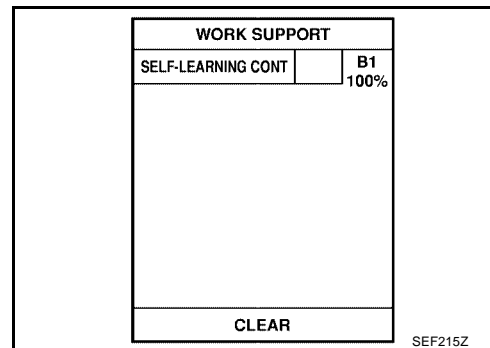

OK >> GO TO 5.

NG >> Repair or replace.

## 5. CLEAR THE SELF-LEARNING DATA

### With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?**  
**Is it difficult to start engine?**

### Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?**  
**Is it difficult to start engine?**

Yes or No

Yes >> Perform trouble diagnosis for DTC P0171 or DTC P0172 (Refer to [EC-1442](#) or [EC-1449](#)).

No >> GO TO 6.

## 6. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor1 harness connector.
3. Check harness continuity between HO2S1 terminal 4 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to power in harness or connectors.

## 7. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 92 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Check harness continuity between ECM terminal 92 or HO2S1 terminal 1 and engine ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-1361, "Component Inspection"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace malfunctioning heated oxygen sensor 1.

## 9. CHECK MASS AIR FLOW SENSOR

Refer to [EC-1374, "Component Inspection"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace mass air flow sensor.

## 10. CHECK PCV VALVE

Refer to [EC-1858, "Component Inspection"](#) .

OK or NG

OK >> GO TO 11.

NG >> Replace PCV valve.

## 11. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-1418, "Component Inspection"](#) .

OK or NG

OK >> GO TO 12.

NG >> Replace heated oxygen sensor 1.

## 12. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 1

UBS002AI

Ⓟ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.

2. Select "MANU TRIG" and adjust "TRIGGER POINT" to 100% in "DATA MONITOR" mode with CONSULT-II.
3. Select "HO2S1 (B1)" and "HO2S1 MNTR (B1)".
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch "RECORD" on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

SEF646Y

6. Check the following.
  - "HO2S1 MNTR (B1)" in "DATA MONITOR" mode changes from "RICH" to "LEAN" to "RICH" 5 times in 10 seconds. 5 times (cycles) are counted as shown at right.
  - "HO2S1 (B1)" voltage goes above 0.6V at least once.
  - "HO2S1 (B1)" voltage goes below 0.3V at least once.
  - "HO2S1 (B1)" voltage never exceeds 1.0V.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
  2. Set voltmeter probes between ECM terminal 92 [HO2S1 (B1) signal] and engine ground.
  3. Check the following with engine speed held at 2,000 rpm constant under no load.
    - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
    - The maximum voltage is over 0.6V at least one time.
    - The minimum voltage is below 0.3V at least one time.
    - The voltage never exceeds 1.0V.
- 1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V  
 2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
HEATED OXYGEN SENSOR 1**

UBS002AJ

Refer to [EM-110, "EXHAUST MANIFOLD AND THREE WAY CATALYST"](#) .

**DTC P0134 HO2S1**

PFP:22690

**Component Description**

UBS002AK

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002AL

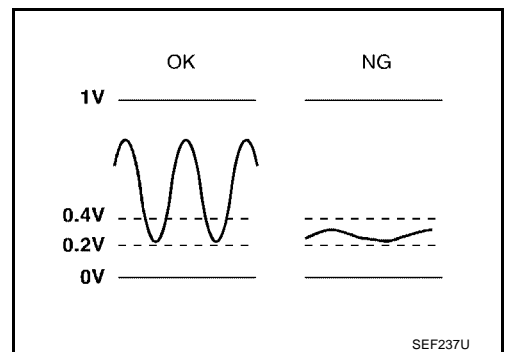

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS002AM

Under the condition in which the heated oxygen sensor 1 signal is not input, the ECM circuits will read a continuous approximately 0.3V. Therefore, for this diagnosis, the time that output voltage is within 200 to 400 mV range is monitored, and the diagnosis checks that this time is not inordinately long.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0134 0134	Heated oxygen sensor 1 circuit no activity detected	The voltage from the sensor is constantly approx. 0.3V.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> </ul>

### Component Inspection HEATED OXYGEN SENSOR 1

UBS002AR

**Ⓟ With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "MANU TRIG" and adjust "TRIGGER POINT" to 100% in "DATA MONITOR" mode with CONSULT-II.
3. Select "HO2S1 (B1)" and "HO2S1 MNTR (B1)".
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch "RECORD" on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

SEF646Y

6. Check the following.
  - "HO2S1 MNTR (B1)" in "DATA MONITOR" mode changes from "RICH" to "LEAN" to "RICH" 5 times in 10 seconds. 5 times (cycles) are counted as shown at right.
  - "HO2S1 (B1)" voltage goes above 0.6V at least once.
  - "HO2S1 (B1)" voltage goes below 0.3V at least once.
  - "HO2S1 (B1)" voltage never exceeds 1.0V.

cycle	1   2   3   4   5
HO2S1 MNTR (B1)	R-L-R-L-R-L-R-L-R-L-R
R means HO2S1 MNTR (B1) indicates RICH	
L means HO2S1 MNTR (B1) indicates LEAN	

SEF217YA

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.

- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 92 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is below 0.3V at least one time.
- The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V

2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

## Removal and Installation HEATED OXYGEN SENSOR 1

UBS002AS

Refer to [EM-110, "EXHAUST MANIFOLD AND THREE WAY CATALYST"](#).

**DTC P0138 HO2S2**

PF:226A0

**Component Description**

UBS002AT

The heated oxygen sensor 2, after three way catalyst (Manifold), monitors the oxygen level in the exhaust gas on each bank. Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2. This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002AU

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>Warm-up condition</li> <li>After keeping engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS002AV

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0138 0138	Heated oxygen sensor 2 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted)</li> <li>Heated oxygen sensor 2</li> </ul>

**DTC Confirmation Procedure**

UBS002AW

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### ④ WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for two minutes.
6. If 1st trip DTC is detected, go to [EC-1431, "Diagnostic Procedure"](#).

### Overall Function Check

UBS002AX

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

### ④ WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for two minutes.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Start engine and keep the engine speed at between 3,500 to 4,000 rpm for at least one minute under no load.
7. Let engine idle for two minutes.
8. Select "Mode 3" with GST.
9. If DTC is detected, go to [EC-1431, "Diagnostic Procedure"](#).

Wiring Diagram

### Component Inspection HEATED OXYGEN SENSOR 2

UBS002B0

#### Ⓟ With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for two minutes.

- Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

- Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**⊗ Without CONSULT-II**

- Start engine warm it up to the normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
- Let engine idle for one minutes.
- Set voltmeter probes between ECM terminal 95 [HO2S2 (B1) signal] and engine ground.
- Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**  
**If the voltage is above 0.63V at step 6, step 7 is not necessary.**
- Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.50V at least once during this procedure.**
- If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

---

**Removal and Installation**  
**HEATED OXYGEN SENSOR 2**

Refer to [EX-3, "EXHAUST SYSTEM"](#) .

**DTC P0139 HO2S2**

PF2:226A0

**Component Description**

UBS002B2

The heated oxygen sensor 2, after three way catalyst (Manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002B3

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>Warm-up condition</li> <li>After keeping engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS002B4

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0139 0139	Heated oxygen sensor 2 circuit slow response	It takes more time for the sensor to respond between rich and lean than the specified time.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted)</li> <li>Heated oxygen sensor 2</li> <li>Fuel pressure</li> <li>Injectors</li> <li>Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

UBS002B5

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

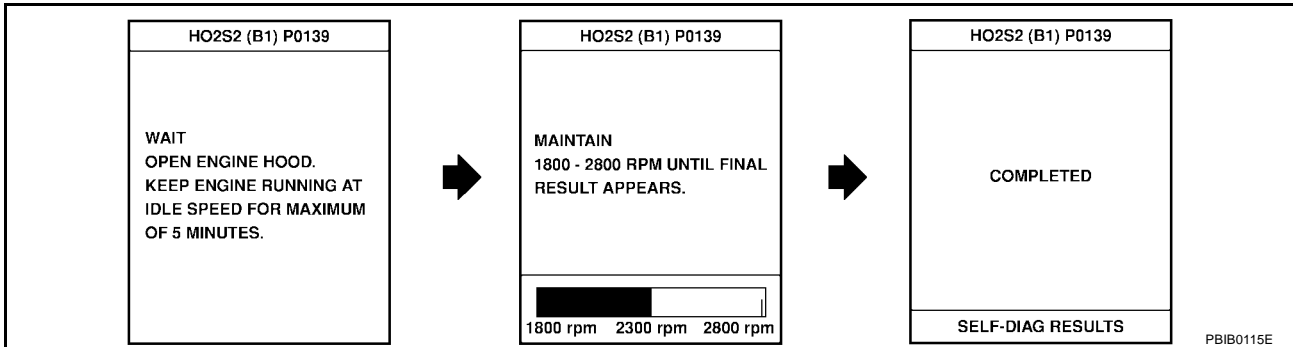

For the best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

**WITH CONSULT-II**

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.

3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minutes.
5. Select "HO2S2 (B1) P0139" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
 If "NG" is displayed, refer to [EC-1438, "Diagnostic Procedure"](#) .  
 If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch "ON" and select "COOLANTEMP/S" in "DATA MONITOR" mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring "COOLANTEMP/S" indication on CONSULT-II.
  - d. When "COOLANTEMP/S" indication reaches to 70°C (158°F), go to step 3.

**Overall Function Check**

UBS002B6

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

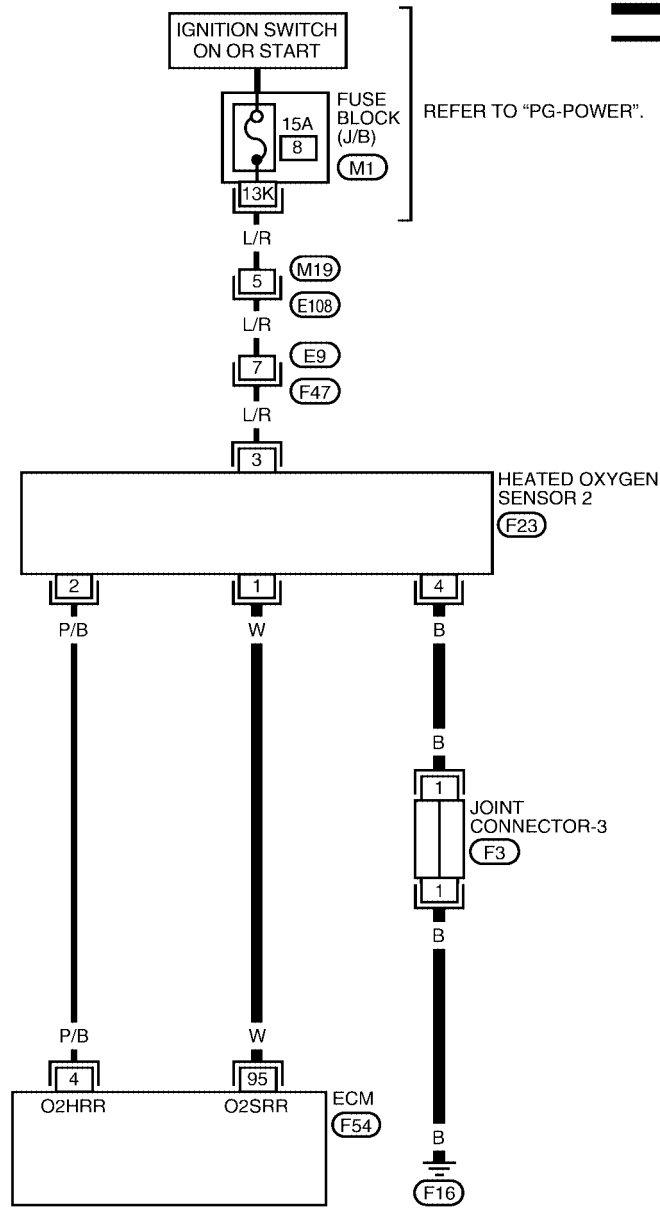

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 95 [HO2S2 (B1) signal] and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**A change of voltage should be more than 0.06V for 1 second during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should change at more than 0.06V for 1 second during this procedure.**
8. If NG, go to [EC-1438, "Diagnostic Procedure"](#) .

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171 or P0172. Refer to [EC-1442](#) or [EC-1449](#).
- No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Check harness continuity between HO2S2 terminal 4 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open and short between HO2S2 and engine ground

>> Repair open circuit or short to power in harness or connectors.

**5. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 95 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Check harness continuity between ECM terminal 95 or HO2S2 terminal 1 and engine ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

4. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 6.

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

UBS002BA

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

### On Board Diagnosis Logic

UBS002BB

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and light up the MIL (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0171 0171	Fuel injection system too lean	<ul style="list-style-type: none"> <li>● Fuel injection system does not operate properly.</li> <li>● The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.)</li> </ul>	<ul style="list-style-type: none"> <li>● Intake air leaks</li> <li>● Heated oxygen sensor 1</li> <li>● Injectors</li> <li>● Exhaust gas leaks</li> <li>● Incorrect fuel pressure</li> <li>● Lack of fuel</li> <li>● Mass air flow sensor</li> <li>● Incorrect PCV hose connection</li> </ul>

### DTC Confirmation Procedure

UBS002BC

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
4. Clear the self-learning control coefficient by touching "CLEAR".
5. Select "DATA MONITOR" mode with CONSULT-II.
6. Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-1445. "Diagnostic Procedure"](#).
7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-1445. "Diagnostic Procedure"](#). If engine does not start, check exhaust and intake air leak visually.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QR25DE]

3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 3" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and let it idle for at least 10 minutes.
8. Select "MODE 7" with GST. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-1445, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-1445, "Diagnostic Procedure"](#).  
If engine does not start, check exhaust and intake air leak visually.

# DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QR25DE]

UBS002BD

## Wiring Diagram

EC-FUEL-01

REFER TO THE FOLLOWING.  
 (M1) - FUSE BLOCK - JUNCTION BOX (J/B)

BBWA0416E

## Diagnostic Procedure

### 1. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (manifold).

#### OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace.

### 2. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Listen for an intake air leak after the mass air flow sensor.
2. Check PCV hose connection.

#### OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace.

### 3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 92 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Check harness continuity between ECM terminal 92 or HO2S1 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

6. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

#### 4. CHECK FUEL PRESSURE

---

1. Release fuel pressure to zero. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-1257, "Fuel Pressure Check"](#) .

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK >> GO TO 5.  
NG >> Follow the construction of "FUEL PRESSURE CHECK".

---

#### 5. CHECK MASS AIR FLOW SENSOR

---

 **With CONSULT-II**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**1.0 - 4.0 g-m/sec: at idling**  
**4.0 - 10 g-m/sec: at 2,500 rpm**

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**1.0 - 4.0 g-m/sec: at idling**  
**4.0 - 10 g-m/sec: at 2,500 rpm**

OK or NG

- OK >> GO TO 6.  
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-1375, "DTC P0102, P0103 MAF SENSOR"](#) .

**6. CHECK FUNCTION OF INJECTORS**

**Ⓟ With CONSULT-II**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

**ⓧ Without CONSULT-II**

1. Start engine.
2. Listen to each injector operating sound.

**Clicking noise should be heard.**

OK or NG

OK >> GO TO 7.

NG >> Perform trouble diagnosis for [EC-1796, "INJECTOR CIRCUIT"](#) .

**7. CHECK INJECTOR**

1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
2. Turn ignition switch "OFF".
3. Disconnect injector harness connectors.
4. Remove injector gallery assembly. Refer to [EM-118, "FUEL INJECTOR AND FUEL TUBE"](#) .  
Keep fuel hose and all injectors connected to injector gallery.  
The injector harness connectors should remain connected.
5. Disconnect all ignition coil harness connectors.
6. Prepare pans or saucers under each injector.
7. Crank engine for about 3 seconds. Make sure that fuel sprays out from injectors.

**Fuel should be sprayed evenly for each injector.**

OK or NG

OK >> GO TO 8.

NG >> Replace injectors from which fuel does not spray out.  
Always replace O-ring with new ones.

---

8. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## DTC P0172 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

### On Board Diagnosis Logic

UBS002BF

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (The actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and light up the MIL (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0172 0172	Fuel injection system too rich	<ul style="list-style-type: none"> <li>● Fuel injection system does not operate properly.</li> <li>● The amount of mixture ratio compensation is too large. (The mixture ratio is too rich.)</li> </ul>	<ul style="list-style-type: none"> <li>● Heated oxygen sensor 1</li> <li>● Injectors</li> <li>● Exhaust gas leaks</li> <li>● Incorrect fuel pressure</li> <li>● Mass air flow sensor</li> </ul>

### DTC Confirmation Procedure

UBS002BG

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
4. Clear the self-learning control coefficient by touching "CLEAR".
5. Select "DATA MONITOR" mode with CONSULT-II.
6. Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-1452, "Diagnostic Procedure"](#).
7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-1452, "Diagnostic Procedure"](#). If engine does not start, remove ignition plugs and check for fouling, etc.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0172 FUEL INJECTION SYSTEM FUNCTION

[QR25DE]

3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 3" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and let it idle for at least 10 minutes.
8. Select "MODE 7" with GST. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-1452, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal.  
If engine starts, go to [EC-1452, "Diagnostic Procedure"](#). If engine does not start, check exhaust and intake air leak visually.

UBS002BH

## Wiring Diagram

EC-FUEL-01

BBWA0416E

## Diagnostic Procedure

### 1. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before three way catalyst (manifold).

OK or NG

- OK    >> GO TO 2.
- NG    >> Repair or replace.

### 2. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK    >> GO TO 3.
- NG    >> Repair or replace.

### 3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 92 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Check harness continuity between ECM terminal 92 or HO2S1 terminal 1 and engine ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

6. Also check harness for short to power.

OK or NG

- OK    >> GO TO 4.
- NG    >> Repair open circuit or short to ground or short to power in harness or connectors.

### 4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-1257, "Fuel Pressure Check"](#) .

**At idling: 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK    >> GO TO 5.
- NG    >> Follow the construction of "FUEL PRESSURE CHECK".

**5. CHECK MASS AIR FLOW SENSOR**

**With CONSULT-II**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**1.0 - 4.0 g-m/sec: at idling**  
**4.0 - 10 g-m/sec: at 2,500 rpm**

**With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**1.0 - 4.0 g-m/sec: at idling**  
**4.0 - 10 g-m/sec: at 2,500 rpm**

OK or NG

OK >> GO TO 6.

NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-1375, "DTC P0102, P0103 MAF SENSOR"](#) .

**6. CHECK FUNCTION OF INJECTORS**

**With CONSULT-II**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

**Without CONSULT-II**

1. Start engine.
2. Listen to each injector operating sound.

**Clicking noise should be heard.**

OK or NG

OK >> GO TO 7.

NG >> Perform trouble diagnosis for [EC-1796, "INJECTOR CIRCUIT"](#) .

---

## 7. CHECK INJECTOR

---

1. Remove injector assembly. Refer to [EM-118, "FUEL INJECTOR AND FUEL TUBE"](#) .  
Keep fuel hose and all injectors connected to injector gallery.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect injector harness connectors.  
The injector harness connectors should remain connected.
4. Disconnect all ignition coil harness connectors.
5. Prepare pans or saucers under each injectors.
6. Crank engine for about 3 seconds.  
Make sure fuel does not drip from injector.

### OK or NG

OK (Does not drip.)>>GO TO 8.

NG (Drips.)>>Replace the injectors from which fuel is dripping. Always replace O-ring with new one.

---

## 8. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## DTC P0181 FTT SENSOR

### Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

### <Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

\*: These data are reference values and are measured between ECM terminal 70 (Fuel tank temperature sensor) and ground.

### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may lead to ECM's transistor damage. Use ground other than ECM, such as engine ground.**

### On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0181 0181	Fuel tank temperature sensor circuit range/performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel tank temperature sensor</li> </ul>

### DTC Confirmation Procedure

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Check "COOLAN TEMP/S" value.  
If "COOLAN TEMP/S" is less than 60°C (140°F), the result will be OK.  
If "COOLAN TEMP/S" is above 60°C (140°F), go to the following step.
4. Cool engine down until "COOLAN TEMP/S" signal is less than 60°C (140°F).
5. Wait at least 10 seconds.
6. If 1st trip DTC is detected, go to [EC-1456, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure**

**1. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-1456, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 2.
- NG >> Replace fuel tank temperature sensor.

**2. CHECK INTERMITTENT INCIDENT**

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .  
 Refer to [EC-1458, "Wiring Diagram"](#) .

>> INSPECTION END

**Component Inspection**  
**FUEL TANK TEMPERATURE SENSOR**

1. Remove fuel level sensor unit.
2. Check resistance between fuel level sensor unit and fuel pump terminals 4 and 5 by heating with hot water or heat gun as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

If NG, replace fuel level sensor unit.

**Removal and Installation**  
**FUEL TANK TEMPERATURE SENSOR**

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

DTC P0182, P0183 FTT SENSOR

PF2:22630

UBS002BP

Component Description

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

\*: These data are reference values and are measured between ECM terminal 70 (Fuel tank temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may lead to ECM's transistor damage. Use ground other than ECM, such as engine ground.

On Board Diagnosis Logic

UBS002BQ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0182 0182	Fuel tank temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Fuel tank temperature sensor</li> </ul>
P0183 0183	Fuel tank temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

DTC Confirmation Procedure

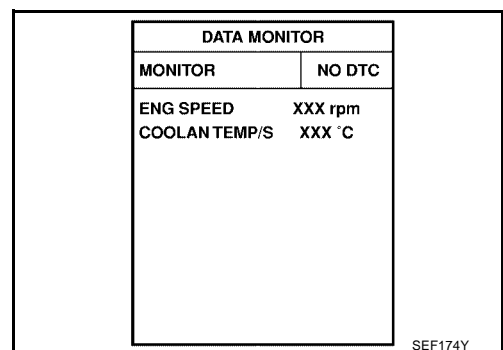

UBS002BR

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-1459, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure****1. CHECK POWER SUPPLY**

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Turn ignition switch "ON".

4. Check voltage between fuel level sensor unit and fuel pump terminal 4 and body ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

**2. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors B3, M16
- Harness connectors M59, F27
- Harness for open or short between ECM and fuel level sensor unit and fuel pump

>> Repair harness or connector.

**3. CHECK GROUND CIRCUIT**

1. Turn ignition switch "OFF".
2. Check harness continuity between fuel level sensor unit and fuel pump terminal 5 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to power in harness or connectors.

**4. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-1460, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel tank temperature sensor.

**5. CHECK INTERMITTENT INCIDENT**

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection FUEL TANK TEMPERATURE SENSOR

UBS002BU

1. Remove fuel level sensor unit.
2. Check resistance between fuel level sensor unit and fuel pump terminals 4 and 5 by heating with hot water or heat gun as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

If NG, replace fuel level sensor unit.

UBS002BV

### Removal and Installation FUEL TANK TEMPERATURE SENSOR

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

# DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

[QR25DE]

## DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

PFP:00019

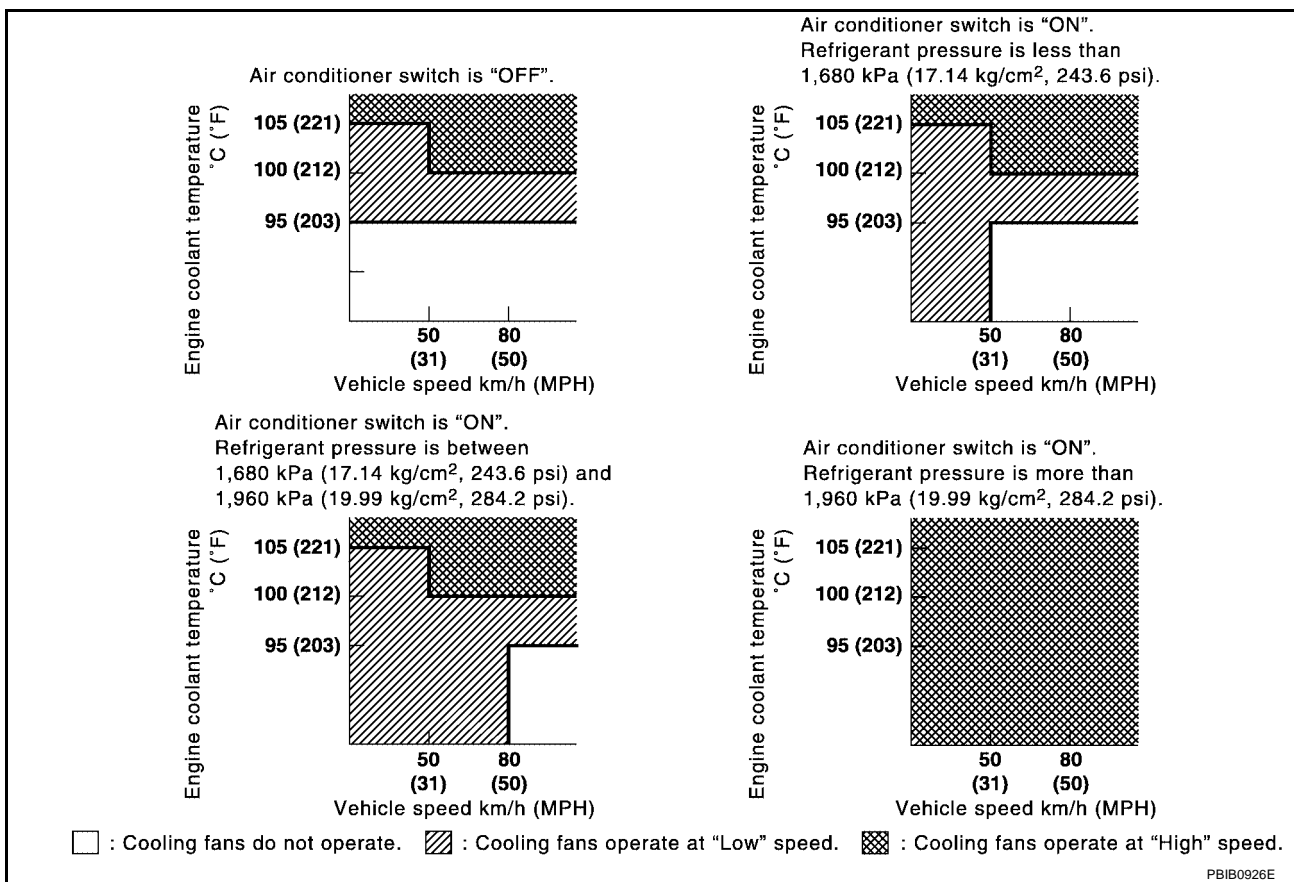

### System Description COOLING FAN CONTROL

UBS002BW

Sensor	Input Signal to ECM	ECM function	Actuator
Vehicle speed sensor	Vehicle speed	Cooling fan control	Cooling fan relay(s)
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch	Air conditioner "ON" signal		
Ignition switch	Start signal		
Refrigerant pressure sensor	Refrigerant pressure		

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

### OPERATION

### CONSULT-II Reference Value in Data Monitor Mode

UBS002BX

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF
		Air conditioner switch: ON (Compressor operates.)
		OFF
		ON

# DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

[QR25DE]

MONITOR ITEM	CONDITION		SPECIFICATION
COOLING FAN	<ul style="list-style-type: none"> <li>● Engine: After warming up, idle the engine</li> <li>● Air conditioner switch: OFF</li> </ul>	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (219°F)	LOW
		Engine coolant temperature is 105°C (221°F) or more	HIGH

## On Board Diagnosis Logic

UBS002BY

This diagnosis checks whether the engine coolant temperature is extraordinary high, even when the load is not heavy.

When malfunction is detected, the malfunction indicator lamp (MIL) will light up even in the first trip.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0217 0217	Engine coolant over temperature condition	Engine coolant temperature is excessively high under normal engine speed.	<ul style="list-style-type: none"> <li>● Harness or connectors (The cooling fan circuit is open or shorted)</li> <li>● Cooling fan</li> <li>● Thermostat</li> <li>● Improper ignition timing</li> <li>● Engine coolant temperature sensor</li> <li>● Blocked radiator</li> <li>● Blocked front end (Improper fitting of nose mask)</li> <li>● Crushed vehicle frontal area (Vehicle frontal is collided but not repaired)</li> <li>● Blocked air passage by improper installation of front fog lamp or fog lamps</li> <li>● Improper mixture ratio of coolant</li> <li>● Damaged bumper</li> </ul> <p>For more information, refer to <a href="#">EC-1473</a>, "<a href="#">Main 12 Causes of Overheating</a>".</p>

### CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to [MA-23](#), "[Changing Engine Coolant](#)". Also, replace the engine oil. Refer to [LU-17](#), "[Changing Engine Oil](#)".

1. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14](#), "[Anti-freeze Coolant Mixture Ratio](#)".
2. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

## Overall Function Check

UBS002BZ

Use this procedure to check the overall function of the coolant overtemperature enrichment protection check, a DTC might not be confirmed.

### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high-pressure fluid escaping from the radiator.

Wrap a thick cloth around the cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

## WITH CONSULT-II

1. Check the coolant level and mixture ratio (using coolant tester) in the reservoir tank and radiator.

**Allow engine to cool before checking coolant level and mixture ratio.**

- If the coolant level in the reservoir and/or radiator is below the proper range, go to [EC-1466, "Diagnostic Procedure"](#).
- If the coolant mixture ratio is out of the range of 45 to 55%, replace the coolant in the following procedure [MA-23, "Changing Engine Coolant"](#).

- a. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute like pouring coolant from a kettle. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14, "Anti-freeze Coolant Mixture Ratio"](#).
  - b. After refilling coolant, run engine to ensure that no water-flow noise is emitted.
  - c. After checking or replacing coolant, go to step 3 below.
2. Ask the customer if engine coolant has been added. If it has been added, go to [EC-1466, "Diagnostic Procedure"](#). After repair, go to the next step.
  3. Start engine and let it idle.
  4. Make sure that A/C switch is "OFF" and air conditioner is not operating. If NG, check air conditioner circuit. Refer to [MTC-19, "TROUBLE DIAGNOSIS"](#) After repair, go to the next step.
  5. Perform "ENG COOLANT TEMP" in "ACTIVE TEST" mode with CONSULT-II at idle.
    - a. Set "ENG COOLANT TEMP" to 95°C (203°F) and make sure that cooling fan operates at low speed. If NG, go to [EC-1466, "Diagnostic Procedure"](#).
    - b. Set "ENG COOLANT TEMP" to 105°C (221°F) and make sure that cooling fan operates at high speed. If NG, go to [EC-1466, "Diagnostic Procedure"](#). After repair, go to the next step.
  6. Check for blocked coolant passage.
    - a. Warm up engine to normal operating temperature, then grasp radiator upper hose and lower hose and make sure that coolant flows. If NG, go to [EC-1466, "Diagnostic Procedure"](#). After repair, go to the next step.  
**Be extremely careful not to touch any moving or adjacent parts.**
  7. Check for blocked radiator air passage.
    - a. When market fog lamps have been installed, check for damaged fans and clogging in the condenser and radiator.
    - b. Check the front end for clogging caused by insects or debris.
    - c. Check for improper fitting of front-end cover, damaged radiator grille or bumper, damaged vehicle front. If NG, take appropriate action and then go to the next step.
  8. Check function of ECT sensor.  
Refer to [EC-1390, "Component Inspection"](#).  
If NG, replace ECT sensor and go to the next step.
  9. Check ignition timing. Refer to [EC-1291, "Basic Inspection"](#).  
Make sure that ignition timing is 15°±5° at idle.  
If NG, refer to [EC-1291, "Basic Inspection"](#), and then recheck.

## WITH GST

1. Check the coolant level and mixture ratio (using coolant tester) in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level and mixture ratio.**
  - If the coolant level in the reservoir and/or radiator is below the proper range, and go to [EC-1466, "Diagnostic Procedure"](#).
  - If the coolant mixture ratio is out of the range of 45 to 55%, replace the coolant in the following procedure [MA-23, "Changing Engine Coolant"](#).
- a. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute like pouring coolant from a kettle. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14, "Anti-freeze Coolant Mixture Ratio"](#).
- b. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

## DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

[QR25DE]

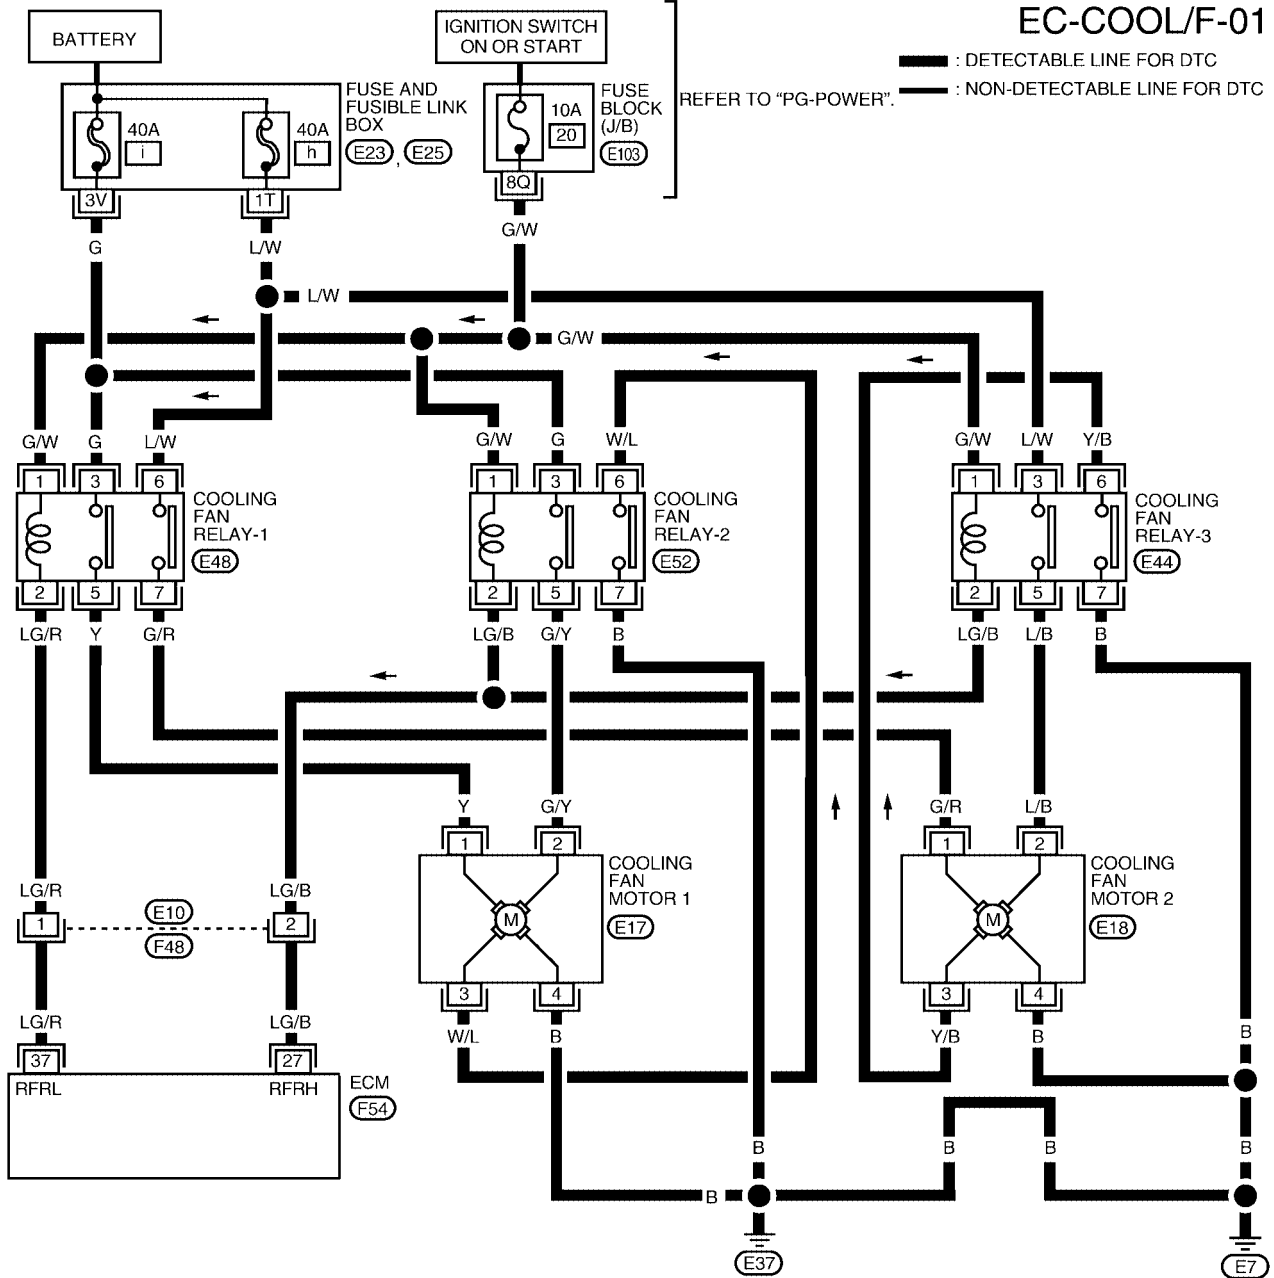

- c. After checking or replacing coolant, go to step 3 below.
2. Ask the customer if engine coolant has been added. If it has been added, go to [EC-1466, "Diagnostic Procedure"](#) . After repair, go to the next step.
3. Start engine and let it idle.
4. Make sure that A/C switch is "OFF" and air conditioner is not operating. If NG, check air conditioner circuit. Refer to [MTC-19, "TROUBLE DIAGNOSIS"](#) . After repair, go to the next step.
5. Turn ignition switch "OFF".
6. Disconnect engine coolant temperature sensor harness connector.
7. Connect 150Ω resistor to engine coolant temperature sensor.
8. Start engine and make sure that cooling fan operates.  
**Be careful not to overheat engine.**  
If NG, go to [EC-1466, "Diagnostic Procedure"](#) . After repair, go to the next step.
9. Check for blocked coolant passage.
  - a. Warm up engine to normal operating temperature, then grasp radiator upper hose and lower hose and make sure that coolant flows.  
If NG, go to [EC-1466, "Diagnostic Procedure"](#) . After repair, go to the next step.  
**Be extremely careful not to touch any moving or adjacent parts.**
10. Check for blocked radiator air passage.
  - a. When market fog lamps have been installed, check for damaged fans and clogging in the condenser and radiator.
  - b. Check the front end for clogging caused by insects or debris.
  - c. Check for improper fitting of front-end cover, damaged radiator grille or bumper, damaged vehicle front.  
If NG, take appropriate action and then go to the next step.
11. Check function of ECT sensor.  
Refer to [EC-1390, "Component Inspection"](#) .  
If NG, replace ECT sensor and go to the next step.
12. Check ignition timing. Refer to [EC-1291, "Basic Inspection"](#) .  
Make sure that ignition timing is  $15^{\circ} \pm 5^{\circ}$  at idle.  
If NG, refer to [EC-1291, "Basic Inspection"](#) , and then recheck.

## Diagnostic Procedure

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 4.

### 2. CHECK COOLING FAN LOW SPEED OPERATION

Ⓜ With CONSULT-II

1. Disconnect cooling fan relays-2 and -3.
2. Start engine and let it idle.

3. Select "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II and touch "LOW" on the CONSULT-II screen.
4. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

- OK >> GO TO 3.
- NG >> Check cooling fan low speed control circuit. (Go to [EC-1470, "PROCEDURE A"](#).)

ACTIVE TEST	
COOLING FAN	LOW
MONITOR	
COOLAN TEMP/S	XXX °C

SEF784Z

### 3. CHECK COOLING FAN HIGH SPEED OPERATION

Ⓜ With CONSULT-II

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relays-2 and -3.
3. Start engine and let it idle.
4. Select "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II and touch "HIGH" on the CONSULT-II screen.
5. Make sure that cooling fans-1 and -2 operate at high speed.

OK or NG

- OK >> GO TO 6.
- NG >> Check cooling fan high speed control circuit. (Go to [EC-1472, "PROCEDURE B"](#).)

ACTIVE TEST	
COOLING FAN	HIGH
MONITOR	
COOLAN TEMP/S	XXX °C

SEF785Z

# DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

[QR25DE]

## 4. CHECK COOLING FAN LOW SPEED OPERATION

### ⊗ Without CONSULT-II

1. Disconnect cooling fan relays-2 and -3.
2. Start engine and let it idle.
3. Turn air conditioner switch "ON".
4. Turn blower fan switch "ON".

5. Make sure that cooling fans-1 and -2 operate at low speed.

### OK or NG

OK >> GO TO 5.

NG >> Check cooling fan low speed control circuit. (Go to [EC-1470, "PROCEDURE A"](#).)

## 5. CHECK COOLING FAN HIGH SPEED OPERATION

### ⊗ Without CONSULT-II

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relays-2 and -3.
3. Turn air conditioner switch and blower fan switch "OFF".
4. Disconnect engine coolant temperature sensor harness connector.
5. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
6. Restart engine and make sure that cooling fans-1 and -2 operate at high speed.

### OK or NG

OK >> GO TO 6.

NG >> Check cooling fan high speed control circuit. (Go to [EC-1472, "PROCEDURE B"](#).)

## 6. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

**Testing pressure: 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)**

**CAUTION:**

Higher than the specified pressure may cause radiator damage.

**Pressure should not drop.**

OK or NG

OK >> GO TO 7.

NG >> Check the following for leak.

- Hose
  - Radiator
  - Water pump
- Refer to [CO-26, "WATER PUMP"](#) .

## 7. CHECK RADIATOR CAP

Apply pressure to cap with a tester.

**Radiator cap relief pressure:**

**59 - 98 kPa (0.6 - 1.0 kg/cm<sup>2</sup> , 9 - 14 psi)**

OK or NG

OK >> GO TO 8.

NG >> Replace radiator cap.

## 8. CHECK THERMOSTAT

1. Check valve seating condition at normal room temperatures.  
**It should seat tightly.**
2. Check valve opening temperature and valve lift.

**Valve opening temperature: 82°C (180°F) [standard]**

**Valve lift: More than 8 mm/95°C (0.31 in/203°F)**

3. Check if valve is closed at 5°C (9°F) below valve opening temperature.  
For details, refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace thermostat.

## 9. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-1390, "Component Inspection"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace engine coolant temperature sensor.

---

**10. CHECK MAIN 12 CAUSES**

---

If the cause cannot be isolated, go to [EC-1473, "Main 12 Causes of Overheating"](#) .

**>> INSPECTION END**

# DTC P0217 COOLANT OVERTEMPERATURE ENRICHMENT PROTECTION

[QR25DE]

## PROCEDURE A

### 1. CHECK POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-1.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-1 terminals 1, 3, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector E103
- 40A fusible links
- Fuse and fusible link box connectors E23, E25
- Harness for open or short between cooling fan relay-1 and fuse
- Harness for open or short between cooling fan relay-1 and fusible links

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK COOLING FAN MOTORS CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-1 terminal 5 and cooling fan motor-1 terminal 1, cooling fan motor-1 terminal 4 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between cooling fan relay-1 terminal 7 and cooling fan motor-2 terminal 1, cooling fan motor-2 terminal 4 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

#### 4. CHECK OUTPUT SIGNAL CIRCUIT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 37 and cooling fan relay-1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

---

#### 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-1 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

#### 6. CHECK COOLING FAN RELAY-1

---

Refer to [EC-1474, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
NG >> Replace cooling fan relay.

---

#### 7. CHECK COOLING FAN MOTORS-1 AND -2

---

Refer to [EC-1474, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace cooling fan motors.

---

#### 8. CHECK INTERMITTENT INCIDENT

---

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## PROCEDURE B

### 1. CHECK POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relays-2 and -3.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relays-2 and -3 terminals 1, 3 and body ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between cooling fan relays-2 and -3 and fuse
- Harness for open or short between cooling fan relays-2 and -3 and fusible links

>> Repair harness or connectors.

### 3. CHECK COOLING FAN MOTORS CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between the following;  
cooling fan relay-2 terminal 5 and cooling fan motor-1 terminal 2,  
cooling fan relay-2 terminal 6 and cooling fan motor-1 terminal 3,  
cooling fan relay-2 terminal 7 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between the following;  
cooling fan relay-3 terminal 5 and cooling fan motor-2 terminal 2,  
cooling fan relay-3 terminal 6 and cooling fan motor-2 terminal 3,  
cooling fan relay-3 terminal 7 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK OUTPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 27 and cooling fan relay-2 terminal 2, cooling fan relay-3 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK    >> GO TO 6.  
NG    >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relays-2, -3 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK COOLING FAN RELAYS-2 AND -3

Refer to [EC-1474, "COOLING FAN RELAYS-1, -2 AND -3"](#) .

OK or NG

- OK    >> GO TO 7.  
NG    >> Replace cooling fan relays.

## 7. CHECK COOLING FAN MOTORS

Refer to [EC-1474, "COOLING FAN MOTORS-1 AND -2"](#) .

OK or NG

- OK    >> GO TO 8.  
NG    >> Replace cooling fan motors.

## 8. CHECK INTERMITTENT INCIDENT

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## Component Inspection COOLING FAN RELAYS-1, -2 AND -3

UBS002C3

Check continuity between terminals 3 and 5, 6 and 7.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

If NG, replace relay.

SEF745U

## COOLING FAN MOTORS-1 AND -2

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Speed	Terminals	
		(+)	(-)
Cooling fan motor	Low	1	4
	High	1, 2	3, 4

**Cooling fan motor should operate.**

If NG, replace cooling fan motor.

SEF734W

DTC P0222, P0223 TP SENSOR

PF1:16119

Component Description

UBS0055P

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

UBS0055Q

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> <li>Shift lever: D (A/T model) 1st (M/T model)</li> </ul>	Accelerator pedal: Fully released	More than 0.36V
THRTL SEN2★		Accelerator pedal: Fully depressed	Less than 4.75V

★: Throttle position sensor2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS0055R

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The TP sensor 1 circuit is open or shorted.)</li> <li>Electric throttle control actuator (TP sensor 1)</li> </ul>
P0223 0223	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

UBS0055S

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

# DTC P0222, P0223 TP SENSOR

[QR25DE]

## WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1478, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

## WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P0222, P0223 TP SENSOR

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
58	B	Sensors' ground	<b>[Engine is running]</b> <ul style="list-style-type: none"> <li>● Warm-up condition</li> <li>● Idle speed</li> </ul>	Approximately 0V
65	R	Sensors' power supply	<b>[Ignition switch "ON"]</b>	Approximately 5V
73	W	Throttle position sensor 1	<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"> <li>● Engine stopped</li> <li>● Shift lever position: "D" (A/T model)</li> <li>● Shift lever position is "1st" (M/T model)</li> <li>● Accelerator pedal fully released</li> </ul>	More than 0.36V
			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"> <li>● Engine stopped</li> <li>● Shift lever position: "D" (A/T model)</li> <li>● Shift lever position is "1st" (M/T model)</li> <li>● Accelerator pedal fully depressed</li> </ul>	Less than 4.75V

## Diagnostic Procedure

UBS0055U

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch "ON".

3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-1
- Harness for open or short between electric throttle control actuator and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between electric throttle control actuator terminal 5 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-2
- Harness for open or short between electric throttle control actuator and ECM
- Harness for open or short between electric throttle control actuator and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 73 and electric throttle control actuator terminal 4. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK THROTTLE POSITION SENSOR**

Refer to [EC-1480, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

**8. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-1255, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**9. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
THROTTLE POSITION SENSOR**

UBS0055V

1. Reconnect all harness connectors disconnected.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Turn ignition switch "ON".
4. Set selector lever to "D" position (A/T models) or "1st" position (M/T models).
5. Check voltage between ECM terminals 73 (TP sensor 1), 74 (TP sensor 2) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
73 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
74 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
8. Perform [EC-1255, "Idle Air Volume Learning"](#) .

**Removal and Installation  
ELECTRIC THROTTLE CONTROL ACTUATOR**

UBS0055W

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

# DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

[QR25DE]

## DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

PF0:0000

### On Board Diagnosis Logic

UBS002D0

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire

The misfire detection logic consists of the following two conditions.

- One Trip Detection Logic (Three Way Catalyst Damage)**  
 On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.  
 When a misfire condition occurs, the ECM monitors the CKP sensor (POS) signal every 200 engine revolutions for a change.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.  
 If another misfire condition occurs that can damage the TWC on a second trip, the MIL will blink.  
 When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on.  
 If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
- Two Trip Detection Logic (Exhaust quality deterioration)**  
 For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.  
 A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	<ul style="list-style-type: none"> <li>● Improper spark plug</li> <li>● Insufficient compression</li> </ul>
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	<ul style="list-style-type: none"> <li>● Incorrect fuel pressure</li> <li>● The injector circuit is open or shorted</li> </ul>
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	<ul style="list-style-type: none"> <li>● Fuel injectors</li> <li>● Intake air leak</li> </ul>
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	<ul style="list-style-type: none"> <li>● The ignition signal circuit is open or shorted</li> </ul>
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	<ul style="list-style-type: none"> <li>● Lack of fuel</li> <li>● Drive plate or flywheel</li> <li>● Heated oxygen sensor 1</li> <li>● Incorrect PCV hose connection</li> </ul>

### DTC Confirmation Procedure

UBS002D1

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

- Turn ignition switch "ON", and select "DATA MONITOR" mode with CONSULT-II.
- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.

# DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

[QR25DE]

- Start engine again and drive at 1,500 to 3,000 rpm for at least 3 minutes.  
**Hold the accelerator pedal as steady as possible.**  
**NOTE:**  
**Refer to the freeze frame data for the test driving conditions.**
- If 1st trip DTC is detected, go to [EC-1482, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

PBIB0164E

## WITH GST

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

UBS002D2

### 1. CHECK FOR INTAKE AIR LEAK

- Start engine and run it at idle speed.
- Listen for the sound of the intake air leak.
- Check PCV hose connection.

OK or NG

- OK >> GO TO 2.  
NG >> Discover air leak location and repair.

### 2. CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

OK or NG

- OK >> GO TO 3.  
NG >> Repair or replace it.

## 3. PERFORM POWER BALANCE TEST

### With CONSULT-II

1. Perform "POWER BALANCE" in "ACTIVE TEST" mode.
2. Is there any cylinder which does not produce a momentary engine speed drop?

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

### Without CONSULT-II

When disconnecting each injector harness connector one at a time, is there any cylinder which does not produce a momentary engine speed drop?

#### Yes or No

- Yes >> GO TO 4.
- No >> GO TO 7.

## 4. CHECK INJECTOR

Does each injector make an operating sound at idle?

#### Yes or No

- Yes >> GO TO 5.
- No >> Check injector(s) and circuit(s). Refer to [EC-1796](#), "[INJECTOR CIRCUIT](#)".

## 5. CHECK IGNITION SPARK

1. Disconnect ignition coil assembly from rocker cover.
2. Connect a known good spark plug to the ignition coil assembly.
3. Place end of spark plug against a suitable ground and crank engine.
4. Check for spark.

### OK or NG

- OK >> GO TO 6.  
NG >> Check ignition coil, power transistor and their circuits.  
Refer to [EC-1777, "IGNITION SIGNAL"](#) .

## 6. CHECK SPARK PLUGS

Remove the spark plugs and check for fouling, etc.

### OK or NG

- OK >> GO TO 7.  
NG >> Repair or replace spark plug(s) with standard type one(s). For spark plug type, refer to [MA-27, "Changing Spark Plugs \(Double Platinum - Tipped Type\)"](#) .

## 7. CHECK COMPRESSION PRESSURE

Check compression pressure. Refer to [EM-145, "CHECKING COMPRESSION PRESSURE"](#) .

<b>Standard:</b>	<b>1,190 kPa (12.1 kg/cm<sup>2</sup> , 172 psi)/250 rpm</b>
<b>Minimum:</b>	<b>990 kPa (10.1 kg/cm<sup>2</sup> , 144 psi)/250 rpm</b>
<b>Difference between each cylinder:</b>	<b>98 kPa (1.0 kg/cm<sup>2</sup> , 14 psi)/250 rpm</b>

### OK or NG

- OK >> GO TO 8.  
NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

## 8. CHECK FUEL PRESSURE

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
3. Install fuel pressure gauge and check fuel pressure. Refer to [EC-1257, "Fuel Pressure Check"](#) .

**At idle: Approx. 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

### OK or NG

- OK >> GO TO 9.  
NG >> Follow the construction of "FUEL PRESSURE CHECK".

## 9. CHECK IGNITION TIMING

Check the following items. Refer to [EC-1291, "Basic Inspection"](#) .

Items	Specifications	
Target idle speed	A/T	700 ± 50 rpm (in "P" or "N" position)
	M/T	700 ± 50 rpm
Ignition timing	A/T	15 ± 5° BTDC (in "P" or "N" position)
	M/T	15 ± 5° BTDC

OK or NG

- OK >> GO TO 10.
- NG >> Follow the "Basic Inspection".

## 10. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-1410, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 12.
- NG >> GO TO 11.

## 11. CHECK MASS AIR FLOW SENSOR

 **With CONSULT-II**

Check mass air flow sensor signal in "DATA MONITOR" mode with CONSULT-II.

- 1.4 - 4.0 g-m/sec: at idling**
- 4.0 - 10.0 g-m/sec: at 2,500 rpm**

 **With GST**

Check mass air flow sensor signal in MODE 1 with GST.

- 1.4 - 4.0 g-m/sec: at idling**
- 4.0 - 10.0 g-m/sec: at 2,500 rpm**

OK or NG

- OK >> GO TO 12.
- NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-1375, "DTC P0102, P0103 MAF SENSOR"](#) .

## 12. CHECK SYMPTOM MATRIX CHART

Check items on the rough idle symptom in [EC-1295, "Symptom Matrix Chart"](#) .

OK or NG

- OK >> GO TO 13.
- NG >> Repair or replace.

## 13. ERASE THE 1ST TRIP DTC

Some tests may cause a 1st trip DTC to be set.

Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) .

>> GO TO 14.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**DTC P0327, P0328 KS**

**Component Description**

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

**On Board Diagnosis Logic**

The MIL will not light for knock sensor malfunction.

DTC No.	Trouble Diagnosis Name	DTC Detected Condition	Possible Cause
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Knock sensor</li> </ul>
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

**DTC Confirmation Procedure**

**NOTE:**

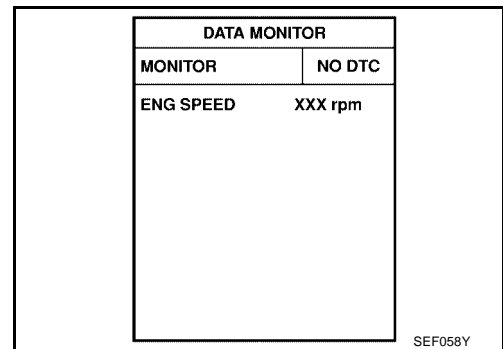

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to [EC-1488, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
82	W	Knock sensor	[Engine is running] ● Idle speed	Approximately 2.5V

**Diagnostic Procedure**

UBS002D7

**1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-I**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check resistance between ECM terminal 82 and engine ground. Refer to Wiring Diagram.

**NOTE:**

It is necessary to use an ohmmeter which can measure more than 10 MΩ.

**Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]**

4. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 4.  
NG >> GO TO 2.

**2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-II**

1. Disconnect knock sensor harness connector.
2. Check harness continuity between ECM terminal 82 and knock sensor terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 3.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**3. CHECK KNOCK SENSOR**

Refer to [EC-1489, "Component Inspection"](#).

**OK or NG**

- OK >> GO TO 5.  
NG >> Replace knock sensor.

## 4. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 5.

## 5. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection KNOCK SENSOR

Check resistance between knock sensor terminal 1 and ground.

#### NOTE:

It is necessary to use an ohmmeter which can measure more than 10 M $\Omega$ .

**Resistance: Approximately 530 - 590k $\Omega$  [at 20°C (68°F)]**

#### CAUTION:

Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.

### Removal and Installation KNOCK SENSOR

Refer to [EM-160, "CYLINDER BLOCK"](#) .

## DTC P0335 CKP SENSOR (POS)

PFP:23731

### Component Description

UBS002DA

The crankshaft position sensor (POS) is located on the oil pan facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.

The sensor consists of a permanent magnet and Hall IC.

When the engine is running, the high and low parts of the teeth cause the gap with the sensor change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

The ECM receives the voltage signal and detects the fluctuation of the engine revolution.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002DB

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED-	<ul style="list-style-type: none"> <li>● Tachometer: Connect</li> <li>● Run engine and compare tachometer indication with the CONSULT-II value.</li> </ul>	Almost the same speed as the CONSULT-II value.

### On Board Diagnosis Logic

UBS002DC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0335 0335	Crankshaft position sensor (POS) circuit	<ul style="list-style-type: none"> <li>● The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking.</li> <li>● The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running.</li> <li>● The crankshaft position sensor (POS) signal is not in the normal pattern during engine running.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Crankshaft position sensor (POS)</li> <li>● Signal plate</li> </ul>

### DTC Confirmation Procedure

UBS002DD

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

**Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch "ON".**

#### WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to [EC-1492, "Diagnostic Procedure"](#).

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS002DF

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT

1. Disconnect crankshaft position (CKP) sensor (POS) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between CKP sensor (POS) terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between crankshaft position sensor (POS) and ECM
- Harness for open or short between crankshaft position sensor (POS) and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK CKP (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between CKP sensor (POS) terminal 3 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open or short between crankshaft position sensor (POS) and engine ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 62 or 71 and CKP sensor (POS) terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK CRANKSHAFT POSITION SENSOR (POS)**

Refer to [EC-1494, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace crankshaft position sensor (POS).

**8. CHECK GEAR TOOTH**

Visually check for chipping signal plate gear tooth.

OK or NG

OK >> GO TO 9.

NG >> Replace the signal plate.

**9. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection CRANKSHAFT POSITION SENSOR (POS)

UBS002DG

1. Loosen the fixing bolt of the sensor.
2. Disconnect crankshaft position sensor (POS) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

PBIB0563E

## DTC P0340 CMP SENSOR (PHASE)

PFP:23731

### Component Description

UBS002DI

The camshaft position sensor (PHASE) senses the retraction with intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position. When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.

The sensor consists of a permanent magnet and Hall IC.

When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.

The changing gap causes the magnetic field near the sensor to change.

Due to the changing magnetic field, the voltage from the sensor changes.

PBIB0562E

## Diagnostic Procedure

UBS002DM

### 1. CHECK STARTING SYSTEM

Turn ignition switch to "START" position.

**Does the engine turn over?**

**Does the starter motor operate?**

Yes or No

Yes >> GO TO 2.

No >> Check starting system. (Refer to [SC-9, "STARTING SYSTEM"](#) .)

### 2. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 3.

### 3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT

1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch "ON".

3. Check voltage between CMP sensor (PHASE) terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between camshaft position sensor (PHASE) and ECM
- Harness for open or short between camshaft position sensor (PHASE) and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 5. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between CMP sensor (PHASE) terminal 3 and engine ground.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

### 6. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open or short between camshaft position sensor (PHASE) and engine ground

>> Repair open circuit or short to power in harness or connectors.

## 7. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 62 or 71 and CMP sensor (PHASE) terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-1500, "Component Inspection"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace camshaft position sensor (PHASE).

## 9. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 10.

NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

## 10. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection CAMSHAFT POSITION SENSOR (PHASE)

UBS002DN

1. Loosen the fixing bolt of the sensor.
2. Disconnect camshaft position sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

# DTC P0340 CMP SENSOR (PHASE)

[QR25DE]

5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance $\Omega$ [at 25°C (77°F)]
1 (+) - 2 (-)	Except 0 or $\infty$
1 (+) - 3 (-)	
2 (+) - 3 (-)

## DTC P0420 THREE WAY CATALYST FUNCTION

### On Board Diagnosis Logic

The ECM monitors the switching frequency ratio of heated oxygen sensors 1 and 2.

A three way catalyst (Manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.

When the frequency ratio of heated oxygen sensors 1 and 2 approaches a specified limit value, the three way catalyst (Manifold) malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420	Catalyst system efficiency below threshold	<ul style="list-style-type: none"> <li>● Three way catalyst (Manifold) does not operate properly.</li> <li>● Three way catalyst (Manifold) does not have enough oxygen storage capacity.</li> </ul>	<ul style="list-style-type: none"> <li>● Three way catalyst (Manifold)</li> <li>● Exhaust tube</li> <li>● Intake air leaks</li> <li>● Fuel injectors</li> <li>● Fuel injector leaks</li> <li>● Spark plug</li> <li>● Improper ignition timing</li> </ul>

### DTC Confirmation Procedure

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

**TESTING CONDITION:**

- **Do not hold engine speed for more than the specified minutes below.**
1. Start engine and warm it up to the normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  4. Let engine idle for one minute.
  5. Open engine hood.
  6. Select "DTC & SRT CONFIRMATION" then "SRT WORK SUPPORT" mode with CONSULT-II.
  7. Rev engine up to 2,000 to 3,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely.  
If "INCMP" of "CATALYST" changed to "COMPLT", go to step 10.
  8. Wait 5 seconds at idle.

## Overall Function Check

UBS002DR

Use this procedure to check the overall function of the three way catalyst (Manifold). During this check, a DTC might not be confirmed.

### CAUTION:

**Always drive vehicle at a safe speed.**

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 92 [HO2S1 signal] and engine ground, and ECM terminal 95 [HO2S2 signal] and engine ground.
6. Keep engine speed at 2,000 rpm constant under no load.

# DTC P0420 THREE WAY CATALYST FUNCTION

[QR25DE]

7. Make sure that the voltage switching frequency (high & low) between ECM terminal 95 and engine ground is very less than that of ECM terminal 92 and engine ground.

**Switching frequency ratio = A/B**

**A: Heated oxygen sensor 2 voltage switching frequency**

**B: Heated oxygen sensor 1 voltage switching frequency**

**This ratio should be less than 0.75.**

If the ratio is greater than above, it means three way catalyst (manifold) does not operate properly. Go to [EC-1504, "Diagnostic Procedure"](#).

**NOTE:**

If the voltage at terminal 92 does not switch periodically more than 5 times within 10 seconds at step 5, perform trouble diagnosis for "DTC P0133" first. (See [EC-1412](#).)

## Diagnostic Procedure

UBS002DS

### 1. CHECK EXHAUST SYSTEM

Visually check exhaust tubes and muffler for dent.

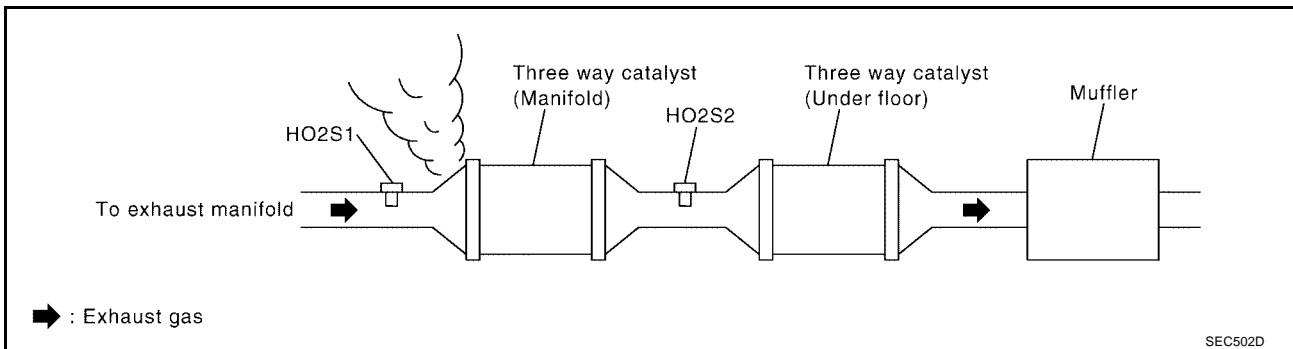

OK or NG

OK >> GO TO 2.

NG >> Repair or replace.

### 2. CHECK EXHAUST AIR LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust air leak before the three way catalyst (Manifold).

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

### 3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 4.

NG >> Repair or replace.

## 4. CHECK IGNITION TIMING

Check the following items. Refer to [EC-1291, "Basic Inspection"](#) .

Items	Specifications	
Ignition timing	A/T	$15^{\circ} \pm 5^{\circ}$ BTDC (in "P" or "N" position)
	M/T	$15^{\circ} \pm 5^{\circ}$ BTDC
Target idle speed	A/T	$700 \pm 50$ rpm (in "P" or "N" position)
	M/T	$700 \pm 50$ rpm

OK or NG

- OK >> GO TO 5.
- NG >> Follow the "Basic Inspection".

## 5. CHECK INJECTORS

1. Stop engine and then turn ignition switch "ON".
2. Check voltage between ECM terminals 101, 102, 103, 104 and ground with CONSULT-II or tester.  
Refer to Wiring Diagram for Injectors, [EC-1797](#) .

**Battery voltage should exist.**

OK or NG

- OK >> GO TO 6.
- NG >> Perform [EC-1798, "Diagnostic Procedure"](#) .

## 6. CHECK IGNITION SPARK

1. Turn ignition switch "OFF".
2. Disconnect ignition coil assembly from rocker cover.
3. Connect a known good spark plug to the ignition coil assembly.
4. Place end of spark plug against a suitable ground and crank engine.
5. Check for spark.

OK or NG

- OK >> GO TO 7.
- NG >> Check ignition coil with power transistor and their circuit.  
Refer to [EC-1777, "IGNITION SIGNAL"](#) .

---

## 7. CHECK INJECTOR

---

1. Turn ignition switch "OFF".
2. Remove injector assembly.  
Refer to [EM-118, "FUEL INJECTOR AND FUEL TUBE"](#) .  
Keep fuel hose and all injectors connected to injector gallery.
3. Disconnect all ignition coil harness connectors.
4. Turn ignition switch "ON".  
Make sure fuel does not drip from injector.

### OK or NG

OK (Does not drip.)>>GO TO 8.

NG (Drips.)>>Replace the injector(s) from which fuel is dripping.

---

## 8. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

Trouble is fixed.>>**INSPECTION END**

Trouble is not fixed.>>Replace three way catalyst (Manifold).

DTC P0441 EVAP CONTROL SYSTEM

PF:14950

System Description

UBS002DT

NOTE:

If DTC P0441 is displayed with P2122, P2123, P2127, P2128 or P2138, perform trouble diagnosis for displayed other DTC.

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

UBS002DU

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a fault is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0441 0441	EVAP control system incorrect purge flow	EVAP control system does not operate properly, EVAP control system has a leak between intake manifold and EVAP control system pressure sensor.	<ul style="list-style-type: none"> <li>● EVAP canister purge volume control solenoid valve stuck closed</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Loose, disconnected or improper connection of rubber tube</li> <li>● Blocked rubber tube</li> <li>● Cracked EVAP canister</li> <li>● EVAP canister purge volume control solenoid valve circuit</li> <li>● Accelerator pedal position sensor</li> <li>● Blocked purge port</li> <li>● EVAP canister vent control valve</li> </ul>

DTC Confirmation Procedure

UBS002DV

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform test at a temperature of 0°C (32°F) or more.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and let it idle for at least 70 seconds.
4. Select "PURG FLOW P0441" of "EVAPORATIVE SYSTEM" in "DTC CONFIRMATION" mode with CONSULT-II.

5. Touch "START".  
If "COMPLETED" is displayed, go to step 7.
6. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take at least 35 seconds.)

Selector lever	Suitable position
Vehicle speed	32 - 120 km/h (20 - 75 MPH)
ENG SPEED	500 - 3,800 rpm
B/FUEL SCHDL	1.0 - 10.0 msec
Engine coolant temperature	70 - 100°C (158 - 212°F)

**If "TESTING" is not changed for a long time, retry from step 2.**

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-1509, "Diagnostic Procedure"](#).

## Overall Function Check

*UBS002DW*

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a DTC might not be confirmed.

### WITH GST

1. Lift up drive wheels.
2. Start engine (TCS switch "OFF") and warm it up to normal operating temperature.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Start engine and wait at least 70 seconds.
5. Set voltmeter probes to ECM terminals 88 (EVAP control system pressure sensor signal) and ground.
6. Check EVAP control system pressure sensor value at idle speed and note it.
7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Gear position	Any position other than "P", "N" or "R"

8. Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (measured at step 6) for at least 1 second.
9. If NG, go to [EC-1509, "Diagnostic Procedure"](#).

**Diagnostic Procedure**

**1. CHECK EVAP CANISTER**

1. Turn ignition switch "OFF".
2. Check EVAP canister for cracks.

**OK or NG**

- OK (With CONSULT-II)>>GO TO 2.
- OK (Without CONSULT-II)>>GO TO 3.
- NG >> Replace EVAP canister.

**2. CHECK PURGE FLOW**

**Ⓜ With CONSULT-II**

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
2. Start engine and let it idle.

3. Select "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II.
4. Rev engine up to 2,000 rpm.
5. Touch "Qd" and "Qu" on CONSULT-II screen to adjust "PURG VOL CONT/V" opening and check vacuum existence.

PURG VOL CONT/V	Vacuum
100.0%	Should exist.
0.0%	Should not exist.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**OK or NG**

- OK >> GO TO 7.
- NG >> GO TO 4.

A  
EC  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

### 3. CHECK PURGE FLOW

**Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum gauge indication when revving engine up to 2,000 rpm.

**Vacuum should exist.**

6. Release the accelerator pedal fully and let idle.

**Vacuum should not exist.**

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 4.

### 4. CHECK EVAP PURGE LINE

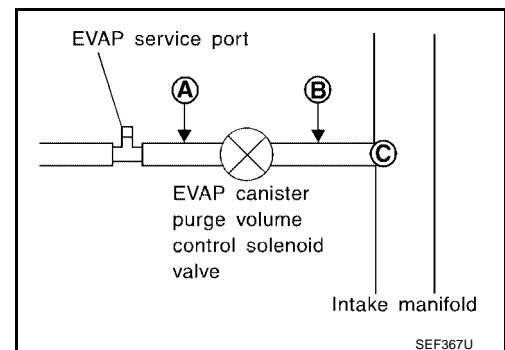

1. Turn ignition switch "OFF".
2. Check EVAP purge line for improper connection or disconnection. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK (With CONSULT-II)>>GO TO 5.
- OK (Without CONSULT-II)>>GO TO 6.
- NG >> Repair it.

### 5. CHECK EVAP PURGE HOSE AND PURGE PORT

1. Disconnect purge hoses connected to EVAP service port **A** and EVAP canister purge volume control solenoid valve **B**.
2. Blow air into each hose and EVAP purge port **C**.

3. Check that air flows freely.

OK or NG

- OK >> GO TO 6.
- NG >> Repair or clean hoses and/or purge port.

**6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE****Ⓟ With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace EVAP canister purge volume control solenoid valve.

**8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR HOSE**

1. Turn ignition switch "OFF".
2. Check disconnection or improper connection of hose connected to EVAP control system pressure sensor.

OK or NG

- OK >> GO TO 9.  
NG >> Repair it.

**9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR**

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 10.  
NG >> Replace EVAP control system pressure sensor.

**10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR FUNCTION**

Refer to "DTC Confirmation Procedure" for DTC P0452 ([EC-1534](#)) and P0453 ([EC-1540](#)) .

OK or NG

- OK >> GO TO 11.  
NG >> Replace EVAP control system pressure sensor.

**11. CHECK RUBBER TUBE FOR CLOGGING**

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 12.  
NG >> Clean the rubber tube using an air blower.

---

## 12. CHECK EVAP CANISTER VENT CONTROL VALVE

---

Refer to [EC-1532, "Component Inspection"](#) .

OK or NG

OK >> GO TO 13.

NG >> Replace EVAP canister vent control valve.

---

## 13. CHECK EVAP PURGE LINE

---

Inspect EVAP purge line (pipe and rubber tube). Check for evidence of leaks.

Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

OK >> GO TO 14.

NG >> Replace it.

---

## 14. CLEAN EVAP PURGE LINE

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 15.

---

## 15. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

DTC P0442 EVAP CONTROL SYSTEM

On Board Diagnosis Logic

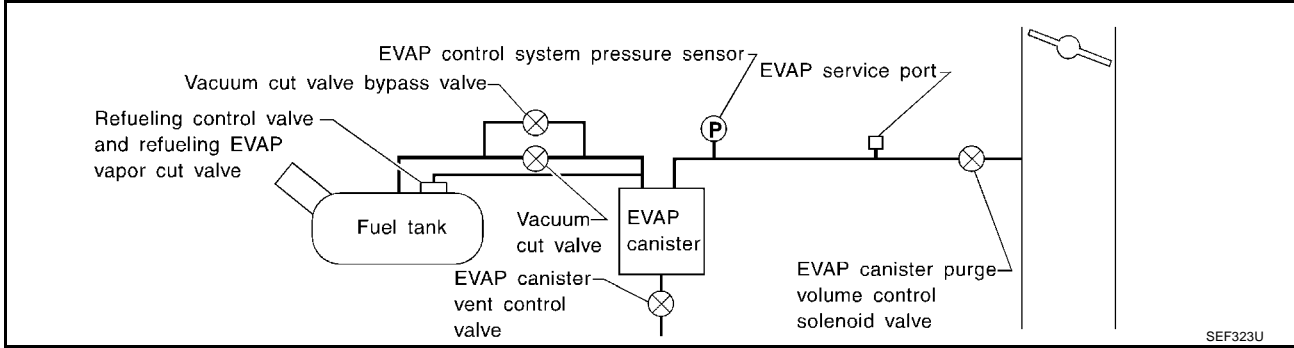

NOTE:

If DTC P0442 is displayed with P1448, perform trouble diagnosis for DTC P1448 first. (See EC-1687.)

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum.

If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following "Vacuum test" conditions.

The vacuum cut valve bypass valve is opened to clear the line between the fuel tank and the EVAP canister purge volume control solenoid valve. The EVAP canister vent control valve will then be closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve is opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0442 0442	EVAP control system small leak detected (negative pressure)	EVAP control system has a leak, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Blocked or bent rubber tube to EVAP control system pressure sensor</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Fuel level sensor and the circuit</li> <li>● Refueling control valve</li> <li>● ORVR system leaks</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS002DZ

**NOTE:**

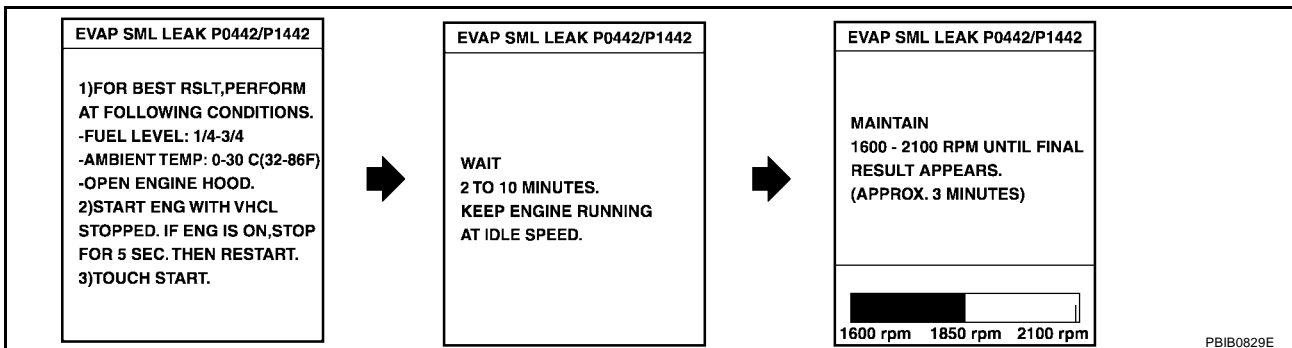

- If DTC P0442 is displayed with P1448, perform trouble diagnosis for DTC P1448 first. (See [EC-1687](#).)
- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Perform “DTC WORK SUPPORT” when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Always perform test at a temperature of 0 to 30°C (32 to 86°F).

**WITH CONSULT-II**

1. Turn ignition switch “ON”.
2. Turn ignition switch “OFF” and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “DATA MONITOR” mode with CONSULT-II.
4. Make sure that the following conditions are met.  
**COOLAN TEMP/S: 0 - 70°C (32 - 158°F)**  
**INT/A TEMP SE: 0 - 30°C (32 - 86°F)**
5. Select “EVAP SML LEAK P0442/P1442” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-II.  
 Follow the instruction displayed.

**NOTE:**

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-1291, "Basic Inspection"](#).

6. Make sure that “OK” is displayed.  
 If “NG” is displayed, refer to [EC-1515, "Diagnostic Procedure"](#).

**NOTE:**

**Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.**

**WITH GST**

**NOTE:**

Be sure to read the explanation of “Driving Pattern” on [EC-1270](#) before driving vehicle.

1. Start engine.

2. Drive vehicle according to "Driving Pattern", [EC-1270](#) .
3. Stop vehicle.
4. Select "MODE 1" with GST.  
If SRT of EVAP system is not set yet, go to the following step.  
If SRT of EVAP system is set, the result will be OK.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Start engine.  
**It is not necessary to cool engine down before driving.**
7. Drive vehicle again according to the "Driving Pattern", [EC-1270](#) .
8. Stop vehicle.
9. Select "MODE 3" with GST.  
If P0442 is displayed on the screen, go to [EC-1515, "Diagnostic Procedure"](#) .  
If P0441 is displayed on the screen, go to "Diagnostic Procedure" for DTC P0441, [EC-1509](#) .  
If P0441 and P0442 are not displayed on the screen, go to the following step.
10. Select "MODE 1" with GST.  
If SRT of EVAP system is set, the result will be OK.  
If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

UBS002E0

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.  
NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK >> GO TO 3.  
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-1849, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FULLER CAP\)"](#) .

OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel filler cap with a genuine one.

## 5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II >> GO TO 6.  
 Models without CONSULT-II >> GO TO 7.

## 6. CHECK FOR EVAP LEAK

**Ⓟ With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.  
 NG >> Repair or replace.

**7. CHECK FOR EVAP LEAK**

**⊗ Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Apply 12 volts DC to vacuum cut valve bypass valve. The valve will open. (Continue to apply 12V until the end of test.)

4. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in the system.

5. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

**8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT**

Refer to [EC-1687, "DTC Confirmation Procedure"](#).

**OK or NG**

- OK >> GO TO 9.
- NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

**9. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Does water drain from the EVAP canister?

**Yes or No**

- Yes >> GO TO 10.
- No (With CONSULT-II)>>GO TO 12.
- No (Without CONSULT-II)>>GO TO 13.

## 10. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

## 13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 14.

## 14. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#) .

OK or NG

- OK >> GO TO 15.
- NG >> Repair or reconnect the hose.

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

OK >> GO TO 16.

NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-1456, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace fuel level sensor unit.

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

**18. CHECK EVAP PURGE LINE**

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection.

Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

OK >> GO TO 19.

NG >> Repair or reconnect the hose.

**19. CLEAN EVAP PURGE LINE**

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

**20. CHECK REFUELING EVAP VAPOR LINE**

Check refueling EVAP vapor line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1852, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 21.

NG >> Repair or replace hoses and tubes.

**21. CHECK SIGNAL LINE AND RECIRCULATION LINE**

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses, tubes or filler neck tube.

**22. CHECK REFUELING CONTROL VALVE**

Refer to [EC-1855, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling control valve with fuel tank.

---

**23. CHECK FUEL LEVEL SENSOR**

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

---

**24. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[QR25DE]

## DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PF1:14920

### Description SYSTEM DESCRIPTION

UBS002E2

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Ignition switch	Start signal		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Closed throttle position		
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Vehicle speed sensor	Vehicle speed		

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002E3

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION

## DTC Confirmation Procedure

UBS002E5

### NOTE:

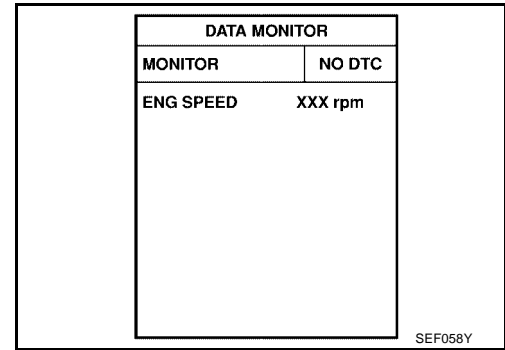

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

**Before performing the following procedure, confirm battery voltage is more than 11V at idle.**

### Ⓟ WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for at least 13 seconds.
4. If 1st trip DTC is detected, go to [EC-1524, "Diagnostic Procedure"](#).

### Ⓢ WITH GST

Follow the procedure "WITH CONSULT-II" above.

## 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- Fuse block (J/B) connector E103
- 10A fuse
- Harness for open or short between EVAP canister purge volume control solenoid valve and fuse

>> Repair harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 13 and EVAP canister purge volume control solenoid valve terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-II)>>GO TO 4.

OK (Without CONSULT-II)>>GO TO 5.

NG >> Repair open circuit or short to ground and short to power in harness or connectors.

## 4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

**Ⓜ With CONSULT-II**

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

UBS002E9

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

## DTC P0447 EVAP CANISTER VENT CONTROL VALVE

PFP:14935

### Component Description

UBS002EA

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System (Small Leak)" diagnosis.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002EB

## 3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect EVAP canister vent control valve harness connector.

3. Turn ignition switch "ON".
4. Check voltage between EVAP canister vent control valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M14, B1
- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between EVAP canister vent control valve and fuse

>> Repair harness or connectors.

## 5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 11 and EVAP canister vent control valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B3, M16
- Harness connectors M59, F27
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 8.  
 NG >> Clean the rubber tube using an air blower.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-1532, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.  
 NG >> Replace EVAP canister vent control valve.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS002EG

Ⓟ With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
6. Check air passage continuity and operation delay time.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
ON	No
OFF	Yes

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

[QR25DE]

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform inspection again.

⊗ **Without CONSULT-II**

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

3. Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
12V direct current supply between terminals 1 and 2	No
OFF	Yes

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform inspection again.

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[QR25DE]

## DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

PF2:25085

### Component Description

UBS002EH

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases. The EVAP control system pressure sensor is not used to control the engine system. It is used only for on board diagnosis.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002EI

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	1.8 - 4.8V

### On Board Diagnosis Logic

UBS002EJ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0452 0452	EVAP control system pressure sensor low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● EVAP control system pressure sensor</li> </ul>

### DTC Confirmation Procedure

UBS002EK

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Always perform test at a temperature of 5°C (41°F) or more.

#### WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".

# DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR

[QR25DE]

4. Select "DATA MONITOR" mode with CONSULT-II.
5. Make sure that "FUEL T/TEMP SE" is more than 0°C (32°F).
6. Start engine and wait at least 20 seconds.  
If 1st trip DTC is detected, go to [EC-1537, "Diagnostic Procedure"](#).

88	B/R	EVAP control system pressure sensor	[Ignition switch "ON"]	1.8 - 4.8V

## Diagnostic Procedure

UBS002EM

### 1. RETIGHTEN GROUND SCREWS

Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check sensor harness connector for water.

**Water should not exist.**

OK or NG

OK >> GO TO 3.

NG >> Repair or replace harness connector.

## 3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "ON".
2. Check voltage between EVAP control system pressure sensor terminal 1 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Joint connector-1
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair harness or connectors.

## 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between EVAP control system pressure sensor terminal 3 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Joint connector-2
- Harness for open or short between EVAP control system pressure sensor and ECM
- Harness for open or short between EVAP control system pressure sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 88 and EVAP control system pressure sensor terminal 2.  
Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between ECM and EVAP control system pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace EVAP control system pressure sensor.

## 10. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CONTROL SYSTEM PRESSURE SENSOR

UBS002EN

1. Remove EVAP control system pressure sensor with its harness connector connected.
2. Remove hose from EVAP control system pressure sensor.
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch "ON" and check output voltage between ECM terminal 88 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

**CAUTION:**

- Always calibrate the vacuum pump gauge when using it.
- Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or over pressure 101.3 kPa (760 mmHg, 29.92 inHg) of pressure.

5. If NG, replace EVAP control system pressure sensor.

# DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

[QR25DE]

## DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR

PF:P:25085

### Component Description

UBS002EO

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases. The EVAP control system pressure sensor is not used to control the engine system. It is used only for on board diagnosis.

---

Check obstructed rubber tube connected to EVAP canister vent control valve.

OK or NG

- OK >> GO TO 13.  
NG >> Clean rubber tube using an air blower, repair or replace rubber tube.

**13. CHECK IF EVAP CANISTER SATURATED WITH WATER**

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

Yes or No

- Yes >> GO TO 14.
- No >> GO TO 16.

**14. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 15.

**15. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

**16. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
EVAP CONTROL SYSTEM PRESSURE SENSOR**

UBS002EU

1. Remove EVAP control system pressure sensor with its harness connector connected.
2. Remove hose from EVAP control system pressure sensor.
3. Install a vacuum pump to EVAP control system pressure sensor.
4. Turn ignition switch "ON" and check output voltage between ECM terminal 88 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200 mmHg, -7.87)	2.1 to 2.5V lower than above value

**CAUTION:**

- Always calibrate the vacuum pump gauge when using it.
- Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg) of pressure.

5. If NG, replace EVAP control system pressure sensor.

## DTC P0455 EVAP CONTROL SYSTEM

PFP:14950

### On Board Diagnosis Logic

UBS002EV

**NOTE:**

**If DTC P0455 is displayed with P1448, perform trouble diagnosis for DTC P1448 first. (EC-1687.)**

This diagnosis detects a very large leak (fuel filler cap fell off etc.) in EVAP system between the fuel tank and EVAP canister purge volume control solenoid valve.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0455 0455	EVAP control system gross leak detected	EVAP control system has a very large leak such as fuel filler cap fell off, EVAP control system does not operate properly.	<ul style="list-style-type: none"> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent.</li> <li>● Blocked or bent rubber tube to EVAP control system pressure sensor</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged.</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling control valve</li> <li>● ORVR system leaks</li> </ul>

**CAUTION:**

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

### DTC Confirmation Procedure

UBS002EW

**CAUTION:**

**Never remove fuel filler cap during the DTC Confirmation Procedure.**

**NOTE:**

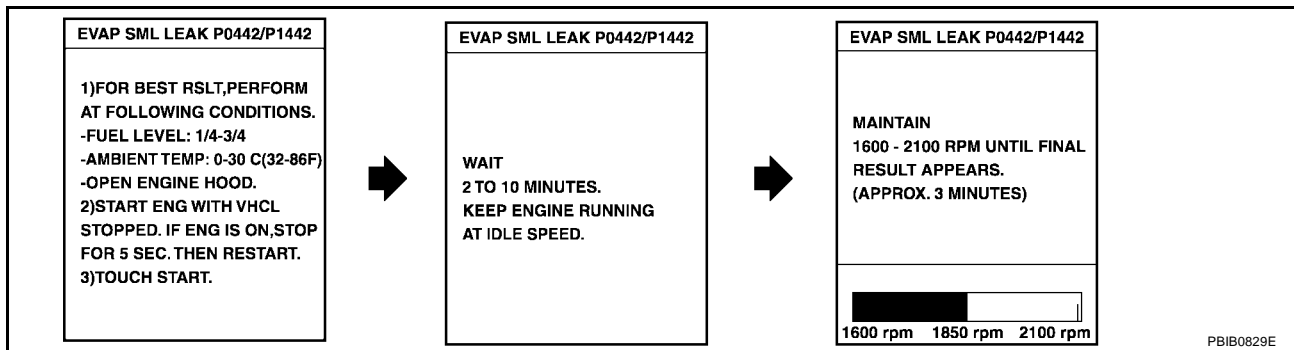

- If DTC P0455 is displayed with P1448, perform trouble diagnosis for DTC P1448 first. ([EC-1687](#) .)
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.
- If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Perform “DTC WORK SUPPORT” when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Open engine hood before conducting the following procedures.

**WITH CONSULT-II**

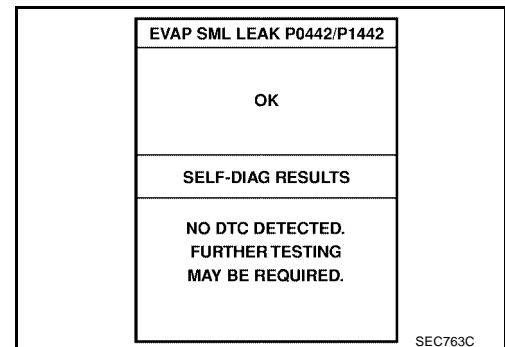

1. Tighten fuel filler cap securely until ratcheting sound is heard.
2. Turn ignition switch “ON”.
3. Turn ignition switch “OFF” and wait at least 10 seconds.
4. Turn ignition switch “ON” and select “DATA MONITOR” mode with CONSULT-II.
5. Make sure that the following conditions are met.  
**COOLAN TEMP/S: 0 - 70°C (32 - 158°F)**  
**INT/A TEMP SE: 0 - 60°C (32 - 140°F)**
6. Select “EVAP SML LEAK P0442/P1442” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-II.  
 Follow the instruction displayed.

**NOTE:**

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-1291, "Basic Inspection"](#) .

7. Make sure that “OK” is displayed.  
 If “NG” is displayed, select “SELF-DIAG RESULTS” mode and make sure that “EVAP GROSS LEAK [P0455]” is displayed. If it is displayed, refer to [EC-1549, "Diagnostic Procedure"](#) .  
 If P0442 is displayed, perform “Diagnostic Procedure” for DTC P0442, [EC-1515](#) .

**WITH GST**

**NOTE:**

Be sure to read the explanation of “Driving Pattern” on [EC-1270](#) before driving vehicle.

1. Start engine.
2. Drive vehicle according to “Driving Pattern”, [EC-1270](#) .
3. Stop vehicle.
4. Select “MODE 1” with GST.
  - If SRT of EVAP system is not set yet, go to the following step.

- If SRT of EVAP system is set, the result will be OK.
- 5. Turn ignition switch "OFF" and wait at least 10 seconds.
- 6. Start engine.  
**It is not necessary to cool engine down before driving.**
- 7. Drive vehicle again according to the "Driving Pattern", [EC-1270](#) .
- 8. Stop vehicle.
- 9. Select "MODE 3" with GST.
  - If P0455 is displayed on the screen, go to [EC-1549, "Diagnostic Procedure"](#) .
  - If P0442 is displayed on the screen, go to "Diagnostic Procedure", for DTC P0442, [EC-1515](#) .
  - If P0441 is displayed on the screen, go to "Diagnostic Procedure" for DTC P0441, [EC-1509](#) .
  - If P0455, P0441 and P0442 are not displayed on the screen, go to the following step.
- 10. Select "MODE 1" with GST.
  - If SRT of EVAP system is set, the result will be OK.
  - If SRT of EVAP system is not set, go to step 6.

## Diagnostic Procedure

UBS002EX

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.
- NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK >> GO TO 3.
- NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-1849, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FULLER CAP\)"](#) .

OK or NG

- OK >> GO TO 5.
- NG >> Replace fuel filler cap with a genuine one.

## 5. CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks, improper connection or disconnection.

Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

OK >> GO TO 6.

NG >> Repair or reconnect the hose.

## 6. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 7.

## 7. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT

Refer to [EC-1687, "DTC Confirmation Procedure"](#).

OK or NG

OK >> GO TO 8.

NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

## 8. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II >> GO TO 9.

Models without CONSULT-II >> GO TO 10.

## 9. CHECK FOR EVAP LEAK

### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

#### NOTE:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

#### OK or NG

- OK >> GO TO 11.  
 NG >> Repair or replace.

A  
 EC  
 C  
 D  
 E  
 F  
 G  
 H  
 I  
 J  
 K  
 L  
 M

10. CHECK FOR EVAP LEAK

⊗ Without CONSULT-II

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Apply 12 volts DC to vacuum cut valve bypass valve. The valve will open. (Continue to apply 12V until the end of test.)

4. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in the system.

5. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK >> GO TO 12.  
 NG >> Repair or replace.

11. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

Ⓟ With CONSULT-II

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

OK or NG

- OK >> GO TO 14.  
 NG >> GO TO 13.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0628E

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**⊗ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 13.

**13. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#) .

OK or NG

- OK (With CONSULT-II)>>GO TO 14.
- OK (Without CONSULT-II)>>GO TO 15.
- NG >> Repair or reconnect the hose.

**14. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

**Ⓜ With CONSULT-II**

1. Start engine.
2. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 15.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 16.
- NG >> Replace EVAP canister purge volume control solenoid valve.

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

Refer to [EC-1456, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 17.
- NG >> Replace fuel level sensor unit.

---

## 17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

---

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace EVAP control system pressure sensor.

---

## 18. CHECK REFUELING EVAP VAPOR LINE

---

Check refueling EVAP vapor line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1852, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

- OK >> GO TO 19.
- NG >> Repair or replace hoses and tubes.

---

## 19. CHECK SIGNAL LINE AND RECIRCULATION LINE

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

- OK >> GO TO 20.
- NG >> Repair or replace hoses, tubes or filler neck tube.

---

## 20. CHECK REFUELING CONTROL VALVE

---

Refer to [EC-1855, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 21.
- NG >> Replace refueling control valve with fuel tank.

---

## 21. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**DTC P0456 EVAP CONTROL SYSTEM**

PF0:14950

**On Board Diagnosis Logic**

UBS002EY

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum. If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following "Vacuum test" conditions.

The vacuum cut valve bypass valve is opened to clear the line between the fuel tank and the EVAP canister purge volume control solenoid valve. The EVAP canister vent control valve will then be closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve is opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected.

If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected.

If ECM judges there are no leaks, the diagnosis will be OK.

PBIB0838E

# DTC P0456 EVAP CONTROL SYSTEM

[QR25DE]

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0456 0456	Evaporative emission control system very small leak (negative pressure check)	<ul style="list-style-type: none"> <li>● EVAP system has a very small leak.</li> <li>● EVAP system does not operate properly.</li> </ul>	<ul style="list-style-type: none"> <li>● Incorrect fuel tank vacuum relief valve</li> <li>● Incorrect fuel filler cap used</li> <li>● Fuel filler cap remains open or fails to close.</li> <li>● Foreign matter caught in fuel filler cap.</li> <li>● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve.</li> <li>● Foreign matter caught in EVAP canister vent control valve.</li> <li>● EVAP canister or fuel tank leaks</li> <li>● EVAP purge line (pipe and rubber tube) leaks</li> <li>● EVAP purge line rubber tube bent</li> <li>● Blocked or bent rubber tube to EVAP control system pressure sensor</li> <li>● Loose or disconnected rubber tube</li> <li>● EVAP canister vent control valve and the circuit</li> <li>● EVAP canister purge volume control solenoid valve and the circuit</li> <li>● Fuel tank temperature sensor</li> <li>● O-ring of EVAP canister vent control valve is missing or damaged</li> <li>● EVAP canister is saturated with water</li> <li>● EVAP control system pressure sensor</li> <li>● Refueling control valve</li> <li>● ORVR system leaks</li> <li>● Fuel level sensor and the circuit</li> <li>● Foreign matter caught in EVAP canister purge volume control solenoid valve</li> </ul>

## CAUTION:

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS002EZ

### NOTE:

- If DTC P0456 is displayed with P0442, first perform TROUBLE DIAGNOSIS FOR DTC P0456.
- After repair, make sure that the hoses and clips are installed properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

- Open engine hood before conducting following procedure.
- If any of following conditions are met just before the DTC confirmation procedure, leave the vehicle for more than 1 hour.
  - Fuel filler cap is removed.
  - Refilled or drained the fuel.
  - EVAP component parts is/are removed.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

### Ⓟ WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Make sure the following conditions are met.  
**FUEL LEVEL SE: 0.25 - 1.15V**

**COOLAN TEMP/S: 0 - 32°C (32 - 90°F)**

**FUEL T/TMP SE: 0 - 35°C (32 - 95°F)**

**INT A/TEMP SE: More than 0°C (32°F)**

If NG, turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle) or refilling/draining fuel until the output voltage condition of the "FUEL LEVEL SE" meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).

3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Select "EVAP V/S LEAK P0456/P1456" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
Follow the instruction displayed.

6. Make sure that "OK" is displayed.  
If "NG" is displayed, refer to [EC-1558, "Diagnostic Procedure"](#).

**NOTE:**

- If the engine speed cannot be maintained within the range displayed on CONSULT-II screen, go to [EC-1291, "Basic Inspection"](#).
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

## Overall Function Check

UBS002F0

### WITH GST

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a DTC might not be confirmed.

**CAUTION:**

- Never use compressed air, doing so may damage the EVAP system.
- Do not start engine.
- Do not exceeded 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi).

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Set the pressure pump and a hose.
3. Also set a vacuum gauge via 3-way connector and a hose.
4. Turn ignition switch "ON".
5. Connect GST and select MODE 8.
6. Using MODE 8 control the EVAP canister vent control valve (close) and vacuum cut valve bypass valve (open).
7. Apply pressure and make sure the following conditions are satisfied.

**Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg)**

**Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg).**

If NG, go to [EC-1558, "Diagnostic Procedure"](#).

If OK, go to next step.

8. Disconnect GST.
9. Start engine and warm it up to normal operating temperature.

10. Turn ignition switch "OFF" and wait at least 10 seconds.
11. Restart engine and let it idle for 90 seconds.
12. Keep engine speed at 2,000 rpm for 30 seconds.
13. Turn ignition switch "OFF".

**NOTE:**

For more information, refer to GST instruction manual.

## Diagnostic Procedure

UBS002F1

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.  
NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK >> GO TO 3.  
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-1849, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel filler cap with a genuine one.

**5. INSTALL THE PRESSURE PUMP**

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II>>GO TO 6.  
Models without CONSULT-II>>GO TO 7.

**6. CHECK FOR EVAP LEAK**

**Ⓜ With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

## 7. CHECK FOR EVAP LEAK

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Apply 12 volts DC to vacuum cut valve bypass valve. The valve will open. (Continue to apply 12V until the end of test.)

4. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in the system.

5. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.  
 NG >> Repair or replace.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT

Refer to [EC-1693, "Component Inspection"](#).

**OK or NG**

- OK >> GO TO 9.  
 NG >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

## 9. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Does water drain from the EVAP canister?

**Yes or No**

- Yes >> GO TO 10.  
 No (With CONSULT-II)>>GO TO 12.  
 No (Without CONSULT-II)>>GO TO 13.

**10. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**Ⓜ With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

- NG >> GO TO 14.

**13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**Ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 14.

**14. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#) .

OK or NG

- OK >> GO TO 15.
- NG >> Repair or reconnect the hose.

---

## 15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

---

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

OK >> GO TO 16.

NG >> Replace EVAP canister purge volume control solenoid valve.

---

## 16. CHECK FUEL TANK TEMPERATURE SENSOR

---

Refer to [EC-1456, "FUEL TANK TEMPERATURE SENSOR"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace fuel level sensor unit.

---

## 17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

---

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

---

## 18. CHECK EVAP PURGE LINE

---

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection.

Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

OK >> GO TO 19.

NG >> Repair or reconnect the hose.

---

## 19. CLEAN EVAP PURGE LINE

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

---

## 20. CHECK REFUELING EVAP VAPOR LINE

---

Check refueling EVAP vapor line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1852, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 21.

NG >> Repair or replace hoses and tubes.

---

## 21. CHECK SIGNAL LINE AND RECIRCULATION LINE

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses, tubes or filler neck tube.

---

## 22. CHECK REFUELING CONTROL VALVE

---

Refer to [EC-1855, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling control valve with fuel tank.

---

**23. CHECK FUEL LEVEL SENSOR**

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

---

**24. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

**DTC P0460 FUEL LEVEL SENSOR**

**Component Description**

UBS002F3

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the ECM.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

**On Board Diagnosis Logic**

UBS002F4

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0460 0460	Fuel level sensor circuit noise	Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

**DTC Confirmation Procedure**

UBS002F5

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and wait maximum of 2 consecutive minutes.
4. If 1st trip DTC is detected, go to [EC-1566, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
FUEL T/TMP SE	XXX °C
FUEL LEVEL SE	XXX V

BBWA0227E

# DTC P0460 FUEL LEVEL SENSOR

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
77	B/W	Fuel level sensor ground	[Engine is running] ● Idle speed	Approximately 0V
87	G/R	Fuel level sensor	[Ignition switch "ON"]	Approximately 0 - 4.8V Output voltage varies with fuel level.

## Diagnostic Procedure

UBS002F7

### 1. CHECK FUEL LEVEL SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Turn ignition switch "ON".

4. Check voltage between fuel level sensor unit and fuel pump terminal 2 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M16, B3
- Harness for open or short between combination meter and fuel level sensor until and fuel pump

>> Repair open circuit or short to ground or short to power in harness or connectors.

**3. CHECK FUEL LEVEL SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Check harness continuity between fuel level sensor unit and fuel pump terminal 5 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

**4. DETECT MALFUNCTIONING PART**

Check the following.

- Harness for open or short between fuel level sensor unit and fuel pump and body ground

>> Repair open circuit or short to power in harness or connectors.

**5. CHECK FUEL LEVEL SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 87 and fuel level sensor unit and fuel pump terminal 2, ECM terminal 77 and fuel level sensor unit and fuel pump terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 7.  
NG >> GO TO 6.

**6. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M16, B3
- Harness connectors M58, F26
- Harness connectors M59, F27
- Harness for open or short between ECM and fuel level sensor unit and fuel pump

>> Repair open circuit or short to ground or short to power in harness or connectors.

**7. CHECK FUEL LEVEL SENSOR**

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace fuel level sensor unit.

**8. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## DTC P0460 FUEL LEVEL SENSOR

[QR25DE]

---

### Remove and Installation FUEL LEVEL SENSOR

UBS002F8

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

**DTC P0461 FUEL LEVEL SENSOR**

**Component Description**

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the ECM.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

**On Board Diagnosis Logic**

Driving long distances naturally affect fuel gauge level.

This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long distance.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>

**Overall Function Check**

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

**WARNING:**

When performing following procedure, be sure to observe the handling of the fuel. Refer to [FL-7, "FUEL TANK"](#).

**TESTING CONDITION:**

Before starting overall function check, preparation of draining fuel and refilling fuel is required.

**WITH CONSULT-II**

**NOTE:**

Start from step 11, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-1257, "FUEL PRESSURE RELEASE"](#).
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch "OFF" and wait at least 10 seconds then turn "ON".
6. Select "FUEL LEVEL SE" in "DATA MONITOR" mode with CONSULT-II.
7. Check "FUEL LEVEL SE" output voltage and note it.
8. Select "FUEL PUMP" in "ACTIVE TEST" mode with CONSULT-II.
9. Touch "ON" and drain fuel approximately 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) and stop it.
10. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
11. Check "FUEL LEVEL SE" output voltage and note it.
12. Check "FUEL LEVEL SE" output voltage and confirm whether the voltage changes more than 0.03V during step 7 to 11.  
If NG, check the fuel level sensor, refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#).

DATA MONITOR	
MONITOR	NO DTC
FUEL T/TMP SE	XXX °C
FUEL LEVEL SE	XXX V

SEF195Y

 WITH GST
**NOTE:**

Start from step 11, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch "OFF".
6. Set voltmeters probe between ECM terminal 87 (fuel level sensor signal) and ground.
7. Turn ignition switch "ON".
8. Check voltage between ECM terminal 87 and ground and note it.
9. Drain fuel by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) from the fuel tank using proper equipment.
10. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
11. Confirm that the voltage between ECM terminal 87 and ground changes more than 0.03V during step 8 - 10.

If NG, check component of fuel level sensor, refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

## DTC P0462, P0463 FUEL LEVEL SENSOR

### Component Description

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the ECM.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

### On Board Diagnosis Logic

ECM receives two signals from the fuel level sensor circuit.

One is fuel level sensor power supply circuit, and the other is fuel level sensor ground circuit.

This diagnosis indicates the former, to detect open or short circuit malfunction.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0462 0462	Fuel level sensor circuit low input	An excessively low voltage is sent from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel level sensor</li> </ul>
P0463 0463	Fuel level sensor circuit high input	An excessively high voltage is sent from the sensor is sent to ECM.	

### DTC Confirmation Procedure

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 11V at ignition switch "ON".

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-1573, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC

FUEL LEVEL SENSOR**

UBS002FH

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

## DTC P0500 VSS

### Description

The vehicle speed sensor is installed in the transaxle. It contains a pulse generator which provides a vehicle speed signal to the combination meter. The combination meter then sends a signal to the ECM.

### On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	<ul style="list-style-type: none"> <li>● Harness or connectors (The vehicle speed sensor circuit is open or shorted)</li> <li>● Vehicle speed sensor</li> <li>● Combination meter</li> </ul>

### DTC Confirmation Procedure

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Steps 1 and 2 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

**WITH CONSULT-II**

1. Start engine.
2. Read "VHCL SPEED SE" in "DATA MONITOR" mode with CONSULT-II. The vehicle speed on CONSULT-II should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.  
If NG, go to [EC-1577, "Diagnostic Procedure"](#).  
If OK, go to following step.
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Warm engine up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	1,200 - 6,000 rpm
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	6.0 - 31.8 msec
Selector lever	Suitable position
PW/ST SIGNAL	OFF

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
B/FUEL SCHDL	XXX msec
PW/ST SIGNAL	OFF
VHCL SPEED SE	XXX km/h

SEF196Y

6. If 1st trip DTC is detected, go to [EC-1577, "Diagnostic Procedure"](#).

### Overall Function Check

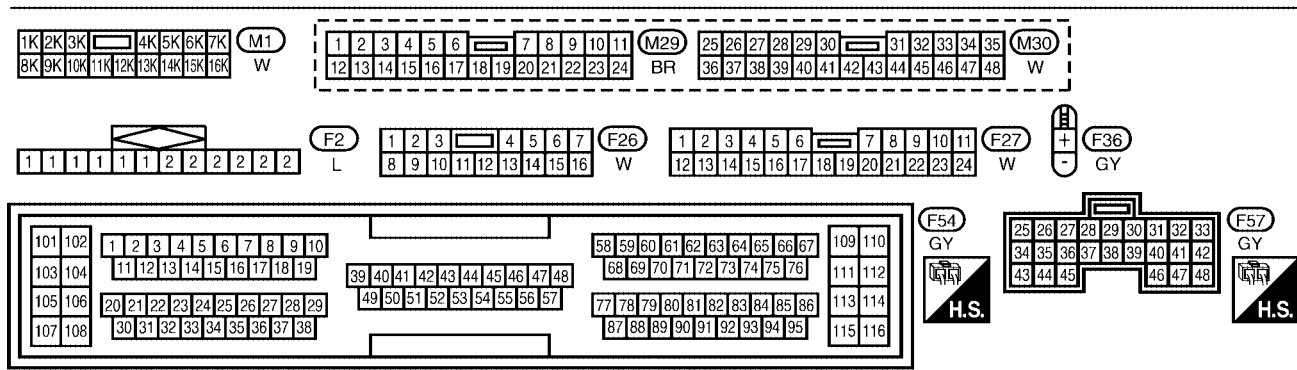

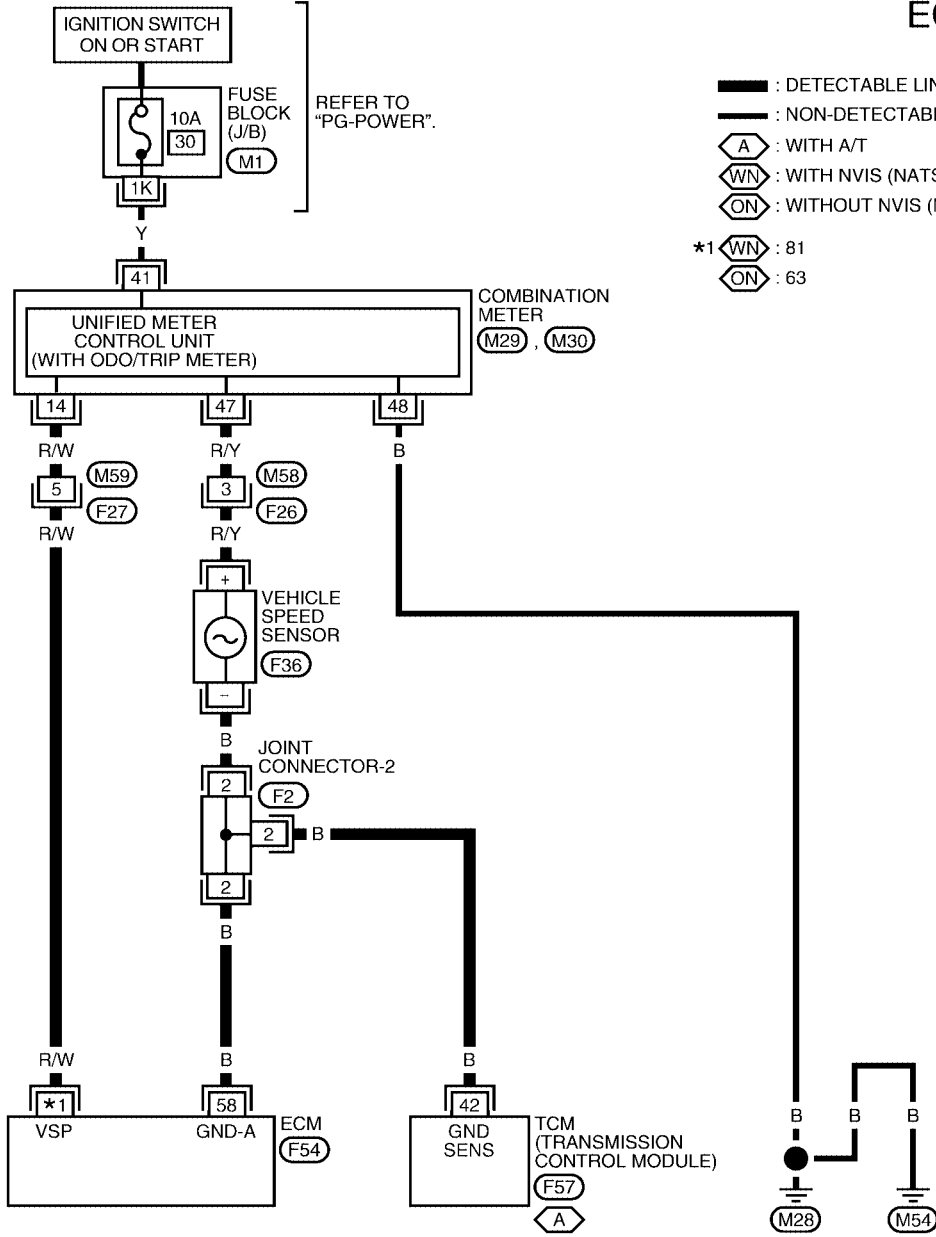

Use this procedure to check the overall function of the vehicle speed sensor circuit. During this check, a 1st trip DTC might not be confirmed.

**WITH GST**

1. Lift up drive wheels.
2. Start engine.
3. Read vehicle speed sensor signal in "MODE 1" with GST.  
The vehicle speed sensor on GST should be able to exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
4. If NG, go to [EC-1577, "Diagnostic Procedure"](#).

Wiring Diagram

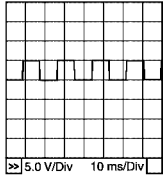

EC-VSS-01

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
63 (With- out NVIS)	R/W	Vehicle speed sensor	<b>[Engine is running]</b> ● Lift up the vehicle ● Vehicle speed is 40 km/h (25MPH)	Approximately 2.3V★ 
81 With (NVIS)				PBIB0531E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

**Diagnostic Procedure**

UBS002FN

**1. CHECK INPUT SIGNAL CIRCUIT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector and combination meter harness connector.
3. Check harness continuity between ECM terminal 81 (Models with NVIS) or 63 (Models without NVIS) and combination meter terminal 14.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

**2. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and combination meter

>> Repair open circuit or short to ground or short to power in harness or connectors.

**3. CHECK SPEEDOMETER FUNCTION**

Make sure that speedometer functions properly.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

---

**4. CHECK SPEEDOMETER CIRCUIT FOR OPEN AND SHORT**

---

Check the following.

- Harness connectors M58, F26
- Joint connector-2
- Harness for open or short between combination meter and vehicle speed sensor
- Harness for open or short between vehicle speed sensor and ECM
- Harness for open or short between vehicle speed sensor and TCM

OK or NG

OK >> Check combination meter and vehicle speed sensor. Refer to [DI-3, "METERS AND GAUGES"](#) .

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**5. CHECK INTERMITTENT INCIDENT**

---

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

DTC P0506 ISC SYSTEM

Description

NOTE:

If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC displayed.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0506 0506	Idle speed control system RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	<ul style="list-style-type: none"> <li>● Electric throttle control actuator</li> <li>● Intake air leak</li> </ul>

DTC Confirmation Procedure

NOTE:

- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.
- If the target idle speed is out of the specified value, perform [EC-1255, "Idle Air Volume Learning"](#), before conducting "DTC Confirmation Procedure". For the target idle speed, refer to the [EC-1862, "SERVICE DATA AND SPECIFICATIONS \(SDS\)"](#).

TESTING CONDITION:

- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.
- Always perform the test at a temperature above -10°C (14°F).

 WITH CONSULT-II

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON" again and select "DATA MONITOR" mode with CONSULT-II.
5. Start engine and run it for at least 1 minute at idle speed.
6. If 1st trip DTC is detected, go to [EC-1580, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

 WITH GST

Follow the procedure "WITH CONSULT-II" above.

---

**Diagnostic Procedure****1. CHECK INTAKE AIR LEAK**

---

1. Start engine and let it idle.
2. Listen for an intake air leak after the mass air flow sensor.

**OK or NG**

- OK >> GO TO 2.  
NG >> Discover air leak location and repair.

**2. REPLACE ECM**

---

1. Stop engine.
2. Replace ECM.
3. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to [EC-1275, "NVIS \(Nissan Vehicle Immobilizer System — NATS\)"](#) .
4. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .
5. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
6. Perform [EC-1255, "Idle Air Volume Learning"](#) .

**>> INSPECTION END**

**DTC P0507 ISC SYSTEM**

**Description**

**NOTE:**

If DTC P0507 is displayed with other DTC, first perform the trouble diagnosis for the other DTC displayed.

The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.

The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

**On Board Diagnosis Logic**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0507 0507	Idle speed control system RPM higher than expected	The idle speed is more than the target idle speed by 200 rpm or more.	<ul style="list-style-type: none"> <li>● Electric throttle control actuator</li> <li>● Intake air leak</li> <li>● PCV system</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

**DTC P0605 ECM**

PF023710

**Component Description**

UBS002FW

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

UBS002FX

**On Board Diagnosis Logic**

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEPROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

**FAIL-SAFE MODE**

ECM enters fail-safe mode when malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	<ul style="list-style-type: none"> <li>● ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.</li> <li>● ECM deactivates ASCD operation.</li> </ul>

**DTC Confirmation Procedure**

UBS002FY

Perform "PROCEDURE FOR MALFUNCTION A" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION B". If there is no malfunction on "PROCEDURE FOR MALFUNCTION B", perform "PROCEDURE FOR MALFUNCTION C".

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**PROCEDURE FOR MALFUNCTION A**

Ⓟ **With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If 1st trip DTC is detected, go to [EC-1584, "Diagnostic Procedure"](#).

Ⓟ **With GST**

Follow the procedure "With CONSULT-II" above.

**PROCEDURE FOR MALFUNCTION B**

**With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
4. If 1st trip DTC is detected, go to [EC-1584, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**With GST**

Follow the procedure "With CONSULT-II" above.

**PROCEDURE FOR MALFUNCTION C**

**With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
4. Repeat step 3 procedure, 32 times.
5. If 1st trip DTC is detected, go to [EC-1584, "Diagnostic Procedure"](#).

**DTC P0650 MIL**

PF2:24810

**Component Description**

UBS002G0

Malfunction Indicator Lamp (MIL) is located on the instrument panel. When the ignition switch is turned ON without engine running, MIL will light up. This is a bulb check. When the engine is started, MIL should go off. If MIL remains on, the on board diagnostic system has detected an engine system malfunction.

**On Board Diagnosis Logic**

UBS002G1

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0650 0650	Malfunction indicator (MIL) control circuit	<ul style="list-style-type: none"> <li>An excessively high voltage is sent to ECM through the MIL circuit under the condition that calls for MIL light up.</li> <li>An excessively low voltage is sent to ECM through the MIL circuit under the condition that calls for MIL not to light up.</li> </ul>	<ul style="list-style-type: none"> <li>Harness or connectors (MIL circuit is open or shorted.)</li> <li>MIL</li> </ul>

**FAIL-SAFE MODE**

ECM enters in fail-safe mode when both DTC P0650 and another DTC, which calls for MIL to light up, are detected at the same time.

Detected items	Engine operating condition in fail-safe mode
MIL circuit	Engine speed will not rise more than 2,500 rpm due to the fuel cut

**DTC Confirmation Procedure**

UBS002G2

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1588, "Diagnostic Procedure"](#).

 - JUNCTION BOX (J/B)

BBWA0230E

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
18	OR/L	MIL	[Ignition switch "ON"]	0 - 1.0V
			[Engine is running] ● Idle speed	BATTERY VOLTAGE (11 - 14V)

**Diagnostic Procedure**

UBS002G4

**1. CHECK MIL POWER SUPPLY**

1. Turn ignition switch "OFF".
2. Disconnect combination meter harness connector.
3. Turn ignition switch "ON".
4. Check voltage between combination meter terminal 41 and ground with CONSULT-II or tester

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

**2. DETECT MALFUNCTIONING PART**

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between fuse and combination meter

>> Repair harness or connectors.

**3. CHECK MIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 18 and combination meter terminal 20. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

#### 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and combination meter

>> Repair open circuit or short to ground or short to power in harness or connectors.

#### 5. CHECK COMBINATION METER

1. Turn ignition switch "OFF".
2. Disconnect combination meter harness connectors.
3. Check continuity under the following conditions.

CONDITION	Combination meter terminal No. (Polarity)	Continuity
1	20 (+) - 41 (-)	Should not exist.
2	41 (+) - 20 (-)	Should exist.

#### OK or NG

- OK >> GO TO 6.
- NG >> Replace combination meter. Refer to [DI-8, "Combination Meter"](#) .

#### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

## DTC P1102 MAF SENSOR

### Component Description

UBS002GA

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002GB

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N ● No-load	Idle Approx. 1.1 - 1.5V
		2,500 rpm Approx. 1.6 - 2.0V
CAL/LD VALUE	● Engine: After warming up ● Shift lever: N ● Air conditioner switch: OFF ● No-load	Idle 10% - 35%
		2,500 rpm 10% - 35%
MASS AIRFLOW	● Engine: After warming up ● Shift lever: N ● Air conditioner switch: OFF ● No-load	Idle 1.0 - 4.0 g-m/s
		2,500 rpm 4.0 - 10.0 g-m/s

### On Board Diagnosis Logic

UBS002GC

**This self-diagnosis has the one trip detection logic.**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1102 1102	Mass air flow sensor circuit range/performance problem	A voltage from the sensor is constantly approx.1.0V when engine is running.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.

### DTC Confirmation Procedure

UBS002GD

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON".

# DTC P1102 MAF SENSOR

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
65	R	Sensor's power supply	[Ignition switch "ON"]	Approximately 5V
72	OR/L	Mass air flow sensor	[Engine is running] ● Warm-up condition ● Idle speed	1.1 - 1.5V
			[Engine is running] ● Warm-up condition ● Engine speed is 2,500 rpm.	1.6 - 2.0V
80	W/L	Mass air flow sensor ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V

## Diagnostic Procedure

UBS002GF

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect MAF sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between mass air flow sensor and ECM relay
- Harness for open or short between mass air flow sensor and ECM

>> Repair harness or connectors.

## 4. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and ECM terminal 80. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 5.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 5. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 72. Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK MASS AIR FLOW SENSOR**

Refer to [EC-1599, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace mass air flow sensor.

**7. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
MASS AIR FLOW SENSOR**

UBS002GG

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 72 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.1 - 1.5
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.6 - 2.0
Idle to about 4,000 rpm*	1.5 - 2.0 to Approx. 4.0

\*: Check for liner voltage rise in response to engine being increased to about 4,000 rpm.

PBIB0537E

4. If the voltage is out of specification, proceed the following.
  - a. Turn ignition switch "OFF".
  - b. Disconnect mass air flow sensor harness connector and reconnect it again.
  - c. Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

## DTC P1111 IVT CONTROL SOLENOID VALVE

PFP:23796

### Component Description

UBS002GI

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002GJ

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N	Idle
