			[Engine is running] ● Warm-up condition ● Engine speed is 2,000 rpm	Approximately 9V★ 

PBIB0532E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS002GN

### 1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Turn ignition switch "ON".

BBI A0018E

4. Check voltage between intake valve timing control solenoid valve terminal 2 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

PBIB0192E

### 2. DETECT MALFUNCTION PART

Check the following.

- Harness for open or short between intake valve timing control solenoid valve and ECM
- Harness for open or short between intake valve timing control solenoid valve and ECM relay

>> Repair or replace harness or connectors.

## 3. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 107 and intake valve timing control solenoid valve terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to [EC-1603, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace intake valve timing control solenoid valve.

## 5. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection INTAKE VALVE TIMING CONTROL SOLENOID VALVE

UBS002GO

1. Disconnect intake valve timing control solenoid valve harness connector.
2. Check resistance between intake valve timing control solenoid valve terminals 1 and 2.

Terminals	Resistance
1 and 2	Approximately 8Ω at 20°C (68°F)
1 or 2 and ground	∞Ω (Continuity should not exist)

PBIB0193E

### Removal and Installation INTAKE VALVE TIMING CONTROL SOLENOID VALVE

UBS002GP

Refer to [EM-134, "TIMING CHAIN"](#) .

## DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

PFP:16119

### Component Description

UBS0056D

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle control motor is operated by the ECM and it opens and closes the throttle valve. The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS0056E

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1121 1121	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detect the throttle valve is stuck open. <b>This self-diagnosis has the one trip detection logic.</b>	

### FAIL-SAFE MODE

When the malfunction A or B is detected in the two consecutive trips, the ECM enters fail-safe mode and the MIL lights up.

When the malfunction C is detected even in the 1st trip, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.

### DTC Confirmation Procedure

UBS0056F

#### NOTE:

- Perform "PROCEDURE FOR MALFUNCTION A AND B" first. If the 1st trip DTC cannot be confirmed, perform "PROCEDURE FOR MALFUNCTION C".  
If there is no malfunction on "PROCEDURE FOR MALFUNCTION A AND B", perform "PROCEDURE FOR MALFUNCTION C".
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR MALFUNCTION A AND B

##### ④ With CONSULT-II

1. Turn ignition witch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Shift selector lever to "D" position (A/T), "1st" position (M/T) and wait at least 2 seconds.
4. Turn ignition switch "OFF", wait at least 10 seconds, and then turn "ON".
5. If 1st trip DTC is detected, go to [EC-1605. "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**With GST**

Follow the procedure "With CONSULT-II" above.

## PROCEDURE FOR MALFUNCTION C

**With CONSULT-II**

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Shift selector lever to "D" position (A/T), "1st" position (M/T) and wait at least 2 seconds.
4. Shift selector lever to "N" or "P" position.
5. Start engine and let it idle for 3 seconds.
6. If DTC is detected, go to [EC-1605, "Diagnostic Procedure"](#) .

**With GST**

Follow the procedure "With CONSULT-II" above.

## Diagnostic Procedure

### 1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if a foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.
- NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

### 2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-1255, "Idle Air Volume Learning"](#) .

>> INSPECTION END

## DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

PFP:16119

### Description

UBS006JN

**NOTE:**

If DTC P1122 is displayed with DTC P1121 or 1126, first perform the trouble diagnosis for DTC P1121 or P1126. Refer to [EC-1604](#) or [EC-1613](#).

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc.

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.

The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

UBS006JO

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1122 1122	Electric throttle control performance problem	Electric throttle control function does not operate properly.	<ul style="list-style-type: none"> <li>● Harness or connectors (Throttle control motor circuit is open or shorted)</li> <li>● Electric throttle control actuator</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS006JP

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and wait at least 2 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to [EC-1608, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS006JR

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK THROTTLE CONTROL MOTOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 115 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to power in harness or connectors.

## 3. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-I

1. Reconnect harness connectors disconnected.
2. Check voltage between ECM terminal 113 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)

OK or NG

OK >> GO TO 10.

NG >> GO TO 4.

## 4. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect throttle control motor relay harness connector.

3. Check voltage between throttle control motor relay terminals 2, 5 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

---

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Fuse and fusible link box connector E23
- 15A fuse
- Harness for open or short between throttle control motor relay and battery

>> Repair or replace harness or connectors.

---

## 6. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check continuity between ECM terminal 113 and throttle control motor relay terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 7. CHECK THROTTLE CONTROL MOTOR RELAY OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Check continuity between ECM terminal 112 and throttle control motor relay terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 8. CHECK THROTTLE CONTROL MOTOR RELAY

---

Refer to [EC-1612, "Component Inspection"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace throttle control motor relay.

---

## 9. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## 10. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch "OFF".
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	114	Should not exist
	116	Should exist
6	114	Should exist
	116	Should not exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 11.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 11. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.

OK or NG

OK >> GO TO 12.

NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

## 12. CHECK THROTTLE CONTROL MOTOR

Refer to [EC-1612, "Component Inspection"](#) .

OK or NG

OK >> GO TO 13.

NG >> GO TO 14.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

OK >> GO TO 14.

NG >> Repair or replace harness or connectors.

## 14. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-1255, "Idle Air Volume Learning"](#) .

>> INSPECTION END

## Component Inspection THROTTLE CONTROL MOTOR RELAY

1. Apply 12V direct current between relay terminals 1 and 2.
2. Check continuity between relay terminals 3 and 5.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

3. If NG, replace throttle control motor relay.

## THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

**Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]**

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
5. Perform [EC-1255, "Idle Air Volume Learning"](#) .

## Remove and Installation ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

# DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

[QR25DE]

## DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

PF1:16119

### Component Description

UBS006JU

Power supply for the Throttle Control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

### CONSULT-II Reference Value in Data Monitor Mode

UBS006JV

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

### On Board Diagnosis Logic

UBS006JW

These self-diagnosis have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1124 1124	Throttle control motor relay circuit short	ECM detect the throttle control motor relay is stuck ON.	<ul style="list-style-type: none"><li>● Harness or connectors (Throttle control motor relay circuit is shorted)</li><li>● Throttle control motor relay</li></ul>
P1126 1126	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	<ul style="list-style-type: none"><li>● Harness or connectors (Throttle control motor relay circuit is open)</li><li>● Throttle control motor relay</li></ul>

### FAIL-SAFE MODE

When the DTC is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS006JX

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### PROCEDURE FOR DTC P1124

##### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

##### With CONSULT-II

1. Turn ignition switch "ON" and wait at least 1 second.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If DTC is detected, go to [EC-1616, "Diagnostic Procedure"](#).

DTC P1143 HO2S1

PF2:22690

Component Description

UBS002HF

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

CONSULT-II Reference Value in Data Monitor Mode

UBS002HG

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

UBS002HH

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high and whether the “lean” output is sufficiently low. When both the outputs are shifting to the lean side, the malfunction will be detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1143 1143	Heated oxygen sensor 1 lean shift monitoring	The maximum and minimum voltage from the sensor are not reached to the specified voltages.	<ul style="list-style-type: none"> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform at a temperature above –10°C (14°F).
- Before performing following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P1143” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

SEC769C

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.

# DTC P1143 HO2S1

[QR25DE]

2. Set voltmeter probes between ECM terminal 92 [HO2S1(B1) signal] and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.
  - The maximum voltage is over 0.6V at least one time.
  - The minimum voltage is over 0.1V at least one time.
4. If NG, go to [EC-1625, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. RETIGHTEN HEATED OXYGEN SENSOR 1

Loosen and retighten heated oxygen sensor 1.

**Tightening torque:**

**40 - 50 N·m (4.1 - 5.1 kg·m, 30 - 37 ft·lb)**

>> GO TO 3.

### 3. CLEAR THE SELF-LEARNING DATA

#### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

#### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171. Refer to [EC-1442](#).
- No >> GO TO 4.

### 4. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-1361, "Component Inspection"](#).

OK or NG

- OK >> GO TO 5.
- NG >> Replace heated oxygen sensor 1.

### 5. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-1627, "Component Inspection"](#).

OK or NG

- OK >> GO TO 6.
- NG >> Replace heated oxygen sensor 1.

### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

For circuit, refer to [EC-1408, "Wiring Diagram"](#).

>> INSPECTION END

3. Check the following with engine speed held at 2,000 rpm constant under no load.
- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
  - The maximum voltage is over 0.6V at least one time.
  - The minimum voltage is below 0.3V at least one time.
  - The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V

2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

## Removal and Installation HEATED OXYGEN SENSOR 1

UBS002HM

Refer to [EM-110, "EXHAUST MANIFOLD AND THREE WAY CATALYST"](#) .

**DTC P1144 HO2S1**

PF2:22690

**Component Description**

UBS002HN

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002HO

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS002HP

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high. The “lean” output is sufficiently low. When both the outputs are shifting to the rich side, the malfunction will be detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1144 1144	Heated oxygen sensor 1 rich shift monitoring	The maximum and minimum voltages from the sensor are beyond the specified voltages.	<ul style="list-style-type: none"> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

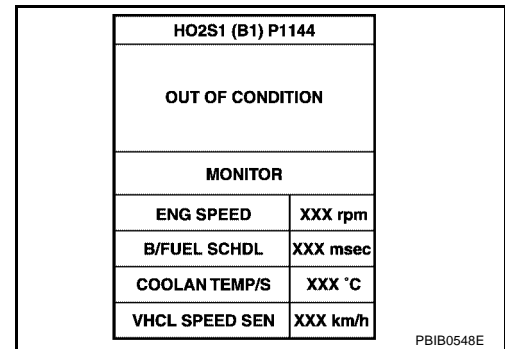

- Always perform at a temperature above –10°C (14°F).
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 5 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P1144” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

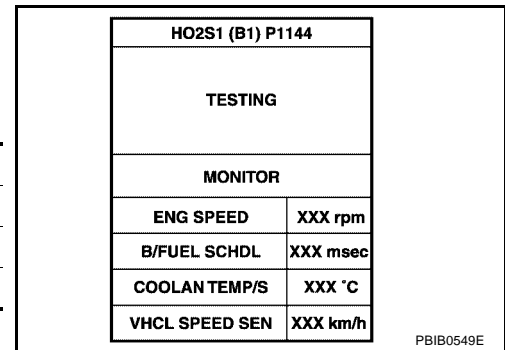

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 50 seconds or more.)

ENG SPEED	1,200 - 3,200 rpm
Vehicle speed	Less than 100 km/h (62 MPH)
B/FUEL SCHDL	1.9 - 13.0 msec
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to [EC-1631, "Diagnostic Procedure"](#).

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.

2. Set voltmeter probes between ECM terminal 92 [HO2S1(B1) signal] and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.
  - The maximum voltage is below 0.8V at least one time.
  - The minimum voltage is below 0.35V at least one time.
4. If NG, go to [EC-1631, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

### 2. RETIGHTEN HEATED OXYGEN SENSOR 1

Loosen and retighten heated oxygen sensor 1.

**Tightening torque: 40 - 50 N·m (4.1 - 5.1 kg·m, 30 - 37 ft·lb)**

>> GO TO 3.

### 3. CLEAR THE SELF-LEARNING DATA

**With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

**Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?**  
**Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-1449](#).
- No >> GO TO 4.

### 4. CHECK HO2S1 CONNECTOR FOR WATER

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 harness connector.
3. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace harness or connectors.

### 5. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-1361, "Component Inspection"](#).

OK or NG

- OK >> GO TO 6.
- NG >> Replace heated oxygen sensor 1.

- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 92 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is below 0.3V at least one time.
- The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V

2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

## Removal and Installation HEATED OXYGEN SENSOR 1

UBS002HU

Refer to [EM-110, "EXHAUST MANIFOLD AND THREE WAY CATALYST"](#) .

**DTC P1146 HO2S2**

PF2:226A0

**Component Description**

UBS002HV

The heated oxygen sensor 2, after three way catalyst (Manifold), monitors the oxygen level in the exhaust gas on each bank.

Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS002HW

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>Warm-up condition</li> </ul>		0 - 0.3V ↔ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>After keeping engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul>	Revsing engine from idle to 3,000 rpm quickly.	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS002HX

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1146 1146	Heated oxygen sensor 2 minimum voltage monitoring	The minimum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted)</li> <li>Heated oxygen sensor 2</li> <li>Fuel pressure</li> <li>Injectors</li> </ul>

**DTC Confirmation Procedure**

UBS002HY

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Open engine hood before conducting following procedure.

**WITH CONSULT-II**

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.

4. Let engine idle for one minutes.
5. Select "HO2S2 (B1) P1146" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
 If "NG" is displayed, go to [EC-1638, "Diagnostic Procedure"](#) .  
 If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch "ON" and select "COOLANTEMP/S" in "DATA MONITOR" mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring "COOLANTEMP/S" indication on CONSULT-II.
  - d. When "COOLANTEMP/S" indication reaches to 70°C (158°F), go to step3.

**Overall Function Check**

UBS002HZ

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**CAUTION:**

**Always drive vehicle at a safe speed.**

**WITH GST**

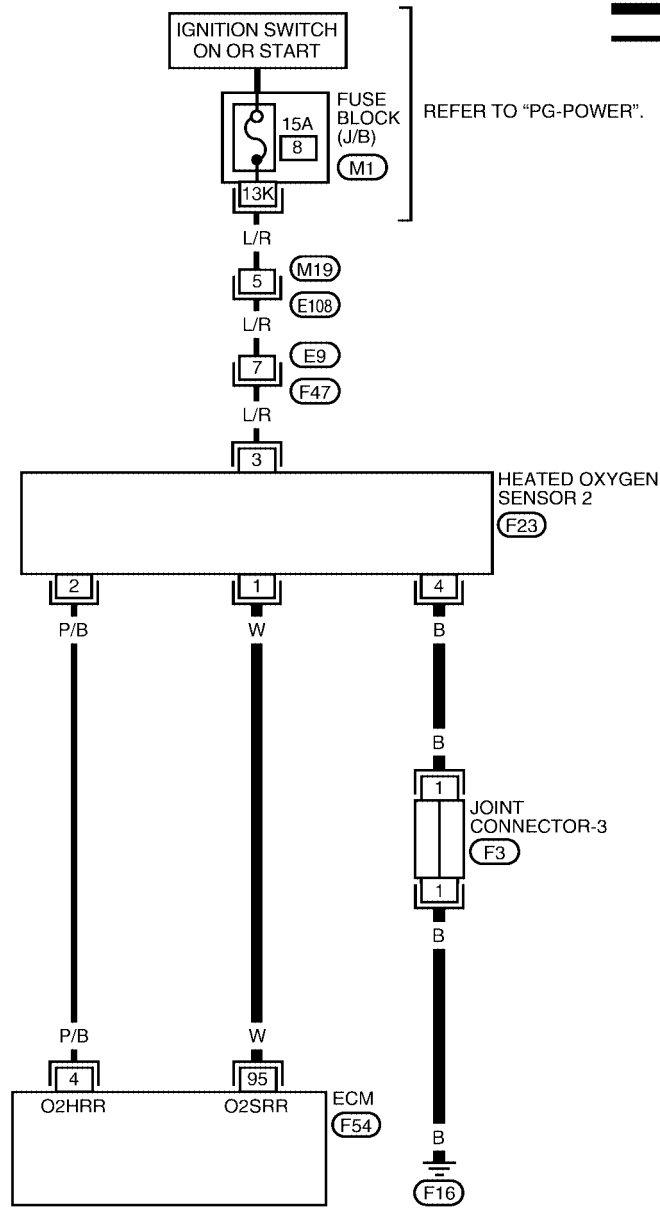

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 95 [HO2S2 (B1) signal] and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be below 0.50V at least once during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.50V at least once during this procedure.**
8. If NG, go to [EC-1638, "Diagnostic Procedure"](#) .

**Diagnostic Procedure**

UBS00211

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-1449](#) .  
No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Check harness continuity between HO2S2 terminal 4 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open and short between HO2S2 and engine ground

>> Repair open circuit or short to power in harness or connectors.

**5. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 95 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Check harness continuity between ECM terminal 95 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

4. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 6.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-1640, "Component Inspection"](#) .

OK or NG

OK >> GO TO 7.

NG >> Replace heated oxygen sensor 2.

**On Board Diagnosis Logic**

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1147 1147	Heated oxygen sensor 2 maximum voltage monitoring	The maximum voltage from the sensor is not reached to the specified voltage.	<ul style="list-style-type: none"> <li>Harness or connectors (The sensor circuit is open or shorted)</li> <li>Heated oxygen sensor 2</li> <li>Fuel pressure</li> <li>Injectors</li> <li>Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

For the best result, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C (32 to 86°F).

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "HO2S2 (B1) P1147" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II and follow the instruction of CONSULT-II.

6. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
 If "NG" is displayed, go to [EC-1645, "Diagnostic Procedure"](#) .  
 If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Turn ignition switch "ON" and select "COOLANTEMP/S" in "DATA MONITOR" mode with CONSULT-II.
  - c. Start engine and warm it up while monitoring "COOLANTEMP/S" indication on CONSULT-II.
  - d. When "COOLANTEMP/S" indication reaches to 70°C (158°F), go to step 3.

## Overall Function Check

UBS00218

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

### CAUTION:

**Always drive vehicle at a safe speed.**

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Set voltmeter probes between ECM terminal 95 [HO2S2 (B1) signal] and engine ground.
5. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**  
**If the voltage can be confirmed in step 5, step 6 is not necessary.**
6. Keep vehicle idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be above 0.63V at least once during this procedure.**
7. If NG, go to [EC-1645, "Diagnostic Procedure"](#) .

Wiring Diagram

EC-HO2S2-01

REFER TO THE FOLLOWING.

- (M1) - FUSE BLOCK - JUNCTION BOX (J/B)
- (F3) - JOINT CONNECTOR

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
95	W	Heated oxygen sensor 2	<p><b>[Engine is running]</b></p> <ul style="list-style-type: none"> <li>● Engine speed is below 3,600rpm after the following conditions are met.                             <ul style="list-style-type: none"> <li>- Engine after warming up</li> <li>- Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load.</li> </ul> </li> <li>● Revving engine from idle to 3,000 rpm quickly.</li> </ul>	0 - Approximately 1.0V

**Diagnostic Procedure**

UBS002IA

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 detected?**  
**Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171. Refer to [EC-1442](#).
- No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Check harness continuity between HO2S2 terminal 4 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

#### OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-3
- Harness for open or short between HO2S2 and engine ground

>> Repair open circuit or short to power in harness or connectors.

**5. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 95 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Check harness continuity between ECM terminal 95 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

4. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 6.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK HEATED OXYGEN SENSOR 2**

Refer to [EC-1647, "Component Inspection"](#) .

OK or NG

OK >> GO TO 7.

NG >> Replace heated oxygen sensor 2.

**7. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection  
HEATED OXYGEN SENSOR 2**

UBS0021B

**With CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minutes.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

6. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

7. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minutes.
5. Set voltmeter probes between ECM terminal 95 [HO2S2 (B1) signal] and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.

(Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**

**If the voltage is above 0.63V at step 6, step 7 is not necessary.**

7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).

**The voltage should be below 0.50V at least once during this procedure.**

8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 2**

UBS0021C

Refer to [EX-3, "EXHAUST SYSTEM"](#) .

## DTC P1148 CLOSED LOOP CONTROL

PFP:22690

### On Board Diagnosis Logic

UBS002ID

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1148 1148	Closed loop control function	The closed loop control function does not operate even when vehicle is driving in the specified condition.	<ul style="list-style-type: none"> <li>● The heated oxygen sensor 1 circuit is open or shorted.</li> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor heater</li> </ul>

### DTC Confirmation Procedure

UBS002IE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Never raise engine speed above 3,600 rpm during the "DTC Confirmation Procedure". If the engine speed limit is exceeded, retry the procedure from step 2.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Hold engine speed at 2,000 rpm and check one of the following.
  - "HO2S1 (B1)" voltage should go above 0.70V at least once.
  - "HO2S1 (B1)" voltage should go below 0.21V at least once.
 If the check result is NG, perform [EC-1650, "Diagnostic Procedure"](#).  
 If the check result is OK, perform the following step.
4. Let engine idle at least 5 minutes.
5. Maintain the following condition at least 50 consecutive seconds.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
B/FUEL SCHDL	XXX msec
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
VHCL SPEED SE	XXX km/h

SEF682Y

B/FUEL SCHDL	2.8 msec or more
ENG SPEED	More than 1,600 rpm
Selector lever	Suitable position
VHCL SPEED SE	More than 70 km/h (43 MPH)

During this test, P0134 may be displayed on CONSULT-II screen.

6. If DTC is detected, go to [EC-1650, "Diagnostic Procedure"](#).

### Overall Function Check

UBS002IF

Use this procedure to check the overall function of the closed loop control. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.

## DTC P1148 CLOSED LOOP CONTROL

[QR25DE]

- Set voltmeter probes between ECM terminal 92 [HO2S1 (B1) signal] and engine ground.
- Check the following with engine speed held at 2,000 rpm constant under no-load.
  - The voltage should go above 0.70V at least once.
  - The voltage should go below 0.21V at least once.
- If NG, go to [EC-1650, "Diagnostic Procedure"](#).

UBS0021G

### Diagnostic Procedure

Perform trouble diagnosis for "DTC P0133", [EC-1416](#).

# DTC P1217 ENGINE OVER TEMPERATURE

[QR25DE]

PF0:0000

UBS002IH

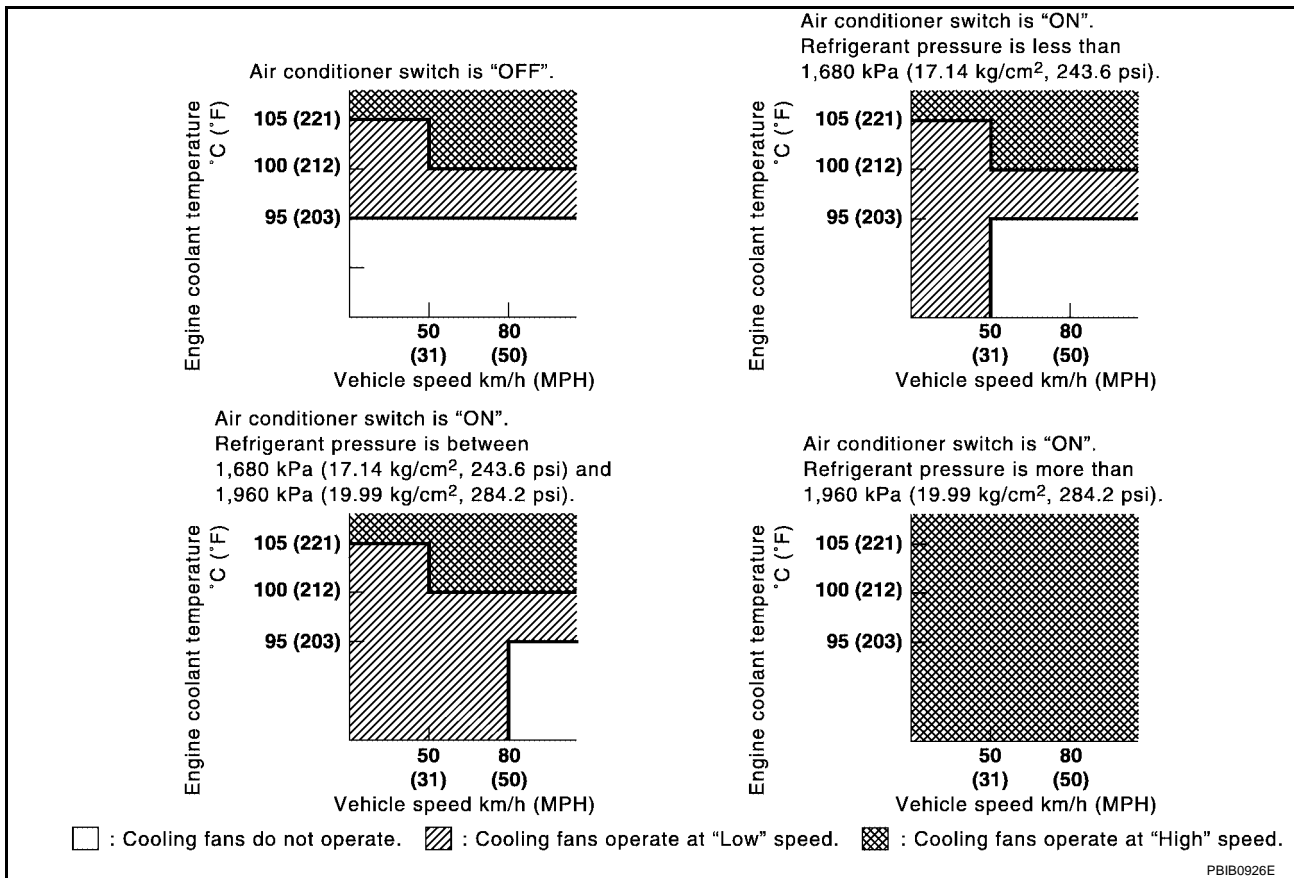

## DTC P1217 ENGINE OVER TEMPERATURE

### System Description COOLING FAN CONTROL

Sensor	Input Signal to ECM	ECM function	Actuator
Vehicle speed sensor	Vehicle speed	Cooling fan control	Cooling fan relay(s)
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch	Air conditioner "ON" signal		
Ignition switch	Start signal		
Refrigerant pressure sensor	Refrigerant pressure		

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

### OPERATION

### CONSULT-II Reference Value in Data Monitor Mode

UBS002II

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF OFF
		Air conditioner switch: ON (Compressor operates.) ON
COOLING FAN	● Engine: After warming up, idle the engine	Engine coolant temperature is 94°C (201°F) or less OFF
	● Air conditioner switch: OFF	Engine coolant temperature is between 95°C (203°F) and 104°C (219°F) LOW
		Engine coolant temperature is 105°C (221°F) or more HIGH

## On Board Diagnosis Logic

**This self-diagnosis has the one trip detection logic.**

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise. When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1217 1217	Engine over temperature (Overheat)	<ul style="list-style-type: none"> <li>● Cooling fan does not operate properly (Overheat).</li> <li>● Cooling fan system does not operate properly (Overheat).</li> <li>● Engine coolant was not added to the system using the proper filling method.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (The cooling fan circuit is open or shorted.)</li> <li>● Cooling fan</li> <li>● Radiator hose</li> <li>● Radiator</li> <li>● Radiator cap</li> <li>● Water pump</li> <li>● Thermostat</li> </ul> <p>For more information, refer to <a href="#">EC-1662</a>, "<a href="#">Main 12 Causes of Overheating</a>".</p>

**CAUTION:**

When a malfunction is indicated, be sure to replace the coolant. Refer to [MA-23](#), "[Changing Engine Coolant](#)". Also, replace the engine oil. Refer to [LU-17](#), "[Changing Engine Oil](#)".

1. Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to [MA-14](#), "[Anti-freeze Coolant Mixture Ratio](#)".
2. After refilling coolant, run engine to ensure that no water-flow noise is emitted.

## Overall Function Check

Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

**WARNING:**

**Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.**

**Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.**

**WITH CONSULT-II**

1. Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-1655](#), "[Diagnostic Procedure](#)".
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-1655](#), "[Diagnostic Procedure](#)".
3. Turn ignition switch "ON".

# DTC P1217 ENGINE OVER TEMPERATURE

[QR25DE]

4. Perform "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II.
5. If the results are NG, go to [EC-1655, "Diagnostic Procedure"](#).

ACTIVE TEST	
COOLING FAN	OFF
MONITOR	
COOLANT TEMP/S	XXX °C

SEF646X

## WITH GST

1. Check the coolant level in the reservoir tank and radiator.  
**Allow engine to cool before checking coolant level.**  
If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to [EC-1655, "Diagnostic Procedure"](#).
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to [EC-1655, "Diagnostic Procedure"](#).
3. Start engine.  
**Be careful not to overheat engine.**
4. Turn air conditioner switch "ON".
5. Turn blower fan switch "ON".
6. Make sure that cooling fan operates at low speed.  
If NG, go to [EC-1655, "Diagnostic Procedure"](#).  
If OK, go to the following step.
7. Turn ignition switch "OFF".
8. Turn air conditioner switch and blower fan switch "OFF".
9. Disconnect engine coolant temperature sensor harness connector.
10. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
11. Restart engine and make sure that cooling fan operates at higher speed than low speed.  
**Be careful not to overheat engine.**
12. If NG, go to [EC-1655, "Diagnostic Procedure"](#).

# DTC P1217 ENGINE OVER TEMPERATURE

[QR25DE]

UBS002L

## Wiring Diagram

BBWA0431E

## Diagnostic Procedure

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 4.

### 2. CHECK COOLING FAN LOW SPEED OPERATION

**With CONSULT-II**

1. Disconnect cooling fan relays-2 and -3.
2. Start engine and let it idle.

3. Select "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II and touch "LOW" on the CONSULT-II screen.
4. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

- OK >> GO TO 3.
- NG >> Check cooling fan low speed control circuit. (Go to [EC-1659, "PROCEDURE A"](#) .)

ACTIVE TEST	
COOLING FAN	LOW
MONITOR	
COOLAN TEMP/S	XXX °C

SEF784Z

### 3. CHECK COOLING FAN HIGH SPEED OPERATION

**With CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relays-2 and -3.
3. Start engine and let it idle.
4. Select "COOLING FAN" in "ACTIVE TEST" mode with CONSULT-II and touch "HIGH" on the CONSULT-II screen.
5. Make sure that cooling fans-1 and -2 operate at high speed.

OK or NG

- OK >> GO TO 6.
- NG >> Check cooling fan high speed control circuit. (Go to [EC-1661, "PROCEDURE B"](#) .)

ACTIVE TEST	
COOLING FAN	HIGH
MONITOR	
COOLAN TEMP/S	XXX °C

SEF785Z

## 4. CHECK COOLING FAN LOW SPEED OPERATION

⊗ **Without CONSULT-II**

1. Disconnect cooling fan relays-2 and -3.
2. Start engine and let it idle.
3. Turn air conditioner switch "ON".
4. Turn blower fan switch "ON".

5. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

OK >> GO TO 5.

NG >> Check cooling fan low speed control circuit. (Go to [EC-1659, "PROCEDURE A"](#).)

## 5. CHECK COOLING FAN HIGH SPEED OPERATION

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Reconnect cooling fan relays-2 and -3.
3. Turn air conditioner switch and blower fan switch "OFF".
4. Disconnect engine coolant temperature sensor harness connector.
5. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
6. Restart engine and make sure that cooling fans-1 and -2 operate at high speed.

OK or NG

OK >> GO TO 6.

NG >> Check cooling fan high speed control circuit. (Go to [EC-1661, "PROCEDURE B"](#).)

## 6. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

**Testing pressure: 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)**

**CAUTION:**

Higher than the specified pressure may cause radiator damage.

**Pressure should not drop.**

OK or NG

OK >> GO TO 7.

NG >> Check the following for leak.

- Hose
  - Radiator
  - Water pump
- Refer to [CO-26, "WATER PUMP"](#) .

## 7. CHECK RADIATOR CAP

Apply pressure to cap with a tester.

**Radiator cap relief pressure:**

**59 - 98 kPa (0.6 - 1.0 kg/cm<sup>2</sup> , 9 - 14 psi)**

OK or NG

OK >> GO TO 8.

NG >> Replace radiator cap.

## 8. CHECK THERMOSTAT

1. Check valve seating condition at normal room temperatures.  
**It should seat tightly.**
2. Check valve opening temperature and valve lift.

**Valve opening temperature:**

**82°C (180°F) [standard]**

**Valve lift:**

**More than 8 mm/95°C (0.31 in/203°F)**

3. Check if valve is closed at 5°C (9°F) below valve opening temperature.

For details, refer to [CO-28, "THERMOSTAT AND THERMOSTAT HOUSING"](#) .

OK or NG

OK >> GO TO 9.

NG >> Replace thermostat.

## 9. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EC-1390, "Component Inspection"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace engine coolant temperature sensor.

---

**10. CHECK MAIN 12 CAUSES**

---

If the cause cannot be isolated, go to [EC-1662. "Main 12 Causes of Overheating"](#) .

>> INSPECTION END

## PROCEDURE A

### 1. CHECK POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relay-1.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relay-1 terminals 1, 3, 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector E103
- 40A fusible links
- Fuse and fusible link box connectors E23, E25
- Harness for open or short between cooling fan relay-1 and fuse
- Harness for open or short between cooling fan relay-1 and fusible links

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK COOLING FAN MOTORS CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between cooling fan relay-1 terminal 5 and cooling fan motor-1 terminal 1, cooling fan motor-1 terminal 4 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between cooling fan relay-1 terminal 7 and cooling fan motor-2 terminal 1, cooling fan motor-2 terminal 4 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK OUTPUT SIGNAL CIRCUIT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 37 and cooling fan relay-1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

---

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relay-1 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 6. CHECK COOLING FAN RELAY-1

---

Refer to [EC-1663, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
NG >> Replace cooling fan relay.

---

## 7. CHECK COOLING FAN MOTORS-1 AND -2

---

Refer to [EC-1663, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.  
NG >> Replace cooling fan motors.

---

## 8. CHECK INTERMITTENT INCIDENT

---

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## PROCEDURE B

### 1. CHECK POWER SUPPLY

1. Turn ignition switch "OFF".
2. Disconnect cooling fan relays-2 and -3.
3. Turn ignition switch "ON".
4. Check voltage between cooling fan relays-2 and -3 terminals 1, 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between cooling fan relays-2 and -3 and fuse
- Harness for open or short between cooling fan relays-2 and -3 and fusible links

>> Repair harness or connectors.

### 3. CHECK COOLING FAN MOTORS CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.
3. Check harness continuity between the following; cooling fan relay-2 terminal 5 and cooling fan motor-1 terminal 2, cooling fan relay-2 terminal 6 and cooling fan motor-1 terminal 3, cooling fan relay-2 terminal 7 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.
5. Check harness continuity between the following; cooling fan relay-3 terminal 5 and cooling fan motor-2 terminal 2, cooling fan relay-3 terminal 6 and cooling fan motor-2 terminal 3, cooling fan relay-3 terminal 7 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

6. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK OUTPUT SIGNAL CIRCUIT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 27 and cooling fan relay-2 terminal 2, cooling fan relay-3 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK     >> GO TO 6.  
NG     >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Harness for open or short between cooling fan relays-2, -3 and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK COOLING FAN RELAYS-2 AND -3

Refer to [EC-1663, "Component Inspection"](#) .

OK or NG

- OK     >> GO TO 7.  
NG     >> Replace cooling fan relays.

## 7. CHECK COOLING FAN MOTORS

Refer to [EC-1663, "Component Inspection"](#) .

OK or NG

- OK     >> GO TO 8.  
NG     >> Replace cooling fan motors.

## 8. CHECK INTERMITTENT INCIDENT

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

## Main 12 Causes of Overheating

UBS002IN

Engine	Step	Inspection item	Equipment	Standard	Reference page
OFF	1	<ul style="list-style-type: none"> <li>● Blocked radiator</li> <li>● Blocked condenser</li> <li>● Blocked radiator grille</li> <li>● Blocked bumper</li> </ul>	<ul style="list-style-type: none"> <li>● Visual</li> </ul>	No blocking	—

## Component Inspection COOLING FAN RELAYS-1, -2 AND -3

UBS00210

Check continuity between terminals 3 and 5, 6 and 7.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

If NG, replace relay.

SEF745U

## COOLING FAN MOTORS-1 AND -2

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Speed	Terminals	
		(+)	(-)
Cooling fan motor	Low	1	4
	High	1, 2	3, 4

**Cooling fan motor should operate.**

If NG, replace cooling fan motor.

SEF734W

## DTC P1225 TP SENSOR

### Component Description

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance problem	Closed throttle position learning value is excessively low.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

### DTC Confirmation Procedure

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Turn ignition switch "ON".
5. If 1st trip DTC is detected, go to [EC-1665, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

#### WITH GST

Follow the procedure "With CONSULT-II" above.

**Diagnostic Procedure****1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY**

1. Turn ignition switch "OFF".
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.  
 NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

**2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-1255, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**Remove and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

## DTC P1226 TP SENSOR

### Component Description

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

### On Board Diagnosis Logic

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1226 1226	Closed throttle position learning performance problem	Closed throttle position learning is not performed successfully, repeatedly.	<ul style="list-style-type: none"> <li>Electric throttle control actuator (TP sensor 1 and 2)</li> </ul>

### DTC Confirmation Procedure

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Turn ignition switch "OFF", wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Repeat steps 3 and 4, 32 times.
6. If 1st trip DTC is detected, go to [EC-1667, "Diagnostic Procedure"](#).

**WITH GST**

Follow the procedure "With CONSULT-II" above.

**Diagnostic Procedure****1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY**

1. Turn ignition switch "OFF".
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

**OK or NG**

- OK >> GO TO 2.  
 NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

**2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR**

1. Replace the electric throttle control actuator.
2. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .
3. Perform [EC-1255, "Idle Air Volume Learning"](#) .

>> INSPECTION END

**Remove and Installation**  
**ELECTRIC THROTTLE CONTROL ACTUATOR**

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

## DTC P1229 SENSOR POWER SUPPLY

PFP:16119

### On Board Diagnosis Logic

UBS002JF

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1229 1229	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	<ul style="list-style-type: none"> <li>● Harness or connectors (The TP sensor 1 and 2 circuit is shorted.) (APP sensor 1 circuit is shorted.) (MAF sensor circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.)</li> <li>● Electric throttle control actuator (TP sensor 1 and 2)</li> <li>● Accelerator pedal position sensor (APP sensor 1)</li> <li>● MAF sensor</li> <li>● EVAP control system pressure sensor</li> <li>● Refrigerant pressures sensor</li> <li>● ECM pin terminal</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

### DTC Confirmation Procedure

UBS002JG

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-1670, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

[QR25DE]

## DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

UBS002JJ

### Description

#### SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	EVAP canister purge flow control	EVAP canister purge vol- ume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Ignition switch	Start signal		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Fuel tank temperature sensor	Fuel temperature in fuel tank		
Vehicle speed sensor (CAN communication line)	Vehicle speed		

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

### COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002JK

Specification data are reference values.

P1444 1444	EVAP canister purge volume control solenoid valve	The canister purge flow is detected during the specified driving conditions, even when EVAP canister purge volume control solenoid valve is completely closed.	<ul style="list-style-type: none"> <li>● EVAP control system pressure sensor</li> <li>● EVAP canister purge volume control solenoid valve (The valve is stuck open.)</li> <li>● EVAP canister vent control valve</li> <li>● EVAP canister</li> <li>● Hoses (Hoses are connected incorrectly or clogged.)</li> </ul>

## DTC Confirmation Procedure

UBS002JM

### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

**Always perform test at a temperature of 5°C (41°F) or more.**

### WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "PURG VOL CN/V P1444" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.
5. Touch "START".
6. Start engine and let it idle until "TESTING" on CONSULT-II changes to "COMPLETED". (It will take approximately 10 seconds.)  
If "TESTING" is not displayed after 5 minutes, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-1675, "Diagnostic Procedure"](#).

### WITH GST

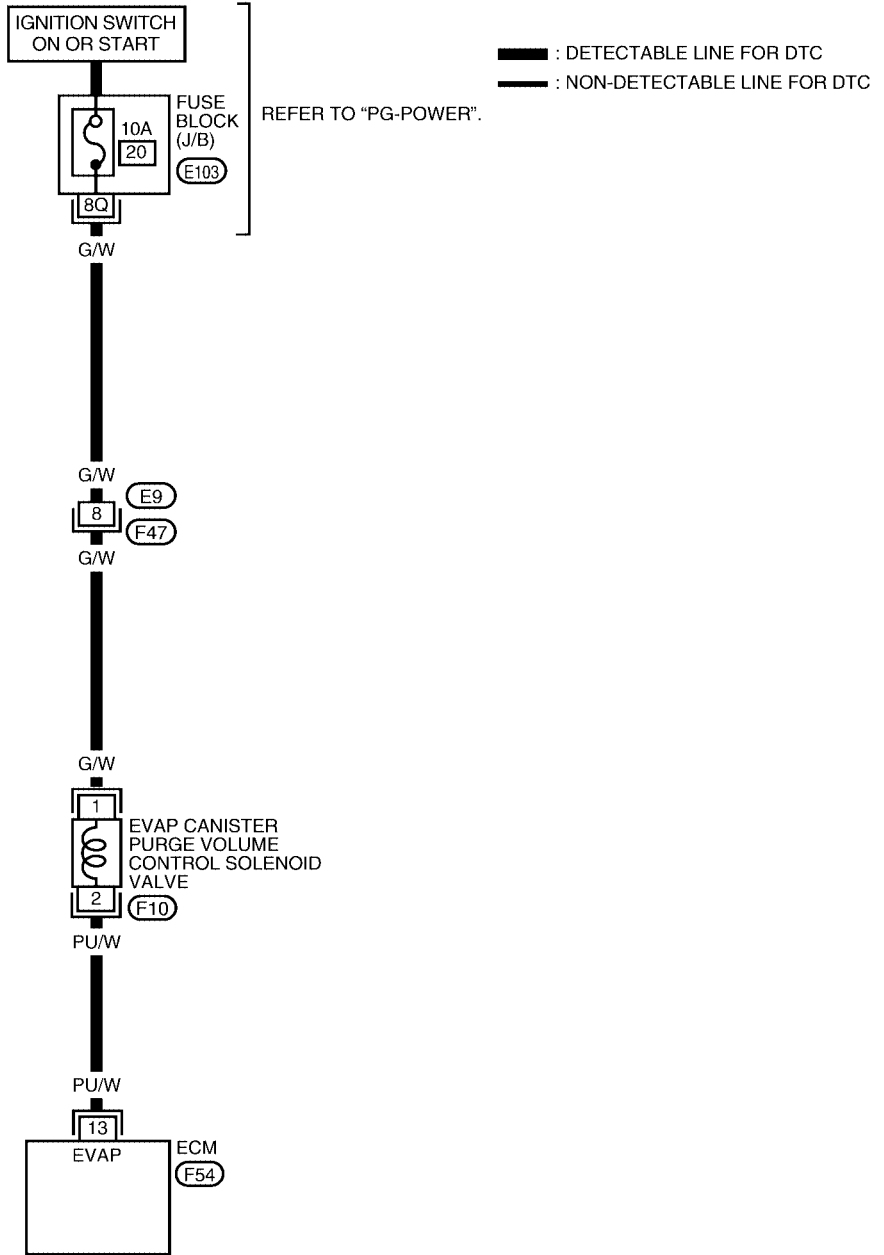

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and let it idle for at least 20 seconds.
4. Select "MODE 7" with GST.
5. If 1st trip DTC is detected, go to [EC-1675, "Diagnostic Procedure"](#).

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QR25DE]

UBS002JN

## Wiring Diagram

			[Engine is running] ● Engine speed is about 2,000 rpm (More than 100 seconds after starting engine)	Approximately 10V★  PBIB0520E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS002JO

### 1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

- Turn ignition switch "OFF".
- Disconnect EVAP canister purge volume control solenoid valve harness connector.
- Turn ignition switch "ON".

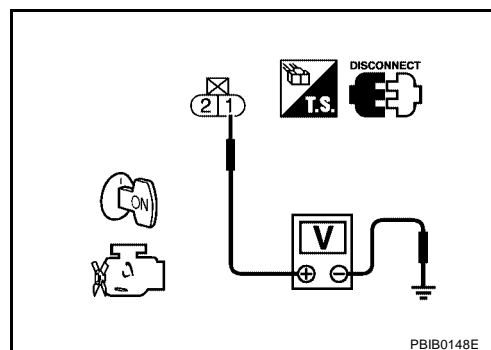

- Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and engine ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QR25DE]

## 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- Fuse block (J/B) connector E103
- 10A fuse
- Harness for open or short between EVAP canister purge volume control solenoid valve and fuse

>> Repair harness or connectors.

## 3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 13 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR HOSE

Check disconnection or improper connection of hose connected to EVAP control system pressure sensor.

OK or NG

OK >> GO TO 5.

NG >> Repair it.

## 5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

BBIA0116E

2. Check connectors for water.

**Water should not exist.**

OK or NG

OK >> GO TO 6.

NG >> Replace EVAP control system pressure sensor.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QR25DE]

## 6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK (With CONSULT-II)>>GO TO 7.
- OK (Without CONSULT-II)>>GO TO 8.
- NG >> Replace EVAP control system pressure sensor.

## 7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

 With CONSULT-II

1. Turn ignition switch "OFF".
2. Reconnect harness connectors disconnected.
3. Start engine.
4. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

## 8. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace EVAP canister purge volume control solenoid valve.

## 9. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 10.
- NG >> Clean the rubber tube using an air blower.

## 10. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-1532, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 11.
- NG >> Replace EVAP canister vent control valve.

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QR25DE]

## 11. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

Yes or No

- Yes >> GO TO 12.  
 No >> GO TO 14.

## 12. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK >> GO TO 14.  
 NG >> GO TO 13.

## 13. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

## 14. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

UBS002.JP

④ With CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100.0%	Yes
0.0%	No

# DTC P1444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE [QR25DE]

## ⊗ Without CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

## DTC P1446 EVAP CANISTER VENT CONTROL VALVE

PFP:14935

### Component Description

UBS002JR

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System (Small Leak)" diagnosis.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002JS

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

### On Board Diagnosis Logic

### 1. CHECK RUBBER TUBE

1. Turn ignition switch "OFF".
2. Disconnect rubber tube connected to EVAP canister vent control valve.

3. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 2.
- NG >> Clean rubber tube using an air blower.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-1685, "Component Inspection"](#).

OK or NG

- OK >> GO TO 3.
- NG >> Replace EVAP canister vent control valve.

### 3. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

Yes or No

- Yes >> GO TO 4.
- No >> GO TO 6.

#### 4. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

#### 5. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

#### 6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR HOSE

Check disconnection or improper connection of hose connected to EVAP control system pressure sensor.

OK or NG

- OK >> GO TO 7.
- NG >> Repair it.

#### 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 8.
- NG >> Replace EVAP control system pressure sensor.

#### 8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace EVAP control system pressure sensor.

#### 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection EVAP CANISTER VENT CONTROL VALVE

### With CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

5. Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
6. Check air passage continuity and operation delay time.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
ON	No
OFF	Yes

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
H02S1 (B1)	XXX V

PBIB0834E

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform inspection again.

### Without CONSULT-II

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

3. Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
12V direct current supply between terminals 1 and 2	No
OFF	Yes

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.

## DTC P1446 EVAP CANISTER VENT CONTROL VALVE

[QR25DE]

---

5. Perform inspection again.

## DTC P1448 EVAP CANISTER VENT CONTROL VALVE

### Component Description

**NOTE:**

If DTC P1448 is displayed with P0442, perform trouble diagnosis for DTC P1448 first.

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.

This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.

This solenoid valve is used only for diagnosis, and usually remains opened.

When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows "EVAP Control System (Small Leak)" diagnosis.

### CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

### On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1448 1448	EVAP canister vent control valve open	EVAP canister vent control valve remains opened under specified driving conditions.	<ul style="list-style-type: none"> <li>● EVAP canister vent control valve</li> <li>● EVAP control system pressure sensor and the circuit</li> <li>● Blocked rubber tube to EVAP canister vent control valve</li> <li>● EVAP canister is saturated with water</li> <li>● Vacuum cut valve</li> </ul>

### DTC Confirmation Procedure

**NOTE:**

- If DTC P1448 is displayed with P0442, perform trouble diagnosis for DTC P1448 first.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

**TESTING CONDITION:**

- Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 to 3/4 full and vehicle is placed on flat level surface.
- Always perform test at a temperature of 0 to 30°C (32 to 86°F).

# DTC P1448 EVAP CANISTER VENT CONTROL VALVE

[QR25DE]

1. Turn ignition switch "ON".
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Make sure that the following conditions are met.

COOLANT TEMP/S	0 - 70°C (32 - 158°F)
INT/A TEMP SE	0 - 30°C (32 - 86°F)

5. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
Follow the instruction displayed.

If the engine speed cannot be maintained within the range displayed on the CONSULT-II screen, go to [EC-1291, "Basic Inspection"](#).

6. Make sure that "OK" is displayed.  
If "NG" is displayed, go to the following step.

**NOTE:**

**Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.**

7. Stop engine and wait at least 10 seconds, then turn "ON".
8. Disconnect hose from vehicle frame.

9. Select "VENT CONTROL/V" of "ACTIVE TEST" mode with CONSULT-II.
10. Touch "ON" and "OFF" alternately.

ACTIVE TEST	
VENT CONTROL/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 (B1)	XXX V

11. Make sure the following.

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes

If the result is NG, go to [EC-1691, "Diagnostic Procedure"](#).  
If the result is OK, go to "Diagnostic Procedure" for DTC P0442, [EC-1515](#).

3.2 - 4.8 N-m  
(0.33 - 0.49 kg-m,  
29 - 43 in-lb)

## Overall Function Check

Use this procedure to check the overall function of the EVAP canister vent control valve circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Disconnect hose from vehicle frame.
2. Disconnect EVAP canister vent control valve harness connector.
3. Verify the following.

Condition	Air passage continuity
12V direct current supply between terminals 1 and 2	No
No supply	Yes

If the result is NG, go to [EC-1691, "Diagnostic Procedure"](#).  
 If the result is OK, go to "Diagnostic Procedure" for DTC P0442, [EC-1515](#).

BBWA0225E

# DTC P1448 EVAP CANISTER VENT CONTROL VALVE

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
11	L/Y	EVAP canister vent control valve	[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS002K4

### 1. CHECK RUBBER TUBE

1. Turn ignition switch "OFF".
2. Disconnect rubber tube connected to EVAP canister vent control valve.

3. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 2.
- NG >> Clean rubber tube using an air blower.

### 2. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to [EC-1693, "Component Inspection"](#).

OK or NG

- OK >> GO TO 3.
- NG >> Replace EVAP canister vent control valve.

### 3. CHECK VACUUM CUT VALVE

Refer to [EC-1721, "Component Inspection"](#).

OK or NG

- OK >> GO TO 4.
- NG >> Replace vacuum cut valve.

#### 4. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Check if water will drain from the EVAP canister.

Yes or No

- Yes >> GO TO 5.  
No >> GO TO 7.

#### 5. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve attached.

**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK >> GO TO 7.  
NG >> GO TO 6.

#### 6. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

#### 7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR HOSE

Check disconnection or improper connection of hose connected to EVAP control system pressure sensor.

OK or NG

- OK >> GO TO 8.  
NG >> Repair it.

## 8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 9.
- NG >> Replace EVAP control system pressure sensor.

## 9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace EVAP control system pressure sensor.

## 10. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection EVAP CANISTER VENT CONTROL VALVE

UBS002K5

**With CONSULT-II**

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch "ON".

# DTC P1448 EVAP CANISTER VENT CONTROL VALVE

[QR25DE]

- Perform "VENT CONTROL/V" in "ACTIVE TEST" mode.
- Check air passage continuity and operation delay time.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
ON	No
OFF	Yes

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

- Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
- Perform inspection again.

⊗ **Without CONSULT-II**

- Remove EVAP canister vent control valve from EVAP canister.
- Check portion **B** of EVAP canister vent control valve for being rusted.

ACTIVE TEST

**Operation takes less than 1 second.**  
**Make sure new O-ring is installed properly.**  
 If NG, go to next step.

- Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
- Perform inspection again.

DTC P1456 EVAP CONTROL SYSTEM

PFP:14710

On Board Diagnosis Logic

UBS002K6

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using of vapor pressure in the fuel tank.

The EVAP canister vent control valve is closed to shut the EVAP purge line. The vacuum cut valve bypass valve will then be opened to clear the line between the fuel tank and the EVAP canister purge volume control solenoid valve. The EVAP control system pressure sensor can now monitor the pressure inside the fuel tank. If pressure increases, the ECM will check for leaks in the line between the vacuum cut valve and EVAP canister purge volume control solenoid valve.

## CAUTION:

- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- If the fuel filler cap is not tightened properly, the MIL may come on.
- Use only a genuine NISSAN rubber tube as a replacement.

## DTC Confirmation Procedure

UBS002K7

### NOTE:

- After repair, make sure that the hoses and clips are installed properly.
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### TESTING CONDITION:

- Open engine hood before conducting following procedure.
- If any of following conditions are met just before the DTC confirmation procedure, leave the vehicle for more than 1 hour.
  - Fuel filler cap is removed.
  - Refilled or drained the fuel.
  - EVAP component parts is/are removed.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

### WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Make sure the following conditions are met.
  - FUEL LEVEL SE: 0.25 - 1.15V
  - COOLAN TEMP/S: 0 - 32°C (32 - 90°F)
  - FUEL T/TMP SE: 0 - 35°C (32 - 95°F)

**INT A/TEMP SE: More than 0°C (32°F)**

If NG, turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle) or refilling/draining fuel until the output voltage condition of the "FUEL LEVEL SE" meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).

3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Turn ignition switch "ON".
5. Select "EVAP V/S LEAK P0456/P1456" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.  
Follow the instruction displayed.

6. Make sure that "OK" is displayed.  
If "NG" is displayed, refer to [EC-1698, "Diagnostic Procedure"](#) .

**NOTE:**

- If the engine speed cannot be maintained within the range displayed on CONSULT-II screen, go to [EC-1291, "Basic Inspection"](#) .
- Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

## Overall Function Check

UBS002K8

**WITH GST**

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a 1st trip DTC might not be confirmed.

**CAUTION:**

- Never use compressed air, doing so may damage the EVAP system.
- Do not start engine.
- Do not exceeded 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi).

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Set the pressure pump and a hose.
3. Also set a vacuum gauge via 3-way connector and a hose.
4. Turn ignition switch "ON".
5. Connect GST and select MODE 8.
6. Using MODE 8 control the EVAP canister vent control valve (close) and vacuum cut valve bypass valve (open).
7. Apply pressure and make sure the following conditions are satisfied.

**Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg)**

**Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg).**

If NG, go to [EC-1698, "Diagnostic Procedure"](#) .

If OK, go to next step.

8. Disconnect GST.
9. Start engine and warm it up to normal operating temperature.
10. Turn ignition switch "OFF" and wait at least 10 seconds.
11. Restart engine and let it idle for 90 seconds.

12. Keep engine speed at 2,000 rpm for 30 seconds.
13. Turn ignition switch "OFF".

**NOTE:**

For more information, refer to GST instruction manual.

## Diagnostic Procedure

UBS002K9

### 1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch "OFF".
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

- OK >> GO TO 2.  
NG >> Replace with genuine NISSAN fuel filler cap.

### 2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

- OK >> GO TO 3.  
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.  
2. Retighten until ratcheting sound is heard.

### 3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

- OK >> GO TO 5.  
NG >> GO TO 4.

### 4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to [EC-1849, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FULLER CAP\)"](#).

OK or NG

- OK >> GO TO 5.  
NG >> Replace fuel filler cap with a genuine one.

**5. INSTALL THE PRESSURE PUMP**

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely.

**NOTE:**

**Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.**

Models with CONSULT-II>>GO TO 6.  
Models without CONSULT-II>>GO TO 7.

**6. CHECK FOR EVAP LEAK**

**Ⓜ With CONSULT-II**

1. Turn ignition switch "ON".
2. Select "EVAP SYSTEM CLOSE" of "WORK SUPPORT" mode with CONSULT-II.
3. Touch "START" and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup> , 0.6 psi) of pressure in the system.

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

**OK or NG**

- OK >> GO TO 8.
- NG >> Repair or replace.

## 7. CHECK FOR EVAP LEAK

⊗ **Without CONSULT-II**

1. Turn ignition switch "OFF".
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)
3. Apply 12 volts DC to vacuum cut valve bypass valve. The valve will open. (Continue to apply 12V until the end of test.)

4. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

**NOTE:**

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in the system.

5. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

OK or NG

- OK    >> GO TO 8.  
 NG    >> Repair or replace.

## 8. CHECK EVAP CANISTER VENT CONTROL VALVE, O-RING AND CIRCUIT

Refer to "DTC Confirmation Procedure", [EC-1687](#).

OK or NG

- OK    >> GO TO 9.  
 NG    >> Repair or replace EVAP canister vent control valve and O-ring or harness/connector.

## 9. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Does water drain from the EVAP canister?

Yes or No

- Yes    >> GO TO 11.  
 No (With CONSULT-II) >> GO TO 12.  
 No (Without CONSULT-II) >> GO TO 13.

**10. CHECK EVAP CANISTER**

Weigh the EVAP canister with the EVAP canister vent control valve attached.  
**The weight should be less than 1.8 kg (4.0 lb).**

OK or NG

- OK (With CONSULT-II)>>GO TO 12.
- OK (Without CONSULT-II)>>GO TO 13.
- NG >> GO TO 12.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

**12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**Ⓜ With CONSULT-II**

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform "PURG VOL CONT/V" in "ACTIVE TEST" mode.
4. Touch "Qu" on CONSULT-II screen to increase "PURG VOL CONT/V" opening to 100.0%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XX %
HO2S1 MNTR (B1)	LEAN

PBIB0828E

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

**13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION**

**Ⓧ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

**Vacuum should exist.**

OK or NG

- OK >> GO TO 16.
- NG >> GO TO 14.

**14. CHECK VACUUM HOSE**

Check vacuum hoses for clogging or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#) .

OK or NG

- OK >> GO TO 15.
- NG >> Repair or reconnect the hose.

---

**15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE**

---

Refer to [EC-1526, "Component Inspection"](#) .

OK or NG

OK >> GO TO 16.

NG >> Replace EVAP canister purge volume control solenoid valve.

---

**16. CHECK FUEL TANK TEMPERATURE SENSOR**

---

Refer to [EC-1456, "Component Inspection"](#) .

OK or NG

OK >> GO TO 17.

NG >> Replace fuel level sensor unit.

---

**17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR**

---

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace EVAP control system pressure sensor.

---

**18. CHECK EVAP PURGE LINE**

---

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection.

Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#) .

OK or NG

OK >> GO TO 19.

NG >> Repair or reconnect the hose.

---

**19. CLEAN EVAP PURGE LINE**

---

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

---

**20. CHECK REFUELING EVAP VAPOR LINE**

---

Check refueling EVAP vapor line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to [EC-1852, "ON BOARD REFUELING VAPOR RECOVERY \(ORVR\)"](#) .

OK or NG

OK >> GO TO 21.

NG >> Repair or replace hoses and tubes.

---

**21. CHECK SIGNAL LINE AND RECIRCULATION LINE**

---

Check signal line and recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.

NG >> Repair or replace hoses, tubes or filler neck tube.

---

**22. CHECK REFUELING CONTROL VALVE**

---

Refer to [EC-1855, "Component Inspection"](#) .

OK or NG

OK >> GO TO 23.

NG >> Replace refueling control valve with fuel tank.

---

**23. CHECK FUEL LEVEL SENSOR**

---

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

OK >> GO TO 24.

NG >> Replace fuel level sensor unit.

**DTC P1464 FUEL LEVEL SENSOR**

**Component Description**

UBS002KB

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the ECM.

It consists of two parts, one is mechanical float and the other side is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

UBS002KC

**On Board Diagnosis Logic**

ECM receives two signals from the fuel level sensor.

One is fuel level sensor power supply circuit, and the other is fuel level sensor ground circuit.

This diagnosis indicates the latter to detect open circuit malfunction.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause

## Diagnostic Procedure

UBS002KF

### 1. CHECK FUEL LEVEL SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 77 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F26, M58
- Harness connectors M16, B3
- Harness for open and short between ECM and body ground

>> Replace open circuit or short to power in harness or connectors.

### 3. CHECK FUEL LEVEL SENSOR

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#) .

OK or NG

- OK >> GO TO 4.
- NG >> Replace fuel level sensor unit.

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

UBS002KG

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

## DTC P1490 VACUUM CUT VALVE BYPASS VALVE

PFP:17372

### Description

UBS002KH

#### COMPONENT DESCRIPTION

The vacuum cut valve and vacuum cut valve bypass valve are installed in parallel on the EVAP purge line between the fuel tank and the EVAP canister.

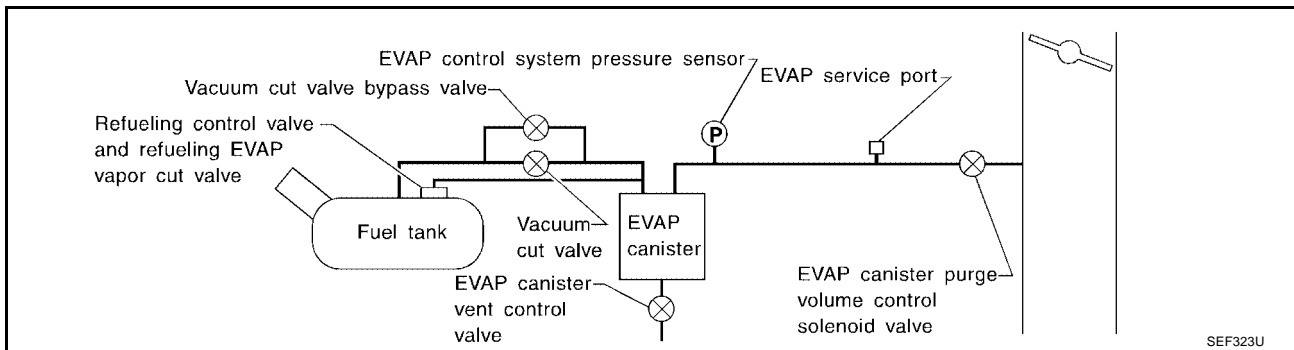

The vacuum cut valve prevents the intake manifold vacuum from being applied to the fuel tank.

The vacuum cut valve bypass valve is a solenoid type valve and generally remains closed. It opens only for on board diagnosis.

The vacuum cut valve bypass valve responds to signals from the ECM. When the ECM sends an ON (ground) signal, the valve is opened. The vacuum cut valve is then bypassed to apply intake manifold vacuum to the fuel tank.

## 3. CHECK VACUUM CUT VALVE BYPASS VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect vacuum cut valve bypass valve harness connector.

3. Turn ignition switch "ON".
4. Check voltage between vacuum cut valve bypass valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M14, B1
- Fuel block (J/B) connector M1
- 10A fuse
- Harness for open or short between vacuum cut valve bypass valve and fuse

>> Repair harness or connectors.

## 5. CHECK VACUUM CUT VALVE BYPASS VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 8 and vacuum cut valve bypass valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M14
- Harness connectors M59, F27
- Harness for open or short between vacuum cut valve bypass valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK VACUUM CUT VALVE BYPASS VALVE

Refer to [EC-1712, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace vacuum cut valve bypass valve.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection VACUUM CUT VALVE BYPASS VALVE

## DTC Confirmation Procedure

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

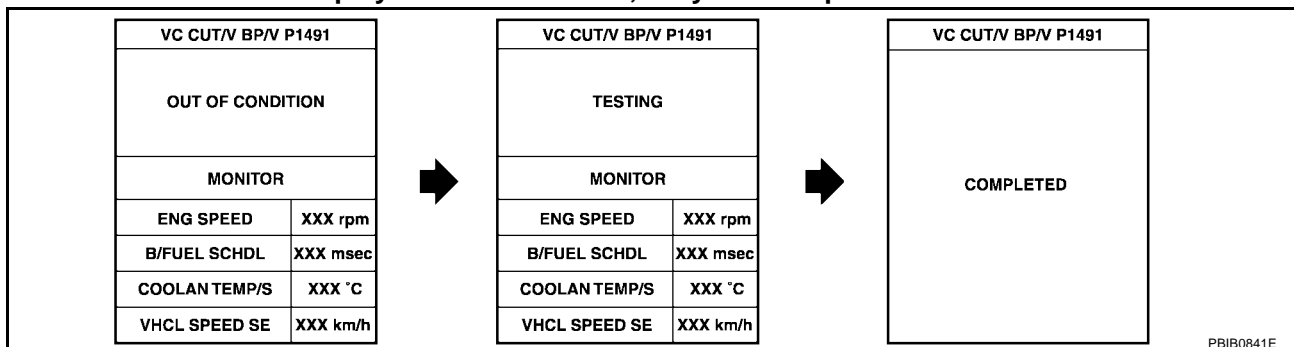

Always perform test at a temperature of 5 to 30°C (41 to 86°F).

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and let it idle for at least 70 seconds.
5. Select "VC CUT/V BP/V P1491" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-II.
6. Touch "START".
7. When the following conditions are met, "TESTING" will be displayed on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take at least 30 seconds.)

ENG SPEED	1,000 - 3,800 rpm
Selector lever	Suitable position
Vehicle speed	36 - 120 km/h (22 - 75 MPH)
B/FUEL SCHDL	1.0 - 7.2 msec

If "TESTING" is not displayed after 5 minutes, retry from step 3.

8. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-1718, "Diagnostic Procedure"](#).

## Overall Function Check

Use this procedure to check the overall function of vacuum cut valve bypass valve. During this check, the 1st trip DTC might not be confirmed.

**WITH GST**

1. Remove vacuum cut valve and vacuum cut valve bypass valve as an assembly.

## DTC P1491 VACUUM CUT VALVE BYPASS VALVE

[QR25DE]

2. Apply vacuum to port **A** and check that there is no suction from port **B**.
3. Apply vacuum to port **B** and check that there is suction from port **A**.
4. Blow air in port **B** and check that there is a resistance to flow out of port **A**.
5. Supply battery voltage to the terminal.
6. Blow air in port **A** and check that air flows freely out of port **B**.
7. Blow air in port **B** and check that air flows freely out of port **A**.
8. If NG, go to [EC-1718, "Diagnostic Procedure"](#).

- NG >> Replace vacuum cut valve bypass valve.

---

## 9. CHECK VACUUM CUT VALVE

---

Refer to [EC-1721, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.
- NG >> Replace vacuum cut valve.

---

## 10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR HOSE

---

1. Turn ignition switch "OFF".
2. Check disconnection or improper connection of hose connected to EVAP control system pressure sensor.

OK or NG

- OK >> GO TO 11.
- NG >> Repair or replace.

---

## 11. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

---

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

**Water should not exist.**

OK or NG

- OK >> GO TO 12.
- NG >> Replace EVAP control system pressure sensor.

---

## 12. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

---

Refer to [EC-1539, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 13.
- NG >> Replace EVAP control system pressure sensor.

---

## 13. CHECK RUBBER TUBE FOR CLOGGING

---

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

- OK >> GO TO 14.
- NG >> Clean the rubber tube using an air blower.

---

## 14. CHECK EVAP CANISTER VENT CONTROL VALVE

---

Refer to [EC-1532, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 15.
- NG >> Replace EVAP canister vent control valve.

15. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**VACUUM CUT VALVE BYPASS VALVE**

UBS002KV

**With CONSULT-II**

1. Reconnect harness disconnected connectors.
2. Turn ignition switch ON.
3. Perform "VC/V BYPASS/V" in "ACTIVE TEST" mode.

ACTIVE TEST	
VC/V BYPASS/V	OFF
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 MNTR (B1)	LEAN

PBIB0840E

4. Check air passage continuity and operation delay time under the following conditions.

Condition VC/V BYPASS/V	Air passage continuity between <b>A</b> and <b>B</b>
ON	Yes
OFF	No

**Operation takes less than 1 second.**  
If NG, replace vacuum cut valve bypass valve.

**Without CONSULT-II**

Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between <b>A</b> and <b>B</b>
12V direct current supply between terminals 1 and 2	Yes
No supply	No

**Operation takes less than 1 second.**  
If NG, replace vacuum cut valve bypass valve.

## VACUUM CUT VALVE

Check vacuum cut valve as follows:

1. Plug port **C** and **D** with fingers.
2. Apply vacuum to port **A** and check that there is no suction from port **B**.
3. Apply vacuum to port **B** and check that there is suction from port **A**.
4. Blow air in port **B** and check that there is a resistance to flow out of port **A**.
5. Open port **C** and **D**.
6. Blow air in port **A** check that air flows freely out of port **C**.
7. Blow air in port **B** check that air flows freely out of port **D**.
8. If NG, replace vacuum cut valve.

**DTC P1564 ASCD STEERING SWITCH**

**Component Description**

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

Refer to [EC-1860, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAIN SW	● Ignition switch: ON	● CRUISE switch: Depressed	ON

## Diagnostic Procedure

### 1. CHECK ASCD STEERING SWITCH CIRCUIT

#### With CONSULT-II

1. Turn ignition switch "ON".
2. Select "MAIN SW", "RESUME/ACC SW", "SET SW" and "CANCEL SW" in "DATA MONITOR" mode with CONSULT-II.
3. Check each item indication under the following conditions.

Switch	Monitor item	Condition	Indication
CRUISE	MAIN SW	Pressed	ON
		Released	OFF
COAST/SET	SET SW	Pressed	ON
		Released	OFF
ACCEL/RES	RESUME/ACC SW	Pressed	ON
		Released	OFF
CANCEL	CANCEL SW	Pressed	ON
		Released	OFF

DATA MONITOR	
MONITOR	NO DTC
MAIN SW	OFF
CANCEL SW	OFF
RESUME/ACC SW	OFF
SET SW	OFF

SEC006D

#### Without CONSULT-II

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 89 and ground with pressing each button.

Switch	Condition	Voltage [V]
CRUISE	Pressed	Approx. 0.5
	Released	Approx. 4.0
COAST/SET	Pressed	Approx. 2.0
	Released	Approx. 4.0
ACCEL/RES	Pressed	Approx. 3.0
	Released	Approx. 4.0
CANCEL	Pressed	Approx. 1.0
	Released	Approx. 4.0

#### OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 2.

### 2. CHECK ASCD STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect ASCD steering switch harness connector.
4. Check harness continuity between ASCD steering switch terminal 1 and ECM terminal 58. Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

---

### 3. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M59, F27
- Harness connectors M102, M401
- Joint connector-2
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

### 4. CHECK ASCD STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Check harness continuity between ECM terminal 89 and ASCD steering switch terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

---

### 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M59, F27
- Harness connectors M102, M401
- Spiral cable
- Harness for open and short between ECM and ASCD steering switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

### 6. CHECK ASCD STEERING SWITCH

---

Refer to [EC-1728, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.
- NG >> Replace ASCD steering switch.

---

### 7. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1606, "DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION"](#) .

>> **INSPECTION END**

#### **Component Inspection** **ASCD STEERING SWITCH**

UBS002L2

1. Disconnect ASCD steering switch.

# DTC P1564 ASCD STEERING SWITCH

[QR25DE]

2. Check continuity between ASCD steering switch terminals 1 and 4 with pushing each switch.

Switch	Condition	Resistance [ $\Omega$ ]
CRUISE SW	Pressed	Approx. 4,000
	Released	Approx. 0
COAST/SET SW	Pressed	Approx. 660
	Released	Approx. 0
ACCEL/RES SW	Pressed	Approx. 1,000
	Released	Approx. 0
CANCEL SW	Pressed	Approx. 250
	Released	Approx. 0

If NG, replace ASCD steering switch.

## DTC P1572 ASCD BRAKE SWITCH

PFP:25320

### Component Description

UBS002L3

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal).

Refer to [EC-1860, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002L4

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1 (ASCD brake switch)	● Ignition switch: ON	● Brake pedal: Fully released	ON
		● Brake pedal: Slightly depressed	OFF
BRAKE SW2 (stop lamp switch)	● Ignition switch: ON	● Brake pedal: Fully released	OFF
		● Brake pedal: Slightly depressed	ON

### On Board Diagnosis Logic

UBS002L5

The MIL will not light up for this diagnosis.

#### NOTE:

If DTC P1572 is displayed with DTC P0605 or P1805, first perform the trouble diagnosis for DTC P0605 or P1805. Refer to [EC-1583](#) or [EC-1746](#).

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1572 1572	ASCD brake switch	ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The stop lamp switch circuit is open or shorted.)</li> <li>● Harness or connectors (The ASCD brake switch circuit is open or shorted.)</li> <li>● Harness or connectors (The ASCD clutch switch circuit is open or shorted.)</li> <li>● Stop lamp switch</li> <li>● ASCD brake switch</li> <li>● ASCD clutch switch</li> <li>● Incorrect stop lamp switch installation</li> <li>● Incorrect ASCD brake switch installation</li> <li>● Incorrect ASCD clutch switch installation</li> <li>● ECM</li> </ul>

### DTC Confirmation Procedure

UBS002L6

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

# DTC P1572 ASCD BRAKE SWITCH

[QR25DE]

Steps 3 and 4 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

## WITH CONSULT-II

1. Start engine.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position

If 1st trip DTC is detected, go to [EC-1733, "Diagnostic Procedure"](#) .  
If 1st trip DTC is not detected, go to the following step.

4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Selector lever	Suitable position
Driving location	Depress the brake pedal for more than five seconds so as not to come off from the above-mentioned condition.

5. If 1st trip DTC is detected, go to [EC-1733, "Diagnostic Procedure"](#) .

## WITH GST

Follow the procedure "WITH CONSULT-II" above.

# DTC P1572 ASCD BRAKE SWITCH

[QR25DE]

UBS002L7

## Wiring Diagram

EC-ASC/BS-01

BBWA0421E

# DTC P1572 ASCD BRAKE SWITCH

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
40	R/G	Stop lamp switch	[Engine is running] ● Brake pedal fully released	Approximately 0V
			[Engine is running] ● Brake pedal depressed	BATTERY VOLTAGE (11 - 14V)
56	P/L	ASCD brake switch	[Ignition switch "ON"] ● Brake pedal is depressed ● Clutch pedal is depressed (M/T models)	Approximately 0V
			[Ignition switch "ON"] ● Brake pedal is fully released ● Clutch pedal is fully released (M/T models)	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS002L8

### 1. CHECK OVERALL FUNCTION-I

**With CONSULT-II**

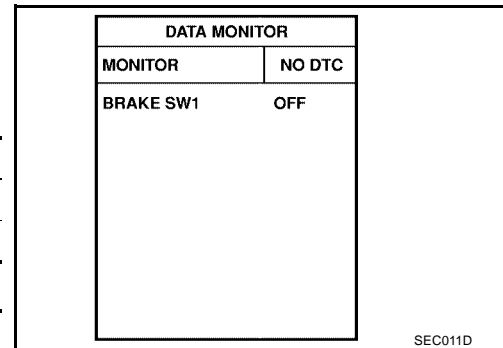

- Turn ignition switch "ON".
- Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
- Check "BRAKE SW1" indication under the following conditions.

**M/T models**

CONDITION	INDICATION
When clutch pedal or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

**A/T models**

CONDITION	INDICATION
When brake pedal is depressed	OFF
When brake pedal is fully released	ON

**Without CONSULT-II**

- Turn ignition switch "ON".
- Check voltage between ECM terminal 56 and ground under the following conditions.

**M/T models**

CONDITION	VOLTAGE
When clutch pedal or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

**A/T models**

CONDITION	VOLTAGE
When brake pedal is depressed	Approximately 0V
When brake pedal is fully released	Battery voltage

OK or NG

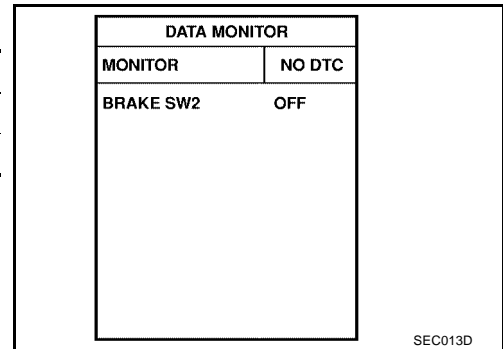

- OK >> GO TO 2.
- NG (M/T models) >>GO TO 3.
- NG (A/T models) >>GO TO 4.

## 2. CHECK OVERALL FUNCTION-II

### ④ With CONSULT-II

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

### ⊗ Without CONSULT-II

Check voltage between ECM terminal 40 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

#### OK or NG

- OK >> GO TO 18.
- NG >> GO TO 13.

## 3. CHECK ASCD BRAKE SWITCH CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

#### OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

**4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT**

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models)>>GO TO 6.  
 OK (A/T models)>>GO TO 7.  
 NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

**7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 56 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.  
NG >> GO TO 8.

---

**8. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**9. CHECK ASCD BRAKE SWITCH**

---

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD brake switch.

---

**10. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 56 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.  
NG >> GO TO 11.

---

**11. DETECT MALFUNCTIONING PART**

---

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

**12. CHECK ASCD CLUTCH SWITCH**

---

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.  
NG >> Replace ASCD clutch switch.

**13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT**

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal 1 and ground with CONSULT -II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 14.

**14. DETECT MALFUNCTIONING PART**

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

**15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 40 and stop lamp switch terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.  
 NG >> GO TO 16.

**16. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

**17. CHECK STOP LAMP SWITCH**

Refer to [EC-1738, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 18.
- NG >> Replace stop lamp switch.

**18. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
ASC D BRAKE SWITCH**

UBS002L9

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Check continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should exist.
When brake pedal is depressed.	Should not exist.

If NG, adjust ASCD brake switch installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#) , and perform step 3 again.

**ASC D CLUTCH SWITCH (FOR M/T MODELS)**

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When clutch pedal is fully released.	Should exist.
When clutch pedal is depressed.	Should not exist.

If NG, adjust ASCD clutch switch installation, refer to [CL-23, "CLUTCH SYSTEM"](#) , and perform step 3 again.

## STOP LAMP SWITCH

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.
3. Check continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Condition	Continuity
When brake pedal is fully released.	Should not exist.
When brake pedal is depressed.	Should exist.

If NG, adjust stop lamp switch installation, refer to [BR-11](#), "[BRAKE PEDAL AND BRACKET](#)", and perform step 3 again.

# DTC P1574 ASCD VEHICLE SPEED SENSOR

[QR25DE]

## DTC P1574 ASCD VEHICLE SPEED SENSOR

PF3:31036

### Component Description

UBS002LA

The ECM receives two vehicle speed sensor signals. One is sent from combination meter, and the other is from TCM (Transmission control module) via CAN communication line. The ECM uses these signals for ASCD control. Refer to [EC-1860, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for ASCD functions.

### On Board Diagnosis Logic

UBS002LB

The MIL will not light up for this diagnosis.

#### NOTE:

- If DTC P1574 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-1350, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).
- If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to [EC-1575, "DTC P0500 VSS"](#).
- If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to [EC-1583, "DTC P0605 ECM"](#).

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 1574	ASCD vehicle speed sensor	ECM detects a difference between two vehicle speed signals is out of the specified range.	<ul style="list-style-type: none"><li>● Harness or connectors (The CAN communication line is open or shorted.)</li><li>● Harness or connectors (The combination meter circuit is open or shorted.)</li><li>● TCM</li><li>● Combination meter</li><li>● Vehicle speed sensor</li><li>● ECM</li></ul>

### DTC Confirmation Procedure

UBS002LC

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

Step 3 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

#### Ⓟ WITH CONSULT-II

1. Start engine.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Drive the vehicle at more than 40 km/h (25MPH).
4. If 1st trip DTC is detected, go to [EC-1741, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### Ⓟ WITH GST

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure****1. CHECK DTC WITH TCM**

Check DTC with TCM. Refer to [AT-428, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION"](#) .

OK or NG

OK >> GO TO 2.

NG >> Perform trouble shooting relevant to DTC indicated.

**2. CHECK VEHICLE SPEED SENSOR CIRCUIT**

Refer to [DI-26, "VEHICLE SPEED SENSOR SIGNAL CHECK"](#) .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

**3. CHECK COMBINATION METER**

Check combination meter function.

Refer to [DI-3, "METERS AND GAUGES"](#) .

## DTC P1706 PNP SWITCH

PFP:32006

### Component Description

UBS002LE

When the shift lever position is "P" (A/T models only) or "N", park/neutral position (PNP) switch is "ON". ECM detects the position because the continuity of the line (the "ON" signal) exists.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002LF

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
P/N POSI SW	● Ignition switch: ON	ON
	Shift lever: Except above	OFF

### On Board Diagnosis Logic

UBS002LG

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1706 1706	Park/neutral position switch	The signal of the park/neutral position (PNP) switch is not changed in the process of engine starting and driving.	<ul style="list-style-type: none"> <li>● Harness or connectors [The park/neutral position (PNP) switch circuit is open or shorted.]</li> <li>● Park/neutral position (PNP) switch</li> </ul>

### DTC Confirmation Procedure

UBS002LH

**CAUTION:**

**Always drive vehicle at a safe speed.**

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "P/N POSI SW" in "DATA MONITOR" mode with CONSULT-II. Then check the "P/N POSI SW" signal under the following conditions.

Position (Selector lever)	Known-good signal
"N" and "P" position	ON
Except the above position	OFF

If NG, go to [EC-1745, "Diagnostic Procedure"](#) .

If OK, go to following step.

3. Select "DATA MONITOR" mode with CONSULT-II.
4. Start engine and warm it up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	1,500 - 3,000 rpm
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	3.0 - 31.8 msec
VHCL SPEED SE	More than 64 km/h (40 MPH)
Selector lever	Suitable position

6. If 1st trip DTC is detected, go to [EC-1745, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
P/N POSI SW	ON

SEF212Y

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
P/N POSI SW	OFF
B/FUEL SCHDL	XXX msec

SEF213Y

## Overall Function Check

Use this procedure to check the overall function of the park/neutral position (PNP) switch circuit. During this check, a 1st trip DTC might not be confirmed.

**WITH GST**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 43 (PNP switch signal) and body ground under the following conditions.

Condition (Gear position)	Voltage V (Known good data)
"P" (A/T models only) and "N" position	Approx. 0
Except the above position	A/T models: Battery voltage M/T: Approximately 5V

3. If NG, go to [EC-1745, "Diagnostic Procedure"](#) .

# DTC P1706 PNP SWITCH

[QR25DE]

UBS002LJ

## Wiring Diagram

### EC-PNP/SW-01

BBWA0241E

# DTC P1706 PNP SWITCH

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

## CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
43	G/OR	PNP switch	<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"><li>Shift lever position is "P" or "N" (A/T models), "Neutral" (M/T models).</li></ul>	Approximately 0V
			<b>[Ignition switch "ON"]</b> <ul style="list-style-type: none"><li>Except the above gear position</li></ul>	<b>A/T models</b> BATTERY VOLTAGE (11 - 14V) <b>M/T models</b> Approximately 5V

## Diagnostic Procedure

UBS002LK

### 1. CHECK GROUND CIRCUIT

- Turn ignition switch "OFF".
- Disconnect PNP switch harness connector.
- Check harness continuity between PNP switch terminal 2 and body ground. Refer to Wiring Diagram.

**Continuity should exist.**

- Also check harness for short to power.

OK or NG

OK >> GO TO 2.

NG >> Repair open circuit or short to power in harness or connectors.

### 2. CHECK INPUT SIGNAL CIRCUIT

- Disconnect ECM harness connector.
- Check harness continuity between ECM terminal 43 and PNP switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

- Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to power in harness or connectors.

### 3. CHECK PNP SWITCH

Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#) (A/T models), [MT-139, "POSITION SWITCH"](#) (6M/T models) or [MT-78, "POSITION SWITCH"](#) (5M/T models).

OK or NG

OK >> GO TO 4.

NG >> Replace PNP switch.

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

>> INSPECTION END

## DTC P1805 BRAKE SWITCH

PFP:25320

### Description

UBS002LL

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002LM

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
BRAKE SW	<ul style="list-style-type: none"> <li>● Ignition switch: ON</li> </ul>	Brake pedal: Fully released OFF
		Brake pedal: Slightly depressed ON

### On Board Diagnosis Logic

UBS002LN

The MIL will not light up for this diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for an extremely long time while the vehicle is driving.	<ul style="list-style-type: none"> <li>● Harness or connectors (Stop lamp switch circuit is open or shorted.)</li> <li>● Stop lamp switch</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Engine operating condition in fail-safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range.	
	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

### DTC Confirmation Procedure

UBS002LO

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-II.
4. Select "DATA MONITOR" mode with CONSULT-II.
5. If 1st trip DTC is detected, go to [EC-1748, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

#### WITH GST

Follow the procedure "WITH CONSULT-II" above.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
40	R/G	Stop lamp switch	[Engine is running] ● Brake pedal fully released	Approximately 0V
			[Engine is running] ● Brake pedal depressed	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS002LQ

### 1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch "OFF".
2. Check the stop lamp when depressing and releasing the brake pedal.

Brake pedal	Stop lamp
Fully released	Not illuminated
Depressed	Illuminated

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 2.

### 2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.

BBA0105E

2. Check voltage between stop lamp switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

PBIB1225E

### 3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector M2
- Harness for open and short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect stop lamp switch harness connector.
4. Check harness continuity between ECM terminal 40 and stop lamp switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 6. CHECK STOP LAMP SWITCH

Refer to [EC-1750, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
NG >> Replace stop lamp switch.

### 7. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection STOP LAMP SWITCH

1. Disconnect stop lamp switch harness connector.

2. Check continuity between stop lamp switch terminals 1 and 2 under the following conditions.

Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

If NG, adjust brake pedal installation, refer to [BR-11, "BRAKE PEDAL AND BRACKET"](#), and perform step 2 again.

**DTC P2122, P2123 APP SENSOR**

**Component Description**

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.41 - 0.71V
		Accelerator pedal: Fully depressed	More than 4.2V
CLSD THL POS	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

**On Board Diagnosis Logic**

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The APP sensor 1 circuit is open or shorted.)</li> <li>● Accelerator pedal position sensor (Accelerator pedal position sensor 1)</li> </ul>
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

**FAIL-SAFE MODE**

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

## Diagnostic Procedure

UBS006KD

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminal 2 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Joint connector-1
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between APP sensor terminal 4 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Joint connector-2
- Harness for open or short between ECM and accelerator pedal position sensor
- Harness for open or short between TCM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK APP SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 75 and APP sensor terminal 3.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Harness for open or short between ECM and accelerator pedal position sensor

DTC P2127, P2128 APP SENSOR

Component Description

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.

Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN2★	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	0.41 - 0.71V
		Accelerator pedal: Fully depressed	More than 4.2V
CLSD THL POS	● Ignition switch: ON (engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

★: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2127 2127	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The APP sensor 2 circuit is open or shorted.)</li> <li>● Accelerator pedal position sensor (Accelerator pedal position sensor 2)</li> </ul>
P2128 2128	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

			<b>[Ignition switch "ON"]</b> ● Engine speed ● Accelerator pedal fully depressed	More than 4.2V
76	R/B	Accelerator pedal position sensor 2	<b>[Ignition switch "ON"]</b> ● Engine speed ● Accelerator pedal fully released	0.21 - 0.36V
			<b>[Ignition switch "ON"]</b> ● Engine speed ● Accelerator pedal fully depressed	More than 2.1V
86	G	Accelerator pedal position sensor 2 ground	<b>[Ignition switch "ON"]</b>	Approximately 0V

## Diagnostic Procedure

UBS006L1

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CHECK APP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between APP sensor terminals 1, 2 and ground with CONSULT-II or tester.

APP sensor terminal	Voltage (V)
1	Approximately 2.5
2	Approximately 5

OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E59, F27
- Joint connector-1
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 4. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between APP sensor terminal 4, 5 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness connectors M59, F27
- Joint connector-2
- Harness for open or short between ECM and accelerator pedal position sensor
- Harness for open or short between TCM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 75 and APP sensor terminal 3, ECM terminal 76 and APP sensor terminal 6.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M58, F26
- Harness connectors M59, F27
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK APP SENSOR

Refer to [EC-1775, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace accelerator pedal assembly.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

### Component Inspection ACCELERATOR PEDAL POSITION SENSOR

UBS006L2

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch "ON".

# DTC P2138 APP SENSOR

[QR25DE]

3. Check voltage between ECM terminals 75 (APP sensor 1 signal), 76 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
75 (Accelerator pedal position sensor 1)	Fully released	0.41 - 0.71V
	Fully depressed	More than 4.2V
76 (Accelerator pedal position sensor 2)	Fully released	0.21 - 0.36V
	Fully depressed	More than 2.1V

4. If NG, replace accelerator pedal assembly and go to next step.  
5. Perform [EC-1255, "Accelerator Pedal Released Position Learning"](#) .  
6. Perform [EC-1255, "Throttle Valve Closed Position Learning"](#) .  
7. Perform [EC-1255, "Idle Air Volume Learning"](#) .

## Remove and Installation ACCELERATOR PEDAL

UBS006L3

Refer to [ACC-2, "ACCELERATOR CONTROL SYSTEM"](#) .

## IGNITION SIGNAL

### Component Description

#### IGNITION COIL & POWER TRANSISTOR

The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns on and off the ignition coil primary circuit. This on-off operation induces the proper high voltage in the coil secondary circuit.

## Diagnostic Procedure

UBS002LU

### 1. CHECK ENGINE START

Turn ignition switch "OFF", and restart engine.

**Is engine running?**

Yes or No

- Yes (With CONSULT-II)>>GO TO 2.
- Yes (Without CONSULT-II)>>GO TO 3.
- No >> GO TO 4.

### 2. CHECK OVERALL FUNCTION

④ With CONSULT-II

- Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
- Make sure that all circuits do not produce a momentary engine speed drop.

OK or NG

- OK >> INSPECTION END
- NG >> GO TO 8.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

## 3. CHECK OVERALL FUNCTION

⊗ **Without CONSULT-II**

1. Let engine idle.
2. Read the voltage signal between ECM terminals 21, 22, 23, 24 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

PBIB0521E

PBIB0579E

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 8.

## 4. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check voltage between ECM terminals 109, 111 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.  
 NG >> Go to [EC-1342. "POWER SUPPLY CIRCUIT FOR ECM"](#).

PBIB0580E

## 5. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

Check voltage between ECM terminal 12 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 6.  
 NG >> Go to [EC-1342. "POWER SUPPLY CIRCUIT FOR ECM"](#).

PBIB0136E

## 6. CHECK CONDENSER CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.
3. Check harness continuity between ECM terminal 12 and condenser terminal + , condenser terminal – and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK CONDENSER

Refer to [EC-1786, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace condenser.

## 8. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-V

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect ignition coil harness connector.
4. Turn ignition switch ON.

5. Check voltage between ignition coil terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

OK >> GO TO 10.

NG >> GO TO 9.

## 9. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between ignition coil and ECM relay
- Harness for open or short between ignition coil and ECM

>> Repair or replace harness or connectors.

## 10. CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ignition coil terminal 2 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to power.

OK or NG

- OK >> GO TO 11.
- NG >> Repair open circuit or short to power in harness or connectors.

## 11. CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 21, 22, 23, 24 and ignition coil terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 12.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to [EC-1786, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 13.
- NG >> Replace ignition coil with power transistor.

## 13. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

**>> INSPECTION END**

### Component Inspection IGNITION COIL WITH POWER TRANSISTOR

UBS002LV

1. Turn ignition switch "OFF".
2. Disconnect ignition coil harness connector.
3. Check resistance between ignition coil terminals as follows.

Terminal No.	Resistance $\Omega$ [at 25°C (77°F)]
1 and 2	Except 0 or $\infty$
1 and 3	Except 0
2 and 3	

### CONDENSER

1. Turn ignition switch "OFF".
2. Disconnect condenser harness connector.

# IGNITION SIGNAL

[QR25DE]

3. Check resistance between condenser terminals as + and - .

**Resistance: Above 1 MΩ at 25°C (77°F)**

**VIAS**

**Description  
SYSTEM DESCRIPTION**

Sensor	Input Signal to ECM	ECM function	Actuator
Mass air flow sensor	Amount of intake air	VIAS control	VIAS control solenoid valve
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Closed throttle position		
Ignition switch	Start signal		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Engine coolant temperature sensor	Engine coolant temperature		

When the engine is running at low or medium speed, the power valve is fully closed. Under this condition, the effective suction port length is equivalent to the total length of the intake manifold collector's suction port including the intake valve. This long suction port provides increased air intake which results in improved suction efficiency and higher torque generation.

The surge tank and one-way valve are provided. When engine is running at high speed, the ECM sends the signal to the VIAS control solenoid valve. This signal introduces the intake manifold vacuum into the power valve actuator and therefore opens the power valve to two suction passages together in the collector. Under this condition, the effective port length is equivalent to the length of the suction port provided independently for each cylinder. This shortened port length results in enhanced engine output with reduced suction resistance under high speeds.

**COMPONENT DESCRIPTION**

**Power Valve**

The power valve is installed in intake manifold collector and used to control the suction passage of the variable induction air control system. It is set in the fully closed or fully opened position by the power valve actuator operated by the vacuum stored in the surge tank. The vacuum in the surge tank is controlled by the VIAS control solenoid valve.

**VIAS Control Solenoid Valve**

The VIAS control solenoid valve cuts the intake manifold vacuum signal for power valve control. It responds to ON/OFF signals from the ECM. When the solenoid is off, the vacuum signal from the intake manifold is cut. When the ECM sends an ON signal the coil pulls the plunger downward and feeds the vacuum signal to the power valve actuator.

1. Start engine and warm it up to normal operating temperature.
2. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode with CONSULT-II.

ACTIVE TEST	
VIAS SOL VALVE	OFF
MONITOR	
ENG SPEED	XXX rpm

PBIB0844E

3. Turn VIAS control solenoid valve "ON" and "OFF", and make sure that power valve actuator rod moves.

**⊗ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Rev engine quickly up to above 5,000 rpm and make sure that power valve actuator rod moves.

OK or NG

OK >> **INSPECTION END**

NG (With CONSULT-II)>>GO TO 2.

NG (Without CONSULT-II)>>GO TO 3.

## 2. CHECK VACUUM EXISTENCE

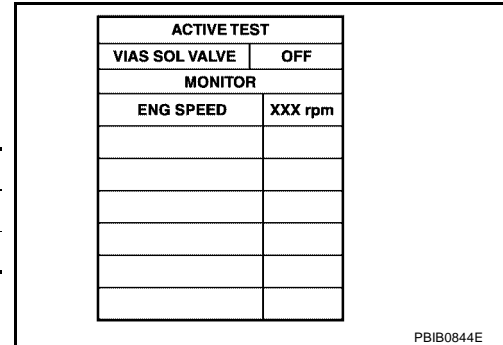

### With CONSULT-II

1. Stop engine and disconnect vacuum hose connected to power valve actuator.
2. Start engine and let it idle.
3. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode with CONSULT-II.
4. Turn VIAS control solenoid valve "ON" and "OFF", and check vacuum existence under the following conditions.

VIAS SOL VALVE	Vacuum
ON	Should exist.
OFF	Should not exist.

#### OK or NG

- OK >> Repair or replace power valve actuator.
- NG >> GO TO 4.

## 3. CHECK VACUUM EXISTENCE

### Without CONSULT-II

1. Stop engine and disconnect vacuum hose connected to power valve actuator.
2. Disconnect VIAS control solenoid valve harness connector.
3. Start engine and let it idle.
4. Apply 12V of direct current between VIAS control solenoid valve terminals 1 and 2.
5. Check vacuum existence under the following conditions.

Condition	Vacuum
12V direct current supply	Should exist.
No supply	Should not exist.

#### OK or NG

- OK >> Repair or replace power valve actuator.
- NG >> GO TO 4.

## 4. CHECK VACUUM HOSE

1. Stop engine.
2. Check hoses and tubes between intake manifold and power valve actuator for crack, clogging, improper connection or disconnection. Refer to [EC-1237, "Vacuum Hose Drawing"](#).

#### OK or NG

- OK >> GO TO 5.
- NG >> Repair hoses or tubes.

## 5. CHECK VACUUM TANK

Refer to [EC-1795, "Component Inspection"](#).

#### OK or NG

- OK >> GO TO 6.
- NG >> Replace vacuum tank.

## 6. CHECK VIAS CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch "ON".
2. Disconnect VIAS control solenoid valve harness connector.
3. Turn ignition switch "ON".

4. Check voltage between VIAS control solenoid valve terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E9, F47
- Fuse block (J/B) connector E103
- 10A fuse
- Harness continuity between fuse and VIAS control solenoid valve

>> Repair harness or connectors.

## 8. CHECK VIAS CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 25 and VIAS control solenoid valve terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 9. CHECK VIAS CONTROL SOLENOID VALVE

Refer to [EC-1795, "Component Inspection"](#).

OK or NG

- OK >> GO TO 10.  
NG >> Replace VIAS control solenoid valve.

10. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**VIAS CONTROL SOLENOID VALVE**

UBS002M1

**With CONSULT-II**

1. Reconnect harness connectors disconnected.
2. Turn ignition switch ON.
3. Perform "VIAS SOL VALVE" in "ACTIVE TEST" mode.
4. Check air passage continuity and operation delay time under the following conditions.

Condition VIAS SOL VALVE	Air passage continuity between <b>A</b> and <b>B</b>	Air passage continuity between <b>A</b> and <b>C</b>
ON	Yes	No
OFF	No	Yes

Operation takes less than 1 second.

PBIB0177E

**With GST**

Check air passage continuity and operation delay time under the following conditions.

Condition	Air passage continuity between <b>A</b> and <b>B</b>	Air passage continuity between <b>A</b> and <b>C</b>
12V direct current supply between terminals 1 and 2	Yes	No
No supply	No	Yes

Operation takes less than 1 second.

MEC488B

**VACUUM TANK**

1. Disconnect vacuum hose connected to vacuum tank.
2. Connect a vacuum pump to the port **A** of vacuum pump.
3. Apply vacuum and make sure that vacuum exists at the port **B** .

PBIB0846E

**Removal and Installation**  
**VIAS CONTROL SOLENOID VALVE**

UBS002M2

Refer to [EM-105, "INTAKE MANIFOLD"](#) .

## INJECTOR CIRCUIT

### Component Description

UBS002M3

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the injector circuit, the coil in the injector is energized. The energized coil pulls the needle valve back and allows fuel to flow through the injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

## Diagnostic Procedure

UBS002M6

### 1. INSPECTION START

Turn ignition switch to "START".

**Is any cylinder ignited?**

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 3.

## 2. CHECK OVERALL FUNCTION

**④ With CONSULT-II**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

**⊗ Without CONSULT-II**

1. Start engine.
2. Listen to each injector operating sound.  
**Clicking noise should be heard.**

OK or NG

- OK    >> **INSPECTION END**  
 NG    >> GO TO 3.

## 3. CHECK INJECTOR POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect injector harness connector.
3. Turn ignition switch "ON".

4. Check voltage between injector terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M19, E108
- Harness connectors E10, F48
- Harness connectors F12, F101
- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between injector and fuse

>> Repair harness or connectors.

## 5. CHECK INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between injector terminal 2 and ECM terminals 101, 102, 103, 104. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F12, F101
- Harness for open or short between injector and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK INJECTOR

Refer to [EC-1801, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 8.
- NG >> Replace injector.

## 8. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection INJECTOR

1. Disconnect injector harness connector.
2. Check resistance between terminals as shown in the figure.

**Resistance: 12.1 - 12.9Ω [at 20°C (68°F)]**

### Removal and Installation INJECTOR

Refer to [EM-118, "FUEL INJECTOR AND FUEL TUBE"](#) .

# START SIGNAL

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
41	B/Y	Start signal	[Ignition switch "ON"]	Approximately 0V
			[Ignition switch "START"]	9 - 14V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS002MB

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 3.

### 2. CHECK OVERALL FUNCTION

**With CONSULT-II**

- Turn ignition switch "ON".
- Check "START SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	START SIGNAL
Ignition switch "ON"	OFF
Ignition switch "START"	ON

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 4.

### 3. CHECK OVERALL FUNCTION

**Without CONSULT-II**

Check voltage between ECM terminal 41 and ground under the following conditions.

Condition	Voltage
Ignition switch "START"	Battery voltage
Other positions	Approximately 0V

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 4.

### 4. CHECK STARTING SYSTEM

Turn ignition switch "OFF", then turn it to "START".

**Does starter motor operate?**

Yes or No

- Yes >> GO TO 5.
- No >> Refer to [SC-9, "STARTING SYSTEM"](#).

**5. CHECK FUSE**

1. Turn ignition switch "OFF".
2. Disconnect 10A fuse.
3. Check if 10A fuse is OK.

OK or NG

- OK >> GO TO 6.  
 NG >> Replace 10A fuse.

**6. CHECK START SIGNAL INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Disconnect ECM harness connector.
2. Disconnect ignition switch harness connector.
3. Check harness continuity between ECM terminal 41 and fuse block (J/B), ignition switch and fuse block (J/B). Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
 NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors M58, F26
- Fuse block (J/B) connectors M2, E103
- Harness for open or short between ignition switch and fuse block (J/B)
- Harness for open or short between ECM and fuse block (J/B)

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK INTERMITTENT INCIDENT**

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

# FUEL PUMP CIRCUIT

[QR25DE]

## FUEL PUMP CIRCUIT

PFM:17042

### Description SYSTEM DESCRIPTION

UBS002MC

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed	Fuel pump control	Fuel pump relay
Ignition switch	Start signal		

The ECM activates the fuel pump for several seconds after the ignition switch is turned on to improve engine startability. If the ECM receives a engine speed signal from the crankshaft position sensor (POS) and camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch is turned to ON.	Operates for 1 second.
Engine running and cranking	Operates.
When engine is stopped	Stops in 1.5 seconds.
Except as shown above	Stops.

### COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002MD

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
FUEL PUMP RLY	● For 1 seconds after turning ignition switch ON	ON
	● Engine running or cranking	
	● Except above conditions	OFF

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
10 (Without NVIS)	B/P	Fuel pump relay	[Ignition switch "ON"] ● For 1 seconds after turning ignition switch "ON"	0 - 1.0V
29 (With NVIS)			[Ignition switch "ON"] ● More than 1 seconds after turning ignition switch "ON".	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS002MF

### 1. CHECK OVERALL FUNCTION

- Turn ignition switch "ON".
- Pinch fuel feed hose with two fingers.  
**Fuel pressure pulsation should be felt on the fuel hose for 1 second after ignition switch is turned "ON".**

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 2.

### 2. CHECK FUEL PUMP RELAY POWER SUPPLY CIRCUIT

- Turn ignition switch "OFF".
- Disconnect fuel pump relay.
- Turn ignition switch "ON".

- Check voltage between fuel pump relay terminals 1, 5 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector B4
- 10A fuse
- 15A fuse
- Harness for open or short between fuse and fuel pump relay

>> Repair harness or connectors.

## 4. CHECK FUEL PUMP POWER SUPPLY AND GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect fuel level sensor unit and fuel pump harness connector.
3. Check harness continuity between fuel pump relay terminal 3 and fuel pump terminal 1, fuel pump terminal 3 and body ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 5. CHECK FUEL PUMP RELAY OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 10 or 29 and fuel pump relay terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.

NG >> GO TO 6.

## 6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B3, M16
- Harness connectors M58, F26
- Harness for open or short between ECM and fuel pump relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK FUEL PUMP RELAY

Refer to [EC-1810, "Component Inspection"](#) .

OK or NG

OK >> GO TO 8.

NG >> Replace fuel pump relay.

## 8. CHECK FUEL PUMP

Refer to [EC-1810, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace fuel pump.

## 9. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection FUEL PUMP RELAY

UBS002MG

Check continuity between terminals 3 and 5 under the following conditions.

Conditions	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

### FUEL PUMP

1. Disconnect fuel level sensor unit and fuel pump harness connector.
2. Check resistance between fuel level sensor unit and fuel pump terminals 1 and 3.

**Resistance: Approximately 1.0Ω [at 25°C (77°F)]**

### Removal and Installation FUEL PUMP

UBS002MH

Refer to [FL-3, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"](#) .

# POWER STEERING OIL PRESSURE SWITCH

[QR25DE]

## POWER STEERING OIL PRESSURE SWITCH

PF:49761

### Component Description

UBS002MI

The power steering oil pressure switch is attached to the power steering high-pressure tube and detects a power steering load. When a power steering load is detected, it signals the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

### CONSULT-II Reference Value in Data Monitor Mode

UBS002MJ

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
PW/ST SIGNAL	● Engine: After warming up, idle the engine	Steering wheel in neutral position (forward direction) OFF
		The steering wheel is fully turned ON

## Diagnostic Procedure

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 3.

### 2. CHECK OVERALL FUNCTION

 **With CONSULT-II**

1. Start engine.
2. Check "PW/ST SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Steering in neutral position	OFF
Steering is turned	ON

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 4.

### 3. CHECK OVERALL FUNCTION

 **Without CONSULT-II**

1. Start engine.
2. Check voltage between ECM terminal 46 and ground under the following conditions.

Condition	Voltage
When steering wheel is turned quickly	Approximately 0V
Except above	Approximately 5V

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 4.

### 4. CHECK INPUT SIGNAL CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Disconnect power steering oil pressure switch harness connector.
4. Check harness continuity between ECM terminal 46 and power steering oil pressure switch terminal + . Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING PART**

Check the harness for open or short between ECM and power steering oil pressure switch.

>> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK POWER STEERING OIL PRESSURE SWITCH**

Refer to [EC-1815, "Component Inspection"](#) .

OK or NG

OK >> GO TO 7.

NG >> Replace power steering oil pressure switch.

**7. CHECK INTERMITTENT INCIDENT**

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection  
POWER STEERING OIL PRESSURE SWITCH**

UBS002MM

1. Turn ignition switch "OFF".
2. Disconnect power steering oil pressure switch harness connector.
3. Start engine.
4. Check continuity between power steering oil pressure switch terminal + and body ground.

Conditions	Continuity
Steering wheel is being turned	Yes
Steering wheel is not being turned	No

If NG, replace power steering oil pressure switch.

**Removal and Installation  
POWER STEERING OIL PRESSURE SWITCH**

Refer to [PS-21, "POWER STEERING OIL PUMP"](#) .

UBS002MN

# REFRIGERANT PRESSURE SENSOR

[QR25DE]

## REFRIGERANT PRESSURE SENSOR

PFP:92136

### Component Description

UBS002MO

The refrigerant pressure sensor is installed at the liquid tank of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

# REFRIGERANT PRESSURE SENSOR

[QR25DE]

## Wiring Diagram

UBS002MP

EC-RP/SEN-01

BBWA0424E

# REFRIGERANT PRESSURE SENSOR

[QR25DE]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI-NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
58	B	Sensors' ground	[Engine is running] ● Warm-up condition ● Idle speed	Approximately 0V
65	R	Sensor's power supply	[Ignition switch "ON"]	Approximately 5V
83	L	Refrigerant pressure sensor	[Engine is running] ● Warm-up condition ● Both A/C switch and blower switch are "ON". (Compressor operates.)	1.0 - 4.0V

## Diagnostic Procedure

UBS002MQ

### 1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower switch "ON".
3. Check voltage between ECM terminal 83 and ground with CONSULT-II or tester.

**Voltage: 1.0 - 4.0V**

OK or NG

- OK >> **INSPECTION END**
- NG >> **GO TO 2.**

## 2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn A/C switch and blower switch "OFF".
2. Stop engine.
3. Disconnect refrigerant pressure sensor harness connector.
4. Turn ignition switch "ON".

5. Check voltage between refrigerant pressure sensor terminal 3 and ground with CONSULT-II or tester.

**Voltage: Approximately 5V**

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F48
- Joint connector-1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair harness or connectors.

## 4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between refrigerant pressure sensor terminal 1 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 6.  
NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Joint connector-2
- Harness for open or short between ECM and refrigerant pressure sensor
- Harness for open or short between TCM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 83 and refrigerant pressure sensor terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

## 7. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors E9, F47
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

- OK >> Replace refrigerant pressure sensor.  
NG >> Repair or replace.

### Removal and Installation REFRIGERANT PRESSURE SENSOR

Refer to [MTC-82, "REFRIGERANT LINES"](#) .

## Diagnostic Procedure

UBS002MU

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

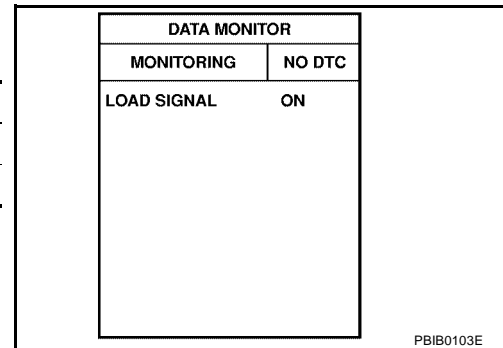

- Yes >> GO TO 2.
- No >> GO TO 3.

### 2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-1

With CONSULT-II

- Turn ignition switch "ON".
- Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Lighting switch "ON" at 2nd position	ON
Lighting switch "OFF"	OFF

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 8.

### 3. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-1

Without CONSULT-II

- Turn ignition switch "ON".
- Check voltage between ECM terminal 53 and ground under the following conditions.

Condition	Voltage
Lighting switch "ON" at 2nd position	BATTERY VOLTAGE
Lighting switch "OFF"	0V

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 8.

## 4. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-2

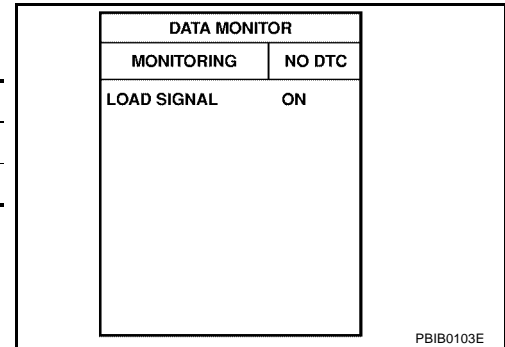

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
FAN control switch "ON" in any position	ON
FAN control switch "OFF"	OFF

**OK or NG**

- OK >> GO TO 6.  
 NG >> GO TO 13.

## 5. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-2

**Without CONSULT-II**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 55 and ground under the following conditions.

Condition	Voltage
FAN control switch "ON" in any position	Approximately 0V
FAN control switch "OFF"	Approximately 5V

**OK or NG**

- OK >> GO TO 7.  
 NG >> GO TO 13.

## 6. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-3

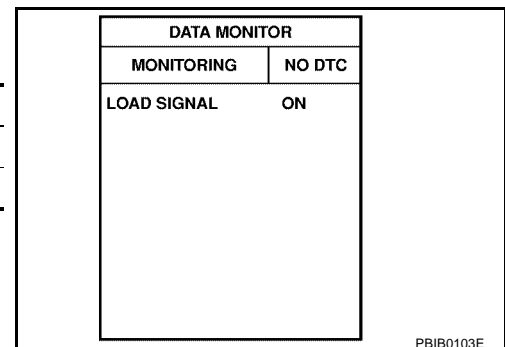

**With CONSULT-II**

1. Turn ignition switch "ON".
2. Check "LOAD SIGNAL" in "DATA MONITOR" mode with CONSULT-II under the following conditions.

Condition	LOAD SIGNAL
Rear window defogger switch "ON"	ON
Rear window defogger switch "OFF"	OFF

**OK or NG**

- OK >> INSPECTION END.  
 NG >> GO TO 16.

**7. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-3**

**⊗ Without CONSULT-II**

1. Turn ignition switch "ON".
2. Check voltage between ECM terminal 52 and ground under the following conditions.

Condition	Voltage
Rear window defogger switch "ON"	BATTERY VOLTAGE
Rear window defogger switch "OFF"	Approximately 0V

**OK or NG**

- OK >> INSPECTION END.
- NG >> GO TO 16.

**8. CHECK HEADLAMP FUNCTION**

1. Start engine.
2. Turn the lighting switch "ON" at 2nd position.
3. Check that headlamps are illuminated.

**OK or NG**

- OK (Models for USA)>>GO TO 8.
- OK (Models for Canada)>>GO TO 11.
- NG >> Refer to [LT-6, "HEADLAMP \(FOR USA\)"](#) or [LT-10, "HEADLAMP \(FOR CANADA\) — DAYTIME LIGHT SYSTEM —"](#) .

**9. CHECK HEADLAMP INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect lighting switch harness connectors.
4. Check harness continuity between ECM terminal 53 and lighting switch terminal 9, 10 under the following conditions.

Condition	Continuity
1	Should not exist
2	Should exist

5. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 19.
- NG >> GO TO 10.

## 10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M19
- Harness connectors M58, F26
- Diode M55
- Harness for open and short between ECM and lighting switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 11. CHECK HEADLAMP INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect lighting switch harness connector E114.  
Disconnect daytime light control unit harness connector.
4. Check harness continuity between ECM terminal 53 and lighting switch terminal 10, daytime light control unit terminal 6 under the following conditions.

Condition	Continuity
1	Should not exist
2	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 19.  
NG >> GO TO 12.

## 12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M19
- Harness connectors M58, F26
- Diode M55
- Harness for open and short between ECM and lighting switch
- Harness for open and short between ECM and daytime light control unit

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 13. CHECK HEATER FAN SWITCH FUNCTION

1. Start engine.
2. Turn the heater fan switch "ON" in any position.
3. Check that heater fan turns properly.

OK or NG

- OK >> GO TO 14.  
 NG >> Refer to [MTC-19, "TROUBLE DIAGNOSIS"](#)

### 14. CHECK HEATER FAN INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect air control connector.
4. Check harness continuity between ECM terminal 55 and air control terminal 8.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 19.  
 NG >> GO TO 15.

### 15. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open and short between ECM and air control

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 16. CHECK REAR WINDOW DEFOGGER FUNCTION

1. Start engine.
2. Turn "ON" the rear window defogger switch.
3. Check the rear windshield. Is the rear windshield heated up?

Yes or No

- Yes >> GO TO 17.  
 No >> Refer to [GW-17, "REAR WINDOW DEFOGGER"](#)

### 17. CHECK REAR WINDOW DEFOGGER INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Stop engine.
2. Disconnect ECM harness connector.
3. Disconnect rear window defogger relay.
4. Check harness continuity between ECM terminal 52 and rear window defogger terminal 5, 7.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 19.  
 NG >> GO TO 18.

---

## 18. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors B1, M14
- Harness connectors M56, F26
- Harness for open and short between ECM and rear window defogger relay.

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 19. CHECK INTERMITTENT INCIDENT

---

Perform [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**ASC D BRAKE SWITCH**

**Component Description**

When depress on the brake pedal, ASC D brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal)  
 Refer to [EC-1860, "AUTOMATIC SPEED CONTROL DEVICE \(ASC D\)"](#) for the ASC D function.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1 (ASC D brake switch)	● Ignition switch: ON	● Brake pedal: Fully released	ON
		● Brake pedal: Slightly	OFF
BRAKE SW2 (Stop lamp switch)	● Ignition switch: ON	● Brake pedal: Fully released	OFF
		● Brake pedal: Depressed	ON

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
40	R/G	Stop lamp switch	<b>[Engine is running]</b> ● Brake pedal fully released	Approximately 0V
			<b>[Engine is running]</b> ● Brake pedal depressed	BATTERY VOLTAGE (11 - 14V)
56	P/L	ASCD brake switch	<b>[Ignition switch "ON"]</b> ● Brake pedal is depressed ● Clutch pedal is depressed (M/T models)	Approximately 0V
			<b>[Ignition switch "ON"]</b> ● Brake pedal is fully released ● Clutch pedal is fully released (M/T models)	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

### 1. CHECK OVERALL FUNCTION-I

UBS002MY

**Ⓜ With CONSULT-II**

- Turn ignition switch "ON".
- Select "BRAKE SW1" in "DATA MONITOR" mode with CONSULT-II.
- Check "BRAKE SW1" indication under the following conditions.  
**M/T models**

CONDITION	INDICATION
When clutch pedal or brake pedal is depressed	OFF
When clutch pedal and brake pedal are fully released	ON

**A/T models**

CONDITION	INDICATION
When brake pedal is depressed	OFF
When brake pedal is fully released	ON

**⊗ Without CONSULT-II**

- Turn ignition switch "ON".
- Check voltage between ECM terminal 56 and ground under the following conditions.  
**M/T models**

CONDITION	VOLTAGE
When clutch pedal or brake pedal is depressed	Approximately 0V
When clutch pedal and brake pedal are fully released	Battery voltage

**A/T models**

CONDITION	VOLTAGE
When brake pedal is depressed	Approximately 0V
When brake pedal is fully released	Battery voltage

OK or NG

OK >> GO TO 2.

NG (M/T models) >>GO TO 3.

NG (A/T models) >>GO TO 4.

## 2. CHECK OVERALL FUNCTION-II

**④ With CONSULT-II**

Check "BRAKE SW2" indication in "DATA MONITOR" mode.

CONDITION	INDICATION
When brake pedal is released	OFF
When brake pedal is depressed	ON

**⊗ Without CONSULT-II**

Check voltage between ECM terminal 40 and ground under the following conditions.

CONDITION	VOLTAGE
When brake pedal is released	Approximately 0V
When brake pedal is depressed	Battery voltage

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 13.

## 3. CHECK ASCD BRAKE SWITCH CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD clutch switch terminal 1 and ground under the following conditions with CONSULT-II or tester.

CONDITION	VOLTAGE
When brake pedal is released	Battery voltage
When brake pedal is depressed	Approx. 0V

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

## 4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch "ON".

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK (M/T models)>>GO TO 6.
- OK (A/T models)>>GO TO 7.
- NG >> GO TO 5.

## 5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 7. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 56 and ASCD brake switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 9.
- NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 9. CHECK ASCD BRAKE SWITCH

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.
- NG >> Replace ASCD brake switch.

## 10. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 56 and ASCD clutch switch terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 12.
- NG >> GO TO 11.

## 11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

## 12. CHECK ASCD CLUTCH SWITCH

Refer to [EC-1738, "Component Inspection"](#)

OK or NG

- OK >> GO TO 18.
- NG >> Replace ASCD clutch switch.

### 13. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal 1 and ground with CONSULT -II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 15.
- NG >> GO TO 14.

### 14. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector M2
- 10A fuse
- Harness for open or short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

### 15. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 40 and stop lamp switch terminal 1. Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 17.
- NG >> GO TO 16.

### 16. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 17. CHECK STOP LAMP SWITCH

---

Refer to [EC-1738, "Component Inspection"](#) .

OK or NG

OK >> GO TO 18.

NG >> Replace stop lamp switch.

---

## 18. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**ASCD INDICATOR**

**Component Description**

ASCD indicator lamp illuminates to indicate ASCD operation status. Lamp has two indicators, CRUISE and SET, and is integrated in combination meter.

CRUISE indicator illuminates when CRUISE switch on ASCD steering switch is turned ON to indicated that ASCD system is ready for operation.

SET indicator illuminates when following conditions are met.

- CRUISE indicator is illuminated.
- SET switch on ASCD steering switch is turned ON while vehicle speed is within the range of ASCD setting.

SET indicator remains lit during ASCD control.

Refer to [EC-1860, "AUTOMATIC SPEED CONTROL DEVICE \(ASCD\)"](#) for the ASCD function.

**CONSULT-II Reference Value in Data Monitor Mode**

Specification data are reference value.

MONITOR ITEM	CONDITION		SPECIFICATION
CRUISE LAMP	● Ignition switch: ON	● CRUISE switch is depressed at first time → second time	ON → OFF
SET LAMP	● CRUISE switch: ON ● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)	● SET switch pressed	ON
		● ASCD control is canceled	OFF

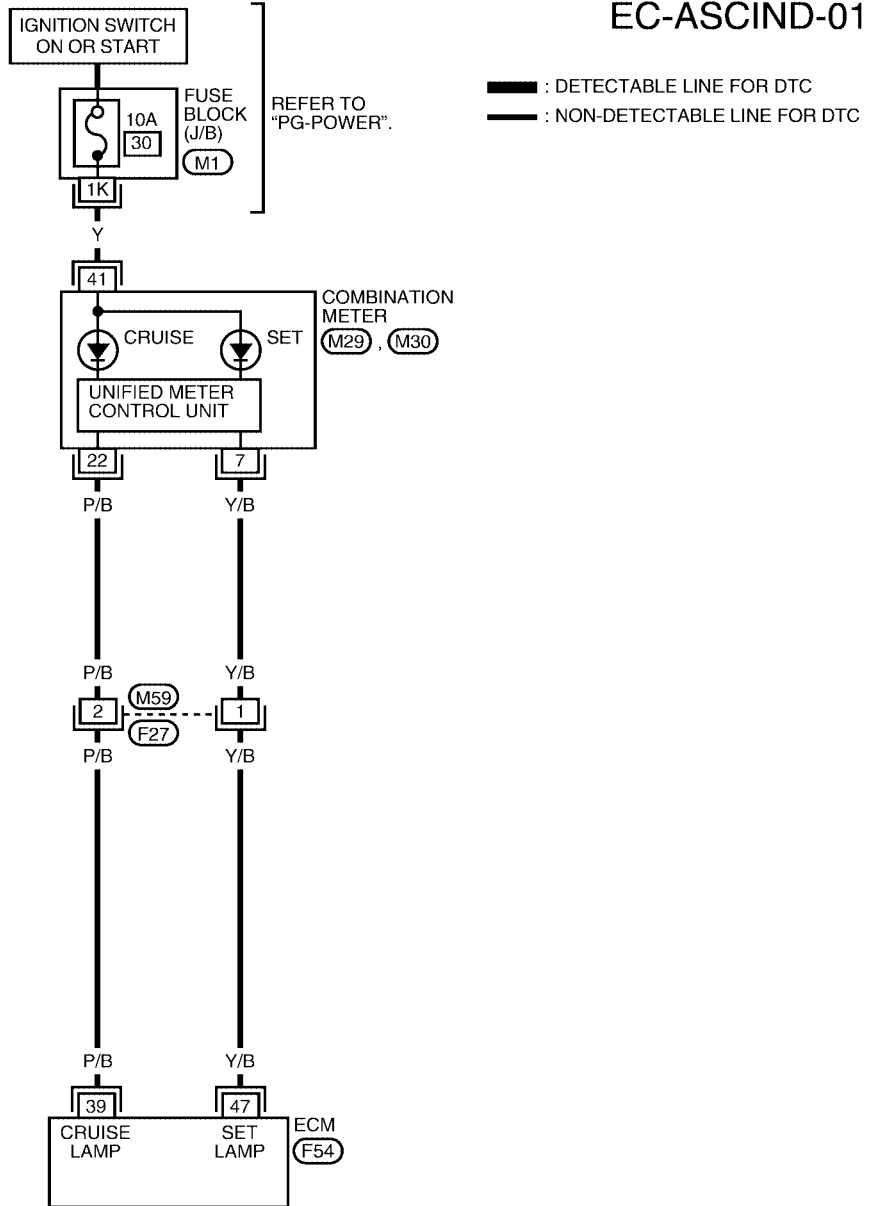

# ASC D INDICATOR

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
39	P/B	ASCD CRUISE lamp	<b>[Ignition switch "ON"]</b> ● CRUISE switch is depressed at first time → second time	Approximately 0V ↓ BATTERY VOLTAGE (11 - 14V)
47	Y/B	ASCD SET lamp	<b>[Engine is running]</b> ● SET switch is "ON". ● ASCD control is operating.	Approximately 0V
			<b>[Engine is running]</b> ● ASCD control is not operating.	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS002N2

### 1. CHECK OVERALL FUNCTION

Check ASCD indicator under the following conditions.

ASCD INDICATOR	CONDITION		SPECIFICATION
CRUISE lamp	● Ignition switch: ON	● CRUISE switch is depressed at first time → second time	ON → OFF
SET lamp	● CRUISE switch: ON ● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)	● SET switch pressed	ON
		● ASCD control is canceled	OFF

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 2.

### 2. CHECK COMBINATION METER OPERATION

Does combination meter operate normally?

Yes or No

- Yes >> GO TO 3.
- No >> Check combination meter circuit. Refer to [DI-8, "Combination Meter"](#).

### 3. CHECK ASCD INDICATOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect combination meter harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

ECM terminal	Combination meter terminal
39	22
47	7

**Continuity should exist.**

5. Also check harness for short to ground or short to power.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M59, F27
- Harness for open and short between ECM and combination meter

>> Repair open circuit or short to ground or short to power in harness or connectors

## 5. CHECK COMBINATION METER

Check continuity under the following conditions.

CONDITION	Combination meter terminal No. (Polarity)	Continuity
1	7 (+) - 41 (-)	Should not exist.
	22 (+) - 41 (-)	
2	41 (+) - 7 (-)	Should exist.
	41 (+) - 22 (-)	

OK or NG

- OK >> GO TO 6.
- NG >> Replace combination meter. Refer to [DI-8](#).

## 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-1341, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#).

## EVAPORATIVE EMISSION SYSTEM

PFP:14950

### Description SYSTEM DESCRIPTION

UBS002N4

The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister. The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank. The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases. EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

### Component Inspection EVAP CANISTER

Check EVAP canister as follows:

1. Pinch the fresh air hose.
2. Blow air into port **A** and check that it flows freely out of port **B**.

### Tightening Torque

Tighten EVAP canister as shown in the figure.

**Make sure new O-ring is installed properly between EVAP canister and EVAP canister vent control valve.**

### FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FULLER CAP)

1. Wipe clean valve housing.

2. Check valve opening pressure and vacuum.

**Pressure:** 15.3 - 20.0 kPa  
(0.156 - 0.204 kg/cm<sup>2</sup>, 2.22 - 2.90 psi)

**Vacuum:** -6.0 to -3.4 kPa  
(-0.061 to -0.035 kg/cm<sup>2</sup>, -0.87 to -0.48 psi)

3. If out of specification, replace fuel filler cap as an assembly.

#### CAUTION:

**Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.**

### VACUUM CUT VALVE AND VACUUM CUT VALVE BYPASS VALVE

Refer to [EC-1712](#).

### EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to [EC-1526](#).

### FUEL TANK TEMPERATURE SENSOR

Refer to [EC-1456](#).

## EVAP SERVICE PORT

Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.

UBS002N6

## How to Detect Fuel Vapor Leakage

### CAUTION:

- Never use compressed air or a high pressure pump.
- Do not exceed 4.12 kPa (0.042 kg/cm<sup>2</sup>, 0.6 psi) of pressure in EVAP system.

### NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.

### Ⓟ WITH CONSULT-II

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump and hose to the EVAP service port adapter.
3. Turn ignition switch "ON".
4. Select the "EVAP SYSTEM CLOSE" of "WORK SUPPORT MODE" with CONSULT-II.
5. Touch "START". A bar graph (Pressure indicating display) will appear on the screen.

PEF838U

6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
7. Remove EVAP service port adapter and hose with pressure pump.

PEF917U

# EVAPORATIVE EMISSION SYSTEM

[QR25DE]

8. Locate the leak using a leak detector. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

⊗ **WITHOUT CONSULT-II**

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

3. Apply battery voltage to between the terminals of both EVAP canister vent control valve and vacuum cut valve bypass valve to make a closed EVAP system.

4. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm<sup>2</sup>, 0.2 to 0.4 psi).
5. Remove EVAP service port adapter and hose with pressure pump.
6. Locate the leak using a leak detector. Refer to [EC-1847, "EVAPORATIVE EMISSION LINE DRAWING"](#).

## ON BOARD REFUELING VAPOR RECOVERY (ORVR)

PFP:00032

## System Description

UBS002N7

PBIB1267E

From the beginning of refueling, the fuel tank pressure goes up. When the pressure reaches the setting value of the refueling control valve (RCV) opening pressure, the RCV is opened. After RCV opens, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve, RCV and refueling vapor line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

The RCV is always closed during driving and the evaporative emission control system is operated the same as conventional system.

**WARNING:**

When conducting inspections below, be sure to observe the following:

- Put a "CAUTION: INFLAMMABLE" sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO<sub>2</sub> fire extinguisher.

**CAUTION:**

- Before removing fuel line parts, carry out the following procedures:
  - Put drained fuel in an explosion-proof container and put lid on securely.
  - Release fuel pressure from fuel line. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#).
  - Disconnect battery ground cable.
- Always replace O-ring when the fuel gauge retainer is removed.
- Do not kink or twist hose and tube when they are installed.
- Do not tighten hose and clamps excessively to avoid damaging hoses.
- After installation, run engine and check for fuel leaks at connection.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.

**Diagnostic Procedure****SYMPTOM: FUEL ODOR FROM EVAP CANISTER IS STRONG.****1. CHECK EVAP CANISTER**

1. Remove EVAP canister with EVAP canister vent control valve attached.
2. Weigh the EVAP canister with EVAP canister vent control valve attached.  
The weight should be less than 1.8 kg (4.0 lb).

**10. CHECK ONE-WAY FUEL VALVE-I**

Check one-way valve for clogging.

OK or NG

- OK >> GO TO 11.  
 NG >> Repair or replace one-way fuel valve with fuel tank.

**11. CHECK ONE-WAY FUEL VALVE-II**

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.  
 When a stick is inserted, the valve should open, when removing stick it should close.

**Do not drop any material into the tank.**

OK or NG

- OK >> **INSPECTION END**  
 NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

UBS002N9

**Component Inspection  
REFUELING EVAP VAPOR CUT VALVE****Ⓟ With CONSULT-II**

1. Remove fuel tank. Refer to [FL-7, "FUEL TANK"](#) .
2. Drain fuel from the tank as follows:
  - a. Remove fuel feed hose located on the fuel gauge retainer.
  - b. Connect a spare fuel hose, one side to fuel gauge retainer where the hose was removed and the other side to a fuel container.
  - c. Drain fuel using "FUEL PUMP RELAY" in "ACTIVE TEST" mode with CONSULT-II.
3. Check refueling EVAP vapor cut valve for being stuck to close as follows.  
 Blow air into the refueling EVAP vapor cut valve (from hose end **B** ), and check that the air flows freely into the tank.
4. Check EVAP vapor cut valve for being stuck to open as follows.
  - a. Connect vacuum pump to hose ends **A** and **B** using a suitable 3-way connector.
  - b. Remove fuel gauge retainer with fuel gauge unit.  
**Always replace O-ring with new one.**
  - c. Put fuel tank upside down.

# ON BOARD REFUELING VAPOR RECOVERY (ORVR)

[QR25DE]

- d. Apply vacuum pressure to both hose ends **A** and **B** [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

SEF246Y

## With GST

1. Remove fuel tank. Refer to [FL-7, "FUEL TANK"](#).
2. Drain fuel from the tank as follows:
  - a. Remove fuel gauge retainer.
  - b. Drain fuel from the tank using a hand pump into a fuel container.
3. Check refueling EVAP vapor cut valve for being stuck to close as follows. Blow air into the refueling EVAP vapor cut valve (from hose end **B**), and check that the air flows freely into the tank.
4. Check EVAP vapor cut valve for being stuck to open as follows.
  - a. Connect vacuum pump to hose ends **A** and **B** using a suitable 3-way connector.
  - b. Remove fuel gauge retainer with fuel gauge unit.  
**Always replace O-ring with new one.**
  - c. Put fuel tank upside down.
  - d. Apply vacuum pressure to both hose ends **A** and **B** [-13.3 kPa (-100 mmHg, -3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

SEF246Y

## REFUELING CONTROL VALVE

1. Remove fuel filler cap.
2. Check air continuity between hose ends **A** and **B**.  
Blow air into the hose end **B**. Air should flow freely into the fuel tank.
3. Blow air into hose end **A** and check there is no leakage.
4. Apply pressure to both hose ends **A** and **B** [20 kPa (150 mmHg, 5.91 inHg)] using a pressure pump and a suitable 3-way connector. Check that there is no leakage.

SEF246Y

POSITIVE CRANKCASE VENTILATION

PF1:11810

Description  
SYSTEM DESCRIPTION

UBS002NA

PBIB0492E

This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

SEF559A

Component Inspection  
PCV (POSITIVE CRANKCASE VENTILATION) VALVE

UBS002NB

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

SEC137A

# POSITIVE CRANKCASE VENTILATION

[QR25DE]

## PCV VALVE VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

## AUTOMATIC SPEED CONTROL DEVICE (ASCD)

PFP:18930

### System Description INPUT/OUTPUT SIGNAL CHART

UBS002NC

Sensor	Input signal to ECM	ECM function	Actuator
ASCD brake switch	Brake pedal operation	ASCD vehicle speed control	Electric throttle control actuator
Stop lamp switch	Brake pedal operation		
ASCD clutch switch (MT models)	Clutch pedal operation		
ASCD steering switch	ASCD steering switch operation		
Park/Neutral position (PNP) switch (AT models)	Gear position		
Combination meter	Vehicle speed		
TCM	Power train revolution		

### BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.

Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).

ECM controls throttle angle of electric throttle control actuator to regulate engine speed.

Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.

### SET OPERATION

Press ASCD CRUISE switch (Main switch). (The CRUISE indicator in combination meter illuminates.)

When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET switch. (Then SET indicator in combination meter illuminates.)

### ACCEL OPERATION

If the RESUME/ACCEL switch is depressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.

And then ASCD will keep the new set speed.

### CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is depressed
- Brake pedal is depressed
- Clutch pedal is depressed (M/T models)
- A/T selector lever is shifted to P or N position (A/T models)

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

### COAST OPERATION

When the SET/COAST switch is depressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

### RESUME OPERATION

When the RESUME/ACCEL switch is depressed after cancel operation other than depressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released.
- Clutch pedal is released (M/T models)
- A/T selector lever is in other than P and N positions (A/T models)
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

# SERVICE DATA AND SPECIFICATIONS (SDS)

[QR25DE]

## SERVICE DATA AND SPECIFICATIONS (SDS)

PF0:00030

### Fuel Pressure

UBS002NE

Fuel pressure at idle	Approximately 350 kPa (3.57kg/cm <sup>2</sup> , 51psi)
-----------------------	--

### Idle Speed and Ignition Timing

UBS002NF

Target idle speed	No-load*1 (in "P" or N" position)	700±50 rpm
Air conditioner: ON	In "P" or N" position	800 rpm or more
Ignition timing	In "P" or N" position	15°±5° BTDC

\*1: Under the following conditions:

- Air conditioner switch: OFF
- Electric load: OFF (Lights, heater fan & rear window defogger)
- Steering wheel: Kept in straight-ahead position

### Calculated Load Value

UBS002NG

	Calculated load value % (Using CONSULT-II or GST)
At idle	10 - 35
At 2,500 rpm	10 - 35

### Mass Air Flow Sensor

UBS002NH

Supply voltage	Battery voltage (11 - 14V)
Output voltage at idle	1.1 - 1.5*V
Mass air flow (Using CONSULT-II or GST)	1.0 - 4.0 g·m/sec at idle* 4.0 - 10.0 g·m/sec at 2,500 rpm*

\*: Engine is warmed up to normal operating temperature and running under no-load.

### Intake Air Temperature Sensor

UBS002NI

Temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1
80 (176)	0.31 - 0.37

### Engine Coolant Temperature Sensor

UBS002NJ

Temperature °C (°F)	Resistance kΩ
20 (68)	2.1 - 2.9
50 (122)	0.68 - 1.00
90 (194)	0.236 - 0.260

### Heated Oxygen Sensor 1 Heater

UBS002NK

Resistance [at 25°C (77°F)]	2.3 - 4.3Ω
-----------------------------	------------

### Heated Oxygen Sensor 2 Heater

UBS002NL

Resistance [at 25°C (77°F)]	2.3 - 4.3Ω
-----------------------------	------------

### Crankshaft Position Sensor (POS)

UBS002NM

Refer to [EC-1494, "Component Inspection"](#) .

### Camshaft Position Sensor (PHASE)

UBS002NN

Refer to [EC-1500, "Component Inspection"](#) .

### Throttle Control Motor

UBS002NO

Resistance [at 25°C (77°F)]	Approximately 1 - 15Ω
-----------------------------	-----------------------

# SERVICE DATA AND SPECIFICATIONS (SDS)

# PRECAUTIONS

---

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS001EH

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# PREPARATION

## PREPARATION

PFP:00002

### Special Service Tools

EIS0016R

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
— (J-39570) Chassis ear	Locating the noise
— (J-43980) NISSAN Squeak and Rattle kit	Repairing the cause of noise

### Commercial Service Tools

EIS0016S

Tool name	Description
Engine ear (J-39565)	Locating the noise

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK AND RATTLE TROUBLE DIAGNOSES

PF0:00003

### Work Flow

EIS0016T

### CUSTOMER INTERVIEW

Interview the customer, if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to [EI-8, "Diagnostic Worksheet"](#). This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak — (Like tennis shoes on a clean floor)  
Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak — (Like walking on an old wooden floor)  
Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle — (Like shaking a baby rattle)  
Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock — (Like a knock on a door)  
Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick — (Like a clock second hand)  
Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump — (Heavy, muffled knock noise)  
Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz — (Like a bumblebee)  
Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

- Close a door.
- Tap or push/pull around the area where the noise appears to be coming from.
- Rev the engine.
- Use a floor jack to recreate vehicle "twist".
- At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
- Raise the vehicle on a hoist and hit a tire with a rubber hammer.
- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

## CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.

If a TSB relates to the symptom, follow the procedure to repair the noise.

## LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:
  - Removing the components in the area that you suspect the noise is coming from.  
**Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise.**
  - Tapping or pushing/pulling the component that you suspect is causing the noise.  
**Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.**
  - Feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
  - Placing a piece of paper between components that you suspect are causing the noise.
  - Looking for loose components and contact marks.

Refer to [EI-6, "Generic Squeak and Rattle Troubleshooting"](#).

## REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - Separate components by repositioning or loosening and retightening the component, if possible.
  - Insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A NISSAN Squeak and Rattle Kit (J-43980) is available through your authorized NISSAN Parts Department.

### CAUTION:

**Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information.**

The following materials are contained in the NISSAN Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.

URETHANE PADS [1.5 mm (0.059 in) thick]

Insulates connectors, harness, etc.

76268-9E005: 100 x 135 mm (3.94 x 5.31 in)/76884-71L01: 60 x 85 mm (2.36 x 3.35 in)/76884-71L02: 15 x 25 mm (0.59 x 0.98 in)

INSULATOR (Foam blocks)

Insulates components from contact. Can be used to fill space behind a panel.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

73982-9E000: 45 mm (1.77 in) thick, 50 x 50 mm (1.97 x 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 x 50 mm (1.97 x 1.97 in)

INSULATOR (Light foam block)

80845-71L00: 30 mm (1.18 in) thick, 30 x 50 mm (1.18 x 1.97 in)

FELT CLOTH TAPE

Used to insulate where movement does not occur. Ideal for instrument panel applications.

68370-4B000: 15 x 25 mm (0.59 x 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles.

UHMW (TEFLON) TAPE

Insulates where slight movement is present. Ideal for instrument panel applications.

SILICONE GREASE

Used in place of UHMW tape that will be visible or not fit.

Note: Will only last a few months.

SILICONE SPRAY

Use when grease cannot be applied.

DUCT TAPE

Use to eliminate movement.

## CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

## Generic Squeak and Rattle Troubleshooting

EIS0016U

Refer to Table of Contents for specific component removal and installation information.

## INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

### CAUTION:

**Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.**

## CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and upper/lower cluster lid C
3. Wiring harnesses behind audio and A/C control unit
4. Console lid to console bin.

The instrument panel repair and isolation procedures also apply to the center console.

## DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the NISSAN Squeak and Rattle Kit (J-43980) to repair the noise.

A

## TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.

B

In addition look for:

1. Trunk lid bumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

C

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

D

## SUNROOF/HEADLINER

E

Noises in the sunroof/headliner area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headliner and squeaking

F

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

G

## SEATS

When isolating seat noises it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

H

Cause of seat noise include:

1. Headrest rods and holders
2. A squeak between the seat pad cushion and frame
3. The rear seat back lock and bracket

EI

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

J

## UNDERHOOD

K

Some interior noises may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noises include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

L

M

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## Diagnostic Worksheet

EIS0016V

### SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Nissan Customer:

We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

#### I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)

The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

LIWA0276E

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK & RATTLE DIAGNOSTIC WORKSHEET- page 2

Briefly describe the location where the noise occurs:

---

---

---

### II. WHEN DOES IT OCCUR? (check the boxes that apply)

- |  |   |
|--|---|
| <input type="checkbox"/> anytime                             | <input type="checkbox"/> after sitting out in the sun |
| <input type="checkbox"/> 1 <sup>st</sup> time in the morning | <input type="checkbox"/> when it is raining or wet    |
| <input type="checkbox"/> only when it is cold outside        | <input type="checkbox"/> dry or dusty conditions      |
| <input type="checkbox"/> only when it is hot outside         | <input type="checkbox"/> other: _____                 |

### III. WHEN DRIVING:

- through driveways
- over rough roads
- over speed bumps
- only at about \_\_\_\_ mph
- on acceleration
- coming to a stop
- on turns : left, right or either (circle)
- with passengers or cargo
- other: \_\_\_\_\_
- after driving \_\_\_\_ miles or \_\_\_\_ minutes

### IV. WHAT TYPE OF NOISE?

- squeak (like tennis shoes on a clean floor)
- creak (like walking on an old wooden floor)
- rattle (like shaking a baby rattle)
- knock (like a knock on a door)
- tick (like a clock second hand)
- thump (heavy, muffled knock noise)
- buzz (like a bumble bee)

## BODY FRONT END

PFPP:H5022

### Removal and Installation

EIS0016X

- When removing or installing hood, place a cloth or other padding on front fender panels and cowl top. This prevents vehicle body from being scratched.
- Bumper fascia is made of plastic. Do not use excessive force and be sure to keep oil away from it.
- Hood adjustment: Adjust at hinge portion. **B**
- Hood lock adjustment: After adjusting, check hood lock control operation. Apply a coat of grease to hood lock engaging mechanism.
- Hood opener: Do not attempt to bend cable forcibly. Doing so increases effort required to unlock hood.

### FRONT BUMPER ASSEMBLY

1. Remove screws securing left and right front fog lamps, and remove the lamps (if equipped); or remove filler trim panel.
2. Remove four clips C205 from the top of the front grille, pull up to unclip bottom and remove. **A**
3. Remove clips C205 and screws located on front side of fender protector at wheel opening.
4. Remove three bolts from the air deflector.
5. Remove two bolts securing lower side of front bumper fascia.
6. Pull off front bumper fascia and energy absorber.
7. Remove four nuts securing bumper reinforcement, then remove bumper reinforcement.
8. Remove four bolts securing front bumper side stays.
9. Remove front bumper side stays.
10. Remove the air dam if necessary.

### Removal and Installation

EIS0016Y

- When removing or installing trunk lid, place a cloth or other padding on rear fender panels. This prevents vehicle body from being scratched.
- Bumper fascia is made of plastic. Do not use excessive force and be sure to keep oil away from it.
- Trunk lid adjustment: Adjust at hinge-trunk lid portion for proper trunk lid fit.
- Trunk lid lock system adjustment: Adjust striker so that it is in the center of the lock. After adjustment, check trunk lid lock operation.
- Opener cable: Do not attempt to bend cable using excessive force.
- After installation, make sure that trunk lid and fuel filler lid open smoothly.

### REAR BUMPER ASSEMBLY

1. Remove four bolts and one clip C205 from lower side of rear bumper fascia.
2. Remove two screws from each quarter panel side.
3. Remove four clips C205 from upper side of rear bumper fascia.
4. Remove rear bumper fascia.
5. Remove four nuts securing bumper reinforcement, then remove bumper reinforcement.
6. Remove four bolts securing bumper side stays, then remove bumper side stays.

## SIDE AND FLOOR TRIM

### Removal and Installation

**CAUTION:**

- **Wrap the tip of flat-bladed screwdriver with a cloth when removing metal clips from garnishes.**
1. Remove A/T finisher or M/T shift lever boot. Refer to [IP-10, "Removal and Installation"](#) .
  2. Remove the console. Refer to [IP-10, "Removal and Installation"](#) .
  3. Remove front and rear seats. Refer to [SE-3, "Removal and Installation"](#) (front), or [SE-5, "Removal and Installation"](#) (rear).
  4. Remove kick plates.
  5. Remove dash side lower garnish. **A**
  6. Remove body side welts.
  7. Remove front seat belt floor anchor bolt. Refer to [SB-3, "Removal and Installation"](#) .
  8. Remove rear seat belt floor anchor bolt. Refer to [SB-5, "Removal and Installation"](#) .
  9. Remove center pillar lower garnish.
  10. Remove adjuster cover and pillar shoulder bolt. Refer to [SB-3, "Removal and Installation"](#) .
  11. Remove floor carpet.
  12. Remove center pillar upper garnish. **C**
  13. Remove front pillar garnish. **B**
  14. Remove rear pillar garnish. **D**
  15. Remove parcel shelf.
  16. Remove center rear seat back finisher.
  17. Remove side rear seat back finishers. **E**

## DOOR FINISHER

### Removal and Installation

EIS00172

#### CAUTION:

Wrap the tip of a flat-bladed screwdriver with cloth when prying pawls from door trim.

1. Remove the door pull finisher(s).
2. Remove power window switch(es) finisher(s), then disconnect the connector(s) (models equipped with power windows).
- **Do not lift the front of the power window switch assembly.**
3. Remove window regulator handle (models without power windows).
4. Remove screws and disconnect clips C101 and clips C103 from door.
5. Reach behind and carefully pull door trim panel from inside handle until finisher pops off.
6. Lift out door trim.

# ROOF TRIM

PFP:73910

EIS00173

## ROOF TRIM

### Removal and Installation

#### CAUTION:

Disconnect both terminals from battery in advance.

1. Remove driver air bag module and steering wheel. Refer to [SRS-40, "Removal and Installation"](#) and [PS-11, "STEERING WHEEL"](#).
2. Fully tilt front right and left seat backs backward.
3. Remove front pillar garnish, front and rear kick plates. Refer to [EI-28, "Removal and Installation"](#).
4. Remove center pillar lower and upper garnish, and rear pillar garnish. Refer to [EI-28, "Removal and Installation"](#).
5. Remove sun visors.
6. Remove interior lamp.
7. Remove assist grips (if equipped). **A**
8. Remove sunroof welt (if equipped) and door welts.
9. Remove sunroof switch (if equipped) and map lamp assembly.
10. Remove clips attached to roof.
11. Take out headlining from the front passenger door.

## PRECAUTIONS

### Parts Requiring Angular Tightening

EBS00CE6

- Use an angle wrench for the final tightening of the following engine parts:
  - Cylinder head bolts
  - Main bearing cap bolts
  - Connecting rod cap nuts
- Do not use a torque value for final tightening.
- The torque value for these parts are for a preliminary step.
- Ensure thread and seat surfaces are clean and coated with engine oil.

### Precautions for Liquid Gasket

EBS00EXN

#### REMOVAL OF LIQUID GASKET SEALING

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket sealing.

**CAUTION:**

**Be careful not to damage the mating surfaces.**

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap (1) the cutter where the Silicone RTV Sealant is applied. Use a plastic hammer to slide the cutter (2) by tapping on the side.

**CAUTION:**

**If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.**

#### LIQUID GASKET APPLICATION PROCEDURE

1. Using a scraper, remove the old Silicone RTV Sealant adhering to the gasket application surface and the mating surface.
- Remove the sealant completely from the groove of the gasket application surface, mounting bolts, and bolt holes.
2. Thoroughly clean the gasket application surface and the mating surface and remove adhering moisture, grease and foreign materials.
3. Attach the sealant tube to the tube presser.
 

**Use Genuine Silicone RTV Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

4. Apply the sealant using Tool without breaks to the specified location with the specified dimensions.

**Tube presser**

**WS39930000 (-)**

# PRECAUTIONS

[QG18DE]

- If there is a groove for the sealant application, apply the sealant to the groove.
- As for the bolt holes, normally apply the sealant inside the holes. If specified, it should be applied outside the holes. Make sure to read the text of this manual.
- Within five minutes of the sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to [MA-13](#), "[RECOMMENDED FLUIDS AND LUBRICANTS](#)".

## CAUTION:

Follow all specific instructions in this manual.

## Rocker Cover Bolts

EBS00EWP

## NOTE:

Remove and install rocker cover bolts with a socket or wrench only.

# PREPARATION

Oxygen sensor thread cleaner J-43897-18 J-43897-12   AEM488	Reconditioning the exhaust system threads before installing a new oxygen sensor (Use with anti-seize lubricant shown below.) <b>a: J-43897-18 [18 mm dia.] for zirconium oxygen sensor</b> <b>b: J-43897-12 [12 mm dia.] for titania oxygen sensor</b>	M
Anti-seize lubricant (Permatex 133AR or equivalent meeting MIL specification MIL-A-907)   AEM489	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads	

# NOISE, VIBRATION, AND HARSHNESS (NVH) TROUBLESHOOTING

[QG18DE]

## NOISE, VIBRATION, AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

### Noise, Vibration and Harshness (NVH) Troubleshooting NVH TROUBLESHOOTING — ENGINE NOISE

EBS00CEA

Use the chart below to help you find the cause of the symptom.

1. Locate the area where noise occurs.
2. Confirm the type of noise.
3. Specify the operating condition of engine.
4. Check specified noise source.

If necessary, repair or replace these parts.

Location of noise	Type of noise	Operating condition of engine						Source of noise	Check item	Reference page
		Before warm-up	After warm-up	When starting	When idling	When racing	While driving			
Top of Engine Rocker Cover Cylinder Head	Ticking or click	C	A	—	A	B	—	Tappet noise	Valve clearance	<a href="#">EM-35</a>
	Rattle	C	A	—	A	B	C	Camshaft bearing noise	Camshaft journal clearance Camshaft runout	<a href="#">EM-33</a> , <a href="#">EM-34</a>
Crankshaft Pulley Cylinder Block (Side of Engine) Oil pan	Slap or knock	—	A	—	B	B	—	Piston pin noise	Piston and piston pin clearance Connecting rod bushing clearance	<a href="#">EM-69</a> , <a href="#">EM-76</a>
	Slap or rap	A	—	—	B	B	A	Piston slap noise	Piston-to-bore clearance Piston ring side clearance Piston ring end gap Connecting rod bend and torsion	<a href="#">EM-69</a> , <a href="#">EM-70</a> , <a href="#">EM-70</a> , <a href="#">EM-70</a>
	Knock	A	B	C	B	B	B	Connecting rod bearing noise	Connecting rod bearing clearance (Big end) Connecting rod bushing clearance (Small end)	<a href="#">EM-75</a> , <a href="#">EM-76</a>

## OIL PAN

### Components

### Removal

1. Remove engine RH side undercover splash shield.
2. Drain engine oil.
3. Remove front exhaust tube.  
Refer to [EX-3, "Removal and Installation"](#).
4. Remove the exhaust manifold support.
5. Remove the engine gusset.

6. Remove rear plate cover (lower) (A/T models).
7. Remove oil pan.
  - a. Loosen and remove nuts and bolts of oil pan in order shown.

- b. Insert Tool between cylinder block and oil pan.
 

**CAUTION:**

  - Be careful not to damage aluminum mating face.
  - Do not insert screwdriver, or oil pan flange will be damaged.
- c. Slide Tool by tapping on the side of the Tool with a hammer.

## Installation

1. Use a scraper to remove old RTV Silicone Sealant from mating surface of oil pan.
  - Also remove old RTV Silicone Sealant from mating surface of cylinder block.

# OIL PAN

[QG18DE]

2. Apply a continuous bead of RTV Silicone Sealant to mating surface of oil pan.
  - Use Genuine RTV Silicone Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - Apply to groove on mating surface.
  - Allow 7 mm (0.28 in) clearance around bolt holes.

- Be sure RTV Silicone Sealant diameter is 3.5 to 4.5 mm (0.138 to 0.177 in).
- Installation should be done within 5 minutes after applying sealant.

3. Install oil pan.
  - Tighten oil pan nuts and bolts in the numerical order.
  - Wait at least 30 minutes before refilling engine oil.
4. Install the remaining parts in the reverse order of removal.

## FUEL INJECTOR AND FUEL TUBE

### Removal and Installation

#### CAUTION:

- Apply new engine oil when installing the parts that specified to do so in the figure.
- Do not remove or disassemble parts unless instructed as shown above.

#### REMOVAL

1. Release the fuel pressure. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) (ULEV), [EC-637, "FUEL PRESSURE RELEASE"](#) (SULEV).
2. Disconnect the intake manifold bracket.
3. Remove the PCV hose and bracket.
4. Disconnect the sub-harness for the fuel injectors.
5. Disconnect the fuel quick connector on the engine side.
  - Using the quick connector release tool (hereinafter called "release tool"), perform the following steps to disconnect quick connector.

- a. Remove quick connector cap.

# FUEL INJECTOR AND FUEL TUBE

[QG18DE]

- b. With the sleeve side of release facing quick connector, install release tool onto fuel tube.
- c. Insert release tool into quick connector until sleeve contacts and goes no further. Hold the release tool on that position.

**CAUTION:**

Inserting the release tool hard will not disconnect quick connector. Hold release tool where it contacts and goes no further.

- d. Pull the quick connector straight out from the fuel tube.

**CAUTION:**

- Pull quick connector holding it at the "A" position, as shown in illustration.
- Do not pull with lateral force applied. O-ring inside quick connector may be damaged.
- Prepare container and cloth beforehand as fuel will leak out.
- Avoid fire and sparks.
- Be sure to cover openings of disconnected pipes with plug or plastic bag to avoid fuel leakage and entry of foreign materials.

6. When removing fuel hose quick connector at vehicle piping side, perform as follows.

- a. Remove quick connector cap.
- b. Hold the sides of the connector, push in tabs and pull out the tube. (The figure is shown for reference only.)
  - If the connector and the tube are stuck together, push and pull several times until they start to move. Then disconnect them by pulling.

**CAUTION:**

- The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.
- Do not use any tools to remove the quick connector.
- Keep the resin tube away from heat. Be especially careful when welding near the tube.
- Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.
- Do not bend or twist the tube during installation and removal.
- Do not remove the remaining retainer on tube.
- When the tube is replaced, also replace the retainer with a new one. Retainer color: Green.
- To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.

7. Remove the fuel injectors from the fuel tube, as follows:

- a. Release the clip, and remove the fuel injector.
- b. Pull the fuel injector straight out of the fuel tube.

**CAUTION:**

- Be careful not to damage the nozzle.
- Avoid any impact, such as dropping the fuel injector.
- Do not disassemble or adjust the fuel injector.

## INSTALLATION

1. Installation is in the reverse order of removal.

- Install new O-rings on the fuel injectors.
- Lubricate the new O-rings lightly with new engine oil.
- Be careful not to scratch the injector during installation. Also be careful not to twist or stretch the O-ring. If the O-ring was stretched while it was installed, do not insert it into the fuel tube immediately.

# FUEL INJECTOR AND FUEL TUBE

[QG18DE]

- a. Install the fuel injector into the fuel tube with the following procedure:
  - Do not reuse the clip, replace it with a new one.
  - Insert the clip into the clip mounting groove on the fuel injector.
  - Insert clip so that projection A of fuel injector matches notch A of the clip.
- b. Insert fuel injector into fuel tube with clip attached.
  - Insert it while matching it to the axial center.
  - Insert fuel injector so that projection B of fuel injector matches notch B of the clip.
  - Make sure that fuel tube flange is securely fixed in flange fixing groove on the clip.
  - Make sure that installation is complete by checking that fuel injector does not rotate or come off.
- c. Install the fuel tube assembly with the following procedure:
  - Insert the tip of each fuel injector into the intake manifold.

- Tighten the fuel tube mounting bolts in two stages in the numerical order shown.

**Stage 1** : 12 - 14 N·m (1.2 - 1.4 kg·m, 9 - 10 ft·lb)

**Stage 2** : 17 - 24 N·m (1.7 - 2.4 kg·m, 12 - 17 ft·lb)

### CAUTION:

- After properly connecting fuel tube assembly to injector and fuel hose, check connection for fuel leakage.

## CONNECTING QUICK CONNECTOR ON THE FUEL HOSE (ENGINE SIDE)

1. Make sure no foreign substances are deposited in and around the fuel tube and quick connector, and there is no damage to them.
2. Thinly apply new engine oil around the fuel tube tip end.
3. Align center to insert quick connector straight into fuel tube.

- Insert fuel tube into quick connector until the top spool on fuel tubes is inserted completely and the second level spool is positioned slightly below the quick connector bottom end.

### CAUTION:

- Hold at position "A" as shown, when inserting the fuel tube into the quick connector.
- Carefully align to center to avoid inclined insertion to prevent damage to the O-ring inside the quick connector.
- Insert the fuel tube until you hear a "click" sound and actually feel the engagement.
- To avoid misidentification of engagement with a similar sound, be sure to perform the next step.

4. Before clamping the fuel hose with the hose clamp, pull the quick connector hard by hand, holding at the "A" position, as shown. Make sure it is completely engaged (connected) so that it does not come off of the fuel tube.

### NOTE:

Recommended pulling force is 50 N (5.1 kg, 11.2 lb).

5. Install quick connector cap on quick connector joint.

# FUEL INJECTOR AND FUEL TUBE

[QG18DE]

- Direct arrow mark on quick connector cap to upper side (fuel hose side).
6. Install fuel hose to hose clamp.

## CONNECTING QUICK CONNECTOR ON THE FUEL HOSE (VEHICLE PIPING SIDE)

1. Make sure no foreign substances are deposited in and around the fuel tube and quick connector, and there is no damage to them.
2. Align center to insert quick connector straight into fuel tube.
  - Insert fuel tube until a click is heard.
  - Install quick connector cap on quick connector joint. Direct arrow mark on quick connector cap upper side.
  - Install fuel hose to hose clamp.

## INSPECTION AFTER INSTALLATION

Make sure there is no fuel leakage at connections as follows:

1. Apply fuel pressure to fuel lines by turning ignition ON (with engine stopped). Then check for fuel leaks at connections.
2. Start the engine and rev it up and check for fuel leaks at connections.

### NOTE:

Use mirrors for checking on hard to see points of the fuel system.

### CAUTION:

**Do not touch the engine immediately after stopping, as the engine becomes extremely hot.**

# ROCKER COVER

[QG18DE]

- Loosen the bolts in the numerical order as shown.
- If replacement is necessary, remove the rocker cover oil seal using a flat-head screwdriver.

**CAUTION:**

Be careful not to damage the rocker cover.

## INSTALLATION

- Install the rocker cover oil seal.

- Using a drift with outer diameter 97 mm (3.82 in) and inner diameter 83 mm (3.27 in) to 88 mm (3.46 in), press in oil seal.

**NOTE:**

There are two types of oil seal. If oil seal with flat bottom surface is pressed in, drift with any inner diameter can be used.

- Press oil seal in until it is flush with installation surface.

- Install the gasket on top of No. 1 camshaft bracket.
  - Position the gasket aligning its shape with camshaft bracket side. Align positioning stopper pin with hole gasket, and install.
- Install the gasket (for circumference, square type) to installation groove of rocker cover.

- Apply sealant to the positions shown, then install rocker cover.
  - Use Genuine RTV Silicone Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

# ROCKER COVER

[QG18DE]

5. Tighten the rocker cover bolts to specified torque in two steps, in the numerical order as shown.

Bolt length:	Bolt position	Torque
25 mm (0.98 in)	: 1	: 6.9 - 9.5 N·m (0.70 - 0.97 kg·m, 61 - 84 in·lb)
65 mm (2.56 in)	: 2	: 6.9 - 9.5 N·m (0.70 - 0.97 kg·m, 61 - 84 in·lb)
20 mm (0.79 in)	Except the above (all circumference)	: 6.9 - 9.5 N·m (0.70 - 0.97 kg·m, 61 - 84 in·lb)

6. Install the intake valve timing control solenoid valve and camshaft position sensor (PHASE).  
 ● Tighten bolts after fully inserting into rocker cover.

Intake valve timing control solenoid valve bolt	: 8.82 - 10.78 N·m (0.9 - 1.0 kg·m, 78 - 95 in·lb)
Camshaft position sensor (PHASE) bolt	: 7.2 - 10.8 N·m (0.73 - 1.1, 64 - 95 in·lb)

7. Install the PCV control valve.

PCV control valve	: 19.6 - 29.4 N·m (2.0 - 2.9 kg·m, 15 - 21 ft·lb)
-------------------	---

8. Install the remaining components in the reverse order of removal.

## CAMSHAFT

### Removal and Installation

- |                      |                                 |                            |
|----------------------|---------------------------------|----------------------------|
| 1. Camshaft brackets | 2. Camshaft sprocket (INT)      | 3. Camshaft sprocket (EXH) |
| 4. Washer            | 5. Cylinder head front cover    | 6. Chain tensioner         |
| 7. Valve lifter      | 8. Adjusting shim (if equipped) | 9. Camshaft (EXH)          |
| 10. Camshaft (INT)   |                                 |                            |

**CAUTION:**

Prior to installation, apply engine oil to the parts marked in the figure.

**REMOVAL**

1. Remove the rocker cover. Refer to [EM-23, "ROCKER COVER"](#).
2. Remove the cylinder head front cover.
  - Move harness secured to the front surface beforehand.
3. Set No. 1 cylinder at TDC of its compression stroke.
  - a. Remove the RH splash cover.
  - b. Rotate crankshaft pulley clockwise and align the yellow paint mark with the timing indicator.

# CAMSHAFT

[QG18DE]

- c. Confirm mating marks stamped on intake and exhaust sprockets are located as shown.
  - If not, rotate crankshaft pulley as shown and align them.
- d. Referring to mating marks on the intake and exhaust camshaft sprockets, put paint mating marks on timing chain links.

4. Set the intake camshaft sprocket to the most advanced position.

**CAUTION:**

Removal and installation of the intake camshaft sprocket is required to maintain the most advanced position because of the following reasons. Therefore, follow the procedure exactly.

- Sprocket and vane (camshaft in front) rotate and become offset within the specific angle range.
- When engine is stationary, the vane is located at the most retarded position. The vane is fixed to the sprocket by an internal lock pin. Therefore, it does not rotate.
- If the camshaft sprocket mounting bolts are turned under the above circumstance, the lock pin will be damaged by lateral load (shear stress). It may cause non-standard operation.

**NOTE:**

"Rotating direction" means direction viewed from the engine front side.

**CAUTION:**

Do not remove the chain tensioner before performing this step.

- a. Using a wrench, hold the hexagonal part so that the intake camshaft does not move.

- b. Using an air gun, apply air pressure to the intake valve timing control solenoid valve advance side oil passage on the top surface of the No. 1 camshaft bracket.

**Compressed air pressure : 300 kPa (3.06 kg/cm<sup>2</sup>, 43.5 psi) or more**

- Keep applying air pressure until step "d" is completed.

**CAUTION:**

- Be careful not to damage the oil passage from interference of the air gun tip.
- Thoroughly wipe off the oil before applying air pressure. When applying air pressure, cover around the air gun using a rag. Wear protective glasses if necessary.

EM  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

# CAMSHAFT

[QG18DE]

- c. Slowly turn the intake camshaft in direction A (counterclockwise: intake manifold side).  
 ● Perform while applying air pressure.

**CAUTION:**

**Be careful not to dislocate the camshaft retaining spanner.**

- d. During the above step, an operating click (a sound indicating internal lock pin is disengaged) is heard from the inside of the intake camshaft sprocket. After hearing it, slowly turn intake camshaft in direction B (clockwise: exhaust manifold side), and set to most advanced position.

- Perform while applying air pressure.
- When the vane rotates solely against sprocket, lock pin is disengaged even if operating click is not heard.
- If the lock pin is not disengaged, jiggle the camshaft with a wrench.
- If the lock pin is not disengaged with the above step, tap the intake camshaft in front with a plastic hammer.

- e. The following status indicates that the most advanced position is achieved: vane starts rotating on its own, then the sprocket also starts rotating when camshaft is turned. When above status is achieved, this step is complete.

- The most advanced position is confirmed when the stopper pin groove and lock pin breathing groove are aligned.

- f. Stop the air and insert stopper pin [approximately 3 mm (0.12 in) dia., length of inserted part is approximately 15 mm (0.59 in)] into pinhole on camshaft sprocket to fix the most advanced position.

**NOTE:**

In the figure, an Allen wrench [a/f 2.5 mm (0.091 in), short part: approximately 20 mm (0.79 in), long part: approximately 50 mm (1.97 in)] is used for stopper pin as an example.

**CAUTION:**

**Load (spring reaction force) is not applied to stopper pin. Pin is easily detached. Therefore, secure it with vinyl tape to prevent detachment.**

5. Remove the chain tensioner.

- Press the plate down and release the stopper tab.
- Insert the plunger into the tensioner body until it stops.
- Secure the plate by passing the stopper pin (such as a hard wire) through the plate hole and body hole. (Plunger is also secured.)
- Remove the mounting bolts and remove the chain tensioner.

# CAMSHAFT

[QG18DE]

6. While holding the hexagonal part of the camshaft with a wrench, loosen the mounting bolts and remove the intake and exhaust camshaft sprockets.

**CAUTION:**

- Avoid securing the camshaft at other than the hexagonal part and loosening mounting bolts by utilizing tension of timing chain.
- After this step is completed, do not rotate crankshaft and camshaft separately in order to prevent interference between the valves and pistons.

7. Handle the intake camshaft sprocket as follows.

**CAUTION:**

- Secure the stopper pin with vinyl tape to prevent detachment.
- Avoid dropping it or subjecting it to impact.
- Do not disassemble. (Do not loosen the 3 bolts on front surface.)

**NOTE:**

If stopper pin is detached and the lock pin is engaged at the most retarded position during removal, recover as follows.

- a. Reinstall the stopper pin to intake camshaft, and tighten the intake camshaft sprocket mounting bolts so that air does not leak.

**CAUTION:**

**Tightening torque for the mounting bolts must be minimum so that air does not leak, preventing damage to the internal lock pin.**

- b. Apply air pressure to disengage the lock pin, and turn the vane to the most advanced position. (This step can be performed with the timing chain removed.)
- c. Reinstall stopper pin.
- d. Remove intake camshaft sprocket from the camshaft.

8. Loosen the camshaft bracket bolts in the order shown, and remove the camshaft brackets and camshafts.

**CAUTION:**

**Be careful not to damage signal plate on rear end of intake camshaft.**

9. Remove adjusting shims and valve lifters.
- Check mounting positions, and set them aside in the order removed.

## INSTALLATION

1. Install the valve lifter and adjusting shims.
- Install them in the same position from which they were removed.
  - Install adjusting shim with its stamped mark facing down (valve lifter side).

# CAMSHAFT

[QG18DE]

2. Install the camshafts.

- Intake and exhaust camshafts are distinguished by checking difference between front and rear end shapes.

- Install camshafts so that the dowel pins on the front side are positioned as shown.

3. Install camshaft brackets.

- Completely remove any foreign material on mounting surfaces of camshaft brackets and mounting surface of cylinder head.
- Referring to marks on top surfaces of camshaft brackets, install them to their original positions and in their original directions.

4. Tighten camshaft bracket mounting bolts as follows.

- Different bolts are used depending on installation location. Refer to following for proper bolt locations.

**Bolt color:**

**1 to 10 in figure : black (reamer bolt)**

**11 and 12 in figure : gold**

**Camshaft bracket bolt**

**Step 1 (bolts 9 - 12) : 2.0 N-m (0.2 kg-m, 18 in-lb)**

**Step 2 (bolts 1 - 8) : 2.0 N-m (0.2 kg-m, 18 in-lb)**

**Step 3 : 5.9 N-m (0.6 kg-m, 52 in-lb)**

**Step 4 : 9.0 - 11.8 N-m (0.92 - 1.2 kg-m, 80 - 104 in-lb)**

5. Install intake camshaft sprocket as follows.

- Before installation, make sure that stopper pin is inserted in intake camshaft sprocket.

**NOTE:**

Service parts are provided with pin inserted.

**CAUTION:**

**Stopper pin is easily detached. Secure it with vinyl tape to prevent detachment.**

- a. Install timing chain by aligning the mating mark (marked when timing chain is removed) with mark on camshaft sprocket.
  - Align dowel pin on camshaft front surface and pinhole on sprocket backside, then install.

- b. While holding the hexagonal part of camshaft with a wrench, tighten intake camshaft sprocket bolt to specification.
  - Make sure that stopper pin is not detached.

**Intake camshaft sprocket bolt : 78.4 - 88.2 N·m (8.0 - 9.0 kg·m, 58 - 65 ft·lb)**

6. Install exhaust camshaft sprocket as follows.
  - a. Install timing chain by aligning the mating mark (marked when timing chain is removed) with mark on camshaft sprocket.
    - Align dowel pin on camshaft front surface and pinhole on sprocket, then install.
  - b. While holding the hexagonal part of the camshaft with a wrench, tighten exhaust camshaft sprocket bolt to specification.

**Exhaust camshaft sprocket bolt : 98.1 - 127.5 N·m (10 - 13 kg·m, 73 - 94 ft·lb)**

- c. Make sure that mating marks on intake/exhaust camshaft sprockets and mating mark on timing chain are aligned.

7. Install chain tensioner.
  - Hold plate and plunger with a stopper pin, then install them.
  - After installation, remove stopper pin and release plunger.
  - Make sure again that mating marks on intake/exhaust camshaft sprockets and mating mark on timing chain are aligned.

A  
EM  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

8. Remove stopper pin from intake camshaft sprocket.

9. Slowly turn crankshaft pulley clockwise to set intake camshaft sprocket to most retarded position.

- The sprocket begins turning after the crankshaft does. Once sprocket starts turning, keep turning crankshaft until the vane (camshaft) also begins turning. The most retarded position should now be achieved.
- The most retarded position is confirmed when stopper pin groove is at a clockwise offset from lock pin breathing groove.
- While turning crankshaft slightly more counterclockwise, confirm that the lock pin is engaged when vane and sprocket turn together.

10. Install cylinder head front cover.

- Apply Genuine Anaerobic Liquid Gasket or equivalent as shown in the figure. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
- Install it by aligning the dowel pin on the cylinder head.

11. Check and adjust valve clearance. Refer to [EM-35, "Valve Clearance"](#).

12. Install the remaining components in the reverse order of removal.

## INSPECTION AFTER REMOVAL

Check camshaft for scratches, seizure and wear.

## Camshaft Runout

1. Put the camshaft on a V-block supporting the No.2 and No.5 journals.
2. Set the dial gauge vertically on the No.3 journal.
3. Turn camshaft in one direction by hand, and measure the camshaft runout on the dial gauge total indicator reading.

**Standard** : Less than 0.02 mm (0.0008 in)  
**Limit** : 0.1 mm (0.004 in)

4. If it exceeds the limit, replace camshaft.

## Camshaft Cam Height

1. Measure the camshaft cam height.

**Standard intake cam height** : 40.61 - 40.8 mm (1.599 - 1.606 in)

**Standard exhaust cam height** : 38.965 - 39.155 mm (1.534 - 1.542 in)

**Cam wear limit** : 0.20 mm (0.0079 in)

2. If wear is beyond the limit, replace the camshaft.

## Camshaft Journal Clearance

1. Install the camshaft brackets and tighten the bolts to specified torque.
2. Using inside micrometer, measure inner diameter of camshaft bracket.

**Standard No. 1 Intake and exhaust** : 28.000 - 28.021 mm (1.1024 - 1.1032 in)

**Standard No.2, 3, 4, 5 Intake** : 23.985 - 24.006 mm (0.9443 - 0.9451 in)

**Exhaust** : 24.000 - 24.021 mm (0.9449 - 0.9457 in)

3. Measure the outer diameter of the camshaft journal.

**Standard No.1** : 27.935 - 27.955 mm (1.0998 - 1.1006 in)

**Standard No. 2, 3, 4, 5** : 23.935 - 23.955 mm (0.9423 - 0.9431 in)

4. If the journal clearance exceeds the limit, replace camshaft and/or cylinder head.

- (Camshaft journal clearance) = (inner diameter of camshaft bracket) – (outer diameter of camshaft journal)

## Camshaft journal clearance

### Standard

**Intake** : 0.030 - 0.071 mm (0.0012 - 0.0028 in)

**Exhaust** : 0.045 - 0.086 mm (0.0018 - 0.0034 in)

### Limit

**Intake** : 0.135 mm (0.0053 in)

**Exhaust** : 0.150 mm (0.0059 in)

### NOTE:

Inner diameter of the camshaft bracket is manufactured together with the cylinder head. If the camshaft bracket is out of specification, replace the entire cylinder head assembly.

## Camshaft End Play

1. Install camshaft in cylinder head. Refer to [EM-29, "INSTALLATION"](#)
2. Install a dial gauge in the thrust direction on the front end of the camshaft. Measure the end play with the dial gauge while moving the camshaft forward and backward (in direction to axis).

### Camshaft end play

**Standard** : 0.115 - 0.188 mm (0.0045 - 0.0074 in)

**Limit** : 0.20 mm (0.0079 in)

3. If out of the specified range, replace with new camshaft and measure again.
4. If out of the specified range again, replace with new cylinder head assembly.

## Camshaft Sprocket Runout

1. Install the camshaft sprocket on the camshaft.
2. Measure camshaft sprocket runout while turning the camshaft by hand.

**Runout (total indicator reading)** : Less than 0.15 mm (0.0059 in)

3. If it exceeds the specification, replace camshaft sprocket.

## Valve Lifter and Valve Shim

1. Check contact and sliding surfaces for excessive wear or cracks, replace as necessary.

2. Measure the valve lifter outer diameter.

**Valve lifter outer diameter : 29.960 - 29.975 mm (1.1795 - 1.1801 in)**

If out of the specified range, replace the valve lifter.

3. Measure the valve lifter guide bore.

**Standard : 30.000 - 30.021 mm (1.1811 - 1.1819 in)**

4. Calculate valve lifter clearance. If out of specified range, replace valve lifter and/or cylinder head of whichever exceeds standard limit.  
 (Valve lifter clearance) = (valve lifter guide bore) – (outer diameter of valve lifter)

**Valve lifter clearance : 0.025 - 0.065 mm (0.0010 - 0.0026 in)**

## Valve Clearance INSPECTION

### NOTE:

The following procedure is applicable when: components related to camshafts or valves are removed, installed, or replaced. Driveability concerns (poor starting, poor idling, noise) are caused by valve clearance aging.

1. Warm engine and stop.
2. Remove RH splash cover.
3. Remove the rocker cover. Refer to [EM-23, "ROCKER COVER"](#).
4. Remove all of the spark plugs.
5. Set No. 1 cylinder at TDC on its compression stroke.
  - Align pointer with TDC mark on crankshaft pulley.
  - Check that both intake and exhaust cam noses on No. 1 cylinder face outward.
  - If not, turn crankshaft one revolution (360°) and align as described above.

### NOTE:

Or, valves to be checked when No. 4 cylinder is at TDC of its compression stroke can be checked first following step 8.

6. Referring to figure, measure valve clearances of valves with x in table below using a thickness gauge.

Cylinder	No. 1		No. 2		No. 3		No. 4	
	INT	EXH	INT	EXH	INT	EXH	INT	EXH
No. 1 cylinder at TDC of its compression stroke	X	X	X			X		

# CAMSHAFT

[QG18DE]

- Using a feeler gauge, measure clearance between valve lifter and camshaft.
- Record any valve clearance measurements which are out of specification. They will be used later to determine the required replacement adjusting shim.

MBIB0224E

## Valve clearance standard:

Hot	Intake	: 0.32 - 0.40 mm (0.013 - 0.016 in)
	Exhaust	: 0.37 - 0.45 mm (0.015 - 0.018 in)
Cold*	Intake	: 0.25 - 0.33 mm (0.010 - 0.013 in)
	Exhaust	: 0.32 - 0.40 mm (0.013 - 0.016 in)

\*: Approximately 20°C (68°F) (Reference data)

If an adjustment is done with a cold engine, confirm reference values with hot engine are met.

Limit values with hot engine (reference)	Intake	: 0.21 - 0.47 mm (0.008 - 0.019 in)
	Exhaust	: 0.30 - 0.56 mm (0.012 - 0.022 in)

- Turn crankshaft one revolution (360°) to position No. 4 cylinder at TDC of its compression stroke.
- Check only those valves shown in the figure and marked with an x in the table.

Cylinder	No. 1		No. 2		No. 3		No. 4	
	INT	EXH	INT	EXH	INT	EXH	INT	EXH
No. 4 cylinder at TDC of its compression stroke				X	X		X	X

- If outside the standard, adjust applicable valves. Refer to [EM-36, "ADJUSTING"](#).

MBIB0225E

## ADJUSTING

Adjust valve clearance while engine is cold.

- Turn crankshaft clockwise (viewed from front) to position cam lobe upward on camshaft for valve that must be adjusted.
- Turn valve lifter and adjusting shim to removal direction.
  - Using a slotted screwdriver with an extra-thin tip, turn the valve lifter cutout in the direction shown by the arrow.

MBIB0226E

# CAMSHAFT

[QG18DE]

3. Place Tool (1) around camshaft as shown. **Before placing Tool (1), rotate notch toward center of cylinder head. This will simplify shim removal later.**

**CAUTION:**

- Be careful not to damage camshaft and cylinder head.
- Be careful not to damage surroundings of valve lifter.

4. Rotate Tool (1) so that valve lifter is pushed down, compressing the spring.

5. Place Tool (2) between camshaft and valve lifter to retain valve lifter.

**CAUTION:**

- If camshaft pliers are suddenly turned back, the lifter stopper may contact and damage the camshaft journals. Turn back the camshaft pliers carefully to remove.
- Tool (2) must be placed as close to camshaft bracket as possible.
- Be careful not to damage cam surface with Tool (2).

6. Remove Tool (1).

7. Keep adjusting shim slightly up from the valve lifter. Remove adjusting shim using Tool and a magnetic finger.

A  
EM  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

8. Determine replacement adjusting shim size using the following formula.

- Use a micrometer to determine thickness (t1) of removed shim at camshaft contact face (around center).
- Use  $t1 + (C1 - C2)$  to calculate thickness of new adjusting shim so valve clearance comes within specified values.

t1 = Thickness of removed shim  
 C1 = Measured valve clearance  
 C2 = Standard valve clearance

**Hot engine:**

**Intake : 0.32 - 0.40 mm (0.013 - 0.016 in)**

**Exhaust : 0.37 - 0.45 mm (0.015 - 0.018 in)**

**Reference values with cold engine:**

**Intake : 0.25 - 0.33 mm (0.010 - 0.013 in)**

**Exhaust : 0.32 - 0.40 mm (0.013 - 0.016 in)**

SEM145D

- Thickness of new adjusting shim is indicated with stamped mark on its back.
- **Shims are available in 50 sizes from 2.00 mm (0.0787 in) to 2.98 mm (0.1173 in), in steps of 0.02 mm (0.0008 in).**
- Select the closest size shim to the calculated thickness. Refer to [EM-83, "Available Shims"](#).

AEM236

9. Install new shim using a suitable tool.

- **Install with the surface on which the thickness is stamped facing down.**

WEM041

10. Place Tool (1) as explained in steps 4 and 5.

11. Remove Tool (2).

12. Remove Tool (1).

13. Turn the crankshaft a couple of times by hand.

14. Recheck the valve clearance.

WEM042

# TIMING CHAIN

[QG18DE]

PFP:13028

EBS00CEH

## TIMING CHAIN

### Components

SEC. 120•130•135•493

⊗ : Always replace after every disassembly.

🔧 : Lubricate with new engine oil.

🔩 : Apply Genuine RTV Silicone Sealant or equivalent. Refer to GI Section.

🔩 : N•m (kg-m, ft-lb)

🔩 : N•m (kg-m, in-lb)

- |                              |                                      |                                     |

WBIA0298E

### CAUTION:

- After removing timing chain, do not turn crankshaft and camshaft separately, or valves will strike piston heads.
- When installing chain tensioner, oil seats, or other sliding parts, lubricate contacting surfaces with new engine oil.

# TIMING CHAIN

[QG18DE]

- Apply new engine oil to bolt threads and seat surfaces when installing camshaft sprocket and crankshaft pulley.

## Removal

EBS00CEI

1. Disconnect battery ground cable.
2. Drain engine coolant. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#) .  
Be careful not to spill coolant on drive belts.
3. Drain engine oil. Refer to [MA-20, "Changing Engine Oil"](#) .
4. Remove the following belts.
  - Power steering pump drive belt
  - Alternator drive belt
5. Remove power steering pump from adjusting bar.
6. Remove alternator. Refer to [SC-31, "Removal"](#) .
7. Remove front RH wheel. Refer to [WT-4, "Removal"](#) .
8. Remove front/right-side splash undercover.
9. Remove center member.
10. Remove front exhaust tube. Refer to [EX-3, "Removal and Installation"](#) .

11. Disconnect vacuum hoses for:
  - EVAP canister
  - Brake power booster
12. Remove ignition coils.
13. Remove spark plugs.

14. Remove rocker cover. Refer to [EM-23, "REMOVAL"](#)
15. Remove oil level gauge.

# TIMING CHAIN

[QG18DE]

16. Remove gusset.

17. Remove rear plate (lower)(A/T models).

18. Remove oil pan and oil strainer. Refer to [EM-16, "Removal"](#).

19. For safe operation, and to reduce load to mount insulator, install center member.

20. Remove RH engine mounting and RH engine mounting bracket. Refer to [EM-63, "ENGINE ASSEMBLY"](#).

a. Remove any parts that make it difficult to remove RH mount.

b. Support cylinder block bottom surface with a transmission jack.

**CAUTION:**

● When positioning jack, use a wooden block to avoid damage to the oil pan mounting surface.

c. Separate and remove engine mounting bracket and engine mounting.

21. Remove cylinder head front cover.

22. Remove auxiliary bolts of cylinder head.

23. Set No. 1 piston at TDC on its compression stroke.

# TIMING CHAIN

[QG18DE]

- a. Turn the crankshaft pulley clockwise, and align the pointer to the timing mark on the pulley.

- b. Make sure the camshaft sprocket mating mark is in the position shown in the figure.
- If the mating mark is not in position, turn the crankshaft pulley once more and position it.

24. Remove crankshaft pulley as follows.

- a. Secure crankshaft counterweight with the handle of a hammer, and loosen crankshaft pulley bolt.

**CAUTION:**

Take care to prevent foreign material from entering the engine.

- b. Remove crankshaft pulley using crankshaft pulley puller.

**CAUTION:**

- Hook tab onto back of crankshaft pulley only.
- Do not remove crankshaft pulley bolt. Fully loosen, and then use it as support point.

25. Remove water pump pulley and idler pulley bracket assembly.

26. Remove front cover as follows.

- a. To ease front cover removal, pull oil pump drive spacer out through front oil seal.

- Pull it straight out using long nose pliers or two flat-bladed screwdrivers.

**CAUTION:**

Be careful not to damage side of oil pump drive spacer and front oil seal lip.

- b. Remove power steering pump adjusting bar.

# TIMING CHAIN

[QG18DE]

c. Remove front cover carefully.

- Remove mounting bolts A - E shown in figure.

**NOTE:**

Bolts C and E have been removed in step b.

**CAUTION:**

- When removing, be careful not to damage or bend front end of cylinder head gasket. Also after peeling off contact surface between front cover and gasket, their surfaces shall be smooth.
- If cylinder head gasket is damaged, replace it with a new one.

d. Remove O-rings from front cover and cylinder block.

27. Pull two dowel pins for front cover out of cylinder block.

- Heat them sufficiently with industrial dryer, then pull them out using locking pliers.

28. If front oil seal is to be replaced, remove it from the front cover.

- Insert a flat-bladed screwdriver in notch on oil seal mounting point, and pry out oil seal.

29. Set the intake camshaft sprocket to the most advanced position.

**CAUTION:**

Do not remove the chain tensioner before performing this step.

**CAUTION:**

Removal/installation of the intake camshaft sprocket is required to maintain the most advanced position because of the following reasons. Therefore, follow the procedure exactly.

- Sprocket and vane (camshaft in front) rotate and become offset within the specific angle range.
- When engine is stationary, the vane is located at the most retarded position. The vane is fixed to the sprocket by an internal lock pin. Therefore, it does not rotate.
- If the camshaft sprocket mounting bolts are turned under the above circumstance, the lock pin will be damaged by lateral load (shear stress). It may cause non-standard operation.

**NOTE:**

"Rotating direction" means direction viewed from the engine front side.

# TIMING CHAIN

[QG18DE]

- a. Using a wrench, hold the hexagonal part so that the intake camshaft does not move.

- b. Using an air gun, apply air pressure to the intake valve timing control solenoid valve advance side oil passage on the top surface of the No. 1 camshaft bracket.

**Compression pressure** :300 kPa (3.06 kg/cm<sup>2</sup>, 43.5 psi) or more

- Keep applying air pressure until substep d is completed.

**CAUTION:**

- Be careful not to damage the oil passage from interference of the air gun tip.
- Thoroughly wipe off the oil before applying air pressure. When applying air pressure, cover around the air gun using a rag. Wear protective glasses if necessary.

- c. Slowly turn the intake camshaft in direction A (counterclockwise: intake manifold side).

**CAUTION:**

**Be careful not to dislocate the camshaft retaining spanner.**

- d. During the above step, an operating click (a sound indicating internal lock pin is disengaged) is heard from the inside of the intake camshaft sprocket. After hearing it, slowly turn intake camshaft in direction B (clockwise: exhaust manifold side), and set to most advanced position.

- Perform while applying air pressure.
- When the vane rotates solely against sprocket, lock pin is disengaged even if operating click is not heard.
- If the lock pin is not disengaged, jiggle the camshaft with a wrench.
- If the lock pin is not disengaged with the above step, tap the intake camshaft in front with a plastic hammer.

- e. The following status indicates that the most advanced position is achieved: vane starts rotating on its own, then the sprocket also starts rotating when camshaft is turned. When above status is achieved, this step is complete.

- The most advanced position is confirmed when the stopper pin groove and lock pin breathing groove are aligned.

# TIMING CHAIN

[QG18DE]

- f. Stop the air and insert stopper pin [approximately 3 mm (0.12 in) dia., length of inserted part is approximately 15 mm (0.59 in)] into pinhole on camshaft sprocket to fix the most advanced position.

**CAUTION:**

**Load (spring reaction force) is not applied to stopper pin. Pin is easily detached. Therefore, secure it with vinyl tape to prevent detachment.**

**NOTE:**

In the figure, an Allen wrench [a/f 2.5 mm (0.098 in), short part: approximately 20 mm (0.79 in), long part: approximately 50 mm (1.97 in)] is used for stopper pin as an example.

30. Remove the chain tensioner.

- Remove in the following order.

- Press the plate down and release the stopper tab.
- Insert the plunger into the tensioner body until it stops.
- Secure the plate by passing the stopper pin (such as a hard wire) through the plate hole and body hole. (Plunger is also secured.)
- Remove the mounting bolts and remove the chain tensioner.

31. While holding the hexagonal part of the camshaft with a wrench, loosen the mounting bolts and remove the intake and exhaust camshaft sprockets.

**CAUTION:**

- Avoid securing the camshaft at other than the hexagonal part and loosening mounting bolts by utilizing tension of timing chain.
- After this step is completed, do not rotate crankshaft and camshaft separately in order to prevent interference between the valves and pistons.

32. Remove the timing chain, timing chain slack guide and tension guide.

33. Remove crankshaft sprocket.

## INSPECTION AFTER REMOVAL

Check for cracks and excessive wear at roller links. Replace if necessary.

## INSTALLATION

**CAUTION:**

- Use a scraper to completely remove all liquid gasket adhering to mounting surface. De-grease and clean mounting surfaces.
  - After installation, wipe off any protruding liquid gasket.
1. Install timing chain and its related parts as follows.

# TIMING CHAIN

[QG18DE]

- Refer to figure for proper alignment positions for the sprockets, timing chain and their related parts.
  - Install each sprocket with its mating mark facing the engine front side.
- Install timing chain and crankshaft sprocket.
    - Make sure that the crankshaft key points straight up (No. 1 cylinder is at TDC).
    - Hook timing chain on front end of camshaft so that it will not fall off.
  - Install timing chain slack guide and tension guide.
  - Install the camshaft sprocket. Refer to [EM-29, "INSTALLATION"](#).
  - Install the chain tensioner. Refer to [EM-29, "INSTALLATION"](#).
  - Make sure that mating marks are properly aligned.
  - Temporarily install the oil pump drive spacer, crankshaft pulley and crankshaft pulley mounting bolt so that the crankshaft can be rotated.
  - Rotate crankshaft clockwise several times to make sure it rotates normally.
  - Remove parts installed in step f.

- Install front oil seal to front cover.
  - Install it so that identification letters on oil seal will face toward front side of the engine.
  - Using an oil seal drift, press oil seal in until it is flush with end surface of mounting position.
  - Make sure that oil seal outer circumference is free from damage and burrs.

- Install front cover as follows.
  - Install O-ring to cylinder block.
  - Apply a continuous bead of sealant to the positions shown in the figure between the cylinder head gasket lower surface and the cylinder block.
    - **Use Genuine RTV Silicone Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply a continuous bead of sealant to the back surface of the front cover as shown in the figure.
    - **Use Genuine RTV Silicone Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**
- CAUTION:**
- **Do not apply sealant to groove A shown in figure.**
  - **Be especially careful of amount of sealant being applied in locations indicated with a \* in the figure.**
- Apply sealant to the top surface of front cover lightly and evenly.

# TIMING CHAIN

[QG18DE]

- Use Genuine RTV Silicone Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

- e. Install O-ring to back surface to front cover.
- f. With socket oil pump inner rotor placed on crankshaft top surface (clearance between front cover top surface and cylinder head gasket lower surface is secured), move front cover close to cylinder block.
- g. Lift front cover at an angle and install it to mounting position so that front cover will come in contact with both cylinder head gasket lower surface and cylinder block front surface at the same time.

**CAUTION:**

- Be careful not to damage cylinder head gasket.
- Make sure both sealing surfaces are contacted at the same time to ensure proper sealant adhesion and location.

- h. Install the front cover with mounting bolts temporarily so that front cover will not move.
- i. Press fit the dowel pin into the cylinder block through the front cover.

- j. Tighten the front cover mounting bolts temporarily.
- A [M6 x 20 mm (0.79 in)], B [M6 x 40 mm (1.57 in)], C [M8 x 70 mm (2.76)], D [M6 x 73 mm (2.87 in)]
  - Bolt C also secures the power steering pump adjusting bar.
  - Bolt E [M6 x 12 mm (0.47 in)] is for installing power steering pump adjusting bar.
- k. Tighten the cylinder head auxiliary bolts (M6) temporarily.
- l. Tighten the front cover mounting bolts and cylinder head auxiliary bolts to specified torque.

4. Install oil pump drive spacer.
- When installing, align with flat of oil pump rotor.
  - If they are not aligned, rotate inner rotor with a flat-bladed screwdriver to align them.

**CAUTION:**

- Be careful not to damage oil seal lips.

5. Install water pump pulley and idler pulley bracket assembly.
6. Install crankshaft pulley.
- When installing it, make sure that front oil seal lip is not inverted and garter spring is in position.
  - Secure crankshaft counterweight with the handle of a hammer, and tighten crankshaft pulley bolt.

# TIMING CHAIN

[QG18DE]

7. Install cylinder head front cover.
  - Apply Silicone RTV Sealant to cylinder head front cover in the specified thickness, as shown.
  - Use Genuine Silicone RTV Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
8. Install engine front mounting bracket.

9. Installation of the remaining parts is in reverse order of removal.

## INSPECTION AFTER INSTALLATION

EBS00EWJ

- In order to allow sealant to cure, perform inspection at least 30 minutes after the last step involving sealant is installed.
- With engine warmed up, check each part for engine oil leakage.

## OIL SEAL

### Replacement VALVE OIL SEAL

1. Remove rocker cover. Refer to [EM-23, "Removal and Installation"](#) .
2. Remove camshaft. Refer to [EM-26, "Removal and Installation"](#) .
3. Remove valve spring. Refer to [EM-56, "DISASSEMBLY"](#) .
4. Remove valve oil seal with Tool.

**CAUTION:**

**Piston concerned should be set at TDC to prevent valve from falling into combustion chamber.**

5. Apply new engine oil to new valve oil seal and install it with Tool.

### FRONT OIL SEAL

1. Remove the following parts:
  - Engine under cover
  - RH engine side cover
  - Generator and power steering drive belts
  - Crankshaft pulley
2. Remove front oil seal from front cover.
  - **Be careful not to scratch front cover.**

## OIL SEAL

[QG18DE]

3. Apply new engine oil to new oil seal and install it using a suitable tool.
  - Install new oil seal in the direction shown.

## REAR OIL SEAL

1. Remove the transaxle. Refer to [MT-16, "Removal and Installation"](#) (RS5F70A), [MT-82, "Removal and Installation"](#) (RS5F51A), [MT-143, "Removal and Installation"](#) (RS6F51H), or [AT-265, "REMOVAL AND INSTALLATION"](#) (RE4F03B), [AT-649, "REMOVAL AND INSTALLATION"](#) (RE4F04B).
2. Remove flywheel (MT) or drive plate (AT).
3. Remove rear oil seal.
  - **Be careful not to scratch rear oil seal retainer.**

4. Apply new engine oil to new oil seal and install it using a suitable tool.
  - **Install new oil seal in the direction shown.**

## CYLINDER HEAD

## On-Vehicle Service

## CHECKING COMPRESSION PRESSURE

1. Warm up the engine to full operating temperature.
2. Turn the ignition switch OFF.
3. Release the fuel pressure. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)], or [EC-637, "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)].
4. Remove the ignition coils.
5. Remove the spark plugs.
  - Clean the area around the spark plug with compressed air before removing the spark plug.
6. Attach a compression tester to No. 1 cylinder.

7. Depress the accelerator pedal fully to keep the throttle valve wide open.
  8. Crank the engine and record highest gauge indication.
  9. Repeat the measurement on each cylinder as shown above.
    - **Always use a fully-charged battery to obtain specified engine speed.**
- |  |                                      |
|--|--------------------------------------|
| Compression pressure                           | : kPa (kg/cm <sup>2</sup> , psi)/rpm |
| Standard                                       | : 1,324 (13.5, 192)/350              |
| Minimum  | : 1,157 (11.5, 168)/350              |
| Maximum allowable difference between cylinders | : 98 (1.0, 14)/350                   |
10. If cylinder compression in one or more cylinders is low, pour a small amount of engine oil into the cylinder through the spark plug hole and retest compression.
    - **If adding oil improves cylinder compression, piston rings may be worn or damaged. If so, replace piston rings after checking the piston and cylinder walls.**
    - **If pressure stays low, a valve may be sticking or seating improperly. Inspect and repair valve and valve seat. Refer to [EM-35, "INSPECTION"](#) , [EM-60, "VALVE SEATS"](#) . If valve or valve seat is damaged excessively, replace them.**
    - If compression in any two adjacent cylinders is low and if adding oil does not improve compression, there is leakage past the gasket surface. If so, replace cylinder head gasket.
  11. Install spark plugs, ignition coils and fuel pump fuse.

12. Erase DTC if any DTC appears. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (ULEV)], or [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (SULEV)].

## Removal and Installation

EBS00CEN

- |                                    |                         |                           |
|------------------------------------|-------------------------|---------------------------|
| 1. Rear engine slinger             | 2. Cylinder head bolt   | 3. Washer                 |
| 4. Auxiliary bolt of cylinder head | 5. Cylinder head gasket | 6. Cylinder head assembly |

### CAUTION:

- When installing camshaft and oil seal, lubricate contacting surfaces with new engine oil.
- When tightening cylinder head bolts, camshaft sprocket bolts and camshaft bracket bolts, lubricate bolt threads and seat surfaces with new engine oil.
- Attach tags to valve lifters so as not to mix them up.

### REMOVAL

1. Drain engine coolant.  
Be careful not to spill coolant on drive belts.

2. Release the fuel pressure. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) for [QG18DE (ULEV)], or [EC-637, "FUEL PRESSURE RELEASE"](#) for [QG18DE (SULEV)].
3. Remove the air duct to intake manifold collector.
4. Remove the engine drive belts.

5. Remove the front splash undercovers.
6. Remove the front exhaust tube.
7. Before removing the intake manifold collector from the engine, the following parts should be disconnected to remove the intake manifold collector:
  - Fuel injector tube quick connectors. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#) .
  - Ground harness
 Harness connectors for:
  - Electric throttle control actuator
  - Heated oxygen sensor (ULEV) or Air fuel ratio (A/F) sensor (SULEV only)
  - Swirl control position sensor (SULEV only)
  - Swirl control valve (SULEV only)
  - Water hoses from collector
  - Heater hoses
  - PCV hose
 Vacuum hoses for:
  - EVAP canister
  - Power brake booster
8. Remove the intake manifold rear supports.
9. Remove the exhaust manifold.
10. Remove the spark plugs.
11. Remove rocker cover. Refer to [EM-23, "ROCKER COVER"](#) .
12. Remove camshafts. Refer to [EM-26, "CAMSHAFT"](#) .

13. Remove cylinder head bolts.
  - Cylinder head bolts should be loosened in two or three steps.

**CAUTION:**  
**Head warping or cracking could result from removing the cylinder head bolts in incorrect order.**
14. Remove cylinder head with intake manifold.

## INSTALLATION

1. Before installing cylinder head gasket, apply a bead of Genuine RTV Silicone Sealant or equivalent, to mating surface of cylinder block as shown. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) .
2. Install the cylinder head gasket.
  - **When installing the cylinder head with manifolds, use a new cylinder head gasket.**

# CYLINDER HEAD

[QG18DE]

3. Install cylinder head assembly and cylinder head bolts with washers.
  - Apply new engine oil to threads and seating surface of mounting bolts.

**CAUTION:**

- Be sure to install washers between bolts and cylinder head with washer orientation as shown.

4. Tighten cylinder head bolts (1) to (10) in numerical order as shown in five stages.

**Cylinder head bolts**

- Stage 1** : 29.4 N-m (3.0 kg-m, 22 ft-lb)
- Stage 2** : 58.8 N-m (6.0 kg-m, 43 ft-lb)
- Stage 3** : 0 N-m (0 kg-m, 0 ft-lb) (loosen)
- Stage 4** : 27.4 - 31.4 N-m (2.8 - 3.2 kg-m, 21 - 23 ft-lb)
- Stage 5** : 50° - 55° (target 50°) clockwise

**CAUTION:**

Check and confirm the tightening angle by using angle wrench.

# CYLINDER HEAD

[QG18DE]

5. Tighten cylinder auxiliary bolts (11) to (14) in numerical order shown in figure.
  - Verify shank length under bolt head. [Bolt 11: 20 mm (0.79 in), bolts 12 - 14: 25 mm (0.98 in)]
6. Install the remaining components in the reverse order of removal.

## Disassembly and Assembly

EBS00EWV

PBIC0973E

- |                    |                                      |                  |
|--------------------|--------------------------------------|------------------|
| 1. Cylinder head   | 2. Valve (INT)                       | 3. Valve (EXH)   |
| 4. Valve seat      | 5. Engine coolant temperature sensor | 6. Copper washer |
| 7. Spark plug tube | 8. Spark plug                        |                  |

### CAUTION:

- When installing camshafts, chain tensioners, oil seals or other sliding parts, lubricate contacting surface with new engine oil.
- Apply new engine oil to threads and seat surface when installing cylinder head, camshaft sprocket, crankshaft pulley and camshaft bracket.
- Note valve lifter positions so as to ensure proper installation locations.

### DISASSEMBLY

1. Remove intake manifold assembly.
2. Remove adjusting shims (if equipped) and valve lifters.
  - Note locations for installation.

# CYLINDER HEAD

[QG18DE]

3. Remove valve collet.
  - compress valve spring using Tool as shown. Remove valve collet with magnet.
4. Remove valve spring retainer and valve spring.
5. Push valve stem through the combustion chamber side, and remove valve.
  - Inspect valve guide clearance before removal. Refer to [EM-58, "VALVE GUIDE CLEARANCE"](#).
  - Label components for installation in the same location.

6. Remove valve oil seal using Tool as shown.
7. Remove valve spring seat.
8. When valve seat must be replaced, refer to [EM-60, "REPLACING VALVE SEAT FOR SERVICE PARTS"](#).
9. When valve guide must be replaced, refer to [EM-59, "VALVE GUIDE REPLACEMENT"](#).
10. Remove spark plugs.
11. Remove engine coolant temperature sensor.

**CAUTION:**

**Do not shock it.**

12. Remove spark plug tubes, as necessary.
  - Using a pair of pliers, pull spark plug tube out of cylinder head.

**CAUTION:**

● **Take care not to damage cylinder head.**

● **Spark plug tubes are deformed during removal and cannot be reused once removed. Do not remove unless necessary.**

## ASSEMBLY

1. If removed, install valve seat, refer to [EM-60, "REPLACING VALVE SEAT FOR SERVICE PARTS"](#).
2. If removed, install valve guide, refer to [EM-59, "VALVE GUIDE REPLACEMENT"](#).
3. Install valve oil seal using Tool as shown.
4. Install valve spring seat.
5. Install valve.
  - Install large diameter to intake side.
6. Install valve spring.
7. Install valve spring retainer.

8. Install valve collet.
  - Compress valve spring using Tool as shown. Install valve collet with magnet.
  - Tap stem edge lightly with plastic hammer after installation to check if installed securely.
9. Install adjusting shim, if equipped, using Tool.
10. Apply sealant to engine coolant temperature sensor threads.
  - Use Genuine Anaerobic Liquid Gasket, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
11. Install engine coolant temperature sensor.

# CYLINDER HEAD

[QG18DE]

12. Install spark plug tube.
  - Press-fit spark tube as follows.
  - a. Remove old liquid gasket adhering to cylinder-head mounting hole.
  - b. Apply liquid gasket to area within approximately 15 mm (0.59 in) from edge of spark plug tube press-fit side as shown.
    - Use **Genuine Anaerobic Liquid Gasket, or equivalent**. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - c. Using a drift, press-fit the spark plug tube so that its height "H" is as shown.

**Standard press-fit height "H" : 41.0 - 42.0 mm (1.61 - 1.65 in)**

### CAUTION:

- When press-fitting, take care not to deform spark plug tube.
  - After press-fitting, wipe off liquid gasket protruding onto cylinder head upper surface.
13. Install spark plugs. Refer to [EM-12, "OUTER COMPONENT PARTS"](#).
  14. Install intake manifold. Refer to [EM-12, "OUTER COMPONENT PARTS"](#).

## Inspection after Disassembly CYLINDER HEAD DISTORTION

EBS00CEP

1. Clean surface of cylinder head.
2. Use a reliable straightedge and feeler gauge to check the flatness of cylinder head mating surface.
  - Check along six positions as shown.

### Head surface flatness

**Standard : Less than 0.03 mm (0.0012 in)**

**Limit : 0.1 mm (0.004 in)**

If beyond the specified limit, replace or resurface it.

### Resurfacing limit:

The limit for cylinder head resurfacing is determined by the amount of cylinder block resurfacing.

Amount of cylinder head resurfacing is "A".

Amount of cylinder block resurfacing is "B".

**The maximum limit is :  $A + B = 0.2 \text{ mm (0.008 in)}$   
as follows**

After resurfacing cylinder head, check that camshaft rotates freely by hand. If resistance is felt, replace cylinder head.

**Nominal cylinder head height : 117.8 - 118.0 mm (4.638 - 4.646 in)**

## VALVE GUIDE CLEARANCE

1. Measure valve deflection as shown in figure. (Valve and valve guide wear the most in this direction.)

### Valve deflection limit (dial gauge reading)

**Intake & Exhaust : 0.2 mm (0.008 in)**

# CYLINDER HEAD

[QG18DE]

2. If it exceeds the limit, check valve to valve guide clearance.
  - a. Measure valve stem diameter and valve guide inner diameter.
  - b. Calculate valve to valve guide clearance.  
**Valve stem to valve guide clearance = valve guide inner diameter – valve stem diameter.**
  - c. Check that clearance is within specification.

Unit: mm (in)

	Standard	Limit
Intake	0.020 - 0.050 (0.0008 - 0.0020)	0.1 (0.004)
Exhaust	0.040 - 0.070 (0.0016 - 0.0028)	0.1 (0.004)

- If it exceeds the limit, replace valve and remeasure clearance.
- If limit is still exceeded after replacing valve, replace valve guide.

## VALVE GUIDE REPLACEMENT

1. To remove valve guide, heat cylinder head to 110° to 130°C (230° to 266°F).

2. Drive out valve guide with a press [under a 20 kN (2 ton, 2.2 US ton, 2.0 Imp ton) pressure] or hammer and suitable tool.

3. Ream cylinder head valve guide hole.

**Valve guide hole diameter (for service parts)**  
**Intake & Exhaust : 9.685 - 9.696 mm**  
**(0.3813 - 0.3817 in)**

# CYLINDER HEAD

[QG18DE]

- Heat cylinder head to 110° to 130°C (230° to 266°F) and press service valve guide into cylinder head at specified height.

**Projection "L" : 11.5 - 11.7 mm (0.453 - 0.461 in)**

- Ream the new valve guide to the specified inner diameter.

**Inner diameter finished size**

**Intake & Exhaust : 5.500 - 5.515 mm  
(0.2165 - 0.2171 in)**

## VALVE SEATS

Check valve seats for pitting at contact surface. Resurface or replace if excessively worn.

- Before repairing valve seats, check valve and valve guide for wear. If they have worn, replace them. Then correct valve seat.
- Use both hands to cut uniformly.

## REPLACING VALVE SEAT FOR SERVICE PARTS

- Bore out old seat until it collapses. Set machine depth stop so that boring cannot contact the bottom face of seat recess in cylinder head.
- Ream cylinder head recess. Refer to [EM-85, "Valve Seat"](#) for the reaming bore for the service valve seat.

### NOTE:

Use the valve guide center for reaming to ensure valve seat will have the correct fit.

# CYLINDER HEAD

[QG18DE]

- Heat cylinder head to 110° to 130°C (230° to 266°F).
- Press fit valve seat until it seats on the bottom.
- Cut or grind valve seat using suitable tool to the specified dimensions. Refer to [EM-82, "Valve"](#).
- After cutting, lap valve seat with abrasive compound.

- Check valve seating condition.

<b>Seat face angle "α"</b>	<b>: 44°53' - 45°07'</b>
<b>Contacting width "W"</b>	
<b>Intake</b>	<b>: 1.06 - 1.34 mm (0.0417 - 0.0528 in)</b>
<b>Exhaust</b>	<b>: 1.34 - 1.63 mm (0.0528 - 0.0642 in)</b>

- Use a depth gauge to measure the distance "L" between the mounting surface of the cylinder head spring seat and the valve stem end. If the distance is shorter than specified, repeat step 5 above to correct it. If the distance is longer, replace the valve seat.

<b>Valve seat resurface limit</b>	
<b>Intake</b>	<b>: 35.95 - 36.55 mm (1.4154 - 1.4390 in)</b>
<b>Exhaust</b>	<b>: 35.92 - 36.52 mm (1.4142 - 1.4378 in)</b>

## VALVE DIMENSIONS

Check dimensions of each valve. Refer to [EM-82, "Valve"](#).

## VALVE SPRING

### Squareness

- Measure dimension "S".

<b>Out-of-square "S"</b>	<b>: Less than 1.75 mm (0.0689 in)</b>
--------------------------	--

- If it exceeds the limit, replace the spring.

# CYLINDER HEAD

[QG18DE]

## Pressure

Check valve spring pressure at specified spring height.

### Pressure

**Standard : 370.0 N (37.73 kg, 83.19 lb) at 23.64 mm (0.9307 in)**

**Limit : More than 347.8 N (35.46 kg, 78.19 lb) at 23.64 mm (0.9307 in)**

If not within specification, replace the spring.

## ENGINE ASSEMBLY Removal and Installation

PF10001

EBS00CET

SEC. 112

: N·m (kg·m, ft·lb)

- |                                 |                               |                                  |
|---------------------------------|-------------------------------|----------------------------------|
| 1. RH engine mounting           | 2. RH engine mounting bracket | 3. LH engine mounting            |
| 4. Rear engine mounting bracket | 5. Rear engine mounting       | 6. Dynamic damper                |
| 7. Center member                | 8. Front engine mounting      | 9. Front engine mounting bracket |

WBIA0206E

**WARNING:**

- Position vehicle on a flat and solid surface.
- Place chocks at front and back of rear wheels.
- Do not remove engine until exhaust system has completely cooled off, otherwise, you may burn yourself and/or fire may break out in fuel line.
- Before disconnecting fuel hose, release pressure.  
Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)], or [EC-637, "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)].
- Be sure to lift engine and transaxle in a safe manner.
- For engines not equipped with engine slingers, attach proper slingers and bolts described in PARTS CATALOG.

**CAUTION:**

- When lifting engine, be sure to clear surrounding parts. Use special care near accelerator wire casing, brake lines and brake master cylinder.
- When lifting the engine, always use engine slingers in a safe manner.
- When removing drive shaft, be careful not to damage grease seal of transaxle.
- Before separating engine and transaxle, remove crankshaft position sensor (POS) from the cylinder block assembly.
- Always be extra careful not to damage edge of crankshaft position sensor (POS), or signal plate teeth.

Engine cannot be removed separately from transaxle. Remove engine with transaxle as an assembly.

**REMOVAL**

1. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)], or [EC-637, "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)].
2. Drain coolant from radiator and cylinder block. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#) .
3. Remove coolant reservoir tank.
4. Drain engine oil. Refer to [MA-20, "Changing Engine Oil"](#) .
5. Remove battery and battery tray. Refer to [SC-4, "BATTERY"](#) .
6. Remove air cleaner and air duct.
7. Remove drive belts.
8. Remove generator and air conditioner compressor from engine and position aside. Refer to [SC-31, "Removal"](#) , [MTC-68, "Removal and Installation"](#) .
9. Remove power steering oil pump from engine and position aside. Refer to [PS-21, "COMPONENTS"](#) .

**NOTE:**

Power steering oil pump does not need to be disconnected from power steering tubes.

10. Remove the following parts:
  - RH and LH front tires
  - Front splash undercovers
  - RH and LH drive shaft. Refer to [FAX-14, "Removal"](#) .

**CAUTION:**

When removing the drive shaft, be careful not to damage transaxle side grease seal.

WEM020

- Disconnect control rod and support rod from transaxle (M/T models).
- Disconnect control cable from transaxle (A/T models). Refer to [AT-263, "Control Cable Adjustment"](#) .

- Center member
- Front exhaust tube. Refer to [EX-3, "Removal and Installation"](#) .
- Stabilizer bar. Refer to [FSU-11, "Removal and Installation"](#) .
- Radiator/Cooling fan. Refer to [CO-13, "Removal"](#) .
- Fuel injector tube quick connectors (Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#) .)

- Ground harness

Harness connectors for:

- Electric throttle control actuator
- Swirl control valve (SULEV only)
- Swirl control position switch (SULEV only)
- Heated oxygen sensor (ULEV only) or Air fuel ratio (A/F) sensor SULEV only)
- Water hoses from collector
- Heater hoses
- PCV hose
- Intake valve timing control solenoid

Vacuum hoses for:

- EVAP canister
- Power brake booster

11. If necessary, install engine slingers and support engine from above with a hoist.
12. Lift up engine slightly and disconnect or remove all engine mountings.

**CAUTION:**

**When lifting engine, be sure to clear surrounding parts. Use special care near brake tubes and brake master cylinder.**

## Removal and Installation

EBS00CEV

### CAUTION:

- When installing sliding parts such as bearings and pistons, apply engine oil on the sliding surfaces.
- Place removed parts, such as bearings and bearing caps, in their proper order and direction.
- When installing connecting rod nuts and main bearing cap bolts, apply new engine oil to threads and seating surfaces.
- Do not allow any magnetic materials to contact the signal plate teeth of flywheel or drive plate, and rear plate.
- Remove the crankshaft position sensor (POS).
- Be careful not to damage sensor edges and signal plate teeth.

## Disassembly

### PISTON AND CRANKSHAFT

EBS00CEW

1. Place engine on a work stand.
2. Drain any remaining engine coolant and oil.
3. Remove timing chain. Refer to [EM-40, "Removal"](#) .

4. Remove pistons with connecting rod.
  - When disassembling piston and connecting rod, remove snap ring first. Then heat piston to 60° to 70°C (140° to 158°F) or use piston pin press stand at room temperature.

### CAUTION:

- When piston rings are not replaced, make sure that piston rings are mounted in their original positions.
- When replacing piston rings, if there is no punch mark, install with either side up.

5. Measure crankshaft end play. Refer to [EM-72, "Crankshaft"](#) .

6. Loosen main bearing caps in numerical order as shown in figure.
  - Bolts should be loosened in two or three steps.
7. Remove bearing caps, main bearings and crankshaft.

- Remove signal plate from crankshaft.

EBS00CEX

## Inspection PISTON AND PISTON PIN CLEARANCE

- Measure inner diameter of piston pin hole "dp".

**Standard diameter "dp" :18.993 - 19.005 mm  
(0.7478 - 0.7482 in)**

- Measure outer diameter of piston pin "Dp".

**Standard diameter "Dp" :18.989 - 19.001 mm  
(0.7476 - 0.7481 in)**

- Calculate piston pin clearance  $Dp - dp$ .

**Piston pin to piston clearance : 0.002 - 0.006 mm (0.0001 - 0.0002 in)**

If it exceeds the above value, replace piston assembly with pin.

## PISTON RING SIDE CLEARANCE

### Side clearance

<b>Top ring</b>	<b>: 0.045 - 0.080 mm (0.0018 - 0.0031 in)</b>
<b>2nd ring</b>	<b>: 0.030 - 0.070 mm (0.0012 - 0.0028 in)</b>
<b>Oil ring</b>	<b>: 0.065 - 0.135 mm (0.0026 - 0.0053 in)</b>
<b>Limit</b>	<b>: 0.2 mm (0.008 in)</b>

If out of specification, replace piston and/or piston ring assembly.

## PISTON RING END GAP

### End gap

<b>Top ring</b>	<b>: 0.20 - 0.39 mm (0.0079 - 0.0154 in)</b>
<b>2nd ring</b>	<b>: 0.32 - 0.56 mm (0.0126 - 0.0220 in)</b>
<b>Oil ring</b>	<b>: 0.20 - 0.69 mm (0.0079 - 0.0272 in)</b>

### Limit of end gap

<b>Top ring</b>	<b>: 0.49 mm (0.0193 in)</b>
<b>2nd ring</b>	<b>: 0.64 mm (0.0252 in)</b>
<b>Oil ring</b>	<b>: 1.09 mm (0.0429 in)</b>

If out of specification, replace piston ring. If gap exceeds maximum limit with a new ring, rebore cylinder and use oversized piston and piston rings.

Refer to [EM-87, "Piston, Piston Ring and Piston Pin"](#).

- When replacing the piston, check the cylinder block surface for scratches or seizure. If scratches or seizure is found, hone or replace the cylinder block.

## CONNECTING ROD BEND AND TORSION

<b>Bend Limit</b>	<b>: 0.15 mm (0.0059 in) per 100 mm (3.94 in) length</b>
<b>Torsion Limit</b>	<b>: 0.3 mm (0.012 in) per 100 mm (3.94 in) length</b>

If it exceeds the limit, replace connecting rod assembly.

## CYLINDER BLOCK DISTORTION AND WEAR

Clean upper surface of cylinder block.

Use a reliable straightedge and feeler gauge to check the flatness of cylinder block surface. Check along six positions shown in figure.

### Block surface flatness

**Standard** : Less than 0.03 mm (0.0012 in)

**Limit** : 0.1 mm (0.004 in)

If out of specification, resurface it.

The limit for cylinder block resurfacing is determined by the amount of cylinder head resurfacing.

**Amount of cylinder head resurfacing is "A".**

**Amount of cylinder block resurfacing is "B".**

**The maximum limit is as follows A + B : 0.2 mm (0.008 in)**

**Nominal cylinder block height from crankshaft center 213.95 - 214.05 mm (8.4232 - 8.4271 in)**

If necessary, replace cylinder block.

## PISTON-TO-BORE CLEARANCE

1. Using a bore gauge, measure cylinder bore for wear, out-of-round and taper. The Y axis is in the longitudinal direction of the engine.

**Standard inner diameter (Grade No. 1) :80.000 - 80.010 mm (3.1496 - 3.1500 in)**

**Wear limit :0.2 mm (0.008 in)**

**Out-of-round (X - Y) standard :Less than 0.015 mm (0.0006 in)**

**Taper (B - A) standard :Less than 0.01 mm (0.0004 in)**

If it exceeds the limit, rebore all cylinders. Replace cylinder block if necessary.

2. Check for score and seizure. If seizure is found, hone it.

- **If cylinder block or piston is replaced, match piston grade with grade number on cylinder block lower surface.**

# CYLINDER BLOCK

[QG18DE]

3. Measure piston skirt diameter.

**Piston diameter "A"** :Refer to [EM-87, "Piston, Piston Ring and Piston Pin"](#) .

**Measuring point "a"** :42.3 mm (1.665 in)  
(Distance from the top)

4. Check that piston-to-bore clearance is within specification.

**Piston-to-bore clearance** :0.025 - 0.045 mm  
(0.0010 - 0.0018 in)  
**= cylinder bore measurement "B" – Piston diameter "A"**

5. Determine piston oversize according to amount of cylinder wear.

- **Oversize pistons are available for service. Refer to [EM-87, "Piston, Piston Ring and Piston Pin"](#) .**

6. Cylinder bore size is determined by adding piston-to-bore clearance to piston diameter "A".

## Rebored size calculation

$$D = A + B - C$$

where:

**D** : Bored diameter  
**A** : Piston diameter as measured  
**B** : Piston-to-bore clearance  
**C** : Honing allowance 0.02 mm  
(0.0008 in)

7. Install main bearing caps and tighten bolts to the specified torque. This will prevent distortion of cylinder bores.

8. Cut cylinder bores.

- **When any cylinder needs boring, all other cylinders must also be bored.**
- **Do not cut too much out of cylinder bore at a time. Cut only 0.05 mm (0.0020 in) or so at a time.**

- 9.hone cylinders to obtain specified piston-to-bore clearance.

10. Measure finished cylinder bore for out-of-round and taper.

- **Measurement should be done after cylinder bore cools down.**

## CRANKSHAFT

1. Check crankshaft main and pin journals for score, wear or cracks.

2. With a micrometer, measure journals for taper and out-of-round.

**Out-of-round, (X – Y)**

**Standard** : Less than 0.003 mm  
(0.0001 in)

**Limit** : Less than 0.005 mm  
(0.0002 in)

**Taper, (A – B)**

**Standard** : Less than 0.004 mm  
(0.0002 in)

**Limit** : Less than 0.005 mm  
(0.0002 in)

3. Measure crankshaft runout.

**Runout, Standard (Total indicator reading)** : Less than 0.04 mm  
(0.0016 in)

**Limit** : Less than 0.05 mm  
(0.0020 in)

**BEARING CLEARANCE**

Use Method A or Method B. Method A is preferred because it is more accurate.

**Method A (Using bore gauge and micrometer)**

**Main bearing**

1. Set main bearings in their proper positions on cylinder block and main bearing cap.
2. Install main bearing cap to cylinder block.  
**Tighten all bolts in correct order in two or three stages. Refer to [EM-77, "Assembly"](#) .**

3. Measure inner diameter "A" of each main bearing.

# CYLINDER BLOCK

[QG18DE]

4. Measure outer diameter "Dm" of each main journal in crankshaft.

5. Calculate main bearing clearance.

**Main bearing clearance = A – Dm**

**Standard : 0.018 - 0.042 mm (0.0007 - 0.0017 in)**

**Limit : 0.1 mm (0.004 in)**

If it exceeds the limit, replace bearing.

If clearance cannot be adjusted within standard of any bearing, grind crankshaft journal and use undersized bearing.

**When grinding crank pin and crank journal:**

- Grind until clearance is within specified standard bearing clearance.
- Fillets should be finished as shown in the figure. R: 2.3 - 2.5 mm (0.091 - 0.098 in)

Refer to [EM-90, "Bearing Clearance"](#) for standard bearing clearance and available spare parts.

6. If the crankshaft is replaced, select thickness of main bearings as follows:

- a. Grade number of each cylinder block main journal is punched on the respective cylinder block. These numbers are punched in either Arabic or Roman numerals.
- b. Grade number of each crankshaft main journal is punched on the respective crankshaft. These numbers are punched in either Arabic or Roman numerals.

# CYLINDER BLOCK

[QG18DE]

c. Select main bearing with suitable thickness according to the following table.

**Main bearing grade color:**

Crankshaft main journal grade number	Cylinder block main journal grade number		
	0	1 or I	2 or II
0	0 (Black)	1 (Brown)	2 (Green)
1 or I	1 (Brown)	2 (Green)	3 (Yellow)
2 or II	2 (Green)	3 (Yellow)	4 (Blue)

For example:

Cylinder block main journal grade number: 1

Crankshaft main journal grade number: 2

Main bearing grade number = 1 + 2 = 3 (Yellow)

## Connecting Rod Bearing (Big End)

1. Install connecting rod bearing to connecting rod and cap.
2. Install connecting rod cap to connecting rod.

**Tighten bolts to the specified torque.**

3. Measure inner diameter "C" of each bearing.

4. Measure outer diameter "Dp" of each crankshaft pin journal.
5. Calculate connecting rod bearing clearance.

**Connecting rod bearing clearance = C – Dp**

**Standard : 0.014 - 0.039 mm (0.0006 - 0.0015 in)**

**Limit : 0.1 mm (0.004 in)**

If it exceeds the limit, replace bearing.

If clearance cannot be adjusted using any standard bearing grade, grind crankshaft journal and use undersized bearing. Refer to [EM-90, "Bearing Clearance"](#).

- If a new bearing, crankshaft or connecting rod is replaced, select connecting rod bearing according to the following table.

## Connecting rod bearing grade number:

These numbers are punched in either Arabic or Roman numerals.

Crankshaft pin journal grade number	Connecting rod bearing grade color
0	—

# CYLINDER BLOCK

[QG18DE]

Crankshaft pin journal grade number	Connecting rod bearing grade color
1 or I	Brown
2 or II	Green

## Method B (Using Plastigage)

### CAUTION:

- Do not turn crankshaft or connecting rod while Plastigage is being inserted.
- If incorrect bearing clearance exists, use a thicker or undersized main bearing to ensure specified clearance.

## CONNECTING ROD BUSHING CLEARANCE (SMALL END)

1. Measure inner diameter "C" of bushing.

2. Measure outer diameter "Dp" of piston pin.
3. Calculate piston pin to connecting rod bushing clearance.

**Piston pin to connecting rod bushing clearance =  
C – Dp**

**Standard :0.005 - 0.017 mm (0.0002 - 0.0007 in)**

**Limit :0.023 mm (0.0009 in)**

If it exceeds the limit, replace connecting rod assembly or connecting rod bushing and/or piston pin.

## REPLACEMENT OF CONNECTING ROD BUSHING (SMALL END)

1. Drive in small end bushing until it is flush with end surface of rod.

**Be sure to align the oil holes.**

2. Ream the bushing so that clearance with piston pin is within specification.

**Piston pin to connecting rod bushing clearance**

**Standard : 0.005 - 0.017 mm (0.0002 - 0.0007 in)**

**Limit : 0.023 mm (0.0009 in)**

## FLYWHEEL RUNOUT

Runout (Total indicator reading)

Flywheel (M/T models) :Less than 0.15 mm  
(0.0059 in)

**CAUTION:**

- Do not allow any magnetic materials to contact the ring gear teeth and rear plate.
- Do not resurface flywheel. Replace as necessary.

EBS00CEY

## Assembly PISTON

1. Install new snap ring on one side of piston pin hole.

2. Heat piston to 60° to 70°C (140° to 158°F) and assemble piston, piston pin, connecting rod and new snap ring.

- Align the direction of piston and connecting rod.
- Numbers stamped on connecting rod and cap correspond to each cylinder.
- After assembly, make sure connecting rod swings smoothly.

3. Set piston rings as shown.

**CAUTION:**

- When piston rings are not replaced, make sure that piston rings are mounted in their original position.
- Install new piston rings either side up if there is no punch mark.

# CYLINDER BLOCK

[QG18DE]

- Align piston rings so that end gaps are positioned as shown.

## CRANKSHAFT

1. Install signal plate to crankshaft using dowel pin to properly position the signal plate. Remove the dowel pin after the signal plate bolts are tightened. Tighten the signal plate bolts.

**Signal plate bolts : 7.64 - 9.22 N·m (0.78 - 0.94 kg·m, 67.7 - 81.6 in·lb)**

**Dowel pin diameter : 6 mm (0.24 in)**

2. Set main bearings in their proper positions on cylinder block and main bearing cap.

- Confirm that correct main bearings are selected by using **Method A** or **Method B**. Refer to **EM-90, "Bearing Clearance"**.
- Apply new engine oil to bearing surfaces.

# CYLINDER BLOCK

[QG18DE]

3. Install crankshaft and main bearing caps and tighten bolts to the specified torque.
  - Apply new engine oil to the bolt thread and seat surface.
  - Prior to tightening bearing cap bolts, shift crankshaft back and forth to properly seat the bearing caps.
  - Tighten bearing cap bolts gradually in two or three stages. Start with center bearing and move outward as shown in figure.
  - After securing bearing cap bolts, make sure crankshaft turns smoothly by hand.

4. Measure crankshaft free end play.

### Crankshaft free end play

**Standard**      0.060 - 0.220 mm (0.0024 - 0.0087 in)

**Limit**          0.3 mm (0.012 in)

If beyond the limit, replace thrust bearing with new ones.

5. Install connecting rod bearings in connecting rods and connecting rod caps.
  - Confirm that correct bearings are used. Refer to [EM-90, "Connecting Rod Bearing"](#).
  - Install bearings so that oil hole in connecting rod aligns with oil hole of bearing.
  - Apply new engine oil to bolt threads and bearing surfaces.

6. Install pistons with connecting rods.
  - a. Install them into corresponding cylinders with Tool.
    - Make sure connecting rod does not scratch cylinder wall.
    - Make sure connecting rod bolts do not scratch crankshaft pin journals.
    - Arrange so that front mark on piston head faces engine.
    - Apply new engine oil to piston rings and sliding surface of piston.

# CYLINDER BLOCK

[QG18DE]

- b. Install connecting rod caps.  
Apply new engine oil to bolt threads and nut seating surfaces.  
Tighten connecting rod cap nuts in two stages:

**Stage 1 : 13.72 - 15.68 N·m (1.399 - 1.599 kg·m,  
10.120 - 11.566 ft·lb)**

**Stage 2 : 35 - 40 degrees clockwise, or 23 - 28 N·m  
(2.3 - 2.9 kg·m, 17 - 21 ft·lb)**

7. Measure connecting rod side clearance.

**Connecting rod side clearance**

**Standard : 0.200 - 0.470 mm (0.0079 - 0.0185 in)**

**Limit : 0.52 mm (0.0205 in)**

**If beyond the limit, replace connecting rod and/or crankshaft.**

8. Install rear oil seal retainer.

- a. Before installing rear oil seal retainer, remove old Silicone RTV Sealant from cylinder block and retainer.

- b. Apply a continuous bead of Silicone RTV Sealant to rear oil seal retainer.

- **Use Genuine Silicone RTV Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**
- **Apply around inner side of bolt holes.**

9. Install crankshaft position sensor (POS).

**Crankshaft position sensor bolt : 7.2 - 10.8 N·m (0.73 - 1.10 kg·m, 63.4 - 95.5 in·lb)**

10. Install knock sensor at correct angle.

**Knock sensor bolt : 15.7 - 20.6 N·m (1.6 - 2.1 kg·m,  
12 - 15 ft·lb)**

## Valve VALVE

Unit: mm (in)

Valve head diameter "D"	Intake	29.9 - 30.2 (1.177 - 1.189)
	Exhaust	24.9 - 25.2 (0.980 - 0.992)
Valve length "L"	Intake	92.00 - 92.50 (3.6220 - 3.6417)
	Exhaust	92.37 - 92.87 (3.6366 - 3.6563)
Valve stem diameter "d"	Intake	5.465 - 5.480 (0.2152 - 0.2157)
	Exhaust	5.445 - 5.460 (0.2144 - 0.2150)
Valve face angle "α"		45°15' - 45°45'
Valve face contact width	Intake	1.06 - 1.34 (0.0417 - 0.0528)
	Exhaust	1.34 - 1.63 (0.0528 - 0.0642)
Valve margin "T" limit		1.05 - 1.35 (0.0413 - 0.0531)
Valve stem end surface grinding limit		0.2 (0.008)

## VALVE SPRING

Free height mm (in)		41.19 (1.622)
Pressure N (kg, lb) at height mm (in)	Standard	370.0 (37.73, 83.19) at 23.64 (0.9307)
	Limit	More than 347.8 (35.46, 78.19) at 23.64 (0.9307)
Out-of-square mm (in)		Less than 1.75 (0.0689)

## VALVE LIFTER

Unit: mm (in)

Valve lifter outer diameter	29.960 - 29.975 (1.1795 - 1.1801)
Valve lifter guide bore	30.000 - 30.021 (1.1811 - 1.1819)
Clearance between valve lifter and valve lifter guide	0.025 - 0.065 (0.0010 - 0.0026)

## VALVE CLEARANCE

Unit: mm (in)

	For adjusting (Standard)		For checking (Reference)
	Hot	Cold* (reference data)	Hot
Intake	0.32 - 0.40 (0.013 - 0.016)	0.25 - 0.33 (0.010 - 0.013)	0.21 - 0.47 (0.008 - 0.019)
Exhaust	0.37 - 0.45 (0.015 - 0.018)	0.32 - 0.40 (0.013 - 0.016)	0.30 - 0.56 (0.012 - 0.022)

\*: At a temperature of approximately 20°C (68°F)

**Whenever valve clearances are adjusted to cold specifications, check that the clearances satisfy hot specifications and adjust again if necessary.**

\*: Total indicator reading at measuring point 115 mm (4.53 in) from crankshaft center.

## PRECAUTIONS

PFP:00001

### Precautions for Draining Coolant

EBS00CFC

- Drain coolant when engine is cooled.

### Precautions for Disconnecting Fuel Piping

EBS00CFD

- Before starting work, make sure no fire or spark producing items are in the work area.
- Release fuel pressure before any removal or disassembly.
- After disconnecting pipes, plug openings to stop fuel leakage.

### Precautions for Removal and Disassembly

EBS00CFE

- When instructed to use special service tools, use the specified tools. Always be careful to work safely, avoid forceful operations.
- Use maximum care to avoid damage to mating or sliding surfaces.
- Cover openings of engine system with tape or equivalent, if necessary, to seal out foreign materials.
- Mark and arrange disassembly parts in an organized way for easy troubleshooting and assembly.
- When loosening nuts and bolts, as a basic rule, start with the one furthest outside, then the one diagonally opposite, and so on. If the order of loosening is specified, follow the specifications.

### Precautions for Inspection, Repair and Replacement

EBS00CFF

- Before repairing or replacing, thoroughly inspect parts. Inspect new replacement parts in the same way, and replace if necessary.

### Precautions for Assembly and Installation

EBS00CFG

- Use torque wrench to tighten bolts or nuts.
- When tightening nuts and bolts, as a basic rule, equally tighten in several different steps starting with the ones in center, then ones on inside and outside diagonally in this order. If the order of tightening is specified, follow the specifications.
- Always replace the old with a new gasket, packing, oil seal or O-ring.
- Thoroughly wash, clean, and air-blow each part. Carefully check oil or coolant passages for any restriction and blockage.
- Avoid damaging sliding or mating surfaces. Completely remove foreign materials such as cloth lint or dust. Before assembly, oil sliding surfaces well.
- Bleed the air trapped within the system after draining the coolant.
- Before starting engine, apply fuel pressure to fuel lines with turning ignition switch ON (with engine stopped). Then make sure that there are no leaks at fuel line connections.
- After repairing, start engine and increase engine speed to check coolant, fuel, oil, and exhaust systems for leakage or rattles.

### Parts Requiring Angular Tightening

EBS00CFH

- Use an angle wrench for the final tightening of the following engine parts.
  - Cylinder head bolts
  - Lower cylinder block bolts
  - Connecting rod cap bolts
  - Crankshaft pulley bolt (No angle wrench is required as the bolt flange is provided with notches for angular tightening)
- Do not use a torque value for final tightening.
- The torque value for these parts are for a preliminary step.
- Ensure thread and seat surfaces are clean and coated with engine oil.

# PRECAUTIONS

[QR25DE]

EBS00EZ4

## Precautions for Liquid Gasket REMOVAL OF LIQUID GASKET SEALING

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket sealing.

### CAUTION:

Be careful not to damage the mating surfaces.

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap (1) the cutter where the Silicone RTV Sealant is applied. Use a plastic hammer to slide the cutter (2) by tapping on the side.

### CAUTION:

If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.

## LIQUID GASKET APPLICATION PROCEDURE

- Using a scraper, remove the old Silicone RTV Sealant adhering to the gasket application surface and the mating surface.
- Remove the sealant completely from the groove of the gasket application surface, mounting bolts, and bolt holes.
- Thoroughly clean the gasket application surface and the mating surface and remove adhering moisture, grease and foreign materials.

- Attach the sealant tube to the tube presser.  
**Use Genuine Silicone RTV Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply the sealant using Tool without breaks to the specified location with the specified dimensions.

**Tube presser**

**WS39930000 (-)**

- If there is a groove for the sealant application, apply the sealant to the groove.
- As for the bolt holes, normally apply the sealant inside the holes. If specified, it should be applied outside the holes. Make sure to read the text of this manual.
- Within five minutes of the sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#).

### CAUTION:

Follow all specific instructions in this manual.

NVH Troubleshooting —Engine Noise

EBS00CFL

WBIA0069E

# NOISE, VIBRATION, AND HARSHNESS (NVH) TROUBLESHOOTING

[QR25DE]

EBS00CFM

## Use the Chart Below to Help You Find the Cause of the Symptom.

1. Locate the area where noise occurs.
2. Confirm the type of noise.
3. Specify the operating condition of engine.
4. Check specified noise source.

If necessary, repair or replace these parts.

Location of noise	Type of noise	Operating condition of engine						Source of noise	Check item	Reference page
		Before warm-up	After warm-up	When starting	When idling	When racing	While driving			
Top of engine Rocker cover Cylinder head	Ticking or clicking	C	A	—	A	B	—	Tappet noise	Valve clearance	<a href="#">EM-130</a>
	Rattle	C	A	—	A	B	C	Camshaft bearing noise	Camshaft journal clearance Camshaft runout	<a href="#">EM-126</a> <a href="#">EM-125</a>

A: Closely related B: Related C: Sometimes related —: Not related

DRIVE BELTS

PF0:02117

Checking Drive Belts

EBS00KBL

NOTE:

On vehicles not equipped with A/C, there is an idler pulley in the position for the drive belt routing.

**WARNING:**

Inspect the drive belt only when the engine is stopped.

- Make sure that the stamp mark of drive belt auto-tensioner is within the usable range.

NOTE:

- Check the drive belt auto-tensioner indication when the engine is cold.
- When the new drive belt is installed, the range should be A.
- Visually check entire belt for wear, damage or cracks.
- If the indicator is out of allowable use range or belt is damaged, replace the belt.

Tension Adjustment

EBS00KBM

Belt tension is not manually adjustable, it is automatically adjusted by the drive belt auto-tensioner.

Removal and Installation

EBS00KBN

REMOVAL

1. Remove front RH engine side cover.
2. While securely holding the hexagonal part in pulley center of drive belt auto-tensioner, move in the direction of arrow (loosening direction of tensioner) using Tool.

Tool number : — (J-46535)

**CAUTION:**

- Avoid placing hand in a location where pinching may occur if the holding tool accidentally comes off.
- Do not loosen the auto-tensioner pulley bolt. (Do not turn it counterclockwise.) If turned counterclockwise, the complete auto-tensioner must be replaced as a unit, including pulley.

3. Insert a rod approximately 6 mm (0.24 in) in diameter through the rear of tensioner into retaining boss to lock tensioner pulley.

NOTE:

Leave tensioner pulley arm locked until belt is installed again.

4. Loosen auxiliary drive belt from water pump pulley in sequence, and remove it.

**INSTALLATION**

Installation is in the reverse order of removal.

**CAUTION:**

- Do not loosen the auto-tensioner pulley bolt. (Do not turn it counterclockwise.) If turned counterclockwise, the complete auto-tensioner must be replaced as a unit, including pulley.
- Avoid placing hand in a location where pinching may occur if the holding tool accidentally comes off.
- Confirm belts are completely set on the pulleys.

**NOTE:**

- Turn crankshaft pulley clockwise several times to equalize tension between each pulley.
- Confirm tension of drive belt at indicator (notch on fixed side) is within the possible use range. Refer to [EM-100](#).

**Removal and Installation of Drive Belt Auto-tensioner**

EBS00KBO

**CAUTION:**

The complete auto-tensioner must be replaced as a unit, including the pulley.

**REMOVAL**

1. Remove the front RH engine side cover.
2. Remove the drive belt. Refer to [EM-100, "REMOVAL"](#).
3. Remove the alternator. Refer to [SC-32, "Removal"](#).
4. Remove the drive belt auto-tensioner, using power tool.

**CAUTION:**

Do not loosen the auto-tensioner pulley bolt. (Do not turn it counterclockwise.) If turned counterclockwise, the complete auto-tensioner must be replaced as a unit, including pulley.

**INSTALLATION**

1. Install drive belt auto-tensioner.
2. While securely holding the hexagonal part in pulley center of drive belt auto-tensioner, move in the direction of arrow (loosening direction of tensioner) using Tool.

Tool number : — (J-46535)

**CAUTION:**

- Avoid placing hand in a location where pinching may occur if the holding tool accidentally comes off.

## DRIVE BELTS

[QR25DE]

- 
- **Do not loosen the auto-tensioner pulley bolt. (Do not turn it counterclockwise.) If turned counterclockwise, the complete auto-tensioner must be replaced as a unit, including pulley.**
  - 3. Insert a rod approximately 6 mm (0.24 in) in diameter through the rear of tensioner into retaining boss to lock tensioner pulley.

**NOTE:**

Leave tensioner pulley arm locked until belt is installed.

**CAUTION:**

- **Install the drive belt auto-tensioner carefully so not to damage the water pump pulley.**
- **If there is damage greater than peeled paint, replace the drive belt auto-tensioner.**
- **Do not swap the pulley between the new and old auto-tensioner unit.**
- 4. Installation of the remaining components is in the reverse order of removal.

## AIR CLEANER AND AIR DUCT

### Removal and Installation

: Always replace after every disassembly.

- |                         |   |                             |
|-------------------------|---|-----------------------------|
| 1. Resonator            | 2. Air cleaner to electric throttle control actuator tube | 3. Air cleaner element      |
| 4. Mass air flow sensor | 5. Air cleaner case (upper)                               | 6. Air cleaner case (lower) |
| 7. Resonator            | 8. O-ring   |                             |

#### REMOVAL

1. Disconnect the mass air flow sensor electrical connector.
2. Disconnect the tube clamp at the electric throttle control actuator.
3. Remove air cleaner to electric throttle control actuator tube and air cleaner case (upper) with the mass air flow sensor attached.
4. Remove mass air flow sensor from air cleaner case (upper), as necessary.

A  
EM  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

**CAUTION:**

Handle the mass air flow sensor with care:

- Do not shock it.
- Do not disassemble it.
- Do not touch the internal sensor.

5. Remove the air cleaner element, as necessary and replace it with a new element.
6. Remove the air cleaner case (lower).

**INSTALLATION**

Installation is in the reverse order of removal.

- Attach each joint according to the alignment marks made during removal. Screw all clamps firmly.

**CHANGING THE AIR CLEANER ELEMENT**

1. Unhook the air cleaner case side clips and raise the air cleaner case (upper).
2. Remove the air cleaner element.
3. Replace the air cleaner element with a new element and install the air cleaner case (upper).

## INTAKE MANIFOLD

### Removal and Installation

- |   |                                       |                              |
|---|---------------------------------------|------------------------------|
| 1. Cylinder head assembly                       | 2. PCV hose                           | 3. Intake manifold collector |
| 4. Gasket                                       | 5. Electric throttle control actuator | 6. Intake manifold support   |
| 7. Vacuum reservoir tank                        | 8. VIAS control solenoid valve        | 9. Intake manifold           |
| 10. EVAP canister purge volume control solenoid |                                       |                              |

### REMOVAL

#### **WARNING:**

**To avoid the danger of being scalded, never drain the coolant when the engine is hot.**

1. Disconnect the negative battery terminal.
2. Release the fuel pressure.  
Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
3. Drain coolant when engine is cooled. Refer to [MA-23, "DRAINING ENGINE COOLANT"](#) .
4. Disconnect the MAF sensor electrical connector.
5. Remove air cleaner case and air duct assembly.  
Refer to [EM-103, "Removal and Installation"](#) .
6. Disconnect the following components at the intake side:
  - a. PCV hose
  - b. EVAP canister purge volume control solenoid
  - c. Electric throttle control actuator
  - d. Brake booster vacuum hose

# INTAKE MANIFOLD

[QR25DE]

7. Disconnect the fuel quick connector on the engine side.

- Using Tool perform the following steps to disconnect the quick connector.

Tool number : — (J-45488)

a. Remove quick connector cap.

b. With the sleeve side of Tool facing quick connector, install Tool onto fuel tube.

c. Insert Tool into quick connector until sleeve contacts and goes no further. Hold the Tool on that position.

**CAUTION:**

Inserting the Tool hard will not disconnect quick connector. Hold Tool where it contacts and goes no further.

d. Pull the quick connector straight out from the fuel tube.

**CAUTION:**

- Pull quick connector holding it at the "A" position, as shown.

- Do not pull with lateral force applied. O-ring inside quick connector may be damaged.

- Prepare container and cloth beforehand as fuel will leak out.

- Avoid fire and sparks.

- Be sure to cover openings of disconnected pipes with plug or plastic bag to avoid fuel leakage and entry of foreign materials.

8. When removing fuel hose quick connector at vehicle piping side, perform as follows.

a. Remove quick connector cap.

b. Hold the sides of the connector, push in tabs and pull out the tube. (The figure is shown for reference only.)

- If the connector and the tube are stuck together, push and pull several times until they start to move. Then disconnect them by pulling.

**CAUTION:**

- The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.

- Do not use any tools to remove the quick connector.

- Keep the resin tube away from heat. Be especially careful when welding near the tube.

- Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.

- Do not bend or twist the tube during installation and removal.

- Do not remove the remaining retainer on tube.

# INTAKE MANIFOLD

[QR25DE]

- When the tube is replaced, also replace the retainer with a new one.  
Retainer color: Green.
  - To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.
9. Loosen mounting bolts diagonally, and remove the electric throttle control actuator.
- CAUTION:**  
Handle carefully to avoid any damage.
10. Disconnect intake manifold collector harness, and vacuum hose.
- CAUTION:**  
Cover engine openings to avoid entry of foreign materials.
11. Remove intake manifold collector mounting bolts on the support.
12. Loosen the mounting bolts and nuts in the order shown to remove the intake manifold collector.

13. Loosen the bolts in the order shown to remove the intake manifold assembly.

## INSPECTION AFTER REMOVAL

### Surface Distortion

- Using straightedge and feeler gauge, inspect surface distortion of intake manifold collector and intake manifold surface.

**Standard : 0.1 mm (0.004 in)**

## INSTALLATION

Installation is in the reverse order of removal.

### Tightening Intake Manifold Bolts and Nuts

- Install the intake manifold bolts and nuts in the numerical order of the tightening sequence as shown.

**CAUTION:**

After tightening No.5, retighten the No.1 mounting bolt to specification.

### Tightening Intake Manifold Collector Bolts and Nuts

- Tighten in numerical order as shown.

**CAUTION:**

After tightening No.7, retighten the No.1 mounting bolt to specification.

### Installation of Electric Throttle Control Actuator:

- Tighten the mounting bolts of electric throttle control actuator equally and diagonally in several steps.

**Electric throttle control actuator mounting bolts**

: 7.2 - 9.6 N·m (0.74 - 0.98 kg·m, 64 - 84 in·lb)

- After installation perform procedure in [EM-109, "INSPECTION AFTER INSTALLATION"](#).

## CONNECTING QUICK CONNECTOR ON THE FUEL HOSE (ENGINE SIDE)

1. Make sure no foreign substances are deposited in and around the fuel tube and quick connector, and there is no damage to them.
2. Thinly apply new engine oil around the fuel tube tip end.
3. Align center to insert quick connector straight into fuel tube.

- Insert fuel tube into quick connector until the top spool on fuel tubes is inserted completely and the second level spool is positioned slightly below the quick connector bottom end.

**CAUTION:**

- Hold at position "A" as shown, when inserting the fuel tube into the quick connector.
- Carefully align to center to avoid inclined insertion to prevent damage to the O-ring inside the quick connector.
- Insert the fuel tube until you hear a "click" sound and actually feel the engagement.
- To avoid misidentification of engagement with a similar sound, be sure to perform the next step.

4. Before clamping the fuel hose with the hose clamp, pull the quick connector hard by hand, holding at the "A" position, as shown. Make sure it is completely engaged (connected) so that it does not come off of the fuel tube.

**NOTE:**

Recommended pulling force is 50 N (5.1 kg, 11.2 lb).

5. Install quick connector cap on quick connector joint.

# INTAKE MANIFOLD

[QR25DE]

- Direct arrow mark on quick connector cap to upper side (fuel hose side).
6. Install fuel hose to hose clamp.

## CONNECTING QUICK CONNECTOR ON THE FUEL HOSE (VEHICLE PIPING SIDE)

1. Make sure no foreign substances are deposited in and around the fuel tube and quick connector, and there is no damage to them.
2. Align center to insert quick connector straight into fuel tube.
  - Insert fuel tube until a click is heard.
  - Install quick connector cap on quick connector joint. Direct arrow mark on quick connector cap upper side.
  - Install fuel hose to hose clamp.

## INSPECTION AFTER INSTALLATION

Make sure there is no fuel leakage at connections as follows:

1. Apply fuel pressure to fuel lines by turning ignition switch ON (with engine stopped). Then check for fuel leaks at connections.
2. Start the engine and rev it up and check for fuel leaks at connections.

### NOTE:

Use mirrors for checking on connections out of the direct line of sight.

### CAUTION:

**Do not touch engine immediately after stopping as engine is extremely hot.**

- Perform procedures for "Throttle Valve Closed Position Learning" after finishing repairs. Refer to [EC-1255, "Throttle Valve Closed Position Learning"](#).
- If electric throttle control actuator is replaced, perform procedures for "Idle Air Volume Learning" after finishing repairs. Refer to [EC-1255, "Idle Air Volume Learning"](#).

# EXHAUST MANIFOLD AND THREE WAY CATALYST

[QR25DE]

- Loosen the nuts in the sequence shown, on the exhaust manifold and three way catalyst.
- Remove the exhaust manifold and three way catalyst assembly and gasket. Discard the gasket.

## INSPECTION AFTER REMOVAL

### Surface Distortion

- Use a reliable straightedge and feeler gauge to check the flatness of exhaust manifold fitting surface.

**Standard : 0.3 mm (0.012 in)**

## INSTALLATION

Installation is in the reverse order of removal. Pay attention to the following.

### Tightening Exhaust Manifold Nuts

- Tighten the nuts in the numerical order shown, to specification. After tightening No.5, retighten No.1 and then No.3 to specification.

### Installation of Heated Oxygen Sensors

Clean the heated oxygen sensor threads with the Tool, then apply the anti-seize lubricant to the threads before installing the heated oxygen sensors.

### **CAUTION:**

**Do not over-tighten the heated oxygen sensors. Doing so may cause damage to the heated oxygen sensors, resulting in a malfunction and the MIL coming on.**

# OIL PAN AND OIL STRAINER

[QR25DE]

7. Remove the lower oil pan bolts. Loosen the bolts in the order shown.

8. Insert the Tool (Seal cutter) between lower oil pan and the upper oil pan to separate them. Tap gently on the side to move the Tool around the pan; do not damage the mating surface.
9. Remove the lower oil pan.
10. Remove the oil pickup screen.
11. Remove rear plate cover, and four engine to transaxle bolts.

12. Loosen the upper oil pan bolts in the numerical order shown to remove the upper oil pan.

13. Insert the Tool (Seal cutter) between the upper oil pan and the cylinder block to separate them. Tap gently on the side to move the Tool around the pan; do not damage the mating surface.

14. Remove the upper oil pan.

## INSPECTION AFTER REMOVAL

- Clean the oil pickup screen to remove any foreign material.

## INSTALLATION

1. Installation is in the reverse order of removal. Pay attention to the following.

# OIL PAN AND OIL STRAINER

[QR25DE]

- a. Apply Genuine Silicone RTV Sealant, or equivalent, to the upper oil pan. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) , and [EM-92, "Precautions for Liquid Gasket"](#) .
- Install the two new O-rings in the upper oil pan.

- b. Tighten the upper oil pan bolts in the order as shown.
- Bolt No.10,11,18 indicate a double tightening in the sequence of bolt No.s 1, 2, 3.

**NOTE:**

Refer below for specified bolt sizes:

M6 × 20 mm (0.79 in): No.19, 20

M8 × 25 mm (0.98 in): No.1, 3, 4, 9

M8 x 45 mm (1.77 in): No.2, 5, 6, 7, 8, 17

M8 x100 mm (3.97 in): No.12, 13, 14, 15, 16

- c. Apply Genuine Silicone RTV Sealant, or equivalent to the lower oil pan. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) , and [EM-92, "Precautions for Liquid Gasket"](#) .

- d. Tighten the lower oil pan bolts in the numerical order shown.
- Wait at least 30 minutes after the oil pans are installed before filling the engine with oil.

## INSPECTION AFTER INSTALLATION

- Check for any engine oil leaks with the engine at full operating temperature and running at idle.

## IGNITION COIL

### Removal and Installation

1. Ignition coil

2. Spark plug

3. Rocker cover

### REMOVAL

1. Remove the engine cover.
2. Disconnect the harness connector from the ignition coil.
3. Remove the ignition coil.

**CAUTION:**

**Do not drop or shock it.**

### INSTALLATION

Installation is in the reverse order of removal.

## SPARK PLUG

### Removal and Installation

EBS00CFW

1. Ignition coil

2. Spark plug

3. Rocker cover

### REMOVAL

1. Remove the ignition coil. Refer to [EM-115, "Removal and Installation"](#).
2. Remove the spark plug with a suitable spark plug wrench.

Temperature range	NGK
Standard type	PLFR5A-11 (Platinum tipped)
Hot type	PLFR4A-11(Platinum tipped)
Cold type	PLFR6A-11(Platinum tipped)

### INSPECTION AFTER REMOVAL

- Use standard type spark plug for normal conditions.

The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:

- Frequent engine starts.
- Low ambient temperatures.

The cold type spark plug is suitable when spark plug knock occurs with the standard type spark plug under conditions such as:

- Extended highway driving.
- Frequent high engine revolution.

# SPARK PLUG

[QR25DE]

Do not use a wire brush for cleaning the spark plugs. Replace as necessary.

If plug is covered with carbon, a spark cleaner may be used.

**Cleaner air pressure** : less than 588 kPa (6kg/cm<sup>2</sup>, 85 psi)

**Cleaning time** : less than 20 seconds

Checking and adjusting plug gap is not required between change intervals.

**Gap nominal** : 1.1 mm ( 0.043 in)

## INSTALLATION

- Installation is in the reverse order of removal.

## FUEL INJECTOR AND FUEL TUBE

### Removal and Installation

- |                  |                    |                |
|------------------|--------------------|----------------|
| 1. Fuel hose     | 2. Intake manifold | 3. Sub-harness |
| 4. Fuel tube     | 5. Clip            | 6. O-ring      |
| 7. Fuel injector | 8. Insulator       |                |

#### CAUTION:

- Apply new engine oil to parts before installing the parts, as shown above.
- Do not remove or disassemble parts unless instructed as shown in the figure.

#### REMOVAL

1. Release the fuel pressure. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
2. Remove the intake air duct. Refer to [EM-103, "Removal and Installation"](#) .
3. Partially drain the engine coolant. Refer to [MA-23, "DRAINING ENGINE COOLANT"](#) .
4. Remove the intake collector. Refer to [EM-105, "INTAKE MANIFOLD"](#) .
5. Disconnect the fuel hose quick connector at the fuel tube side.
  - For how to disconnect and connect the quick connector, refer to [EM-105, "INTAKE MANIFOLD"](#) .

# FUEL INJECTOR AND FUEL TUBE

[QR25DE]

## CAUTION:

- Prepare a container and cloth for catching any spilled fuel.
  - This operation should be performed in a place that is free from any open flames.
  - While hoses are disconnected seal their openings with vinyl bag or similar material to prevent foreign material from entering them.
6. Disconnect sub-harness for injector at engine front side, and remove it from bracket.
  7. Loosen the mounting bolts in the order as shown, then remove fuel tube and fuel injectors as an assembly.
  8. Remove the fuel injectors from the fuel tube.
    - Release the clip and remove the fuel injector.
    - Pull fuel injector straight out of the fuel tube.
    - Be careful not to damage the nozzle.
    - Avoid any impact, such as dropping the fuel injector.
    - Do not disassemble or adjust the fuel injector.

## INSTALLATION

1. Install new O-rings on the fuel injector.
  - Lubricate the O-rings lightly with new engine oil.
  - Be careful not to scratch it during installation. Also be careful not to twist or stretch the O-ring. If the O-ring was stretched while it is attached, do not insert it into the fuel tube immediately.
2. Install the fuel injector into the fuel tube with the following procedure:
  - Do not reuse the clip, replace it with a new one.
  - Insert the new clip into the clip mounting groove on fuel injector.
  - Insert the clip so that the projection on "Lug A" of fuel injector matches notch "A" of the clip.
3. Insert fuel injector into fuel tube with clip attached.
  - Insert it while matching it to the axial center.
  - Insert fuel injector so that the projection on "Lug B" of fuel injector matches notch "B" of the clip.
  - Make sure that fuel tube flange is securely fixed in flange fixing groove on the clip.
  - Make sure that installation is complete by checking that fuel injector does not rotate or come off.
4. Install fuel tube assembly.
  - a. Insert the tip of each fuel injector into intake manifold.

- b. Tighten the mounting bolts in two steps in the numerical order shown.

**Fuel tube bolt** : 9.3 - 10.8 N-m (0.95 - 1.1 kg-m,  
tightening 1st step 83 - 95 in-lb)

**Fuel tube bolt** : 20.6 - 26.5 N-m (2.1 - 2.7 kg-m,  
tightening 2nd step 16 - 19 ft-lb)

## CAUTION:

- After properly connecting fuel tube assembly to injector and fuel hose, check connection for fuel leakage.

5. Connect the fuel hose quick connector. Refer to [EM-105, "INTAKE MANIFOLD"](#) .
6. Install the intake collector. Refer to [EM-105, "INTAKE MANIFOLD"](#) .
7. Installation of the remaining components is in the reverse order of removal.

### INSPECTION AFTER INSTALLATION

Make sure there is no fuel leakage at connections as follows:

1. Apply fuel pressure to fuel lines by turning ignition switch ON (with engine stopped). Then check for fuel leaks at connections.
2. Start the engine and rev it up and check for fuel leaks at connections.

**NOTE:**

Use mirrors for checking on connections out of the direct line of sight.

**CAUTION:**

**Do not touch engine immediately after stopping as engine is extremely hot.**

- Perform procedures for "Throttle Valve Closed Position Learning" after finishing repairs. Refer to [EC-1255, "Throttle Valve Closed Position Learning"](#) .
- If electric throttle control actuator is replaced, perform procedures for "Idle Air Volume Learning" after finishing repairs. Refer to [EC-1255, "Idle Air Volume Learning"](#) .

## ROCKER COVER

### Removal and Installation

SEC.111-118

1. PCV valve
2. Oil filler cap
3. Rocker cover
4. Rocker cover gasket

### REMOVAL

1. Remove the ignition coils. Refer to [EM-115, "Removal and Installation"](#).
2. Disconnect the PCV hose and breather hose from the rocker cover.
3. Loosen the bolts in the numerical order as shown.
4. Remove the rocker cover. Remove the oil filler cap and PCV valve if necessary, to transfer to the new rocker cover.

## INSTALLATION

1. Apply Silicone RTV Sealant to the joint part of the cylinder head and camshaft bracket following the steps below:
  - a. Refer to illustration "a" to apply sealant to joint part of No.1 camshaft bracket and cylinder head.
  - b. Refer to illustration "b" to apply sealant in a 90° degree angle to the illustration "a".
- **Use Genuine Silicone RTV Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**
2. Install the rocker cover.
  - The rocker cover gasket must be securely installed in the groove in the rocker cover.

3. Tighten the rocker cover bolts in two steps, in the numerical order as shown.

**Rocker cover bolt : 1.0 - 2.9 N·m (0.1 - 0.3 kg-m, 9 - 26 in-lb)**  
**tightening 1st step**

**Rocker cover bolt : 7.4 - 9.3 N·m (0.75 - 0.95 kg-m, 65 - 82 in-lb)**  
**tightening 2nd step**

4. Connect the PCV hose and breather hose to the rocker cover. If necessary, install the oil filler cap and PCV valve and lubricate the PCV valve O-ring with new engine oil.
5. Install the ignition coils. Refer to [EM-115, "Removal and Installation"](#).

# CAMSHAFT

[QR25DE]

8. Remove the IVT control (intake valve timing control) cover by cutting the sealant using Tool.
- Loosen the bolts in the order shown.

9. Set the No.1 cylinder at TDC on its compression stroke with the following procedure:
- Open the access cover on RH undercover.
  - Rotate crankshaft pulley clockwise, and align mating marks for TDC with timing indicator on front cover, as shown.

- At the same time, make sure that the mating marks on camshaft sprockets are lined up with the yellow links in the timing chain, as shown.
- If not, rotate crankshaft pulley one more turn to line up the mating marks to the yellow links, as shown.

10. Pull the timing chain guide out between the camshaft sprockets through front cover.

11. Remove camshaft sprockets with the following procedure.

**CAUTION:**

- Do not rotate the crankshaft or camshaft while the timing chain is removed. It causes interference between valve and piston.

**NOTE:**

- Chain tension holding work is not necessary. Crank sprocket and timing chain do not disconnect structurally while front cover is attached.

- Line up the mating marks on camshaft sprockets with the yellow links in the timing chain, and paint an indelible mating mark on the sprocket and timing chain link plate.

# CAMSHAFT

[QR25DE]

- b. Push in the tensioner plunger and hold. Insert a stopper pin into the hole on tensioner body to hold the chain tensioner. Remove the timing chain tensioner.
  - Use a wire with 0.5 mm (0.02 in) diameter for a stopper pin.
- c. Secure the hexagonal part of camshaft with a suitable tool. Loosen the camshaft sprocket mounting bolts and remove the camshaft sprockets.

12. Loosen the camshaft bracket bolts in the order shown, and remove the camshaft brackets and camshafts.
  - Remove No.1 camshaft bracket by slightly tapping it with a rubber mallet.
13. Remove the valve lifters.
  - Check mounting positions, and set them aside in the order removed.

## INSPECTION AFTER REMOVAL

### Camshaft Runout

1. Put the camshaft on a V-block supporting the No.2 and No.5 journals.
2. Set the dial gauge vertically on the No.3 journal.
3. Turn camshaft in one direction by hand, and measure the camshaft runout on the dial gauge total indicator reading.

**Standard : Less than 0.04 mm (0.0016 in)**

### Camshaft Cam Height

1. Measure the camshaft cam height.

**Standard intake cam height : 45.665 - 45.855 mm (1.7978 - 1.8053 in)**

**Standard exhaust cam height : 43.975 - 44.165 mm (1.7313 - 1.7388 in)**

2. If wear is beyond the limit, replace the camshaft.

## Camshaft Journal Clearance

### Outer Diameter of Camshaft Journal

- Measure the outer diameter of the camshaft journal.

**Standard No.1 outer diameter** : 27.935 - 27.955 mm (1.0998 - 1.1006 in)

**Standard No.2, 3, 4, 5, outer diameter** : 23.435 - 23.455 mm (0.9226 - 0.9234 in)

### Inner Diameter of Camshaft Bracket

- Tighten the camshaft bracket bolts to the specified torque following the tightening pattern as shown. Refer to [EM-128, "INSTALLATION"](#).

- Using inside micrometer, measure inner diameter of camshaft bracket.

**Standard No.1** : 28.000 - 28.021 mm (1.1024 - 1.1032 in)

**Standard No.2, 3, 4, 5** : 23.500 - 23.521 mm (0.9252 - 0.9260 in)

### Calculation of Camshaft Journal Clearance

- (Journal clearance) = (inner diameter of camshaft bracket) – (outer diameter of camshaft journal)

**Standard** : 0.045 - 0.086 mm (0.0018 - 0.0034 in)

- When out of the specified range above, replace either or both the camshaft and the cylinder head assembly.

#### NOTE:

Inner diameter of the camshaft bracket is manufactured together with the cylinder head. If the camshaft bracket is out of specification, replace the entire cylinder head assembly.

## Camshaft End Play

1. Install a dial gauge in the thrust direction on the front end of the camshaft. Measure the end play with the dial gauge while moving the camshaft forward and backward (in direction to axis).

**Standard end play** : 0.115 - 0.188 mm (0.0045 - 0.0074 in)

2. If out of the specified range, replace with new camshaft and measure again.
3. If out of the specified range again, replace with new cylinder head assembly.

## Camshaft Sprocket Runout

1. Install the camshaft in the cylinder head.
2. Install the camshaft sprocket on the camshaft.
3. Measure camshaft sprocket runout while turning the camshaft by hand.

**Runout** : Less than 0.15 mm (0.0059 in)

4. If it exceeds the specification, replace camshaft sprocket.

## Valve Lifter

- Check if the surface of the valve lifter has any excessive wear or cracks, replace as necessary.

## Valve Lifter Clearance

### Outer Diameter of Valve Lifter

- Measure the valve lifter outer diameter.

**Valve lifter outer diameter** : 33.965 - 33.980 mm (1.3372 - 1.3378 in)

- If out of the specified range, replace the valve lifter.

# CAMSHAFT

[QR25DE]

## Valve Lifter Hole Diameter

- Using inside micrometer, measure valve lifter guide bore diameter of cylinder head.

**Standard : 34.000 - 34.021 mm (1.3386 - 1.3394 in)**

- If out of the specified range, replace the cylinder head assembly.

## Calculation of Valve Lifter Clearance

- (Valve lifter clearance) = (valve lifter bore diameter) – (valve lifter outer diameter)

**Standard : 0.020 - 0.056 mm (0.0008 - 0.0022 in)**

- If out of specified range, replace either or both valve lifter and cylinder head assembly.

## INSTALLATION

- Install the valve lifter.
  - Install them in the same position from which they were removed.
- Install the camshafts.
  - The distinction between the intake and exhaust camshafts is in a difference of shapes of the back end:

Intake: Signal plate for the camshaft position sensor (PHASE)

Exhaust: Cone end shape

- Install camshafts so that the dowel pins on the front side are positioned as shown.

- Install camshaft brackets.
  - Install by referring to identification mark on upper surface mark.
  - Install so that identification mark can be correctly read when viewed from the exhaust side.
  - Install No. 1 camshaft bracket as follows.
    - Apply sealant to No.1 camshaft bracket as shown.

# CAMSHAFT

[QR25DE]

- Use Genuine Silicone RTV Sealant, or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

**CAUTION:**

- After installation, be sure to wipe off any excessive sealant leaking from part "A" (both on right and left sides).

- Apply sealant to camshaft bracket contact surface on the front cover backside.
- Apply sealant to the outside of bolt hole on front cover.

- Position the No.1 camshaft bracket near the mounting position, and install it without disturbing the sealant applied to the surfaces.

4. Tighten camshaft bracket bolts in four steps in the order shown.
  - a. Tighten in the order from 9 to 11 with tightening torque 2.0 N·m (0.2 kg·m, 17 in·lb).
  - b. Tighten in the order from 1 to 8 with tightening torque 2.0 N·m (0.2 kg·m, 17 in·lb)
  - c. Tighten all bolts in specific order with tightening torque 5.9 N·m (0.5 kg·m, 52 in·lb).
  - d. Tighten in the order from 1 to 11 with tightening torque 9.0 to 11.8 N·m (0.92 to 1.2 kg·m, 80 to 104 in·lb).

**CAUTION:**

After tightening camshaft bracket bolts, be sure to wipe off excessive sealant from the parts listed below.

- Mating surface of rocker cover.
- Mating surface of front cover, when installed without the front cover.

# CAMSHAFT

[QR25DE]

5. Install camshaft sprockets.
  - Install them by lining up the mating marks on each camshaft sprocket with the ones painted on the timing chain during removal.
  - Before installation of chain tensioner, it is possible to re-match the marks on timing chain with the ones on each sprocket.

**CAUTION:**

- **Aligned mating marks could slip. Therefore, after matching them, hold the timing chain in place by hand.**
- **Before and after installing chain tensioner, check again to make sure that mating marks have not slipped.**

6. Install chain tensioner.

**CAUTION:**

**After installation, pull the stopper pin off completely, and make sure that the tensioner is fully released.**

7. Install chain guide.
8. Install IVT control (intake valve timing control) cover with the following procedure.
  - a. Install IVT control solenoid valve to intake valve timing control cover.
  - b. Install O-ring to front cover side.
  - c. Apply Genuine Silicone RTV Sealant to the positions shown in the figure. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

- d. Install IVT control cover.
  - Tighten the bolts in the numerical order as shown.
9. Check and adjust valve clearances. Refer to [EM-130, "Valve Clearance"](#).
10. Install the remaining components in the reverse order of removal.

## Valve Clearance INSPECTION

- Perform this inspection as follows after removal, installation, or replacement of the camshaft or any valve-related parts, or if there are any unusual engine conditions due to changes in valve clearance over time (starting, idling, and/or noise).
  1. Warm up the engine, then stop it.
  2. Remove front RH engine undercover.
  3. Remove the rocker cover.  
Refer to [EM-121, "Removal and Installation"](#).

EBS00CG0

# CAMSHAFT

[QR25DE]

- Turn crankshaft pulley in normal direction (clockwise when viewed from front) to align TDC identification mark (without paint mark) with timing indicator.

- At this time, check that both the intake and exhaust cam noses of No. 1 cylinder face outside.
  - If they do not face outside, turn crankshaft pulley once more.

- By referring to the figure, measure valve clearances at locations marked X as shown in the table below (locations indicated with black arrow in figure) with a feeler gauge.

- No.1 cylinder compression TDC.

Cylinder	No.1		No.2		No.3		No.4	
	INT	EXH	INT	EXH	INT	EXH	INT	EXH
Measurable	x	x	x			x		

- Use a feeler gauge, measure clearance between valve and camshaft.

**Valve clearance standard:**

<b>Hot</b>	<b>Intake</b>	<b>: 0.32 - 0.40 mm (0.013 - 0.016 in)</b>
	<b>Exhaust</b>	<b>: 0.33 - 0.41 mm (0.013 - 0.016 in)</b>
<b>Cold*</b>	<b>Intake</b>	<b>: 0.24 - 0.32 mm (0.009 - 0.013 in)</b>
	<b>Exhaust</b>	<b>: 0.26 - 0.34 mm (0.010 - 0.013 in)</b>

\*Reference data at approximately 20°C (68°F)

**CAUTION:**

If inspection was carried out with cold engine, check that values with fully warmed up engine are still within specifications.

- Turn crankshaft one complete revolution (360°) and align mark on crankshaft pulley with pointer.

8. By referring to the figure, measure valve clearances at locations marked X as shown in the table below (locations indicated with black arrow in figure).

- No.4 cylinder compression TDC.

Cylinder	No.1		No.2		No.3		No.4	
	INT	EXH	INT	EXH	INT	EXH	INT	EXH
Measurable				x	x		x	x

9. If out of specifications, adjust as follows.

### VALVE ADJUSTMENT

- Perform adjustment depending on selected head thickness of valve lifter.
- The specified valve lifter thickness is the dimension at normal temperatures. Ignore dimensional differences caused by temperature. Use the specifications for hot engine condition to adjust.

1. Remove camshaft. Refer to [EM-123, "Removal and Installation"](#) .
2. Remove the valve lifters at the locations that are outside the standard.
3. Measure the center thickness of the removed valve lifters with a micrometer.

4. Use the equation below to calculate valve lifter thickness for replacement.

- Valve lifter thickness calculation.  
 $t = t1 + (C1 - C2)$   
 $t$  = Thickness of replacement valve lifter.  
 $t1$  = Thickness of removed valve lifter.  
 $C1$  = Measured valve clearance.  
 $C2$  = Standard valve clearance.

- Thickness of a new valve lifter can be identified by stamp marks on the reverse side (inside the cylinder). Stamp mark 696 indicates a thickness of 6.96 mm (0.2740 in) **Available thickness of valve lifter: 26 sizes with a range of 6.96 to 7.46 mm (0.2740 to 0.2937 in), in steps of 0.02 mm (0.0008 in), when assembled at the factory.**

5. Install the selected valve lifter.
6. Install camshaft.
7. Manually turn crankshaft pulley a few turns.
8. Check that valve clearances for cold engine are within specifications, by referring to the specified values.
9. After completing the repair, check valve clearances again with the specifications for warmed engine. Use a feeler gauge to measure the clearance between the valve and camshaft. Make sure the values are within specifications.

# CAMSHAFT

[QR25DE]

## Valve clearance:

Unit: mm (in)

	Cold* (reference data)	Hot
Intake	0.24 - 0.32 (0.009 - 0.013)	0.304 - 0.416 (0.012 - 0.016)
Exhaust	0.26 - 0.34 (0.010 - 0.013)	0.308 - 0.432 (0.012 - 0.017)

### Removal and Installation

SEC.110•112•120•130•135

WBIA0031E

- |                             |  |                                |
|-----------------------------|--|--------------------------------|
| 1. Oil rings                | 2. Camshaft sprocket (INT)               | 3. Camshaft sprocket (EXH)     |
| 4. Chain tensioner          | 5. Spring                                | 6. Chain tensioner plunger     |
| 7. Timing chain slack guide | 8. Timing chain                          | 9. Front cover                 |
| 10. Chain guide             | 11. IVT control solenoid valve           | 12. IVT control cover          |
| 13. Engine mounting bracket | 14. Crankshaft pulley bolt               | 15. Crankshaft pulley          |
| 16. Front oil seal          | 17. Balancer unit timing chain tensioner | 18. Oil pump drive spacer      |
| 19. Crankshaft sprocket     | 20. Timing chain tension guide           | 21. Balancer unit timing chain |
| 22. Balancer unit           |  |                                |

**CAUTION:**  
Apply new engine oil to parts marked in illustration before installation.

**REMOVAL**

1. Release the fuel pressure. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
2. Remove the air cleaner and air duct assembly. Refer to [EM-103, "Removal and Installation"](#) .
3. Remove the spark plugs. Refer to [EM-116, "Removal and Installation"](#) .
4. Remove the rocker cover. Refer to [EM-121, "Removal and Installation"](#) .
5. Remove the coolant overflow reservoir tank.
6. Remove the auxiliary drive belt auto-tensioner. Refer to [EM-101, "Removal and Installation of Drive Belt Auto-tensioner"](#) .
7. Remove the alternator. Refer to [SC-31, "Removal and Installation"](#) .
8. Remove the strut tower brace.
9. Dismount and position aside the A/C compressor with the piping attached.
10. Dismount and position aside the power steering pump and reservoir tank with the piping attached.
11. Remove the upper and lower oil pan, and oil strainer. Refer to [EM-112, "Removal and Installation"](#) .
12. Remove the IVT control (intake valve timing control) cover.
  - a. Loosen bolts in the numerical order as shown.
  - b. Remove the cover with suitable tool to cut the sealant.
13. Pull chain guide between camshaft sprockets out through front cover.

14. Set the No.1 cylinder at TDC on the compression stroke with the following procedure:
  - a. Rotate the crankshaft pulley clockwise and align the mating marks to the timing indicator on the front cover.

- b. At the same time, make sure that the mating marks on the camshaft sprockets are lined up as shown.
    - If not lined up, rotate the crankshaft pulley one more turn to line up the mating marks to the positions as shown.

# TIMING CHAIN

[QR25DE]

15. Remove crankshaft pulley with the following procedure:

- a. Hold the crankshaft pulley with a suitable tool, then loosen the crankshaft pulley mounting bolt, and pull the pulley out about 10 mm (0.39 in). Remove the crankshaft pulley mounting bolt.

- b. Attach a pulley puller in the M 6 (0.24 in diameter) thread hole on crankshaft pulley, and remove crankshaft pulley.

16. Remove the front cover with the following procedure:

- a. Loosen the mounting bolts in the numerical order as shown, and remove them.
- b. Remove the front cover.

**CAUTION:**

- Be careful not to damage the mounting surface.

17. If the front oil seal needs to be replaced, lift it out with a screwdriver to remove it.

18. Remove timing chain with the following procedure:

- a. Push in the tensioner plunger. Insert a stopper pin into the hole on the tensioner body to hold the chain tensioner.
  - Use a wire of 0.5 mm (0.02 in) diameter as a stopper pin.
- b. Remove the chain tensioner.

# TIMING CHAIN

[QR25DE]

- c. Secure hexagonal part of the camshaft with a wrench and loosen the camshaft sprocket mounting bolt and remove the camshaft sprocket for both camshafts.

**CAUTION:**

- Do not rotate the crankshaft or camshafts while the timing chain is removed. It can cause damage to the valve and piston.

19. Remove the chain slack guide, tension guide, timing chain, and oil pump drive spacer.

20. Remove the timing chain tensioner for the balancer unit with the following procedure:

- Lift the tensioner lever up, and release the ratchet claw.
- Push tensioner sleeve in, and hold it.
- Matching the hole on lever with the one on body, insert a stopper pin to secure tensioner sleeve.
- Remove the timing chain tensioner for the balancer unit.

21. Remove timing chain for balancer unit and crankshaft sprocket.

22. Loosen mounting bolts in reverse order shown in the figure, and remove balancer unit.

- Use Torx socket (size E14)

**CAUTION:**

- Do not disassemble balancer unit.

## INSPECTION AFTER REMOVAL

### Timing Chain

Check the timing chain for cracks or serious wear. If a defect is detected, replace it.

## Balancer Unit Mounting Bolt Outer Diameter

- Measure outer diameters (d1, d2) at the two positions shown in the figure.
- Measure d2 within the range A.
- If the value difference (d1 - d2) exceeds the limit (a dimension difference is large), replace it with a new one.

**Limit : 0.15 mm (0.0059 in) or more**

## INSTALLATION

### NOTE:

- There may be two color variations of the link marks (link colors) on the timing chain.
- There are 26 links between the gold/yellow mating marks on the timing chain; and 64 links between the camshaft sprocket gold/yellow link and the crankshaft sprocket orange/blue link, on the timing chain side without the tensioner.

1. Make sure the crankshaft key points straight up.
2. Install the balancer unit and tighten the mounting bolts in the numerical order shown with the following procedure:

### CAUTION:

- **When reusing a mounting bolt, check its outer diameter before installation. Refer to [EM-138, "Balancer Unit Mounting Bolt Outer Diameter"](#).**

- a. Apply new engine oil to threads and seating surfaces of mounting bolts.
- b. Tighten them to 45.2 - 51.0 N·m (4.6 - 5.2 kg·m, 34 - 37 ft·lb).
- c. Turn them another 90° - 95° degrees (Target: 90° degrees).
- d. Fully loosen in the reverse order of tightening to 0 N·m (0 kg·m, 0 ft·lb).
- e. Tighten them to 45.2 - 51.0 N·m (4.6 - 5.2 kg·m, 34 - 37 ft·lb).
- f. Turn them another 90° - 95° degrees (Target: 90° degrees).

### CAUTION:

- **Check tightening angle with an angle wrench or a protractor. Do not make judgment by visual check alone.**

3. Install the crankshaft sprocket and timing chain for the balancer unit.

- Make sure that the crankshaft sprocket is positioned with mating marks on the block and sprocket meeting at the top.
- Install it by lining up mating marks on each sprocket and timing chain.

# TIMING CHAIN

[QR25DE]

4. Install timing chain tensioner for balancer unit.

**NOTE:**

Chain guide and tensioner move freely with the caulking pin as the axle. Therefore, bolt hole position of the three points could be changed during removal. If points change, temporarily fix the two mounting bolts on the chain guide and move the tensioner to match the bolt holes.

- Be careful not to let mating marks of each sprocket and timing chain slip.
- After installation, make sure the mating marks have not slipped, then remove stopper pin and release tensioner.

5. Install timing chain and related parts.

- Install by lining up mating marks on each sprocket and timing chain as shown.

**NOTE:**

Before installing chain tensioner, it is possible to change the position of mating mark on timing chain for that of each sprocket for alignment.

**CAUTION:**

**For the above reason, after the mating marks are aligned, keep them aligned by holding them with a hand.**

- Before and after installing chain tensioner, check again to make sure that mating marks have not slipped.
- After installing chain tensioner, remove stopper pin, and make sure the tensioner moves freely.
- To avoid skipped teeth, do not move crankshaft and camshaft until front cover is installed.

6. Install front oil seal to front cover.

- Using a drift of 56 mm (2.20 in) diameter, press oil seal in until it is flush with front end surface of front cover.

**CAUTION:**

- Be careful not to cause damage to circumference of oil seal.

# TIMING CHAIN

[QR25DE]

7. Install front cover with the following procedure:
  - a. Install O-rings to cylinder head and cylinder block.
  - b. Apply Genuine Silicone RTV Sealant or equivalent, to positions specified in the figure. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - c. Make sure the mating marks on the timing chain and each sprocket are still aligned. Then install the front cover.

**CAUTION:**

- Be careful not to damage the front oil seal during installation with the front end of the crankshaft.

- d. Tighten mounting bolts in the numerical order as shown.
- e. After all bolts are tightened, retighten them to the specified torque.

**Front cover bolts : 12 - 13 N·m (1.2 - 1.4 kg·m, 9 - 10 ft-lb)**

**CAUTION:**

**Wipe off any excess sealant leaking at the surface for installing the oil pan.**

8. Install the chain guide between the camshaft sprockets.

9. Install IVT control cover with the following procedure:
  - a. Install IVT control solenoid valves to IVT control cover.
  - b. Install oil rings to the intake camshaft sprocket insertion points on IVT control backside cover.
  - c. Install O-ring to front cover.

# TIMING CHAIN

[QR25DE]

d. Apply Silicone RTV Sealant to the positions as shown.

e. Tighten the mounting bolts in the numerical order as shown.

10. Insert crankshaft pulley by aligning with crankshaft key.

- Tap its center with a plastic hammer to insert.

11. Tighten crankshaft pulley mounting bolts.

- Secure crankshaft pulley with a pulley holder to tighten the bolt.
- Perform angle tightening with the following procedure:

- Apply new engine oil to threads and seat surfaces of mounting bolts.
- Tighten to initial specifications:-

**Crankshaft pulley bolt initial tightening : 37.3 - 47.1 N·m (3.8 - 4.8 kg·m, 28 - 34 ft-lb)**

c. Apply a paint mark on the front cover, mating with any one of six easy to recognize stamp marks on bolt flange.

d. Turn crankshaft pulley bolt another 60° to 66° degrees [Target: 60° degrees].

- Check vertical mounting angle with movement of one stamp mark.

12. Installation of the remaining parts is in reverse order of removal.

**OIL SEAL****Removal and installation of Valve Oil Seal  
REMOVAL**

1. Remove camshaft. Refer to [EM-123, "REMOVAL"](#)
2. Remove valve lifter. Refer to [EM-123, "REMOVAL"](#) .
3. Rotate crankshaft, and set piston whose oil seal is to be removed to top dead center. This prevents valve from dropping inside cylinder.

**CAUTION:**

**When rotating crankshaft, be careful to avoid scarring the front cover with the timing chain.**

4. Remove valve collet, valve spring retainer and valve spring with Tool.

5. Remove valve oil seal with Tool.

6. Installation of the remaining components is in reverse order of removal.

**INSTALLATION**

1. Apply new engine oil to new valve oil seal joint surface and seal lip.
2. Press in valve oil seal to the position shown with Tool.

**Removal and Installation of Front Oil Seal  
REMOVAL**

1. Remove the following parts:
  - Engine under cover
  - Drive belts. Refer to [EM-100, "REMOVAL"](#) .
  - Crankshaft pulley. Refer to [EM-134, "TIMING CHAIN"](#)
2. Remove front oil seal from front cover.

**CAUTION:**

Be careful not to scratch front cover.

**INSTALLATION**

1. Apply new engine oil to new oil seal and install it using a suitable tool.
  - Install new oil seal in the direction shown.

2. Installation of the remaining components is in reverse order of removal.

## Removal and Installation of Rear Oil Seal

### REMOVAL

1. Remove the transaxle. Refer to [MT-16, "Removal and Installation"](#) (RS5F70A), [MT-82, "Removal and Installation"](#) (RS5F51A), [MT-143, "Removal and Installation"](#) (RS6F51H), or [AT-265, "REMOVAL AND INSTALLATION"](#) (RE4F03B), [AT-649, "REMOVAL AND INSTALLATION"](#) (RE4F04B).
2. Remove flywheel (MT) or drive plate (AT).
3. Remove rear oil seal.
  - Be careful not to damage crankshaft and/or cylinder block.

### INSTALLATION

1. Apply new engine oil to new oil seal and install it using a suitable tool.
  - Install new oil seal in the direction shown.

2. Install rear oil seal with a suitable drift.

#### CAUTION:

- Do not touch grease applied onto oil seal lip.
- Be careful not to damage crankshaft and/or cylinder block.
- Press fit oil seal straight to avoid causing burrs or tilting.

3. Installation of the remaining components is in reverse order of removal.

**CYLINDER HEAD**

**On-Vehicle Service**

**CHECKING COMPRESSION PRESSURE**

1. Warm up the engine to full operating temperature.
2. Turn ignition switch OFF.
3. Release the fuel pressure. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
4. Remove the ignition coil and spark plug from each cylinder. Refer to [EM-116, "Removal and Installation"](#) .
5. Connect engine tachometer (not required in use of CONSULT-II).
6. Disconnect the fuel injector harness connector to avoid any residual fuel injection during the measurement.
7. Install the compression tester with the adapter into the spark plug hole.

- Use compression gauge whose picking up end inserted to spark plug hole is smaller than 20 mm (0.79 in) in diameter. Otherwise, it may be caught by cylinder head during removal.

8. With the accelerator pedal fully depressed, turn the ignition switch to the "START" position to crank over the engine. When the gauge pointer stabilizes, read the compression pressure and engine rpm. Perform these steps to check each cylinder.

Unit: kPa (kg/cm<sup>2</sup> , psi) / rpm

Standard	Minimum	Difference limit between cylinders
1,250 (12.8, 181.3) / 250	1,060 (10.8, 153.7) / 250	100 (1.0, 14) / 250

**CAUTION:**

**Always use a fully charged battery to obtain specified engine cranking speed.**

- If the engine speed is out of specified rpm range, check the battery. Check engine speed again with a fully charged battery.
- If compression pressure is below minimum value, check valve clearances and parts associated with combustion chamber (valve, valve seat, piston, piston ring, cylinder bore, cylinder head, cylinder head gasket). After the checking, measure compression pressure again.
- If some cylinders have low compression pressure, pour small amount of engine oil into the spark plug hole of the cylinder to re-check it for compression.
  - If the added engine oil improves the compression, the piston rings may be worn or damaged. Check the piston rings and replace if necessary.

## CYLINDER HEAD

[QR25DE]

- 
- If the compression pressure remains at low level despite the addition of engine oil, the valves may be malfunctioning. Check the valves for damage. Replace the valve or valve seat accordingly.
  - If two adjacent cylinders have respectively low compression pressure and their compression remains low even after the addition of engine oil, the head gasket is leaking. In such a case, replace the cylinder head gasket.
9. Install spark plug, ignition coil and harness connectors.

# CYLINDER HEAD

[QR25DE]

## Removal and Installation

EBS00CG3

- |                     |                        |                          |

| 4. PCV valve        | 5. Rocker cover        | 6. Rocker cover gasket   |
| 7. O-ring           | 8. Valve collet        | 9. Valve spring retainer |
| 10. Valve spring    | 11. Valve oil seal     | 12. Valve guide          |
| 13. Spark plug tube | 14. Cylinder head bolt | 15. Cylinder head gasket |

WBIA0225E

- 16. Valve seat (EXH)
- 19. Valve seat (INT)

- 17. Valve (EXH)
- 20. Cylinder head

- 18. Valve (INT)

## REMOVAL

1. Release fuel pressure. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) .
2. Remove the strut tower brace.
3. Drain engine coolant and engine oil. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#) , [MA-20, "Changing Engine Oil"](#) .
4. Remove the engine undercovers.
5. Remove the timing chain. Refer to [EM-134, "Removal and Installation"](#) .
6. Remove the camshafts. Refer to [EM-123, "CAMSHAFT"](#) .
7. Remove the exhaust manifold. Refer to [EM-110, "REMOVAL"](#) .
8. Support the engine with suitable hoist and floor jack.
9. Remove cylinder head loosening bolts in the numerical order as shown.
10. If necessary to transfer to new cylinder head or remove for reconditioning, remove the intake manifold collector, intake manifold, and fuel tube assembly. Refer to [EM-105, "Removal and Installation"](#) .

## INSPECTION AFTER REMOVAL

### Outer Diameter of Cylinder Head Bolts

- Cylinder head bolts are tightened by plastic zone tightening method. Whenever the size difference between d1 and d2 exceeds the limit, replace the bolts with new ones.  
**Limit (d1 - d2) : 0.23 mm (0.0091 in) or less**
- If reduction of outer diameter appears in a position other than d2, use it as d2 point.

## INSTALLATION

1. Install a new cylinder head gasket.
2. Follow the steps below to tighten the cylinder head bolts in the numerical order as shown.

### CAUTION:

- **If cylinder head bolts are re-used, check their outer diameters before installation. Refer to [EM-148, "Outer Diameter of Cylinder Head Bolts"](#) .**
- Apply new engine oil to the threads and the seating surfaces of mounting bolts.

### Cylinder head bolts

- Step 1 : 98.1 N·m (10 kg·m, 72 ft·lb)**
- Step 2 : 0 N·m (0 kg·m, 0 ft·lb) (loosen)**
- Step 3 : 34.3 - 44.1 N·m (3.5 - 4.4 kg·m, 26 - 32 ft·lb)**
- Step 4 : 75° - 80° (target: 75°) clockwise**
- Phase 5 : 75° - 80° (target: 75°) clockwise**

# CYLINDER HEAD

[QR25DE]

## Cylinder head bolt loosening sequence

WBIA0033E

### CAUTION:

Check and confirm the tightening angle by using an angle wrench or protractor. Avoid judgement by visual inspection without the tool.

- Installation of the remaining components is in reverse order of removal.

WBIA0155E

## Disassembly and Assembly

EBS00CG4

SEC. 111•130•220

SBIA0251E

- |                      |                          |  |
|----------------------|--------------------------|--|
| 1. Valve collet      | 2. Valve spring retainer | 3. Valve spring (with valve spring seat) |
| 4. Valve oil seal    | 5. Valve guide           | 6. Cylinder head                         |
| 7. Valve seat (INT)  | 8. Valve (INT)           | 9. Valve (EXH)                           |
| 10. Valve seat (EXH) | 11. Spark plug           | 12. Spark plug tube                      |

**CAUTION:**

- When installing camshafts, chain tensioners, oil seals or other sliding parts, lubricate contacting surfaces with new engine oil.
- Apply new engine oil to threads and seat surfaces when installing the cylinder head, camshaft sprocket, crankshaft pulley and camshaft bracket.
- Attach tags to valve lifters so all parts are assembled in their original position.

**DISASSEMBLY**

1. Remove the valve lifter.
  - Note installation point.
2. Remove the valve collet.
  - Compress valve spring with valve spring compressor. Remove valve collet with magnet driver.
3. Remove valve spring retainer and valve spring.

**CAUTION:**

**Do not remove valve spring seat from valve spring.**

4. Push valve stem to combustion chamber side, and remove valve.
  - Inspect valve guide clearance before removal. Refer to [EM-152, "VALVE GUIDE CLEARANCE"](#) .
  - Note installation point.
5. Remove valve oil seal with valve oil seal puller.
6. When valve seat must be replaced, refer to [EM-153, "VALVE SEAT REPLACEMENT"](#) .
7. When valve guide must be replaced, refer to [EM-152, "VALVE GUIDE REPLACEMENT"](#) .
8. Remove spark plug with spark plug wrench.
9. Remove spark plug tube, if necessary using pliers.

**CAUTION:**

- Be careful not to damage cylinder head.
- Do not remove spark plug tube if not necessary. Once removed, the spark plug tube cannot be reused because of deformation.

**ASSEMBLY**

1. Install valve guide. Refer to [EM-152, "VALVE GUIDE REPLACEMENT"](#) .
2. Install valve seat. Refer to [EM-153, "VALVE SEAT REPLACEMENT"](#) .
3. Install valve oil seal.
  - Install with valve oil seal drift to match dimension in illustration.
4. Install valve.
  - Install larger diameter to intake side.

# CYLINDER HEAD

[QR25DE]

5. Install valve spring.
  - Install smaller pitch (valve spring seat side) to cylinder head side.
  - Note the identification color of the valve spring:
    - Intake: blue
    - Exhaust: yellow
6. Install valve spring retainer.
7. Install valve collet.
  - Compress valve spring with valve spring compressor. Install valve collet with magnet wand.
  - Tap stem edge lightly with plastic hammer after installation to check its installed condition.
8. Install valve lifter.
9. Install spark plug tube.
  - a. Remove old liquid gasket from cylinder head side mounting hole.
  - b. Apply liquid gasket all around on spark plug tube with a 12 mm (0.47 in) width from edge of spark plug tube on the press fit side.
    - Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - c. Press fit spark plug tube so that height is to "H" as shown.
 

**Press fit height "H" standard value : 38.55 - 38.65 mm (1.518 - 1.522 in)**

**CAUTION:**

- When press fitting be careful not to deform spark plug tube.
- After press fitting, wipe off any protruding liquid gasket on top surface of cylinder head.

10. Install spark plug.

## Inspection After Disassembly CYLINDER HEAD DISTORTION

1. Wipe off oil and remove water scale deposits, old gasket, old sealer, and carbon with a scraper.
 

**CAUTION:**  
Use care not to allow gasket debris to enter passages for oil or water.
2. At each of several locations on bottom surface of cylinder head, measure distortion in six directions.

**Standard : 0.1 mm (0.004 in) or less**

## VALVE DIMENSIONS

Check dimensions of each valve. Refer to [EM-187, "VALVE"](#).

## VALVE GUIDE CLEARANCE

Perform this inspection before removing the valve guide.

1. Make sure that the valve stem diameter is within the specification.
2. Push the valve out by approximately 15 mm (0.59 in) toward the combustion chamber side to measure the valve's run-out volume (in the direction of dial gauge) with dial gauge.
3. Half of the run-out volume accounts for the valve guide clearance.

### Valve to guide clearance

**Intake : 0.020 - 0.053 mm (0.0008 - 0.0021 in)**

**Exhaust : 0.030 - 0.063 mm (0.0012 - 0.0025 in)**

## VALVE GUIDE REPLACEMENT

When valve guide is removed, replace with oversized (0.2 mm, 0.008 in) valve guide.

1. To remove valve guide, heat cylinder head to 110° to 130°C (230° to 266°F) by soaking in heated oil.

2. Drive out valve guide with a press [under a 20 kN (2.2 ton-force) pressure] or hammer and suitable tool.

3. Ream cylinder head valve guide hole.

**Valve guide hole diameter for intake and exhaust : 10.175 - 10.196 mm (0.4006 - 0.4014 in)**

4. Heat cylinder head to 110° to 130°C (230° to 266°F) by soaking in heated oil.

# CYLINDER HEAD

[QR25DE]

5. Press valve guide from camshaft side to dimensions as in illustration.

6. Using valve guide reamer, apply reamer finish to valve guide.

**Intake and exhaust : 6.000 - 6.018 mm (0.2362 - 0.2369 in)**

## VALVE SEAT CONTACT

After confirming that the dimensions of valve guides and valves are within specifications, perform this procedure:

- Apply prussian blue (or white lead) onto contacting surface of valve seat to check the condition of the valve contact on the seat surface.
- Check if the contact area band is continuous all around the circumference.
- If not, grind to adjust valve fitting and check again. If the contacting surface still has NG conditions even after the re-check, replace the valve seat.

## VALVE SEAT REPLACEMENT

When valve seat is removed, replace with an oversized [0.5 mm, (0.020 in)] valve seat.

1. Bore out old seat until it collapses. Boring should not continue beyond the bottom face of the seat recess in the cylinder head. Set the machine depth stop to ensure this.
2. Ream cylinder head recess diameter for service valve seat.

**Intake : 37.000 - 37.016 mm (1.4567 - 1.4573 in)**

**Exhaust : 32.000 - 32.016 mm (1.2598 - 1.2605 in)**

- Be sure to ream in circles concentric to the valve guide center. This will enable the valve seat to fit correctly.

# CYLINDER HEAD

[QR25DE]

- Heat cylinder head to 110° to 130°C (230° to 266°F) by soaking in heated oil.
- Provide valve seats cooled well with dry ice. Force fit valve seat into cylinder head.

**CAUTION:**

Avoid directly touching the cold valve seats.

- Using a valve seat cutter set or a valve seat grinder, finish the seat to the specified dimensions.

**CAUTION:**

When using valve seat cutter, firmly grip the cutter handle with both hands. Then, press on the contacting surface all around the circumference to cut in a single drive. Improper pressure on the cutter or cutting many different times may result in a defective valve seat.

Grind to obtain the dimensions indicated as shown.

**Standard**

- D1 dia. : 33.5 mm (1.3189 in)
- D2 dia. : 35.1 - 35.3 mm (1.382 - 1.390 in)
- D3 dia. : 39.0 - 39.2 mm (1.535 - 1.543 in)
- D4 dia. : 28 mm (1.10 in)
- D5 dia. : 29.9 - 30.1 mm (1.177 - 1.185 in)
- D6 dia. : 33.5 - 33.7 mm (1.319 - 1.327 in)

- Using compound, grind to adjust valve fitting.
- Check again for normal contact.

## VALVE SPRING SQUARENESS

Set try square along the side of the valve spring and rotate the spring. Measure the maximum clearance between the top face of the spring and the try square.

**Limit : 1.9 mm (0.0748 in)**

## VALVE SPRING DIMENSIONS AND VALVE SPRING PRESSURE LOAD

Check valve spring pressure with valve spring seat installed at specified spring height. Replace if not within specifications.

# CYLINDER HEAD

[QR25DE]

**CAUTION:**

Do not remove the valve spring seat.

STANDARD	INTAKE (identification color: blue)	EXHAUST (identification color: yellow)
Free height	44.84 - 45.34 mm (1.7654 - 1.7850 in)	45.28 - 45.78 mm (1.7827 - 1.8024 in)
Installation height	35.30 mm (1.390 in)	35.30 mm (1.390 in)
Installation load	151 - 175 N (15.4 - 17.8 kg-force, 34 - 39 lb-force)	151 - 175 N (15.4 - 17.8 kg-force, 34 - 39 lb-force)
Height during valve open	24.94 mm (0.9819 in)	26.39 mm (1.0390 in)
Load with valve open	358 - 408 N (36.5 - 41.6 kg-force, 80 - 92 lb-force)	325 - 371 N (33.1 - 37.8 kg-force, 73 - 83 lb-force)

## ENGINE ASSEMBLY

### Removal and Installation

SEC. 112

WBIA0205E

- |                       |                                  |                                 |
|-----------------------|----------------------------------|---------------------------------|
| 1. RH engine mount    | 2. RH engine mounting bracket    | 3. Rear engine mounting bracket |
| 4. Rear engine mount  | 5. Center member                 | 6. LH engine mount              |
| 7. Front engine mount | 8. Front engine mounting bracket |                                 |

**WARNING:**

- Place chocks at the front and back of the rear wheels. A
- For engines not equipped with slingers, attach proper slingers and bolts as described in the Parts Catalog. EM

**CAUTION:**

- Do not start working until the exhaust system and coolant are cool. C
- If items or work required are not covered by the engine main body section, refer to the applicable sections. D
- Use the correct supporting points for lifting and jacking. Refer to [GI-39, "Lifting Points and Tow Truck Towing"](#) . E
- In removing the drive shaft, be careful not to damage the grease seals on the transaxle.
- Before separating the engine and transaxle, remove the crankshaft position sensor (POS) from the assembly.
- Be sure not to damage the edge of the crankshaft position sensor (POS) or the ring gear teeth.

**REMOVAL**

1. Release fuel pressure. Refer to [EC-1257, "FUEL PRESSURE RELEASE"](#) . F
2. Disconnect the fuel rail at the fuel hose quick connector (engine side). Refer to [EM-105, "INTAKE MANIFOLD"](#) . G
3. Drain the engine oil. Refer to [LU-17, "Changing Engine Oil"](#) .
4. Drain the engine coolant. Refer to [MA-23, "DRAINING ENGINE COOLANT"](#) .
5. Remove the engine hood assembly. Refer to [EI-13, "Removal and Installation"](#) .
6. Remove the battery, battery hold downs, and battery tray. Refer to [SC-4, "BATTERY"](#) . H
7. Disconnect the MAF sensor electrical connector.
8. Remove the air duct and air cleaner case assembly. Refer to [EM-103, "Removal and Installation"](#) . I
9. Disconnect the heater hoses.
10. Remove the radiator and radiator fan assembly. Refer to [CO-30, "Removal and Installation"](#) . J
11. Remove the alternator. Refer to [SC-32, "Removal"](#) .
12. Remove the left and right drive shafts. Refer to [FAX-14, "Removal"](#) .
13. Remove the engine undercovers.
14. Dismount the A/C compressor with piping connected and secure with wire to the radiator support.
15. Disconnect the transaxle shift control cables, if equipped (A/T only).
16. Disconnect the brake power booster vacuum hose.
17. Disconnect the following engine compartment electrical harness connectors: L
  - Heated oxygen sensors
  - Starter assembly
  - Coolant temperature sensor
  - Camshaft position sensor (PHASE)
  - EVAP canister purge volume control solenoid
  - Backup lamp switch
  - Vehicle speed sensor
  - Electric throttle control actuator
  - Ignition coils
  - Fuel injector harness
  - Engine ground straps
  - Intake valve timing control solenoid
  - Transaxle sensors (A/T only)
  - Crankshaft position sensor (POS)
  - Knock sensor
  - Oil pressure switch
  - Swirl control valve

- Power steering pressure switch
18. Remove clutch operating cylinder from transaxle, and move it aside (M/T models).
  19. Remove engine coolant reservoir tank.
  20. Remove front exhaust tube. Refer to [EX-3, "Removal and Installation"](#) .
  21. Dismount the power steering pump with piping connected and position it aside with wire.
  22. Install engine slingers into front left cylinder head and rear right cylinder head.

- Use alternator bracket mounting bolt holes for the front slinger.
- Use the proper slingers and bolts as described in the Parts Catalog.

**Slinger bolts - front** : 51.0 - 64.7 N·m (5.2 - 6.5 kg·m,  
38 - 47 ft·lb)

**Slinger bolts - rear** : 24.5 - 31.4 N·m (2.5 - 3.2 kg·m,  
18 - 23 ft·lb)

23. Support the engine/transaxle assembly with engine lifting equipment from the top and a suitable transmission jack under the engine/transaxle assembly, with the vehicle raised on a hoist.

24. Remove the center member.
  - Remove front and rear engine mounting insulator through-bolt and the center member bolts.
25. Remove RH engine mounting insulator.
26. Remove LH transaxle mounting insulator through-bolts.
27. Lower the engine/transaxle assembly from the engine compartment on the platform jack, steady it safely with the lifting equipment.
28. Remove the starter motor. Refer to [SC-21, "Removal"](#) .
29. Separate the engine and transaxle.

## INSTALLATION

Installation is in the reverse order of removal.

- Do not allow oil to get on mounting insulators. Be careful not to damage mounting insulators.
- If parts have a direction mark (arrow) this indicates front of the vehicle, and the parts must be installed according to the identification mark.

## INSPECTION AFTER INSTALLATION

- Before starting engine, check the levels of engine coolant, lubricants, engine oil. If less than required quantity, fill to the specified level.
- Run engine to check for unusual noise and vibration.
- Warm up engine thoroughly to make sure there is no leakage of coolant, lubricants, oil, fuel, and exhaust gas.
- Bleed air from passages in pipes and tubes of applicable lines.

| 28. Cylinder block heater (if equipped) |                                |                                     |

WBIA0073E

**CAUTION:**

Apply new engine oil to parts marked in illustration before installation.

**DISASSEMBLY**

1. Remove the engine and transaxle as an assembly from the vehicle, and separate the transaxle from the engine. Refer to [EM-156, "Removal and Installation"](#).
2. Mount the engine on a suitable engine stand.
3. Drain any remaining engine oil and coolant from the engine.
4. Remove the following components and associated parts.
  - Exhaust manifold and three way catalyst assembly. Refer to [EM-110, "Removal and Installation"](#).
  - Intake manifold collector. Refer to [EM-105, "Removal and Installation"](#).
  - Intake manifold and fuel tube assembly. Refer to [EM-105, "Removal and Installation"](#).
  - Ignition coils. Refer to [EM-115, "Removal and Installation"](#).
  - Rocker cover. Refer to [EM-121, "Removal and Installation"](#).
  - Front cover, timing chain, and balancer unit. Refer to [EM-134, "Removal and Installation"](#).
  - Cylinder head. Refer to [EM-147, "Removal and Installation"](#).
5. Remove the cylinder block heater, if equipped.
6. Remove the knock sensor.

**CAUTION:**

Carefully handle the sensor and do not drop the sensor.

7. Remove crankshaft position sensor (POS).

**CAUTION:**

- Avoid impacts such as a dropping.
- Do not disassemble.
- Keep it away from metal particles.
- Do not place sensor close to magnetic materials.

8. Remove the flywheel (M/T models) or drive plate (A/T models). Hold the crankshaft with a stopper plate and remove the mounting bolts using Tool.

**Tool numbers**

For Flywheel bolt : J-45737

For Drive plate bolt : J-45816

**CAUTION:**

- Be careful not to damage the flywheel contact surface for the clutch disc.

**NOTE:**

- The flywheel two-block construction allows movement in response to transmission side pressure, or when twisted in its rotational direction, therefore, some amount of noise is normal.

# CYLINDER BLOCK

[QR25DE]

9. Remove pilot converter using Tool (A/T models).

10. Remove the piston and connecting rod assemblies.
- Position the crankshaft and corresponding connecting rod, to be removed, to the bottom dead center stroke.
  - Remove the connecting rod cap. Number the cap so it can be assembled in the same position.
  - Using a hammer handle or similar tool, push the piston and connecting rod assembly out of the top of the cylinder block. Number the piston and rod so it can be assembled in the same position.
    - Before removing the piston and connecting rod assembly, check the connecting rod side clearance. Refer to [EM-176, "CONNECTING ROD SIDE CLEARANCE"](#).

11. Remove the connecting rod bearings. If reusing, number them so they can be assembled in the same position and direction.

**CAUTION:**

- When removing them, note the installation position. Keep them in the correct order.

12. Remove the piston rings from the piston.

- Use a piston ring expander.

**CAUTION:**

- When removing the piston rings, be careful not to damage the piston.
- Be careful not to damage piston rings by expanding them excessively, if reusing them.
- Before removing the piston rings, check the piston ring side clearance. Refer to [EM-177, "PISTON RING SIDE CLEARANCE"](#).

13. Remove the piston from the connecting rod as follows.

- Using a snap ring pliers, remove the two snap rings.

# CYLINDER BLOCK

[QR25DE]

- b. Heat the piston to 60° - 70°C (140° - 158°F) with a heat gun, or equivalent.

- c. Push out piston pin with a punch of an outer diameter of approximately 19 mm (0.75 in).

14. Remove the lower cylinder block mounting bolts.

- Before loosening the lower cylinder block mounting bolts, measure the crankshaft side clearance. Refer to [EM-175](#), "["CRANKSHAFT SIDE CLEARANCE"](#) .
- Loosen them in the order shown to remove them.

15. Remove the lower cylinder block.

- Using Tool (seal cutter) cut the Silicone RTV Sealant and remove the lower cylinder block from the cylinder block.

**CAUTION:**  
Be careful not to damage the mounting surface.

16. Remove the crankshaft.

- CAUTION:**
- Do not damage or deform the signal plate while mounted on the crankshaft.
  - When setting the crankshaft on a flat surface, use a block of wood to avoid interference between the signal plate and the surface.
  - Do not remove signal plate unless it is necessary.

17. Pull the rear oil seal out of the rear end of the crankshaft.

**CAUTION:**  
Do not to damage the crankshaft or cylinder block when removing the rear oil seal.

A  
EM  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

**NOTE:**

When replacing the rear oil seal without removing the cylinder block, use a screwdriver to pull it out from between crankshaft and block.

- Remove the main bearings and thrust bearings from the cylinder block and lower cylinder block.

**CAUTION:**

**Identify and number the bearings, if reusing them, so that they are assembled in the same position and direction.**

**ASSEMBLY**

- Using compressed air, clean out the coolant and oil passages in the cylinder block, the cylinder bore and the crankcase to remove any foreign material.

**CAUTION:**

**Use approved safety glasses to protect your eyes.**

- Install the drain plugs on the cylinder block.

- Apply Silicone RTV Sealant.  
**Use Genuine Silicone RTV Sealant, or equivalent. Refer to GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS".**
- Replace the copper washers with new ones.

- Install the main bearings and the thrust bearings.
  - Remove dust, dirt, and oil from the bearing mating surfaces of the cylinder block and lower cylinder block.
  - Install the thrust bearings to both sides of the No. 3 main bearing journal on the cylinder block.
    - Install the thrust bearings with the oil groove facing the crankshaft arm (outside).

- Install the main bearings paying attention to their position and direction.
  - The main bearing with an oil hole and groove goes on the cylinder block. The one without them goes on the lower cylinder block.
  - Only the main bearing (on the cylinder block) for No. 3 journal has different specifications.
  - Before installing the bearings, apply engine oil to the bearing friction surface (inside). Do not apply oil to the back surface, but thoroughly clean it.
  - When installing, align the bearing stopper to the notch.
  - Make sure that the oil holes on the cylinder block and those on the corresponding bearing are aligned.

# CYLINDER BLOCK

[QR25DE]

4. Install the signal plate to the crankshaft.

**Signal plate bolts** : 12 - 14 N·m (1.22 - 1.43 kg·m,  
9 - 10 ft·lb)

- Position the crankshaft and signal plate using a positioning dowel pin, and tighten the mounting bolts to specification.
- Remove the dowel pin.

**CAUTION:**

Be sure to remove dowel pin before installing the crankshaft.

**NOTE:**

Dowel pins for the crankshaft and signal plate are supplied as a set for each.

- Install the crankshaft onto the cylinder block.
  - While turning the crankshaft by hand, check that it turns smoothly.
- Install the lower cylinder block.

- Apply Silicone RTV Sealant to positions shown in the figure.

**NOTE:**

Cylinder block and lower cylinder block are machined together. Neither of them can be replaced separately.

**CAUTION:**

After the Silicone RTV Sealant is applied, the lower cylinder block installation must be finished within 5 minutes.

- Tighten lower cylinder block mounting bolts in the numerical order shown and according to the following steps:

**NOTE:**

Apply new engine oil to threads and seat surfaces of the mounting bolts.

**Lower cylinder block mounting bolts**

**Step 1 (bolts 11 - 22)** : 22.6 - 27.5 N·m (2.3 - 2.8 kg·m,  
17 - 20 ft·lb)

**Step 2 (bolts 1 - 10)** : 36.3 - 42.2 N·m (3.7 - 4.3 kg·m,  
27 - 31 ft·lb)

**Step 3 (bolts 1 - 10)** : 60° - 65° (target: 60°)

**CAUTION:**

Use an angle wrench (special service tool) or protractor to check tightening angle. Do not tighten by visual inspection.

- Wipe off completely any protruding Silicone RTV Sealant on the exterior of engine.
- Check crankshaft side clearance. Refer to [EM-175. "CRANK-SHAFT SIDE CLEARANCE"](#).
- After installing the mounting bolts, make sure that the crankshaft can be rotated smoothly by hand.

- Install the rear oil seal.

# CYLINDER BLOCK

[QR25DE]

- Press in rear oil seal to the position shown in the figure.

- Press the oil seal between cylinder block and crankshaft with a suitable drift.
- Be careful not to touch the grease on the oil seal lip.
- Be careful not to cause scratches or burrs when pressing in the rear oil seal.

9. Install the piston to the connecting rod. Assemble the components in their original positions.
  - a. Using a snap ring pliers, install the snap ring into the grooves of the piston's rear side.
    - Insert the piston pin snap ring fully into groove.
  - b. Install the piston to the connecting rod.
    - Using a heat gun, heat the piston [approximately 60° - 70° C (140° - 158° F)] until the piston pin can be pushed in by hand without excessive force. From the front to the rear, insert the piston pin into the piston and the connecting rod.
    - Assemble so that the front mark on the piston crown and the oil holes and the cylinder No. on the connecting rod are positioned as shown in the figure.
  - c. Install the piston pin snap ring into the front of the piston.
    - Check that the connecting rod moves smoothly.

10. Using a piston ring expander, install the piston rings. Assemble the components in their original positions.

**CAUTION:**

**Be careful not to damage the piston.**

- Position each ring with the gap as shown in the figure, referencing the piston front mark as the starting point.
- Install the top ring and the second ring with the stamped surface facing upward.

**Stamped mark**

**: A (top ring)**

**: 2A (second ring)**

# CYLINDER BLOCK

[QR25DE]

11. Install the connecting rod bearings to the connecting rod and the connecting rod cap. Assemble the components in their original positions.

- When installing the connecting rod bearings, apply engine oil to the bearing friction surface (inside). Do not apply oil to the back surface, but thoroughly clean the back.
- When installing, align the connecting rod bearing stopper protrusion with the notch of the connecting rod to install.
- Check the oil holes on the connecting rod and those on the corresponding bearing are aligned.

12. Install the piston and connecting rod assembly to the crankshaft. Assemble the components in their original positions.

- Rotate the crankshaft so the pin corresponding to the connecting rod to be installed is at the bottom dead center position.
- Apply engine oil sufficiently to the cylinder bore, piston, and crankshaft pin.
- Match the cylinder position number with the cylinder No. on the connecting rod for installation.
- Using a piston ring compressor, install the piston with the front mark on the piston crown facing the front of the engine.

**CAUTION:**

**Be careful not to damage the crankshaft pin, resulting from an interference of the connecting rod big end.**

13. Install the connecting rod caps. Assemble the components in their original positions.

- Match the stamped cylinder number marks on the connecting rod with those on the cap to install.

14. Tighten the connecting rod bolt as follows:  
Apply engine oil to the threads and seats of the connecting rod bolts.

**CAUTION:**

**Always use either an angle wrench or protractor. Avoid tightening based on visual check alone.**

**Step 1 : 18.6 - 20.6 N·m (1.9 - 2.1 kg·m, 14 - 15 ft·lb)**

**Step 2 : 85° - 95° (target 90° degrees)**

- Check the connecting rod side clearance. Refer to [EM-176, "CONNECTING ROD SIDE CLEARANCE"](#)
- After tightening the bolts, make sure that the crankshaft rotates smoothly.

# CYLINDER BLOCK

[QR25DE]

15. Install flywheel (M/T Models), or drive plate (A/T Models).

- Install drive plate, reinforcement plate and pilot converter as shown in figure.
- Using a drift with 33 mm (1.30 in) diameter, push pilot converter into the end of the crankshaft.

16. Install the cylinder block heater.

**Cylinder block heater : 69 - 78 N·m (7.0 - 8.0 kg·m, 51 - 57 ft·lb)**

17. Install the knock sensor.

- Make sure that there is no foreign material on the cylinder block mating surface and the back surface of the knock sensor.
- Install the knock sensor with the connector facing lower left by 45° as shown.
- Do not tighten the mounting bolts while holding the connector.
- Make sure that the knock sensor does not interfere with other parts.

**Knock sensor bolt : 15.7 - 26.5 N·m (1.6 - 2.7 kg·m, 12 - 19 ft·lb)**

**CAUTION:**

**If the knock sensor is dropped, replace it with new one.**

18. Install the crankshaft position sensor (POS).

**Crankshaft position sensor bolt : 5.4 - 7.3 N·m (0.55 - 0.75 kg·m, 48 - 65 in·lb)**

19. Installation of remaining components is in the reverse order of removal.

## How to Select Piston and Bearing DESCRIPTION

EBS00CG8

Selection points	Selection parts	Selection items	Selection methods
Between cylinder block to crankshaft	Main bearing	Main bearing grade (bearing thickness)	Determined by match of cylinder block bearing housing grade (inner diameter of housing) and crankshaft journal grade (outer diameter of journal)
Between crankshaft to connecting rod	Connecting rod bearing	Connecting rod bearing grade (bearing thickness)	Combining service grades for connecting rod big end inner diameter and crankshaft pin outer diameter determine connecting rod bearing selection
Between cylinder block to piston	Piston and piston pin assembly (The piston is available together with piston pin as an assembly)	Piston grade (piston outer diameter)	Piston grade = cylinder bore grade (inner diameter of bore)
*Between piston to connecting rod	—	—	—

\*For the service parts, the grade for fitting cannot be selected between a piston pin and a connecting rod. (Only 0 grade is available.) The information at the shipment from the plant is described as a reference.

- The identification grade stamped on each part is the grade for the dimension measured in new condition. This grade cannot apply to reused parts.

# CYLINDER BLOCK

[QR25DE]

- For reused or repaired parts, measure the dimension accurately. Determine the grade by comparing the measurement with the values of each selection table.
- For details of the measurement method of each part, the reuse standards, and the selection method of the selective fitting parts, refer to the text.

## HOW TO SELECT A PISTON

### When New Cylinder Block is Used:

- Check the cylinder bore grade on rear left side of cylinder block, and select a piston of the same grade.
- If there is a corrected stamp mark on the cylinder block, use it as a correct reference.

### When a Cylinder Block is Reused:

1. Measure the cylinder block bore inner diameter.
2. Determine the bore grade by comparing the measurement with the values under the cylinder bore inner diameter of the "Piston Selection Table". Select the piston of the same grade.

### Piston Selection Table

Unit: mm (in)

Grade number (Mark)	1	2 (or no mark)	3
Inner diameter of cylinder bore	89.000-89.010 (3.5039-3.5043)	89.010-89.020 (3.5043-3.5047)	89.020-89.030 (3.5047-3.5051)
Outer diameter of piston	88.980-88.990 (3.5031-3.5035)	88.990-89.000 (3.5035-3.5039)	89.000-89.010 (3.5039-3.5043)

### NOTE:

- The piston is available together with piston pin as an assembly.
- The piston pin (piston pin bore) grade is provided only for the parts installed at the plant. For service parts, no grades can be selected. Only 0 grade is available.

## HOW TO SELECT A CONNECTING ROD BEARING

### When New Connecting Rod and Crankshaft are Used:

1. Apply big end inside diameter grade stamped on connecting rod side face to the row in the "Connecting Rod Bearing Selection Table".

2. Apply pin diameter grade stamped on crankshaft front side to the column in the "Connecting Rod Bearing Selection Table".
3. Read the symbol at the cross point of selected row and column in the "Connecting Rod Bearing Selection Table".
4. Apply the symbol obtained to connecting rod bearing grade table to select.

### When Crankshaft and Connecting Rod are Reused:

1. Measure dimensions of the big end inner diameter of connecting rod and outer diameter of crankshaft pin individually.
2. Apply the dimension measured to the "Connecting Rod Bearing Selection Table" below.

# CYLINDER BLOCK

[QR25DE]

**Connecting Rod Bearing Selection Table**

**Connecting Rod Bearing Grade Table**

Grade	0	1	2	3
Upper / Lower thickness mm (in)	1.499 / 1.495 (0.0590 / 0.0589)	1.503 / 1.499 (0.0592 / 0.0590)	1.507 / 1.503 (0.0593 / 0.0592)	1.511 / 1.507 (0.0595 / 0.0593)
Identification color	Black	Brown	Green	Yellow

**Undersize Bearing Usage Guide**

- When the specified oil clearance is not obtained with standard size connecting rod bearing, use undersize (U.S.) bearing.
- When using undersize bearing, measure the bearing inner diameter with bearing installed, and grind the crankshaft pin so that the oil clearance satisfies the standard.

# CYLINDER BLOCK

[QR25DE]

## Bearing Undersize Table

Unit: mm (in)

Size U.S.	Thickness
0.25 (0.0098)	1.624 - 1.632 (0.0639 - 0.0643)

### CAUTION:

In grinding the crankshaft pin to use undersize bearings, do not damage the fillet R (All crankshaft pins).

## HOW TO SELECT A MAIN BEARING

### When New Cylinder Block and Crankshaft are Used:

- "Main Bearing Selection Table" rows correspond to bearing housing grade on rear left side of cylinder block.
  - If there is a corrected stamp mark on the cylinder block, use it as a correct reference.

- Apply journal diameter grade stamped on crankshaft front side to column in "Main Bearing Selection Table".

- Find value at crossing of row and column in "Main Bearing Selection Table".

### CAUTION:

- There are two main bearing selection tables. One is for odd-numbered journals (1, 3, and 5) and the other is for even-numbered journals (2 and 4). Make certain to use the appropriate table. This is due to differences in the specified clearances.

- Apply the symbol obtained to "Main Bearing Grade Table" to select.

### NOTE:

- Service parts are available as a set of both upper and lower.

### When Cylinder Block and Crankshaft are Reused:

- Measure inner diameter of cylinder block main bearing housing and outer diameter of crankshaft journal.
- Apply measurement in above step 1 to the "Main Bearing Selection Table".
- Follow steps 3 and 4 in "When New Cylinder Block and Crankshaft are Used".

# CYLINDER BLOCK

	LWR	1.994 - 1.997 (0.0785 - 0.0786)		

## Use Undersize Bearing Usage Guide

- Use undersize (U.S.) bearing when oil clearance with standard size main bearing is not within specification.
- When using undersize (U.S.) bearing, measure the bearing inner diameter with the bearing installed and grind journal until oil clearance falls within specification.

## Bearing Undersize Table

Unit: mm (in)	
Size U.S.	Thickness
0.25 (0.0098)	2.106 - 2.114 (0.0829 - 0.0832)

### CAUTION:

Do not damage fillet R when grinding crankshaft journal in order to use an undersize bearing (all journals).

EBS00CG9

## Inspection After Disassembly CRANKSHAFT SIDE CLEARANCE

- Using a dial gauge, measure the clearance between the thrust bearings and the crankshaft arm when the crankshaft is moved fully forward or backward.

**Standard : 0.10 - 0.26 mm (0.0039 - 0.0102 in)**

**Limit : 0.30 mm (0.0118 in)**

- If the measured value exceeds the limit, replace the thrust bearings, and measure again. If it still exceeds the limit, replace the crankshaft.

## CONNECTING ROD SIDE CLEARANCE

- Measure side clearance between connecting rod and crankshaft arm with feeler gauge.

**Standard** : 0.20 - 0.35 mm (0.0079 - 0.0138 in)

**Limit** : 0.50 mm (0.0197 in)

- If the measured value exceeds the limit, replace the connecting rod bearings, and measure again. If it still exceeds the limit, replace the crankshaft also.

## PISTON AND PISTON PIN CLEARANCE

### Piston Pin Bore Diameter

- Measure the piston pin bore diameter with an inside micrometer.
- Service parts apply only to grade 0.

**Piston pin bore diameter**

**Grade No. 0** : 19.993 - 19.999 mm (0.7871 - 0.7874 in)

**Grade No. 1** : 19.999 - 20.005 mm (0.7874 - 0.7876 in)

### Outer Diameter of Piston Pin

- Measure outer diameter of piston pin with a micrometer.

**Piston pin outer diameter**

**Grade No. 0** : 19.989 - 19.995 mm (0.7870 - 0.7872 in)

**Grade No. 1** : 19.995 - 20.001 mm (0.7872 - 0.7874 in)

### Piston to Piston Pin Clearance

(Piston to piston pin clearance) = (Piston pin bore diameter) – (Outer diameter of piston pin)

**Standard** : 0.002 - 0.006 mm (0.0001 - 0.0002 in)

- If clearance exceeds specification, replace either or both of piston/piston pin assembly and connecting rod assembly with reference to specification of each parts.
- Refer to piston selection table to replace piston/piston pin assembly. Refer to [EM-169, "HOW TO SELECT A PISTON"](#) .
- Refer to connecting rod bearing selection table to replace connecting rod. Refer to [EM-170, "HOW TO SELECT A CONNECTING ROD BEARING"](#) .

**NOTE:**

- The connecting rod small end grade and piston pin hole (piston pin) grade are provided only for the parts installed at the plant. For service parts, no grades can be selected. Only 0 grade is available.
- Refer to [EM-178, "CONNECTING ROD BUSHING OIL CLEARANCE \(SMALL END\)"](#) for the values for each grade at the plant.
- Regarding marks on piston head, refer to [EM-169, "HOW TO SELECT A PISTON"](#).

**PISTON RING SIDE CLEARANCE**

- Measure side clearance of piston ring and piston ring groove with feeler gauge.

**Standard**

- Top ring** : 0.045 - 0.080 mm (0.0018 - 0.0031 in)
- 2nd ring** : 0.030 - 0.070 mm (0.0012 - 0.0028 in)
- Oil ring** : 0.065 - 0.135 mm (0.0026 - 0.0053 in)

**Limit**

- Top ring** : 0.11 mm (0.0043 in)
- 2nd ring** : 0.10 mm (0.004 in)
- Oil ring** : —

- If out of specification, replace piston and/or piston ring assembly.

**PISTON RING END GAP**

- Check if inner diameter of cylinder bore is within specification. Refer to [EM-180, "PISTON TO CYLINDER BORE CLEARANCE"](#).
- Insert piston ring until middle of cylinder with piston, and measure gap.

**Standard**

- Top ring** : 0.21 - 0.31 mm (0.0083 - 0.0122 in)
- 2nd ring** : 0.32 - 0.47 mm (0.0126 - 0.0185 in)
- Oil ring** : 0.20 - 0.60 mm (0.0079 - 0.0236 in)

**Limit**

- Top ring** : 0.54 mm (0.0213 in)
- 2nd ring** : 0.67 mm (0.0264 in)
- Oil ring** : 0.95 mm (0.0374 in)

- If out of specification, replace piston ring. If gap still exceeds the limit even with a new ring, re-bore cylinder and use oversized piston and piston ring.

**CONNECTING ROD BEND AND TORSION**

- Check with connecting rod aligner.

# CYLINDER BLOCK

[QR25DE]

- Bend limit** : 0.15 mm (0.0059 in) per 100 mm (3.94 in) length
- Torsion limit** : 0.30 mm (0.0118 in) per 100 mm (3.94 in) length

- If it exceeds the limit, replace connecting rod assembly.

## CONNECTING ROD BEARING (BIG END)

- Install the connecting rod cap without the connecting rod bearing installed. After tightening the connecting rod bolt to the specified torque, measure the connecting rod big end inner diameter using an inside micrometer.

**Standard** : 48.000 - 48.013 mm (1.8898 - 1.8903 in)

## CONNECTING ROD BUSHING OIL CLEARANCE (SMALL END)

### Inner Diameter of Connecting Rod (Small End)

- Measure inner diameter of bushing.

**Connecting rod small end inner diameter**

**Grade No. 0** : 20.000 - 20.006 mm (0.7874 - 0.7876 in)

**Grade No. 1** : 20.006 - 20.012 mm (0.7876 - 0.7879 in)

## Outer Diameter of Piston Pin

- Measure outer diameter of piston pin.

### Piston pin outer diameter

**Grade No. 0 : 19.989 - 19.995 mm (0.7870 - 0.7872 in)**

**Grade No. 1 : 19.995 - 20.001 mm (0.7872 - 0.7874 in)**

## Connecting Rod Oil Clearance (Small End)

(Connecting rod small end oil clearance) = (Inner diameter of connecting rod small end) – (Outer diameter of piston pin)

**Standard : 0.005 - 0.017 mm (0.0002 - 0.0007 in)**

- If the measured value exceeds the standard, replace the connecting rod assembly and/or piston and piston pin assembly.
- If replacing the piston and piston pin assembly, refer to the "Piston Selection Table" to select the piston corresponding to the applicable bore grade of the cylinder block to be used. Refer to [EM-169, "HOW TO SELECT A PISTON"](#).

## Factory Installed Parts Grading:

- Service parts apply only to grade 0.

Grade	Unit: mm (in)	
	0	1
Connecting rod small end inner diameter	20.000 - 20.006 (0.7874 - 0.7876)	20.006 - 20.012 (0.7876 - 0.7879)
Piston pin outer diameter	19.989 - 19.995 (0.7870 - 0.7872)	19.995 - 20.001 (0.7872 - 0.7874)
Piston pin bore diameter	19.993 - 19.999 (0.7871 - 0.7874)	19.999 - 20.005 (0.7874 - 0.7876)

## CYLINDER BLOCK DISTORTION

- Using a scraper, remove gasket on the cylinder block surface, and also remove oil, scale, carbon, or other contamination.

### CAUTION:

**Be careful not to allow gasket debris to enter the oil or coolant passages.**

- Measure the distortion on the block upper face at some different points in 6 directions.

**Limit : 0.1 mm (0.004 in)**

- If out of the distortion limit, replace the cylinder block.

## INNER DIAMETER OF MAIN BEARING HOUSING

- Install the main bearing caps with the main bearings removed and tighten the mounting bolts to the specified torque. Refer to [EM-164, "ASSEMBLY"](#) .
- Using a bore gauge, measure the inner diameter of the main bearing housing. Refer to [EM-190, "CYLINDER BLOCK"](#) .
- If out of the standard, replace the cylinder block and lower cylinder block assembly.

**NOTE:**

These components cannot be replaced as a single unit because they were processed together.

## PISTON TO CYLINDER BORE CLEARANCE

### Inner Diameter of Cylinder Bore

- Using a bore gauge, measure cylinder bore for wear, out-of-round and taper at 6 different points on each cylinder. (X and Y directions at A, B and C). The Y axis is in the longitudinal direction of the engine.

**NOTE:**

When determining cylinder bore grade, measure cylinder bore at B position.

### Cylinder bore inner diameter

**Grade No. 1** : 89.000 - 89.010 mm (3.5039 - 3.5043 in)

**Grade No. 2** : 89.010 - 89.020 mm (3.5043 - 3.5047 in)

**Grade No. 3** : 89.020 - 89.030 mm (3.5047 - 3.5051 in)

**Wear limit:** 0.2 mm (0.008 in)

**Out-of-round (difference between, X – Y):** 0.015 mm (0.0006 in)

**Taper limit (difference between, C – A):** 0.01 mm (0.0004 in)

- If the measured value rebore exceeds the limit, or if there are scratches and/or seizure on the cylinder inner wall, hone the inner wall.
- An oversize piston is provided. When using an oversize piston, rebore the cylinder so that the clearance of the piston cylinder satisfies the standard.

### Piston oversize (OS)

**Clearance** : 0.2 mm (0.008 in)

**Diameter** : 89.180 - 89.210 mm (3.5110 - 3.5122 in)

## Outer Diameter of Piston

- Measure piston skirt diameter (A).

### Piston skirt diameter

**Grade No. 1 : 88.980 - 88.990 mm (3.5031 - 3.5035 in)**

**Grade No. 2 : 88.990 - 89.000 mm (3.5035 - 3.5039 in)**

**Grade No. 3 : 89.000 - 89.010 mm (3.5039 - 3.5043 in)**

**Oversize clearance : 0.20 mm (0.0079 in)**

- Measure point (a) (distance from the top): 42 mm (1.65 in)

## Piston to Cylinder Bore Clearance

- Calculate by outer diameter of piston skirt and inner diameter of cylinder (direction X, position B).  
(Clearance) = (Inner diameter of cylinder) – (Outer diameter of piston skirt).

**Standard : 0.010 - 0.030 mm (0.0004 - 0.0012 in)**

**Limit : 0.08 mm (0.0031 in)**

- If it exceeds the limit, replace piston/piston pin assembly.

## Reboring Cylinder Bore

1. Cylinder bore size is determined by adding piston-to-bore clearance to piston diameter "A".

**Rebored size calculation:  $D = A + B - C$**

**D: Bored diameter**

**A: Piston diameter as measured**

**B: Piston-to-bore clearance (standard value)**

**C: Honing allowance 0.02 mm (0.0008 in)**

2. Install main bearing caps, and tighten to the specified torque. Otherwise, cylinder bores may be distorted in final assembly.
3. Cut cylinder bores.
  - **When any cylinder needs boring, all other cylinders must also be bored.**
  - **Do not cut too much out of cylinder bore at a time. Cut only 0.05 mm (0.0020 in) or so in diameter at a time.**
- 4.hone cylinders to obtain specified piston-to-bore clearance.
5. Measure finished cylinder bore for out-of-round and taper.
  - **Measurement should be done after cylinder bore cools down.**

## OUTER DIAMETER OF CRANKSHAFT MAIN JOURNAL

- Measure outer diameter of crankshaft main journals "Dm".

**Standard : 54.955 - 54.979 mm (2.1636 - 2.1645 in)**  
**"Dm"**

## OUTER DIAMETER OF CRANKSHAFT PIN JOURNAL

- Measure outer diameter of crankshaft pin journals.
  - Standard** : 44.956 - 44.974 mm (1.7699 - 1.7706 in)
  - "Dp"**

## OUT-OF-ROUND AND TAPER OF CRANKSHAFT

- Using a micrometer, measure the dimensions at four different points shown in the figure on each journal and pin.
- Out-of-round is indicated by the difference in dimensions between "X" and "Y" at "A" and "B".
- Taper is indicated by the difference in dimension between "A" and "B" at "X" and "Y".

**Limit**

**Out-of-round (X - Y)** : 0.005 mm (0.0002 in)

**Taper (A - B)** : 0.005 mm (0.0002 in)

## CRANKSHAFT RUNOUT

- Place a V-block on a precise flat table to support the journals on both ends of the crankshaft.
- Place a dial gauge straight up on the No. 3 journal.
- While rotating the crankshaft, read the movement of the pointer on the dial gauge, the total indicator reading.

**Limit** : 0.05 mm (0.002 in)

## OIL CLEARANCE OF CONNECTING ROD BEARING

### Method of Measurement

- Install the connecting rod bearings to the connecting rod and the cap, and tighten the connecting rod bolts to the specified torque. Using an inside micrometer measure the inner diameter of connecting rod bearing.
  - (Oil clearance) = (Inner diameter of connecting rod bearing) – (Outer diameter of crankshaft pin)

**Standard** : 0.028 - 0.045 mm (0.0011 - 0.0018 in)

**Limit** : 0.10 mm (0.0039 in)

- If clearance cannot be adjusted within the standard, grind crankshaft pin and use undersized bearing. Refer to [EM-170, "HOW TO SELECT A CONNECTING ROD BEARING"](#).

## Method of Using Plastigage

- Remove oil and dust on the crankshaft pin and the surfaces of each bearing completely.
- Cut the Plastigage slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Install the connecting rod bearings to the connecting rod cap, and tighten the connecting rod bolts to the specified torque.

**CAUTION:**

**Never rotate the crankshaft.**

- Remove the connecting rod cap and bearings, and using the scale on the Plastigage bag, measure the Plastigage width.

**NOTE:**

The procedure when the measured value exceeds the limit is same as that described in the method by calculation.

## OIL CLEARANCE OF MAIN BEARING

### Method of Measurement

- Install the main bearings to the cylinder block and bearing cap. Measure the main bearing inner diameter with the bearing cap bolt tightened to the specified torque.  
(Oil clearance) = (Inner diameter of main bearing) – (Outer diameter of crankshaft journal)

**Standard:**

**No. 1, 3, and 5 journals : 0.012 - 0.022 mm (0.0005 - 0.0009 in)**

**No. 2 and 4 journals : 0.018 - 0.028 mm (0.0007 - 0.0011 in)**

**Limit : 0.1 mm (0.004 in)**

- If the measured value exceeds the limit, select main bearings referring to the main bearing inner diameter and crankshaft journal outer diameter, so that the oil clearance satisfies the standard. Refer to [EM-172, "HOW TO SELECT A MAIN BEARING"](#).

### Method of Using Plastigage

- Remove oil and dust on the crankshaft journal and the surfaces of each bearing completely.
- Cut the Plastigage slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Tighten the main bearing bolts to the specified torque.

**CAUTION:**

**Never rotate the crankshaft.**

- Remove the bearing cap and bearings, and using the scale on the Plastigage bag, measure the Plastigage width.

**NOTE:**

The procedure when the measured value exceeds the limit is same as that described in the "Method by Calculation".

## CRUSH HEIGHT OF MAIN BEARING

- When the bearing cap is removed after being tightened to the specified torque with main bearings installed, the tip end of bearing must protrude.

**Standard : There must be crush height.**

- If the standard is not met, replace main bearings.

## OUTER DIAMETER OF LOWER CYLINDER BLOCK MOUNTING BOLT

- Perform only with M10 (0.39 in) bolts.
- Measure outer diameters (d1, d2) at two positions as shown.
- Measure d2 at a point within block A.
- When the value of d1- d2 exceeds the limit (a large difference in dimensions), replace the bolt with a new one.

**Limit : 0.13 mm (0.0051 in) or more**

## OUTER DIAMETER OF CONNECTING ROD BOLT

- Measure outer diameter (d) at position shown in the figure.
- When "d" exceeds the limit (when it becomes thinner), replace the bolt with a new one.

**Limit : 7.75 mm (0.3051 in) or less**

## MOVEMENT AMOUNT OF FLYWHEEL (M/T MODEL)

### NOTE:

- Inspection for double mass flywheel only.
- Do not disassemble double mass flywheel.

### Flywheel Runout

- Measure runout of flywheel contact surface to the clutch with a dial gauge.
- Measure runout at 210 mm (8.27 in) dia.

**Standard : 0.45 mm (0.0177 in) or less**

**Limit : 1.3 mm (0.051 in) or less**

- When measured value exceeds the limit, replace the flywheel with a new one.

### Movement Amount in Rotation Direction

- Check the movement amount in the following procedure.
  1. Install a bolt to clutch cover mounting hole, and place a torque wrench on the extended line of the flywheel center line.
- Tighten bolt to keep it from loosening at a force of 9.8 N·m (1 kg·m, 87 in·lb).

# CYLINDER BLOCK

[QR25DE]

- Put a mating mark on circumferences of the two flywheel masses without applying any load (measurement standard points).
- Apply a force of 9.8 N·m (1 kg·m, 87 in·lb) in each direction, and mark the movement amount on the mass on the transaxle side.
- Measure dimensions of movement amounts A and B on circumference of the flywheel on the transaxle side.

**Standard : 28.3 mm (1.114 in) or less**

- When measured value is outside the standard, replace flywheel.

## QR25DE

### CAUTION:

- Always replace exhaust gaskets with new ones when reassembling.
- For the QR25DE engine, install the front combination seal bearing as shown. Position the conical spring so that the wide end is against the flange as shown.

- With engine running, check all tube connections for exhaust gas leaks, and entire system for unusual noises.
- Check to ensure that mounting brackets and mounting insulators are installed properly and free from undue stress. Improper installation could result in excessive noise or vibration.
- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; replace it with a new one.
- Before installing a new oxygen sensor, clean exhaust system threads using oxygen sensor thread cleaner tool, J-43897-18 or J-43897-12, and apply anti-seize lubricant.
- Do not over-tighten the oxygen sensor. Doing so may cause damage to the oxygen sensor, resulting in the MIL coming on.

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions

EDS00006

- When installing rubber parts, final tightening must be carried out under unladen condition\* with tires on ground.  
\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Use flare nut wrench when removing or installing brake tubes.
- Always torque brake lines when installing.

# ON-VEHICLE SERVICE

## ON-VEHICLE SERVICE

PF0:0000

### Front Axle Parts

EDS000QA

Check front axle and front suspension parts for excessive play, cracks, wear or other damage.

- Shake each front wheel to check for excessive play.
- Make sure that the cotter pin is properly installed.
- Retighten all axle and suspension nuts and bolts to the specified torque.

**Tightening torque** : Refer to [FSU-5, "Components"](#) .

### Front Wheel Bearing

EDS000QB

- Rotate wheel hub to check that wheel bearings operate smoothly.
- Check axial end play.

**Axial end play** : 0.05 mm (0.0020 in) or less

If out of specification or wheel bearing does not turn smoothly, replace wheel bearing assembly.

Refer to [FAX-6, "WHEEL HUB AND KNUCKLE"](#) .

### Drive Shaft

EDS000QC

Check for grease leakage or other damage.

## WHEEL HUB AND KNUCKLE

### Components

- |                               |                               |                           |
|-------------------------------|-------------------------------|---------------------------|
| 1. Drive shaft                | 2. Sensor rotor (if equipped) | 3. Knuckle                |
| 4. Wheel sensor (if equipped) | 5. Baffle plate               | 6. Wheel bearing assembly |
| 7. Snap ring                  | 8. Wheel bolt                 | 9. Wheel hub              |
| 10. Wheel bearing lock nut    | 11. Cotter pin                | 12. Disc rotor            |
| 13. Wheel nut                 |                               |                           |

### Removal

EDS000QE

#### CAUTION:

Before removing the front axle assembly, disconnect the wheel sensor from the assembly. Then move it away from the front axle assembly area.

Failure to do so may result in damage to the sensor wires and the wheel sensor becoming inoperative.

1. Remove cotter pin and wheel bearing lock nut.

# WHEEL HUB AND KNUCKLE

2. Separate tie-rod from knuckle with Tool.
- **Install stud nut on stud bolt to prevent damage to stud bolt.**

3. Remove brake caliper assembly, torque member and rotor.
- **Brake hose need not be disconnected from brake caliper. In this case, suspend caliper assembly with wire so as not to stretch brake hose. Be careful not to depress brake pedal, or piston will pop out. Make sure brake hose is not twisted.**

4. Remove strut lower mounting nuts and bolts.

5. Separate drive shaft from knuckle by lightly tapping it. If it is hard to remove, use a puller.
- **Cover boots with shop towel so as not to damage them when removing drive shaft.**

# WHEEL HUB AND KNUCKLE

6. Loosen lower ball joint nut.
7. Remove knuckle from lower ball joint stud with Tool.

EDS000QF

## Installation

1. Install in reverse order of removal.
  - Install knuckle with wheel hub.  
**When installing knuckle to strut, be sure to hold bolts and tighten nuts.**

 : 114 - 133 N·m (11.6 - 13.6 kg·m, 84 - 98 ft·lb)

**Before tightening, apply oil to threaded portion of drive shaft.**

- Tighten wheel bearing lock nut.

 : 197 - 274 N·m (20 - 28 kg·m, 145 - 202 ft·lb)  
(QG18DE models)

 : 255 - 333 N·m (26 - 33 kg·m, 188 - 245 ft·lb)  
(QR25DE models)

- Rotate wheel hub to check that wheel bearings operate smoothly.
- Rotate wheel hub to check wheel bearing axial end play.

**Axial end play : 0.05 mm (0.0020 in) or less**

EDS000QG

## Disassembly

### CAUTION:

When removing wheel hub or wheel bearing from knuckle, replace wheel bearing assembly (outer race and inner race) with a new one.

Wheel bearing does not require maintenance. If any of the following symptoms are noted, replace wheel bearing assembly.

- Growling noise is emitted from wheel bearing during operation.
- Wheel bearing drags or turns roughly. This occurs when turning hub by hand after bearing lock nut is tightened to specified torque.

# WHEEL HUB AND KNUCKLE

## WHEEL HUB

Drive out hub and inner race from knuckle with a suitable tool.

A  
B  
C

FAX

## WHEEL BEARING

When replacing wheel bearing, replace complete wheel bearing assembly (inner race and outer race).

1. Remove bearing inner race.

E  
F  
G  
H

2. Remove snap rings.

I  
J  
K  
L

3. Press out bearing outer race.

4. Remove baffle plate, if required.

M

EDS000QH

## Inspection

### WHEEL HUB AND KNUCKLE

Check wheel hub and knuckle for cracks by using a magnetic exploration or dyeing test.

### SNAP RING

Check snap ring for wear or cracks. Replace if necessary.

# WHEEL HUB AND KNUCKLE

EDS000QI

## Assembly

- If baffle plate has been removed, replace it with a new one.
- When installing the baffle plate, press new plate so that it is in contact with knuckle wall. Refer to figure at right.

1. Press new wheel bearing assembly into knuckle until it seats against knuckle shoulder.

**Maximum load P : 29.4 kN  
(3.0 ton, 3.3 US ton, 2.95 Imp ton)**

### CAUTION:

- Do not apply disassembly force in direction "R". There is a possibility of breaking the seal. In case of separation (except range of initial clearance) and disassembling of inner race, the wheel bearing must be replaced with a new part.
- Do not press inner race of wheel bearing assembly or seal.
- Do not apply oil or grease to mating surfaces of wheel bearing outer race and knuckle.

2. Install outer snap ring into groove of knuckle.
3. Press wheel hub into knuckle until it stops when the end of the wheel bearing is hit.

**Maximum load P : 49.0 kN  
(5.0 ton, 5.5 US ton, 4.9 Imp ton)**

- Do not move wheel hub in direction "R".

4. Check bearing operation.

- a. Add load P with press.

**Load P : 34.3 - 49.0 kN  
(3.5 - 5.0 ton, 3.9 - 5.5 US ton,  
3.44 - 4.92 Imp ton)**

- b. Spin knuckle several turns in both directions.
- c. Make sure that wheel bearings operate smoothly.

# DRIVE SHAFT

PFP:39100

## DRIVE SHAFT

LDIA0014E

# DRIVE SHAFT

## Removal

EDS000QK

1. Remove cotter pin and wheel bearing lock nut.

2. Remove drive shaft center support bearing bolts.

3. Remove strut lower mounting nuts and bolts.
4. Remove brake hose clip.

5. Separate drive shaft from knuckle by lightly tapping it. If it is hard to remove, use a puller.
  - **Cover boots with shop towel so as not to damage them when removing drive shaft.**

# DRIVE SHAFT

6. Remove left drive shaft from transaxle.

7. Remove right drive shaft from transaxle.

— For M/T models —

- Pry off drive shaft from transaxle as shown at right.

— For A/T models —

- Insert screwdriver into transaxle opening for right drive shaft and strike with a hammer.
- **Be careful not to damage pinion mate shaft and side gear.**

# DRIVE SHAFT

EDS000QL

## Installation TRANSAXLE SIDE

1. Drive a new oil seal to transaxle. Refer to [MT-12, "SIDE OIL SEAL"](#) , [MT-77, "SIDE OIL SEAL"](#) , [MT-138, "SIDE OIL SEAL"](#) [AT-264, "Differential Side Oil Seal Replacement"](#) , or [AT-647, "Differential Side Oil Seal Replacement"](#) .
2. Set Tool along the inner circumference of oil seal.

3. Insert drive shaft into transaxle. Be sure to properly align the serrations and then withdraw Tool.
4. Push drive shaft, then press-fit circular clip on the drive shaft into circular clip groove of side gear.
5. After its insertion, try to pull the flange out of the slide joint by hand. If it pulls out, the circular clip is not properly meshed with the side gear.

## WHEEL SIDE

1. Install drive shaft into knuckle.
2. Tighten strut lower mounting nuts and wheel bearing lock nut.

## Disassembly TRANSAXLE SIDE (TS79C AND T86 TYPE)

EDS000QM

1. Remove boot bands.
2. Put matching marks on slide joint housing and drive shaft before separating joint assembly.
3. Put matching marks on spider assembly and drive shaft.

4. Remove snap ring, then remove spider assembly.

### CAUTION:

**Do not disassemble spider assembly.**

5. Draw out boot.
  - **Cover drive shaft serrations with tape so as not to damage the boot.**

# DRIVE SHAFT

## TRANSAXLE SIDE (D90,D90+B AND D86+B TYPE)

1. Remove boot bands.
2. Put matching marks on slide joint housing and drive shaft before separating joint assembly.
3. Pry off snap ring with a screwdriver, and pull out slide joint housing.

4. Put matching marks on inner race and drive shaft.
  5. Remove snap ring, then remove ball cage, inner race and balls as a unit.
  6. Draw out boot.
- **Cover drive shaft serrations with tape so as not to damage the boot.**

## WHEEL SIDE (ZF90, B90 AND B86 TYPE)

### CAUTION:

The joint on the wheel side cannot be disassembled.

1. Before separating joint assembly, put matching marks on drive shaft and joint assembly.
  2. Separate joint assembly with a suitable tool.
- **Be careful not to damage threads on drive shaft.**
3. Remove boot bands.

## SUPPORT BEARING

1. Remove dust shield.

B  
C  
FAX  
E  
F  
G  
H  
I  
J  
K  
L  
M

# DRIVE SHAFT

2. Remove snap ring.

3. Press support bearing assembly off drive shaft.

4. Remove snap ring.

5. Remove dust shield.

6. Separate support bearing from retainer.

## Inspection

Thoroughly clean all parts in cleaning solvent, then dry with compressed air. Check parts for evidence of deformation and other damage.

## DRIVE SHAFT

Replace drive shaft if it is twisted or cracked.

## BOOT

Check boot for fatigue, cracks or wear. Replace with new boot and boot bands.

## JOINT ASSEMBLY (TRANSAXLE SIDE)

### TS79C AND T86 TYPE

- Check spider assembly for needle bearing and washer damage. Replace if necessary.
- Check roller surfaces for scratches, wear and other damage. Replace if necessary.
- Check serration for deformation. Replace if necessary.
- Check slide joint housing for any damage. Replace if necessary.
- When replacing only spider assembly, select a new spider assembly from among those listed in table below. Ensure that the number stamped on slide joint is the same as that stamped on new part.

# DRIVE SHAFT

**Housing alone cannot be replaced. It must be replaced together with spider assembly.**

Stamped number	Part No.*
01	39720-61E01
02	39720-61E02
03	39720-61E03
04	39720-61E04
05	39720-61E05
06	39720-61E06
07	39720-61E07

\*: Always check with the Parts Department for the latest parts information.

## D90+B TYPE

- Replace any parts of double offset joint which show signs of scorching, rust, wear or excessive play.
- Check serration for deformation. Replace if necessary.
- Check slide joint housing for any damage. Replace if necessary.

## JOINT ASSEMBLY (WHEEL SIDE)

Replace joint assembly if it is deformed or damaged.

## SUPPORT BEARING

Make sure support bearing rolls freely and is free from noise, cracks, pitting and wear.

## SUPPORT BEARING BRACKET

Check support bearing bracket for cracks with a magnetic exploration or dyeing test.

## Assembly

EDS000QO

- After drive shaft has been assembled, ensure that it moves smoothly over its entire range without binding.
- Use Genuine NISSAN grease or equivalent after every overhaul.

## SUPPORT BEARING

1. Install bearing into retainer.

2. Install dust shield.
3. Install snap ring.
4. Press drive shaft into bearing.

# DRIVE SHAFT

5. Install snap ring.
6. Install new dust shield.

## WHEEL SIDE (ZF90, B90 AND B86 TYPE)

1. Install boot and new small boot band on drive shaft.
  - Cover drive shaft serration with tape to prevent damage to boot during installation.

2. Set joint assembly onto drive shaft by lightly tapping it.
  - Ensure that marks which were made during disassembly are properly aligned.

3. Pack drive shaft with specified amount of grease.

<b>Specified amount of grease</b>	: QG18DE 115 - 125 g (4.06 - 4.41 oz) : QR25DE A/T 120 - 140 g (4.23 - 4.94 oz) : QR25DE M/T 115 - 135 g (4.06 - 4.76 oz)
-----------------------------------	--

4. Make sure that boot is properly installed on the drive shaft groove.  
Set boot so that it does not swell and deform when its length is "L1".

<b>Length "L1"</b>	
<b>QG18DE</b>	: 97 mm (3.82 in)
<b>QR25DE A/T</b>	: 115.7 mm (4.56 in)
<b>QR25DE M/T</b>	: 124.2 mm (4.89 in)

# DRIVE SHAFT

- Lock new large and small boot bands securely with a suitable tool.

- Install the sensor rotor, if equipped. For front sensor rotor, use a hammer and wooden block. For rear sensor rotor, use a suitable drift and press.
  - Always replace sensor rotor with a new one.

## DYNAMIC DAMPER

- Use a new damper band when reinstalling.
- Install dynamic damper from stationary-joint side while holding it securely:

Unit: mm (in)

Applied model	QG18DE	
	LH	RH
"A"	175-185 (6.89 - 7.28)	420-430 (16.54 - 16.93)

## FUEL SYSTEM

PF17503

### Checking Fuel Lines

EBS00DTF

Inspect the fuel lines, filler cap, and fuel tank for incorrect attachment, leaks, cracks, damage, loose connections, chafing, and deterioration.

If necessary, repair or replace the faulty parts.

### General Precautions

EBS00DTG

#### **WARNING:**

When replacing the fuel line parts, observe the following:

- Place a "CAUTION: FLAMMABLE" sign in the workshop.
- Do not smoke while servicing the fuel system. Keep open flames and sparks away from the work area.
- Have a CO<sub>2</sub> fire extinguisher in the workshop.

#### **CAUTION:**

Before removing the fuel line parts, use the following procedures:

- Put drained fuel in an explosion-proof container and put the lid on securely.
- Release the fuel pressure from the fuel system. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)], [EC-637, "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)], [EC-1257, "FUEL PRESSURE RELEASE"](#) (QR25DE).
- Disconnect the battery ground cable.
- Always replace the O-ring seals with new ones.
- Do not kink or twist any of the hoses and tubes when installing.
- Do not over tighten the hose clamps to avoid damaging hoses.
- After installation, run the engine and check for fuel leaks at the connections.
- Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.
- For inspection and installation of EVAP system parts, refer to [EC-33, "System Diagram"](#) [QG18DE (ULEV)], [EC-614, "System Diagram"](#) [QG18DE (SULEV)], [EC-1236, "System Diagram"](#) (QR25DE).
- For inspection and installation of ORVR system parts, refer to [EC-33, "System Diagram"](#) [QG18DE (ULEV)], [EC-614, "System Diagram"](#) [QG18DE (SULEV)], [EC-1236, "System Diagram"](#) (QR25DE).

# FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

## FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY PFP:17042

### Removal and Installation REMOVAL

EBS00DTH

1. Release the fuel pressure from the fuel line.  
**Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)] [EC-637, "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)], [EC-1257, "FUEL PRESSURE RELEASE"](#) (QR25DE).**
2. Disconnect the battery ground cable.
3. Open the fuel filler lid and filler cap.
4. Remove the rear seat cushion. Refer to [SE-5, "Removal and Installation"](#).
5. Remove the inspection hole cover located under the rear seat cushion.

# FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

6. Disconnect the fuel pump assembly electrical connector.

7. Disconnect the fuel feed hose quick connector as follows:

- a. Align the mating marks on the fuel pump outlet and the quick connector.
- b. Hold the quick connector and push in the tabs, then pull out from the fuel pump outlet that is inserted in the quick connector.

**CAUTION:**

- The quick connector can be removed when the tabs are completely depressed. Do not twist the fuel hose more than necessary.
- Do not use any tools to remove the quick connector.

8. Remove the six retainer ring screws.

9. To remove, pull up on the fuel level sensor unit and fuel pump.

**CAUTION:**

Do not damage the arm of the fuel level sensor and fuel tank temperature sensor when removing.

10. Remove the fuel pump as shown in the figure.

- Apply mating marks on the fuel pump and fuel filter for proper alignment for installation.

# FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

11. Disconnect the fuel pump harness connector.

12. Remove the fuel filter from fuel level sensor unit as shown.

- Apply mating marks on fuel filter and fuel level sensor unit for proper alignment for installation.

13. Remove the fuel pressure regulator from the fuel filter, if necessary.

# FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

## INSTALLATION

Installation is in reverse order of removal.

Connect the quick connector as follows:

1. Align the mating marks on the fuel pump outlet and quick connector for installation.
2. Align the push tabs with the quick connector slots.
3. Insert the fuel pump outlet into the center of the quick connector until you hear a click.

After connecting the quick connector, make sure the connection is fully seated as follows:

1. Pull on the quick connector to make sure it is firmly connected.
2. Apply fuel pressure to the fuel lines by turning the ignition switch ON (without starting the engine). Then check for fuel leaks at the connections.
3. Start the engine and increase the engine speed, verify there are no fuel leaks.

# FUEL TANK

PF17202

EBS00DT1

## FUEL TANK

### Removal and Installation

### REMOVAL

1. Release the fuel pressure.  
Refer to [EC-56. "FUEL PRESSURE RELEASE"](#) [QG18DE (ULEV)], [EC-637. "FUEL PRESSURE RELEASE"](#) [QG18DE (SULEV)], [EC-1257. "FUEL PRESSURE RELEASE"](#) (QR25DE).
2. Disconnect the battery ground cable.
3. Open the fuel filler lid and filler cap.
4. Drain the fuel from fuel tank.
5. Remove the rear seat cushion. Refer to [SE-5. "Removal and Installation"](#) .
6. Remove the inspection hole cover located under rear seat.

# FUEL TANK

7. Disconnect the fuel pump electrical connector.

8. Disconnect the fuel feed hose quick connector as follows:
- Apply mating marks on the fuel pump outlet and the quick connector for installation.
  - Hold the quick connector and push in the tabs, then pull out off of the fuel pump outlet that is inserted into the quick connector.

**CAUTION:**

- The quick connector can be removed when the tabs are completely depressed. Do not twist the fuel feed hose more than necessary.
- Do not use any tools to remove the quick connector.

9. Remove the center exhaust tube. Refer to [EX-3, "Removal and Installation"](#).
10. From rear left area of the fuel tank, remove the filler hose, vent hose, and evaporation hoses as shown.

11. Support the fuel tank with a suitable transmission jack as shown.

12. Remove the fuel tank mounting band bolts while supporting the fuel tank.

# FUEL TANK

- Lower the fuel tank by 70 - 80 mm (2.76 - 3.15 in), then remove the nuts and clips holding the fuel tank protector, and remove the protector.

- To remove the clips, use pliers to squeeze the extensions as shown by the arrows, and then remove the clip from above.

- Remove the fuel tank.

## INSTALLATION

Installation is in the reverse order of removal.  
Connect the quick connector as follows:

- Align mating marks on the fuel pump outlet and the quick connector for correct installation.
- Align the push tabs with the quick connector slots.
- Insert the fuel pump outlet into the center of the quick connector until you hear a click.

After connecting the quick connector, check that the quick connector is fully seated as follows:

- Pull on the quick connector to make sure it is firmly connected.
- Apply fuel pressure to the fuel lines by turning the ignition switch ON (without starting the engine). Then check for fuel leaks at the hose connections.
- Start the engine and increase engine speed, verify that there are no fuel leaks.

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions

EES0001B

- When installing rubber parts, final tightening must be carried out under unladen condition\* with tires on ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.  
\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Use flare nut wrench when removing or installing brake tubes.
- Always torque brake lines when installing.
- Lock nuts are un reusable parts; always use new ones. When replacing, do not wipe the oil off the new lock nut before tightening.

# NOISE, VIBRATION, AND HARSHNESS (NVH) TROUBLESHOOTING

## NOISE, VIBRATION, AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

### NVH Troubleshooting Chart

EES0001E

Use the following chart to help you find the cause of the symptom. If necessary, repair or replace these parts.

Symptom		Possible Cause and SUSPECTED PARTS														Reference page

# FRONT SUSPENSION ASSEMBLY

EES000IG

## On-Vehicle Service

Check front axle and front suspension parts for excessive play, cracks, wear or other damage.

- Shake each front wheel to check for excessive play.
- Make sure that cotter pin is inserted.
- Retighten all axle and suspension nuts and bolts to the specified torque. Refer to [FSU-5, "Components"](#).

- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage. If ball joint dust cover is cracked or damaged, replace transverse link.

- Check spring height from top of wheelarch to the ground.
  - Vehicle must be unladen\*, parked on a level surface, and tires checked for proper inflation and wear (tread wear indicator must not be showing).  
\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
  - Bounce vehicle up and down several times before measuring.

**Standard height** : Refer to [FSU-16, "Wheelarch Height \(Unladen\\*\)"](#)

- Spring height is not adjustable. If out of specification, check for worn springs or suspension parts.

- Check suspension ball joint end play.
  - Jack up front of vehicle and set the stands.
  - Clamp dial indicator onto transverse link and place indicator tip on lower edge of brake caliper.
  - Make sure front wheels are straight and brake pedal is depressed.
  - Place a pry bar between transverse link and inner rim of road wheel.
  - While raising and releasing pry bar, observe maximum dial indicator value.

**Vertical end play** : 0 mm (0 in)

- If ball joint movement is beyond specifications, remove and replace it.

## Front Wheel Alignment

EES000IH

Before checking front wheel alignment, be sure to make a preliminary inspection (unladen\*).

\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

# FRONT SUSPENSION ASSEMBLY

## PRELIMINARY INSPECTION

1. Check tires for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.
- a. Remove tire from wheel and mount wheel on a tire balance machine.
- b. Set dial indicator as shown in the illustration.

**Wheel runout (Dial indicator value) : Refer to [WT-3, "ROAD WHEEL"](#) .**

3. Check front wheel bearings for looseness.
4. Check front suspension for looseness.
5. Check steering linkage for looseness.
6. Check that front shock absorbers work properly.
7. Check vehicle wheelarch height (unladen\*). Refer to [FSU-16, "Wheelarch Height \(Unladen\\*\)"](#) .
  - \*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

## CAMBER, CASTER AND KINGPIN INCLINATION

**Camber, caster and kingpin inclination are preset at factory and cannot be adjusted.**

1. Measure camber, caster and kingpin inclination of both right and left wheels with a suitable alignment gauge.

**Camber, caster and kingpin inclination : Refer to [FSU-15, "Front Wheel Alignment \(Unladen\\*1\)"](#) .**

2. If camber, caster or kingpin inclination is not within specification, inspect front suspension parts. Replace damaged or worn out parts.

## TOE-IN

**Measure toe-in using the following procedure.**

### WARNING:

- Always perform the following procedure on a flat surface.
- Make sure that no person is in front of the vehicle before pushing it.

1. Bounce front of vehicle up and down to stabilize the posture.
2. Push the vehicle straight ahead about 5 m (16 ft).
3. Put a mark on base line of tread (rear side) of both tires at the same height as hub center. These are measuring points.

4. Measure distance "A" (rear side).
5. Push the vehicle slowly ahead to rotate the wheels 180 degrees (1/2 turn).

**If the wheels have rotated more than 180 degrees (1/2 turn), try the above procedure again from the beginning. Never push vehicle backward.**

6. Measure distance "B" (front side).

**Total toe-in : Refer to [FSU-15, "Front Wheel Alignment \(Unladen\\*1\)"](#) .**

## FRONT SUSPENSION ASSEMBLY

7. Adjust toe-in by varying the length of steering tie-rods.
  - a. Loosen lock nuts.
  - b. Adjust toe-in by screwing tie-rods in and out.

**Standard length "L"** : Refer to [FSU-15, "Front Wheel Alignment \(Unladen\\*1\)"](#) .

- c. Tighten lock nuts to specified torque. Refer to [FSU-5, "Components"](#) .

### FRONT WHEEL TURNING ANGLE

1. Set wheels in straight-ahead position. Then move vehicle forward until front wheels rest on turning radius gauge properly.
2. Rotate steering wheel all the way right and left; measure turning angle.

**Do not hold the steering wheel on full lock for more than 15 seconds.**

**Wheel turning angle (Full turn)** : Refer to [FSU-15, "Front Wheel Alignment \(Unladen\\*1\)"](#) .

# COIL SPRING AND SHOCK ABSORBER

PFP:56210

## COIL SPRING AND SHOCK ABSORBER

### Removal and Installation

EES000II

- Remove shock absorber fixing bolt and nut (to hoodledge).
- Do not remove piston rod lock nut on vehicle.

- When installing strut spacer, it must be positioned as shown.

### Disassembly

EES000I

1. Set shock absorber on vise, then **loosen** piston rod lock nut.
  - Do not remove piston rod lock nut at this time.
2. Compress spring with Tool so that shock absorber mounting insulator can be turned by hand.

#### **WARNING:**

**Make sure that the pawls of the two spring compressors are firmly hooked on the spring. The spring compressors must be tightened alternately so as not to tilt the spring.**

3. Remove piston rod lock nut.

### Inspection

#### SHOCK ABSORBER ASSEMBLY

EES000IK

- Check for smooth operation through a full stroke, both compression and extension.
- Check for oil leakage on welded or gland packing portions.
- Check piston rod for cracks, deformation or other damage and replace if necessary.

# COIL SPRING AND SHOCK ABSORBER

## MOUNTING INSULATOR AND RUBBER PARTS

- Check cemented rubber-to-metal portion for separation or cracks. Check rubber parts for deterioration and replace if necessary.

## THRUST BEARING

- Check thrust bearing parts for abnormal noise or excessive rattle in axial direction and replace if necessary.

## COIL SPRING

- Check for cracks, deformation or other damage and replace if necessary.

## Assembly

- When installing coil spring on strut, it must be positioned as shown.

EES0001L

- Install upper spring seat with alignment mark facing the outer side of vehicle, in line with strut-to-knuckle attachment points.
- **Replace strut lower mounting nuts.**
- **When installing strut to knuckle, be sure to hold bolts and tighten nuts.**

**Strut to knuckle  
tightening torque : 114 - 133 N·m  
(11.6 - 13.6 kg-m, 84 - 98 ft-lb)**

# STABILIZER BAR

## STABILIZER BAR

### Removal and Installation

- Remove four stabilizer bar mounting nuts from each side.

- When installing stabilizer, make sure the paint mark and clamp face in their correct directions.

- Make sure that the slit in the bushing is in the position shown.

- Install four stabilizer bar mounting nuts at each side.

A

## STABILIZER BAR

- Install stabilizer bar with ball joint socket properly placed.

- Check stabilizer for deformation or cracks and replace if necessary.
- Check rubber bushings for deterioration or cracks and replace if necessary.
- Check ball joint can rotate in all directions. If movement is not smooth and free, replace stabilizer bar connecting rod.

# TRANSVERSE LINK AND LOWER BALL JOINT

PFP:54500

## TRANSVERSE LINK AND LOWER BALL JOINT

EES000IN

### Removal and Installation

1. Remove wheel bearing lock nut.
2. Remove tie-rod ball joint.
3. Remove strut lower bracket fixing bolts and nuts.
4. Separate drive shaft from knuckle by slightly tapping drive shaft end.

Cover boots with shop towel so as not to damage them when removing drive shaft.

5. Separate lower ball joint stud from knuckle with suitable tool.

6. Remove fixing bolts.
7. Remove transverse link and lower ball joint.
8. During installation, final tightening must be carried out at curb weight with tires on the ground. Refer to [FSU-5, "Components"](#).
9. After installation, check wheel alignment. Refer to [FSU-6, "Front Wheel Alignment"](#).

### Inspection

#### TRANSVERSE LINK

- Check transverse link for damage, cracks or deformation and replace if necessary.
- Check rubber bushing for damage, cracks and deformation and replace if necessary.

EES000IO

J  
K  
L  
M

## TRANSVERSE LINK AND LOWER BALL JOINT

### LOWER BALL JOINT

- Check ball joint for play. Replace transverse link assembly if any of the following cases occur: Ball stud is worn, play in axial direction is excessive or joint is hard to swing. Before checking, turn ball joint at least 10 revolutions so that ball joint is properly broken in.

**Swinging force "A"** : 7.8 - 77.5 N (0.8 - 7.9 kg,  
1.8 - 17.4 lb)  
(measuring point  
cotter pin hole of  
ball stud)

**Turning torque "B"** : 0.50 - 4.90 N·m  
(5.1 - 50 kg-cm,  
4.4 - 43.4 in-lb)

**Vertical end play "C"** : 0 mm (0 in)

- Check dust cover for damage. Replace it and cover clamp if necessary.

## PRECAUTIONS

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EAS000X3

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

#### Description

EAS000V5

Observe the following precautions to ensure safe and proper servicing. These precautions are not described in each individual section.

#### General Precautions

EAS000V6

- Do not operate the engine for an extended period of time without proper exhaust ventilation. Keep the work area well ventilated and free of any inflammable materials. Special care should be taken when handling any inflammable or poisonous materials, such as gasoline, refrigerant gas, etc. When working in a pit or other enclosed area, be sure to properly ventilate the area before working with hazardous materials. Do not smoke while working on the vehicle.

- Before jacking up the vehicle, apply wheel chocks or other tire blocks to the wheels to prevent the vehicle from moving. After jacking up the vehicle, support the vehicle weight with safety stands at the points designated for proper lifting before working on the vehicle. These operations should be done on a level surface.
- When removing a heavy component such as the engine or transaxle/transmission, be careful not to lose your balance and drop them. Also, do not allow them to strike adjacent parts, especially the brake tubes and master cylinder.

## PRECAUTIONS

- Before starting repairs which do not require battery power:  
Turn off ignition switch.  
Disconnect the negative battery terminal.
- If the battery terminals are disconnected, recorded memory of radio and each control unit is erased.

- To prevent serious burns:  
Avoid contact with hot metal parts.  
Do not remove the radiator cap when the engine is hot.
- Dispose of drained oil or the solvent used for cleaning parts in an appropriate manner.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically.  
Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.
- Clean all disassembled parts in the designated liquid or solvent prior to inspection or assembly.
- Replace oil seals, gaskets, packings, O-rings, locking washers, cotter pins, self-locking nuts, etc. with new ones.
- Replace inner and outer races of tapered roller bearings and needle bearings as a set.
- Arrange the disassembled parts in accordance with their assembled locations and sequence.
- Do not touch the terminals of electrical components which use microcomputers (such as ECM).  
Static electricity may damage internal electronic components.
- After disconnecting vacuum or air hoses, attach a tag to indicate the proper connection.
- Use only the fluids and lubricants specified in this manual.
- Use approved bonding agent, sealants or their equivalents when required.
- Use hand tools, power tools (disassembly only) and recommended special tools where specified for safe and efficient service repairs.
- When repairing the fuel, oil, water, vacuum or exhaust systems, check all affected lines for leaks.

- Before servicing the vehicle:  
Protect fenders, upholstery and carpeting with appropriate covers.  
Take caution that keys, buckles or buttons do not scratch paint.

# PRECAUTIONS

## **WARNING:**

To prevent ECM from storing the diagnostic trouble codes, do not carelessly disconnect the harness connectors which are related to the engine control system and TCM (transmission control module) system. The connectors should be disconnected only when working according to the WORK FLOW of TROUBLE DIAGNOSES in EC and AT sections.

## **Precautions for NVIS/IVIS (NISSAN/INFINITI VEHICLE IMMOBILIZER SYSTEM - NATS) (If Equipped)**

EAS000V7

NVIS/IVIS (NATS) will immobilize the engine if someone tries to start it without the registered key of NVIS/IVIS (NATS).

Both of the originally supplied ignition key IDs have been NVIS/IVIS (NATS) registered.

The security indicator is located on the instrument panel. The indicator blinks when the immobilizer system is functioning.

Therefore, NVIS/IVIS (NATS) warns outsiders that the vehicle is equipped with the anti-theft system.

- When NVIS/IVIS (NATS) detects trouble, the security indicator lamp lights up while ignition switch is in "ON" position.  
This lighting up indicates that the anti-theft is not functioning, so prompt service is required.
- When servicing NVIS/IVIS (NATS) (trouble diagnoses, system initialization and additional registration of other NVIS/IVIS (NATS) ignition key IDs), CONSULT-II hardware and CONSULT-II NVIS/IVIS (NATS) software is necessary.  
Regarding the procedures of NVIS/IVIS (NATS) initialization and NVIS/IVIS (NATS) ignition key ID registration, refer to CONSULT-II operation manual, NVIS/IVIS (NATS).

**Therefore, CONSULT-II NVIS/IVIS (NATS) software (program card and operation manual) must be kept strictly confidential to maintain the integrity of the anti-theft function.**

- When servicing NVIS/IVIS (NATS) (trouble diagnoses, system initialization and additional registration of other NVIS/IVIS (NATS) ignition key IDs), it may be necessary to re-register original key identification. Therefore, be sure to receive all keys from vehicle owner. A maximum of four or five key IDs can be registered into NVIS/IVIS (NATS).
- When failing to start the engine first time using the key of NVIS/IVIS (NATS), start as follows.
  1. Leave the ignition key in "ON" position for approximately 5 seconds.
  2. Turn ignition key to "OFF" or "LOCK" position and wait approximately 5 seconds.
  3. Repeat step 1 and 2 again.
  4. Restart the engine while keeping the key separate from any others on key-chain.

## **Precautions for Three Way Catalyst**

EAS000V8

If a large amount of unburned fuel flows into the catalyst, the catalyst temperature will be excessively high. To prevent this, follow the instructions.

- Use unleaded gasoline only. Leaded gasoline will seriously damage the three way catalyst.
- When checking for ignition spark or measuring engine compression, make tests quickly and only when necessary.
- Do not run engine when the fuel tank level is low, otherwise the engine may misfire, causing damage to the catalyst.

Do not place the vehicle on flammable material. Keep flammable material off the exhaust pipe and the three way catalyst.

## **Precautions for Fuel (Unleaded Regular Gasoline Recommended)**

EAS000X4

Use unleaded regular gasoline with an octane rating of at least 87 AKI (Anti-Knock Index) number (Research octane number 91).

## **CAUTION:**

**Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst. Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage validity.**

## **Precautions for Fuel (Unleaded Premium Gasoline Recommended)**

EAS000X5

Use unleaded regular gasoline with an octane rating of at least 87 AKI (Anti-Knock Index) number (Research octane number 91).

# PRECAUTIONS

For improved vehicle performance, NISSAN/INFINITI recommend the use of unleaded premium gasoline with an octane rating of at least 91 AKI number (Research octane number 96).

## CAUTION:

**Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst. Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage validity.**

## Precautions for Multiport Fuel Injection System or Engine Control System

EAS000VA

- Before connecting or disconnecting any harness connector for the multiport fuel injection system or ECM:  
Turn ignition switch to "OFF" position.  
Disconnect negative battery terminal.  
Otherwise, there may be damage to ECM.
- Before disconnecting pressurized fuel line from fuel pump to injectors, be sure to release fuel pressure.
- Be careful not to jar components such as ECM and mass air flow sensor.

## Precautions for Hoses

### HOSE REMOVAL AND INSTALLATION

EAS000VB

- To prevent damage to rubber hose, do not pry off rubber hose with tapered tool or screwdriver.

- To reinstall the rubber hose securely, make sure that hose insertion length and orientation is correct. (If tube is equipped with hose stopper, insert rubber hose into tube until it butts up against hose stopper.)

# PRECAUTIONS

## HOSE CLAMPING

- If old rubber hose is re-used, install hose clamp in its original position (at the indentation where the old clamp was). If there is a trace of tube bulging left on the old rubber hose, align rubber hose at that position.
- Discard old clamps; replace with new ones.

- After installing plate clamps, apply force to them in the direction of the arrow, tightening rubber hose equally all around.

## Precautions for Engine Oils

EAS000VC

Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used oil.

If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

## HEALTH PROTECTION PRECAUTIONS

- Avoid prolonged and repeated contact with oils, particularly used engine oils.
- Wear protective clothing, including impervious gloves where practicable.
- Do not put oily rags in pockets.
- Avoid contaminating clothes, particularly underpants, with oil.
- Heavily soiled clothing and oil-impregnated footwear should not be worn. Overalls must be cleaned regularly.
- First aid treatment should be obtained immediately for open cuts and wounds.
- Use barrier creams, applying them before each work period, to help the removal of oil from the skin.
- Wash with soap and water to ensure all oil is removed (skin cleansers and nail brushes will help). Preparations containing lanolin replace the natural skin oils which have been removed.
- Do not use gasoline, kerosene, diesel fuel, gas oil, thinners or solvents for cleaning skin.
- If skin disorders develop, obtain medical advice without delay.
- Where practical, degrease components prior to handling.
- Where there is a risk of eye contact, eye protection should be worn, for example, chemical goggles or face shields; in addition an eye wash facility should be provided.

## ENVIRONMENTAL PROTECTION PRECAUTIONS

Dispose of used oil and used oil filters through authorized waste disposal contractors to licensed waste disposal sites, or to the waste oil reclamation trade. If in doubt, contact the local authority for advice on disposal facilities.

It is illegal to pour used oil on to the ground, down sewers or drains, or into water sources.

The regulations concerning pollution vary between regions.

## Precautions for Air Conditioning

EAS000VD

Use an approved refrigerant recovery unit any time the air conditioning system must be discharged. Refer to ATC/MTC section "HFC-134a (R-134a) Service Procedure", "REFRIGERANT LINES" for specific instructions.

# HOW TO USE THIS MANUAL

## HOW TO USE THIS MANUAL

PFP:00008

### Description

EAS000VE

This volume explains "Removal, Disassembly, Installation, Inspection and Adjustment" and "Trouble Diagnoses".

### Terms

EAS000VF

- The captions **WARNING** and **CAUTION** warn you of steps that must be followed to prevent personal injury and/or damage to some part of the vehicle.  
**WARNING** indicates the possibility of personal injury if instructions are not followed.  
**CAUTION** indicates the possibility of component damage if instructions are not followed.  
**BOLD TYPED STATEMENTS** except **WARNING** and **CAUTION** give you helpful information.  
Standard value: Tolerance at inspection and adjustment.  
Limit value: The maximum or minimum limit value that should not be exceeded at inspection and adjustment.

### Units

EAS000VG

- The **UNITS** given in this manual are primarily expressed as the SI UNIT (International System of Unit), and alternatively expressed in the metric system and in the yard/pound system.  
"Example"

**Outer Socket Lock Nut : 59 - 78 N-m (6.0 - 8.0 kg-m, 43 - 58 ft-lb)**

### Contents

EAS000VH

- **ALPHABETICAL INDEX** is provided at the end of this manual so that you can rapidly find the item and page you are searching for.
- **A QUICK REFERENCE INDEX**, a black tab (e.g. **BR**) is provided on the first page. You can quickly find the first page of each section by matching it to the section's black tab.
- **THE CONTENTS** are listed on the first page of each section.
- **THE TITLE** is indicated on the upper portion of each page and shows the part or system.
- **THE PAGE NUMBER** of each section consists of two or three letters which designate the particular section and a number (e.g. "BR-5").
- **THE SMALL ILLUSTRATIONS** show the important steps such as inspection, use of special tools, knacks of work and hidden or tricky steps which are not shown in the previous large illustrations. Assembly, inspection and adjustment procedures for the complicated units such as the automatic transaxle or transmission, etc. are presented in a step-by-step format where necessary.

### Components

EAS000VI

- **THE LARGE ILLUSTRATIONS** are exploded views (See the following) and contain tightening torques, lubrication points, section number of the **PARTS CATALOG** (e.g. SEC. 440) and other information necessary to perform repairs.

# HOW TO USE THIS MANUAL

The illustrations should be used in reference to service matters only. When ordering parts, refer to the appropriate **PARTS CATALOG**.

## SYMBOLS

SYMBOL	DESCRIPTION
	Tightening torque
	Should be lubricated with grease. Unless otherwise indicated, use recommended multi-purpose grease.
	Should be lubricated with oil.
	Sealing point
	Checking point
	Always replace after every disassembly.
 P	Apply petroleum jelly.
	Apply ATF.
★	Select with proper thickness.
☆	Adjustment is required.

## How to Follow Trouble Diagnoses

### DESCRIPTION

EAS000VJ

### NOTICE:

Trouble diagnoses indicate work procedures required to diagnose problems effectively. Observe the following instructions before diagnosing.

# HOW TO USE THIS MANUAL

1. Before performing trouble diagnoses, read the "Preliminary Check", the "Symptom Chart" or the "Work Flow".
2. After repairs, re-check that the problem has been completely eliminated.
3. Refer to Component Parts and Harness Connector Location for the Systems described in each section for identification/location of components and harness connectors.
4. Refer to the Circuit Diagram for quick pinpoint check.  
If you need to check circuit continuity between harness connectors in more detail, such as when a sub-harness is used, refer to Wiring Diagram in each individual section and Harness Layout in PG section for identification of harness connectors.
5. When checking circuit continuity, ignition switch should be OFF.
6. Before checking voltage at connectors, check battery voltage.
7. After accomplishing the Diagnostic Procedures and Electrical Components Inspection, make sure that all harness connectors are reconnected as they were.

## HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES

1. **Work and diagnostic procedure**  
Start to diagnose a problem using procedures indicated in enclosed test groups.
2. **Questions and required results**  
Questions and required results are indicated in bold type in test group.  
The meaning of are as follows:
  - a. **Battery voltage** → 11 - 14V or approximately 12V
  - b. **Voltage** : Approximately 0V → Less than 1V
3. **Symbol used in illustration**

# HOW TO USE THIS MANUAL

Symbols included in illustrations refer to measurements or procedures. Before diagnosing a problem, familiarize yourself with each symbol. Refer to "Connector Symbols" in GI Section and "KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES" below.

## 4. Action items

Next action for each test group is indicated based on result of each question. Test group number is shown in the left upper portion of each test group.

## HARNESS WIRE COLOR AND CONNECTOR NUMBER INDICATION

There are two types of harness wire color and connector number indication.

### TYPE 1: Harness Wire Color and Connector Number are Shown in Illustration

- Letter designations next to test meter probe indicate harness wire color.
- Connector numbers in a single circle (e.g. M33) indicate harness connectors.
- Connector numbers in a double circle (e.g. F211) indicate component connectors.

# HOW TO USE THIS MANUAL

## TYPE 2: Harness Wire Color and Connector Number are Shown in Text

**Example 1:**

**2 CHECK INTAKE SENSOR CIRCUIT BETWEEN INTAKE SENSOR AND AUTO AMP. (LCU)**

1. Disconnect auto amp. (LCU) harness connector.
2. Check circuit continuity between intake sensor harness connector M59 terminal No. 2 (GW) and auto amp. (LCU) harness connector M56 terminal No. 11 (GW).

OK or NG

**Example 2:**

**POWER SUPPLY AND GROUND CIRCUIT CHECK**

**Power Supply Circuit Check**

—NCEL00-16807  
INDEL00-16807/01

Connector	Terminals (+)	Terminal (Wire color)	(-)	Ignition switch position		
				OFF	ACC	ON
M40		37 (Y)	Ground	Battery voltage	Battery voltage	Battery voltage
M41		1 (Y)	Ground	0V	0V	Battery voltage

If NG, check the following.

- 7.5A fuse (No. 5, located in fuse block (J/B))
- 10A fuse (No. 11, located in fuse block (J/B))
- Harness for open or short between fuse and combination meter

Connector number    Wire color

## How to Read Wiring Diagrams CONNECTOR SYMBOLS

EAS000VK

Most of connector symbols in wiring diagrams are shown from the terminal side.

## HOW TO USE THIS MANUAL

- Connector symbols shown from the terminal side are enclosed by a single line and followed by the direction mark.
- Connector symbols shown from the harness side are enclosed by a double line and followed by the direction mark.
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG section, "Description", "HARNESS CONNECTOR".

- Male and female terminals  
Connector guides for male terminals are shown in black and female terminals in white in wiring diagrams.

# HOW TO USE THIS MANUAL

## Optional Splice

## DESCRIPTION

Number	Item	Description
1	Power condition	<ul style="list-style-type: none"> <li>This shows the condition when the system receives battery positive voltage (can be operated).</li> </ul>
2	Fusible link	<ul style="list-style-type: none"> <li>The double line shows that this is a fusible link.</li> <li>The open circle shows current flow in, and the shaded circle shows current flow out.</li> </ul>
3	Fusible link/fuse location	<ul style="list-style-type: none"> <li>This shows the location of the fusible link or fuse in the fusible link or fuse box. For arrangement, refer to PG section, POWER SUPPLY ROUTING.</li> </ul>
4	Fuse	<ul style="list-style-type: none"> <li>The single line shows that this is a fuse.</li> <li>The open circle shows current flow in, and the shaded circle shows current flow out.</li> </ul>
5	Current rating	<ul style="list-style-type: none"> <li>This shows the current rating of the fusible link or fuse.</li> </ul>
6	Connectors	<ul style="list-style-type: none"> <li>This shows that connector E3 is female and connector M1 is male.</li> <li>The G/R wire is located in the 1A terminal of both connectors.</li> <li>Terminal number with an alphabet (1A, 5B, etc.) indicates that the connector is SMJ connector. Refer to PG section, SMJ (SUPER MULTIPLE JUNCTION).</li> </ul>
7	Optional splice	<ul style="list-style-type: none"> <li>The open circle shows that the splice is optional depending on vehicle application.</li> </ul>
8	Splice	<ul style="list-style-type: none"> <li>The shaded circle shows that the splice is always on the vehicle.</li> </ul>
9	Page crossing	<ul style="list-style-type: none"> <li>This arrow shows that the circuit continues to an adjacent page.</li> <li>The A will match with the A on the preceding or next page.</li> </ul>
10	Common connector	<ul style="list-style-type: none"> <li>The dotted lines between terminals show that these terminals are part of the same connector.</li> </ul>
11	Option abbreviation	<ul style="list-style-type: none"> <li>This shows that the circuit is optional depending on vehicle application.</li> </ul>
12	Relay	<ul style="list-style-type: none"> <li>This shows an internal representation of the relay. For details, refer to PG section, STANDARDIZED RELAY.</li> </ul>
13	Connectors	<ul style="list-style-type: none"> <li>This shows that the connector is connected to the body or a terminal with bolt or nut.</li> </ul>

## HOW TO USE THIS MANUAL

# HOW TO USE THIS MANUAL

## Harness Indication

- Letter designations next to test meter probe indicate harness (connector) wire color.
- Connector numbers in a single circle M33 indicate harness connectors.

## Component Indication

Connector numbers in a double circle F211 indicate component connectors.

## Switch Positions

Switches are shown in wiring diagrams as if the vehicle is in the “normal” condition. A vehicle is in the “normal” condition when:

- ignition switch is “OFF”,
- doors, hood and trunk lid/back door are closed,
- pedals are not depressed, and
- parking brake is released.

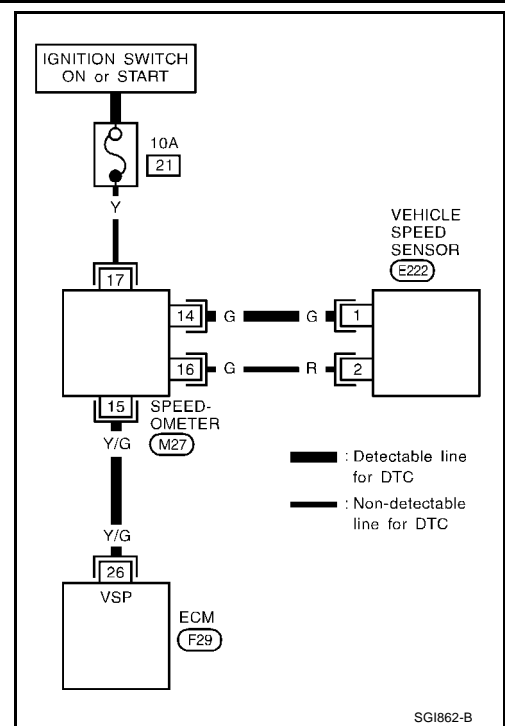

## Detectable Lines and Non-Detectable Lines

In some wiring diagrams, two kinds of lines, representing wires, with different weight are used.

# HOW TO USE THIS MANUAL

- A line with regular weight (wider line) represents a “detectable line for DTC (Diagnostic Trouble Code)”. A “detectable line for DTC” is a circuit in which ECM can detect its malfunctions with the on board diagnostic system.
- A line with less weight (thinner line) represents a “non-detectable line for DTC”. A “non-detectable line for DTC” is a circuit in which ECM cannot detect its malfunctions with the on board diagnostic system.

## Multiple Switch

The continuity of multiple switch is described in two ways as shown below.

- The switch chart is used in schematic diagrams.

# HOW TO USE THIS MANUAL

- The switch diagram is used in wiring diagrams.

## Example

(SWITCH CHART)

WIPER SWITCH

## SERVICE INFORMATION FOR ELECTRICAL INCIDENT

PF0:0000

EAS000VM

### How to Check Terminal Connector and Terminal Pin Kit

Use the connector and terminal pin kits listed below when replacing connectors or terminals. The connector and terminal pin kits contain some of the most commonly used NISSAN/INFINITI connectors and terminals. For detailed connector and terminal pin replacement procedures, refer to the latest NISSAN/INFINITI CONNECTOR AND TERMINAL PIN SERVICE MANUAL.

Tool number (Kent-Moore No.) Tool name	Description
- (J38751-95NI) Connector and terminal pin kit (NISSAN)	<div style="display: flex; justify-content: space-around; margin-top: 10px;"> <span>WAI A0004E</span> <span>WAI A0005E</span> </div>
- (J38751-95INF) Connector and terminal pin kit (INFINITI)	
- (J42992-98KIT) OBD and terminal repair kit	
- (J42992-2000UPD) OBD-II Connector Kit Update	

### HOW TO PROBE CONNECTORS

Connector damage and an intermittent connection can result from improperly probing of the connector during circuit checks.

The probe of a digital multimeter (DMM) may not correctly fit the connector cavity. To correctly probe the connector, follow the procedures below using a "T" pin. For the best contact grasp the "T" pin using an alligator clip.

#### Probing from Harness Side

Standard type (not waterproof type) connector should be probed from harness side with "T" pin.

- If the connector has a rear cover such as a ECM connector, remove the rear cover before probing the terminal.
- Do not probe waterproof connector from harness side. Damage to the seal between wire and connector may result.

#### Probing from Terminal Side

##### FEMALE TERMINAL

- There is a small notch above each female terminal. Probe each terminal with the "T" pin through the notch. Do not insert any object other than the same type male terminal into female terminal.

## SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Some connectors do not have a notch above each terminal. To probe each terminal, remove the connector retainer to make contact space for probing.

### MALE TERMINAL

Carefully probe the contact surface of each terminal using a "T" pin.  
**Do not bend terminal.**

### How to Check Enlarged Contact Spring of Terminal

An enlarged contact spring of a terminal may create intermittent signals in the circuit.

If the intermittent open circuit occurs, follow the procedure below to inspect for open wires and enlarged contact spring of female terminal.

- Assemble a male terminal and approx. 10 cm (3.9 in) of wire.  
**Use a male terminal which matches the female terminal.**
- Disconnect the suspected faulty connector and hold it terminal side up.

- While holding the wire of the male terminal, try to insert the male terminal into the female terminal.  
**Do not force the male terminal into the female terminal with your hands.**

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

4. While moving the connector, check whether the male terminal can be easily inserted or not.

- If the male terminal can be easily inserted into the female terminal, replace the female terminal.

## Waterproof Connector Inspection

If water enters the connector, it can short interior circuits. This may lead to intermittent problems. Check the following items to maintain the original waterproof characteristics.

### RUBBER SEAL INSPECTION

- Most waterproof connectors are provided with a rubber seal between the male and female connectors. If the seal is missing, the waterproof performance may not meet specifications.
- The rubber seal may come off when connectors are disconnected. Whenever connectors are reconnected, make sure the rubber seal is properly installed on either side of male or female connector.

### WIRE SEAL INSPECTION

The wire seal must be installed on the wire insertion area of a waterproof connector. Be sure that the seal is installed properly.

### Terminal Lock Inspection

Check for unlocked terminals by pulling wire at the end of connector. An unlocked terminal may create intermittent signals in the circuit.

EAS000VN

## How to Perform Efficient Diagnosis for an Electrical Incident WORK FLOW

SGI838

STEP	DESCRIPTION								
STEP 1	Get detailed information about the conditions and the environment when the incident occurred. The following are key pieces of information required to make a good analysis: <table border="1"> <tr> <td><b>WHAT</b></td> <td>Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio).</td> </tr> <tr> <td><b>WHEN</b></td> <td>Date, Time of Day, Weather Conditions, Frequency.</td> </tr> <tr> <td><b>WHERE</b></td> <td>Road Conditions, Altitude and Traffic Situation.</td> </tr> <tr> <td><b>HOW</b></td> <td>System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed.</td> </tr> </table>	<b>WHAT</b>	Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio).	<b>WHEN</b>	Date, Time of Day, Weather Conditions, Frequency.	<b>WHERE</b>	Road Conditions, Altitude and Traffic Situation.	<b>HOW</b>	System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed.
<b>WHAT</b>	Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio).								
<b>WHEN</b>	Date, Time of Day, Weather Conditions, Frequency.								
<b>WHERE</b>	Road Conditions, Altitude and Traffic Situation.								
<b>HOW</b>	System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed.								
STEP 2	Operate the system, road test if necessary. Verify the parameter of the incident. If the problem cannot be duplicated, refer to "Incident Simulation Tests".								
STEP 3	Get the proper diagnosis materials together including: <ul style="list-style-type: none"> <li>● Power Supply Routing</li> <li>● System Operation Descriptions</li> <li>● Applicable Service Manual Sections</li> <li>● Check for any Service Bulletins</li> </ul> Identify where to begin diagnosis based upon your knowledge of the system operation and the customer comments.								
STEP 4	Inspect the system for mechanical binding, loose connectors or wiring damage. Determine which circuits and components are involved and diagnose using the Power Supply Routing and Harness Layouts.								
STEP 5	Repair or replace the incident circuit or component.								
STEP 6	Operate the system in all modes. Verify the system works properly under all conditions. Make sure you have not inadvertently created a new incident during your diagnosis or repair steps.								

## INCIDENT SIMULATION TESTS

### Introduction

Sometimes the symptom is not present when the vehicle is brought in for service. If possible, re-create the conditions present at the time of the incident. Doing so may help avoid a No Trouble Found Diagnosis. The following section illustrates ways to simulate the conditions/environment under which the owner experiences an electrical incident.

The section is broken into the six following topics:

- Vehicle vibration
- Heat sensitive

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Freezing
- Water intrusion
- Electrical load
- Cold or hot start up

Get a thorough description of the incident from the customer. It is important for simulating the conditions of the problem.

## Vehicle Vibration

The problem may occur or become worse while driving on a rough road or when engine is vibrating (idle with A/C on). In such a case, you will want to check for a vibration related condition. Refer to the following illustration.

## CONNECTORS & HARNESS

Determine which connectors and wiring harness would affect the electrical system you are inspecting. Gently shake each connector and harness while monitoring the system for the incident you are trying to duplicate. This test may indicate a loose or poor electrical connection.

## HINT

Connectors can be exposed to moisture. It is possible to get a thin film of corrosion on the connector terminals. A visual inspection may not reveal this without disconnecting the connector. If the problem occurs intermittently, perhaps the problem is caused by corrosion. It is a good idea to disconnect, inspect and clean the terminals on related connectors in the system.

## SENSORS & RELAYS

**Gently** apply a slight vibration to sensors and relays in the system you are inspecting. This test may indicate a loose or poorly mounted sensor or relay.

## ENGINE COMPARTMENT

There are several reasons a vehicle or engine vibration could cause an electrical complaint. Some of the things to check for are:

- Connectors not fully seated.
- Wiring harness not long enough and is being stressed due to engine vibrations or rocking.
- Wires laying across brackets or moving components.
- Loose, dirty or corroded ground wires.
- Wires routed too close to hot components.

To inspect components under the hood, start by verifying the integrity of ground connections. (Refer to Ground Inspection described later.) First check that the system is properly grounded. Then check for loose connection by gently shaking the wiring or components as previously explained. Using the wiring diagrams inspect the wiring for continuity.

## BEHIND THE INSTRUMENT PANEL

An improperly routed or improperly clamped harness can become pinched during accessory installation. Vehicle vibration can aggravate a harness which is routed along a bracket or near a screw.

## UNDER SEATING AREAS

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

An unclamped or loose harness can cause wiring to be pinched by seat components (such as slide guides) during vehicle vibration. If the wiring runs under seating areas, inspect wire routing for possible damage or pinching.

## Heat Sensitive

The customer's concern may occur during hot weather or after car has sat for a short time. In such cases you will want to check for a heat sensitive condition.

To determine if an electrical component is heat sensitive, heat the component with a heat gun or equivalent.

**Do not heat components above 60°C (140°F).** If incident occurs while heating the unit, either replace or properly insulate the component.

## Freezing

The customer may indicate the incident goes away after the car warms up (winter time). The cause could be related to water freezing somewhere in the wiring/electrical system.

There are two methods to check for this. The first is to arrange for the owner to leave his car overnight. Make sure it will get cold enough to demonstrate his complaint. Leave the car parked outside overnight. In the morning, do a quick and thorough diagnosis of those electrical components which could be affected.

The second method is to put the suspect component into a freezer long enough for any water to freeze. Reinstall the part into the car and check for the reoccurrence of the incident. If it occurs, repair or replace the component.

## Water Intrusion

The incident may occur only during high humidity or in rainy/snowy weather. In such cases the incident could be caused by water intrusion on an electrical part. This can be simulated by soaking the car or running it through a car wash.

**Do not spray water directly on any electrical components.**

## Electrical Load

The incident may be electrical load sensitive. Perform diagnosis with all accessories (including A/C, rear window defogger, radio, fog lamps) turned on.

## Cold or Hot Start Up

On some occasions an electrical incident may occur only when the car is started cold, or it may occur when the car is restarted hot shortly after being turned off. In these cases you may have to keep the car overnight to make a proper diagnosis.

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

## CIRCUIT INSPECTION

### Introduction

In general, testing electrical circuits is an easy task if it is approached in a logical and organized method. Before beginning it is important to have all available information on the system to be tested. Also, get a thorough understanding of system operation. Then you will be able to use the appropriate equipment and follow the correct test procedure.

You may have to simulate vehicle vibrations while testing electrical components. Gently shake the wiring harness or electrical component to do this.

OPEN	A circuit is open when there is no continuity through a section of the circuit.	
SHORT	There are two types of shorts.	
	● SHORT CIRCUIT	When a circuit contacts another circuit and causes the normal resistance to change.
	● SHORT TO GROUND	When a circuit contacts a ground source and grounds the circuit.

### NOTE:

Refer to "How to Check Terminal" to probe or check terminal.

### Testing for "Opens" in the Circuit

Before you begin to diagnose and test the system, you should rough sketch a schematic of the system. This will help you to logically walk through the diagnosis process. Drawing the sketch will also reinforce your working knowledge of the system.

### CONTINUITY CHECK METHOD

The continuity check is used to find an open in the circuit. The digital multimeter (DMM) set on the resistance function will indicate an open circuit as over limit (no beep tone or no ohms symbol). Make sure to always start with the DMM at the highest resistance level.

To help in understanding the diagnosis of open circuits, please refer to the previous schematic.

- Disconnect the battery negative cable.
- Start at one end of the circuit and work your way to the other end. (At the fuse block in this example)
- Connect one probe of the DMM to the fuse block terminal on the load side.
- Connect the other probe to the fuse block (power) side of SW1. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point A)
- Connect the probes between SW1 and the relay. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point B)
- Connect the probes between the relay and the solenoid. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point C)

Any circuit can be diagnosed using the approach in the previous example.

### VOLTAGE CHECK METHOD

To help in understanding the diagnosis of open circuits please refer to the previous schematic.

In any powered circuit, an open can be found by methodically checking the system for the presence of voltage. This is done by switching the DMM to the voltage function.

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Connect one probe of the DMM to a known good ground.
- Begin probing at one end of the circuit and work your way to the other end.
- With SW1 open, probe at SW1 to check for voltage.  
voltage; open is further down the circuit than SW1.  
no voltage; open is between fuse block and SW1 (point A).
- Close SW1 and probe at relay.  
voltage; open is further down the circuit than the relay.  
no voltage; open is between SW1 and relay (point B).
- Close the relay and probe at the solenoid.  
voltage; open is further down the circuit than the solenoid.  
no voltage; open is between relay and solenoid (point C).

Any powered circuit can be diagnosed using the approach in the previous example.

## Testing for “Shorts” in the Circuit

To simplify the discussion of shorts in the system, please refer to the following schematic.

## RESISTANCE CHECK METHOD

- Disconnect the battery negative cable and remove the blown fuse.
- Disconnect all loads (SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Connect one probe of the DMM to the load side of the fuse terminal. Connect the other probe to a known good ground.
- With SW1 open, check for continuity.  
continuity; short is between fuse terminal and SW1 (point A).  
no continuity; short is further down the circuit than SW1.
- Close SW1 and disconnect the relay. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.  
continuity; short is between SW1 and the relay (point B).  
no continuity; short is further down the circuit than the relay.
- Close SW1 and jump the relay contacts with jumper wire. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.  
continuity; short is between relay and solenoid (point C).  
no continuity; check solenoid, retrace steps.

## VOLTAGE CHECK METHOD

- Remove the blown fuse and disconnect all loads (i.e. SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Turn the ignition key to the ON or START position. Verify battery voltage at the battery + side of the fuse terminal (one lead on the battery + terminal side of the fuse block and one lead on a known good ground).
- With SW1 open and the DMM leads across both fuse terminals, check for voltage.  
voltage; short is between fuse block and SW1 (point A).  
no voltage; short is further down the circuit than SW1.
- With SW1 closed, relay and solenoid disconnected and the DMM leads across both fuse terminals, check for voltage.  
voltage; short is between SW1 and the relay (point B).

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

no voltage; short is further down the circuit than the relay.

- With SW1 closed, relay contacts jumped with fused jumper wire check for voltage.  
voltage; short is down the circuit of the relay or between the relay and the disconnected solenoid (point C).  
no voltage; retrace steps and check power to fuse block.

## Ground Inspection

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.

Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.

When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for “add-on” accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to “Ground Distribution” in PG section.

## Voltage Drop Tests

Voltage drop tests are often used to find components or circuits which have excessive resistance. A voltage drop in a circuit is caused by a resistance when the circuit is in operation.

Check the wire in the illustration. When measuring resistance with DMM, contact by a single strand of wire will give reading of 0 ohms. This would indicate a good circuit. When the circuit operates, this single strand of wire is not able to carry the current. The single strand will have a high resistance to the current. This will be picked up as a slight voltage drop.

Unwanted resistance can be caused by many situations as follows:

- Undersized wiring (single strand example)
- Corrosion on switch contacts
- Loose wire connections or splices.

If repairs are needed always use wire that is of the same or larger gauge.

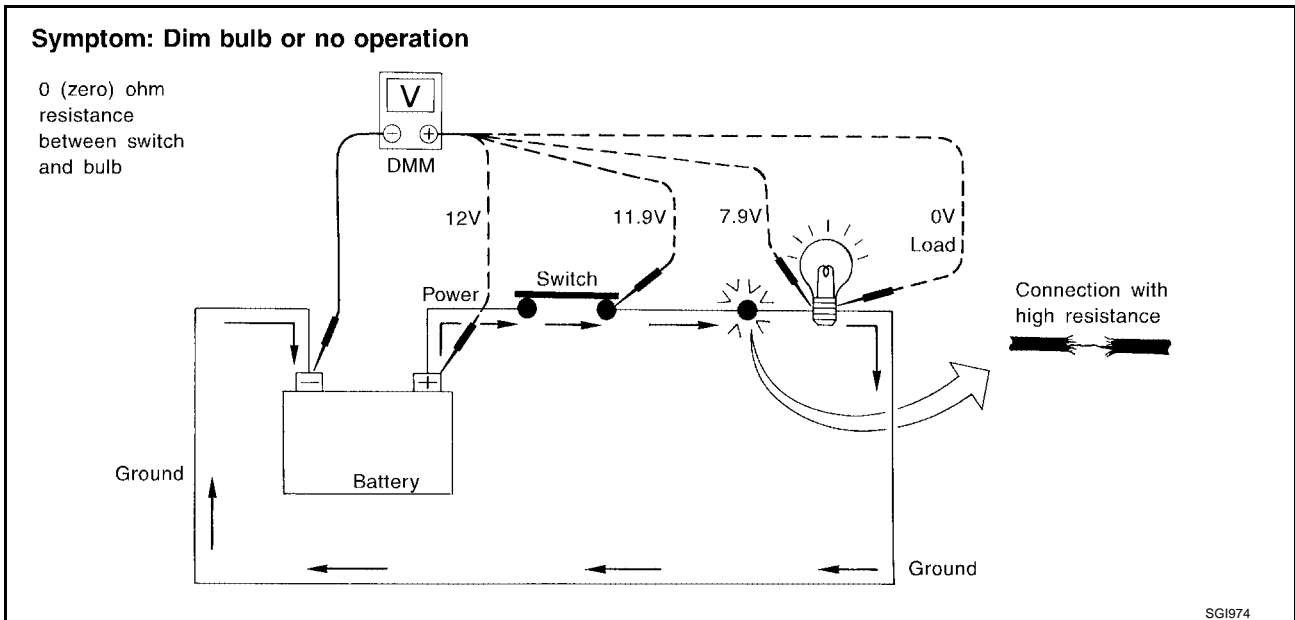

## MEASURING VOLTAGE DROP — ACCUMULATED METHOD

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Connect the DMM across the connector or part of the circuit you want to check. The positive lead of the DMM should be closer to power and the negative lead closer to ground.
- Operate the circuit.
- The DMM will indicate how many volts are being used to “push” current through that part of the circuit.

**Note in the illustration that there is an excessive 4.1 volt drop between the battery and the bulb.**

## MEASURING VOLTAGE DROP — STEP-BY-STEP

The step-by-step method is most useful for isolating excessive drops in low voltage systems (such as those in “Computer Controlled Systems”).

Circuits in the “Computer Controlled System” operate on very low amperage.

The (Computer Controlled) system operations can be adversely affected by any variation in resistance in the system. Such resistance variation may be caused by poor connection, improper installation, improper wire gauge or corrosion.

The step by step voltage drop test can identify a component or wire with too much resistance.

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

## Control Unit Circuit Test

System Description: When the switch is ON, the control unit lights up the lamp.

## INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Switch	Switch ON	Battery voltage	Lower than battery voltage Approx. 8 (Example)
		Switch OFF	Approx. 0	Approx. 0
2	Lamp	Switch ON	Battery voltage	Approx. 0 (Inoperative lamp)
		Switch OFF	Approx. 0	Approx. 0

The voltage value is based on the body ground.

\*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 1 does not detect battery voltage. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not supply power to light up the lamp.

## INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Lamp	Switch ON	Approx. 0	Battery voltage (Inoperative lamp)
		Switch OFF	Battery voltage	Battery voltage
2	Switch	Switch ON	Approx. 0	Higher than 0 Approx. 4 (Example)
		Switch OFF	Approx. 5	Approx. 5

The voltage value is based on the body ground.

\*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 2 does not detect approx. 0V. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not control ground to light up the lamp.

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

EAS000VO

## Control Units and Electrical Parts PRECAUTIONS

- Never reverse polarity of battery terminals.
- Install only parts specified for a vehicle.
- Before replacing the control unit, check the input and output and functions of the component parts.
- Do not apply excessive force when disconnecting a connector.
- If a connector is installed by tightening bolts, loosen bolt mounting it, then take it out by hand.

- Before installing a connector, make sure the terminal is not bent or damaged, and then correctly connect it. When installing a connector by tightening bolts, fix it by tightening the mounting bolt until the painted projection of the connector becomes even with the surface.

- For removal of the lever type connector, pull the lever up to the direction pointed to by the arrow A in the figure, and then remove the connector.

- For installation of the lever type connector, pull down the lever to the direction pointed by the arrow B in the figure, and then push the connector until a clicking noise is heard.

# SERVICE INFORMATION FOR ELECTRICAL INCIDENT

- Do not apply excessive shock to the control unit by dropping or hitting it.
  - Be careful to prevent condensation in the control unit due to rapid temperature changes and do not let water or rain get on it. If water is found in the control unit, dry it fully and then install it in the vehicle.
  - Be careful not to let oil get on the control unit connector.
  - Avoid cleaning the control unit with volatile oil.
  - Do not disassemble the control unit, and do not remove the upper and lower covers.
- 
- When using a DMM, be careful not to let test probes get close to each other to prevent the power transistor in the control unit from damaging battery voltage because of short circuiting.
  - When checking input and output signals of the control unit, use the specified check adapter.

## SMJ INSTALLATION

To install SMJ, tighten bolts until orange "fulltight" mark appears and then retighten to specified torque as required.

**SMJ** :3 - 5 N·m (0.3 - 0.5 kg·m, 26 - 43 in·lb)

### CAUTION:

Do not overtighten bolts, otherwise, they may be damaged.

# CONSULT CHECKING SYSTEM

## CONSULT CHECKING SYSTEM

PFP:00000

### Description

*EAS000VP*

- CONSULT-II is a hand-held type tester. When it is connected with a diagnostic connector equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests.
- Refer to "CONSULT Operator's Manual" for more information.

### Function and System Application

*EAS000VQ*

Diagnostic test mode	Function	ENGINE	A/T	ABS	AIR BAG	SMART ENTRANCE	NVIS (NATS)*
Work support	This mode enables a technician to adjust some devices faster and more accurate by following the indications on CONSULT-II.	x	x	—	—	—	—
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	x	x	x	x	—	x
Trouble diagnostic record	Current self-diagnostic results and all trouble diagnostic records previously stored can be read.	—	—	—	x	—	—
ECU discriminated No.	Classification number of a replacement ECU can be read to prevent an incorrect ECU from being installed.	—	—	—	x	—	—
Data monitor	Input/Output data in the ECU (ECM) can be read.	x	x	x	—	—	—
DTC work support	This mode enables a technician to set operating conditions to confirm self-diagnosis status/results.	—	x	—	—	—	—
Data monitor (Spec.)	The specified values will be displayed when an OK/NG judgement is difficult for the DATA MONITOR items by Bar Chart and Line Graph.	x	—	—	—	—	—
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECU (ECM) and also shifts some parameters in a specified range.	x	—	x	—	—	—
ECU (ECM) part number	ECU (ECM) part number can be read.	x	x	x	—	—	—
Control unit initialization	All registered ignition key IDs in NATS components can be initialized and new IDs can be registered.	—	—	—	—	—	x
Function test	Conducted by CONSULT-II instead of a technician to determine whether each system is "OK" or "NG".	x	—	—	x	—	—
SRT & DTC confirmation	The results of SRT (System Readiness Test) and the self-diagnosis status/results can be confirmed.	x	—	—	—	—	—
REMO CONT ID SET UP	A maximum of four IDs (identifications) can be registered in the memory using the remote controller. These IDs can also be confirmed and erased.	—	—	—	—	x	—

## Nickel Metal Hydride Battery Replacement

EAS000VR

CONSULT-II contains a nickel metal hydride battery. When replacing the battery obey the following:

### WARNING:

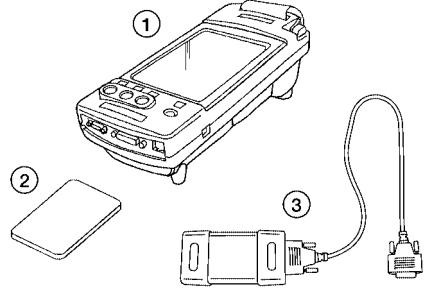

Replace the nickel metal hydride battery with **Genuine CONSULT-II battery only**. Use of another battery may present a risk of fire or explosion. The battery may present a fire or chemical burn hazard if mistreated. Do not recharge, disassemble or dispose of in fire.

Keep the battery out of reach of children and discard used battery conforming to the local regulations.

## Checking Equipment

EAS00159

When ordering the below equipment, contact your NISSAN distributor.

Tool name	Description
<b>NISSAN CONSULT-II (J-44200)</b> 1. CONSULT-II unit (Tester internal soft: Resident version 3.3.0) and accessories 2. Program card AED03C and AEN02C (For NATS) To confirm the best combination of these softwares, refer to CONSULT-II Operation Manual. 3. CONSULT-II coverter	 <p style="text-align: right;">LAlA0038E</p>

### NOTE:

- The CONSULT-II must be used in conjunction with a program card. CONSULT-II does not require loading (Initialization) procedure.
- Be sure the CONSULT-II is turned off before installing or removing a program card.

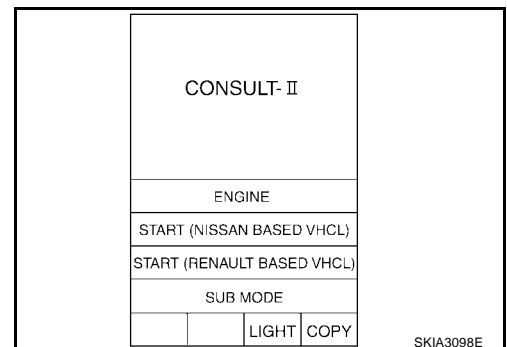

## CONSULT-II Start Procedure

EAS0015A

1. Turn off the ignition switch.
2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

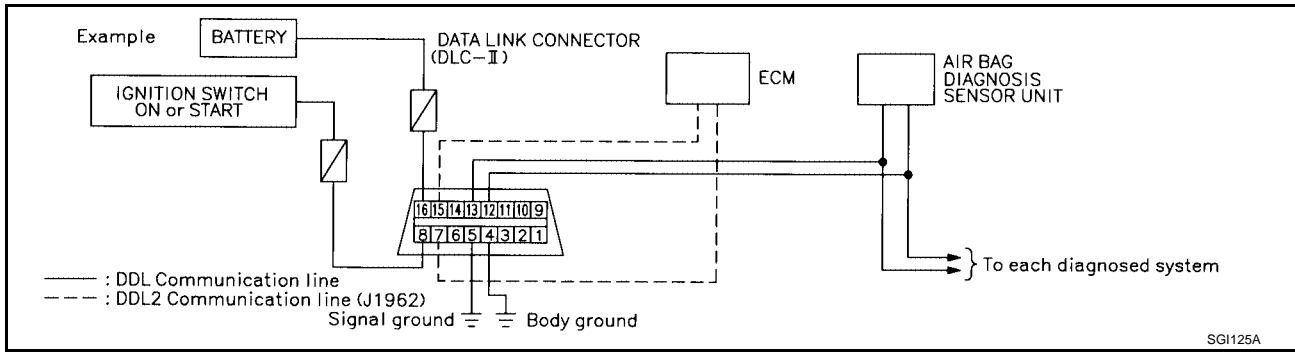

3. Turn on the ignition switch.
4. Touch "START (NISSAN BASED VECL)" or "System Shortcut" (eg: Engine) on the screen.

# CONSULT CHECKING SYSTEM

## CONSULT-II Data Link Connector (DLC) Circuit

EAS000VU

### INSPECTION PROCEDURE

If the CONSULT-II cannot diagnose the system properly, check the following items.

Symptom	Check item
CONSULT-II cannot access any system.	<ul style="list-style-type: none"> <li>● CONSULT-II DLC power supply circuit (Terminal 8) and ground circuit (Terminal 4) (For detailed circuit, refer to "MIL &amp; Data Link Connectors Wiring Diagram" in EC section.)</li> <li>● CONSULT-II DLC cable</li> </ul>
CONSULT-II cannot access individual system. (Other systems can be accessed.)	<ul style="list-style-type: none"> <li>● CONSULT-II program card (Check the appropriate CONSULT-II program card for the system. Refer to "Checking Equipment".)</li> <li>● Power supply and ground circuit for the control unit of the system (For detailed circuit, refer to wiring diagram for each system.)</li> <li>● Open or short circuit between the system and CONSULT-II DLC (For detailed circuit, refer to wiring diagram for each system.)</li> </ul>

#### NOTE:

The DDL1 and DDL2 circuits from DLC pins 12, 13, 14 and 15 may be connected to more than one system. A short in a DDL circuit connected to a control unit in one system may affect CONSULT-II access to other systems.

# LIFTING POINT

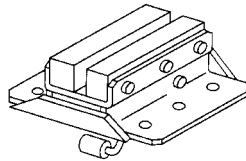

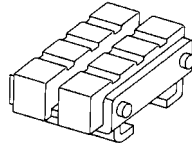

## LIFTING POINT

PF0:0000

### Lifting Points and Tow Truck Towing SPECIAL SERVICE TOOLS

EAS000VV

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore number) Tool name	Description
LM4086-0200 ( — ) Board-on attachment	 <p style="text-align: right;">NT001</p>
LM4519-0000 ( — ) Safety stand attachment	 <p style="text-align: right;">NT002</p>

## GARAGE JACK AND SAFETY STAND

### WARNING:

- Never get under the vehicle while it is supported only by the jack. Always use safety stands when you have to get under the vehicle.
- Place wheel chocks at both front and back of the wheels on the ground.

# LIFTING POINT

## 2-POLE LIFT

### WARNING:

When lifting the vehicle, open the lift arms as wide as possible and ensure that the front and rear of the vehicle are well balanced.

When setting the lift arm, do not allow the arm to contact the brake tubes, brake cable, fuel lines and sill spoiler.

## BOARD-ON LIFT

### CAUTION:

Make sure vehicle is empty when lifting.

- The board-on lift attachment (LM4086-0200) set at front end of vehicle should be set on the front of the sill under the front door opening.
- Position attachments at front and rear ends of board-on lift.

# TOW TRUCK TOWING

## TOW TRUCK TOWING

PFP:00000

### Tow Truck Towing

EAS000VW

GI

#### CAUTION:

- All applicable state or Provincial (in Canada) laws and local laws regarding the towing operation must be obeyed.
- It is necessary to use proper towing equipment to avoid possible damage to the vehicle during towing operation. Towing is in accordance with Towing Procedure Manual at dealer.
- Always attach safety chains before towing.
- When towing, make sure that the transmission, steering system and power train are in good order. If any unit is damaged, dollies must be used.

B

C

D

E

F

G

H

I

J

K

NISSAN recommends that the vehicle be towed with the driving (front) wheels off the ground as illustrated.

#### CAUTION:

- Always release the parking brake when towing the vehicle with the front wheels raised with the rear wheels on the ground.
- When towing manual transaxle models with the front wheels on the ground (if a towing dolly is not used), turn the ignition key to the OFF position, and secure the steering wheel in the straight-ahead position with a rope or similar device. Never place the ignition key in the LOCK position. This will result in damage to the steering lock mechanism. Move the shift lever to the N (Neutral) position.
- Never tow an automatic transaxle model with the rear wheels raised and the front wheels on the ground. This may cause serious and expensive damage to the transaxle. If it is necessary to tow the vehicle with the rear wheels raised, always use towing dollies under the front wheels.
- Never tow an automatic transaxle model from the rear (that is backward) with four wheels on the ground. This may cause serious and expensive damage to the transaxle.

L

M

# TOW TRUCK TOWING

## Vehicle Recovery (Freeing a stuck vehicle)

EAS000VX

- Tow chains or cables must be attached only to the main structural members of the vehicle.
- Pulling devices should be routed so they do not touch any part of the suspension, steering, brake or cooling systems.
- Always pull the cable straight out from the front of the vehicle. Never pull on the vehicle at an angle.
- Pulling devices such as ropes or canvas straps are not recommended for use in vehicle towing or recovery.

# RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS

## RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS

PF0:0000

### Recommended Chemical Products and Sealants

EAS000VZ

Refer to the following chart for help in selecting the appropriate chemical product or sealant.

	Product Description	Purpose	Nissan North America Part No. (USA)	Nissan Canada Part No. (Canada)	Aftermarket Cross-reference Part Nos.
1	Rear View Mirror Adhesive	Used to permanently remount rear view mirrors to windows.	999MP-AM000P	99998-50505	Permatex 81844
2	Anaerobic Liquid Gasket	For metal-to-metal flange sealing. Can fill a 0.38 mm (0.015 inch) gap and provide instant sealing for most powertrain applications.	999MP-AM001P	99998-50503	Permatex 51813 and 51817
3	High Performance Thread Sealant	Provides instant sealing on any threaded straight or parallel threaded fitting. (Thread sealant only, no locking ability.) ● Do not use on plastic.	999MP-AM002P	999MP-AM002P	Permatex 56521
4	Silicone RTV	Gasket Maker	999MP-AM003P (Ultra Grey)	99998-50506 (Ultra Grey)	Permatex Ultra Grey 82194; Three Bond 1207, 1215, 1216, 1217F and 1217G; Nissan RTV Part No. 999MP-A7007
		Gasket Maker for Maxima/Quest 5-speed automatic transmission (RE5F22A)	-	-	Three Bond 1281B or exact equivalent in its quality
5	High Temperature, High Strength Thread Locking Sealant (Red)	Threadlocker	999MP-AM004P	999MP-AM004P	Permatex 27200; Three Bond 1360, 1360N, 1305 N&P, 1307N, 1335, 1335B, 1363B, 1377C, 1386B, D&E and 1388
6	Medium Strength Thread Locking Sealant (Blue)	Threadlocker (service tool removable)	999MP-AM005P	999MP-AM005P	Permatex 24200, 24206, 24240, 24283 and 09178; Three Bond 1322, 1322N, 1324 D&N, 1333D, 1361C, 1364D, 1370C and 1374

# PRECAUTIONS

---

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS0015U

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# WINDSHIELD AND WINDOWS

PF0:72700

EIS0015V

## WINDSHIELD AND WINDOWS

### Removal and Installation REMOVAL

After removing interior moldings and trim to access edge of glass, remove glass using piano wire or power cutting tool and an inflatable pump bag.

#### **WARNING:**

When removing the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

#### **CAUTION:**

- Be careful not to scratch the glass when removing.
- Do not set or stand the glass on its edge. Small chips may develop into cracks.

### INSTALLATION

- Use genuine Nissan Urethane Adhesive Kit or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.
- The molding must be installed securely so that it is in position and leaves no gap.
- Inform the customer that the vehicle should remain stationary until the urethane adhesive has completely cured (preferably 24 hours). Curing time varies with temperature and humidity.

#### **WARNING:**

- Keep heat and open flames away as primers and adhesive are flammable.
- The materials contained in the kit are harmful if swallowed, and may irritate skin and eyes. Avoid contact with the skin and eyes.
- Use in an open, well ventilated location. Avoid breathing the vapors. They can be harmful if inhaled. If affected by vapor inhalation, immediately move to an area with fresh air.
- Driving the vehicle before the urethane adhesive has completely cured may affect the performance of the windshield in case of an accident.

## WINDSHIELD AND WINDOWS

---

### **CAUTION:**

- Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.
- Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.
- Do not leave primers or adhesive cartridge unattended with their caps open or off.
- The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidities. The curing time will increase under higher temperatures and lower humidities.

### Repairing Water Leaks for Windshield

Leaks can be repaired without removing and reinstalling glass.

**If water is leaking between caulking material and body or glass, determine the extent of leakage. This can be determined by applying water while pushing glass outward.**

To stop the leak, apply primer and then sealant to the leak point.

## QUARTER WINDOW

SEC. 820-823-825

 : N·m (kg-m, in-lb)

WBT074

1. Remove the rear door finisher. Refer to [EI-31, "Removal and Installation"](#) .
2. Lower the rear window.
3. Remove two screws securing rear glass, then remove rear glass.
4. Remove two bolts and one top screw securing rear door center sash, then remove rear door center sash.
5. Remove quarter glass and rubber seal.

## POWER WINDOW

### System Description

EIS0015W

Power is supplied at all times:

- from 30A fusible link (letter **d** , located in the fuse and fusible link box)
- to circuit breaker terminal +,
- through circuit breaker terminal -,
- to power window relay terminal 5.

With ignition switch in ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)],
- to power window relay terminal 1.

Ground is supplied:

- to power window relay terminal 2
- through body grounds M28 and M54.

The power window relay is energized and power is supplied:

- through power window relay terminal 3,
- to main power window and door lock/unlock switch terminal 1,
- to front power window switch RH terminal 5,
- to rear power window switch LH and RH terminal 5.

### MANUAL OPERATION

#### Front Door LH

Ground is supplied:

- to main power window and door lock/unlock switch terminal 3,
- through body grounds M28 and M54.

#### WINDOW UP

When the front LH switch in the main power window and door lock/unlock switch is pressed in the up position, power is supplied:

- to front power window motor LH terminal UP,
- through main power window and door lock/unlock switch terminal 9.

Ground is supplied:

- to front power window motor LH terminal DN,
- through main power window and door lock/unlock switch terminal 8.

Then, the motor raises the window until the switch is released, or until the window reaches the end of its travel.

#### WINDOW DOWN

When the LH switch in the main power window and door lock/unlock switch is pressed in the down position, power is supplied:

- to front power window motor LH terminal DN,
- through main power window and door lock/unlock switch terminal 8.

Ground is supplied:

- to front power window motor LH terminal UP,
- through main power window and door lock/unlock switch terminal 9.

Then, the motor lowers the window until the switch is released, or until the window reaches the end of its travel.

#### Front Door RH

Ground is supplied:

- to main power window and door lock/unlock switch terminal 3,
- through body grounds M28 and M54.

#### NOTE:

Numbers in parentheses are terminal numbers, when power window switch is pressed in the UP and DOWN positions respectively.

# POWER WINDOW

---

## MAIN SWITCH OPERATION

Power is supplied:

- through main power window and door lock/unlock switch (5, 6),
- to front power window switch RH (3, 4).

The subsequent operation is the same as the sub-switch operation.

## SUB-SWITCH OPERATION

Power is supplied:

- through front power window switch RH (1, 2),
- to front power window motor RH (UP, DN).

Ground is supplied:

- to front power window motor RH (DN, UP),
- through front power window switch RH (2, 1),
- to front power window switch RH (4, 3),
- through main power window and door lock/unlock switch (6, 5).

Then, the motor raises or lowers the window until the switch is released.

## Rear Door

Rear door windows will raise and lower in the same manner as front door RH window.

## AUTO OPERATION

The power window AUTO feature enables the driver to open the driver's window without holding the window switch in the down or up position.

The AUTO feature only operates on the driver's window.

## POWER WINDOW LOCK

The power window lock is designed to lock operation of all windows except for driver's door window.

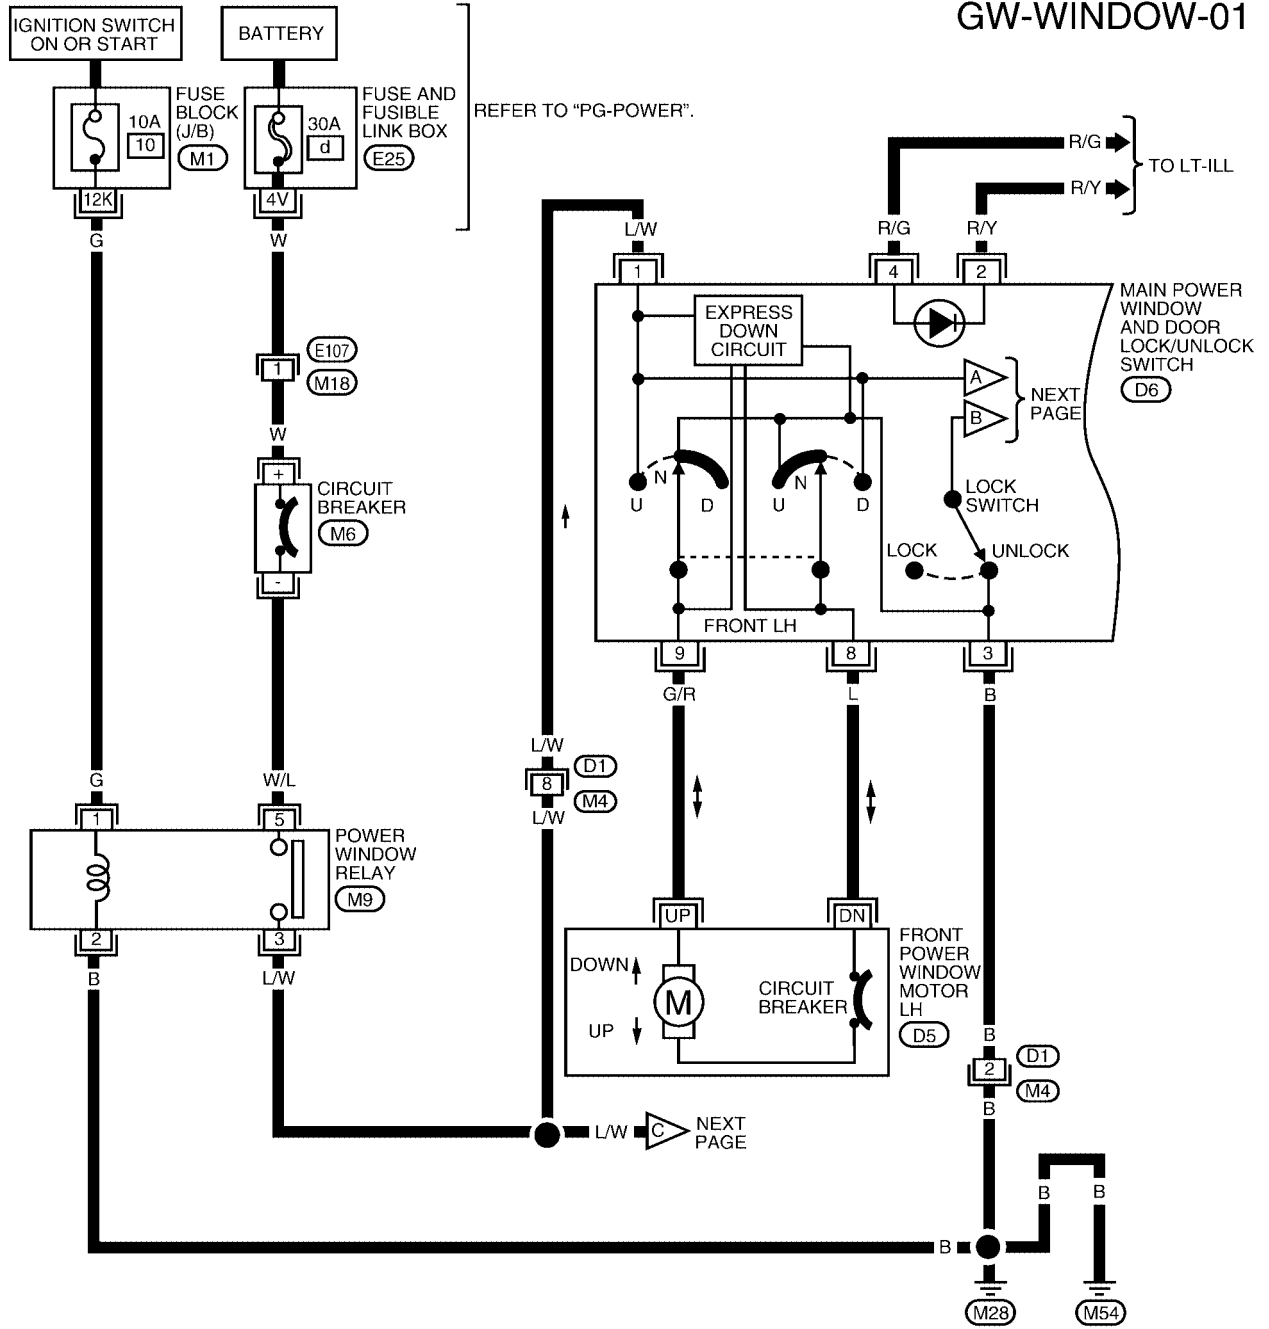

When the lock switch is pressed to lock position, ground of the sub-switches in the main power window and door lock/unlock switch is disconnected. This prevents the power window motors from operating.

## Removal and Installation

### CAUTION:

Be careful not to scratch door mirror body.

1. Remove door finisher. Refer to [EI-31, "Removal and Installation"](#).
2. Remove inner cover from front corner of door.
3. Disconnect door mirror harness connector.
4. Remove three nuts securing door mirror assembly.

### Mirror glass replacement

#### CAUTION:

Do not exceed specified temperature or time limit. Excess heat or duration may cause damage to the mirror housing.

#### • Removal

1. Use a heat lamp (at least 500 watts) to thoroughly warm the frame edge of the door mirror glass to approximately 70°C (159°F) for three minutes.
2. Insert a stiff blade scraper between the mirror glass and the frame. Pry the glass loose.
3. Remove any remaining adhesive (butyl tape) from the mounting surface on the frame.

#### • Installation

1. Install butyl/adhesive tape (2 pieces) on the frame.
2. Warm the mirror glass frame edge thoroughly with a heat lamp.
3. Position mirror glass on frame. Carefully press on the mirror glass to seat it in place.

# REAR WINDOW DEFOGGER

EIS00165

## System Description WITHOUT POWER DOOR LOCKS

The rear window defogger system is controlled by the time control unit. The rear window defogger operates for approximately 15 minutes.

Power is supplied at all times:

- to rear window defogger relay terminal 3
- through 20A fuse [No. 7, located in the fuse block (J/B)],
- to rear window defogger relay terminal 6
- through 20A fuse [No. 4, located in the fuse block (J/B)], and
- to time control unit terminal 7
- through 10A fuse [No. 13, located in the fuse block (J/B)].

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to the rear window defogger relay terminal 1, and
- to time control unit terminal 9.

Ground is supplied to terminal 5 of the rear window defogger switch (built into the air control) through body grounds M28 and M54.

When the rear defogger switch is turned ON, ground is supplied:

- through terminal 3 of the rear window defogger switch
- to time control unit terminal 3.

Terminal 10 of the time control unit then supplies ground to the rear window defogger relay terminal 2.

With power and ground supplied, the rear window defogger relay is energized.

Power is supplied:

- through terminals 5 and 7 of the rear window defogger relay
- to the rear window defogger.

The rear window defogger has an independent ground.

With power and ground supplied, the rear window defogger filaments heat and defog the rear window.

When the system is activated, the rear window defogger indicator illuminates in the rear window defogger switch.

Power is supplied:

- to terminal 4 of the rear window defogger switch
- from terminals 5 and 7 of the rear window defogger relay.

Terminal 5 of the rear window defogger switch is grounded through body grounds M28 and M54.

## WITH POWER DOOR LOCKS

The rear window defogger system is controlled by the smart entrance control unit. The rear window defogger operates for approximately 15 minutes.

Power is supplied at all times:

- to rear window defogger relay terminal 3
- through 20A fuse [No. 7, located in the fuse block (J/B)],
- to rear window defogger relay terminal 6
- through 20A fuse [No. 4, located in the fuse block (J/B)], and
- to smart entrance control unit terminal 10
- through 10A fuse (No. 37, located in the fuse and fusible link box).

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to the rear window defogger relay terminal 1, and
- to smart entrance control unit terminal 33.

Ground is supplied to terminal 5 of the rear window defogger switch (built into the air control) through body grounds M28 and M54.

When the rear defogger switch is turned ON, ground is supplied:

- through terminal 3 of the rear window defogger switch

## REAR WINDOW DEFOGGER

---

- to smart entrance control unit terminal 39.

Terminal 2 of the smart entrance control unit then supplies ground to the rear window defogger relay terminal 2.

With power and ground supplied, the rear window defogger relay is energized.

Power is supplied:

- through terminals 5 and 7 of the rear window defogger relay
- to the rear window defogger.

The rear window defogger has an independent ground.

With power and ground supplied, the rear window defogger filaments heat and defog the rear window.

When the system is activated, the rear window defogger indicator illuminates in the rear window defogger switch.

Power is supplied:

- to terminal 4 of the rear window defogger switch
- from terminals 5 and 7 of the rear window defogger relay.

Terminal 5 of the rear window defogger switch is grounded through body grounds M28 and M54.

EIS00169

## Trouble Diagnoses (Without Power Door Locks) DIAGNOSTIC PROCEDURE

Symptom: Rear Window Defogger Does Not Activate, or Does Not Go Off After Deactivating.

### 1. CHECK REAR WINDOW DEFOGGER OUTPUT SIGNAL

1. Turn ignition switch to ON position.
2. Check voltage between time control unit harness connector M40 terminal 10 (G/R) and ground.

**Voltage (V) Approx.:**

**Rear window defogger  
switch is "OFF" : 12V**

**Rear window defogger  
switch is "ON" : 0V**

OK or NG

- OK >> Check the following.
- Refer to [GW-30, "Filament Check"](#).

NG >> GO TO 2.

### 2. CHECK DEFOGGER RELAY COIL SIDE CIRCUIT

1. Disconnect time control unit harness connector M40.
2. Turn ignition switch to ON position.
3. Check voltage between time control unit harness connector M40 terminal 10 (G/R) and ground.

**Battery voltage should exist.**

OK or NG

OK >> GO TO 3.

- NG >> Check the following.
- 10A fuse [No. 10, located in the fuse block (J/B)]
  - Rear window defogger relay
  - Harness for open or short between 10A fuse [No. 10, located in the fuse block (J/B)] and rear window defogger relay
  - Harness for open or short between rear window defogger relay and time control unit

# REAR WINDOW DEFOGGER

## 3. CHECK REAR WINDOW DEFOGGER SWITCH INPUT SIGNAL

Check continuity between time control unit harness connector M40 terminal 3 (G/B) and ground.

**Continuity:**

**Rear window defogger switch is pushed. Continuity should exist.**

**Rear window defogger switch is released. Continuity should not exist.**

OK or NG

OK >> GO TO 4.

NG >> Check the following.

- Rear window defogger switch  
(Refer to [GW-30, "REAR WINDOW DEFOGGER SWITCH"](#) .)
- Harness for open or short between time control unit and rear window defogger switch
- Rear window defogger switch ground circuit

## 4. CHECK POWER SUPPLY AND IGNITION INPUT SIGNAL

Check voltage between time control unit harness connector M40 terminals 7 (PU), 9 (G) and ground.

Terminals		Ignition switch position		
(+)	(-)	OFF	ACC	ON
7	Ground	Battery voltage	Battery voltage	Battery voltage
9	Ground	0V	0V	Battery voltage

OK or NG

OK >> GO TO 5.

NG >> Check the following.

- 10A fuse [No. 10 or No. 13, located in the fuse block (J/B)]
- Harness for open or short between time control unit and fuse

## 5. CHECK TIME CONTROL UNIT GROUND CIRCUIT

Check continuity between time control unit harness connector M40 terminal 8 and ground.

**Continuity should exist.**

Yes >> Replace time control unit.

No >> Repair harness or connectors.

# REAR WINDOW DEFOGGER

EIS0016A

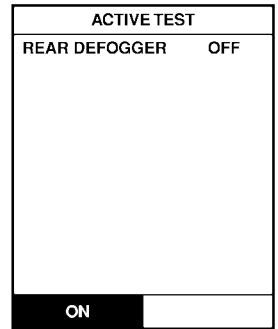

## Trouble Diagnoses (With Power Door Locks) DIAGNOSTIC PROCEDURE

Symptom: Rear Window Defogger Does Not Activate, or Does Not Go Off After Activating.

### 1. CHECK REAR WINDOW DEFOGGER OUTPUT SIGNAL

#### With CONSULT-II

Select "ACTIVE TEST" in "REAR DEFOGGER" with CONSULT-II.

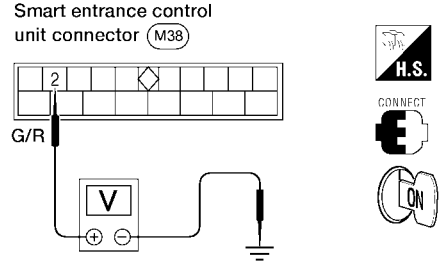

Rear window defogger and rear window defogger switch indicator should operate when the "ON" button on the CONSULT-II screen is touched.

SEL353W

#### Without CONSULT-II

1. Turn ignition switch to ON position.
2. Check voltage between smart entrance control unit harness terminal 2 and ground.

Smart entrance control unit connector (M38)

2

LEL482

#### OK or NG

OK >> Check the following.

- Refer to [GW-30, "REAR WINDOW DEFOGGER RELAY"](#) .
- Rear window defogger circuit
- Refer to [GW-30, "Filament Check"](#) .

NG >> GO TO 2.

# REAR WINDOW DEFOGGER

## 2. CHECK DEFOGGER RELAY COIL SIDE CIRCUIT

1. Disconnect control unit connector.
2. Turn ignition switch to ON position.
3. Check voltage between smart entrance control unit terminal 2 and ground.

### OK or NG

OK >> GO TO 3.

NG >> Check the following.

- 10A fuse [No. 10, located in the fuse block (J/B)]
- Rear window defogger relay
- Harness for open or short between 10A fuse [No. 10, located in the fuse block (J/B)] and rear window defogger relay
- Harness for open or short between rear window defogger relay and smart entrance control unit

# REAR WINDOW DEFOGGER

## 3. CHECK REAR WINDOW DEFOGGER SWITCH INPUT SIGNAL

### With CONSULT-II

Select "REAR DEF SW" in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
REAR DEF SW	ON

When rear window defogger switch is pushed:  
**REAR DEF SW should be ON.**

SEL352W

### Without CONSULT-II

Check continuity between smart entrance control unit terminal 39 and ground.

**H.S.**

DISCONNECT

**OFF**

**Continuity:**  
Rear window defogger switch is pushed.  
**Continuity should exist.**  
Rear window defogger switch is released.  
**Continuity should not exist.**

LEL484

### OK or NG

OK >> GO TO 4.

NG >> Check the following.

- Refer to [GW-30, "REAR WINDOW DEFOGGER SWITCH"](#) .
- Harness for open or short between smart entrance control unit and rear window defogger switch
- Rear window defogger switch ground circuit

## 4. CHECK POWER SUPPLY AND IGNITION INPUT SIGNAL

Check voltage between smart entrance control unit terminals 10 and 33 and ground.

**H.S.**

DISCONNECT

Terminals		Ignition switch position		
(+)	(-)	OFF	ACC	ON
10	Ground	Battery voltage	Battery voltage	Battery voltage
33	Ground	0V	0V	Battery voltage

LEL485

### OK or NG

OK >> GO TO 5.

NG >> Check the following.

- 10A fuse [No. 10 or No. 37, located in the fuse block (J/B)]
- Harness for open or short between smart entrance control unit and fuse

# REAR WINDOW DEFOGGER

## 5. CHECK SMART ENTRANCE CONTROL UNIT GROUND CIRCUIT

Check continuity between smart entrance control unit terminal 16 and ground.

- Yes >> Replace smart entrance control unit.
- No >> Repair harness or connectors.

# REAR WINDOW DEFOGGER

EIS0016B

## Electrical Components Inspection REAR WINDOW DEFOGGER RELAY

Check continuity between terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

SEC202B

## REAR WINDOW DEFOGGER SWITCH

With air control (rear window defogger switch) connector M32 disconnected, check continuity between terminals 3 and 5 when rear window defogger switch is pushed and released.

Terminals		Condition	Continuity
(+)	(-)	Switch pushed	Yes
3	5	Switch released	No

WIIA0105E

## Filament Check

- Attach probe circuit tester (in volt range) to middle portion of each filament.

EIS0016C

SEL263

- When measuring voltage, wrap tin foil around the top of the negative probe. Then press the foil against the wire with your finger.

SEL122R

# REAR WINDOW DEFOGGER

- If a filament is burned out, circuit tester registers 0 or 12 volts.

- To locate burned out point, move probe to left and right along filament. Test needle will swing abruptly when probe passes the point.

## Filament Repair REPAIR EQUIPMENT

- Conductive silver composition (Dupont No. 4817 or equivalent)
- Ruler 30 cm (11.8 in) long
- Drawing pen
- Heat gun
- Alcohol
- Cloth

## REPAIRING PROCEDURE

- Wipe broken heat wire and its surrounding area clean with a cloth dampened in alcohol.

M

## REAR WINDOW DEFOGGER

2. Apply a small amount of conductive silver composition to tip of drawing pen.

### Shake silver composition container before use.

3. Place ruler on glass along broken line. Deposit conductive silver composition on break with drawing pen. Slightly overlap existing heat wire on both sides [preferably 5 mm (0.20 in)] of the break.
4. After repair has been completed, check repaired wire for continuity. This check should be conducted 10 minutes after silver composition is deposited.

### Do not touch repaired area while test is being conducted.

5. Apply a constant stream of hot air directly to the repaired area for approximately 20 minutes with a heat gun. A minimum distance of 3 cm (1.2 in) should be kept between repaired area and hot air outlet. If a heat gun is not available, let the repaired area dry for 24 hours.

# REAR VIEW MIRROR

PFP:96321

EIS0016E

## REAR VIEW MIRROR

### Removal and Installation REMOVAL

Remove rear view mirror by pushing deflect spring with screwdriver as shown in the figure.

### INSTALLATION

1. Install mounting bracket as follows:
  - a. Determine mounting bracket position on windshield by measuring from top of windshield to top of mounting bracket as shown in the figure.
  - b. Mark location on outside of windshield with wax pencil or equivalent.
  - c. Clean attaching point on inside of windshield with an alcohol-saturated paper towel.
  - d. Sand bonding surface of mounting bracket with sandpaper (No. 320 or No. 360).
  - e. Clean bonding surface of mounting bracket with an alcohol-saturated paper towel.
  - f. Apply Genuine Mirror Adhesive or equivalent to bonding surface of mounting bracket. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - g. Install mounting bracket at pre-marked position and press mounting bracket against glass for 30 to 60 seconds.
  - h. After five minutes, wipe off excess adhesive with an alcohol-moistened paper towel.
2. Install rear view mirror.

# PRECAUTIONS

---

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS001E1

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# PREPARATION

## PREPARATION

PFP:00002

### Special Service Tools

EIS00176

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
— (J-39570) Chassis ear	Locating the noise
— (J-43980) NISSAN Squeak and Rattle kit	Repairing the cause of noise

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK AND RATTLE TROUBLE DIAGNOSES

PF0:00003

### Work Flow

EIS00178

### CUSTOMER INTERVIEW

Interview the customer, if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to [IP-8, "Diagnostic Worksheet"](#). This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak — (Like tennis shoes on a clean floor)  
Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak — (Like walking on an old wooden floor)  
Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle — (Like shaking a baby rattle)  
Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock — (Like a knock on a door)  
Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick — (Like a clock second hand)  
Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump — (Heavy, muffled knock noise)  
Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz — (Like a bumblebee)  
Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1. Close a door.
  2. Tap or push/pull around the area where the noise appears to be coming from.
  3. Rev the engine.
  4. Use a floor jack to recreate vehicle "twist".
  5. At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
  6. Raise the vehicle on a hoist and hit a tire with a rubber hammer.
- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
  - If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

## CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.

If a TSB relates to the symptom, follow the procedure to repair the noise.

## LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:
  - Removing the components in the area that you suspect the noise is coming from.  
**Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise.**
  - Tapping or pushing/pulling the component that you suspect is causing the noise.  
**Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.**
  - Feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
  - Placing a piece of paper between components that you suspect are causing the noise.
  - Looking for loose components and contact marks.

Refer to [IP-6, "Generic Squeak and Rattle Troubleshooting"](#).

## REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - Separate components by repositioning or loosening and retightening the component, if possible.
  - Insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A NISSAN Squeak and Rattle Kit (J-43980) is available through your authorized NISSAN Parts Department.

### CAUTION:

**Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information.**

The following materials are contained in the NISSAN Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.

URETHANE PADS [1.5 mm (0.059 in) thick]

Insulates connectors, harness, etc.

76268-9E005: 100 x 135 mm (3.94 x 5.31 in)/76884-71L01: 60 x 85 mm (2.36 x 3.35 in)/76884-71L02: 15 x 25 mm (0.59 x 0.98 in)

INSULATOR (Foam blocks)

Insulates components from contact. Can be used to fill space behind a panel.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

73982-9E000: 45 mm (1.77 in) thick, 50 x 50 mm (1.97 x 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 x 50 mm (1.97 x 1.97 in)

INSULATOR (Light foam block)

80845-71L00: 30 mm (1.18 in) thick, 30 x 50 mm (1.18 x 1.97 in)

FELT CLOTH TAPE

Used to insulate where movement does not occur. Ideal for instrument panel applications.

68370-4B000: 15 x 25 mm (0.59 x 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles.

UHMW (TEFLON) TAPE

Insulates where slight movement is present. Ideal for instrument panel applications.

SILICONE GREASE

Used in place of UHMW tape that will be visible or not fit.

Note: Will only last a few months.

SILICONE SPRAY

Use when grease cannot be applied.

DUCT TAPE

Use to eliminate movement.

## CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

## Generic Squeak and Rattle Troubleshooting

EIS00179

Refer to Table of Contents for specific component removal and installation information.

### INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

#### CAUTION:

**Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.**

### CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and upper/lower cluster lid C
3. Wiring harnesses behind audio and A/C control unit
4. Console lid to console bin.

The instrument panel repair and isolation procedures also apply to the center console.

### DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the NISSAN Squeak and Rattle Kit (J-43980) to repair the noise.

A

## TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.

B

In addition look for:

1. Trunk lid bumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

C

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

D

## SUNROOF/HEADLINER

E

Noises in the sunroof/headliner area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headliner and squeaking

F

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

G

## SEATS

When isolating seat noises it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

H

Cause of seat noise include:

1. Headrest rods and holders
2. A squeak between the seat pad cushion and frame
3. The rear seat back lock and bracket

IP

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

J

## UNDERHOOD

K

Some interior noises may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noises include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

L

M

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## Diagnostic Worksheet

EIS0017A

### SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Nissan Customer:

We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

#### I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)

The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

LIWA0276E

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK & RATTLE DIAGNOSTIC WORKSHEET- page 2

Briefly describe the location where the noise occurs:

---

---

---

### II. WHEN DOES IT OCCUR? (check the boxes that apply)

- |  |   |
|--|---|
| <input type="checkbox"/> anytime                             | <input type="checkbox"/> after sitting out in the sun |
| <input type="checkbox"/> 1 <sup>st</sup> time in the morning | <input type="checkbox"/> when it is raining or wet    |
| <input type="checkbox"/> only when it is cold outside        | <input type="checkbox"/> dry or dusty conditions      |
| <input type="checkbox"/> only when it is hot outside         | <input type="checkbox"/> other: _____                 |

### III. WHEN DRIVING:

- through driveways
- over rough roads
- over speed bumps
- only at about \_\_\_\_ mph
- on acceleration
- coming to a stop
- on turns : left, right or either (circle)
- with passengers or cargo
- other: \_\_\_\_\_
- after driving \_\_\_\_ miles or \_\_\_\_ minutes

### IV. WHAT TYPE OF NOISE?

- squeak (like tennis shoes on a clean floor)
- creak (like walking on an old wooden floor)
- rattle (like shaking a baby rattle)
- knock (like a knock on a door)
- tick (like a clock second hand)
- thump (heavy, muffled knock noise)
- buzz (like a bumble bee)

### Removal and Installation

#### CAUTION:

- Lock the CD changer unit mechanism (models with CD changer). Refer to [AV-10, "LOCKING CD CHANGER UNIT MECHANISM"](#) .
- Disconnect both terminals from battery and wait three minutes.
- Disconnect air bag module connectors in advance.
- Be careful not to scratch pad and other parts.
- Never tamper with or force air bag lid open, as this may adversely affect air bag performance.

## PRECAUTIONS

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS003A9

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precautions For Trouble Diagnosis CAN SYSTEM

EKS003AA

- Do not apply voltage of 7.0V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0V or less.

### Precautions For Harness Repair CAN SYSTEM

EKS003AB

- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in).]

- Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)

## CAN COMMUNICATION

PFP:23710

### System Description

EKS003K5

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### CAN Communication Unit

EKS003K6

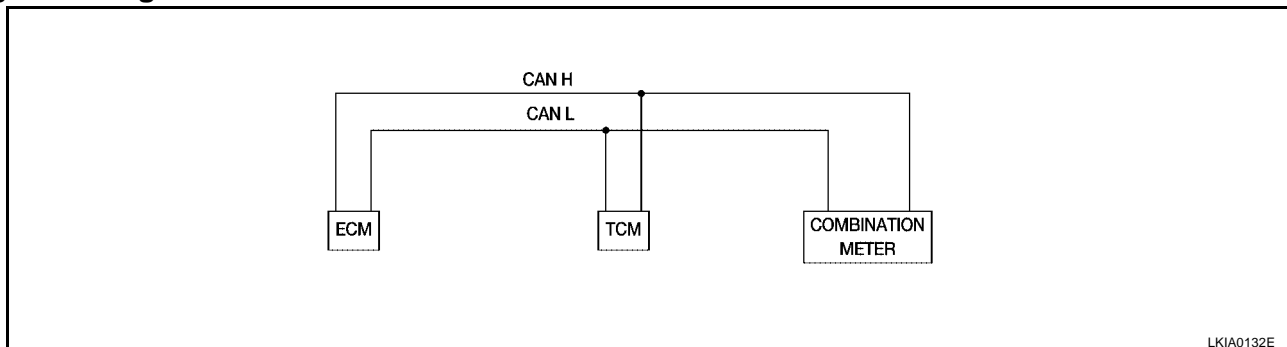

Go to CAN system, when selecting your CAN system type from the following table.

Body type	Sedan

**ECM Circuit Check****1. CHECK CONNECTOR**

1. Turn ignition switch OFF.
2. Check the terminals and connector of ECM for damage, bend and loose connection (control module-side and harness-side).

OK or NG

- OK >> GO TO 2.  
 NG >> Repair terminal or connector.

**2. CHECK HARNESS FOR OPEN CIRCUIT**

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector F59 terminals 94 (L) and 86 (Y).

**94 (L) – 86 (Y) : Approx. 108 – 132Ω**

OK or NG

- OK >> Replace ECM.  
 NG >> Repair harness between ECM and TCM.

**TCM Circuit Check****1. CHECK CONNECTOR**

1. Turn ignition switch OFF.
2. Check the terminals and connector of TCM for damage, bend and loose connection (control module-side and harness-side).

OK or NG

- OK >> GO TO 2.  
 NG >> Repair terminal or connector.

**2. CHECK HARNESS FOR OPEN CIRCUIT**

1. Disconnect TCM connector.
2. Check resistance between TCM harness connector F56 terminals 5 (L) and 6 (Y).

**5 (L) – 6 (Y) : Approx. 54 – 66Ω**

OK or NG

- OK >> Replace TCM.  
 NG >> Repair harness between TCM and ECM.

**Combination Meter Circuit Check****1. CHECK CONNECTOR**

1. Turn ignition switch OFF.
2. Check terminals and connector of combination meter for damage, bend and loose connection (meter-side and harness-side).

OK or NG

- OK >> GO TO 2.  
 NG >> Repair terminal or connector.

**2. CHECK HARNESS FOR OPEN CIRCUIT**

1. Disconnect combination meter connector.
2. Check the following.
  - Without tachometer:  
Resistance between combination meter harness connector M30 terminals 34 (L) and 35 (Y).

**34 (L) – 35 (Y)**  
**(Without tachometer) : Approx. 108 – 132Ω**

- With tachometer:  
Resistance between combination meter harness connector M30 terminals 38 (L) and 39 (Y).

**38 (L) – 39 (Y)**  
**(With tachometer) : Approx. 108 – 132Ω**

OK or NG

- OK >> Replace combination meter.  
 NG >> Repair harness between combination meter and TCM.

**CAN Communication Circuit Check****1. CHECK CONNECTOR**

1. Turn ignition switch OFF.
2. Check following terminals and connector for damage, bend and loose connection (meter-side, control module-side and harness-side).
  - Combination meter
  - TCM
  - ECM
  - Between combination meter and ECM

OK or NG

- OK >> GO TO 2.  
 NG >> Repair terminal or connector.

## 2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector, TCM connector and harness connector F26.
2. Check continuity between ECM harness connector F59 terminals 94 (L) and 86 (Y).

**94 (L) – 86 (Y) : Continuity should not exist.**

OK or NG

- OK >> GO TO 3.  
 NG >> ● Repair harness between ECM and harness connector F26.  
           ● Repair harness between ECM and TCM.

## 3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector F59 terminals 94 (L), 86 (Y) and ground.

**94 (L) – ground : Continuity should not exist.**

**86 (Y) – ground : Continuity should not exist.**

OK or NG

- OK >> GO TO 4.  
 NG >> ● Repair harness between ECM and harness connector F26.  
           ● Repair harness between ECM and TCM.

## 4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect combination meter connector.
2. Check continuity between harness connector M58 terminals 6 (L) and 15 (Y).

**6 (L) – 15 (Y) : Continuity should not exist.**

OK or NG

- OK >> GO TO 5.  
 NG >> Repair harness between harness connector M58 and combination meter.

## 5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between harness connector M58 terminals 6 (L), 15 (Y) and ground.

**6 (L) – ground : Continuity should not exist.**

**15 (Y) – ground : Continuity should not exist.**

OK or NG

- OK >> GO TO 6.  
 NG >> Repair harness between harness connector M58 and combination meter.

**6. ECM/COMBINATION METER INTERNAL CIRCUIT INSPECTION**

Check components inspection. Refer to [LAN-15, "ECM/COMBINATION METER INTERNAL CIRCUIT INSPECTION"](#) .

OK or NG

- OK >> Connect all the connectors and diagnose again. Refer to [LAN-8, "Work Flow"](#) .
- NG >> Replace ECM and/or combination meter.

**Component Inspection**  
**ECM/COMBINATION METER INTERNAL CIRCUIT INSPECTION**

EKS003KF

## CAN Communication Circuit Check

EKS003KQ

### 1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Check following terminals and connector for damage, bend and loose connection (control module-side and harness-side).
  - TCM
  - ECM

OK or NG

OK >> GO TO 2.

NG >> Repair terminal or connector.

## 2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and TCM connector.
2. Check continuity between ECM harness connector F54 terminals 33 (L) and 34 (Y).

**33 (L) – 34 (Y) : Continuity should not exist.**

OK or NG

- OK >> GO TO 3.  
NG >> Repair harness between ECM and TCM.

## 3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector F54 terminals 33 (L), 34 (Y) and ground.

**33 (L) – ground : Continuity should not exist.**

**34 (Y) – ground : Continuity should not exist.**

OK or NG

- OK >> GO TO 4.  
NG >> Repair harness between ECM and TCM.

## 4. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between ECM harness connector F54 terminals 33 (L), 34 (Y) and TCM harness connector F56 terminals 5 (L), 6 (Y).

**33 (L) – 5 (L) : Continuity should exist.**

**34 (Y) – 6 (Y) : Continuity should exist.**

OK or NG

- OK >> GO TO 5.  
NG >> Repair harness.

## 5. ECM/TCM INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to [LAN-29, "ECM/TCM INTERNAL CIRCUIT INSPECTION"](#).

OK or NG

- OK >> Connect all the connectors and diagnose again. Refer to [LAN-25, "Work Flow"](#).  
NG >> Replace ECM and/or TCM.

## Component Inspection

### ECM/TCM INTERNAL CIRCUIT INSPECTION

- Remove ECM and TCM from vehicle.
- Check resistance between ECM terminals 33 and 34.
- Check resistance between TCM terminals 5 and 6.

Unit	Terminal	Resistance value ( $\Omega$ ) (Approx.)
ECM	33 - 34	108 - 136
TCM	5 - 6

# PRECAUTIONS

## PRECAUTIONS

PF0:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS00650

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Wiring Diagrams and Trouble Diagnosis

EKS00385

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

Check for any Service bulletins before servicing the vehicle.

# COMBINATION SWITCH

## Replacement

EKS00387

For removal and installation of spiral cable, refer to [SRS-42, "Removal and Installation"](#).

- Each switch can be replaced without removing switch base.

- To remove switch base, remove switch base attaching screws.

- Before installing the steering wheel, align the steering wheel guide pins with the screws which secure the combination switch as shown in the figure.

# HEADLAMP (FOR USA)

## HEADLAMP (FOR USA)

PF2:26010

### System Description

EKS00388

The headlamps are controlled by the lighting switch which is built into the combination switch. Power is supplied at all times:

- to lighting switch terminal 5
- through 15A fuse (No. 39, located in the fuse and fusible link box), and
- to lighting switch terminal 8
- through 15A fuse (No. 40, located in the fuse and fusible link box).

### LOW BEAM OPERATION

When the lighting switch is turned to headlamp "ON" (2ND) position, "LOW BEAM" (B), power is supplied:

- from lighting switch terminal 10
- to terminal LO of the LH headlamp, and
- from lighting switch terminal 7
- to terminal LO of the RH headlamp.

Ground is supplied:

- to RH and LH headlamp terminal E
- through body grounds E7 and E37.

With power and ground supplied, the headlamps will illuminate.

### HIGH BEAM OPERATION/FLASH-TO-PASS OPERATION

When the lighting switch is turned to headlamp "ON" (2ND) position, "HIGH BEAM" (A) or "FLASH TO PASS" (C) position, power is supplied:

- from lighting switch terminal 9
- to terminal HI of the LH headlamp, and
- from lighting switch terminal 6
- to terminal HI of the RH headlamp, and
- to combination meter terminal 2 (with tachometer), 12 (without tachometer) for the high beam indicator.

Ground is supplied to terminal 3 (with tachometer), 14 (without tachometer) of the combination meter through body grounds M28 and M54.

With power and ground supplied, the high beams and the high beam indicator illuminate.

### VEHICLE SECURITY SYSTEM

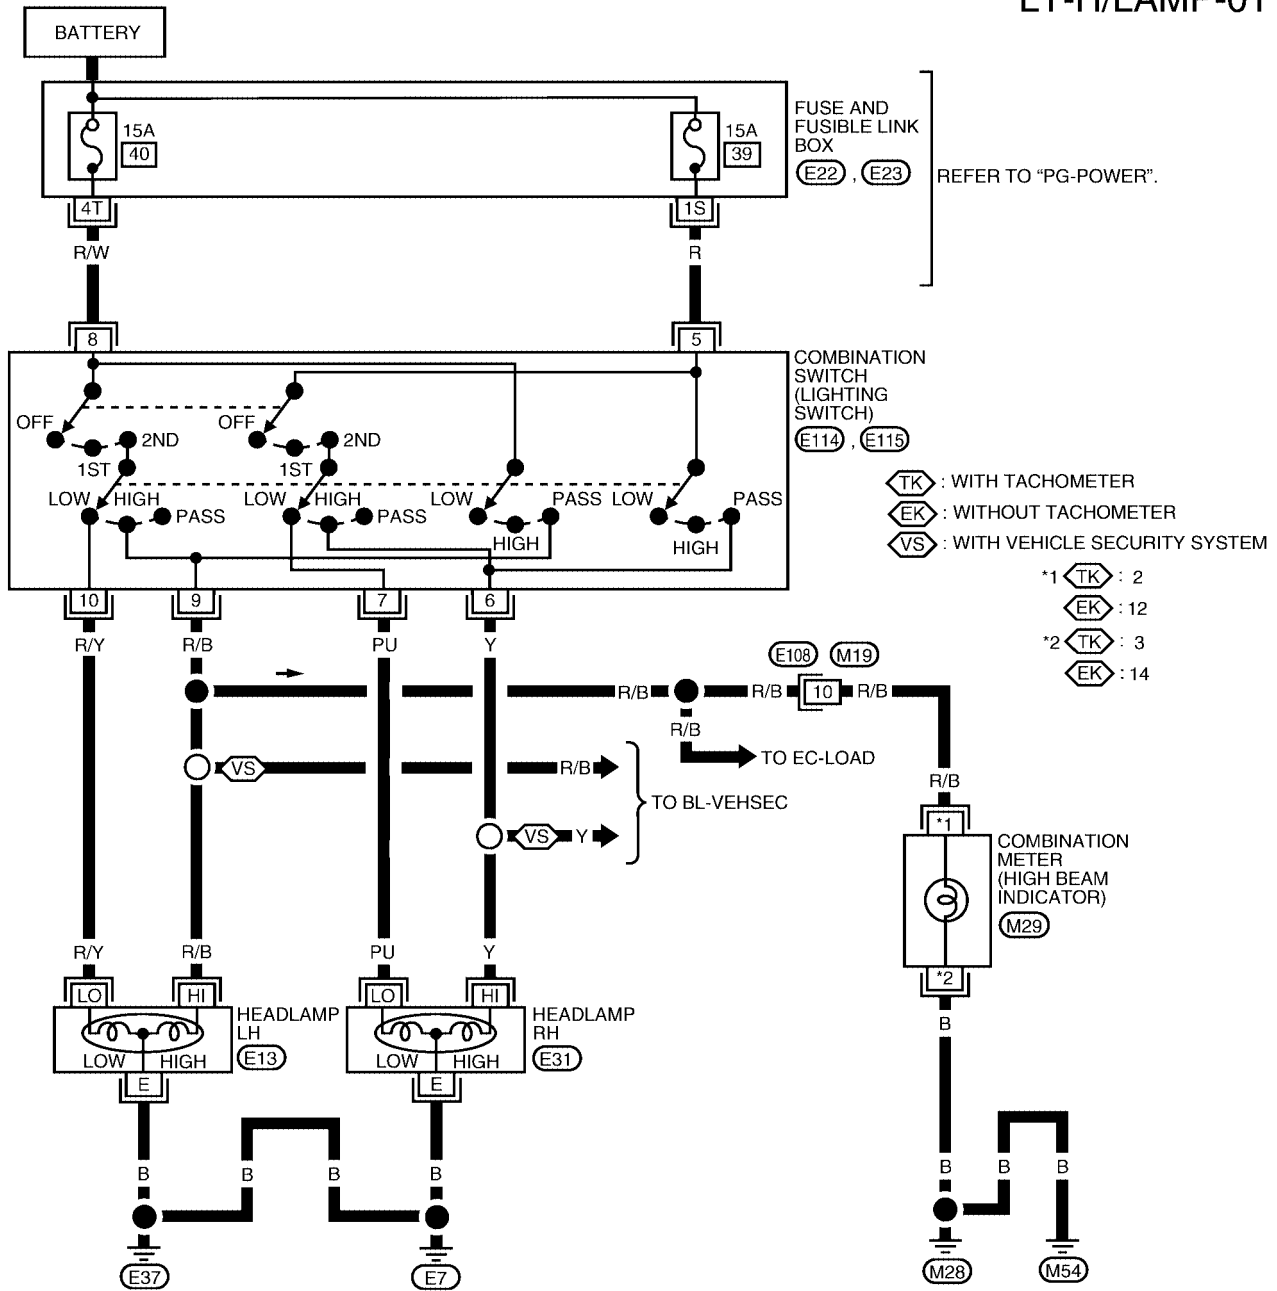

The vehicle security system will flash the high beams if the system is triggered. Refer to [BL-64, "VEHICLE SECURITY \(THEFT WARNING\) SYSTEM"](#).

RH high beam does not operate, but RH low beam operates.	<ol style="list-style-type: none"> <li>1. Bulb</li> <li>2. Open in RH high beam circuit</li> <li>3. Lighting switch</li> </ol>	<ol style="list-style-type: none"> <li>1. Check bulb.</li> <li>2. Check Y wire between lighting switch and RH headlamp for an open circuit.</li> <li>3. Check lighting switch.</li> </ol>
RH low beam does not operate, but RH high beam operates.	<ol style="list-style-type: none"> <li>1. Bulb</li> <li>2. Open in RH low beam circuit</li> <li>3. Lighting switch</li> </ol>	<ol style="list-style-type: none"> <li>1. Check bulb.</li> <li>2. Check PU wire between lighting switch and RH headlamp for an open circuit.</li> <li>3. Check lighting switch.</li> </ol>
High beam indicator does not work.	<ol style="list-style-type: none"> <li>1. Bulb</li> <li>2. Grounds M28 and M54</li> <li>3. Open in high beam circuit</li> </ol>	<ol style="list-style-type: none"> <li>1. Check bulb in combination meter.</li> <li>2. Check grounds M28 and M54.</li> <li>3. Check R/B wire between lighting switch and combination meter for an open circuit.</li> </ol>

## Bulb Replacement

EKS006AP

The headlamp is a semi-sealed beam type which uses a replaceable halogen bulb. The bulb can be replaced from the engine compartment side without removing the headlamp body.

- **Grasp only the plastic base when handling the bulb. Never touch the glass envelope.**

1. Disconnect the battery cable.
2. Disconnect the harness connector from the back side of the headlamp bulb.
3. Turn the bulb retaining ring counterclockwise and remove.
4. Remove the bulb by pulling it straight out of the headlamp assembly. Do not shake the bulb when removing it.
5. Install in the reverse order of removal.

WEL188

### CAUTION:

**Do not leave headlamp reflector without bulb for a long period of time. Dust, moisture, smoke, etc. entering headlamp body may affect the performance of the headlamp. Remove headlamp bulb from the headlamp reflector just before a replacement bulb is installed.**

# HEADLAMP (FOR USA)

EKS006AQ

## Aiming Adjustment

For details, refer to the regulations in your own country.

### NOTE:

By regulation, no means for horizontal adjustment is provided from the factory on a finished vehicle. Horizontal aim will only be serviced in the case of headlamp replacement. After initial aim is set on the replacement headlamp, access to the horizontal adjusting screw must be prevented by installation of the headlamp aim locking cap that is provided with the replacement headlamp assembly.

Before performing aiming adjustment, check the following.

1. Inflate all tires to correct pressures.
2. Place vehicle on flat surface.
3. See that the vehicle is unloaded (except for full levels of coolant, engine oil and fuel, and spare tire, jack, and tools). Have the driver or equivalent weight placed in the driver's seat.

### LOW BEAM

1. Turn headlamp low beam on.
2. Use adjusting screw to perform aiming adjustment.

### CAUTION:

Do not tighten adjusting screw beyond a torque of 1.67 N-m (17 kg-cm, 14.8 in-lb) or damage may occur.

If the vehicle front body has been repaired and/or the headlamp assembly has been replaced, check aiming. Use the aiming chart shown in the figure.

- **Basic illuminating area for adjustment should be within the range shown on the aiming chart. Adjust headlamps accordingly.**

## HEADLAMP (FOR CANADA) — DAYTIME LIGHT SYSTEM —

PF2:26010

### Component Parts and Harness Connector Location

EKS0038D

### System Description

EKS0038E

The headlamp system for Canada vehicles contains a daytime light control unit. This unit activates the high beam headlamps at approximately half illumination whenever the engine is running. If the parking brake is applied before the engine is started, daytime lights will not be illuminated. The daytime lights will illuminate once the parking brake is released. Thereafter, the daytime lights will continue to operate when the parking brake is applied. If the daytime light control unit receives a ground signal from the generator, the daytime lights will not be illuminated. The daytime lights will illuminate once a battery positive voltage signal is sent to the daytime light control unit from the generator.

Power is supplied at all times:

- through 15A fuse (No. 39, located in the fuse and fusible link box)
- to daytime light control unit terminal 2 and
- to lighting switch terminal 5.

Power is also supplied at all times:

- through 15A fuse (No. 40, located in the fuse and fusible link box)
- to daytime light control unit terminal 3 and
- to lighting switch terminal 8.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse (No. 10, located in the fuse block [J/B])
- to daytime light control unit terminal 12.

With the ignition switch in the START position, power is supplied:

- through 10A fuse (No. 21, located in the fuse block [J/B])
- to daytime light control unit terminal 1.

Ground is supplied to daytime light control unit terminal 9 through body grounds E7 and E37.

### HEADLAMP OPERATION

#### Low Beam Operation

When the lighting switch is turned to headlamp "ON" (2ND) position, "LOW BEAM" (B) position, power is supplied:

- from lighting switch terminal 7
- to RH headlamp terminal LO.

Ground is supplied:

- to RH headlamp terminal E
- through body grounds E7 and E37.

Also, when the lighting switch is moved to headlamp "ON" (2ND) position, "LOW BEAM" (B) position, power is supplied:

- from lighting switch terminal 10
- to LH headlamp terminal LO.

Ground is supplied:

- to LH headlamp terminal E

## HEADLAMP (FOR CANADA) — DAYTIME LIGHT SYSTEM —

- from daytime light control unit terminal 7
- through daytime light control unit terminal 9
- through body grounds E7 and E37.

With power and ground supplied, the low beam headlamps illuminate.

### High Beam Operation/Flash-to-pass Operation

When the lighting switch is moved to headlamp “ON” (2ND) position, “HIGH BEAM” (A) or “FLASH TO PASS” (C) position, power is supplied:

- from lighting switch terminal 6
- to RH headlamp terminal HI, and
- from lighting switch terminal 9
- to daytime light control unit terminal 5, and
- to combination meter terminal 2 (with tachometer), 12 (without tachometer) for the high beam indicator
- through daytime light control unit terminal 6
- to LH headlamp terminal HI.

Ground is supplied in the same manner as low beam operation.

Ground is supplied to terminal 3 (with tachometer), 14 (without tachometer) of the combination meter through body grounds M28 and M54.

With power and ground supplied, the high beam headlamps and high beam indicator illuminate.

### DAYTIME LIGHT OPERATION

With the engine running and the lighting switch in the “OFF” or parking lamp (1ST) position and parking brake released, power is supplied:

- to daytime light control unit terminal 3
- through daytime light control unit terminal 6
- to LH headlamp terminal HI
- through LH headlamp terminal E
- to daytime light control unit terminal 7
- through daytime light control unit terminal 8
- to RH headlamp terminal HI.

Ground is supplied:

- to RH headlamp terminal E
- through body grounds E7 and E37.

Because the high beam headlamps are wired in series during daytime light operation, they operate at half illumination.

	Low beam	X	X	X	X	X	X	X	O	X	X	X	X	X	X	X	X	O	X
Front parking and tail lamp		X	X	X	O	O	O	O	O	O	X	X	X	O	O	O	O	O	O
License and instrument illumination lamp		X	X	X	O	O	O	O	O	O	X	X	X	O	O	O	O	O	O

- A: "HIGH BEAM" position
- B: "LOW BEAM" position
- C: "FLASH TO PASS" position
- O : Lamp ON
- X : Lamp OFF
- : Lamp on at half brightness
- \*: When starting the engine with the parking brake released, the daytime light will come ON.  
When starting the engine with the parking brake applied, the daytime light will not come ON. Once the parking brake is released, the daytime light will come ON. Thereafter, the daytime light will continue to operate when the parking brake is applied. If the daytime light control unit receives a ground signal from the generator, the daytime light will not come ON. The daytime light will come ON when battery voltage is sent to the daytime light control unit from the generator (engine is running).

### VEHICLE SECURITY SYSTEM

The vehicle security system will flash the high beams if the system is triggered. Refer to [BL-64, "VEHICLE SECURITY \(THEFT WARNING\) SYSTEM"](#).

# FRONT FOG LAMP

---

## FRONT FOG LAMP

PF2:26150

### System Description

EKS006AJ

Power is supplied at all times to front fog lamp relay terminal 5 through:

- 15A fuse (No. 43, located in the fuse and fusible link box.)

With the lighting switch in headlamp "ON" (2ND) position, "LOW BEAM" (B) position, power is supplied:

- through 15A fuse (No. 39, located in the fuse and fusible link box)
- to lighting switch terminal 5
- through terminal 7 of the lighting switch
- to front fog lamp relay terminal 1.

### FOG LAMP OPERATION

The front fog lamp switch is built into the combination switch. The lighting switch must be in headlamp "ON" (2ND) position and "LOW BEAM" (B) position for fog lamp operation.

With the front fog lamp switch in the ON position ground is supplied:

- to front fog lamp relay terminal 2
- through the front fog lamp switch
- to body grounds E7 and E37.

The front fog lamp relay is energized and power is supplied:

- from front fog lamp relay terminal 3
- to terminal + of each front fog lamp.

Ground is supplied to terminal - of each front fog lamp through body grounds E7 and E37.

With power and ground supplied, the front fog lamps illuminate.

## Aiming Adjustment

Before performing aiming adjustment, make sure of the following.

1. Inflate all tires to correct pressure.
2. Place vehicle on level ground.
3. See that vehicle is unloaded (except for full levels of coolant, engine oil and fuel, and spare tire, jack, and tools). Have the driver or equivalent weight placed in driver's seat.

Adjust aiming in the vertical direction by turning the adjusting screw.

1. Set the distance between the screen and the center of the fog lamp lens as shown.

2. Turn front fog lamps ON.
3. Adjust front fog lamps so that the top edge of the high intensity zone is 100 mm (3.94 in) below the height of the fog lamp centers as shown.
  - When performing adjustment, if necessary, cover the headlamps and opposite fog lamp.

# TURN SIGNAL AND HAZARD WARNING LAMPS

## TURN SIGNAL AND HAZARD WARNING LAMPS

PF2:26120

### System Description

EKS0038Q

### TURN SIGNAL OPERATION

With the hazard switch in the OFF position and the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 26, located in the fuse block (J/B)]
- to hazard switch terminal 2
- through terminal 1 of the hazard switch
- to combination flasher unit terminal B
- through terminal L of the combination flasher unit
- to turn signal switch terminal 1.

Ground is supplied to combination flasher unit terminal E through body grounds M28 and M54.

### LH Turn

When the turn signal switch is moved to the LH position, power is supplied from turn signal switch terminal 3 to:

- front combination lamp LH terminal 3
- combination meter terminal 35 (with tachometer) or 40 (without tachometer)
- rear combination lamp LH terminal 2.

Ground is supplied to the front combination lamp LH terminal 1 through body grounds E7 and E37.

Ground is supplied to the rear combination lamp LH terminal 4 through body grounds B13 and B19.

Ground is supplied to combination meter terminal 12 (with tachometer) or 39 (without tachometer) through body grounds M28 and M54.

With power and ground supplied, the combination flasher unit controls the flashing of the LH turn signal lamps.

### RH Turn

When the turn signal switch is moved to the RH position, power is supplied from turn signal switch terminal 2 to:

- front combination lamp RH terminal 3
- combination meter terminal 4 (with tachometer) or 41 (without tachometer)
- rear combination lamp RH terminal 2.

Ground is supplied to the front combination lamp RH terminal 1 through body grounds E7 and E37.

Ground is supplied to the rear combination lamp RH terminal 4 through body grounds B13 and B19.

Ground is supplied to combination meter terminal 12 (with tachometer) or 39 (without tachometer) through body grounds M28 and M54.

With power and ground supplied, the combination flasher unit controls the flashing of the RH turn signal lamps.

### HAZARD LAMP OPERATION

Power is supplied at all times to hazard switch terminal 3 through:

- 15A fuse [No. 5, located in the fuse block (J/B)].

With the hazard switch in the ON position, power is supplied:

- through terminal 1 of the hazard switch
- to combination flasher unit terminal B
- through terminal L of the combination flasher unit
- to hazard switch terminal 4.

Ground is supplied to combination flasher unit terminal E through body grounds M28 and M54.

Power is supplied through terminal 5 of the hazard switch to:

- front combination lamp LH terminal 3
- combination meter terminal 35 (with tachometer) or 40 (without tachometer)
- rear combination lamp LH terminal 2.

Power is supplied through terminal 6 of the hazard switch to:

- front combination lamp RH terminal 3

## TURN SIGNAL AND HAZARD WARNING LAMPS

---

- combination meter terminal 4 (with tachometer) or 41 (without tachometer)
- rear combination lamp RH terminal 2.

Ground is supplied to terminal 1 of each front combination lamp through body grounds E7 and E37.

Ground is supplied to terminal 4 of each rear combination lamp through body grounds B13 and B19.

Ground is supplied to combination meter terminal 12 (with tachometer) or 39 (without tachometer) through body grounds M28 and M54.

With power and ground supplied, the combination flasher unit controls the flashing of the hazard warning lamps.

### REMOTE KEYLESS ENTRY SYSTEM OPERATION

Power is supplied at all times:

- through 15A fuse [No. 5, located in the fuse block (J/B)]
- to remote keyless entry relay terminals 1, 6 and 3.

Ground is supplied to remote keyless entry relay terminal 2, when the remote keyless entry system is triggered through the smart entrance control unit.

Refer to [BL-34, "REMOTE KEYLESS ENTRY SYSTEM"](#).

The remote keyless entry relay is energized.

Power is supplied through terminal 5 of the remote keyless entry relay:

- to front combination lamp LH terminal 3
- to combination meter terminal 35 (with tachometer) or 40 (without tachometer)
- to rear combination lamp LH terminal 2.

Power is supplied through terminal 7 of the remote keyless entry relay:

- to front combination lamp RH terminal 3
- to combination meter terminal 4 (with tachometer) or 41 (without tachometer)
- to rear combination lamp RH terminal 2.

Ground is supplied to terminal 1 of each front combination lamp through body grounds E7 and E37.

Ground is supplied to terminal 4 of each rear combination lamp through body grounds B13 and B19.

Ground is supplied to combination meter terminal 12 (with tachometer) or 39 (without tachometer) through body grounds M28 and M54.

With power and ground supplied, the smart entrance control unit controls the flashing of the hazard warning lamps.

## Electrical Components Inspection COMBINATION FLASHER UNIT CHECK

EKS0038T

- Before checking, ensure that bulbs meet specifications.
- Connect a battery and test lamp to the combination flasher unit, as shown. Combination flasher unit is properly functioning if it blinks when power is supplied to the circuit.

# ILLUMINATION

## ILLUMINATION

PF2:27545

### System Description

EKS0038U

Power is supplied at all times:

- through 10A fuse (No. 38, located in the fuse and fusible link box)
- to lighting switch terminal 11.

The lighting switch must be in parking lamp (1ST) or headlamp "ON" (2ND) position for illumination. The illumination control switch controls the amount of current to the illumination system. As the amount of current increases, the illumination becomes brighter.

The following chart shows the power and ground connector terminals for the components included in the illumination system.

Component	Connector No.	Power terminal	Ground terminal
Illumination control switch	M22	1	3
Combination meter	M29 or M30	16 or 33	17 or 32
Hazard switch	M43	7	8
Air control	M32	2	6
A/T device indicator*	M44	3	4
Main power window and door lock/unlock switch*	D6	4	2
Audio unit	M45	8	7
CD changer*	M47, M48	23	25

\* If equipped.

The ground for all of the components is controlled through terminals 2 and 3 of the illumination control switch to body grounds M28 and M54.

# INTERIOR, MAP, VANITY AND TRUNK ROOM LAMPS

## INTERIOR, MAP, VANITY AND TRUNK ROOM LAMPS

PF2:26410

### System Description WITHOUT POWER DOOR LOCKS

EKS0038W

#### Power Supply and Ground

Power is supplied at all times:

- through 10A fuse [No. 13, located in the fuse block (J/B)]
- to interior lamp terminal +.

#### Switch Operation

When interior lamp switch is in the DOOR position and any door is opened, ground is supplied to interior lamp through the door switches.

When interior lamp switch is in the ON position, ground is supplied:

- through case ground of interior lamp
- to interior lamp.

#### WITH POWER DOOR LOCKS

#### Power Supply and Ground

Power is supplied at all times:

- through 10A fuse (No. 37, located in the fuse and fusible link box)
- to smart entrance control unit terminal 10.

Power is supplied at all times:

- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to key switch terminal 2 and
- through 10A fuse [No. 13, located in the fuse block (J/B)]
- to trunk room lamp terminal 1.

When the key is removed from ignition key cylinder, power is interrupted:

- through key switch terminal 1
- to smart entrance control unit terminal 32.

With the ignition key switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to smart entrance control unit terminal 33.

Ground is supplied:

- to smart entrance control unit terminal 16
- through body grounds M28 and M54.

#### Switch Operation

When map lamp (LH and/or RH) is ON, ground is supplied:

- through body grounds M28 and M54
- to map lamp terminal –.

Power is supplied:

- to map lamp terminal +
- from smart entrance control unit terminal 17.

When vanity lamp (LH and/or RH) is ON, ground is supplied:

- through body grounds M28 and M54
- to vanity lamps (LH and RH) terminal 2.

Power is supplied:

- to vanity lamps (LH and RH) terminal 1
- from smart entrance control unit terminal 17.

When trunk room lamp switch is ON (trunk lid is opened), ground is supplied:

- through body grounds B13 and B19
- to trunk room lamp switch terminal –

## INTERIOR, MAP, VANITY AND TRUNK ROOM LAMPS

---

- from trunk room lamp switch terminal +
- to trunk room lamp terminal 2

With power and ground supplied, interior lamps turn ON.

### **Battery Saver**

The lamps turn off automatically when interior lamp, map lamp and/or vanity lamps are illuminated with the ignition key in OFF position, if the lamp remains lit by the door switch open signal or if the lamp switch is in ON position for approximately 10 minutes.

After lamps turn OFF by the battery saver system, the lamps illuminate again when:

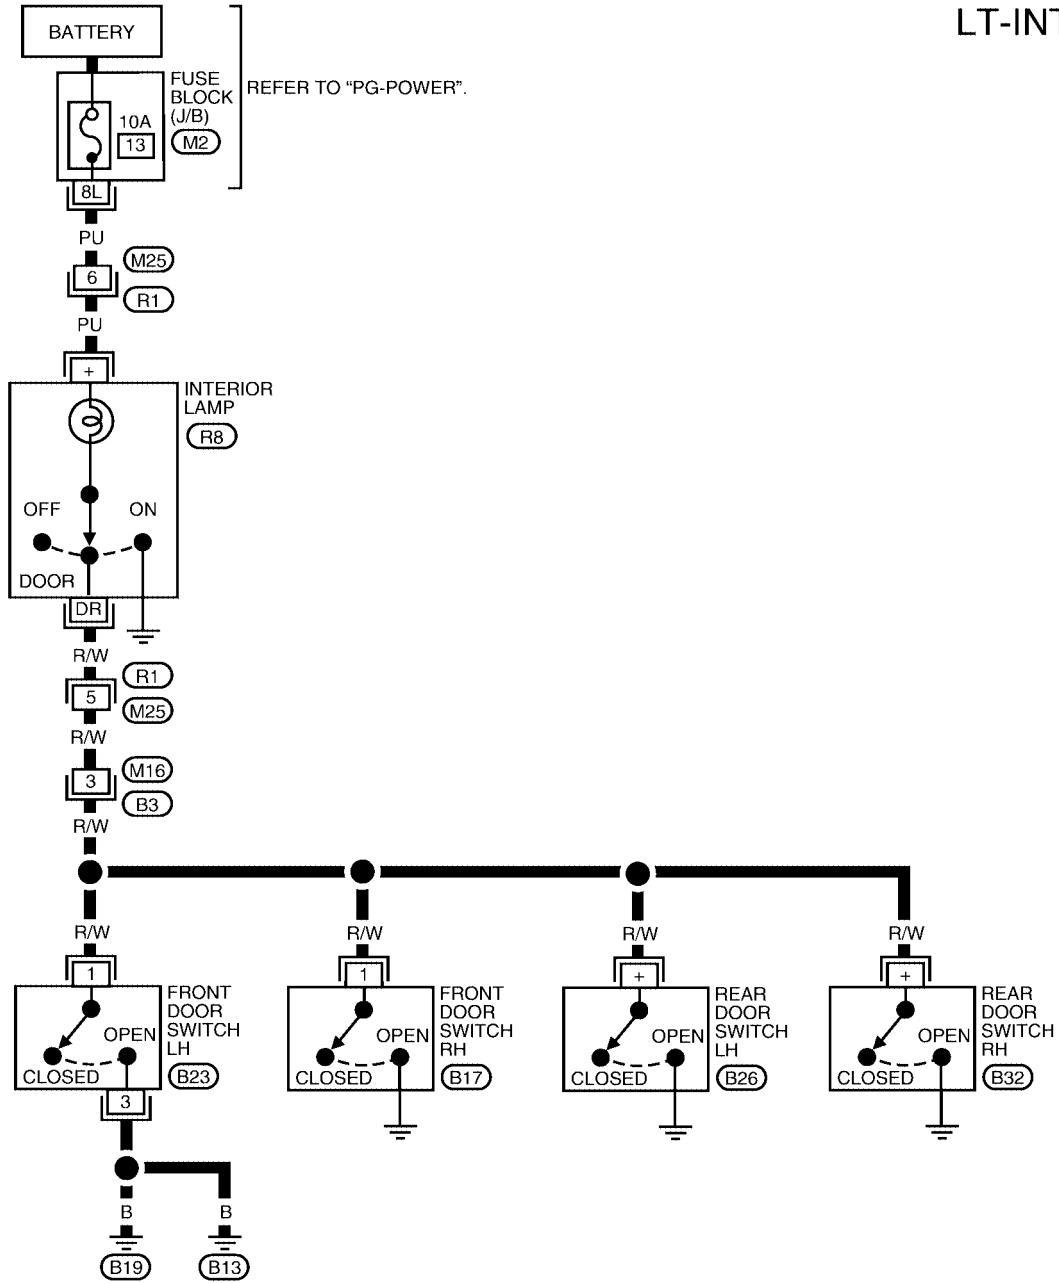

- driver door is locked or unlocked,
- door is opened or closed,
- key is inserted in or removed from ignition key cylinder.

- NG >> Replace door switch.

# INTERIOR, MAP, VANITY AND TRUNK ROOM LAMPS

## 8. CHECK KEY SWITCH INPUT SIGNAL

### With CONSULT-II

Check key switch ("KEY ON SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
KEY ON SW	ON

When key is inserted to ignition key cylinder:  
**KEY ON SW ON**

When key is removed from ignition key cylinder:  
**KEY ON SW OFF**

SEL315W

### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 32 and ground.

Smart entrance control unit connector (M39)

Voltage [V]:  
Condition of key switch: Key is inserted.  
**Approx. 12**  
Condition of key switch: Key is removed.  
**0**

LEL454

OK or NG

- OK >> Replace smart entrance control unit.
- NG >> GO TO 9.

## 9. CHECK KEY SWITCH

Check continuity between terminals 1 and 2.

Key switch connector (E113)

Continuity:  
Condition of key switch: Key is inserted.  
**Yes**  
Condition of key switch: Key is removed.  
**No**

LEL449

OK or NG

- OK >> Check the following.
  - 10A fuse [No. 12, located in fuse block (J/B)]
  - Harness for open or short between key switch and fuse
  - Harness for open or short between smart entrance control unit and key switch
- NG >> Replace key switch.

## PRECAUTIONS

### Precautions for Liquid Gasket

#### REMOVAL OF LIQUID GASKET SEALING

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

**CAUTION:**

**Be careful not to damage the mating surfaces.**

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the areas where the sealant is applied.

**CAUTION:**

**If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.**

#### LIQUID GASKET APPLICATION PROCEDURE

- Using a scraper, remove the old sealant adhering to the gasket application surface and the mating surface.
  - Remove the old sealant completely from the groove of the gasket application surface, mounting bolts, and bolt holes.
- Clean the mating surface to remove dirt, moisture, grease, and foreign material.
- Attach the sealant tube to the tube presser.

**Use Genuine RTV Silicone Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply the sealant without breaks to the specified location with the specified dimensions.
  - If there is a groove for the sealant application, apply the Sealant to the groove.
  - As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.

- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed after installation, fill the engine with oil and coolant.

**CAUTION:**

**If there are specific instructions in the service manual, observe them.**

# LUBRICATION SYSTEM

[QG18DE]

PF1:15010

EBS00CGD

## LUBRICATION SYSTEM

### Lubrication Circuit

PBIC1071E

## ENGINE OIL

### Inspection

#### OIL LEVEL AND MUDDINESS

- Ensure the vehicle is on a level surface with engine off, then check the oil level. If the engine is already started, stop it and allow 10 minutes before checking.
- Check that the oil level is within the range shown in the figure.
- If it is out of range, add oil as necessary. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#) .
- Check the oil for white turbidity or remarkable contamination.
- If the oil becomes turbid and white, it is highly probable that it is contaminated with coolant. Diagnose the problem and correct as necessary.

#### OIL LEAKAGE

Check for oil leakage around the following areas.

- Oil pan
- Oil pan drain plug
- Oil pressure switch
- Oil filter
- Front cover
- Mating surface between cylinder block and cylinder head
- Mating surface between cylinder head and rocker cover
- Crankshaft oil seal.

#### OIL PRESSURE CHECK

##### **WARNING:**

- **Be careful not to burn yourself, as the engine oil may be hot.**
  - **For M/T models, put gearshift lever in Neutral. For A/T models, put the selector lever in Park "P" position.**
1. Check the oil level.
  2. Remove the oil pressure switch.
  3. Connect the oil pressure gauge using the Tool.
  4. After warming up the engine to the normal operating temperature, check that oil pressure corresponding to the engine speed is produced.

#### Engine oil pressure [Oil temperature is 80°C (176°F)]

Engine speed (rpm)	Idle speed	2,000	6,000
Engine pressure kPa (kg/cm <sup>2</sup> , psi)	Approx. 98 (1.0, 14) or more	Approx. 294 (3.0, 43) or more	Approx. 392 (4.0, 57) or more

5. After checking, install the oil pressure switch as follows.
  - a. Remove old sealant adhering to the switch and engine.
  - b. Apply thread sealant. Tighten switch to specification.  
**Use Genuine High Performance Thread Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) .**

**Oil pressure switch : 12 - 17 N-m (1.22 - 1.73 kg-m, 8.8 - 12.5 ft-lb)**

## Changing Engine Oil

**WARNING:**

- Be careful not to burn yourself, as the engine oil may be hot.
  - Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. if skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
1. Warm up engine, and check for oil leakage from engine components.
  2. Stop engine and wait for 10 minutes.
  3. Remove drain plug and oil filler cap to drain the oil.
  4. Remove the oil filter and install a new filter.
  5. Install the oil pan drain plug with a new washer.

**CAUTION:**

- Be sure to clean the drain plug and install with new washer.  
 Oil pan drain plug : 29 - 39 N-m (3.0 - 4.0 kg-m, 22 - 29 ft-lb)
  - The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.  
 Always use the dipstick to determine that the proper amount of oil is in the engine.
6. Fill the engine with oil.

Oil specification and viscosity

- Refer to [MA-13, "Fluids and Lubricants"](#) .

Oil capacity (Approximate):

Drain and refill	With oil filter change	2.7 ℓ (2-7/8 US qt, 2-3/8 Imp qt)
	Without oil filter change	2.5 ℓ (2-5/8 US qt, 2-1/4 Imp qt)
Dry engine (engine overhaul)		3.1 ℓ (3-1/4 US qt, 2-3/4 Imp qt)

7. Warm up the engine and check the area around the drain plug and oil filter for oil leakage.
8. Stop the engine and wait for 10 minutes.
9. Check the oil level. Refer to [LU-5, "ENGINE OIL"](#) .

## OIL FILTER

## Removal and Installation

## REMOVAL

1. Remove the RH engine under cover.
2. Using an oil filter wrench, remove the oil filter.

**CAUTION:**

- Be careful not to get burned when the engine and engine oil are hot.
- When removing, prepare a shop cloth to absorb any oil leakage or spillage.
- Do not allow engine oil to adhere to the drive belts.
- Completely wipe off any oil that adheres to the engine and the vehicle.

## INSTALLATION

1. Remove foreign materials adhering to the oil filter installation surface.
2. Apply engine oil to the oil seal circumference of the new oil filter.

3. Screw the oil filter manually until it touches the installation surface, then tighten it by 2/3 turn.

4. After warming up the engine, check for engine oil leakage.
5. Check oil level with the dipstick and add engine oil as necessary. Refer to [LU-5, "ENGINE OIL"](#).
6. Install the RH engine under cover.

## OIL PUMP

PFP:15010

### Removal and Installation

EBS00CGH

- When installing the oil pump, apply clean engine oil to the rotor.
  - Make sure that O-ring seal is fitted properly.
  - Use a scraper to remove the old sealant from the mating surface of the front cover.
  - Also remove all traces of the old sealant from the mating surface of the engine block.
1. Remove the drive belts.
  2. Remove the oil pan. Refer to [EM-16, "Removal"](#) .
  3. Remove the oil strainer.
  4. Remove the front cover. Refer to [EM-40, "Removal"](#) .
  5. Install the front cover, applying a continuous bead of Genuine RTV Silicone Sealant or equivalent to mating surface of front cover assembly. Refer to [LU-2, "LIQUID GASKET APPLICATION PROCEDURE"](#) .
  6. Installation is in the reverse order of removal.

### Disassembly and Assembly

EBS00CGI

- |                    |                |                 |
|--------------------|----------------|-----------------|
| 1. Oil pump cover  | 2. Inner rotor | 3. Outer rotor  |
| 4. Front cover     | 5. Gasket      | 6. Oil strainer |
| 7. Regulator valve | 8. Spring      | 9. Washer       |
| 10. Plug           |                |                 |

### Inspection

EBS00CGJ

- Install the oil pump rotors with the punch marks on the oil pump cover side, as shown.

# OIL PUMP

[QG18DE]

- Using a feeler gauge, check the following clearances.

## Standard clearance:

Unit: mm (in)

Body to outer rotor radial clearance 1	0.114 - 0.200 (0.0045 - 0.0079)
Inner rotor to outer rotor tip clearance 2	Below 0.18 (0.0071)
Body to inner rotor clearance 3	0.030 - 0.070 (0.0012 - 0.0028)
Body to outer rotor axial clearance 4	0.030 - 0.090 (0.0012 - 0.0035)
Inner rotor to brazed portion of housing clearance 5	0.045 - 0.091 (0.0018 - 0.0036)

- If the tip clearance (2) exceeds the limit, replace the rotor set.
- If the body to rotor clearances (1, 3, 4, 5) exceed the limit, replace the front cover assembly.

## Regulator Valve Inspection

1. Visually inspect components for wear and damage.
2. Check oil pressure regulator valve sliding surface and valve spring.
3. Coat regulator valve with engine oil.
  - Check that the regulator valve falls smoothly into the valve hole by its own weight and gravity.
  - If damaged, replace the regulator valve set or front cover assembly.

4. Check regulator valve to front cover clearance.

**Clearance : 0.040 - 0.097 mm (0.0016 - 0.0038 in)**

- If the valve exceeds the specification, replace the front cover assembly.

### Oil Capacity

EBS00EYQ

Unit: ℓ (US qt., Imp qt.)

With oil filter change	2.7 (2-7/8, 2-3/8)
Without oil filter change	2.5 (2-5/8, 2-1/4)
Dry engine (engine overhaul)	3.1 (3-1/4, 2-3/4)

## PRECAUTIONS

### Precautions for Liquid Gasket

#### REMOVAL OF LIQUID GASKET SEALING

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

**CAUTION:**

**Be careful not to damage the mating surfaces.**

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the areas where the sealant is applied.

**CAUTION:**

**If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.**

#### LIQUID GASKET APPLICATION PROCEDURE

- Using a scraper, remove the old sealant adhering to the gasket application surface and the mating surface.
  - Remove the old sealant completely from the groove of the gasket application surface, mounting bolts, and bolt holes.
- Clean the mating surface to remove dirt, moisture, grease, and foreign material.
- Attach the sealant tube to the tube presser.

**Use Genuine RTV Silicone Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply the sealant without breaks to the specified location with the specified dimensions.
  - If there is a groove for the sealant application, apply the Sealant to the groove.
  - As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.

- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed after installation, fill the engine with oil and coolant.

**CAUTION:**

**If there are specific instructions in the service manual, observe them.**

## ENGINE OIL

### Inspection

#### OIL LEVEL AND MUDINESS

- Ensure the vehicle is on a level surface with engine off, then check the oil level. If the engine is already started, stop it and allow 10 minutes before checking.
- Check that the oil level is within the range shown in the figure and adjust if necessary.
- If it is out of range, add oil as necessary. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#) .
- Check the oil for white turbidity or remarkable contamination.
- If the oil becomes turbid and white, it is highly probable that it is contaminated with coolant. Diagnose the problem and correct as necessary.

#### OIL LEAKAGE

Check for oil leakage around the following areas.

- Oil pan
- Oil pan drain plug
- Oil pressure switch
- Oil filter
- IVTC (intake valve timing control) cover
- Front cover
- Mating surface between cylinder block and cylinder head
- Mating surface between cylinder head and rocker cover
- Crankshaft oil seal

#### OIL PRESSURE CHECK

##### WARNING:

- **Be careful not to burn yourself, as the engine oil may be hot.**
  - **For M/T models, put gearshift lever in Neutral position. For A/T models, put selector lever in Park "P" position.**
1. Check the oil level.
  2. Remove the under cover.
  3. Remove the oil pressure switch to connect the oil pressure gauge.
  4. After warming up the engine to the normal operating temperature, check that oil pressure corresponding to the engine speed is produced.

#### Engine oil pressure [Oil temperature is 80 °C (176 °F)]

Engine speed (rpm)	Idle speed	2,000	6,000
Engine pressure kPa (kg/cm <sup>2</sup> , psi)	Approx. 98 (1.0, 14) or more	Approx. 294 (3.0, 43) or more	Approx. 392 (4.0, 57) or more

5. After checking, install the oil pressure switch as follows:
  - a. Remove the old thread sealant adhering to the switch and engine.
  - b. Apply thread sealant. Tighten the switch to specification.  
**Use Genuine High Performance Thread Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) .**

**Oil pressure switch : 12.3 - 17.2 N·m (1.25 - 1.75 kg·m, 10 - 12 ft·lb)**

## Changing Engine Oil

**WARNING:**

- Be careful not to burn yourself, as the engine oil is hot.
  - Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
1. Warm up engine, and check for oil leakage from engine components.
  2. Stop the engine and wait for 10 minutes.
  3. Remove the oil drain plug and oil filler cap to drain the oil.
  4. Remove the oil filter and replace it with a new oil filter.
  5. Install the oil drain plug using a new washer.

**Oil pan drain plug : 29 - 39 N·m (3.0 - 4.0 kg·m, 22 - 29 ft·lb)**

**CAUTION:**

- Clean the oil drain plug and install with a new washer.
6. Fill the engine with the specified oil.
    - Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#).
- Oil capacity (Approximate):

Drain and refill	With oil filter change	3.9 ℓ (4-1/8 US qt, 3-3/8 Imp qt)
	Without oil filter change	3.7 ℓ (3-7/8 US qt, 3-1/4 Imp qt)
Dry engine (engine overhaul)		4.4 ℓ (4-5/8 US qt, 3-7/8 Imp qt)

- The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.
  - Always use the dipstick to determine when the proper amount of oil is in the engine.
7. Warm up the engine and check the area around the oil drain plug and oil filter for oil leakage.
  8. Stop the engine and wait for 10 minutes.
  9. Check the oil level using the dipstick. Refer to [LU-16, "ENGINE OIL"](#).

## OIL FILTER

### Removal and Installation

#### REMOVAL

1. Open the oil filter installation/removal access cover on the RH engine under cover.
2. Using an oil filter wrench, remove the oil filter.

#### CAUTION:

- Be careful not to get burned when the engine and engine oil are hot.
- When removing, prepare a shop cloth to absorb any oil leakage or spillage.
- Do not allow engine oil to adhere to the drive belts.
- Completely wipe off any oil that adheres to the engine and the vehicle.

#### INSTALLATION

1. Remove foreign material adhering to the oil filter installation surface.
2. Apply a thin coating of engine oil to the oil seal surface of the new oil filter.

3. Screw the oil filter manually until it touches the installation surface and then tighten it by 2/3 turn. Or tighten the oil filter to the correct specification.

**Oil filter :14.7 - 20.5 N-m (1.5 - 2.1 kg-m, 11 - 15 ft-lb)**

4. After warming up the engine, check for engine oil leakage.
5. Check the oil level and adjust the engine oil level as necessary. Refer to [LU-16, "ENGINE OIL"](#).

## OIL PUMP

### Removal and Installation

1. To remove the oil pump, remove the front cover. Refer to [EM-134, "TIMING CHAIN"](#).
  - Only perform the steps necessary to remove the front cover.
2. Installation is in the reverse order of removal.

### Disassembly and Assembly

- |                   |                    |                           |
|-------------------|--------------------|---------------------------|
| 1. Front cover    | 2. Outer rotor     | 3. Inner rotor            |
| 4. Oil pump cover | 5. Regulator valve | 6. Regulator valve spring |
| 7. Regulator plug |                    |                           |

**CAUTION:**

Before installation, apply new engine oil to the parts as instructed in the figure.

#### DISASSEMBLY

1. Remove the oil pump cover.
2. Remove the inner rotor and the outer rotor from the front cover.
3. After removing the regulator plug, remove the regulator valve spring and the regulator valve.

#### INSPECTION AFTER DISASSEMBLY

1. Measuring the internal clearance of the oil pump components.
  - Measure the clearance with a feeler gauge.

Clearance between outer rotor and oil pump body (position 1):

**Standard : 0.114 - 0.179 mm (0.0045 - 0.0070 in) clearance**

Tip clearance between inner rotor and outer rotor (position 2):

**Standard : Less than 0.220 mm (0.0087 in) clearance**

# OIL PUMP

[QR25DE]

- Measure clearance with feeler gauge and straightedge. Side clearance between inner rotor and oil pump body (position 3):

**Standard clearance : 0.030 - 0.070 mm  
(0.0012 - 0.0028 in)**

- Side clearance between outer rotor and oil pump body (position 4):

**Standard clearance : 0.060 - 0.110 mm  
(0.0024 - 0.0043 in)**

- Calculate the clearance between inner rotor and oil pump body as follows.

2. Measure the outer diameter of protruded portion of inner rotor (Position 5).

3. Measure the inner diameter of oil pump body with an inside micrometer (Position 6).

(Clearance) = (Inner diameter of oil pump body) – (Outer diameter of inner rotor):

**Standard clearance : 0.035 - 0.070 mm  
(0.0014 - 0.0028 in)**

4. Measure the regulator valve clearance.

- (Clearance) = D1 (Valve hole diameter) – D2 (Outer diameter of valve):

**Standard clearance : 0.040 - 0.097 mm  
(0.0016 - 0.0038 in)**

**CAUTION:**

**Coat the regulator valve with engine oil.**

**Check that it falls smoothly into the valve hole by its own weight.**

# OIL PUMP

EBS00CGY

Unit: mm (in)

Body to outer rotor radial clearance	0.114 - 0.179 (0.0045-0.0070)
Inner rotor to outer rotor tip clearance	Less than 0.220 (0.0087)
Body to inner rotor axial clearance	0.030 - 0.070 (0.0012 - 0.0028)
Body to outer rotor axial clearance	0.060 - 0.110 (0.0024 - 0.0043)
Inner rotor to brazed portion of housing clearance	0.035 - 0.070 (0.0014 - 0.0028)

### Regulator Valve

EBS00CGZ

Unit: mm (in)

Regulator valve to oil pump cover clearance	0.040 - 0.097 (0.0016 - 0.0038)
---	---------------------------------

### Oil Capacity

EBS00CH0

Unit: ℓ (US qt., Imp qt.)

With oil filter change	Approximately 3.9 (4-1/8, 3-3/8)
Without oil filter change	Approximately 3.7 (3-7/8, 3-1/4)
Dry engine (engine overhaul)	Approximately 4.4 (4-5/8, 3-7/8)

# PRECAUTIONS

## PRECAUTIONS

PF0:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

ELS0001F

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# PREPARATION

## PREPARATION

PFP:00002

### Special Service Tool

ELS0001G

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
KV10115801 (J-37140-A) Oil filter cap wrench	Removing oil filter <b>a: 64.3 mm (2.531 in)</b>
— (J-45695) Coolant refill tool	Refilling engine coolant

NT375

LMA053

### Commercial Service Tool

ELS0001H

Tool name (Kent-Moore No.)	Description
Belt tension gauge (BT3373-F)	Checking drive belt tension of QG18DE engine
Spark plug wrench	Removing and installing spark plugs

AMA126

16 mm  
(0.63 in)

S-NT047

# GENERAL MAINTENANCE

## GENERAL MAINTENANCE

PFP:00000

### Explanation of General Maintenance

ELS000II

### General Maintenance

ELS000IJ

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or they can have their NISSAN dealers do them.

#### OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
<b>Tires</b>	Check the pressure including the spare, at least once a month and always prior to a long distance trip. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	—
<b>Wheel nuts</b>	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	—
<b>Windshield</b>	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	—
<b>Tire rotation</b>	Tires should be rotated every 12,000 km (7,500 miles).	<a href="#">MA-31, "Tire Rotation"</a>
<b>Wheel alignment and balance</b>	If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	<a href="#">FSU-6, "Front Wheel Alignment"</a> and <a href="#">MA-31, "Balancing Wheels"</a>
<b>Windshield wiper blades</b>	Check for cracks or wear if they do not wipe properly.	—
<b>Doors and engine hood</b>	Check that all doors and the engine hood operate smoothly as well as the trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	<a href="#">MA-36, "Lubricating Locks, Hinges and Hood Latches"</a>
<b>Lamps</b>	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	—

#### INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, and cleaning the vehicle.

Item		Reference page
<b>Warning lamps and buzzers/chimes</b>	Make sure that all warning lamps and buzzers/chimes are operating properly.	—
<b>Windshield wiper and washer</b>	Check that the wipers and washer operate properly and that the wipers do not streak.	—
<b>Windshield defroster</b>	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioning.	—
<b>Steering wheel</b>	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises. <b>Free play: Less than 35 mm (1.38 in)</b>	—
<b>Seats</b>	Check seat position controls such as seat adjusters, seat back recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restraints move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seat backs.	—
<b>Seat belts</b>	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	<a href="#">SB-7, "Seat Belt Inspection"</a>
<b>Accelerator pedal</b>	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	—

# GENERAL MAINTENANCE

Item		Reference page
<b>Clutch pedal</b>	Make sure the pedal operates smoothly and check that it has the proper free play.	<a href="#">CL-7, "CLUTCH PEDAL INSPECTION AND ADJUSTMENT"</a>
<b>Brakes</b>	Check that the brake does not pull the vehicle to one side when applied.	—
<b>Brake pedal and booster</b>	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep floor mats away from the pedal.	<a href="#">BR-12, "BRAKE PEDAL HEIGHT"</a> and <a href="#">BR-16, "OPERATING CHECK"</a>
<b>Parking brake</b>	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	<a href="#">PB-2, "Inspection"</a>
<b>Automatic transaxle "Park" mechanism</b>	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	—

## UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page	
		QG18DE	QR25DE
<b>Windshield washer fluid</b>	Check that there is adequate fluid in the tank.	—	
<b>Engine coolant level</b>	Check the coolant level when the engine is cold.	<a href="#">CO-7, "CHECKING COOLING SYSTEM FOR LEAKS"</a>	<a href="#">CO-24, "System Check"</a>
<b>A/C condenser, radiator and hoses</b>	Check the front of the condenser and radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the radiator hoses have no cracks, deformation, deterioration or loose connections.	—	
<b>Brake and clutch fluid levels</b>	Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoirs.	<a href="#">MA-32, "Checking Brake Fluid Level and Leaks"</a> and <a href="#">MA-29, "Checking Clutch Fluid Level and Leaks"</a>	
<b>Battery</b>	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	—	
<b>Engine drive belts</b>	Make sure that no belt is frayed, worn, cracked or oily.	<a href="#">MA-16, "Checking Drive Belts"</a>	<a href="#">MA-23, "Checking Drive Belts"</a>
<b>Engine oil level</b>	Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	—	—
<b>Power steering fluid level and lines</b>	Check the level is between the "MAX" and "MIN" lines on the reservoir with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	<a href="#">MA-34, "Checking Power Steering Fluid and Lines"</a>	
<b>Automatic transaxle fluid level</b>	Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	<a href="#">MA-30, "Checking A/T Fluid"</a>	
<b>Exhaust system</b>	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	<a href="#">MA-29, "Checking Exhaust System"</a>	
<b>Underbody</b>	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	—	
<b>Fluid leaks</b>	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	—	

# PERIODIC MAINTENANCE

## PERIODIC MAINTENANCE

PFP:00026

### Introduction of Periodic Maintenance

ELS0001K

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. **After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.**

Schedule 1	Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions: <ul style="list-style-type: none"> <li>● Repeated short trips of less than 5 miles (8 km).</li> <li>● Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.</li> <li>● Operating in hot weather in stop-and-go "rush hour" traffic.</li> <li>● Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.</li> <li>● Driving in dusty conditions.</li> <li>● Driving on rough, muddy, or salt spread roads.</li> <li>● Towing a trailer, using a camper or a car-top carrier.</li> </ul>	Emission Control System Maintenance	<a href="#">MA-7.</a> <a href="#">"EMIS- SION CON- TROL SYSTEM MAINTENANCE"</a>
		Chassis and Body Maintenance	<a href="#">MA-10.</a> <a href="#">"CHAS- SIS AND BODY MAINTENANCE"</a>
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to your driving habits.	Emission Control System Maintenance	<a href="#">MA-11.</a> <a href="#">"EMIS- SION CON- TROL SYSTEM MAINTENANCE"</a>
		Chassis and Body Maintenance	<a href="#">MA-12.</a> <a href="#">"CHAS- SIS AND BODY MAINTENANCE"</a>

Intake and exhaust valve clearance	NOTE (5)*										<a href="#">EM-35, "Valve Clearance"</a>	—

**NOTE:**

- (1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belt if found damaged or if the auto belt tensioner reading (for QR25DE engine) reaches the maximum limit.
- (2) If operating mainly in dusty conditions, more frequent maintenance may be required.
- (3) Maintenance-free item.
- (4) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.
- (5) If valve noise increases, inspect valve clearance.

Maintenance items and intervals with "\*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Intake and exhaust valve clearance)	NOTE (4)*									<a href="#">EM-35.</a> <a href="#">"Valve Clearance"</a>	—

**NOTE:**

Replace the drive belt if found damaged or if the auto belt tensioner reading reaches the maximum limit.

- (1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belt if found damaged or if the auto belt tensioner reading (for QR25DE engine) reaches the maximum limit.
- (2) Maintenance-free item.
- (3) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.
- (4) If valve noise increases, inspect valve clearance.

# PERIODIC MAINTENANCE

Maintenance items and intervals with “\*” are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

## CHASSIS AND BODY MAINTENANCE

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary. L = Lubricate.

# RECOMMENDED FLUIDS AND LUBRICANTS

PFP:00000

ELS000IN

## RECOMMENDED FLUIDS AND LUBRICANTS

### Fluids and Lubricants

QG18DE		Capacity (Approximate)			Recommended Fluids/Lubricants
		US measure	Imp measure	Liter	
Engine oil Drain and refill	With oil filter change	2 7/8 qt	2 3/8 qt	2.7	<ul style="list-style-type: none"> <li>● API Certification Mark*1</li> <li>● API grade SL, Energy Conserving*1</li> <li>● ILSAC grade GF-III*1</li> </ul>
	Without oil fil- ter change	2 5/8 qt	2 1/4 qt	2.5	
Dry engine (engine overhaul)		3 1/4 qt	2 3/4 qt	3.1	
Cooling system (with reservoir)	M/T	7 1/8 qt	5 7/8 qt	6.7	Genuine NISSAN Long Life Anti-freeze coolant or equivalent
	A/T	7 qt	5 7/8 qt	6.6	
Manual transaxle fluid	RS5F70A	3 1/8 qt	2 5/8 qt	3.0	Genuine NISSAN Manual Transmission Fluid (MTF) HQ multi 75W-85
Automatic tran- saxle fluid	RE4F03B	7 3/8 qt	6 1/8 qt	7.0	NISSAN Matic "D" (Continental U.S. and Alaska) or Canada NISSAN Automatic Transmission Fluid*2
Power steering fluid (PSF)		2 1/8 pt	1 3/4 pt	1.0	Genuine NISSAN PSF or equivalent*4
Brake and clutch fluid		—	—	—	Genuine NISSAN Super Heavy Duty Brake Fluid*3 or equivalent DOT 3 (US FMVSS No. 116)
Multi-purpose grease		—	—	—	NLGI No. 2 (Lithium soap base)
Windshield washer fluid		—	—	—	Genuine NISSAN Windshield Washer Concentrate Cleaner & Anti-freeze or equivalent
Air conditioning system refrigerant		0.99 - 1.21 lb	0.99 - 1.21 lb	0.45 - 0.55 kg	HFC-134a (R-134a)*5
Air conditioning system lubricant		6.1 fl oz	6.3 fl oz	180 mℓ	Genuine NISSAN A/C System Lubricant Type R or equivalent*5

\*1: For further details, see "SAE Viscosity Number".

\*2: DEXRON™ III / MERCON™, or equivalent may also be used. Outside the continental United States and Alaska contact a NISSAN dealership for more information regarding suitable fluids, including recommended brand(s) of DEXRON™ III / MERCON™ Automatic Transmission Fluid.

\*3: Available in mainland U.S.A. through your NISSAN dealer.

\*4: Genuine NISSAN PSF, Canada NISSAN Automatic Transmission Fluid, DEXRON™ III / MERCON™ or equivalent ATF may also be used.

\*5: For further details, see "Air conditioner specification label".

QR25DE		Capacity (Approximate)			Recommended Fluids/Lubricants
		US measure	Imp measure	Liter	
Engine oil Drain and refill	With oil filter change	4 1/8 qt	3 3/8 qt	3.9	<ul style="list-style-type: none"> <li>● API Certification Mark*1</li> <li>● API grade SL, Energy Conserving*1</li> <li>● ILSAC grade GF-III*1</li> </ul>

# RECOMMENDED FLUIDS AND LUBRICANTS

QR25DE	Capacity (Approximate)			Recommended Fluids/Lubricants
	US measure	Imp measure	Liter	
Brake and clutch fluid	—	—	—	Genuine NISSAN Super Heavy Duty Brake Fluid*3 or equivalent DOT 3 (US FMVSS No. 116)
Multi-purpose grease	—	—	—	NLGI No. 2 (Lithium soap base)
Windshield washer fluid	—	—	—	Genuine NISSAN Windshield Washer Concentrate Cleaner & Anti-freeze or equivalent
Air conditioning system refrigerant	0.99 - 1.21 lb	0.99 - 1.21 lb	0.45 - 0.55 kg	HFC-134a (R-134a)*5
Air conditioning system lubricant	6.1 fl oz	6.3 fl oz	180 m ℓ	Genuine NISSAN A/C System Lubricant Type R or equivalent*5

\*1: For further details, see "SAE Viscosity Number".

\*2: DEXRON™ III / MERCON™, or equivalent may also be used. Outside the continental United States and Alaska contact an authorized NISSAN dealership for more information regarding suitable fluids, including recommended brand(s) of DEXRON™ III / MERCON™ Automatic Transmission Fluid.

\*3: Available in mainland U.S.A. through your authorized NISSAN dealer.

\*4: Genuine NISSAN PSF, Canada NISSAN Automatic Transmission Fluid, DEXRON™ III / MERCON™ or equivalent ATF may also be used.

\*5: For further details, see "Air conditioner specification label".

## SAE Viscosity Number

ELS00010

SAE 5W-30 viscosity oil is preferred for all temperatures. SAE 10W-30 and 10W-40 viscosity oil may be used if the ambient temperature is above -18°C (0°F).

### NOTE:

The use of a 5W-30 viscosity oil may increase fuel economy.

## Anti-freeze Coolant Mixture Ratio

ELS0001P

The engine cooling system is filled at the factory with a high-quality, year-round, long life, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors, so additional cooling system additives are not necessary.

Protection for outside temperature down to:		Genuine NISSAN Long Life Anti-freeze coolant or equivalent	Demineralized water or distilled water
°C	°F		
-35°	-30°	50%	50%

## RECOMMENDED FLUIDS AND LUBRICANTS

---

**CAUTION:**

- When adding or replacing coolant, be sure to use only a Genuine NISSAN Long Life Anti-freeze coolant or equivalent with the specified mixture ratio.
- The use of other types of coolant solutions may damage the engine cooling system.

J

K

MA

M

### Checking Drive Belts

ELS0001Q

1. Inspect belt for cracks, fraying, wear and oil. If necessary, replace.
2. Inspect drive belt deflection or tension at a point on the belt midway between pulleys. Adjust if belt deflection exceeds the limit or if belt tension is not within specifications.
  - Check belt tension using Belt Tension Gauge BT3373-F or equivalent. Refer to [MA-38, "BELT DEFLECTION AND TENSION"](#).
  - Inspect drive belt deflection or tension when engine is cold.

### Changing Engine Coolant

ELS0001R

#### **WARNING:**

To avoid the danger of being scalded, never change the coolant when the engine is hot.

#### **DRAINING ENGINE COOLANT**

1. Set climate control system as follows to prevent coolant from remaining in the system.
  - Turn ignition switch "ON" and set temperature controller to maximum hot position.
  - Wait 10 seconds before turning ignition switch "OFF".

## ENGINE MAINTENANCE (QG18DE ENGINE)

- Open radiator drain plug at the bottom of the radiator, and remove radiator filler cap.

**CAUTION:**

**Be careful not to allow coolant to contact drive belts.**

- Remove cylinder block drain plug and air relief plug.

- Check drained coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush engine cooling system. Refer to [MA-18, "FLUSHING COOLING SYSTEM"](#).

### REFILLING ENGINE COOLANT

- Close radiator drain plug. Install the reservoir tank and cylinder block drain plug, if removed for a total system drain for engine removal or repair.
  - The radiator must be completely empty of coolant and water.
  - Apply sealant to the threads of the cylinder block drain plugs. Use Genuine High Performance Thread Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

**Cylinder block drain plug : 34.3 - 44.1 N·m (3.5 - 4.5 kg·m, 26 - 32 ft·lb)**

## ENGINE MAINTENANCE (QG18DE ENGINE)

2. If disconnected, reattach the upper radiator hose at the engine side.
3. Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.
4. Install the Tool by installing the radiator cap adapter onto the radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.
5. Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.

- Use Genuine NISSAN Long Life Anti-freeze coolant or equivalent, mixed 50/50 with distilled water or demineralized water. Refer to [MA-14, "Anti-freeze Coolant Mixture Ratio"](#).

### Coolant capacity (without reservoir tank)

**M/T** : 6.0 ℓ (6 3/8 US qt, 5 1/4 Imp qt)

**A/T** : 5.9 ℓ (6 1/4 US qt, 5 1/4 Imp qt)

**Reservoir tank capacity** : 0.7 ℓ (3/4 US qt, 5/8 Imp qt)  
(for MAX level)

6. Install an air hose to the venturi assembly, the air pressure must be within specification.

**Compressed air supply pressure** : 5.7 - 8.5 kPa (5.6 - 8.4 kg/cm<sup>2</sup>, 80 - 120 psi)

### CAUTION:

**The compressed air supply must be equipped with an air dryer.**

7. The vacuum gauge will begin to rise and there will be an audible hissing noise. During this process open the ball valve on the refill hose slightly. Coolant will be visible rising in the refill hose. Once the refill hose is full of coolant, close the ball valve. This will purge any air trapped in the refill hose.
8. Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations, refer to the vacuum specifications based on the altitude above sea level.

Altitude above sea level	Vacuum gauge reading
0 - 100 m (328 ft)	: 28 inches of vacuum
300 m (984 ft)	: 27 inches of vacuum
500 m (1,641 ft)	: 26 inches of vacuum
1,000 m (3,281 ft)	: 24 - 25 inches of vacuum

9. When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses any vacuum. If the vacuum level drops, perform any necessary repairs to the system and repeat steps 6 - 8 to bring the vacuum to the specified amount. Recheck for any leaks.
10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling system is full when the vacuum gauge reads zero.

### CAUTION:

**Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.**

11. Remove the Tool from the radiator neck opening.
12. Fill the cooling system reservoir tank to the specified level and install the radiator cap. Run the engine to warm up the cooling system and top up the system as necessary.

## FLUSHING COOLING SYSTEM

1. Open air relief plug.

# ENGINE MAINTENANCE (QG18DE ENGINE)

2. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
3. Run engine and warm it up to normal operating temperature.
4. Rev engine two or three times under no-load.
5. Stop engine and wait until it cools down.
6. Drain water.
7. Repeat steps 1 through 6 until clear water begins to drain from radiator.

## Checking Fuel Lines

ELS0001S

- Inspect fuel lines and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

- If necessary, repair or replace faulty parts.

## Changing Air Cleaner Filter

ELS0001T

Unfasten clamps to change air cleaner filter.

# ENGINE MAINTENANCE (QG18DE ENGINE)

ELS000IU

## Changing Engine Oil

### WARNING:

- Be careful not to burn yourself, as the engine oil is hot.
  - Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
1. Warm up engine, and check for oil leakage from engine components.
  2. Stop engine.
  3. Remove drain plug and oil filler cap.
  4. Drain oil and refill with new engine oil.

**Oil pan drain plug : 29 - 39 N·m (3.0 - 4.0 kg·m, 22 - 29 ft·lb)**

### Oil Specification and Viscosity

- Refer to [MA-13, "Fluids and Lubricants"](#).

### Oil Capacity (Approximate)

Unit: ℓ (US qt., Imp qt.)

Drain and refill	With oil filter change	2.7 (2 7/8, 2 3/8)
	Without oil filter change	2.5 (2 5/8, 2 1/4)
Dry engine (engine overhaul)		3.1 (3 1/4, 2 3/4)

### CAUTION:

- Be sure to clean drain plug and install with new washer.

**Oil pan drain plug : 29 - 39 N·m (3.0 - 4.0 kg·m, 22 - 29 ft·lb)**

- The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.
- Always use the dipstick to determine when the proper amount of oil is in the engine.

5. Warm up engine and check area around drain plug and oil filter for oil leakage.
6. Stop engine.
7. Check oil level.

## Changing Oil Filter

1. Remove the oil filter using Tool as shown.

### WARNING:

Be careful not to burn yourself, as the engine and engine oil are hot.

### NOTE:

The filter is a full-flow cartridge type and is provided with a relief valve.

ELS000IV

## ENGINE MAINTENANCE (QG18DE ENGINE)

- Clean oil filter mounting surface on cylinder block. Coat rubber seal of new oil filter with engine oil.

SMA010

- Screw in the oil filter until a slight resistance is felt, then tighten an additional 2/3 turn.

SMA702C

- Add engine oil. Refer to [MA-20, "Changing Engine Oil"](#) .
  - Clean excess oil from engine.

### Changing Spark Plugs (Double Platinum - Tipped Type)

ELS000IW

- Disconnect ignition coil harness connectors.
- Remove ignition coils.

LMA020

- Remove spark plugs with spark plug socket.

#### Spark Plug Types

Hot type	PLFR4A-11
Standard type	PLFR5A-11
Cold type	PLFR6A-11

**Spark plug gap (nominal) : 1.1 mm (0.043 in)**

- The standard type spark plug is suitable for normal driving conditions.
- The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:
  - Frequent engine starts
  - Low ambient temperatures
- The cold type spark plug is suitable when spark knock occurs with the standard type spark plug under conditions such as:
  - Extended highway driving
  - Frequent high engine revolution

## ENGINE MAINTENANCE (QG18DE ENGINE)

- If plug is covered with carbon, a spark plug cleaner may be used as specified.

**CAUTION:**

Do not use wire brush for cleaning. If plug is covered with carbon, spark plug cleaner may be used.

**Cleaner air pressure** : Less than 588 kPa (6 kg/cm<sup>2</sup>, 85 psi)

**Cleaning time** : less than 20 seconds

- Checking and adjusting plug gap is not required between change intervals.

4. Install the spark plugs.

**Spark plug** : 20 - 29 N·m (2.0 - 3.0 kg·m, 14 - 22 ft·lb)

5. Install the ignition coils and ignition wires.

**Ignition coil** : 3.8 - 5.0 N·m (0.38 - 0.51 kg·m, 33 - 44 in·lb)

### Checking EVAP Vapor Lines

ELS0001X

1. Visually inspect EVAP vapor lines for improper attachment, cracks, damage, loose connections, chafing or deterioration.
2. Inspect vacuum relief valve of fuel tank filler cap for clogging, sticking, etc. Refer to [EC-586, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FILLER CAP\)"](#) (QG18DE ULEV), [EC-1208, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FILLER CAP\)"](#) (QG18DE SULEV).

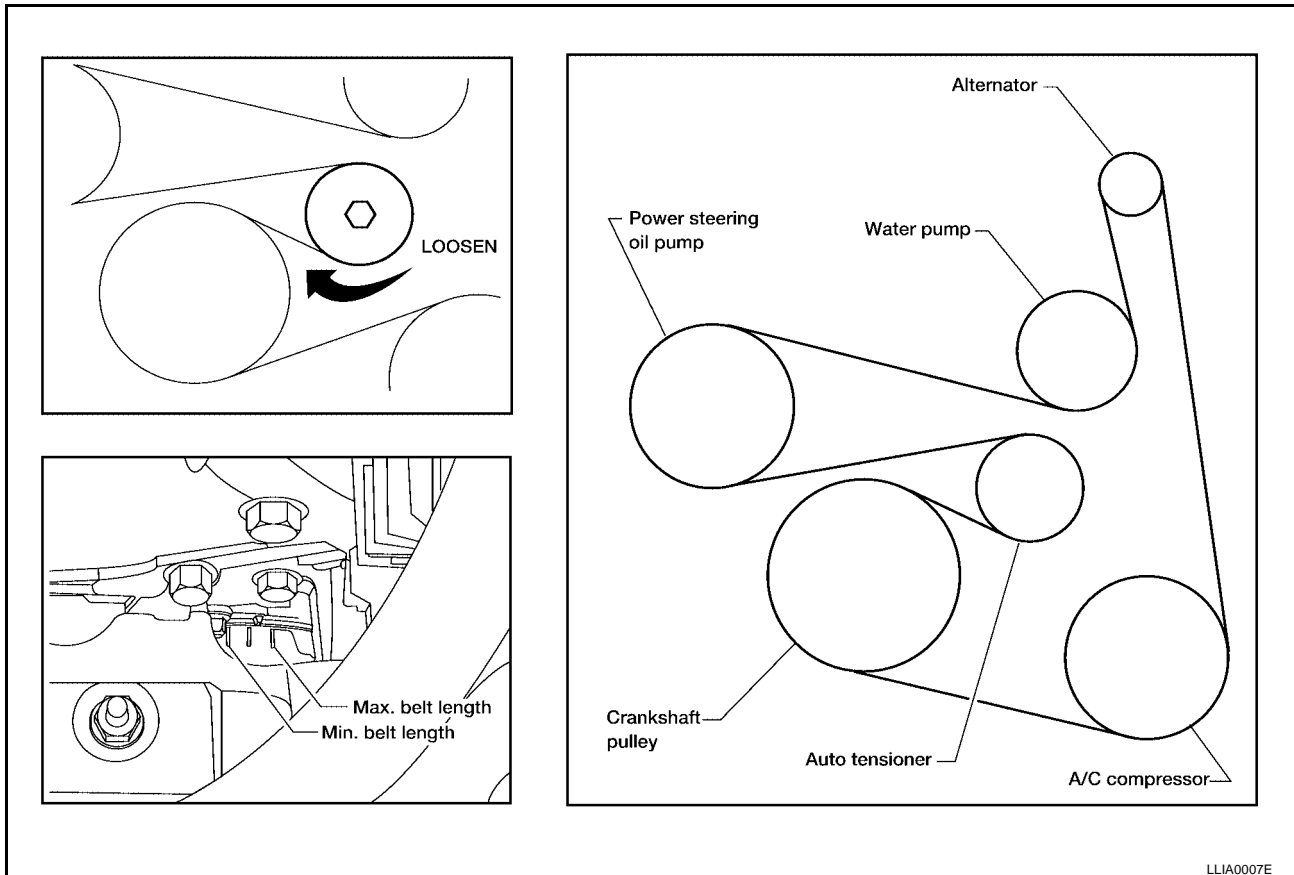

# ENGINE MAINTENANCE (QR25DE ENGINE)

## ENGINE MAINTENANCE (QR25DE ENGINE)

PFP:10001

### Checking Drive Belts

ELS0001Y

LLIA0007E

#### **WARNING:**

Be sure to perform when the engine is stopped.

- Make sure that indicator (single line notch) of each automatic tensioner is within the allowable working range (between three notches).

#### **NOTE:**

- Check the automatic tensioner indicator when the engine is cold.
- The indicator notch is located on the moving side of the tensioner.
- Visually check entire belt for wear, damage or cracks.
- If the indicator is out of allowable working range or belt is damaged, replace the belt.
- Belt tensioning is not necessary, as it is automatically adjusted by auto belt tensioner.

### Changing Engine Coolant

ELS0001Z

#### **WARNING:**

To avoid the danger of being scalded, never change the coolant when the engine is hot.

#### **DRAINING ENGINE COOLANT**

1. Open radiator drain plug at the bottom of the radiator, and remove radiator filler cap.

# ENGINE MAINTENANCE (QR25DE ENGINE)

## CAUTION:

When draining all the coolant in the system, also perform steps two and three:

2. Remove cylinder block drain plug and air relief plug.

3. Check drained coolant for contaminants such as rust, corrosion or discoloration. If contaminated, flush engine cooling system.  
Refer to [MA-25, "FLUSHING COOLING SYSTEM"](#).

## REFILLING ENGINE COOLANT

1. Install the radiator drain plug. Install the reservoir tank and cylinder block drain plug, if removed for a total system drain for engine removal or repair.
  - The radiator must be completely empty of coolant and water.
  - Apply sealant to the threads of the cylinder block drain plugs. Use Genuine High Performance Thread Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).

**Radiator drain plug : 7.8 - 11.8 N-m (0.8 - 1.2 kg-m , 69 - 104 in-lb)**

**Cylinder block drain plug : 34 - 44 N-m (3.5 - 4.5 kg-m, 25 - 33 ft-lb)**

2. If disconnected, reattach the upper radiator hose at the engine side.
3. Set the vehicle heater controls to the full HOT and heater ON position. Turn the vehicle ignition ON with the engine OFF as necessary to activate the heater mode.
4. Install the Tool by installing the radiator cap adapter onto the radiator neck opening. Then attach the gauge body assembly with the refill tube and the venturi assembly to the radiator cap adapter.
5. Insert the refill hose into the coolant mixture container that is placed at floor level. Make sure the ball valve is in the closed position.
  - Use Genuine NISSAN Long Life Anti-freeze coolant or equivalent, mixed 50/50 with distilled water or demineralized water. Refer to [MA-14, "Anti-freeze Coolant Mixture Ratio"](#).

**Coolant capacity (without reservoir tank)**

**M/T : 6.1 ℓ (6 1/2 US qt, 5 3/8 Imp qt)**

**A/T : 6.0 ℓ (6 3/8 US qt, 5 1/4 Imp qt)**

**Reservoir tank capacity : 0.7 ℓ (3/4 US qt, 5/8 Imp qt)  
(for MAX level)**

6. Install an air hose to the venturi assembly, the air pressure must be within specification.

**Compressed air supply pressure : 5.7 - 8.5 kPa (5.6 - 8.4 kg/cm<sup>2</sup>, 80 - 120 psi)**

## CAUTION:

The compressed air supply must be equipped with an air dryer.

7. The vacuum gauge will begin to rise and there will be an audible hissing noise. During this process open the ball valve on the refill hose slightly. Coolant will be visible rising in the refill hose. Once the refill hose is full of coolant, close the ball valve. This will purge any air trapped in the refill hose.

## ENGINE MAINTENANCE (QR25DE ENGINE)

8. Continue to draw the vacuum until the gauge reaches 28 inches of vacuum. The gauge may not reach 28 inches in high altitude locations, refer to the vacuum specifications based on the altitude above sea level.

Altitude Above Sea Level	Vacuum Gauge Reading
0 - 100 m (0 - 328 ft)	28 inches of vacuum
300 m (984 ft)	27 inches of vacuum
500 m (1,641 ft)	26 inches of vacuum
1,000 m (3,281 ft)	24 - 25 inches of vacuum

9. When the vacuum gauge has reached the specified amount, disconnect the air hose and wait 20 seconds to see if the system loses any vacuum. If the vacuum level drops, perform any necessary repairs to the system and repeat steps 6 - 8 to bring the vacuum to the specified amount. Recheck for any leaks.
10. Place the coolant container (with the refill hose inserted) at the same level as the top of the radiator. Then open the ball valve on the refill hose so the coolant will be drawn up to fill the cooling system. The cooling system is full when the vacuum gauge reads zero.

**CAUTION:**

**Do not allow the coolant container to get too low when filling, to avoid air from being drawn into the cooling system.**

11. Remove the Tool from the radiator neck opening.
12. Fill the cooling system reservoir tank to the specified level and install the radiator cap. Run the engine to warm up the cooling system and top up the system as necessary.

### FLUSHING COOLING SYSTEM

- Fill the radiator and reservoir tank with water and reinstall radiator cap.
- Run the engine and warm it up to normal operating temperature.
- Rev the engine two or three times under no-load.
- Stop the engine and wait until it cools down.
- Drain the water.
- Repeat steps 1 through 5 until clear water begins to drain from radiator.

### Checking Fuel Lines

- Inspect fuel lines and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

- If necessary, repair or replace faulty parts.

# ENGINE MAINTENANCE (QR25DE ENGINE)

## Changing Air Cleaner Filter

ELS000J1

Unfasten clamps to change air cleaner filter.

- The viscous paper-type filter does not need cleaning.

## Changing Engine Oil

ELS000J2

### WARNING:

- Be careful not to burn yourself, as the engine oil is hot.
  - Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
1. Warm up engine, and check for oil leakage from engine components.
  2. Stop engine.
  3. Remove drain plug and oil filler cap.
  4. Drain oil and refill with new engine oil.

### Oil Specification and Viscosity

- Refer to [MA-13, "Fluids and Lubricants"](#).

### Oil Capacity (Approximate)

Unit: ℓ (US qt., Imp qt.)

Drain and refill	With oil filter change	3.9 (4 1/8, 3 3/8)
	Without oil filter change	3.7 (3 7/8, 3 1/4)
Dry engine (engine overhaul)		4.4 (4 5/8, 3 7/8)

### CAUTION:

- Be sure to clean drain plug and install with new washer.

**Oil pan drain plug : 29 - 39 N·m (3.0 - 4.0 kg·m, 22 - 29 ft·lb)**

- The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.
- Always use the dipstick to determine when the proper amount of oil is in the engine.

5. Warm up engine and check area around drain plug and oil filter for oil leakage.
6. Stop engine.
7. Check oil level.

# ENGINE MAINTENANCE (QR25DE ENGINE)

## Changing Oil Filter

ELS000J3

1. Remove oil filter with Tool.

**WARNING:**

Be careful not to burn yourself, as the engine and engine oil are hot.

**NOTE:**

The filter is a full-flow cartridge type and is provided with a relief valve.

2. Clean oil filter mounting surface on cylinder block. Coat rubber seal of new oil filter with engine oil.

3. Screw in the oil filter until a slight resistance is felt, then tighten an additional 2/3 turn.
4. Add engine oil. Refer to [MA-26, "Changing Engine Oil"](#).
  - Clean excess oil from engine.

## Changing Spark Plugs (Double Platinum - Tipped Type)

ELS000J4

1. Disconnect ignition coil harness connectors.

2. Remove ignition coils.
3. Remove spark plugs with spark plug socket.

# ENGINE MAINTENANCE (QR25DE ENGINE)

## Spark Plug Types

Hot type	PLFR4A-11
Standard type	PLFR5A-11
Cold type	PLFR6A-11

**Spark plug gap (nominal) : 1.1 mm (0.043 in)**

- Use standard type spark plug for normal condition.
- The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:
  - Frequent engine starts
  - Low ambient temperatures
- The cold type spark plug is suitable when spark knock occurs with the standard type spark plug under conditions such as:
  - Extended highway driving
  - Frequent high engine revolution
- If plug tip is covered with carbon, spark plug cleaner may be used.

### CAUTION:

**Do not use a wire brush for cleaning. If plug tip is covered with carbon, spark plug cleaner may be used.**

**Cleaner air pressure : Less than 588 kPa (6 kg/cm<sup>2</sup>, 85 psi)**

**Cleaning time : less than 20 seconds**

- Checking and adjusting plug gap is not required between change intervals.

4. Install spark plugs.

**Spark plugs : 20 - 29 N-m (2.0 - 3.0 kg-m, 14 - 22 ft-lb)**

5. Install ignition coils and reconnect ignition wires according to numbers indicated on them.

**Ignition coils : 5.4 - 7.3 N-m (0.55 - 0.73 kg-m, 46 - 64 in-lb)**

## Checking EVAP Vapor Lines

ELS000J5

1. Visually inspect EVAP vapor lines for improper attachment, cracks, damage, loose connections, chafing or deterioration.
2. Inspect vacuum relief valve of fuel tank filler cap for clogging, sticking, etc. Refer to [EC-1849, "FUEL TANK VACUUM RELIEF VALVE \(BUILT INTO FUEL FULLER CAP\)"](#).

# CHASSIS AND BODY MAINTENANCE

## CHASSIS AND BODY MAINTENANCE

PFP:00000

### Checking Exhaust System

ELS000J6

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.

### Checking Clutch Fluid Level and Leaks

ELS000J7

If fluid level is extremely low, check clutch system for leaks.

### Checking M/T Oil

ELS000J8

1. Check that transaxle oil is not leaking.
2. Check the transaxle oil level is at the correct level as shown.

#### CAUTION:

Never start the engine while checking the transaxle oil level.

#### Filler plug

RS5F70A : 10 - 19 N·m (1.0 - 2.0 kg·m, 87 - 173 in·lb)  
(QG18DE)

RS5F51A, : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 lb·ft)  
RS6F51H,  
(QR25DE)

### Changing M/T Oil

ELS000J9

1. Drain oil from drain plug and refill with new gear oil.

A  
B  
C  
D  
E  
F  
G  
H  
I  
J  
K  
MA  
M

# CHASSIS AND BODY MAINTENANCE

## 2. Check oil level.

**Oil grade and viscosity** : Refer to [MA-13, "Fluids and Lubricants"](#) .

**Capacity** : RS5F70A (QG18DE)  
3.0 ℓ (3 1/8 US qt, 2 5/8 Imp qt)  
RS5F51A, RS6F51H (QR25DE)  
2.3 ℓ (2 3/8 US qt, 2 Imp qt)

**Drain plug** : RS5F70A (QG18DE)  
10 - 19 N·m (1.0 - 2.0 kg·m, 87 - 173 in·lb)  
RS5F51A, RS6F51H (QR25DE)  
30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)

## Checking A/T Fluid

ELS000JA

1. Check for any A/T fluid leakage and correct as necessary.
2. Warm up the engine.
3. Before driving, the A/T fluid level can be checked at fluid temperatures of 30° to 50°C (86° to 122°F) using the "COLD" range on dipstick.
  - a. Park vehicle on level surface and set parking brake.
  - b. Start engine and move selector lever through each gear position. Leave selector lever in "P" position.
  - c. Check fluid level with engine idling.
  - d. Remove dipstick and note reading. If level is at low side of either range, add fluid to the charging pipe.

### CAUTION:

**Do not overfill.**

- e. Re-insert dipstick into charging pipe as far as it will go.
- f. Remove dipstick and note reading. If reading is at low side of range, add fluid to the charging pipe.

### CAUTION:

**Do not overfill.**

4. Drive vehicle for approximately 5 minutes in urban areas.
5. Re-check fluid level at fluid temperatures of 50° to 80°C (122° to 176°F) using "HOT" range on dipstick.
6. Check the A/T fluid condition.

- If fluid is very dark or smells burned, refer to [AT-64, "FLUID CONDITION CHECK"](#) . Flush cooling system after repair of A/T.
- If the A/T fluid contains any frictional material (clutches, bands), replace the radiator and flush the cooler lines using cleaning solvent and compressed air after repairing the A/T. Refer to [CO-13, "RADIATOR"](#) .

# CHASSIS AND BODY MAINTENANCE

## Changing A/T Fluid

ELS000JB

1. Warm up A/T fluid.
2. Stop engine.
3. Drain A/T fluid from drain plug and refill with new A/T fluid. Always refill same volume with drained fluid.

**Fluid grade** : NISSAN Matic "D" (Continental U.S. and Alaska) or Canada NISSAN Automatic Transmission Fluid. Refer to [MA-13, "Fluids and Lubricants"](#) .

**Fluid capacity (with torque converter)** : RE4F03B (QG18DE) 7.0 ℓ (7 3/8 US qt, 6 1/8 Imp qt)  
RE4F04B (QR25DE) 8.5 ℓ (9 US qt, 7 1/2 Imp qt)

**Drain plug** : 29 - 39 N·m (3.0 - 4.0 kg·m, 22 - 29 ft·lb)

4. Run engine at idle speed for five minutes.
5. Check fluid level and condition. Refer to [MA-30, "Checking A/T Fluid"](#) . If fluid is still dirty, repeat steps 2 through 5.

## Balancing Wheels

ELS000JC

Adjust wheel balance using the road wheel center.

**Wheel balance (maximum allowable unbalance)** : Refer to [MA-31, "Balancing Wheels"](#) .

## Tire Rotation

ELS000JD

- After rotating the tires, adjust the tire pressure.
- Retighten the wheel nuts when the vehicle has been driven for the first 1,000 km (600 miles) or any time the wheel and tire assembly has been removed and installed.
- Tighten wheel nuts in a criss-cross pattern to specification, making several passes.

**Wheel nuts** : 98 - 127 N·m (10 - 12 kg·m, 73 - 93 ft·lb)

# CHASSIS AND BODY MAINTENANCE

## Checking Brake Fluid Level and Leaks

ELS000JE

- Check fluid level in reservoir tank. It should be between MAX and MIN lines on reservoir tank.
- If fluid level is extremely low, check brake system for leaks.
- Release parking brake lever and see if brake warning lamp goes off. If not, check brake system for leaks.

## Checking Brake Lines and Cables

ELS000JF

### CAUTION:

If leakage occurs around joints, retighten or, if necessary, replace damaged parts.

1. Check brake lines (tubes and hoses) for cracks, deterioration and other damage. Replace damaged parts.
2. Check for oil leakage by fully depressing brake pedal while engine is running.

## Changing Brake Fluid

ELS000JG

### CAUTION:

- Refill with new brake fluid "DOT 3". Refer to [MA-13, "Fluids and Lubricants"](#).
- Always keep fluid level higher than minimum line on reservoir tank.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

1. Clean inside of reservoir tank, and refill with new brake fluid.
2. Connect a vinyl tube to each bleeder valve.
3. Drain brake fluid from each air bleeder valve by depressing brake pedal.
4. Refill until brake fluid comes out of each air bleeder valve. Use same procedure as in bleeding hydraulic system to refill brake fluid. Refer to [BR-7, "Bleeding Brake System"](#).

## Checking Disc Brakes

### ROTOR

ELS000JH

Check condition, wear, and damage. Refer to [BR-21, "ROTOR"](#) (front disc brake) and [BR-27, "ROTOR"](#) (rear disc brake).

# CHASSIS AND BODY MAINTENANCE

## CALIPER

Check for leakage. Refer to [BR-21, "CALIPER"](#) (front disc brake) and [BR-27, "CALIPER"](#) (rear disc brake).

## PAD

Check condition and thickness.

### Standard thickness

Front : 22 mm (0.87 in)

Rear : 9 mm (0.35 in)

### Minimum thickness

Front : 20 mm (0.79 in)

Rear : 8 mm (0.31 in)

## Checking Drum Brake WHEEL CYLINDER

Check operation and for leakage. Refer to [BR-33, "WHEEL CYLINDER"](#).

## DRUM

Check condition of inner surface. Refer to [BR-33, "DRUM"](#).

Standard diameter : 203.2 mm (8.000 in)

Maximum inner diameter : 204.5 mm (8.051 in)

A  
B  
C  
D  
E  
F

# CHASSIS AND BODY MAINTENANCE

## LINING

Measure wear and check for damage. Refer to [BR-33, "LINING"](#) .

**Standard thickness** : 4.5 mm (0.177 in)

**Minimum thickness** : 1.5 mm (0.059 in)

## Checking Steering Gear and Linkage

### STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

### STEERING LINKAGE

- Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

## Checking Power Steering Fluid and Lines

### CHECKING FLUID LEVEL

- Check fluid level with engine off.
- Use the correct range of the tank depending on the fluid temperature. Use "HOT" range at fluid temperatures of 50° to 80°C (122° to 176°F). Use "COLD" range at fluid temperatures of 0° to 30°C (32° to 86°F).

#### CAUTION:

**Do not overfill.**

- Recommended fluid is Genuine NISSAN PSF or equivalent. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#) .

### CHECKING LINES

- Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.
- Check rack boots for accumulation of power steering fluid.

# CHASSIS AND BODY MAINTENANCE

## Axle and Suspension Parts

ELS000JL

Check front and rear axle and suspension parts for excessive play, cracks, wear, or other damage.

- Shake each wheel to check for excessive play.
- Rotate each wheel to check for abnormal noise.
  
- Check axle and suspension nuts and bolts for looseness.

- Check strut (shock absorber) for oil leakage or other damage.

- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

# CHASSIS AND BODY MAINTENANCE

## Drive Shaft

ELS000JM

- Check boot and drive shaft for cracks, wear, damage and grease leakage.

## Lubricating Locks, Hinges and Hood Latches

ELS000JN

## Checking Seat Belt, Buckles, Retractors, Anchors and Adjusters

ELS000JO

### CAUTION:

- After any collision, inspect all seat belt assemblies, including retractors and other attached hardware (i.e. anchor bolt, guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision. Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed.
- If any component of seat belt assembly is questionable, do not repair. Replace as seat belt assembly.
- If webbing is cut, frayed, or damaged, replace belt assembly.
- Never oil tongue and buckle.
- Use a Genuine NISSAN seat belt assembly.

For details, refer to "Seat Belt Inspection" in SB section.

## PRECAUTIONS

### Caution

- Do not reuse transaxle oil, once it has been drained.
- Check oil level or replace oil with vehicle on level ground.
- During removal or installation, keep inside of transaxle clear of dust or dirt.
- Check for the correct installation status prior to removal or disassembly. If mating marks are required, be certain they do not interfere with the function of the parts they are applied to.
- In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, use it.
- Be careful not to damage sliding surfaces and mating surfaces.

**DOUBLE-CONE SYNCHRONIZER**

Double-cone synchronizer is used for 1st and 2nd gears to reduce operating force of the shift lever.

SMT837DA

## M/T OIL

Replacement  
DRAINING

1. Start the engine and let it run to warm up the transaxle.
2. Stop the engine. Remove drain plug and drain oil.
3. Set a gasket on the drain plug and install it on the transaxle.

**Drain plug : 10 - 19 N·m (1.0 - 2.0 kg-m, 87 - 173 in-lb)**

**CAUTION:**

**Do not reuse gasket.**

## FILLING

1. Remove filler plug. Fill with new oil until oil level reaches the specified limit near filler plug mounting hole.

**Oil grade : API GL-4**

**Capacity (reference) : Approximately 3.0 ℓ (3 1/8 qt)**

2. After refilling oil, check oil level. Set a new gasket on the filler plug, then install it in the transaxle body.

**Filler plug : 10 - 19 N·m (1.0 - 2.0 kg-m, 87 - 173 in-lb)**

**CAUTION:**

**Do not reuse gasket.**

## Checking

## OIL LEAKAGE AND OIL LEVEL

- Check that oil is not leaking from transaxle.
- Check oil level from filler plug mounting hole as shown.

**CAUTION:**

**Never start engine while checking oil level.**

- Set a new gasket on the filler plug and install it in the transaxle body.

**Filler plug : 10 - 19 N·m (1.0 - 2.0 kg-m, 87 - 173 in-lb)**

**CAUTION:**

**Do not reuse gasket.**

## SIDE OIL SEAL

### Removal and Installation

1. Remove drain plug and drain the oil from transaxle. Refer to [MT-11, "DRAINING"](#) .
2. Remove drive shafts. Refer to [FAX-14, "Removal"](#) .
3. Remove differential oil seal using Tool.

4. Install differential oil seal with a suitable tool.
  - Apply multi-purpose grease to seal lip of oil seal before installing.

5. Install drive shafts. Refer to [FAX-16, "Installation"](#) .
  - Install differential oil seal so that dimensions "A" and "B" are within specifications.

Unit: mm (in)

Model	Dimension "A"	Dimension "B"
QG18DE (RS5F70A)	0.5 (0.020) or less	5.5 - 6.5 (0.217 - 0.256)

6. Refill the transaxle oil and install the drain plug with a new gasket. Refer to [MT-11, "FILLING"](#) .

## POSITION SWITCH

### Position Switch Check

**NOTE:**

For removal and installation of the switches. Refer to [MT-20, "CASE COMPONENTS"](#).

### BACK-UP LAMP SWITCH

- Check continuity.

Gear position	Continuity
Reverse	Yes
Except reverse	No

### PNP SWITCH

- Check continuity.

Gear position	Continuity
Neutral	Yes
Except neutral	No

### STRIKING ROD OIL SEAL

1. Remove transaxle control rod from yoke.
2. Remove retaining pin of yoke using Tool.
  - **Be careful not to damage boot.**

3. Remove the boot.
4. Remove striking rod oil seal with a suitable tool.

5. Install striking rod oil seal using Tool.
  - Apply multi-purpose grease to the seal lip of the oil seal before installing.

6. Install the boot.
7. Install yoke and retaining pin.
8. Connect the transaxle control rod to the yoke.

## TRANSAXLE ASSEMBLY

### Removal and Installation REMOVAL

1. Remove battery negative terminal.
2. Remove air cleaner and air duct.

3. Remove clutch operating cylinder from transaxle. Refer to [CL-11, "Removal"](#).
4. Disconnect back-up lamp switch, VSS sensor, PNP switch, and ground harness connectors.
5. Remove starter motor from transaxle. Refer to [SC-20, "Removal"](#).

# TRANSAXLE ASSEMBLY

[RS5F70A]

6. Remove air breather hose.

7. Remove shift control rod and support rod from transaxle.

8. Remove the drain plug and drain gear oil from transaxle.
9. Remove the drive shafts from the transaxle. Refer to [FAX-14, "Removal"](#).
10. Support engine by placing a jack under oil pan as shown.

**CAUTION:**

**Do not place jack under oil pan drain plug.**

# TRANSAXLE ASSEMBLY

[RS5F70A]

11. Remove LH side and rear side mounting bolts.

12. Remove lower housing bolts.

13. Remove bolts securing transaxle.

14. Lower transaxle while supporting it with a jack.

## INSTALLATION

Installation is in the reverse order of removal.

- Tighten starter motor to transaxle bolts to specification.

**Starter motor to transaxle bolts : 31 - 42 N·m (3.2 - 4.3 kg-m, 23 - 31 ft-lb)**

- Tighten LH and rear mounts to specification.
- Install transaxle to engine, tighten the bolts to specification.

Bolt No.	Tightening torque N·m (kg-m, ft-lb)	" $\ell$ "mm (in)
1	30 - 40 (3.1 - 4.1, 22 - 30)	70 (2.76)
2	30 - 40 (3.1 - 4.1, 22 - 30)	80 (3.15)
3	30 - 40 (3.1 - 4.1, 22 - 30)	30 (1.18)
4*	16 - 21 (1.6 - 2.1, 12 - 15)	25 (0.98)
Front gusset A to engine	30 - 40 (3.1 - 4.1, 22 - 30)	20 (0.79)
Rear gusset B to engine	16 - 21 (1.6 - 2.1, 12 - 15)	16 (0.63)

## Disassembly and Assembly

### DISASSEMBLY

#### Transaxle Case

1. Remove back-up lamp switch, PNP switch, drain plug, and filler plug from transaxle case.

# TRANSAXLE ASSEMBLY

[RS5F70A]

2. Remove snap ring from reverse idler shaft as shown.
3. Remove side cover and rear cover from case.

4. Remove O-ring and mainshaft bearing adjusting shim.
5. Remove reverse idler gear shaft.
  - a. Attach bolt (M6) to thread of reverse idler gear shaft end as shown.
  - b. Pull out the attached bolt (M6), and remove reverse idler gear shaft from case.

6. Remove reverse idler gear, thrust washer (front, rear), and bearing from case.
7. Remove mainshaft rear bearing snap ring from case.

8. Remove check plugs, springs, and check balls from case.

# TRANSAXLE ASSEMBLY

[RS5F70A]

9. Remove transaxle case mounting bolts.

10. Remove input shaft rear bearing adjusting shim from transaxle case.
11. Remove oil gutter from transaxle case.

12. Remove differential side bearing outer race and adjusting shim from transaxle case using Tool.

13. Remove differential oil seal from transaxle case using Tool.

A  
B

14. Remove welch plugs from transaxle case using Tool.

### Clutch Housing

1. Remove transaxle case from clutch housing.
2. Remove check plugs, check springs, check pins, and check balls from housing.

3. Remove 3rd & 4th bracket retaining pin using Tool.

4. Remove 3rd & 4th shift fork stopper ring.

5. Remove 3rd & 4th fork rod.
6. Remove 3rd & 4th shift fork and bracket.

# TRANSAXLE ASSEMBLY

[RS5F70A]

7. Remove interlock plunger and check ball.
8. Remove 5th & reverse bracket stopper ring.

9. Remove retaining pins from 5th & reverse shift fork and 5th & reverse bracket using Tool.

10. Remove 5th & reverse fork rod.
11. Remove interlock pin from 5th & reverse fork rod using Tool.
12. Remove reverse switch bracket and 5th & reverse bracket.
13. Remove check ball from housing.
14. Remove retaining pin for 1st & 2nd shift fork and 1st & 2nd bracket using Tool.

15. Remove 1st & 2nd fork rod.
16. Remove 5th & reverse and 1st & 2nd shift forks, and 1st & 2nd bracket.
17. Remove both input shaft and mainshaft assemblies from housing.

# TRANSAXLE ASSEMBLY

[RS5F70A]

- 18. Remove final drive assembly from housing.
- 19. Remove oil pocket from housing.

- 20. Remove mainshaft bearing retainer from housing.
- 21. Cut off oil channel using a cutter as shown.

- 22. Remove mainshaft front bearing from housing using Tool.

- 23. Using a magnet or other suitable tool, remove selector pin from selector shaft.

- 24. Remove selector shaft and plug, then remove selector using Tool.

# TRANSAXLE ASSEMBLY

[RS5F70A]

25. Remove reamer bolts, then remove select check leaf spring, return spring, steel ball, reverse gate, selector arm, bearing, and bushing.

**CAUTION:**

Be careful not to lose the steel ball.

26. Remove retaining pin and plug from striking lever using Tool.

27. Remove striking rod, then striking lever from housing.
28. Using a flat-head screwdriver or other suitable tool, remove dust seal, input shaft oil seal, and striking rod oil seal from housing.

**CAUTION:**

When removing dust and oil seals, be careful not to damage mounting surfaces of dust seal and oil seal.

29. Remove differential oil seal from housing using Tool.

30. Remove differential side outer race from housing using Tool.

## ASSEMBLY

### Clutch Housing

1. Hammer the new striking rod oil seal into clutch housing as far as it will go using Tool.

**CAUTION:**

**Do not reuse striking rod oil seal.**

2. Hammer the differential oil seal into clutch housing with a suitable tool until it becomes flush with clutch housing end face.

**CAUTION:**

**Do not reuse differential oil seal.**

3. Hammer input shaft oil seal into clutch housing as far as it will go with a suitable tool.

**CAUTION:**

**Do not reuse input shaft oil seal.**

# TRANSAXLE ASSEMBLY

[RS5F70A]

4. Hammer the dust seal into clutch housing as far as it will go using Tool.

**CAUTION:**

**Do not reuse dust seal.**

5. Install outer race of differential side bearing using Tool.

6. Install new oil channel (mainshaft).

**CAUTION:**

**Pay attention to installation direction of oil channel.**

7. Align the notches on mainshaft front bearing and transaxle case. Then, install mainshaft front bearing with a suitable tool.

8. Install mainshaft bearing retainer, tighten bolt to specification.

# TRANSAXLE ASSEMBLY

[RS5F70A]

9. Attach boot, striking rod, and striking lever to clutch housing. Install new retaining pin for striking lever using Tool.

**CAUTION:**

- Before installing striking rod, wrap the end with a vinyl tape or similar product to prevent oil seal from being damaged.
- Do not reuse retaining pin.

10. Hammer the new welch plug (striking lever side) with a general-purpose drift [OD: 12 mm (0.47 in)].

**CAUTION:**

**Do not reuse welch plug.**

11. Install selector, selector shaft, and selector shaft pin into clutch housing.

12. Hammer the new welch plug (selector shaft side) with a general-purpose drift [OD: 12 mm (0.47 in)].

**CAUTION:**

**Do not reuse welch plug.**

13. Install select check leaf spring, return spring, steel ball, reverse gate, selector arm, bushing, and return bearing.

14. Tighten the two reamer bolts to specification.

**CAUTION:**

Use correct reamer bolts for each installation point, because each bolt has a different length.

15. Install oil pocket.

16. Install differential assembly, input shaft assembly, and mainshaft assembly into clutch housing.

**CAUTION:**

Be careful not to damage input shaft oil seal during installation of input shaft assembly.

17. Install 5th & reverse shift fork.

18. Install 1st & 2nd shift fork, bracket, and fork rod.

19. Install retaining pin for 1st & 2nd bracket using Tool.

**CAUTION:**

Do not reuse retaining pin.

20. Install two check balls.

# TRANSAXLE ASSEMBLY

[RS5F70A]

21. Install interlock pin into 5th & reverse fork rod using Tool.
22. Install reverse switch bracket, 5th & reverse bracket, and fork rod.
23. Install new retaining pin for 5th & reverse shift fork and reverse switch bracket using Tool.

**CAUTION:**

**Do not reuse retaining pin.**

24. Install 5th & reverse bracket stopper ring.

**CAUTION:**

**Do not reuse stopper pin.**

25. Install check ball and interlock plunger.
26. Install 3rd & 4th shift fork, bracket, and fork rod.
27. Install 3rd & 4th bracket retaining pin using Tool.

**CAUTION:**

**Do not reuse retaining pin.**

28. Install 3rd & 4th shift fork stopper ring.

**CAUTION:**

**Do not reuse stopper ring.**

29. Install check ball, check pin, and check spring, and apply Anaerobic Liquid Gasket or equivalent onto the check plug. Then, tighten the check plug to specification. Refer to [MT-22, "SHIFT CONTROL COMPONENTS"](#).

## Transaxle Case

1. Insert differential oil seal into differential case with a suitable tool until it becomes flush with case end face.

# TRANSAXLE ASSEMBLY

[RS5F70A]

2. Install welch plug into transaxle case with a suitable tool.

3. Calculate dimension "N" (thickness of adjusting shim) using the following procedure to satisfy specification of end play for differential side bearing.

**End play** : 0.15 - 0.21 mm (0.0059 - 0.0083 in)

**Dimension "N"** = (N1 - N2) + End play

**N** : Thickness of adjusting shim

**N1** : Distance between clutch housing case end face and mounting face of adjusting shim

**N2** : Distance between differential side bearing and transaxle case

Use the "Available Shims" table for the available shim sizes. Refer to [MT-68, "Available Shims — Differential Side Bearing Preload and Adjusting Shim"](#) .

- a. Using dial gauge and scale, measure dimension "N1" between clutch housing case end face and mounting face of adjusting shim.

- b. Install outer race onto differential side bearing on final gear side. Holding the outer race horizontally by hand, rotate the final gear five times or more (for smooth movement of bearing roller).

- c. Using dial gauge and scale as shown, measure dimension "N2" between differential side bearing outer race and transaxle case end face.

# TRANSAXLE ASSEMBLY

[RS5F70A]

4. Install the selected shim and bearing outer race using Tool.

5. Measure the turning torque of the final drive assembly using Tool.

**Turning torque of final drive assembly (New bearing) : 2.9 - 6.9 N-m (30 - 70 kg-cm, 26 - 61 in-lb)**

- When the old bearing is used again, turning torque will be slightly less than the above.
- Make sure turning torque is close to the specified range.
- Changes in turning torque of final drive assembly per revolution should be within 1.0 N-m (10 kg-cm, 8.7 in-lb) without binding.

6. Calculate dimension "O" (thickness of adjusting shim) using the following procedure to satisfy specification of end play for input shaft rear bearing.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

**Dimension "O" = (O1 - O2) + End play**

**O : Thickness of adjusting shim**

**O1 : Distance between transaxle case end face and mounting face of adjusting shim**

**O2 : Distance between clutch housing case end face and end face of input shaft rear bearing**

Use the "Available Shims" table for the available shim sizes. Refer to [MT-65, "Available Adjusting Shims"](#).

- a. Using block gauge, scale, and dial gauge, measure dimension "O1" between transaxle case end face and mounting face of adjusting shim.

# TRANSAXLE ASSEMBLY

[RS5F70A]

- b. Using block gauge, scale, and dial gauge as shown in the figure, measure dimension "O2" between clutch housing case end face and end face of input shaft rear bearing.

7. Install selected input shaft rear bearing adjusting shim onto input shaft.  
8. Install oil gutter into transaxle case.

9. Clean mating surfaces of clutch housing and transaxle case. Check for cracks and damage, then apply sealant. Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#).

10. Install transaxle case onto clutch housing, and tighten mounting bolts with specified torque.

**Transaxle case mounting bolts**

**: Refer to [MT-20, "CASE COMPONENTS"](#).**

# TRANSAXLE ASSEMBLY

[RS5F70A]

11. Apply sealant to threads of back-up lamp switch, PNP switch, and drain plug, then install them. Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#).

**NOTE:**

Fill the case with oil before installation of filler plug.

12. Install speedometer pinion assembly.

**CAUTION:**

**Do not reuse O-ring.**

13. Install check springs and check balls. Apply sealant to the thread on the check plug, and install it.

14. Calculate thickness of adjusting shim using the following procedure to satisfy specification of end play for mainshaft rear bearing.

- End play** : 0 - 0.06 mm (0 - 0.0024 in)
- Dimension "P"** = (P1 - P2) + End play
- P** : Thickness of adjusting shim
- P1** : Distance between transaxle case end face and mainshaft rear bearing
- P2** : Distance between adjusting shim end face of rear cover and transaxle mounting face

Use the "Available Shims" table for the available shim sizes. Refer to [MT-65, "Available Adjusting Shims"](#).

- a. Using dial gauge as shown in the figure, measure dimension "P1" between transaxle case end face and mainshaft rear bearing.

# TRANSAXLE ASSEMBLY

[RS5F70A]

- b. Using dial gauge as shown in the figure, measure dimension "P2" between adjusting shim mounting face of rear cover and transaxle mounting face.

15. Using snap ring pliers and flat-head screwdriver as shown, install snap ring.

**CAUTION:**

**Do not reuse snap ring.**

16. Install selected mainshaft adjusting shim.

17. Install reverse idler gear, O-ring, thrust washers (front and rear), and bearing onto reverse idler shaft.

18. Install snap ring into transaxle case using snap ring pliers.

**CAUTION:**

- Do not reuse snap ring.
- Do not reuse O-ring.
- Before installation, apply gear oil to O-ring.

19. Using feeler gauge, measure the end play of snap ring, and select a snap ring suitable to satisfy the following specification.

**End play : 0.05 - 0.25 mm (0.0020 - 0.0098 in)**

Use the "Available Shims" table for the available shim sizes. Refer to [MT-64, "Available Snap Rings"](#).

## TRANSAXLE ASSEMBLY

[RS5F70A]

20. Install selected snap ring with a suitable tool.

**CAUTION:**  
Do not reuse snap ring.

21. Apply gear oil to rear cover O-ring, and install rear cover, side cover gasket, and side cover. Then tighten mounting bolts with specified torque.

Use the "Available Shims" table for the available shim sizes. Refer to [MT-20, "CASE COMPONENTS"](#) .

**CAUTION:**  
Do not reuse mounting bolts for rear cover and side cover.

## INPUT SHAFT AND GEARS

### Disassembly

1. Before disassembly, measure the end plays of 3rd and 4th input gears with a suitable tool. Refer to [MT-64, "Gear End Play"](#).
  - If end play is not within specification, disassemble and check the parts.

2. Remove oil channel from input shaft rear bearing.

3. Press out input shaft rear bearing using Tool.

4. Remove C-ring holder.
5. Remove 5th gear rear C-ring.

# INPUT SHAFT AND GEARS

[RS5F70A]

6. Remove 5th input gear from input shaft using Tool.
7. Remove 5th gear front C-ring.

8. Remove 4th input gear, baulk ring, 4th gear needle bearing, and 4th gear C-ring from input shaft.
9. Press out both 3rd & 4th synchronizer hub assembly and 3rd input gear from input shaft using Tool.
10. Remove 3rd gear needle bearing.

11. Press out input shaft front bearing from input shaft using Tool.

ECS005TR

## Inspection GEAR AND SHAFT

- Check shaft for cracks, wear or bending.
- Check gears for excessive wear, chips or cracks.

## SYNCHRONIZERS

- Check spline area of coupling sleeves, hubs and gears for wear or cracks.
- Check baulk rings for cracks or deformation.
- Check insert springs for wear or deformation.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

- Measure the movement (free play in dimension "L") of 3rd & 4th coupling sleeve with the end fixed and the other end lifted as shown in the figure. If the movement exceeds specification, replace the sleeve.

Coupling sleeve	Dimension "L"
3rd & 4th	0 - 0.95 mm (0 - 0.0374 in)

- Measure clearance between baulk ring and gear. Refer to [MT-64, "Clearance Between Baulk Ring and Gear"](#) .

## BEARING

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.

## Assembly

1. Press on input shaft front bearing using Tool.

2. Install 3rd gear needle, 3rd input gear and 3rd gear baulk ring bearing to input shaft.
3. Install spread spring, shifting insert, and 3rd & 4th synchronizer hub onto 3rd & 4th coupling sleeve.

- Pay attention to the shape of spread spring and shifting insert for correct assembly.  
Do not install spread spring hook onto the same shifting insert.

**CAUTION:**

**Do not reuse 3rd & 4th synchronizer hub.**

- Install synchronizer hub with its three grooves facing the front side (3rd input gear side).

# INPUT SHAFT AND GEARS

[RS5F70A]

- Install 3rd & 4th coupling sleeve with its chamfered surface facing the 4th input gear side.

4. Position bearing replacer to the front side of input shaft front bearing.
  - Align grooves of shifting insert and 3rd gear baulk ring. Then, press it onto 3rd & 4th synchronizer hub assembly using a drift.

5. Install 4th gear C-ring onto input shaft using Tool.
6. Measure the end play of 3rd & 4th synchronizer hub with a suitable tool, and check if it is within allowable specification.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

7. If not within specification, adjust the end play by changing thickness of 4th (input) gear C-ring. Refer to [MT-64, "Available C-rings"](#).

8. Install 4th gear needle bearing, 4th gear baulk ring, and 5th gear front C-ring.

9. Install 4th input gear using Tool.

# INPUT SHAFT AND GEARS

[RS5F70A]

10. Position 5th input gear as shown, to install it on input shaft.

11. Install 5th input gear using Tool as shown.

**CAUTION:**  
Do not reuse 5th input gear.

12. Install 5th gear rear C-ring onto input shaft using Tool.

13. Measure the end play of 5th input gear with a suitable tool, and check if it is within the allowable specification below.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

14. If not within specification, adjust the end play by changing thickness of the 5th (input gear) rear C-ring. Refer to [MT-64, "Available C-rings"](#).

15. Install C-ring holder onto 5th gear rear C-ring using Tool.

**CAUTION:**  
Do not reuse C-ring holder.

16. Install input shaft rear bearing using Tool.

**CAUTION:**  
Install input shaft rear bearing with its brown surface facing the input gear side.

# INPUT SHAFT AND GEARS

[RS5F70A]

17. Install oil channel onto input shaft.

18. Measure gear end play as a final check. Refer to [MT-64, "Gear End Play"](#) .

## MAINSHAFT AND GEARS

### Disassembly

1. Before disassembly, measure gear end play with a suitable tool. Refer to [MT-64, "Gear End Play"](#) .
  - If end play is not within the specified limit, disassemble and check the parts.

2. Remove snap ring with a suitable tool.

3. Remove C-ring holder and mainshaft C-ring.

4. Press out mainshaft rear bearing from mainshaft using Tool.

# MAINSHAFT AND GEARS

[RS5F70A]

5. Remove mainshaft thrust washer.

6. Remove snap ring from mainshaft. Then, remove reverse main gear assembly, reverse gear needle bearing, and reverse gear baulk ring.
7. Place bearing replacer between 5th & reverse synchronizer hub and 5th main gear, and press out both reverse gear bushing and 5th & reverse synchronizer assembly using Tool.

8. Remove 5th main gear, 5th gear baulk ring, and 5th gear needle bearing.
9. Place bearing replacer between 3rd and 4th main gears, and press out both 5th gear bushing and 4th main gear using Tool.

10. Remove mainshaft adjusting shim and spacer.

11. Place bearing replacer between 2nd main gear and 1st & 2nd synchronizer hub, and press out both 3rd and 2nd main gears.
12. Remove 2nd double cone assembly, 2nd gear bushing, and coupling sleeve assembly.

13. Place bearing replacer on 1st gear front side, and press out all of 2nd gear bushing, 1st & 2nd synchronizer hub, 1st main gear, and 1st double cone using Tool.

14. Remove 1st gear needle bearing.

## Inspection GEAR AND SHAFT

ECS005TU

- Check shaft for cracks, wear or bending.
- Check gears for excessive wear, chips or cracks.

## SYNCHRONIZERS

- Check spline area of coupling sleeves, hubs and gears for wear or cracks.
- Check baulk rings for cracks or deformation.
- Check insert springs for wear or deformation.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

# MAINSHAFT AND GEARS

[RS5F70A]

- Measure the movement (play, dimension "L") of 1st & 2nd coupling sleeve and 5th & reverse coupling sleeve with their end fixed and the other end lifted as shown in the figure. If the movement exceeds specification, replace the sleeve.

Coupling sleeve	Length "L"
1st & 2nd	0 - 0.68 mm (0 - 0.0268 in)
5th & Reverse	0 - 0.89 mm (0 - 0.0350 in)

- Measure clearance between baulk ring and gear. Refer to [MT-64, "Clearance Between Baulk Ring and Gear"](#).

## BEARING

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.

- Measure wear of inner and outer baulk ring as shown.

- Place baulk rings in position on synchronizer cone.
- While holding baulk ring against synchronizer cone as far as it will go, measure dimensions "A" and "B" using Tool.

**Standard "A": 0.6 - 0.8 mm (0.024 - 0.031 in)**

**"B": 0.6 - 1.1 mm (0.024 - 0.043 in)**

**Wear limit : 0.2 mm (0.008 in)**

- If dimension "A" or "B" is smaller than the wear limit, replace outer baulk ring, inner baulk ring and synchronizer cone as a set.

### Assembly

1. Install 1st gear needle bearing and 1st main gear onto mainshaft.

2. Install 1st double cone assembly onto mainshaft.
3. Install 1st & 2nd synchronizer hub with its three grooves facing the front side (1st main gear side) onto mainshaft.

**CAUTION:**

**Do not reuse 1st & 2nd synchronizer hub.**

4. Install 1st & 2nd synchronizer hub using Tool.

5. Install insert spring onto 1st & 2nd coupling sleeve.

# MAINSHAFT AND GEARS

[RS5F70A]

6. Install 1st & 2nd coupling sleeve with its chamfered surface facing the 1st main gear side onto 1st & 2nd synchronizer hub.

7. Install 2nd gear bushing with its flange surface facing 1st & 2nd synchronizer hub side using Tool.

8. Install 2nd needle bearing, 2nd double cone assembly, and 2nd main gear onto mainshaft using Tool.
9. Position 3rd main gear as shown, and install it using Tool.

**CAUTION:**

**Do not reuse 3rd main gear.**

10. Install spacer and mainshaft adjusting shim onto mainshaft.
11. Select a mainshaft adjusting shim suitable to satisfy the following specification of dimension "L" and install it onto mainshaft.

**Specification of dimension "L"** : 151.35 - 151.45 mm (5.9586 - 5.9626 in)

**Mainshaft adjusting shims** : Refer to [MT-65, "Available Adjusting Shims"](#) .

# MAINSHAFT AND GEARS

[RS5F70A]

12. Position 4th main gear as shown, and install it onto mainshaft.

13. Install 4th main gear onto mainshaft using Tool.

**CAUTION:**  
Do not reuse 4th main gear.

14. Install 5th gear bushing with its flange surface facing the 4th main gear side using Tool.

15. Install 5th needle bearing, 5th main gear, and 5th gear baulk ring onto mainshaft.

16. Being careful of the following points, install spread spring, shifting insert, and 5th & reverse synchronizer hub onto 5th & reverse coupling sleeve.

# MAINSHAFT AND GEARS

[RS5F70A]

- Pay attention to the shape of spread spring and shifting insert for correct assembly.  
Do not install spread spring hook onto the same shifting insert.
- Install synchronizer hub with its three grooves facing the front side (5th main gear side).

**CAUTION:**

**Do not reuse 5th & reverse synchronizer hub.**

- Install 5th & reverse coupling sleeve with its chamfered surface facing the reverse main gear side.

17. Install 5th & reverse synchronizer hub assembly using Tool.

18. Install reverse gear baulk ring using Tool.

19. Install reverse gear bushing using Tool.

20. Install reverse gear needle bearing using Tool.

21. Install sub-gear, sub-gear washer, and snap ring onto reverse main gear.

**CAUTION:**

- Pay attention to direction of sub-gear washer.
- Do not reuse snap ring.

22. Install reverse main gear assembly onto mainshaft.
23. Select a thrust washer suitable to satisfy the following specification of dimension "M" as shown, and install it onto mainshaft.

**Specification of dimension "M"** : 244.20 - 244.30 mm (9.6142 - 9.6181 in)  
**Available thrust washers** : Refer to [MT-67. "Available Thrust Washer"](#) .

24. Install mainshaft rear bearing using Tool.

25. Install mainshaft C-ring.
26. Using feeler gauge, measure the end play of mainshaft rear bearing with a suitable tool, and check if it satisfies the following specification.

**End play** : 0 - 0.06 mm (0 - 0.0024 in)  
**Mainshaft C-rings** : Refer to [MT-64. "Available C-rings"](#) .

27. Install C-ring holder.

# MAINSHAFT AND GEARS

[RS5F70A]

28. Install snap ring with a suitable tool.

29. Measure gear end play as a final check. Refer to [MT-64, "Gear End Play"](#) .

## FINAL DRIVE

PFP:38411

### Pre-inspection DIFFERENTIAL CASE SIDE

ECS005TW

1. Clean final drive assembly sufficiently to prevent side gear thrust washer, differential case, side gear, and other parts from sticking by gear oil.
2. Upright the differential case so that the side gear to be measured faces upward.
3. Place final drive adapter and dial gauge onto side gear. Move side gear up and down, and measure the clearance using Tool.

**Clearance between side gear and differential case : 0.1 - 0.2 mm (0.004 - 0.008 in)**

4. If not within specification, adjust the clearance by changing thrust washer thickness.
5. Turn differential case upside down, and measure the clearance between side gear and differential case on the other side in the same way using Tool.

### Disassembly

ECS005TX

1. Remove the final gear bolts. Then, separate the final gear from differential case.
2. Make a notch and remove speedometer drive gear using a scraper or other suitable tool.
  - **Bearing replacer cannot be positioned unless speedometer drive gear is removed.**

3. Remove differential side bearing of final gear side using Tool.
4. Turn differential case upside down, and remove differential side bearing of speedometer drive gear side using Tool.
  - **Be careful not to mix up the differential side bearings.**

5. Remove speedometer stopper.
6. Remove lock pins from pinion mate shaft using Tool.

7. Remove pinion mate shaft.
8. Rotate pinion mate gear, and remove pinion mate gear, pinion mate thrust washer, side gear, and side gear thrust washer from differential case.

ECS005TY

### Inspection GEAR, WASHER, SHAFT AND CASE

- Check mating surfaces of differential case, side gears and pinion mate gears.
- Check washers for wear.

WCIA0004E

### BEARING

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.

#### **CAUTION:**

**When replacing tapered roller bearing, replace outer and inner race as a set.**

SPD715

ECS005TZ

### Assembly

1. Apply gear oil to sliding area of differential case, each gear, and thrust washer.
2. Install side gear thrust washer and side gear into differential case.
3. Position pinion mate gear and pinion mate thrust washer diagonally, and install them into differential case while rotating.

SMT062A

4. Insert pinion mate shaft into differential case.

5. Upright the differential case so that its side gear to be measured faces upward.
6. Place preload adapter and dial gauge onto side gear. Move side gear up and down, and measure the clearance using Tool.
7. Turn differential case upside down, and measure the clearance between side gear and differential case on the other side in the same way using Tool.

**Clearance of side gear and differential case** : 0.1 - 0.2 mm (0.004 - 0.008 in)

**Differential side gear thrust washers** : Refer to [MT-67, "Available Washers"](#) .

8. Install retaining pin using Tool.

- **Make sure that retaining pin is flush with case.**

9. Align and install speedometer drive gear into differential case.
10. Install speedometer stopper.

# FINAL DRIVE

[RS5F70A]

11. Install differential side bearing using Tool.
12. Turn differential case upside down, and install another differential side bearing on the other side in the same way using Tool.

13. Install the final gear into the differential case. Apply sealant onto the final gear bolts, and tighten them in the order as shown to the specified torque.

**Final gear bolts** : Refer to [MT-23, "FINAL DRIVE COMPONENTS"](#) .

## SHIFT CONTROL

PFP:32982

### Inspection

ECS005U0

- Check if the width of shift fork hook (sliding area with coupling sleeve) is within allowable specification below.

Item	One-side wear specification	Sliding width of new part
1st & 2nd	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
3rd & 4th	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
5th & reverse	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)

- Check if shift check groove of fork rod or 5th & reverse check groove is worn, or has any other abnormalities.

# PRECAUTIONS

[RS5F51A]

## PRECAUTIONS

PFP:00001

### Cautions

ECS005UA

- Do not reuse transaxle oil, once it has been drained.
- Check oil level or replace oil with vehicle on level ground.
- During removal or installation, keep inside of transaxle clear of dust or dirt.
- Check for the correct installation status prior to removal or disassembly. If mating marks are required, be certain they do not interfere with the function of the parts they are applied to.
- In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, observe it.
- Be careful not to damage sliding surfaces and mating surfaces.

**M/T OIL****Replacement  
DRAINING**

1. Start the engine and let it run to warm up the transaxle.
2. Stop the engine. Remove drain plug and drain oil.
3. Set a new gasket on the drain plug and install it on the transaxle.

**Drain plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

**FILLING**

1. Remove filler plug. Fill with new oil until oil level reaches the specified limit near filler plug mounting hole.

**Oil grade : API GL-4**

**Capacity (reference) : Approximately 2.3 ℓ (2 3/8 qt)**

2. After refilling oil, check oil level. Assemble new gasket on to filler plug, then install it on the transaxle body.

**Filler plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

**Checking  
OIL LEAKAGE AND OIL LEVEL**

ECS005UG

- Check that oil is not leaking from transaxle.
- Check oil level from filler plug mounting hole as shown.

**CAUTION:**

**Never start engine while checking oil level.**

- Set a new gasket on the filler plug and install it on the transaxle.

**Filler plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

WCIA0022E

## SIDE OIL SEAL

### Removal and Installation

#### REMOVAL

1. Remove the drive shaft from the transaxle body. Refer to [FAX-14, "Removal"](#).
2. Remove oil seal with a slotted screwdriver.

**CAUTION:**

Be careful not to damage the case surface when removing the oil seal.

#### INSTALLATION

Installation is in the reverse order of removal.

- Using Tool (drift), drive the oil seal straight until it protrudes from the case end equal to dimension "A" as shown.

**Dimension "A" : Within 0.5 mm (0.02 in) or flush with the case.**

#### Special Service Tool

Drift to be used	ST30720000
------------------	------------

**CAUTION:**

- When installing oil seal, apply multi-purpose grease to oil seal lips.
  - Oil seal is not reusable.
- Check the oil level after installation. Refer to [MT-76, "Checking"](#).

## POSITION SWITCH

### Checking

**NOTE:**

For removal and installation of the switches. Refer to [MT-84, "Component Parts"](#) .

### BACK-UP LAMP SWITCH

- Check continuity.

Gear position	Continuity
Reverse	Yes
Except reverse	No

### PARK/NEUTRAL POSITION SWITCH

- Check continuity.

Gear position	Continuity
Neutral	Yes
Except neutral	No

**CAUTION:**

- Note that the select side lock plate for securing the control cable is different from the one on the shift side.
- After assembly, make sure selector lever automatically returns to Neutral when it is moved to 1st, 2nd, or Reverse.

## Cable Adjustment

ECS0077V

**NOTE:**

After installation of the select cable, the cable must be adjusted for proper operation. This adjustment is performed before installing the interior console and shift boot.

1. Slide clip "B" from under clip "A" as shown.

2. Shift the control lever to the neutral position.

**CAUTION:**

**Do not move the control lever when adjusting the cables.**

3. Push clip "A" into the cable end case until it snaps into place as shown.

4. Slide clip "B" back over clip "A" until it snaps into place and holds clip "A" in place as shown.

## AIR BREATHER HOSE

### Removal and Installation

Refer to the illustration for air breather hose removal and installation information.

**CAUTION:**

- Make sure there are no pinched or restricted areas on the air breather hose caused by bending or winding when installing it.
- Be sure to insert hose into the transaxle tube until overlap area reaches the spool.

## TRANSAXLE ASSEMBLY

### Removal and Installation

### REMOVAL

1. Remove air cleaner and air duct.
  2. Remove battery.
  3. Remove the air breather hose. Refer to [MT-81, "Removal and Installation"](#).
  4. Remove clutch operating cylinder.
- CAUTION:**  
**Do not depress clutch pedal during removal procedure.**
5. Remove engine under cover.
  6. Remove the control cable from the transaxle. Refer to [MT-79, "Removal and Installation of Control Device and Cable"](#).
  7. Drain gear oil from transaxle. Refer to [MT-76, "Replacement"](#).
  8. Disconnect connectors and harnesses for:
    - PNP switch.
    - Speed sensor.
    - Back-up lamp switch.
    - Ground.
  9. Remove the exhaust front tube. Refer to [EX-3, "Removal and Installation"](#).
  10. Remove the drive shafts. Refer to [FAX-14, "Removal"](#).
  11. Remove starter motor. Refer to [SC-20, "Removal and Installation"](#).
  12. Place a jack under the transaxle.

**CAUTION:**

**When setting the jack, be careful not to bring it into contact with the switch.**

13. Remove the center member, the engine insulator and the engine mount bracket.

# TRANSAXLE ASSEMBLY

[RS5F51A]

14. Support the engine by placing a jack under the oil pan. Do not position the jack so it is in contact with the drain plug.
15. Remove the bolts that mount the engine to the transaxle.
16. Remove the transaxle from the vehicle.

## INSTALLATION

Installation is the reverse order of removal.

- When installing the transaxle to the engine, use the tightening torque and sequence shown below:

**CAUTION:**

**When installing transaxle, be careful not to bring transaxle input shaft into contact with the clutch cover.**

Bolt No.	1	2	3	4	5	6	7	8	9	10
"ℓ" mm (in)	40	82	47	47	52	40	40	40	30	30
Tightening torque N·m (kg·m, ft·lb)	30 - 40 (3.1 - 4.1, 22 - 29)	70 - 80 (7.1 - 8.1, 52 - 59)				30 - 40 (3.1 - 4.1, 22 - 29)				

- After installation, check oil level, and look for leaks and loose mechanisms.

## Disassembly and Assembly

### DISASSEMBLY

ECS005UN

1. Remove drain plug and filler plug.
2. Remove park/neutral position switch and back-up lamp switch.
3. After removing shift check and stopper bolt, remove control assembly.

# TRANSAXLE ASSEMBLY

[RS5F51A]

4. Remove check plugs (3 pieces), check springs (3 pieces), check balls (3 pieces) and shift check sleeve (1 piece) as shown.

5. Remove transaxle case fixing bolts as shown.

6. Remove bore plug.

**CAUTION:**

**Be careful not to damage transaxle case.**

7. While spreading the snap ring of mainshaft rear bearing located at bore plug hole, remove transaxle case.  
8. Remove oil gutter, baffle plate.  
9. Remove snap ring, mainshaft rear bearing adjusting shim and input shaft rear bearing adjusting shim from transaxle case.  
10. Remove differential side bearing outer race (transaxle case side) and the adjustment shim using Tool as shown.

11. Remove the welch plug as shown.

# TRANSAXLE ASSEMBLY

[RS5F51A]

12. Remove differential oil seal as shown.

13. Remove magnet from clutch housing.

14. With shift lever in 5th position, remove the bracket bolts from the reverse lever assembly. Lift the reverse lever assembly to remove.

**CAUTION:**

**Be careful not to lose shifter cap.**

15. Pull out reverse fork rod then remove reverse shift fork.

16. Shift 3rd & 4th fork rod to 3rd position. Remove retaining pin of 5th shift fork using pin punch.

17. Remove stopper rings for 5th & reverse bracket.

18. Pull out 5th & reverse fork rod and remove 5th shift fork and 5th & reverse bracket.

19. Remove check balls (2 pieces) and inter lock pin.

# TRANSAXLE ASSEMBLY

[RS5F51A]

20. Remove retaining pin of 3rd & 4th bracket using pin punch.

21. Remove stopper rings for 3rd & 4th shift fork.  
22. Pull out 3rd & 4th fork rod and remove 3rd & 4th shift fork and bracket.  
23. Remove shift check sleeve from clutch housing.  
24. Remove retaining pin of 1st & 2nd shift fork using pin punch.

25. Pull out 1st & 2nd shift fork with bracket.  
26. Remove 1st & 2nd shift fork.  
27. Remove retaining pin of 1st & 2nd bracket using pin punch and separate 1st & 2nd fork rod and bracket.  
28. Remove gear components from clutch housing.

- a. While tapping input shaft with plastic hammer, remove input shaft assembly, mainshaft assembly and reverse idler gear assembly as a set.

**CAUTION:**

**Always withdraw mainshaft straight out. Failure to do so can damage resin oil channel on clutch housing side.**

- b. Remove final drive assembly.

29. Remove mainshaft bearing retainer and then the mainshaft front bearing using Tool as shown.

30. Remove oil channel on mainshaft side.  
31. Remove differential oil seal (clutch housing side).

# TRANSAXLE ASSEMBLY

[RS5F51A]

32. Remove differential side bearing outer race (clutch housing side).

33. Remove input shaft oil seal.

**CAUTION:**  
Be careful not to damage clutch housing.

## ASSEMBLY

1. Install a new input shaft oil seal from the clutch housing end, to a depth of 1.8 - 2.8 mm (0.071 - 0.110 in) using Tool as shown.

**CAUTION:**  
Oil seals are not reusable.

2. Install a new differential oil seal using Tool as shown.

**CAUTION:**  
Oil seals are not reusable.

# TRANSAXLE ASSEMBLY

[RS5F51A]

3. Install oil channel on mainshaft side.

**CAUTION:**

Position oil channel with specified orientation for installation as shown.

4. Install mainshaft front bearing using Tool as shown.

**CAUTION:**

Install with orientation as shown.

5. Install bearing retainer for mainshaft front bearing.

**Bearing retainer bolt : 6.27 - 8.33 N·m (0.64 - 0.84 kg·m, 56 - 73 in·lb)**

**CAUTION:**

Install with the punched surface facing up.

6. Install differential side bearing outer race using Tool as shown.

7. Install final drive assembly into clutch housing.

# TRANSAXLE ASSEMBLY

[RS5F51A]

8. Install input shaft assembly, mainshaft assembly, and reverse idler gear assembly into clutch housing.

**CAUTION:**

Be sure not to damage input shaft oil seal.

9. Install 1st-2nd fork rod bracket onto 1st-2nd fork rod, and then install a new retaining pin.

**CAUTION:**

Retaining pins are not reusable.

10. Install 1st-2nd fork rod and 1st-2nd shift fork, and then install a new retaining pin.

**CAUTION:**

Retaining pins are not reusable.

11. Install shift check sleeve.

12. Install 3rd-4th bracket, 3rd-4th shift fork, and 3rd-4th fork rod with interlock pin.

13. Install a new stopper ring onto 3rd-4th shift fork.

**CAUTION:**

Stopper rings are not reusable.

14. Install a new retaining pin onto 3rd-4th bracket.

**CAUTION:**

Retaining pins are not reusable.

15. Install 2 check balls.

# TRANSAXLE ASSEMBLY

[RS5F51A]

16. Install 5th-reverse bracket, 5th shift fork, and 5th-reverse fork rod.
17. Install a new stopper ring onto 5th-reverse bracket.

**CAUTION:**

**Stopper rings are not reusable.**

18. Install a new retaining pin onto 5th shift fork.

**CAUTION:**

**Retaining pins are not reusable.**

19. Install reverse shift fork and reverse fork rod.
20. Install reverse lever assembly following procedures below.
  - a. Install shifter cap onto reverse lever assembly cam, and then install them onto reverse shift fork.

**CAUTION:**

**Do not drop shifter cap.**

- b. While lifting reverse shift fork, align cam with 5th-reverse fork rod bracket.

- c. Install the reverse lever assembly and tighten the reverse lever assembly bolts to specification.

**Reverse lever assembly bolts : 11.8 - 15.6 N-m (1.2 - 1.5 kg-m, 9 - 11 ft-lb)**

21. Install the magnet onto clutch housing.
22. Install selected input shaft adjusting shim onto input shaft.
  - For selection of adjusting shims, refer to [MT-98, "INPUTSHAFT END PLAY"](#).
23. Install baffle plate and oil gutter.
24. Install transaxle case following procedures below.

# TRANSAXLE ASSEMBLY

[RS5F51A]

- a. Install selected mainshaft rear bearing adjusting shim into transaxle case.
  - For selection of adjusting shims, refer to [MT-100, "MAINSHAFT END PLAY"](#) .
- b. Temporarily install a new snap ring for the mainshaft rear bearing into transaxle case.

**CAUTION:**

**Do not reuse the snap ring.**

- c. Apply sealant to mating surfaces of transaxle case and clutch housing. Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#) .

**CAUTION:**

**Remove old sealant adhering to mounting surfaces. Also remove any moisture, oil, or foreign material adhering to application and mounting surfaces.**

- d. With snap ring of mainshaft rear bearing temporarily installed, place transaxle case over clutch housing as shown.

- e. Through bore plug mounting hole, with snap ring stretched, and lift up mainshaft assembly from the control assembly mounting hole.
- f. Securely install snap ring onto mainshaft rear bearing as shown.

# TRANSAXLE ASSEMBLY

[RS5F51A]

- g. Tighten mounting bolts "A" and "B" to specification as shown.

**Bolt A** : 50.0 - 53.9 N·m (5.1 - 5.4 kg-m, 37 - 39 ft-lb)

**Bolt B** : 63.0 - 66.9 N·m (6.5 - 6.8 kg-m, 47 - 49 ft-lb)

**CAUTION:**

Always replace bolts "B" as they are self-sealing bolts.

- h. Install control assembly.

**CAUTION:**

Do not reuse the O-ring.

- i. Install a new shift check and a new stopper bolt.

**CAUTION:**

Shift check and stopper bolt are not reusable.

25. Install a new bore plug using Tool as shown.

**CAUTION:**

Bore plugs are not reusable.

26. Install a new welch plug using Tool as shown.

**CAUTION:**

Do not reuse the welch plug.

27. Install 1 shift check sleeve, 3 check balls, 3 check springs, and 3 new check ball plugs as shown.

**CAUTION:**

Check ball plugs are not reusable.

# TRANSAXLE ASSEMBLY

[RS5F51A]

28. Apply sealant to threads of PNP switch and back-up lamp switch, then install them into transaxle case. Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#).

29. Install new gaskets onto drain plug and filler plug, and then install them into transaxle case.

**CAUTION:**

- Gaskets are not reusable.
- After oil is filled, tighten filler plug to specified torque.

ECS005UO

## Adjustment INPUTSHAFT END PLAY

- When adjusting input shaft end play, select adjusting shim for input shaft bearing. To select adjusting shim, measure clearance between transaxle case and input shaft rear bearing.
- Calculate dimension "O" (thickness of adjusting shim) using the following procedure to meet specification of end play for input shaft rear bearing.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

**Dimension "O" = (O<sub>1</sub> - O<sub>2</sub>) + End play**

**O : Thickness of adjusting shim**

**O<sub>1</sub> : Distance between transaxle case end face and mounting face of adjusting shim**

**O<sub>2</sub> : Distance between clutch housing case end face and end face of input shaft rear bearing**

## Adjusting Shim

Shim thickness	Part number	Shim thickness	Part number	Shim thickness	Part number
0.40 mm (0.0157 in)	32225 8H500	0.88 mm (0.0346 in)	32225 8H512	1.36 mm (0.0520 in)	32225 8H524
0.44 mm (0.0173 in)	32225 8H501	0.92 mm (0.0362 in)	32225 8H513	1.40 mm (0.0551 in)	32225 8H560
0.48 mm (0.0189 in)	32225 8H502	0.96 mm (0.0378 in)	32225 8H514	1.44 mm (0.0567 in)	32225 8H561
0.52 mm (0.0205 in)	32225 8H503	1.00 mm (0.0396 in)	32225 8H515	1.48 mm (0.0583 in)	32225 8H562
0.56 mm (0.0220 in)	32225 8H504	1.04 mm (0.0409 in)	32225 8H516	1.52 mm (0.0598 in)	32225 8H563
0.60 mm (0.0236 in)	32225 8H505	1.08 mm (0.0425 in)	32225 8H517	1.56 mm (0.0614 in)	32225 8H564
0.64 mm (0.0252 in)	32225 8H506	1.12 mm (0.0441 in)	32225 8H518	1.60 mm (0.0630 in)	32225 8H565
0.68 mm (0.0268 in)	32225 8H507	1.16 mm (0.0457 in)	32225 8H519	1.64 mm (0.0646 in)	32225 8H566
0.72 mm (0.0283 in)	32225 8H508	1.20 mm (0.0472 in)	32225 8H520	1.68 mm (0.0661 in)	32225 8H567
0.76 mm (0.0299 in)	32225 8H509	1.24 mm (0.0488 in)	32225 8H521	1.72 mm (0.0677 in)	32225 8H568
0.80 mm (0.0315 in)	32225 8H510	1.28 mm (0.0504 in)	32225 8H522		
0.84 mm (0.0331 in)	32225 8H511	1.32 mm (0.0520 in)	32225 8H523		

**CAUTION:**

Only 1 adjusting shim can be selected.

1. Using depth micrometer and straight edge, measure dimension "O<sub>1</sub>" between transaxle case end face and mounting face of adjusting shim as shown.

- Using depth micrometer and straight edge, measure dimension "O<sub>2</sub>" between clutch housing case end face and end face of input shaft rear bearing as shown.

- Install selected input shaft rear bearing adjusting shim onto input shaft.

## DIFFERENTIAL SIDE BEARING PRELOAD

- When adjusting differential side bearing preload, select adjusting shim for differential side bearing. To select adjusting shim, measure clearance "L" between transaxle case and differential side bearing outer race.
- Calculate dimension "L" (thickness of adjusting shim) using the following procedure to meet specification of preload for differential side bearing.

**Preload : 0.15 - 0.21 mm (0.0059 - 0.0083 in)**

**Dimension "L" = (L<sub>1</sub> - L<sub>2</sub>) + Preload**

**L : Thickness of adjusting shim**

**L<sub>1</sub> : Distance between clutch housing case end face and mounting face of adjusting shim**

**L<sub>2</sub> : Distance between differential side bearing and transaxle case**

## Adjusting Shim

Shim thickness	Part number
0.48 mm (0.0189 in)	31438 80X00
0.52 mm (0.0205 in)	31438 80X01
0.56 mm (0.0220 in)	31438 80X02
0.60 mm (0.0236 in)	31438 80X03
0.64 mm (0.0252 in)	31438 80X04
0.68 mm (0.0268 in)	31438 80X05
0.72 mm (0.0283 in)	31438 80X06
0.76 mm (0.0299 in)	31438 80X07
0.80 mm (0.0315 in)	31438 80X08
0.84 mm (0.0331 in)	31438 80X09
0.88 mm (0.0346 in)	31438 80X10
0.92 mm (0.0362 in)	31438 80X11

### CAUTION:

Up to 2 adjusting shims can be selected.

- Using depth micrometer and straight edge, measure dimension "L<sub>1</sub>" between clutch housing case end face and mounting face of adjusting shim as shown.

# TRANSAXLE ASSEMBLY

[RS5F51A]

2. Install outer race onto differential side bearing on final gear side. Holding the outer race horizontally by hand, rotate final gear five times or more (for smooth movement of bearing roller).
3. Using depth micrometer and straight edge, measure dimension "L2" between differential side bearing outer race and transaxle case end face as shown.

4. Install selected adjusting shim and then differential side bearing outer race using Tool as shown.

## MAINSHAFT END PLAY

- When adjusting mainshaft end play, select adjusting shim for mainshaft rear bearing. To select adjusting shim, measure clearance "M" between transaxle case and mainshaft rear bearing.
- Calculate dimension "P" (thickness of adjusting shim) using the following procedure to meet specification of end play for mainshaft rear bearing.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

**Dimension "P" = "M" + End play**

**P : Thickness of adjusting shim**

**M : Distance between mainshaft rear bearing and transaxle case**

## Adjusting Shim

Shim thickness	Part number
0.44 mm (0.0173 in)	32238 8H510
0.48 mm (0.0189 in)	32238 8H511
0.52 mm (0.0205 in)	32238 8H512
0.56 mm (0.0220 in)	32238 8H513
0.60 mm (0.0236 in)	32238 8H514
0.64 mm (0.0252 in)	32238 8H515
0.68 mm (0.0268 in)	32238 8H516
0.72 mm (0.0283 in)	32238 8H517
0.76 mm (0.0299 in)	32238 8H518
0.80 mm (0.0315 in)	32238 8H519
0.84 mm (0.0331 in)	32238 8H520
0.88 mm (0.0346 in)	32238 8H521
0.92 mm (0.0362 in)	32238 8H522
0.96 mm (0.0378 in)	32238 8H523
1.00 mm (0.0396 in)	32238 8H524
1.04 mm (0.0409 in)	32238 8H560
1.08 mm (0.0425 in)	32238 8H561

**CAUTION:**

**Only 1 adjusting shim can be selected.**

1. Install mainshaft assembly to clutch housing.
2. Install snap ring to transaxle case.
3. Install transaxle case to clutch housing, and temporarily assemble them with fixing bolts. Install snap ring temporarily to mainshaft rear bearing.
4. Install dial gauge to snap ring access hole, and expand snap ring. Lift mainshaft assembly through control assembly installation hole, and push it against transaxle case. This state shall be defined as base. Moving distance of mainshaft assembly, with snap ring fit on main bearing, becomes "M".

## REVERSE IDLER GEAR END PLAY

- When adjusting reverse idler gear end play, select adjusting shim for reverse idler gear. To select adjusting shim, measure clearance between transaxle case and reverse idler gear.
- Calculate dimension "Q" (thickness of adjusting shim) using the following procedure to meet specification of end play for reverse idler gear.

**End play : 0.04 - 0.14 mm (0.0016 - 0.0055 in)**

**Dimension "Q" = (Q<sub>1</sub> - Q<sub>2</sub>) + End play**

**Q : Thickness of adjusting shim**

**Q<sub>1</sub> : Distance between transaxle case end face and mounting face of adjusting shim**

**Q<sub>2</sub> : Distance between clutch housing case end face and end face of reverse idler gear**

## Adjusting Shim

Shim thickness	Part number
1.76 mm (0.0693 in)	32237 8H500
1.84 mm (0.0724 in)	32237 8H501
1.92 mm (0.0756 in)	32237 8H502
2.00 mm (0.0787 in)	32237 8H503
2.08 mm (0.0819 in)	32237 8H504
2.16 mm (0.0850 in)	32237 8H505
2.24 mm (0.0882 in)	32237 8H506
2.32 mm (0.0913 in)	32237 8H507
2.40 mm (0.0945 in)	32237 8H508
2.48 mm (0.0976 in)	32237 8H509
2.56 mm (0.1008 in)	32237 8H510
2.64 mm (0.1039 in)	32237 8H511

**CAUTION:**

**Only 1 adjusting shim can be selected.**

- Using depth micrometer and straight edge, measure dimension "Q1" between transaxle case end face and mounting face of adjusting shim as shown.

- Using depth micrometer and straight edge, measure dimension "Q2" between clutch housing case end face and end face of reverse idler gear as shown.

- Install selected reverse idler gear adjusting shim onto reverse idler gear.

## INPUT SHAFT AND GEARS

### Disassembly and Assembly

#### DISASSEMBLY

1. Before disassembling, measure the end play for 3rd, 4th, and 5th input gears as shown.

**End play standard range**

**3rd gear : 0.18 - 0.31 mm (0.0071 - 0.0122 in)**

**4th gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**

**5th gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

**CAUTION:**

**If measurement is outside the standard range, disassemble to check contact surfaces of gear, shaft, and hub. Adjust with snap ring at assembly.**

2. Remove the oil channel.
3. Remove the input shaft rear bearing using Tool as shown.

4. Remove the snap ring as shown.

5. Remove input shaft bearing spacer and 5th stopper simultaneously using Tool as shown.

# INPUT SHAFT AND GEARS

[RS5F51A]

6. Remove 5th input gear and synchronizer hub assembly simultaneously using Tool as shown.
7. Remove 5th needle bearing.

8. Remove 5th bushing, thrust washer, 4th input gear, 4th needle bearing, 4th bushing, 4th baulk ring, 3rd-4th synchronizer hub assembly, 3rd baulk ring and 3rd input gear simultaneously using Tool as shown.
9. Remove 3rd needle bearing.

10. Remove input shaft front bearing using Tool as shown.

## INSPECTION AFTER DISASSEMBLY

### Input Shaft and Gears

Check parts for conditions listed below. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending of shaft.
- Excessive wear, damage, peeling of gears.

## Synchronizer

Check parts for conditions listed below. If necessary, replace them with new ones.

- Damage and excessive wear of contact surfaces of coupling sleeve, synchronizer hub, and shifting insert
- Coupling sleeve and synchronizer hub must move smoothly.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

## Baulk Ring Clearance

Check parts for conditions listed below. If necessary, replace them with new ones.

- Press baulk ring against cone, and measure clearance between baulk ring and cone. If measurement is below limit, replace it with a new one.

### Baulk ring clearance

#### Standard

3rd and 4th : 0.9 - 1.45 mm (0.035 - 0.0571 in)

5th : 0.95 - 1.4 mm (0.0374 - 0.055 in)

Limit value : 0.7 mm (0.028 in)

## Bearing

Check parts for conditions listed below. If necessary, replace them with new ones.

- Damage and rough rotation of bearing

## ASSEMBLY

1. Install 3rd needle bearing.
2. Install 3rd input gear and 3rd baulk ring.

A  
B  
MT  
D  
E  
F  
G

# INPUT SHAFT AND GEARS

[RS5F51A]

3. Install spread spring, shifting insert and new 3rd-4th synchronizer hub onto 3rd-4th coupling sleeve.

**CAUTION:**

- Install with orientation of synchronizer hub as shown.
- Do not reuse 3rd-4th synchronizer hub.

- Install with orientation of coupling sleeve as shown.

- Do not hook the ends of the two spread springs (front and back have two each) on the same shifting insert as shown.

4. Install 3rd-4th synchronizer hub assembly using Tool as shown.

**CAUTION:**

Align the grooves of the shifting insert and 3rd baulk ring.

5. Install 4th bushing using Tool as shown.  
6. Install 4th baulk ring.  
7. Install 4th input gear and 4th needle bearing.

# INPUT SHAFT AND GEARS

[RS5F51A]

8. Select thrust washer so that dimension "C2" satisfies standard below. Then install it onto input shaft.

**Standard for dimension "C2" : 154.7 - 154.8 mm (6.091 - 6.094 in)**

**CAUTION:**  
Only one thrust washer can be selected.

### Thrust Washer

Thickness	Part number	Thickness	Part number
3.84 mm (0.1512 in)	32347 8H500	4.02 mm (0.1583 in)	32347 8H503
3.90 mm (0.1535 in)	32347 8H501	4.08 mm (0.1606 in)	32347 8H504
3.96 mm (0.1559 in)	32347 8H502	4.14 mm (0.1630 in)	32347 8H505

9. Install 5th bushing using Tool as shown.  
10. Install 5th needle bearing and 5th input gear.  
11. Install 5th baulk ring.

12. Install spread spring, shifting insert and 5th synchronizer hub onto 5th coupling sleeve.

**CAUTION:**  
● Install with orientation of synchronizer hub and shifting insert as shown.

# INPUT SHAFT AND GEARS

[RS5F51A]

- Install with orientation of coupling sleeve as shown.

- Do not hook the ends of the two spread springs (front and back has two each) on the same shifting insert as shown.

13. Install 5th synchronizer hub assembly using Tool as shown.

**CAUTION:**  
Align the grooves of 5th shifting insert and 5th baulk ring.

14. Install 5th stopper and then input shaft bearing spacer using Tool as shown.

15. Install snap ring onto input shaft, and check that end play (gap between snap ring and groove) of input shaft bearing spacer is within the standard value.

**End play standard value : 0 - 0.1 mm (0 - 0.004 in)**

- If the measurement is outside the standard value, select the required snap ring size to correct the end play.

# INPUT SHAFT AND GEARS

[RS5F51A]

## Snap Rings

Thickness	Part number	Thickness	Part number
1.71 mm (0.0673 in)	32204 8H510	2.01 mm (0.0791 in)	32204 8H516
1.76 mm (0.0693 in)	32204 8H511	2.06 mm (0.0811 in)	32204 8H517
1.81 mm (0.0713 in)	32204 8H512	2.11 mm (0.0831 in)	32204 8H518
1.86 mm (0.0732 in)	32204 8H513	2.16 mm (0.0850 in)	32204 8H519
1.91 mm (0.0752 in)	32204 8H514	2.21 mm (0.0871 in)	32204 8H520
1.96 mm (0.0772 in)	32204 8H515	2.26 mm (0.0890 in)	32204 8H521

16. Install the input shaft rear bearing using Tool as shown.

**CAUTION:**

**Install input shaft rear bearing with its brown surface facing the input gear side.**

17. Install the input shaft front bearing using Tool as shown.

18. Install the oil channel onto input shaft.

19. Check the end play of 3rd, 4th, and 5th input gears.

**End play standard value**

**3rd gear : 0.18 - 0.31 mm (0.0071 - 0.0122 in)**

**4th gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**

**5th gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

## MAINSHAFT AND GEARS

### Disassembly and Assembly

#### DISASSEMBLY

1. Before disassembling, measure the end play of 1st and 2nd main gears.

**End play standard value**

**1st gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**

**2nd gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

**CAUTION:**

If the measurement is outside the standard value, disassemble to check the contact surfaces of the gear, shaft, and hub. Adjust with the correct snap ring size at assembly.

2. Remove the snap ring.
3. Remove the C-ring holder, and then mainshaft C-ring as shown.

4. Remove the mainshaft rear bearing using Tool as shown.

5. Remove the snap ring.

6. Remove 4th main gear and 5th main gear simultaneously using Tool as shown.
7. Remove adjusting shim.
8. Remove 3rd-4th mainshaft spacer.

9. Remove 3rd main gear, 2nd main gear, 2nd needle bearing, 2nd bushing, 1st-2nd synchronizer hub assembly, 1st main gear, reverse main gear, 1st needle bearing, and 1st bushing simultaneously using Tool as shown.

### INSPECTION AFTER DISASSEMBLY

#### Mainshaft and Gears

Check parts listed. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.

#### Synchronizer

Check parts listed. If necessary, replace them with new ones.

- Damage and unusual wear on contact surfaces of coupling sleeve, synchronizer hub, and shifting insert.
- Coupling sleeve and synchronizer hub must move smoothly.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

## Baulk Ring Clearance

Checking the double cone synchronizer (1st and 2nd).

- Check the clearance of the outer baulk ring, synchronizer cone, and inner baulk ring of 1st and 2nd double cone synchronizers, following the procedure below.

### NOTE:

The mean value is the middle value of a set of measurements between the highest and lowest values. It is calculated by adding the highest and lowest measured value and dividing their sum by two:  $[(\text{high value}) + (\text{low value})] / 2 = \text{mean value}$ .

### CAUTION:

**Outer baulk ring, synchronizer cone, and inner baulk ring act as a set to control the clearances "A" and "B". If the measurement exceeds the service limit value, replace all of them as a set.**

1. Using a dial gauge and Tool, measure clearance "A" at two or more points diagonally opposite, and calculate the mean value.

### Clearance "A"

**Standard : 0.6 - 0.8 mm (0.024 - 0.031 in)**

**Limit value : 0.2 mm (0.008 in) or less**

2. Using a feeler gauge, measure clearance "B" at two or more points diagonally opposite, and calculate the mean value.

### Clearance "B"

**Standard : 0.6 - 1.1 mm (0.024 - 0.043 in)**

**Limit value : 0.2 mm (0.008 in) or less**

## Bearing

Check items below. If necessary, replace them with new ones.

- Damage and rough rotation of bearing

## ASSEMBLY

1. Install reverse main gear using Tools as shown.

### CAUTION:

Install the reverse main gear with the specified orientation as shown.

2. Install 1st bushing using Tools as shown.
3. Install needle bearing, and then 1st main gear.

# MAINSHAFT AND GEARS

[RS5F51A]

4. Install spread spring, shifting insert and new 1st-2nd synchronizer hub onto 1st-2nd coupling sleeve.

**CAUTION:**

- Install with orientation of synchronizer hub as shown.
- Do not reuse the 1st-2nd synchronizer hub.

- Install with orientation of coupling sleeve as shown.

- Do not hook the ends of the two spread springs (front and back have two each) on same shifting insert as shown.

5. Install 1st gear synchronizer assembly onto mainshaft, and synchronizer hub assembly onto mainshaft using Tools as shown.

**CAUTION:**

- Outer baulk ring, synchronizer cone, and inner baulk ring on 2nd gear-side must have been removed.
- Install with orientation of coupling sleeve.

6. Install 2nd bushing using Tools as shown.  
7. Install outer baulk ring, synchronizer cone, and inner baulk ring on 2nd gear-side.  
8. Install 2nd needle bearing and 2nd gear.

# MAINSHAFT AND GEARS

[RS5F51A]

9. Install 3rd main gear using Tools as shown.

**CAUTION:**  
Install with orientation of 3rd main gear as shown.

10. Install 3rd-4th mainshaft spacer.

11. Select a suitable adjusting shim so that the dimension "C1" satisfies the standard value below, and install it onto the mainshaft as shown.

**Standard for dimension "C1" : 173.85 - 173.95 mm (6.844 - 6.848 in)**

**CAUTION:**  
Only 1 adjusting shim can be selected.

### Adjusting Shims

Thickness	Part number	Thickness	Part number
0.52 mm (0.0205 in)	32238 8H500	0.84 mm (0.0331 in)	32238 8H504
0.60 mm (0.0236 in)	32238 8H501	0.92 mm (0.0362 in)	32238 8H505
0.68 mm (0.0268 in)	32238 8H502	1.00 mm (0.0394 in)	32238 8H506
0.76 mm (0.0299 in)	32238 8H503	1.08 mm (0.0425 in)	32238 8H507

12. Install 4th main gear using Tools as shown.

**CAUTION:**  
Install with orientation of 4th main gear as shown.

# MAINSHAFT AND GEARS

[RS5F51A]

13. Install 5th main gear using Tools as shown.

**CAUTION:**  
Install with orientation of 5th main gear as shown.

14. Install snap ring onto mainshaft, and check that end play of 5th main gear satisfies standard value as shown.

**End play standard value : 0 - 0.1 mm (0 - 0.004 in)**

- If measurement is outside the standard value, reselect the required size snap ring.

## Snap Rings

Thickness	Part number	Thickness	Part number
1.85 mm (0.0728 in)	32204 8H500	2.05 mm (0.0807 in)	32204 8H504
1.90 mm (0.0748 in)	32204 8H501	2.10 mm (0.0827 in)	32204 8H505
1.95 mm (0.0768 in)	32204 8H502	2.15 mm (0.0846 in)	32204 8H506
2.00 mm (0.0787 in)	32204 8H503	2.20 mm (0.0866 in)	32204 8H507

15. Install mainshaft rear bearing using Tools as shown.

16. Install C-ring onto mainshaft, and check that end play of mainshaft rear bearing meets specification as shown.

**End play standard value : 0 - 0.06 mm (0 - 0.0024 in)**

- If measurement is outside the standard value, reselect the required size C-ring.

# MAINSHAFT AND GEARS

[RS5F51A]

## C-rings

Thickness	Part number	Thickness	Part number
2.535 mm (0.0866 in)	32348 8H800	2.835 mm (0.1116 in)	32348 8H810
2.565 mm (0.1010 in)	32348 8H801	2.865 mm (0.1128 in)	32348 8H811
2.595 mm (0.1022 in)	32348 8H802	2.895 mm (0.1140 in)	32348 8H812
2.625 mm (0.1033 in)	32348 8H803	2.925 mm (0.1152 in)	32348 8H813
2.655 mm (0.1045 in)	32348 8H804	2.955 mm (0.1163 in)	32348 8H814
2.685 mm (0.1057 in)	32348 8H805	2.985 mm (0.1175 in)	32348 8H815
2.715 mm (0.1069 in)	32348 8H806	3.015 mm (0.1187 in)	32348 8H816
2.745 mm (0.1081 in)	32348 8H807	3.045 mm (0.1199 in)	32348 8H817
2.775 mm (0.1093 in)	32348 8H808	3.075 mm (0.1211 in)	32348 8H818
2.805 mm (0.1104 in)	32348 8H809		

17. Fit C-ring holder, and install snap ring as shown.

18. Check end play of 1st and 2nd main gears.

**End play standard value**

**1st gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**

**2nd gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

## REVERSE IDLER SHAFT AND GEARS

### Disassembly and Assembly DISASSEMBLY

1. Remove reverse idler gear adjusting shim.
2. Remove reverse idler gear (rear), reverse coupling sleeve and insert spring simultaneously.
3. Remove reverse idler gear needle bearing.
4. Remove thrust needle bearing.
5. Remove reverse baulk ring.
6. Remove reverse idler gear (front).
7. Remove reverse idler gear needle bearing.
8. Remove thrust needle bearing.
9. Pull off locking pin from reverse idler shaft.

### INSPECTION AFTER DISASSEMBLY

#### Reverse Idler Shaft and Gears

Check parts listed below. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.

#### Synchronizer

Check parts listed below. If necessary, replace them with new ones.

- Damage and unusual wear on contact surfaces of coupling sleeve, synchronizer hub, and insert spring.
- Coupling sleeve and synchronizer hub must move smoothly.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

## Baulk Ring Clearance

Press baulk ring against cone, and measure clearance between baulk ring and cone. If measurement is below limit value, replace it with a new one.

### Clearance

**Standard : 0.95 - 1.4 mm (0.0374 - 0.055 in)**

**Limit value : 0.7 mm (0.028 in)**

## Bearing

Check parts listed below. If necessary, replace them with new ones.

- Damage and rough rotation of bearing.

## ASSEMBLY

Assembly is in the reverse order of disassembly.

### CAUTION:

- Install with orientation of insert spring as shown.

## FINAL DRIVE

PFP:38411

### Disassembly and Assembly PRE-INSPECTION

ECS005US

1. Clean final drive assembly sufficiently to prevent side gear thrust washer, differential case, side gear, and other parts from sticking by gear oil.
2. Upright the differential case so that the side gear to be measured faces upward.
3. Place final drive adapter and dial indicator onto side gear using Tool as shown.

4. Move side gear up and down, and measure the clearance as shown.

**Clearance between side gear and differential case : 0.1 - 0.2 mm (0.004 - 0.008 in)**

**CAUTION:**

**There must be no resistance and the gears must rotate freely.**

5. If the clearance measured is not within specification, adjust the clearance by changing the thrust washer thickness.
6. Turn the differential case upside down, and measure the clearance between the side gear and differential case on the other side to the same specifications, adjust using a thrust washer as necessary.

### DISASSEMBLY

1. Remove the final gear bolts and then separate the final gear from the differential case.
2. Remove speedometer drive gear.
3. Using Tool and puller, remove differential side bearing (clutch housing side) as shown.

# FINAL DRIVE

[RS5F51A]

- Using Tool and puller, remove differential side bearing (transaxle case side) as shown.

- Using a pin punch, pull out lock pin and pinion mate shaft as shown.

- Rotate pinion mate gears, and remove pinion mate gears, pinion mate thrust washers, side gears, and side gear thrust washers from differential case.

## INSPECTION AFTER DISASSEMBLY

### Gear, Washer, Shaft and Case

- Check side gears, side gear thrust washers, pinion mate shaft, pinion mate gears, pinion mate thrust washers and differential case as shown. If necessary, replace with new parts.

### Bearing

- Check for bearing damage and rough rotation as shown. If necessary, replace with new parts.

### CAUTION:

When replacing tapered roller bearing, replace outer and inner races as a set.

## ASSEMBLY

- Apply gear oil to sliding area of differential case, each gear, and thrust washer.

# FINAL DRIVE

[RS5F51A]

2. Install side gear thrust washers and side gears into differential case as shown.

3. While rotating pinion mate thrust washers and pinion mate gears, and aligning them diagonally, install them into differential case.

4. Insert pinion mate shaft into differential case as shown.

**CAUTION:**

**Be sure not to damage pinion mate thrust washers.**

5. Measure end play of side gears, using the procedure below. Then select side gear thrust washer.

- a. Upright the differential case so that its side gear to be measured faces upward.
- b. Place final drive adapter and dial indicator onto side gears as shown.

- c. Move side gears up and down to measure end play, and select thrust washer so that it meets specification.

**End play standard value : 0.1 - 0.2 mm (0.004 - 0.008 in)**

**CAUTION:**

- There must be no resistance and the gears must rotate freely.
- Place differential case upside down. Measure the end play for opposite side-gears using the same procedure.
- Only one thrust washer can be selected.

### Thrust washers

Thickness	Part number
0.75 mm (0.0295 in)	38424 81X00
0.80 mm (0.0315 in)	38424 81X01
0.85 mm (0.0335 in)	38424 81X02
0.90 mm (0.0354 in)	38424 81X03
0.95 mm (0.0374 in)	38424 81X04

# FINAL DRIVE

[RS5F51A]

6. Drive a new lock pin into the pinion mate shaft using a suitable tool as shown.

**CAUTION:**

**Do not reuse the lock pin.**

7. Install differential side bearing (transaxle case side) using Tool as shown.

8. Align and install speedometer drive gear onto differential case as shown.

9. Install differential side bearing (clutch housing side) using Tools as shown.

10. Install the final gear into the differential case, and tighten the final gear bolts to specification.

**Final gear bolts** : Refer to [MT-88, "FINAL DRIVE COMPONENTS"](#) .

## SHIFT CONTROL

### Inspection

- Check the contact surfaces and sliding areas for wear, damage, and bending as shown. Replace any parts as necessary.

### SHIFT FORK

- Check that the width of the shift fork hooks (sliding area with coupling sleeve) as shown, are within specification.

Item	One-side wear specification	Sliding width of new part
1st & 2nd	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
3rd & 4th	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
5th	0.2 mm (0.008 in)	6.10 - 6.23 mm (0.2402 - 0.2453 in)
Reverse	0.2 mm (0.008 in)	12.80 - 12.93 mm (0.5039 - 0.5091 in)

## PRECAUTIONS

PFP:00001

### Caution

ECS005V2

- Do not reuse transaxle oil, once it has been drained.
- Check oil level, and drain and refill transaxle oil with the vehicle on level ground.
- During removal or installation, keep inside of transaxle clean of dust and dirt.
- Check for the correct installation orientation prior to removal or disassembly. If mating marks are required, be certain they do not interfere with the function of the parts they are applied to.
- In principle, tighten bolts or nuts gradually in several steps working diagonally and from inside to outside as applicable. If a tightening sequence is specified, follow it as specified.
- Be careful not to damage the sliding surfaces and mating surfaces of parts.

## DESCRIPTION

PF0:0000

### Cross-sectional View

ECS005V6

RS6F51H

SCIA0999E

# DESCRIPTION

[RS6F51H]

## DOUBLE-CONE SYNCHRONIZER

Double-cone synchronizer is used for 1st and 2nd gears to reduce operating force of the shift lever as shown.

## REVERSE GEAR

Description of reverse gear components is as shown.

**M/T OIL****Replacement  
DRAINING**

1. Start the engine and let it run to warm up the transaxle oil.
2. Stop the engine. Remove drain plug and drain oil.
3. Set a new gasket on the drain plug and install it in transaxle body.

**Drain plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

**FILLING**

1. Remove filler plug. Fill with new oil until oil level reaches the specified limit near filler plug mounting hole.

**Oil grade : API GL-4**

**Capacity (reference) : Approximately 2.3 ℓ (2 3/8 qt)**

2. After refilling oil, check oil level. Assemble a new gasket on to filler plug, then install it in transaxle body.

**Filler plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

**Checking  
OIL LEAKAGE AND OIL LEVEL**

- Check that oil is not leaking from transaxle.
  - Check oil level from filler plug mounting hole as shown.
- CAUTION:**  
**Never start engine while checking oil level.**
- Set a new gasket on the filler plug and install it in transaxle body.

**Filler plug : 30 - 39 N·m (3.1 - 4.0 kg·m, 23 - 28 ft·lb)**

**CAUTION:**

**Do not reuse gasket.**

## SIDE OIL SEAL

### Removal and Installation

#### REMOVAL

1. Remove the drive shaft from the transaxle body. Refer to [FAX-14, "Removal"](#).
2. Remove oil seal with a slotted screwdriver.

**CAUTION:**

**Be careful not to damage the case surface when removing the oil seal.**

#### INSTALLATION

Installation is in the reverse order of removal.

- Using Tool (drift), drive the new oil seal straight until it protrudes from the case end equal to dimension "A" as shown.

**Dimension "A" : Within 0.5 mm (0.02 in) or flush with the case.**

**CAUTION:**

- Before installing oil seal, apply multi-purpose grease to oil seal lips.
- Oil seal is not reusable.

Drift to be used (special service tool)	ST30720000 (J25405)
---	---------------------

- Check oil level after installation. Refer to [MT-137, "Checking"](#).

## POSITION SWITCH

### Checking

**NOTE:**

For removal and installation of the switches. Refer to [MT-145, "Component Parts"](#).

### BACK-UP LAMP SWITCH

- Check continuity.

Gear position	Continuity
Reverse	Yes
Except reverse	No

### PARK/NEUTRAL POSITION SWITCH

- Check continuity.

Gear position	Continuity
Neutral	Yes
Except neutral	No

| 22. Select cable            | 23. Shift cable    | 24. Lock plate             |
| 25. Lock plate              |                    |                            |

### CAUTION:

- Note that the select side lock plate for securing the control cable is different from the one on the shift side.
- After assembly, make sure selector lever automatically returns to Neutral when it is moved to 1st, 2nd, or Reverse.

### Cable Adjustment

ECS0077W

#### NOTE:

After installation of the select cable, the cable must be adjusted for proper operation. This adjustment is performed before installing the interior console and shift boot.

1. Slide clip "B" from under clip "A" as shown.

2. Shift the control lever to the neutral position.

#### CAUTION:

**Do not move the control lever when adjusting the cables.**

3. Push clip "A" into the cable end case until it snaps into place as shown.

4. Slide clip "B" back over clip "A" until it snaps into place and holds clip "A" in place as shown.

## AIR BREATHER HOSE Removal and Installation

LCIA0033E

### CAUTION:

- Make sure there are no pinched or restricted areas on the air breather hose caused by bending or winding when installing it.
- Insert the air breather hose into the transaxle tube until the overlap area reaches the spool.

### TRANSAXLE ASSEMBLY

PFP:32010

### Removal and Installation

ECS005VD

### REMOVAL

1. Remove the air cleaner and air duct.
2. Remove the battery.
3. Remove the air breather hose. Refer to [MT-81, "Removal and Installation"](#) .
4. Remove the clutch operating cylinder.
 

**CAUTION:**  
**Do not depress the clutch pedal during the removal procedure.**
5. Remove the engine under cover.
6. Disconnect the control cable from the transaxle. Refer to [MT-140, "Removal and Installation of Control Device and Cable"](#) .
7. Drain the gear oil from the transaxle. Refer to [MT-76, "Replacement"](#) .
8. Remove the connectors and harnesses for:
  - PNP switch
  - Speed sensor
  - Back-up lamp switch
  - Ground
9. Remove the exhaust front tube. Refer to [EX-3, "Removal and Installation"](#) .
10. Remove the drive shaft. Refer to [FAX-14, "Removal"](#) .
11. Remove the starter motor. Refer to [SC-20, "Removal and Installation"](#) .
12. Place a suitable jack under the transaxle.
 

**CAUTION:**  
**When setting the jack, be careful not to bring it into contact with the switches.**
13. Remove the center member, engine insulator, and engine mount bracket.
14. Support the engine by placing a jack under the engine oil pan.

# TRANSAXLE ASSEMBLY

[RS6F51H]

15. Remove the bolts that mount the engine to the transaxle.
16. Remove the transaxle from the vehicle as shown.

## INSTALLATION

Installation is the reverse order of removal.

- When installing the transaxle to the engine, use the specified tightening torque in the numerical sequence as shown.

**CAUTION:**

**When installing the transaxle, do not allow the transaxle input shaft to make contact with the clutch cover.**

Bolt No.	1	2	3	4	5	6	7	8	9	10
" $\varnothing$ " mm (in)	40	82	47	47	52	40	40	40	30	30
Tightening torque N·m (kg·m, ft·lb)	30 - 40 (3.1 - 4.1, 22 - 29)		70 - 80 (7.1 - 8.1, 52 - 59)			30 - 40 (3.1 - 4.1, 22 - 29)				

- After installation, check the transaxle oil level, and check for any leaks and any loose mechanisms.

### Disassembly and Assembly DISASSEMBLY

ECS005VF

1. Remove the drain plug and filler plug.
2. Remove the park/neutral position switch and back-up lamp switch.
3. After removing the shift check and stopper bolt, remove the control assembly.

4. Remove the check plugs (4 pieces), check springs (4 pieces), check balls (4 pieces), and shift check sleeve (2 pieces) as shown.

# TRANSAXLE ASSEMBLY

[RS6F51H]

5. Remove the transaxle case fixing bolts as shown.

6. Remove the bore plug.

**CAUTION:**

**Be careful not to damage transaxle case.**

7. While spreading the snap ring of the mainshaft rear bearing located at bore plug hole, remove the transaxle case.
8. Remove the oil gutter and baffle plate.
9. Remove the snap ring, mainshaft rear bearing adjusting shim, and input shaft rear bearing adjusting shim from the transaxle case.
10. Remove the differential side bearing outer race (transaxle case side) using Tool as shown, and then remove the adjusting shim.

11. Remove the welch plug with a suitable punch and hammer as shown.

12. Remove the differential oil seal with a suitable tool as shown.

13. Remove the magnet from the clutch housing.

# TRANSAXLE ASSEMBLY

[RS6F51H]

14. With the shift lever in 5th position, remove the bracket bolts from the reverse lever assembly as shown. Lift the reverse lever assembly to remove.

**CAUTION:**

**Retain the shifter cap for installation.**

15. Pull out the reverse fork rod then remove the reverse shift fork.  
16. Remove the retaining pin of the reverse bracket.

17. Pull out the reverse lever and the reverse bracket fork rod.  
18. Remove the check ball (2 pieces) and the interlock pin.  
19. Shift the 3rd-4th fork rod to the 3rd position. Remove the retaining pin of the 5th-6th shift fork using a pin punch.

20. Remove the stopper rings for the 5th-6th bracket.

21. Pull out the 5th-6th fork rod and remove the 5th-6th shift fork and the 5th-6th bracket.  
22. Remove the check balls (2 pieces) and interlock pin.

# TRANSAXLE ASSEMBLY

[RS6F51H]

23. Remove the retaining pin of 3rd-4th bracket using pin punch.
24. Remove the stopper rings for 3rd-4th shift fork.

25. Pull out the 3rd-4th fork rod and remove 3rd-4th shift fork and bracket.
26. Remove the shift check sleeve from the clutch housing.
27. Remove the retaining pin of 1st-2nd shift fork using a suitable pin punch.

28. Pull out the 1st-2nd fork rod with bracket.
29. Remove the 1st-2nd shift fork.
30. Remove the retaining pin of 1st-2nd bracket using a suitable pin punch and separate the fork rod and bracket.
31. Remove the gear components from the clutch housing.
  - a. While tapping the input shaft with a plastic hammer, remove the input shaft assembly, mainshaft assembly, and reverse idler gear assembly as a set.

**CAUTION:**

**Always withdraw the mainshaft straight out. Failure to do so can damage the resin oil channel on the clutch housing side.**

- b. Remove the final drive assembly.

32. Remove the bearing retainer and then the mainshaft front bearing as shown.
33. Remove the oil channel on the mainshaft side.

# TRANSAXLE ASSEMBLY

[RS6F51H]

34. Remove the differential oil seal (clutch housing side) using Tool as shown.

35. Remove the differential side bearing outer race (clutch housing side) using Tool as shown.

36. Remove the input shaft oil seal using a suitable tool as shown.

**CAUTION:**  
Do not damage the clutch housing sealing surface.

## ASSEMBLY

1. Install a new input shaft oil seal from the clutch housing end of the side, to the depth of 1.8 - 2.8 mm (0.071 - 0.110 in) using Tool (drift) as shown.

**CAUTION:**  
Oil seals are not reusable.

# TRANSAXLE ASSEMBLY

[RS6F51H]

2. Install a new differential oil seal using Tool (drift) as shown.

**CAUTION:**  
Oil seals are not reusable.

3. Install the oil channel on the mainshaft side as shown.

**CAUTION:**  
Position the oil channel with the orientation as shown, for installation.

4. Install the mainshaft front bearing using Tool (drift) as shown.

**CAUTION:**  
Position the mainshaft front bearing with the orientation as shown, for installation

5. Install the mainshaft front bearing retainer.

**CAUTION:**  
Install the bearing retainer with the punched surface facing up.

**Bearing retainer bolt : 6.27 - 8.33 N-m (0.64 - 0.84 kg-m, 56 - 73 in-lb)**

6. Install the differential side bearing outer race using Tool as shown.

# TRANSAXLE ASSEMBLY

[RS6F51H]

7. Install the final drive assembly into the clutch housing.

8. Install the input shaft assembly, mainshaft assembly, and reverse idler gear assembly into the clutch housing.

**CAUTION:**  
Do not damage the input shaft oil seal.

9. Install the 1st-2nd fork rod bracket onto the 1st-2nd fork rod, and then install a new retaining pin as shown.

**CAUTION:**  
Retaining pins are not reusable.

10. Install the 1st-2nd fork rod and the 1st-2nd shift fork, and then install a new retaining pin.

**CAUTION:**  
Retaining pins are not reusable.

11. Install the shift check sleeve.

12. Install the 3rd-4th bracket, 3rd-4th shift fork, and 3rd-4th fork rod with the interlock pin.

# TRANSAXLE ASSEMBLY

[RS6F51H]

13. Install the new stopper rings onto the 3rd-4th shift fork.

**CAUTION:**  
Stopper rings are not reusable.

14. Install a new retaining pin onto the 3rd-4th bracket.

**CAUTION:**  
Retaining pins are not reusable.

15. Install the 2 check balls.  
16. Install the 5th-6th bracket, 5th-6th shift fork, and 5th-6th fork rod.  
17. Install new stopper rings onto the 5th-6th bracket with interlock pin.

**CAUTION:**  
Stopper rings are not reusable.

18. Install a new retaining pin onto the 5th-6th shift fork.

**CAUTION:**  
Retaining pins are not reusable.

19. Install the two check balls.  
20. Install the reverse bracket fork rod and reverse lever bracket.  
21. Install a new retaining pin onto the reverse bracket.

**CAUTION:**  
Retaining pins are not reusable.

22. Install the reverse shift fork and reverse fork rod.  
23. Install the reverse lever assembly using the following steps:  
a. Install the shifter cap onto the reverse lever assembly cam, and then install them onto the reverse shift fork.

**CAUTION:**

**Do not drop the shifter cap.**

- b. While lifting the reverse shift fork, align the cam with the reverse bracket.

- c. Tighten the bracket bolts to specification, and install the reverse lever assembly.

**Bracket bolts : 11.8 - 15.6 N·m (1.2 - 1.5 kg·m, 9 - 11 ft·lb)**

24. Install the magnet onto the clutch housing.  
 25. Install the selected input shaft adjusting shim onto the input shaft.  
 ● For selection of adjusting shims, refer to [MT-160, "INPUTSHAFT END PLAY"](#) .  
 26. Install the baffle plate and oil gutter.  
 27. Install the transaxle case using the following steps:  
 a. Install the selected mainshaft rear bearing adjusting shim into the transaxle case.  
 ● For selection of adjusting shims, refer to [MT-162, "MAINSHAFT END PLAY"](#) .  
 b. Temporarily install the snap ring of the mainshaft rear bearing into the transaxle case.

**CAUTION:**

**Do not reuse the snap ring.**

- c. Apply sealant to the mating surfaces of the transaxle case and clutch housing as shown. Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#) .

**CAUTION:**

**Remove any old sealant adhering to the mounting surfaces. Also remove any moisture, oil, or foreign material adhering to the sealant application and mounting surfaces.**

# TRANSAXLE ASSEMBLY

[RS6F51H]

- d. Using a snap ring of the mainshaft rear bearing temporarily, install the transaxle case over the clutch housing as shown.

- e. Through the bore plug mounting hole, with the snap ring stretched, lift up the mainshaft assembly from the control assembly mounting hole.
- f. Securely install the snap ring onto the mainshaft rear bearing as shown.

- g. Tighten the "A" bolts (gold) and new "B" bolts (black) to specification.

"A" Bolt : 50.0 - 53.9 N-m (5.1 - 5.4 kg-m, 37 - 39 ft-lb)

"B" Bolt : 63.0 - 66.9 N-m (6.5 - 6.8 kg-m, 47 - 49 ft-lb)

**CAUTION:**

Always replace the "B" bolts as they are self-sealing bolts.

- h. Install the control assembly using new O-rings.

**CAUTION:**

Do not reuse the O-ring.

- i. Install a new shift check and a new stopper bolt.

**CAUTION:**

Shift check and stopper bolt are not reusable.

# TRANSAXLE ASSEMBLY

[RS6F51H]

28. Install a new bore plug using Tool (drift) as shown.

**CAUTION:**  
Bore plugs are not reusable.

29. Install the new welch plug using Tool (drift).

**CAUTION:**  
Do not reuse the welch plug

30. Install the 2 shift check sleeves, 4 check balls, 4 check springs, and 4 new check ball plugs.

**CAUTION:**  
Check ball plugs are not reusable.

31. Apply sealant to the threads of the neutral switch and reverse lamp switch. Then install them into the transaxle case. Refer to [MT-145, "CASE AND HOUSING COMPONENTS"](#) . Use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#) .

32. Install new gaskets onto the drain plug and filler plug, and then install them into the transaxle case.

**CAUTION:**

- Gaskets are not reusable.
- After oil is filled, tighten filler plug to specification. Refer to [MT-145, "CASE AND HOUSING COMPONENTS"](#) .

## Adjustment INPUTSHAFT END PLAY

- When adjusting the input shaft end play, select the adjusting shim for the input shaft bearing. To select the correct thickness for the adjusting shim, measure the clearance between the transaxle case and input shaft rear bearing.
- Calculate the dimension "O" (thickness of adjusting shim) using the following steps to adjust the input shaft rear bearing for the specified end play.

**CAUTION:**

Only 1 adjusting shim can be selected.

End play : 0 - 0.06 mm (0 - 0.0024 in)

Dimension "O" = (O<sub>1</sub> - O<sub>2</sub>) + End play

"O" : Thickness of adjusting shim

O<sub>1</sub> : Distance between transaxle case end face and mounting face of adjusting shim

O<sub>2</sub> : Distance between clutch housing case end face and end face of input shaft rear bearing

### Adjusting Shims

Shim thickness	Part number	Shim thickness	Part number	Shim thickness	Part number
0.40 mm (0.0157 in)	32225 8H500	0.88 mm (0.0346 in)	32225 8H512	1.36 mm (0.0520 in)	32225 8H524
0.44 mm (0.0173 in)	32225 8H501	0.92 mm (0.0362 in)	32225 8H513	1.40 mm (0.0551 in)	32225 8H560
0.48 mm (0.0189 in)	32225 8H502	0.96 mm (0.0378 in)	32225 8H514	1.44 mm (0.0567 in)	32225 8H561
0.52 mm (0.0205 in)	32225 8H503	1.00 mm (0.0396 in)	32225 8H515	1.48 mm (0.0583 in)	32225 8H562
0.56 mm (0.0220 in)	32225 8H504	1.04 mm (0.0409 in)	32225 8H516	1.52 mm (0.0598 in)	32225 8H563
0.60 mm (0.0236 in)	32225 8H505	1.08 mm (0.0425 in)	32225 8H517	1.56 mm (0.0614 in)	32225 8H564
0.64 mm (0.0252 in)	32225 8H506	1.12 mm (0.0441 in)	32225 8H518	1.60 mm (0.0630 in)	32225 8H565
0.68 mm (0.0268 in)	32225 8H507	1.16 mm (0.0457 in)	32225 8H519	1.64 mm (0.0646 in)	32225 8H566
0.72 mm (0.0283 in)	32225 8H508	1.20 mm (0.0472 in)	32225 8H520		
0.76 mm (0.0299 in)	32225 8H509	1.24 mm (0.0488 in)	32225 8H521		
0.80 mm (0.0315 in)	32225 8H510	1.28 mm (0.0504 in)	32225 8H522		
0.84 mm (0.0331 in)	32225 8H511	1.32 mm (0.0520 in)	32225 8H523		

1. Using a depth micrometer and straight edge, measure the dimension "O<sub>1</sub>" between the transaxle case end face and mounting face of the adjusting shim as shown.

# TRANSAXLE ASSEMBLY

[RS6F51H]

- Using a depth micrometer and straight edge, measure the dimension "O<sub>2</sub>" between the clutch housing case end face and end face of the input shaft rear bearing as shown.

- Install the selected input shaft rear bearing adjusting shim onto the input shaft.

## DIFFERENTIAL SIDE BEARING PRELOAD

- When adjusting differential side bearing preload, select adjusting shim for differential side bearing. To select adjusting shim, measure clearance "L" between transaxle case and differential side bearing outer race.
- Calculate dimension "L" (thickness of adjusting shim) using the following procedure to meet specification of preload for differential side bearing.

**Preload : 0.15 - 0.21 mm (0.0059 - 0.0083 in)**

**Dimension "L" = (L<sub>1</sub> - L<sub>2</sub>) + Preload**

**"L" : Thickness of adjusting shim**

**L<sub>1</sub> : Distance between clutch housing case end face and mounting face of adjusting shim**

**L<sub>2</sub> : Distance between differential side bearing and transaxle case**

### CAUTION:

**Up to only 2 adjusting shims can be selected.**

### Adjusting Shim

Shim thickness	Part number
0.48 mm (0.0189 in)	31438 80X00
0.52 mm (0.0205 in)	31438 80X01
0.56 mm (0.0220 in)	31438 80X02
0.60 mm (0.0236 in)	31438 80X03
0.64 mm (0.0252 in)	31438 80X04
0.68 mm (0.0268 in)	31438 80X05
0.72 mm (0.0283 in)	31438 80X06
0.76 mm (0.0299 in)	31438 80X07
0.80 mm (0.0315 in)	31438 80X08
0.84 mm (0.0331 in)	31438 80X09
0.88 mm (0.0346 in)	31438 80X10
0.92 mm (0.0362 in)	31438 80X11

- Using a depth micrometer and straight edge, measure the dimension "L<sub>1</sub>" between the clutch housing case end face and mounting face of the adjusting shim as shown.

# TRANSAXLE ASSEMBLY

[RS6F51H]

2. Install the outer race onto the differential side bearing on the final gear side. Holding the outer race horizontally by hand, rotate the final gear five times or more (for smooth movement of the bearing roller).
3. Using a depth micrometer and straight edge, measure the dimension "L2" between the differential side bearing outer race and transaxle case end face as shown.

4. Install the selected adjusting shim and then the differential side bearing outer race using Tool as shown.

## MAINSHAFT END PLAY

- When adjusting the mainshaft end play, select the adjusting shim for the mainshaft rear bearing. To select the adjusting shim, measure clearance "M" between the transaxle case and mainshaft rear bearing.
- Calculate the dimension "P" (thickness of adjusting shim) using the following procedure to meet specification of end play for mainshaft rear bearing.

**End play : 0 - 0.06 mm (0 - 0.0024 in)**

**Dimension "P" = "M" + End play**

**"P" : Thickness of adjusting shim**

**"M" : Distance between mainshaft rear bearing and transaxle case**

### CAUTION:

Only 1 adjusting shim can be selected.

## Adjusting Shim

Shim thickness	Part number
0.44 mm (0.0173 in)	32238 8H510
0.48 mm (0.0189 in)	32238 8H511
0.52 mm (0.0205 in)	32238 8H512
0.56 mm (0.0220 in)	32238 8H513
0.60 mm (0.0236 in)	32238 8H514
0.64 mm (0.0252 in)	32238 8H515
0.68 mm (0.0268 in)	32238 8H516
0.72 mm (0.0283 in)	32238 8H517
0.76 mm (0.0299 in)	32238 8H518
0.80 mm (0.0315 in)	32238 8H519
0.84 mm (0.0331 in)	32238 8H520
0.88 mm (0.0346 in)	32238 8H521
0.92 mm (0.0362 in)	32238 8H522
0.96 mm (0.0378 in)	32238 8H523
1.00 mm (0.0396 in)	32238 8H524
1.04 mm (0.0409 in)	32238 8H560
1.08 mm (0.0425 in)	32238 8H561

1. Install the mainshaft assembly to the clutch housing.
2. Install the snap ring to the transaxle case.
3. Install the transaxle case to clutch housing, and temporarily assemble them with fixing bolts. Temporarily install the snap ring to the mainshaft rear bearing.
4. Install the dial gauge to the snap ring access hole, and expand the snap ring as shown. Lift the mainshaft assembly through the control assembly installation hole, and push it against the transaxle case. This state shall be defined as base. Moving the distance of the mainshaft assembly, with the snap ring installed on the main bearing, becomes "M".

### REVERSE IDLER GEAR END PLAY

- When adjusting the reverse idler gear end play, select the adjusting shim for the reverse idler gear. To select the correct thickness of adjusting shim, measure the clearance between the transaxle case and reverse idler gear.
- Calculate the dimension "Q" (thickness of adjusting shim) using the following steps to adjust the end play of the reverse idler gear to specification.

**End play : 0.04 - 0.14 mm (0.0016 - 0.0055 in)**

**Dimension "Q" = (Q<sub>1</sub> - Q<sub>2</sub>) + End play**

**"Q" : Thickness of adjusting shim**

**Q<sub>1</sub> : Distance between transaxle case end face and mounting face of adjusting shim**

**Q<sub>2</sub> : Distance between clutch housing case end face and end face of reverse idler gear**

**CAUTION:**

**Only 1 adjusting shim can be selected.**

## Adjusting Shim

Shim thickness	Part number
1.76 mm (0.0693 in)	32237 8H500
1.84 mm (0.0724 in)	32237 8H501
1.92 mm (0.0756 in)	32237 8H502
2.00 mm (0.0787 in)	32237 8H503
2.08 mm (0.0819 in)	32237 8H504
2.16 mm (0.0850 in)	32237 8H505
2.24 mm (0.0882 in)	32237 8H506
2.32 mm (0.0913 in)	32237 8H507
2.40 mm (0.0945 in)	32237 8H508
2.48 mm (0.0976 in)	32237 8H509
2.56 mm (0.1008 in)	32237 8H510
2.64 mm (0.1039 in)	32237 8H511

- Using a depth micrometer and straight edge, measure the dimension "Q<sub>1</sub>" between the transaxle case end face and the mounting face of the adjusting shim as shown.

- Using a depth micrometer and straight edge, measure the dimension "Q<sub>2</sub>" between the clutch housing case end face and the end face of reverse idler gear as shown.

- Install the selected reverse idler gear adjusting shim onto the reverse idler gear.

### INPUT SHAFT AND GEARS

#### Disassembly and Assembly

##### DISASSEMBLY

1. Before disassembling, measure the end play for 3rd, 4th, 5th, and 6th input gears.

##### End play standard values

3rd gear : 0.18 - 0.31 mm (0.0071 - 0.0122 in)

4th gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)

5th gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)

6th gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)

##### CAUTION:

If measurement is outside the standard value, disassemble to check the contact surfaces of the gear, shaft, and, hub. Adjust using the correct size snap ring for assembly.

2. Remove the oil channel.
3. Remove the input shaft rear bearing using Tool as shown.
4. Remove the snap ring.

5. Remove the 6th input gear, 6th bushing, and 6th needle bearing using Tool as shown.
6. Remove the 6th baulk ring, 5th-6th coupling sleeve, and shifting insert.

7. Remove the 5th input gear and synchronizer hub assembly simultaneously using Tool as shown.
8. Remove the 5th needle bearing.

9. Remove the 5th bushing, thrust washer, 4th input gear, 4th needle bearing, 4th bushing, 4th baulk ring, 3rd-4th synchronizer hub assembly, 3rd baulk ring, and 3rd input gear simultaneously using Tool as shown.
10. Remove the 3rd needle bearing.

11. Remove the input shaft front bearing using Tool as shown.

## INSPECTION AFTER DISASSEMBLY

### Input Shaft and Gears

Inspect the components for the following conditions as shown. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, or bending of the input shaft.
- Excessive wear, damage, or peeling of the input gears.

### Synchronizer

Check the items below. If necessary, replace them with new ones.

- Damage and excessive wear of the contact surfaces of coupling sleeve, synchronizer hub, and shifting insert.
- Coupling sleeve and synchronizer hub must move smoothly as shown.

# INPUT SHAFT AND GEARS

[RS6F51H]

- If any cracks, damage, or excessive wear is found on the cam face of baulk ring or working face of the insert as shown, replace it.

## Baulk Ring Clearance

Check the items below. If necessary, replace them with new ones.

- Press the baulk ring against cone, and measure clearance between baulk ring and cone. If measurement is below limit, replace it with a new one.

### Clearance - standard

3rd and 4th : 0.9 - 1.45 mm (0.035 - 0.0571 in)

5th and 6th : 0.95 - 1.4 mm (0.0374 - 0.055 in)

Limit : 0.7 mm (0.028 in)

## Bearing

Check the items below. If necessary, replace them with new ones.

- Damage and rough rotation of the bearing as shown.

## ASSEMBLY

1. Install the 3rd needle bearing.
2. Install the 3rd input gear and 3rd baulk ring.
3. Install the spread spring, shifting insert, and a new 3rd-4th synchronizer hub onto the 3rd-4th coupling sleeve.

### CAUTION:

- Install with orientation of the synchronizer hub as shown.
- Do not reuse the 3rd-4th synchronizer hub.

# INPUT SHAFT AND GEARS

[RS6F51H]

- Install with orientation of coupling sleeve as shown.

- Be sure not to hook the ends of the 2 spread springs (front and back have two each) on the same shifting insert.

4. Install 3rd-4th synchronizer hub assembly using Tool as shown.

**CAUTION:**  
Align grooves of shifting insert and 3rd baulk ring.

5. Install the 4th bushing using Tool as shown.
6. Install the 4th baulk ring.
7. Install the 4th input gear and 4th needle bearing.

# INPUT SHAFT AND GEARS

[RS6F51H]

8. Measure the dimension "C2" as shown. Select a thrust washer so that dimension "C2" satisfies standard dimension specification. Then install the thrust washer onto the input shaft.

**Standard for dimension "C2" : 154.7 - 154.8 mm  
(6.091 - 6.094 in)**

**CAUTION:**

**Only 1 thrust washer can be selected.**

**Thrust Washer**

Thickness	Part number	Thickness	Part number
3.84 mm (0.1512 in)	32347 8H500	4.02 mm (0.1583 in)	32347 8H503
3.90 mm (0.1535 in)	32347 8H501	4.08 mm (0.1606 in)	32347 8H504
3.96 mm (0.1559 in)	32347 8H502	4.14 mm (0.1630 in)	32347 8H505

9. Install the 5th bushing using Tool as shown.  
 10. Install the 5th needle bearing and 5th input gear.  
 11. Install the 5th baulk ring.

12. Install the synchronizer assembly onto a new 5th-6th synchronizer hub.

**CAUTION:**

- Install with the orientation of the synchronizer hub as shown.
- Do not reuse the 5th-6th synchronizer hub.

# INPUT SHAFT AND GEARS

[RS6F51H]

- Be sure not to hook the ends of the 2 spread springs (front and back have two each) on the same shifting insert.

13. Install the 5th-6th synchronizer hub assembly using Tool as shown.

**CAUTION:**  
Align the grooves of the 5th-6th shifting insert and 5th-6th baulk ring.

14. Install the needle bearing, 6th input gear and then 6th bushing using Tool as shown.

15. Install the snap ring onto the input shaft, and measure to check that end play (gap between snap ring and groove) of the 6th bushing is within specification.

**End play standard value : 0 - 0.1 mm (0 - 0.004 in)**

- If the measurement is outside the standard value, select the appropriate size snap ring.

## Snap Rings

Thickness	Part number	Thickness	Part number
1.76 mm (0.0693 in)	32204 8H511	2.01 mm (0.0791 in)	32204 8H516

## MAINSHAFT AND GEARS

### Disassembly and Assembly DISASSEMBLY

1. Before disassembling, measure the end play of 1st and 2nd main gears as shown.

**End play standard value**

- 1st gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**
- 2nd gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

**CAUTION:**

If the measurement is outside the standard value, disassemble to check the contact surfaces of gear, shaft, and hub. Adjust with the snap ring at assembly.

2. Remove the snap ring.
3. Remove the C-ring holder, and then mainshaft C-ring as shown.

4. Remove the mainshaft rear bearing, adjust shim, and 6th main gear using Tool as shown.
5. Remove the 5th-6th mainshaft spacer.

6. Remove the 4th main gear and 5th main gear simultaneously using Tool as shown.
7. Remove the adjusting shim.
8. Remove the 3rd-4th mainshaft spacer.

- Remove the 3rd main gear, 2nd main gear, 2nd gear needle bearing, 2nd bushing, 1st-2nd synchronizer assembly, 1st main gear, reverse main gear, 1st gear needle bearing, and 1st bushing simultaneously using Tool as shown.

## INSPECTION AFTER DISASSEMBLY

### Mainshaft and Gears

Check the items listed as shown. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the mainshaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the mainshaft gears.

### Synchronizer

Check the items listed as shown. If necessary, replace them with new ones.

- Damage, unusual wear on contact surfaces of coupling sleeve, synchronizer hub, and shifting insert.
- Coupling sleeve and synchronizer hub must move smoothly as shown.

- If any cracks, damage, or excessive wear is found on the cam face of baulk ring or working face of the insert, replace it.

## Baulk Ring Clearance

Checking the double cone synchronizer (1st-2nd)

- Check the clearance of outer baulk ring, synchronizer cone, and inner baulk ring of 1st-2nd double cone synchronizer, using the following steps.

**NOTE:**

The mean value is the middle value of a set of measurements between the highest and lowest values. It is calculated by adding the highest and lowest measured value and dividing their sum by two:  $[(\text{high value}) + (\text{low value})] / 2 = \text{mean value}$ .

**CAUTION:**

**Outer baulk ring, synchronizer cone, and inner baulk ring act as a set to control the clearances "A" and "B". If the measurement exceeds the service limit value, replace all of them as a set.**

- Using a dial gauge and Tool, measure clearance "A" at two or more points diagonally opposite, and calculate mean value.

**Clearance "A"**

**Standard : 0.6 - 0.8 mm (0.024 - 0.031 in)**

**Limit value : 0.2 mm (0.008 in) or less**

- Using a feeler gauge, measure clearance "B" at two or more points diagonally opposite, and calculate mean value as shown.

**Clearance "B"**

**Standard : 0.6 - 1.1 mm (0.024 - 0.043 in)**

**Limit value : 0.2 mm (0.008 in) or less**

## Bearing

Check the items below. If necessary, replace them with new ones.

- Damage and rough rotation of the bearing as shown.

### ASSEMBLY

1. Install the reverse main gear using Tool as shown.

**CAUTION:**

Install with the orientation of reverse main gear as shown.

2. Install the 1st bushing using Tool as shown.
3. Install the needle bearing, and then the 1st main gear.

4. Install the spread spring, shifting insert, and a new 1st-2nd synchronizer hub onto the 1st-2nd coupling sleeve.

**CAUTION:**

- Install with the orientation of the new synchronizer hub as shown.
- Do not reuse 1st-2nd synchronizer hub

# MAINSHAFT AND GEARS

[RS6F51H]

- Install with the orientation of coupling sleeve as shown.

- Do not hook the ends of the two spread springs (front and back have two each) on the same shifting insert.

5. Install the 1st gear synchronizer assembly onto the mainshaft, and the synchronizer hub assembly onto the mainshaft using Tool as shown.

**CAUTION:**

- Outer baulk ring, synchronizer cone, and inner baulk ring on the 2nd gear-side must have been removed.
- Install the coupling sleeve with the proper orientation.

6. Install the 2nd bushing using Tool as shown.
7. Install the outer baulk ring, synchronizer cone, and inner baulk ring on 2nd gear-side.
8. Install the 2nd needle bearing and 2nd gear.

9. Install the 3rd main gear.

**CAUTION:**

**Install the 3rd main gear with the orientation as shown.**

10. Install the 3rd-4th mainshaft spacer.

# MAINSHAFT AND GEARS

[RS6F51H]

11. Measure the dimension "C1". Select a suitable adjusting shim so that the dimension "C1" satisfies the specified standard value, and install it onto the mainshaft.

**Standard for dimension "C1"** : 173.85 - 173.95 mm  
(6.844 - 6.848 in)

**CAUTION:**

Only 1 adjusting shim can be selected.

**Adjusting Shim**

Thickness	Part number	Thickness	Part number
0.52 mm (0.0205 in)	32238 8H500	0.84 mm (0.0331 in)	32238 8H504
0.60 mm (0.0236 in)	32238 8H501	0.92 mm (0.0362 in)	32238 8H505
0.68 mm (0.0268 in)	32238 8H502	1.00 mm (0.0394 in)	32238 8H506
0.76 mm (0.0299 in)	32238 8H503	1.08 mm (0.0425 in)	32238 8H507

12. Install the 4th main gear with the specified orientation as shown, using Tool as shown.

**CAUTION:**

Install the 4th main gear with the orientation as shown.

13. Install the 5th main gear with the specified orientation as shown, using Tool as shown.

**CAUTION:**

Install the 5th main gear with the orientation as shown.

14. Install the 5th-6th mainshaft spacer.

# MAINSHAFT AND GEARS

[RS6F51H]

15. Install the 6th main gear using Tool as shown.

16. Select the 6th main adjusting shim and then install it onto the mainshaft.

- Calculate thickness “S” of 6th main adjusting shim by procedure below so that end play dimension between 6th main gear and mainshaft rear bearing becomes the dimension specified.

**End play : 0 - 0.1 mm (0 - 0.004 in)**

**Dimension “S” = (“S<sub>1</sub>” - “S<sub>2</sub>”) + end play**

**“S” : Thickness of adjusting shim**

**“S<sub>1</sub>” : Dimension from mainshaft standard face to mainshaft rear bearing press-fit end face**

**“S<sub>2</sub>” : Dimension from mainshaft standard face to 6th main gear end face**

**CAUTION:**

**Only 1 adjusting shim can be selected.**

**Adjusting Shim**

Thickness	Part number	Thickness	Part number
0.88 mm (0.0346 in)	32237 8H560	1.20 mm (0.0472 in)	32237 8H564
0.96 mm (0.0378 in)	32237 8H561	1.28 mm (0.0504 in)	32237 8H565
1.04 mm (0.0409 in)	32237 8H562	1.36 mm (0.0535 in)	32237 8H566
1.12 mm (0.0441 in)	32237 8H563		

- Using a height gauge, measure the dimension “S<sub>1</sub>” and “S<sub>2</sub>” as shown.
- Install the selected 6th main adjusting shim to the mainshaft.

17. Install the mainshaft rear bearing using Tool as shown.

# MAINSHAFT AND GEARS

[RS6F51H]

18. Install the C-ring onto the mainshaft, and check that the end play of mainshaft rear bearing meets specifications.

**End play standard value : 0 - 0.06 mm (0 - 0.0024 in)**

- If the measurement is outside the specified standard value, reselect a new C-ring.

## C-Ring

Thickness	Part number	Thickness	Part number
2.535 mm (0.0866 in)	32348 8H800	2.835 mm (0.1116 in)	32348 8H810
2.565 mm (0.1010 in)	32348 8H801	2.865 mm (0.1128 in)	32348 8H811
2.595 mm (0.1022 in)	32348 8H802	2.895 mm (0.1140 in)	32348 8H812
2.625 mm (0.1033 in)	32348 8H803	2.925 mm (0.1152 in)	32348 8H813
2.655 mm (0.1045 in)	32348 8H804	2.955 mm (0.1163 in)	32348 8H814
2.685 mm (0.1057 in)	32348 8H805	2.985 mm (0.1175 in)	32348 8H815
2.715 mm (0.1069 in)	32348 8H806	3.015 mm (0.1187 in)	32348 8H816
2.745 mm (0.1081 in)	32348 8H807	3.045 mm (0.1199 in)	32348 8H817
2.775 mm (0.1093 in)	32348 8H808	3.075 mm (0.1211 in)	32348 8H818
2.805 mm (0.1104 in)	32348 8H809		

19. Fit the C-ring holder, and install the snap ring as shown.

20. Check the end play of 1st and 2nd main gears as shown.

**End play standard value**

**1st gear : 0.20 - 0.30 mm (0.0079 - 0.0118 in)**

**2nd gear : 0.06 - 0.16 mm (0.0024 - 0.0063 in)**

## REVERSE IDLER SHAFT AND GEARS

### Disassembly and Assembly DISASSEMBLY

1. Remove the reverse idler gear adjusting shim.
2. Remove the reverse idler gear (rear), reverse coupling sleeve and insert spring simultaneously.
3. Remove the reverse idler gear needle bearing.
4. Remove the thrust needle bearing.
5. Remove the reverse baulk ring.
6. Remove the reverse idler gear (front).
7. Remove the reverse idler gear needle bearing.
8. Remove the thrust needle bearing.
9. Pull off the locking pin from the reverse idler shaft.

### INSPECTION AFTER DISASSEMBLY

#### Reverse Idler Shaft and Gears

Check the parts listed. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the reverse idler shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the reverse idler gears.

#### Synchronizer

Check parts listed. If necessary, replace them with new ones.

- Damage and unusual wear on contact surfaces of coupling sleeve, synchronizer hub, and insert spring.
- Coupling sleeve and synchronizer hub must move smoothly as shown.

- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

## Baulk ring clearance

- Press the baulk ring against the cone, and measure the clearance between the baulk ring and cone as shown. If the measurement is below the specified limit, replace it with a new one.

### Baulk ring to gear clearance

**Standard : 0.95 - 1.4 mm (0.0374 - 0.055 in)**

**Limit value : 0.7 mm (0.028 in)**

## Bearing

Check the parts listed. If necessary, replace them with new ones.

- Damage and rough rotation of the bearing.

## ASSEMBLY

Assembly is in the reverse order of disassembly.

### CAUTION:

- Install the insert spring with the orientation as shown.

## FINAL DRIVE

PF3:38411

### Disassembly and Assembly

ECS005VK

1. Remove the final gear bolts. Then, separate the final gear from the differential case.
2. Remove the speedometer drive gear.
3. Using a puller and Tool (drift), remove the differential side bearing (clutch housing side) as shown.

4. Using a puller and Tool (drift), remove the differential side bearing (transaxle case side) as shown.

### INSPECTION AFTER DISASSEMBLY

#### Bearing

- Check for bearing damage and rough rotation as shown. If necessary, replace with a new one.

#### CAUTION:

When replacing the tapered roller bearing, replace the outer and inner races as a set.

### ASSEMBLY

1. Using Tool (drift), install the differential side bearing (transaxle case side) as shown.

# FINAL DRIVE

[RS6F51H]

- Align and install the speedometer drive gear onto the differential case as shown.

- Using Tool (drift), install the differential side bearing (clutch housing side) as shown.

- Install the final gear into the differential case, and tighten the final gear bolts to specification.

**Final gear bolts** : Refer to [MT-149, "FINAL DRIVE COMPONENTS"](#) .

## SHIFT CONTROL

### Inspection

- Check the contact surfaces and sliding area for wear, damage, or bending as shown. If necessary, replace the parts.

### SHIFT FORK

- Check if the width of the shift fork hook (sliding area with coupling sleeve) is within specification, as shown.

#### Shift Fork

Item	One-side wear specification	Sliding width of new part
1st & 2nd	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
3rd & 4th	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
5th & 6th	0.2 mm (0.008 in)	6.10 - 6.23 mm (0.2402 - 0.2453 in)
Reverse	0.2 mm (0.008 in)	12.80 - 12.93 mm (0.5039 - 0.5091 in)

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EJS001QX

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precautions for Working with HFC-134a (R-134a)

EJS001A7

#### **WARNING:**

- CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. If the refrigerants are mixed and compressor failure is likely to occur. Refer to [MTC-3, "Contaminated Refrigerant"](#). To determine the purity of HFC-134a (R-134a) in the vehicle and recovery tank, use Refrigerant Recovery/Recycling equipment and Refrigerant Identifier.
- Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor failure is likely to occur.
- The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
  - When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
  - When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
  - Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.
  - Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove R-134a from the A/C system, using certified service equipment meeting requirements of SAE J2210 (R-134a recycling equipment), or J2209 (R-134a recovery equipment). If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.
  - Do not allow A/C lubricant (Genuine Nissan A/C System Lubricant Type R or equivalent) to come in contact with styrofoam parts. Damage may result.

### Contaminated Refrigerant

EJS001A8

If a refrigerant other than pure R-134a is identified in a vehicle, your options are:

- Explain to the customer that environmental regulations prohibit the release of contaminated refrigerant into the atmosphere.
- Explain that recovery of the contaminated refrigerant could damage your service equipment and refrigerant supply.
- Suggest the customer return the vehicle to the location of previous service where the contamination may have occurred.
- If you choose to perform the repair, recover the refrigerant using only **dedicated equipment and containers. Do not recover contaminated refrigerant into your existing service equipment.** If your facility does not have dedicated recovery equipment, you may contact a local refrigerant product retailer for available service. This refrigerant must be disposed of in accordance with all federal and local regulations. In addition, replacement of all refrigerant system components on the vehicle is recommended.

MTC

# PRECAUTIONS

- If the vehicle is within the warranty period, the air conditioner warranty is void. Please contact Nissan Customer Affairs for further assistance.

## General Refrigerant Precautions

EJS001A9

### WARNING:

- Do not release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.
- Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.
- Do not store or heat refrigerant containers above 52°C (125°F).
- Do not heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.
- Do not intentionally drop, puncture, or incinerate refrigerant containers.
- Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.
- Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.
- Do not pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and R-134a have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.

## Precautions for Leak Detection Dye

EJS001AA

- The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.
- Always wear fluorescence enhancing UV safety glasses to protect your eyes and enhance the visibility of the fluorescent dye.
- A compressor shaft seal should not be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electronic refrigerant leak detector (J-41995).
- Always remove any dye from the leak area after repairs are complete to avoid a misdiagnosis during a future service.
- Do not allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time **cannot be removed**.
- Do not spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).
- Do not use more than one refrigerant dye bottle (1/4 ounce / 7.4 cc) per A/C system.
- Leak detection dyes for R-134a and R-12 A/C systems are different. Do not use R-134a leak detection dye in R-12 A/C systems or R-12 leak detection dye in R-134a A/C systems or A/C system damage may result.
- The fluorescent properties of the dye will remain for over three (3) years unless a compressor failure occurs.

## A/C Identification Label

EJS001AB

Vehicles are equipped factory installed fluorescent dye and have this identification label on the under side of hood.

### NOTE:

Vehicles equipped with factory installed fluorescent dye have a green label.

# PRECAUTIONS

EJS001AC

## Precautions for Refrigerant Connection FEATURES OF NEW TYPE REFRIGERANT CONNECTION

- The O-ring has been relocated. It has also been provided with a groove for proper installation. This eliminates the chance of the O-ring being caught in, or damaged by, the mating part. The sealing direction of the O-ring is now set vertically in relation to the contacting surface of the mating part to improve sealing characteristics.
- The reaction force of the O-ring will not occur in the direction that causes the joint to pull out, thereby facilitating piping connections.

## O-RING AND REFRIGERANT CONNECTION

### QG18DE

### QR25DE

### CAUTION:

The new and former refrigerant connections in some systems use different O-ring configurations. Do not confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant will leak at, or around, the connection.

# PRECAUTIONS

## O-Ring Part Numbers and Specifications

Connection type	O-ring size	Part number*	D mm (in)	W mm (in)
New	8	92471 N8210	6.8 (0.268)	1.85 (0.0728)
Former	10	J2476 N8200	9.25 (0.3642)	1.78 (0.0701)
Former	12	92471 N8200	10.8 (0.425)	1.78 (0.0701)
New	12	92472 N8210	10.9 (0.429)	3.65 (0.1437)
Former	16	92473 N8200	13.9 (0.547)	1.78 (0.0701)
New	16	92473 N8210	13.6 (0.535)	2.43 (0.0957)
New	19	92474 N8210	16.5 (0.650)	2.43 (0.0957)

\*: Always check with the Parts Department for the latest parts information.

### WARNING:

Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.

### CAUTION:

When replacing or cleaning refrigerant cycle components, observe the following.

- When the compressor is removed, store it in the same position as it is when mounted on the car. Failure to do so will cause lubricant to enter the low pressure chamber.
- When connecting tubes, always use a torque wrench and a back-up wrench.
- After disconnecting tubes, immediately plug all openings to prevent entry of dirt and moisture.
- When installing an air conditioner in the vehicle, connect the pipes as the final stage of the operation. Do not remove the seal caps of pipes and other components until just before required for connection.
- Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.
- Thoroughly remove moisture from the refrigeration system before charging the refrigerant.
- Always replace used O-rings.
- When connecting tube, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.  
Lubricant name: Genuine Nissan A/C System Lubricant Type R or equivalent  
Part number: KLH00-PAGRO
- O-ring must be closely attached to dented portion of tube.
- When replacing the O-ring, be careful not to damage O-ring and tube.
- Connect tube until you hear it click, then tighten the nut or bolt by hand until snug. Make sure that the O-ring is installed to tube correctly.

# PRECAUTIONS

- After connecting line, conduct leak test and make sure that there is no leakage from connections. When the gas leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.

## Precautions for Servicing Compressor

EJS001AD

- Plug all openings to prevent moisture and foreign matter from entering.
- When the compressor is removed, store it in the same position as it is when mounted on the car.
- When replacing or repairing compressor, follow "Maintenance of Lubricant Quantity in Compressor" exactly. Refer to [MTC-16, "Maintenance of Lubricant Quantity in Compressor"](#).
- Keep friction surfaces between clutch and pulley clean. If the surface is contaminated, with lubricant, wipe it off by using a clean waste cloth moistened with thinner.
- After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.
- After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation. [Gap between clutch disc and pulley is 0.3 - 0.6 mm (0.012 - 0.024 in)]

## Precautions for Service Equipment RECOVERY/RECYCLING EQUIPMENT

EJS001AE

Follow the manufacturer's instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

## ELECTRONIC LEAK DETECTOR

Follow the manufacturer's instructions for tester operation and tester maintenance.

# PRECAUTIONS

## VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure so the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it. To prevent this migration, use a manual valve situated near the hose-to-pump connection, as follows.

- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut off valve, disconnect the hose from the pump: as long as the hose is connected, the valve is open and lubricating oil may migrate.

Some one-way valves open when vacuum is applied and close under a no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.

## MANIFOLD GAUGE SET

Be certain that the gauge face indicates R-134a or 134a. Make sure the gauge set has 1/2"-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) along with specified lubricant.

## SERVICE HOSES

Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut off devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.

MTC

# PRECAUTIONS

## SERVICE COUPLERS

Never attempt to connect HFC-134a (R-134a) service couplers to an CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close

## CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

## Wiring Diagrams and Trouble Diagnosis

EJS001AF

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-4, "Wiring Diagram — POWER —"](#)

When you perform trouble diagnosis, refer to the following:

- [GI-9, "How to Follow Trouble Diagnoses"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

## HFC-134a (R-134a) Service Tools and Equipment

Never mix HFC-134a refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.

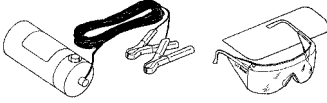

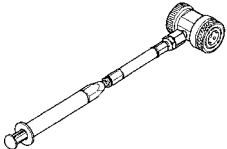

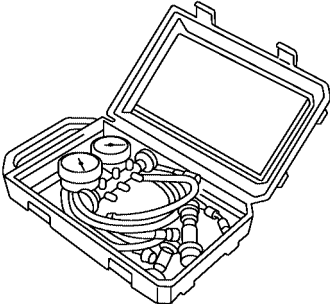

Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.

Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.

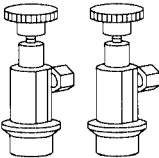

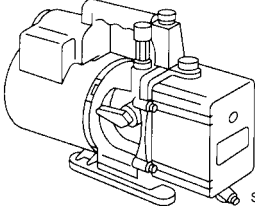

Adapters that convert one size fitting to another must never be used: refrigerant/lubricant contamination will occur and compressor failure will result.

Tool number (Kent-Moore No.) Tool name	Description
HFC-134a (R-134a) refrigerant   S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size ● large container 1/2 <sup>2</sup> -16 ACME

# REFRIGERATION SYSTEM

PFP:KA990

EJS001AI

## REFRIGERATION SYSTEM

### Refrigeration Cycle REFRIGERANT FLOW

The refrigerant flows in the standard pattern, that is, through the compressor, the condenser, the liquid tank, through the evaporator, and back to the compressor. The refrigerant evaporation through the evaporator coil is controlled by an externally equalized expansion valve, located inside the evaporator case.

### FREEZE PROTECTION

The compressor cycles go on and off to maintain the evaporator temperature within a specified range. When the evaporator coil temperature falls below a specified point, the intake sensor interrupts the compressor operation. When the evaporator coil temperature rises above the specification, the thermo control amplifier allows compressor operation.

### REFRIGERANT SYSTEM PROTECTION

#### Refrigerant Pressure Sensor

The refrigerant system is protected against excessively high or low pressures by the refrigerant pressure sensor, located on the refrigerant lines where they attach to the condenser. If the system pressure rises above or falls below the specifications, the refrigerant pressure sensor detects the pressure inside the refrigerant line and sends the voltage signal to the ECM. The ECM turns the A/C relay OFF and stops the compressor when pressure on the high pressure side detected by refrigerant pressure sensor is over about 2,746 kPa (28 kg/cm<sup>2</sup>, 398 psi) or below about 177 kPa (1.8 kg/cm<sup>2</sup>, 26 psi).

#### Pressure Relief Valve

The refrigerant system is also protected by a pressure relief valve, located in the rear head of the compressor. When the pressure of refrigerant in the system increases to an abnormal level [more than 3,727 kPa (38 kg/cm<sup>2</sup>, 540 psi)], the release port on the pressure relief valve automatically opens and releases refrigerant into the atmosphere.

---

## LUBRICANT

### Maintenance of Lubricant Quantity in Compressor

EJS001AJ

The lubricant in the compressor circulates through the system with the refrigerant. Add lubricant to compressor when replacing any component or after a large refrigerant leakage has occurred. It is important to maintain the specified amount.

If lubricant quantity is not maintained properly, the following malfunctions may result:

- Lack of lubricant: May lead to a seized compressor
- Excessive lubricant: Inadequate cooling (thermal exchange interference)

## LUBRICANT

**Name: Genuine Nissan A/C System Lubricant Type R or equivalent**

**Part number: KLH00-PAGR0**

### CHECKING AND ADJUSTING

Adjust the lubricant quantity according to the test group shown below.

## 1. LUBRICANT RETURN OPERATION

---

Can lubricant return operation be performed?

- A/C system works properly.
- There is no evidence of a large amount of lubricant leakage.

Yes or No

- Yes >> GO TO 2.  
No >> GO TO 3.

## 2. PERFORM LUBRICANT RETURN OPERATION

---

1. Start engine, and set the following conditions:
  - **Test condition**
  - Engine speed: Idling to 1,200 rpm**
  - A/C switch: ON**
  - Blower speed: Max. position**
2. Perform lubricant return operation for about 10 minutes.
3. Stop engine.

**CAUTION:**

**If excessive lubricant leakage is noted, do not perform the lubricant return operation.**

>> GO TO 3.

## 3. CHECK COMPRESSOR

---

Should the compressor be replaced?

Yes or No

- Yes >> GO TO [MTC-68. "Removal and Installation"](#) .  
No >> GO TO 4.

## 4. CHECK ANY PART

---

Is there any part to be replaced? (Evaporator, condenser, liquid tank or in case there is evidence of a large amount of lubricant leakage.)

Yes or No

- Yes >> GO TO [MTC-17. "Lubricant Adjusting Procedure for Components Replacement Except Compressor"](#) .  
No >> Carry out the A/C performance test.

# LUBRICANT

## Lubricant Adjusting Procedure for Components Replacement Except Compressor

After replacing any of the following major components, add the correct amount of lubricant to the system.

### Amount of lubricant to be added

Part replaced	Lubricant to be added to system	Remarks
	Amount of lubricant ml (US fl oz, Imp fl oz)	
Evaporator	75 (2.5, 2.6)	—
Condenser	75 (2.5, 2.6)	—
Liquid tank	5 (0.2, 0.2)	Add if compressor is not replaced.
In case of refrigerant leak	30 (1.0, 1.1)	Large leak
	—	Small leak *1

- \*1: If refrigerant leak is small, no addition of lubricant is needed.

## Lubricant Adjustment Procedure for Compressor Replacement

1. Before connecting recovery/recycling equipment to vehicle, check recovery/recycling equipment gauges. No refrigerant pressure should be displayed. If OK, recover refrigerant from equipment lines.
2. Confirm refrigerant purity in supply tank using recovery/recycling equipment and refrigerant identifier. If NG, refer to [MTC-3, "Contaminated Refrigerant"](#).
3. Connect ZCR4 to vehicle. Confirm refrigerant purity in vehicle A/C system using recovery/recycling equipment and refrigerant identifier. If NG, refer to [MTC-3, "Contaminated Refrigerant"](#).
4. Discharge refrigerant into the refrigerant recovery/recycling equipment. Measure lubricant discharged into the recovery/recycling equipment.
5. Drain the lubricant from the "old" (removed) compressor into a graduated container and recover the amount of lubricant drained.
6. Drain the lubricant from the "new" compressor into a separate, clean container.
7. Measure an amount of new lubricant installed equal to amount drained from "old" compressor. Add this lubricant to "new" compressor through the suction port opening.
8. Measure an amount of new lubricant equal to the amount recovered during discharging. Add this lubricant to "new" compressor through the suction port opening.
9. If the liquid tank also needs to be replaced, add an additional 5 ml (0.2 US fl oz, 0.2 Imp fl oz) of lubricant at this time.

**Do not add this 5 ml (0.2 US fl oz, 0.2 Imp fl oz) of lubricant if only replacing the compressor.**

## Control Operation

EJS001AL

### FAN CONTROL SWITCH

This switch turns the fan ON and OFF, and controls fan speed.

### REAR WINDOW DEFOGGER SWITCH

This switch turns the rear window defogger ON and OFF.

### MODE CONTROL KNOB

This control knob controls the outlet air flow.

When DEF or F/D mode is selected, the push control unit sets the intake door to FRESH.

The compressor turns on when DEF mode is selected and remains on until the key is turned off.

### TEMPERATURE CONTROL KNOB

This knob adjusts the temperature of the discharge air.

### RECIRCULATION (REC) SWITCH

OFF position: Outside air is drawn into the passenger compartment.

ON position: Interior air is recirculated inside the vehicle.

The indicator lamp will also light.

Recirculation is canceled when DEF or F/D mode is selected, and resumes when another mode is chosen.

### AIR CONDITIONER (A/C) SWITCH

The air conditioner switch controls the A/C system. When the switch is depressed with the fan ON, the compressor will turn ON. The indicator lamp will also light.

**The air conditioner cooling function operates only when the engine is running.**

# TROUBLE DIAGNOSIS

EJS001AS

## Operational Check

The purpose of the operational check is to confirm that the system operates properly.

### CONDITIONS:

- Engine running and at normal operating temperature.

### PROCEDURE:

#### 1. Check Blower

1. Turn fan control switch to 1-speed.  
Blower should operate on 1-speed.
2. Then turn fan control switch to 2-speed, and continue checking blower speed until all speeds are checked.
3. Leave fan control switch on 4-speed.

If NG, go to [MTC-46, "Trouble Diagnosis Procedure for Blower Motor"](#).

If OK, continue with next check.

#### 2. Check Discharge Air

1. Turn knob to each mode.

2. Confirm that discharge air comes out according to the air distribution table.

Refer to [MTC-21, "Discharge Air Flow"](#).

If NG, go to [MTC-42, "TROUBLE DIAGNOSIS PROCEDURE FOR MODE DOOR"](#).

If OK, continue with next check.

### NOTE:

Confirm that the compressor clutch is engaged (visual inspection) and intake door position is at FRESH when the DEF  mode is selected.

Confirm that the intake door position is at FRESH when the F/D  mode is selected.

Intake door position is checked in the next step.

Discharge air flow

Mode control knob	Air outlet/distribution		
	Face	Foot	Defroster
	100%	–	–
	60%	40%	–
	–	80%	20%
	–	60%	40%
	–	–	100%

# TROUBLE DIAGNOSIS

## 3. Check Recirculation

1. Press REC  switch.  
Recirculation indicator should illuminate.
2. Listen for intake door position change (you should hear blower sound change slightly).

If NG, go to [MTC-38, "Trouble Diagnosis Procedure for Intake Door"](#) .  
If OK, continue with next check.

### NOTE:

- Recirculation does not operate in DEF  and F/D  modes.

## 4. Check Temperature Decrease

1. Turn temperature control knob to full cold.
2. Check for cold air at discharge air outlets.

If NG, go to [MTC-57, "Trouble Diagnosis Procedure for Insufficient Cooling"](#) .

If OK, continue with next check.

## 5. Check Temperature Increase

1. Turn temperature control knob to full hot.
2. Check for hot air at discharge air outlets.

If NG, go to [MTC-64, "Trouble Diagnosis Procedure for Insufficient Heating"](#) .

## 6. Check Air Conditioner Switch

Turn the fan control switch to the desired (1- to 4-speed) position and push the A/C switch to turn ON the air conditioner.

The indicator lamp should come on when air conditioner is ON.

If NG, go to [MTC-51, "Trouble Diagnosis Procedure for Magnet Clutch"](#) .

## INTAKE DOOR

### Trouble Diagnosis Procedure for Intake Door

SYMPTOM:

- Intake door does not change.

#### INSPECTION FLOW

\*1 [MTC-39](#)

\*2 [MTC-35](#)

\*3 [MTC-34](#)

## Component Description INTAKE DOOR MOTOR

EJS001AV

The intake door motor is installed on the intake unit. Using a link, it opens and closes the intake door.

When REC switch is ON, the ground line of the motor is switched from terminal 2 to 1. This starts the motor because the position switch contacts built into it make current flow. When REC switch is OFF, the ground line is switched from terminal 1 to 2. The contacts turn along with the motor. When they reach the non-current flow position, the motor will stop.

# INTAKE DOOR

## Intake Door Motor Circuit

EJS001AW

SYMPTOM:

- Intake door does not change.

### 1. CHECK POWER SUPPLY FOR INTAKE DOOR MOTOR

Disconnect intake door motor harness connector.

Do approx. 12 volts exist between intake door motor harness terminal Nos. 1, 2 and body ground?

Yes or No

Yes >> GO TO 3.

No >> GO TO 2.

# INTAKE DOOR

## 2. CHECK CIRCUIT CONTINUITY BETWEEN INTAKE DOOR MOTOR AND AIR CONTROL UNIT

Check circuit continuity between A/C control unit harness terminal Nos. 10 (11) and intake door motor harness terminal Nos. 2 (1).

If OK, check harness for short.

Yes or No

- Yes >> Replace A/C control unit.
- No >> Repair harness or connector.

## 3. CHECK CIRCUIT CONTINUITY OF INTAKE DOOR MOTOR

Check circuit continuity between intake door motor harness terminal No. 1 and No. 2.

OK or NG

- OK >> GO TO 4.
- NG >> Replace intake door motor.

# INTAKE DOOR

## 4. CHECK INTAKE DOOR LINKAGE

Refer to [MTC-43, "CONTROL LINKAGE ADJUSTMENT"](#) .

OK or NG

OK >> **INSPECTION END.**

NG >> Repair or adjust.

### Control Linkage Adjustment INTAKE DOOR MOTOR

1. Install intake door motor on intake unit.  
Ensure that the intake door motor lever is fitted into the slit portion of intake door link.
2. Connect the intake door motor harness connector.
3. Turn ignition switch to "ON" position.
4. Check that intake door operates properly when REC switch is turned ON and OFF.

## Mode Door TROUBLE DIAGNOSIS PROCEDURE FOR MODE DOOR

SYMPTOM:

- Mode door does not change.

### INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

#### OPERATIONAL CHECK - Discharge air.

- 1) Turn mode control knob.
- 2) Confirm that discharge air comes out according to the air distribution table at left. Refer to "Discharge Air Flow" in "DESCRIPTION" (\*1).

#### Discharge air flow

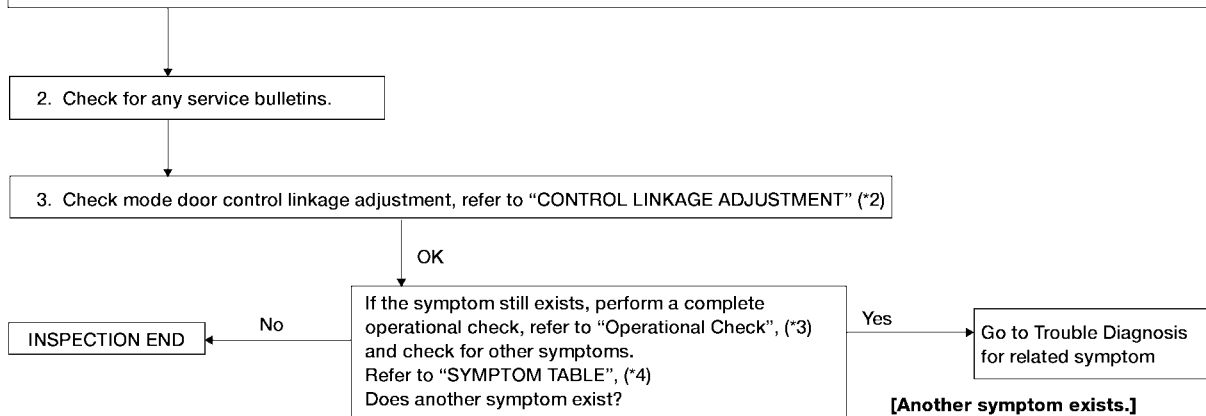

Mode control knob	Air outlet/distribution		
	Face	Foot	Defroster
	100%	-	-
	60%	40%	-
	-	80%	20%
	-	60%	40%
	-	-	100%

#### NOTE:

Confirm that the compressor clutch is engaged (visual inspection) and intake door position is at FRESH when the DEF () or D/F () button is pressed.

If OK (symptom cannot be duplicated), perform complete operational check (\*3).

If NG (symptom is confirmed), continue with STEP-2 following.

## Air Mix Door

### TROUBLE DIAGNOSIS PROCEDURE FOR AIR MIX DOOR

SYMPTOM:

- Air mix door does not change.

### INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

#### OPERATIONAL CHECK - Recirculation

1. Check Temperature Decrease
  - 1) Turn temperature control knob to full cold.
  - 2) Check for cold air at discharge air outlets.

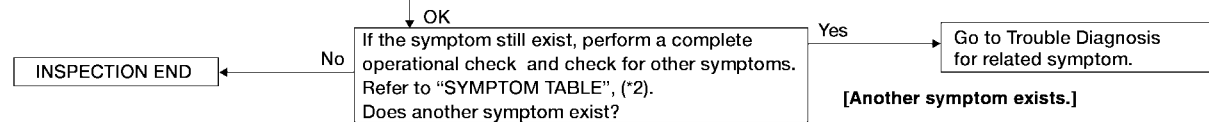

2. Check Temperature Increase
  - 1) Turn temperature control knob to full hot.
  - 2) Check for hot air at discharge air outlets.

If OK (symptom cannot be duplicated). Perform complete operational check. (\*1)  
If NG (symptom is confirmed), continue with STEP-2 following.

2. Check for any service bulletins.

3. Visually check air mix door linkage operation.

4. Visually check air mix door.

\*1 [MTC-35](#)

\*2 [MTC-34](#)

WHA190

# INTAKE DOOR

## Temperature Control Linkage Adjustment

EJS001B0

### Temperature Control Cable

- Turn temperature control knob to the full cold position.
- Set the air mix door lever in the full cold position by hand.
- Pull on cable cover in the direction of the arrow and then clamp cable cover.

**After positioning air mix door control cable, check for proper operation.**

\*2 [MTC-35](#)

\*3 [MTC-34](#)

## Blower Motor Circuit

EJS001B2

SYMPTOM:

- Blower motor does not rotate.

Symptom table No.	INCIDENT
1	Fan fails to rotate.
2	Fan does not rotate at 1-speed.
3	Fan does not rotate at 2-speed.
4	Fan does not rotate at 3-speed.
5	Fan does not rotate at 4-speed.

## 1. DIAGNOSTIC PROCEDURE

Check if blower motor rotates properly at each fan speed.  
Conduct checks as per symptom table above.

- 1 >> GO TO 2.  
2, 3, 4 >> GO TO 8.  
5 >> GO TO 10.

# BLOWER MOTOR

## 2. CHECK POWER SUPPLY FOR BLOWER MOTOR

1. Disconnect blower motor harness connector.
2. Do approx. 12 volts exist between blower motor harness terminal + and body ground?

### Yes or No

Yes >> GO TO 3.

No >> Check 15A (Nos. 14 and 16) fuses at fuse block. Refer to [PG-8, "IGNITION POWER SUPPLY — IGNITION SW. IN "ON" .](#)

## 3. CHECK CIRCUIT CONTINUITY FOR BLOWER MOTOR

1. Turn fan control switch to any position except OFF.
2. Check circuit continuity between blower motor connector M57 terminal – (L/B) and body ground.

**Continuity should exist.**

### OK or NG

OK >> GO TO 4.

NG >> Reconnect blower motor harness connector. GO TO 5.

## 4. CHECK BLOWER MOTOR

Refer to [MTC-50, "BLOWER MOTOR" .](#)

### OK or NG

OK >> **INSPECTION END.**

NG >> Replace blower motor.

# BLOWER MOTOR

## 5. CHECK BLOWER MOTOR CIRCUIT BETWEEN BLOWER MOTOR AND FAN RESISTOR

Do approx. 12 volts exist between fan resistor harness terminal No. 1 and body ground?

Yes or No

Yes >> Disconnect fan control switch harness connector. GO TO 7.

No >> Disconnect blower motor and fan resistor harness connectors. GO TO 6.

## 6. CHECK CIRCUIT CONTINUITY BETWEEN BLOWER MOTOR AND FAN RESISTOR

Check circuit continuity between blower motor harness terminal – and fan resistor harness terminal No. 1.

OK or NG

OK >> Check harness for short and repair as necessary.

NG >> Check harness for open and check connectors. Repair as necessary.

## 7. CHECK GROUND CIRCUIT FOR FAN CONTROL SWITCH

Check circuit continuity between fan control switch harness terminal No. 5 and body ground.

OK or NG

OK >> GO TO 8.

NG >> Repair harness or connector.

# BLOWER MOTOR

## 8. CHECK RESISTOR AFTER DISCONNECTING IT

Refer to [MTC-50, "FAN RESISTOR"](#) .

OK or NG

- OK >> GO TO 9.
- NG >> Replace fan resistor.

## 9. CHECK FAN RESISTOR HARNESS CONNECTOR

Reconnect fan resistor harness connector.

- 1 >> GO TO 12.
- 2, 3, 4 >> GO TO 10.

## 10. CHECK FAN CONTROL SWITCH CIRCUIT

Do approx. 12 volts exist between each fan control switch harness terminal and body ground?

Symptom table No.	Terminal No.		Voltage
	(+)	(-)	
2	4	Body ground	Approx. 12V
3	3		
4	2		
5	1		

LHA131

Yes or No

- Yes >> GO TO 12.
- No >> GO TO 11.

## 11. CHECK CIRCUIT CONTINUITY BETWEEN FAN CONTROL SWITCH AND FAN RESISTOR

Check circuit continuity between fan control switch harness terminal and fan resistor harness terminal.

Terminal No.		Continuity
Fan control switch	Fan resistor	
1	1	Yes
2	2	
3	3	
4	4	

LHA132

OK or NG

- OK >> Check harness for short and repair as necessary.
- NG >> Check harness for open and check connectors. Repair as necessary.

## 12. CHECK FAN CONTROL SWITCH AFTER DISCONNECTING IT

Refer to [MTC-50, "FAN CONTROL SWITCH"](#) .

OK or NG

- OK >> **INSPECTION END.**
- NG >> Replace fan control switch.

# BLOWER MOTOR

EJS001B3

## Electrical Components Inspection FAN CONTROL SWITCH

Check continuity between terminals at each switch position.

Fan control switch position	Continuity between terminals
OFF	
1	4 — 5 — 6
2	3 — 5 — 6
3	2 — 5 — 6
4	1 — 5 — 6

## BLOWER MOTOR

Confirm smooth rotation of the blower motor.

- Ensure that there are no foreign particles inside the intake unit.

## FAN RESISTOR

Check resistance between terminals.

Terminal No.		Resistance (Approx.)
(+)	(-)	
3	1	1.305 - 1.595Ω
4		2.457 - 3.003Ω
2		0.225 - 0.275Ω

# MAGNET CLUTCH

PFP:92660

EJS001B4

## MAGNET CLUTCH

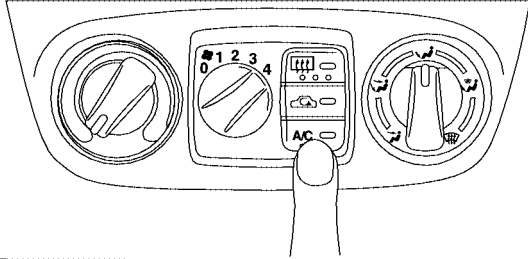

### Trouble Diagnosis Procedure for Magnet Clutch

SYMPTOM:

- Magnet clutch does not operate when A/C switch and fan control switch are ON.

#### INSPECTION FLOW

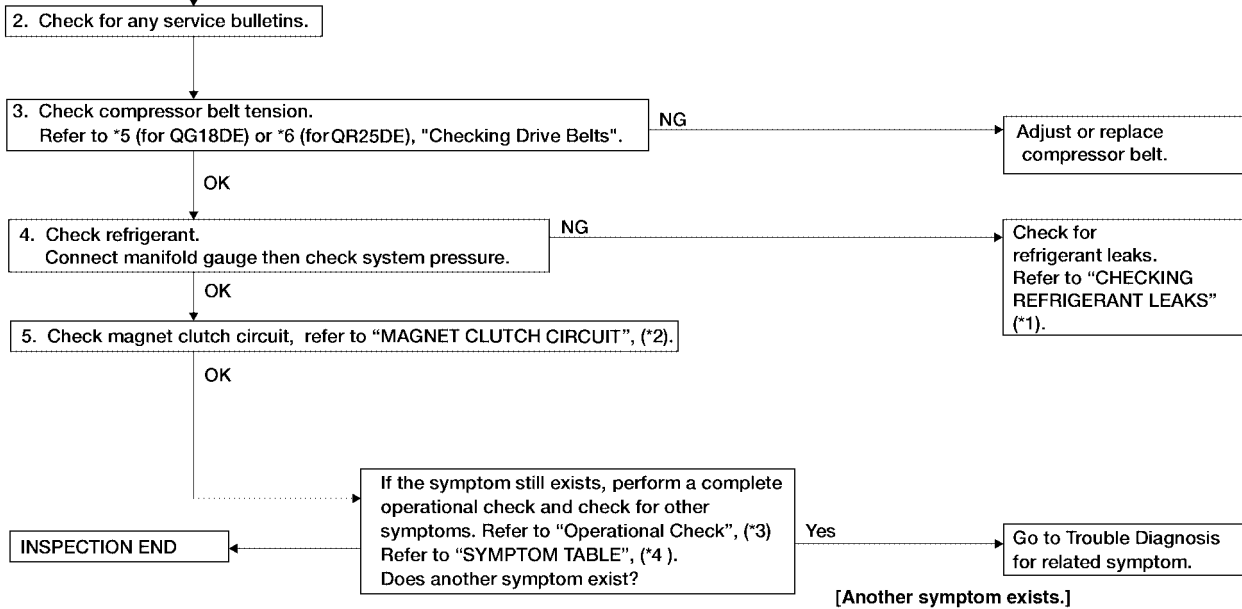

1. Confirm symptom by performing the following operational check.

**OPERATIONAL CHECK - A/C switch**

Turn fan control switch to the desired (1 to 4-speed) position and push the air conditioner switch to turn ON the air conditioner. The indicator light should come on when air conditioner is ON.

If OK (symptom cannot be duplicated), perform complete operational check, refer to "Operational Check", (\*3).  
If NG (symptom is confirmed), continue with STEP-2 following.

\*1 [MTC-86](#)

\*2 [MTC-52](#)

WJIA0006E

# MAGNET CLUTCH

EJS001B5

## Magnet Clutch Circuit

SYMPTOM:

- Magnet clutch does not engage when A/C switch and fan control switch are ON.

### 1. CHECK POWER SUPPLY FOR COMPRESSOR

Disconnect compressor harness connector.

Do approx. 12 volts exist between compressor harness connector E36 terminal No. 1, (L/R) and body ground?

Yes or No

Yes >> GO TO 2.

No >> GO TO 3.

### 2. CHECK MAGNET CLUTCH COIL

Disconnect magnet clutch connector.

Do approx.  $3.2\Omega$  exist between A/C compressor harness connector E36 terminal No. 1, (L/R) and body ground?

Yes or No

Yes >> **INSPECTION END.**

No >> Replace magnet clutch. Refer to [MTC-69, "COMPRESSOR CLUTCH"](#).

# MAGNET CLUTCH

## 3. CHECK CIRCUIT CONTINUITY BETWEEN A/C RELAY AND COMPRESSOR HARNESS

Disconnect A/C relay.

Check circuit continuity between A/C relay harness terminal No. 3 and compressor harness terminal No. 1.

If OK, check harness for short.

OK or NG

OK >> GO TO 4.

NG >> Repair harness or connector.

## 4. CHECK INTAKE SENSOR CIRCUIT

Refer to [MTC-66, "Intake Sensor Circuit"](#) .

OK or NG

OK >> GO TO 5.

NG >> Repair as necessary.

## 5. CHECK POWER SUPPLY FOR A/C RELAY

Disconnect A/C relay.

Do approx. 12 volts exist between A/C relay harness terminal Nos. 1, 5 and body ground?

Yes or No

Yes >> GO TO 6.

No >> Check power supply circuit and 10A (No. 15) fuse at fuse block. Refer to [PG-8, "IGNITION POWER SUPPLY — IGNITION SW. IN "ON" "](#) .

## 6. CHECK A/C RELAY AFTER DISCONNECTING IT

Refer to [MTC-55, "A/C RELAY"](#) .

OK or NG

OK >> Reconnect A/C relay. GO TO 7.

NG >> Replace A/C relay.

# MAGNET CLUTCH

## 7. CHECK COIL SIDE CIRCUIT OF A/C RELAY

Reconnect A/C relay.

Do approx. 12 volts exist between ECM harness connector F59 terminal No. 105 (L) (QG18DE) or F54 terminal No. 26 (L) (QR25DE) and body ground?

**Battery voltage should exist.**

Yes or No

Yes >> GO TO 9.

No >> Disconnect A/C relay. Disconnect ECM harness connector. GO TO 8.

## 8. CHECK CIRCUIT CONTINUITY BETWEEN A/C RELAY AND ECM HARNESS

Check circuit continuity between A/C relay harness connector E50 terminal No. 2 (L) and ECM harness connector F59 terminal No. 105 (L) (QG18DE) or F54 terminal No. 26 (L) (QR25DE).

**Continuity should exist.**

**If OK, check harness for short.**

OK or NG

OK >> Check ECM. Refer to [EC-105, "ECM Terminals and Reference Value"](#) [QG18DE (ULEV Models)], [EC-686, "ECM Terminals and Reference Value"](#) [QG18DE (SULEV Models)] or [EC-1307, "ECM Terminals and Reference Value"](#) (QR25DE).

NG >> Repair harness or connector.

## 9. CHECK VOLTAGE FOR ECM

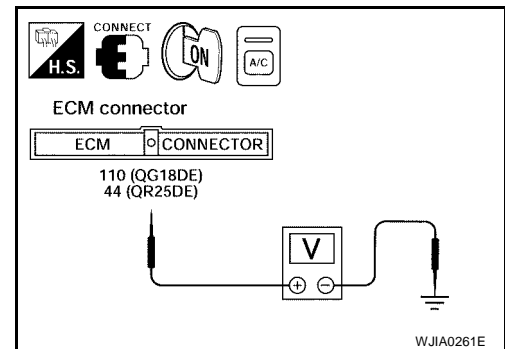

Do approx. 12 volts exist between ECM harness connector F59 (QG18DE) terminal No. 110 (L/R) (QG18DE) or F54 (QR25DE) terminal No. 44 (L/R) and body ground?

**Battery voltage should exist.**

Yes or No

Yes >> GO TO 10.

No >> Check ECM. Refer to [EC-105, "ECM Terminals and Reference Value"](#) [QG18DE (ULEV Models)], [EC-686, "ECM Terminals and Reference Value"](#) [QG18DE (SULEV Models)] or [EC-1307, "ECM Terminals and Reference Value"](#) (QR25DE).

## 10. CHECK REFRIGERANT PRESSURE SENSOR

Refer to [MTC-56, "REFRIGERANT PRESSURE SENSOR"](#).

OK or NG

OK >> GO TO 11.

NG >> Replace refrigerant pressure sensor.

# MAGNET CLUTCH

## 11. CHECK CIRCUIT CONTINUITY BETWEEN FAN CONTROL SWITCH AND A/C CONTROL UNIT

Disconnect A/C control unit and fan control switch.  
Check circuit continuity between fan control switch harness connector M31 terminal No. 6 (Y/G) and A/C control unit harness connector M32 terminal No. 8 (Y/G).

**Continuity should exist.**

**If OK, check harness for short.**

OK or NG

- OK >> GO TO 12.
- NG >> Repair harness or connector.

## 12. CHECK FAN CONTROL SWITCH GROUND

Disconnect fan control switch harness connector.  
Does continuity exist between fan control switch harness terminal No. 5 and body ground?

Yes or No

- Yes >> Replace A/C control unit.
- No >> Repair harness or connector.

## Electrical Component Inspection A/C RELAY

EJS001B6

Check continuity between terminal Nos. 3 and 5.

Conditions	Continuity
12V direct current supply between terminal Nos. 1 and 2	Yes
No current supply	No

If NG, replace relay.

# MAGNET CLUTCH

## REFRIGERANT PRESSURE SENSOR

Make sure that higher A/C refrigerant pressure results in higher refrigerant pressure sensor output voltage.

## Performance Chart

EJS001B9

The Nissan A/C system uses a thermal expansion valve to provide a restriction which causes a pressure change and also controls refrigerant flow through the evaporator.

The best way to diagnose a condition in the refrigerant system is to note the system pressures (shown by the manifold gauges) and the clutch cycle rate and times. Then, compare the findings to the charts.

- The system pressures are low (compressor suction) and high (compressor discharge).
- A clutch cycle is the time the clutch is engaged plus the time it is disengaged (time on plus time off).
- Clutch cycle times are the lengths of time (in seconds) that the clutch is ON and OFF.

## TEST CONDITION

Testing must be performed as follows:

Vehicle location	Indoors or in the shade (in a well-ventilated place)
Doors	Closed
Door windows	Open
Hood	Open
TEMP. switch	Max. COLD
Mode switch	 (Ventilation) set
REC switch	 (Recirculation) set
 (blower) speed	4-speed
Engine speed	1,500 rpm

Operate the air conditioning system for 10 minutes before taking measurements.

## TEST READING

### Recirculating-to-Discharge Air Temperature Table

Inside air (Recirculating air) at blower assembly inlet		Discharge air temperature at center ventilator °C (°F)
Relative humidity %	Air temperature °C (°F)	
50 - 60	20 (68)	6.6 - 8.3 (44 - 47)
	25 (77)	10.4 - 12.4 (51 - 54)
	30 (86)	14.2 - 16.7 (58 - 62)
	35 (95)	18.2 - 21 (65 - 70)
	40 (104)	22.0 - 25.2 (72 - 77)
60 - 70	20 (68)	8.3 - 9.8 (47 - 50)
	25 (77)	12.4 - 14.4 (54 - 58)
	30 (86)	16.7 - 18.9 (62 - 66)
	35 (95)	21.0 - 23.6 (70 - 74)
	40 (104)	25.2 - 28.1 (77 - 83)

### Ambient Air Temperature-to-Operating Pressure Table

Ambient air		High-pressure (Discharge side) kPa (kg/cm <sup>2</sup> , psi)	Low-pressure (Suction side) kPa (kg/cm <sup>2</sup> , psi)
Relative humidity %	Air temperature °C (°F)		
50 - 70	20 (68)	961 - 1,187 (9.8 - 12.1, 139 - 172)	108 - 157 (1.1 - 1.6, 16 - 23)
	25 (77)	1,295 - 1,599 (13.2 - 16.3, 186 - 228)	161.8 - 215.8 (1.65 - 2.2, 23.5 - 31.3)
	30 (86)	1,285 - 1,599 (13.1 - 16.0, 186 - 228)	167 - 216 (1.7 - 2.2, 24 - 31)
	35 (95)	1,520 - 1,863 (15.5 - 19.0, 220 - 279)	235 - 284 (2.4 - 2.9, 34 - 41)
	40 (104)	1,765 - 2,158 (18 - 22, 256 - 313)	289.3 - 353.1 (2.95 - 3.6, 41.9 - 51.2)

# INTAKE SENSOR

PFP:27723

EJS001GW

## INTAKE SENSOR

### Intake Sensor Circuit COMPONENT DESCRIPTION

#### Intake Sensor

The intake sensor is located on the heater and cooling unit. It converts temperature of air after it passes through the evaporator into a resistance value which is then input to the A/C control unit.

After disconnecting intake sensor harness connector, measure resistance between terminals 1 and 2 at sensor harness side, using the table below.

Temperature °C (°F)	Resistance kΩ
-15 (5)	12.34
-10 (14)	9.62
-5 (23)	7.56
0 (32)	6.00
5 (41)	4.80
10 (50)	3.87
15 (59)	3.15
20 (68)	2.57
25 (77)	2.12
30 (86)	1.76
35 (95)	1.47
40 (104)	1.23
45 (113)	1.04

If NG, replace intake sensor.

### DIAGNOSTIC PROCEDURE

SYMPTOM: Intake sensor circuit is open or shorted.

## 1. CHECK INTAKE SENSOR CIRCUIT BETWEEN INTAKE SENSOR AND BODY GROUND

Disconnect intake sensor harness connector.

Terminals		Continuity
(+)	(-)	
Connector	Terminal No. (Wire color)	Body ground
M49	2 (B)	Yes

#### OK or NG

OK >> GO TO 2.

NG >> Repair harness or connector.

# INTAKE SENSOR

## 2. CHECK INTAKE SENSOR CIRCUIT BETWEEN INTAKE SENSOR AND A/C CONTROL UNIT

Disconnect A/C control unit harness connector.

Terminals				Continuity
(+)		(-)		
Connector	Terminal No. (Wire color)	Connector	Terminal No. (Wire color)	Yes
M49	1 (GY)	M32	12 (GY)	

OK or NG

OK >> GO TO 3.

NG >> Repair harness or connector.

## 3. CHECK INTAKE SENSOR

Refer to [MTC-66, "Intake Sensor Circuit"](#) .

OK or NG

OK >> Replace A/C control unit.

NG >> Replace intake sensor.

### Removal and Installation

1. Remove the evaporator. Refer to [MTC-80, "Removal"](#) .
2. Remove the intake sensor clip and then the sensor.

#### **CAUTION:**

**Be careful not to damage the core surface.**

## Removal QG18DE

- When removing center bolt, hold clutch disc with clutch disc tool.
- Remove the clutch disc.  
Clutch disc holding tool:  
(J-44614) Commercial service tool

- Remove the snap ring using external snap ring pliers.

- Pulley removal:

Use a pulley puller with small adapter. Position the small adapter on the end of the drive shaft and the center of the puller on the small adapter. Remove the pulley assembly with the puller.

**To prevent deformation of the pulley groove, the puller claws should be hooked under (not into) the pulley groove.**

- Remove the snap ring using external snap ring pliers.
- Remove the magnet coil harness clip using a screwdriver, the three magnet coil fixing screws and remove the magnet coil.

# COMPRESSOR CLUTCH

## QR25DE

- When removing center bolt, hold clutch disc with clutch disc tool.
- Remove the drive plate using the clutch disc puller. Insert the holder's three pins into the drive plate. Rotate the holder clockwise to hook it onto the plate. Then tighten the center bolt to remove the drive plate. While tightening the center bolt, insert a round bar (screwdriver, etc.) between two of the pins (as shown in the figure) to prevent drive plate rotation. After removing the drive plate, remove the shims from either the drive shaft or the drive plate.

- Remove the snap ring using external snap ring pliers.

- For pulley removal, use pulley puller. Use a commercially available pulley puller. Position the center of the puller on the end of the drive shaft. Remove the pulley assembly with the puller. **To prevent deformation of the pulley groove, the puller claws should be hooked under (not into) the pulley groove.**
- Remove the field coil harness clip using a screwdriver.

# COMPRESSOR CLUTCH

- Remove the three field coil fixing screws and remove the field coil.

## Inspection CLUTCH DISC

If the contact surface shows signs of damage due to excessive heat, replace clutch disc and pulley.

## PULLEY

Check the appearance of the pulley assembly. If contact surface of pulley shows signs of excessive grooving, replace clutch disc and pulley. The contact surfaces of the pulley assembly should be cleaned with a suitable solvent before reinstallation.

## COIL

Check magnet coil for loose connection or cracked insulation.

## Installation QG18DE

- Install the magnet coil.  
**Be sure to align the magnet coil pin with the hole in the compressor front head.**
- Install the magnet coil harness clip using a screwdriver.

- Install the pulley assembly using the installer and a wrench, and then install the snap ring using snap ring pliers.

# COMPRESSOR CLUTCH

- Install the clutch disc on the drive shaft, together with the original shim(s). Press the clutch disc down using the drive plate installer.

- Using the clutch disc tool to prevent clutch disc rotation, tighten the bolt to 12 to 15 N·m (1.2 to 1.5 kg·m, 9 to 11 ft·lb) torque.
- **After tightening the bolt, check that the pulley rotates smoothly.**

- Check clearance all the way around the clutch disc.

**Clutch disc-to-pulley : 0.3 - 0.6 mm (0.012 - 0.024 in) clearance**

If the specified clearance is not obtained, replace adjusting spacer and readjust.

# COMPRESSOR CLUTCH

## QR25DE

- Install the field coil.  
**Be sure to align the magnet coil pin with the hole in the compressor front head.**
- Install the magnet coil harness clip using a screwdriver.

- Install the pulley assembly using the installer, and then install the snap ring using snap ring pliers.

- Install the drive plate on the drive shaft, together with the original shim(s). Press the drive plate down with the installer.

- Using the holder to prevent clutch disc rotation, tighten the bolt to 12 to 15 N-m (1.2 to 1.5 kg-m, 9 to 11 ft-lb) torque.
- **After tightening the bolt, check that the pulley rotates smoothly.**

# COMPRESSOR CLUTCH

- Check clearance all the way around the clutch disc.

**Clutch disc-to-pulley clearance : 0.3 - 0.6 mm (0.012 - 0.024 in)**

If the specified clearance is not obtained, replace adjusting spacer and readjust.

## Break-In Operation

When replacing compressor clutch assembly, always conduct the break-in operation. This is done by engaging and disengaging the clutch about 30 times. Break-in operation raises the level of transmitted torque.

# IN-CABIN MICROFILTER

PFP:27277

## IN-CABIN MICROFILTER

### Removal and Installation FUNCTION

EJS001GX

Air inside passenger compartment is kept clean at either recirculation or fresh mode by installing in-cabin microfilter into blower unit.

### REPLACEMENT TIMING

Refer to [MA-7, "Schedule 1"](#) or [MA-11, "Schedule 2"](#).  
Caution label is affixed inside the glove box.

### REPLACEMENT PROCEDURES

1. Remove glove box assembly. Refer to [IP-10, "Removal and Installation"](#).
2. Remove in-cabin microfilter cover.
3. Remove the in-cabin microfilter from blower unit.
4. Replace with new in-cabin microfilter and reinstall cover on blower unit.
5. Reinstall glove box assembly.

# HEATER & COOLING UNIT (HEATER CORE)

## HEATER & COOLING UNIT (HEATER CORE)

PF2:27110

### Removal

EJS001BK

1. Drain the cooling system. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#) (QG18DE), or [MA-23, "DRAINING ENGINE COOLANT"](#) (QR25DE).
2. Discharge the A/C system. Refer to [MTC-82, "Discharging Refrigerant"](#).
3. Disconnect the two heater hoses from inside the engine compartment.
4. Remove the instrument panel assembly and steering member assembly. Refer to [IP-10, "INSTRUMENT PANEL ASSEMBLY"](#).
5. Remove the heater unit.
6. Remove the heater core.

### Installation

EJS001BL

Install in the reverse order of removal.

**When filling radiator with coolant, refer to [MA-16, "DRAINING ENGINE COOLANT"](#) (QG18DE), or [MA-23, "DRAINING ENGINE COOLANT"](#) (QR25DE).**

**Recharge the A/C system. Refer to [MTC-82, "Evacuating System and Charging Refrigerant"](#).**

# BLOWER UNIT

PFP:27200

EJS001BM

## BLOWER UNIT

### Removal

LHA204

1. Discharge the A/C system. Refer to [MTC-82, "Discharging Refrigerant"](#).
2. Disconnect the two refrigerant lines from the engine compartment. Cap the A/C lines to prevent moisture from entering the system.
3. Remove the glove box and mating trim. Refer to [IP-10, "Removal and Installation"](#).
4. Remove cooling unit. Refer to [MTC-80, "Removal"](#).
5. Disconnect the resistor and blower motor connector.
6. Remove blower unit.
7. Remove the three bolts and then remove the motor from the blower case.

LHA130

### Installation

EJS001BN

Install in the reverse order of removal.

Recharge the A/C system. Refer to [MTC-82, "Evacuating System and Charging Refrigerant"](#).

# A/C EVAPORATOR

## A/C EVAPORATOR

PF2:27280

### Removal

EJS001B0

1. Discharge the A/C system. Refer to [MTC-82, "Discharging Refrigerant"](#).
2. Remove clamp bolt and remove low-pressure and high-pressure lines from cooling unit (expansion valve). Remove lines from retaining clip on dash panel and move lines away from dash panel for clearance.
3. Install caps over cooling unit (expansion valve) ports and lines.
4. Remove both side front console side covers.
5. Remove passenger side instrument panel lower cover and left lower instrument cover clip (from blower case).
6. Remove center console.
7. Remove instrument stay assemblies LH and RH.
8. Remove floor air duct risers on the right and left sides of the console front brackets (if equipped).
9. Disconnect cooling unit drain hose from lower cooling unit cover.
10. Remove five screws and clip from heating and cooling unit lower cover.
11. Drop lower cover as far as possible, reach inside of case and slide evaporator core rearward away from dash panel as far as possible so that rear of evaporator core slides up on case retaining tabs. Evaporator core may be pushed from engine compartment to ease movement. (This provides clearance at the front of the unit so that the cover can be removed).
12. Remove lower cover.

# A/C EVAPORATOR

13. Mark installation point of intake sensor and remove intake sensor from evaporator core.
14. Remove evaporator core from case by sliding forward off of case retaining tabs.
15. Remove expansion valve from evaporator core (if necessary).

EJS001BP

## Installation

Installation is the reverse of removal\*.

**Recharge the A/C system. Refer to [MTC-82, "Evacuating System and Charging Refrigerant"](#).**

\*: When installing lower cover to cooling unit case, ensure that the thermo probe is in the same location as originally installed, and that the intake sensor wire is properly positioned in case slot.

### NOTE:

**Be sure that the evaporator core is fully seated against the dash panel before securing lower cover.**

### HFC-134a (R-134a) Service Procedure SETTING OF SERVICE TOOLS AND EQUIPMENT

#### Discharging Refrigerant

**WARNING:**

Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from A/C system using certified service equipment meeting requirements of SAE J2210 (R-134a recycling equipment) or J2209 (R-134a recovery equipment). If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.

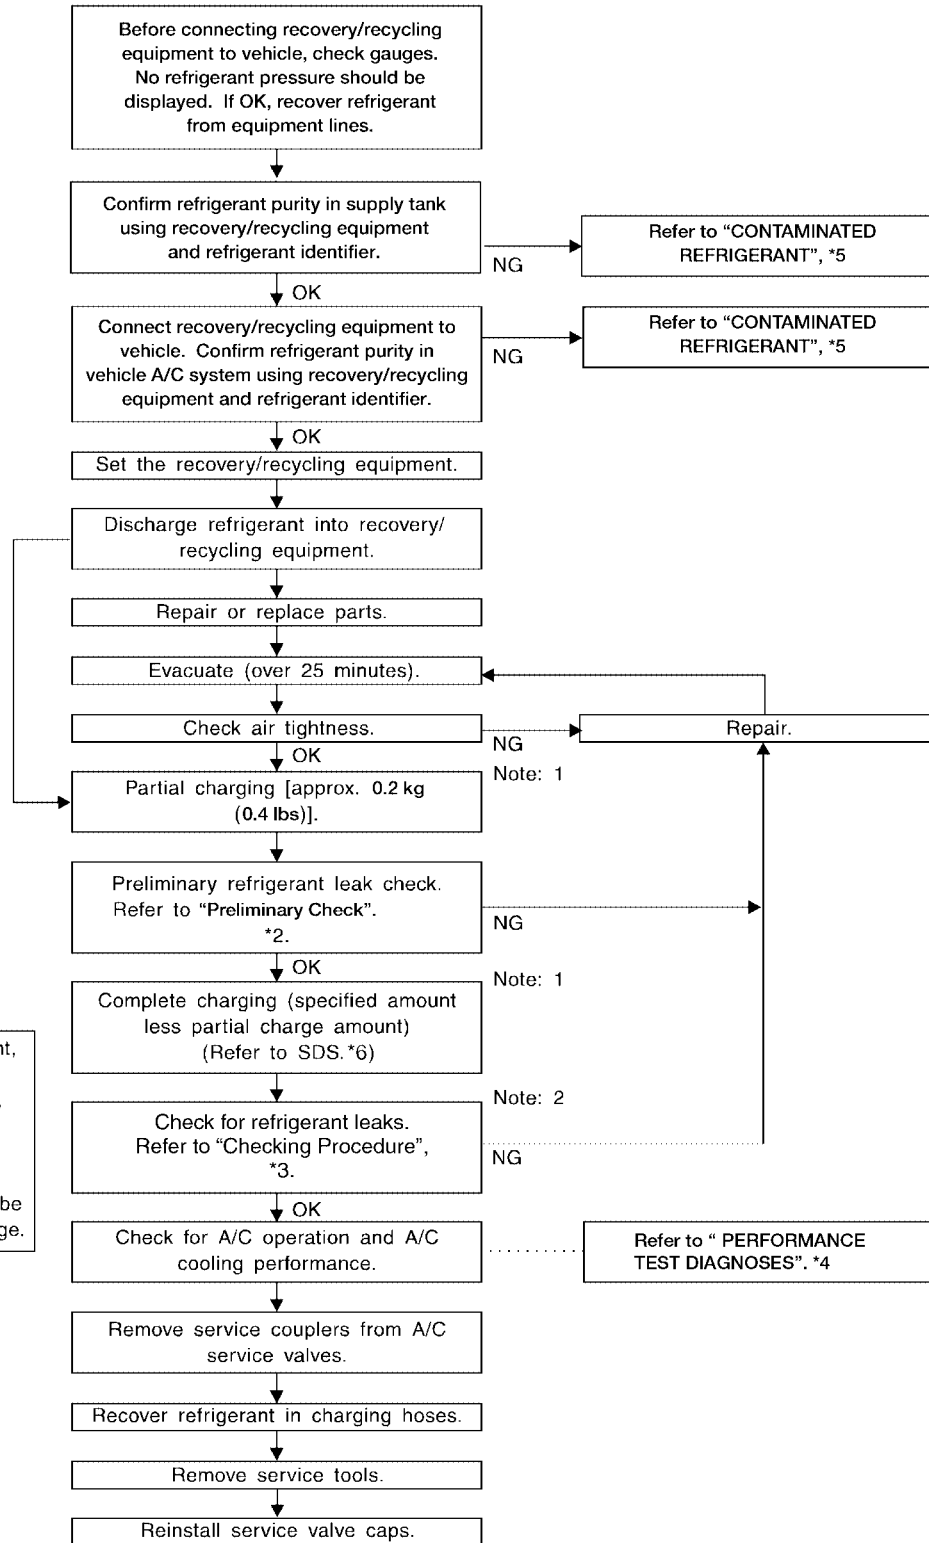

#### Evacuating System and Charging Refrigerant

# REFRIGERANT LINES

Recovered lubricant. Refer to "CHECKING AND ADJUSTING", \*1.

Note: 1 Before charging refrigerant, ensure engine is off.  
 Note: 2 Before checking for leaks, start engine to activate air conditioning system then turn engine off. Service valve caps must be installed to prevent leakage.

## Checking Refrigerant Leaks

EJS001BS

### PRELIMINARY CHECK

- Perform a visual inspection of all refrigeration parts, fittings, hoses and components for signs of A/C lubricant leakage, damage and corrosion. A/C lubricant leakage may indicate an area of refrigerant leakage. Allow extra inspection time in these areas when using either an electronic refrigerant leak detector or fluorescent dye leak detector.
- If dye is observed, confirm the leak with an approved electronic refrigerant leak detector. It is possible a prior leak was repaired and not properly cleaned.
- When searching for leaks, do not stop when one leak is found but continue to check for additional leaks at all system components and connections.
- When searching for refrigerant leaks using an electronic leak detector, move the probe along the suspected leak area at 25 - 50 mm (1 - 2 in) per second and no further than 1/4 inch from the component.

### NOTE:

**Moving the electronic leak detector probe slower and closer to the suspected leak area will improve the chances of finding a leak.**

## Electronic Refrigerant Leak Detector

EJS001BT

### PRECAUTIONS FOR HANDLING LEAK DETECTOR

When performing a refrigerant leak check, use a J-41995 electronic refrigerant leak detector or equivalent. Ensure that the instrument is calibrated and set properly per the operating instructions.

The leak detector is a delicate device. In order to use the leak detector properly, read the operating instructions and perform any specified maintenance.

- **Other gases in the work area or substances on the A/C components, for example, anti-freeze, windshield washer fluid, solvents and lubricants, may falsely trigger the leak detector. Make sure the surfaces to be checked are clean. Clean with a dry cloth or blow off with shop air.**

- **Do not allow the sensor tip of the detector to contact with any substance. This can also cause false readings and may damage the detector.**

1. Position probe approximately 5 mm (3/16 in) away from point to be checked.

2. When testing, circle each fitting completely with probe.

# REFRIGERANT LINES

3. Move probe along component approximately 25 to 50 mm (1 to 2 in)/sec.

## CHECKING PROCEDURE

To prevent inaccurate or false readings, make sure there is no refrigerant vapor, shop chemicals, or cigarette smoke in the vicinity of the vehicle. Perform the leak test in calm area (low air/wind movement) so that the leaking refrigerant is not dispersed.

1. Turn engine off.
2. Connect a suitable A/C manifold gauge set to the A/C service ports.
3. Check if the A/C refrigerant pressure is at least 345 kPa (3.52 kg/cm<sup>2</sup>, 50 psi) above 16°C (61°F). If less than specification, recover/evacuate and recharge the system with the specified amount of refrigerant. Refer to [MTC-82, "HFC-134a \(R-134a\) Service Procedure"](#).

### NOTE:

At temperatures below 16°C (61°F), leaks may not be detected since the system may not reach 345 kPa (3.52 kg/cm<sup>2</sup>, 50 psi).

4. Conduct the leak test from the high side (compressor discharge **a** to evaporator inlet **g**) to the low side (evaporator drain hose **g** to shaft seal **l**). Refer to [MTC-86, "Checking Refrigerant Leaks"](#). Perform a leak check for the following areas carefully. Clean the component to be checked and move the leak detector probe completely around the connection/component.

- **Compressor**

Check the fitting of high and low pressure hoses, relief valve and shaft seal.

- **Liquid tank**

Check the pressure switch, tube fitting, weld seams and the fusible plug mount.

- **Service valves**

Check all around the service valves. Ensure service valve caps are secured on the service valves (to prevent leaks).

### NOTE:

After removing A/C manifold gauge set from service valves, wipe any residue from valves to prevent any false readings by leak detector.

- **Cooling unit (Evaporator)**

With engine OFF, turn blower fan on "High" for at least 15 seconds to dissipate any refrigerant trace in the cooling unit. Wait a minimum of 10 minutes accumulation time (refer to the manufacturer's recommended procedure for actual wait time) before inserting the leak detector probe into the drain hose. Keep the probe inserted for at least ten seconds. Use caution not to contaminate the probe tip with water or dirt that may be in the drain hose.

5. If a leak detector detects a leak, verify at least once by blowing compressed air into area of suspected leak, then repeat check as outlined above.
6. Do not stop when one leak is found. Continue to check for additional leaks at all system components. If no leaks are found, perform steps 7 - 10.
7. Start engine.
8. Set the heater A/C control as follows:
  1. A/C switch ON.
  2. Face mode
  3. Recirculation switch ON
  4. Max cold temperature
  5. Fan speed high

# REFRIGERANT LINES

- Run engine at 1,500 rpm for at least 2 minutes.
- Turn engine off and perform leak check again following steps 4 through 6 above.

**Refrigerant leaks should be checked immediately after stopping the engine. Begin with the leak detector at the compressor. The pressure on the high pressure side will gradually drop after refrigerant circulation stops and pressure on the low pressure side will gradually rise, as shown in the graph. Some leaks are more easily detected when pressure is high.**

- Before connecting the recovery/recycling equipment to the vehicle, check the recovery/recycling equipment gauges. No refrigerant pressure should be displayed. If pressure is displayed, recover refrigerant from equipment lines and then check refrigerant purity.
- Confirm refrigerant purity in supply tank using recovery/recycling equipment and refrigerant identifier. Refer to [MTC-3, "Contaminated Refrigerant"](#).
- Confirm refrigerant purity in vehicle A/C system using the recovery/recycling equipment and refrigerant identifier. Refer to [MTC-3, "Contaminated Refrigerant"](#).
- Discharge A/C system using approved recovery/recycling equipment. Refer to [MTC-82, "Discharging Refrigerant"](#). Repair the leaking fitting or component as necessary.
- Evacuate and recharge the A/C system. Refer to [MTC-82, "Evacuating System and Charging Refrigerant"](#). Perform the leak test to confirm no refrigerant leaks.
- Conduct A/C performance test to make sure the A/C system works properly.

## Fluorescent Dye Leak Detector

EJS001BU

### PRECAUTIONS FOR FLUORESCENT DYE LEAK DETECTION

- The fluorescent dye leak detector is not a replacement for an electronic refrigerant leak detector. The fluorescent dye leak detector should be used in conjunction with an electronic refrigerant leak detector (J-41995) to pinpoint refrigerant leaks.
- For your safety and your customer's satisfaction, read and follow all manufacturer's operating instructions and precautions prior to performing the work.
- Refer to [MTC-4, "Precautions for Leak Detection Dye"](#).

### CHECKING SYSTEM FOR LEAKS USING THE FLUORESCENT LEAK DETECTOR

- Check A/C system for leaks using the UV lamp and safety glasses (J-42220) in a low sunlight area (area without windows preferable). Illuminate all components, fittings and lines. The dye will appear as a bright green/yellow area at the point of leakage. Fluorescent dye observed at the evaporator drain opening indicates an evaporator core assembly (tubes, core or TXV) leak.
- If the suspected area is difficult to see, use an adjustable mirror or wipe the area with a clean shop rag or cloth, then check the cloth with the UV lamp for dye residue.
- Confirm any suspected leaks with an approved electronic refrigerant leak detector.
- After the leak is repaired, remove any residual dye using dye cleaner (J-43872) to prevent future misdiagnosis.
- Perform a system performance check and verify the leak repair with an approved electronic refrigerant leak detector.

### DYE INJECTION

(This procedure is only necessary when re-charging the system or when the compressor has seized and was replaced.)

Refer to [MTC-4, "Precautions for Leak Detection Dye"](#).

- Check A/C system static (at rest) pressure. Pressure must be at least 345 kPa (3.52 kg/cm<sup>2</sup>, 50 psi).
- Pour one bottle (1/4 ounce / 7.4 cc) of the A/C refrigerant dye into the injector tool (J-41459).
- Connect the injector tool to the A/C LOW PRESSURE side service fitting.
- Start engine and switch A/C ON.

## REFRIGERANT LINES

- 
5. With the A/C operating (compressor running), inject one bottle (1/4 ounce / 7.4 cc) of fluorescent dye through the low-pressure service valve using dye injector tool J-41459 (refer to the manufacturer's operating instructions).
  6. With the engine still running, disconnect the injector tool from the service fitting.

**CAUTION:**

**Be careful not to allow dye to spray or drip when disconnecting the injector from the system.**

**NOTE:**

**If repairing the A/C system or replacing a component, pour the dye directly into the open system connection and proceed with the service procedures.**

7. Operate the A/C system for a minimum of 20 minutes to mix the dye with the system oil. Depending on the leak size, operating conditions and location of the leak, it may take from minutes to days for the dye to penetrate a leak and become visible.

# PARKING BRAKE CONTROL

## Adjustment

EFS00244

### Pay attention to the following points after adjustment.

- There is no drag when control lever is being released.
  - Be sure that toggle lever returns to stopper when parking brake lever is released.
1. Loosen parking brake cable.
  2. Depress brake pedal fully more than five times.
  3. Operate control lever 10 times or more with a full stroke [215.2 mm (8.47 in)].
  4. Adjust control lever by turning adjusting nut.
  5. Pull control lever with specified amount of force. Check lever stroke and ensure smooth operation.

**Number of notches : 6 - 7 [196 N (20 kg, 44 lb)]**

6. Bend warning lamp switch plate. Warning lamp should come on when lever is pulled or depressed one notch. It should go off when the lever is fully released.

## HARNESS

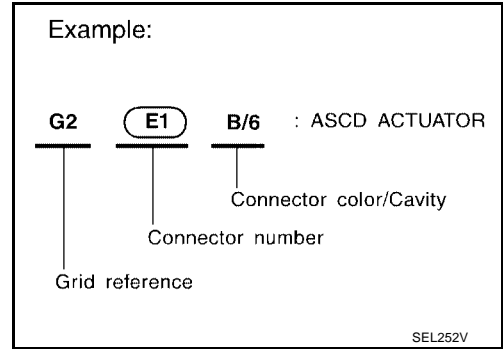

### Harness Layout

EKS003B2

#### HOW TO READ HARNESS LAYOUT

The following Harness Layouts use a map style grid to help locate connectors on the drawings:

- Main Harness
- Engine Room Harness
- Engine Control Harness
- Body Harness

#### TO USE THE GRID REFERENCE

1. Find the desired connector number on the connector list.
2. Find the grid reference.
3. On the drawing, find the crossing of the grid reference letter column and number row.
4. Find the connector number in the crossing zone.
5. Follow the line (if used) to the connector.

#### CONNECTOR SYMBOL

Main symbols of connector (in Harness Layout) are indicated in the below.

Connector type	Water proof type		Standard type	
	Male	Female	Male	Female
<ul style="list-style-type: none"> <li>● Cavity: Less than 4</li> <li>● Relay connector</li> </ul>				
<ul style="list-style-type: none"> <li>● Cavity: From 5 to 8</li> </ul>				
<ul style="list-style-type: none"> <li>● Cavity: More than 9</li> </ul>				
<ul style="list-style-type: none"> <li>● Ground terminal etc.</li> </ul>	—			

# HARNESS

## OUTLINE

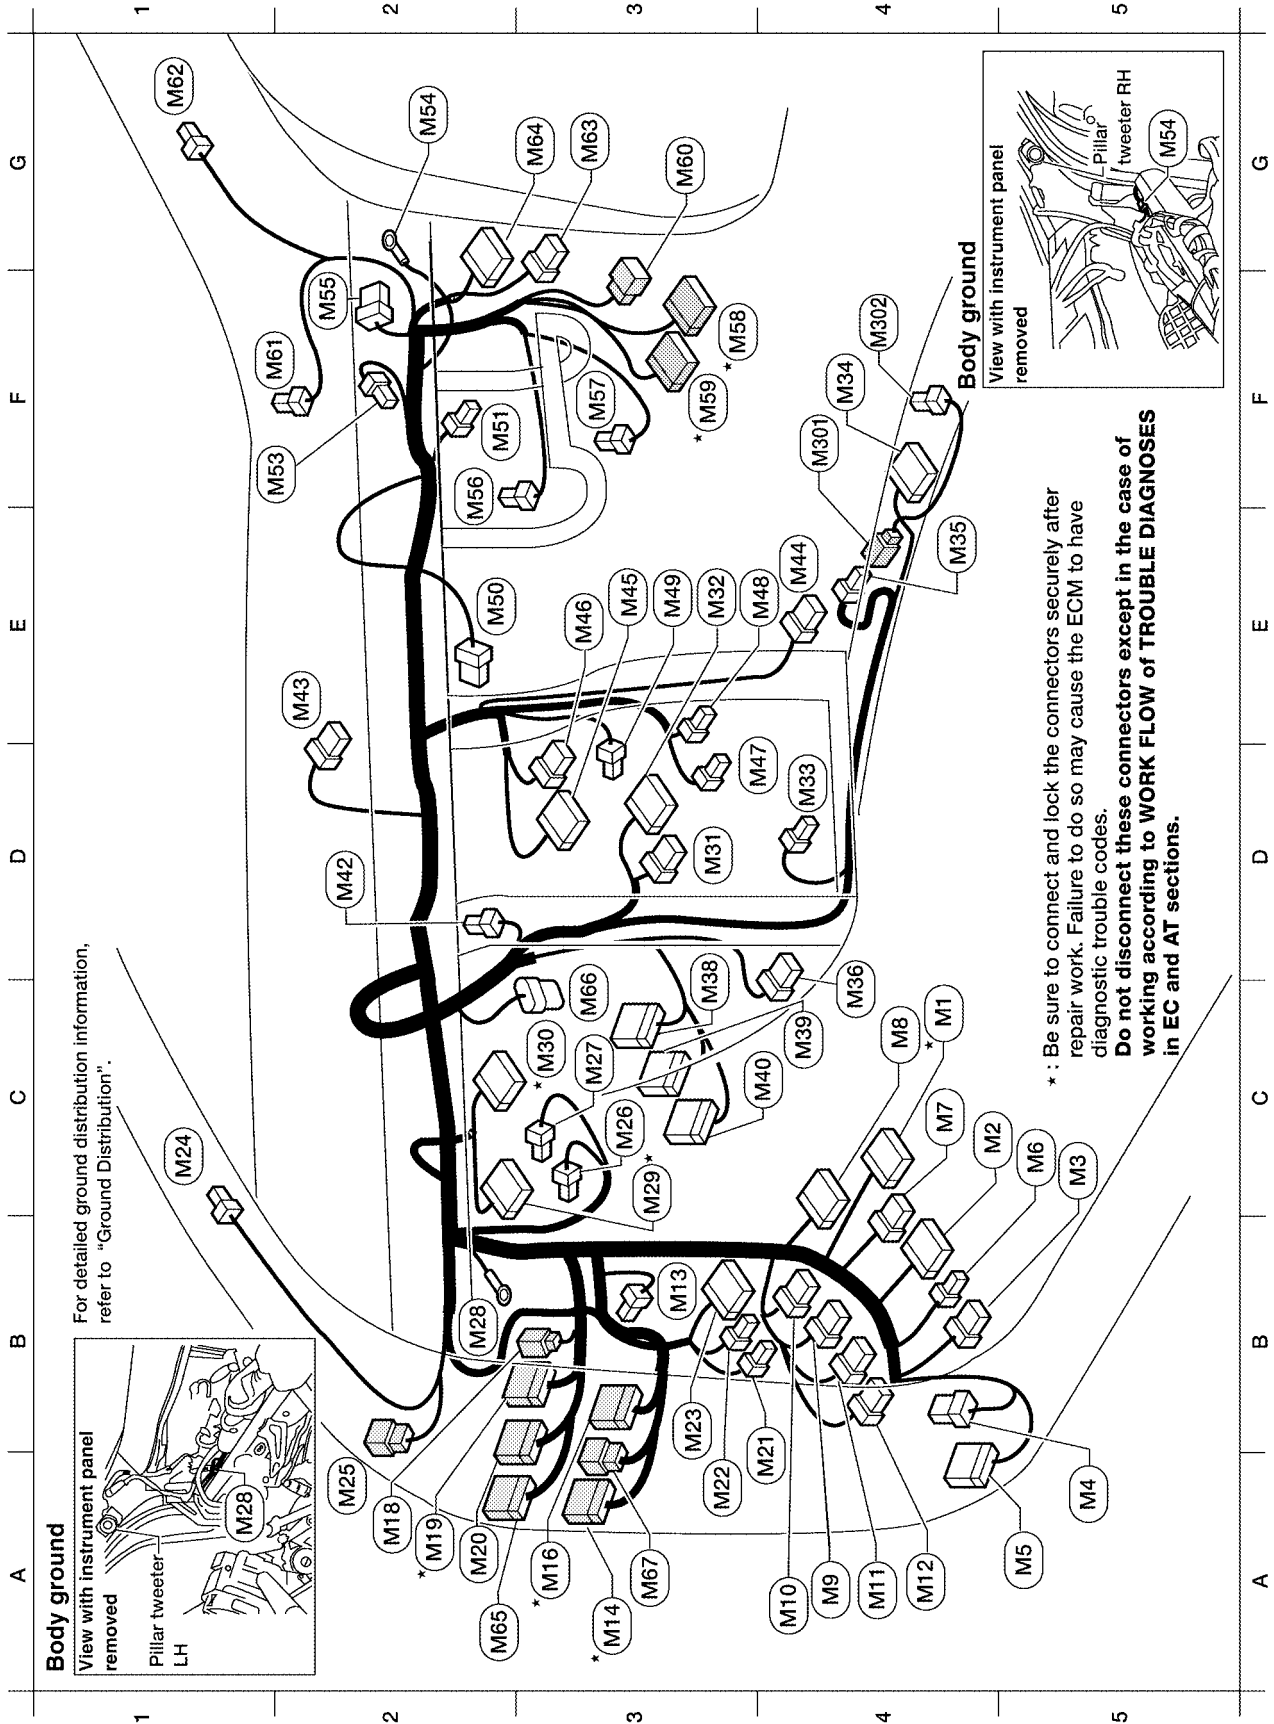

### NOTE:

For detailed ground distribution information, refer to [PG-12, "Ground Distribution"](#) .

# HARNESS

## MAIN HARNESS

For detailed ground distribution information, refer to "Ground Distribution".

\* : Be sure to connect and lock the connectors securely after repair work. Failure to do so may cause the ECM to have diagnostic trouble codes.  
**Do not disconnect these connectors except in the case of working according to WORK FLOW of TROUBLE DIAGNOSES in EC and AT sections.**

## Wiring Diagram Codes (Cell Codes)

EKS003B3

Use the chart below to find out what each wiring diagram code stands for.

Refer to the wiring diagram code in the alphabetical index to find the location (page number) of each wiring diagram.

Code	Section	Wiring Diagram Name
1STSIG	AT	A/T 1ST Signal
2NDSIG	AT	A/T 2ND Signal
3RDSIG	AT	A/T 3RD Signal
4THSIG	AT	A/T 4TH Signal
ABS	BRC	Anti-lock Brake System
A/C,M	MTC	Air Conditioner
A/F	EC	Air Fuel Ratio (A/F) Sensor 1 [QG18DE (SULEV)]
A/FH	EC	Air Fuel Ratio (A/F) Sensor 1 Heater [QG18DE (SULEV)]
APPS1	EC	Accelerator Pedal Position Sensor
APPS2	EC	Accelerator Pedal Position Sensor
APPS3	EC	Accelerator Pedal Position Sensor
ASC/BS	EC	ASCD Brake Switch
ASCBOF	EC	ASCD Brake Switch
ASCIND	EC	ASCD Indicator
ASC/SW	EC	ASCD Steering Switch
AUDIO	AV	Audio
BACK/L	LT	Back-up Lamp
BA/FTS	AT	A/T Fluid Temperature Sensor and TCM Power Supply
BRK/SW	EC	Brake Switch
BYPS/V	EC	Vacuum Cut Valve Bypass Valve (QR25DE Models)
CAN	AT	CAN Communication Line
CAN	EC	CAN Communication Line
CAN	LAN	CAN Communication Line
CHARGE	SC	Charging System
CHIME	DI	Warning Chime
CIGAR	WW	Cigarette Lighter
COOL/F	EC	Cooling Fan Control
DEF	GW	Rear Window Defogger
DLC	EC	Data Link Connector

## Fuse

EKS003B5

- If fuse is blown, be sure to eliminate cause of incident before installing new fuse.
- Use fuse of specified rating. Never use fuse of more than specified rating.
- Do not partially install fuse; always insert it into fuse holder properly.
- Remove fuse for "ELECTRICAL PARTS (BAT)" if vehicle is not used for a long period of time.

## Fusible Link

EKS003B6

A melted fusible link can be detected either by visual inspection or by feeling with finger tip. If its condition is questionable, use circuit tester or test lamp.

### CAUTION:

- If fusible link should melt, it is possible that critical circuit (power supply or large current carrying circuit) is shorted. In such a case, carefully check and eliminate cause of incident.
- Never wrap outside of fusible link with vinyl tape. Important: Never let fusible link touch any other wiring harness, vinyl or rubber parts.

## Circuit Breaker

EKS003B7

For example, when current is 30A, the circuit is broken within 8 to 20 seconds.

A circuit breaker is used for the following systems:

- Power door locks
- Power sunroof
- Power windows
- Remote keyless entry system

# HARNESS CONNECTOR

PFP:24010

EKS003B8

## HARNESS CONNECTOR

### Description

#### HARNESS CONNECTOR (TAB-LOCKING TYPE)

- The tab-locking type connectors help prevent accidental looseness or disconnection.
- The tab-locking type connectors are disconnected by pushing or lifting the locking tab(s). Refer to the illustration below.

Refer to the next page for description of the slide-locking type connector.

#### CAUTION:

Do not pull the harness or wires when disconnecting the connector.

[Example]

SEL769DA

# HARNESS CONNECTOR

## HARNESS CONNECTOR (SLIDE-LOCKING TYPE)

- A new style slide-locking type connector is used on certain systems and components, especially those related to OBD.
- The slide-locking type connectors help prevent incomplete locking and accidental looseness or disconnection.
- The slide-locking type connectors are disconnected by pushing or pulling the slider. Refer to the illustration below.

### CAUTION:

- Do not pull the harness or wires when disconnecting the connector.
- Be careful not to damage the connector support bracket when disconnecting the connector.

[Example]

# HARNESS CONNECTOR

## HARNESS CONNECTOR (DIRECT-CONNECT SRS COMPONENT TYPE)

- SRS direct-connect type harness connectors are used on certain SRS components such as air bag modules and seat belt pre-tensioners.
- Always pull up to release black locking tab prior to removing connector from SRS component.
- Always push down to lock black locking tab after installing connector to SRS component. When locked, the black locking tab is level with the connector housing.

### CAUTION:

- **Do not pull the harness or wires when removing connectors from SRS components.**

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EGS000FE

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precautions for Steering System

EGS000FF

- Before disassembly, thoroughly clean the outside of the unit.
- Disassembly should be done in a clean work area. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- For easier and proper assembly, place disassembled parts in order on a parts rack.
- Use nylon cloths or paper towels to clean the parts; common shop rags can leave lint that might interfere with their operation.
- Before inspection or reassembly, carefully clean all parts with a general purpose, non-flammable solvent.
- Before assembly, apply a coat of recommended Genuine NISSAN PSF II or equivalent to hydraulic parts. Petroleum jelly may be applied to O-rings and seals. Do not use any grease.
- Replace all gaskets, seals and O-rings. Avoid damaging O-rings, seals and gaskets during installation. Perform functional tests whenever designated.

# PREPARATION

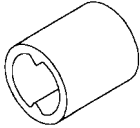

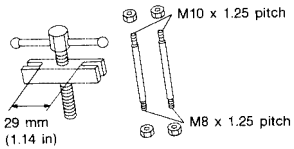

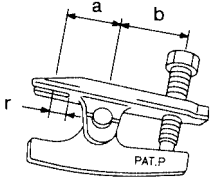

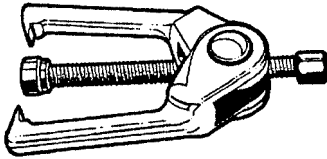

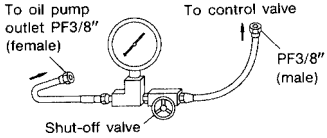

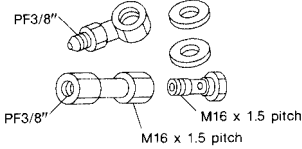

## PREPARATION

PFP:00002

### Special Service Tools

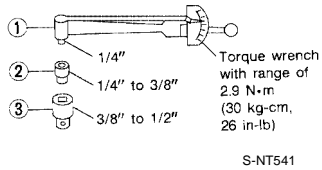

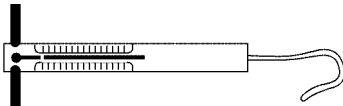

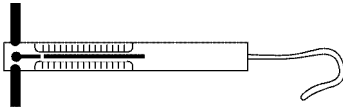

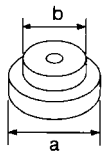

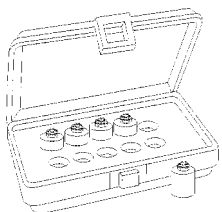

EGS000FG

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
KV48101100 (J26364) Torque adapter <div style="text-align: center;">  </div> <p style="text-align: right;">NT169</p>	Measuring pinion rotating torque
ST27180001 (J25726-B) Steering wheel puller <div style="text-align: center;">  </div> <p style="text-align: right;">S-NT544</p>	Removing steering wheel
HT72520000 (J25730-B) Ball joint remover <div style="text-align: center;">  </div> <p style="text-align: right;">NT546</p>	Removing tie-rod and lower ball joint <b>a: 33 mm (1.30 in)</b> <b>b: 50 mm (1.97 in)</b> <b>r: R11.5 mm (0.453 in)</b>
(J-24319-B) Tie rod puller <div style="text-align: center;">  </div> <p style="text-align: right;">LGIA0007E</p>	Remove outer tie rod

x: Applicable

## ON-VEHICLE SERVICE

PFP:00000

### Checking Steering Wheel Play

EGS000FJ

- With wheels in a straight-ahead position, check steering wheel play.

**Steering wheel play** : 35 mm (1.38 in) or less

- If it is not within specification, check the following for loose or worn components:
  - Steering gear assembly
  - Steering column
  - Front suspension and axle

### Checking Neutral Position on Steering Wheel

EGS000FK

- Make sure that wheel alignment is correct.

**Wheel alignment** : Refer to [FSU-6, "Front Wheel Alignment"](#)

- Verify that the steering gear is centered before removing the steering wheel.

### CHECKING

- Check that the steering wheel is in the neutral position when driving straight ahead.
- If it is not in the neutral position, remove the steering wheel and reinstall it correctly.
- If the neutral position is between two teeth, loosen tie-rod lock nuts. Turn the tie-rods by the same amount in opposite directions on both left and right sides.

### Front Wheel Turning Angle

EGS000FL

- Rotate steering wheel all the way right and left; measure turning angle.

**Turning angle of full turns** : Refer to [FSU-6, "Front Wheel Alignment"](#)

- If it is not within specification, check rack stroke.

**Rack stroke "S"** : Refer to [PS-26, "Steering Gear and Linkage"](#)

# ON-VEHICLE SERVICE

## Checking Gear Housing Movement

EGS000FM

1. Check the movement of steering gear housing during stationary steering on a dry paved surface.
  - Apply a force of 49 N (5 kg, 11 lb) to steering wheel to check the gear housing movement.  
Turn off ignition key while checking.

**Movement of gear housing :  $\pm 2$  mm ( $\pm 0.08$  in) or less**

2. If movement exceeds the limit, replace mount insulator after confirming proper installation of gear housing clamps.

## Checking and Adjusting Drive Belts

EGS000FN

Refer to [MA-16, "Checking Drive Belts"](#) (QG18DE), [MA-23, "Checking Drive Belts"](#) (QR25DE).

## Checking Fluid Level

EGS000FO

Check fluid level, referring to the scale on reservoir tank.  
Use "HOT" range for fluid temperatures of 50 to 80°C (122 to 176°F).  
Use "COLD" range for fluid temperatures of 0 to 30°C (32 to 86°F).

### CAUTION:

- Do not overfill.
- Recommended fluid is Genuine NISSAN PSF or equivalent.  
Refer to [MA-13, "Fluids and Lubricants"](#).

## Checking Fluid Leakage

EGS000FP

Check the lines for improper attachment and for leaks, cracks, damage, loose connections, chafing and deterioration.

1. Run engine between idle speed and 1,000 rpm.

**Make sure temperature of fluid in oil tank rises to 60 to 80°C (140 to 176°F).**

2. Turn steering wheel right-to-left several times.
3. Hold steering wheel at each "lock" position for five seconds and carefully check for fluid leakage.

### CAUTION:

**Do not hold the steering wheel in a locked position for more than 15 seconds.**

4. If fluid leakage at connectors is noticed, shut off engine, then loosen and retighten flare nut.

**Do not overtighten connector as this can damage O-ring, washer and connector.**

5. If fluid leakage from power steering pump is noticed, check power steering pump. Refer to [PS-21, "PRE-DISASSEMBLY INSPECTION"](#).
6. Check rack boots for accumulation of power steering fluid.

## Bleeding Hydraulic System

EGS000FQ

1. Raise front end of vehicle until wheels are clear of the ground.
2. Add fluid into oil tank to specified level. Then quickly turn steering wheel fully to right and left and lightly touch steering stoppers.  
Repeat steering wheel operation until fluid level no longer decreases.
3. Start engine.  
Repeat step 2 above.
  - If any of the following occurs, bleed air again:
    - Air bubbles in reservoir tank

# ON-VEHICLE SERVICE

- Clicking noise in oil pump
- Excessive buzzing in oil pump

Fluid noise may occur in the valve or oil pump. This is common when the vehicle is stationary or while turning the steering wheel slowly. This does not affect the performance or durability of the system.

## Checking Steering Wheel Turning Force

1. Park vehicle on a level, dry surface and set parking brake.
2. Start engine.
3. Bring power steering fluid up to adequate operating temperature. [Make sure temperature of fluid is approximately 60 to 80°C (140 to 176°F).]

**Tires need to be inflated to normal pressure.**

4. Check steering wheel turning force when steering wheel has been turned 360° from the neutral position.

**Steering wheel turning force : 39 N (4 kg, 9 lb) or less**

5. If steering wheel turning force is out of specification, check rack sliding force.
  - a. Disconnect steering column lower joint and knuckle arms from the gear.
  - b. Start and run engine at idle to make sure steering fluid has reached normal operating temperature.
  - c. Pull tie-rod slowly to move it from neutral position to ±11.5 mm (±0.453 in) at speed of 3.5 mm (0.138 in)/s. Check that rack sliding force is within specification.

**Average rack sliding force (QG18DE) : 140 - 330 N (14.3 - 33.6 kg, 31.5 - 74.1 lb)**

**Average rack sliding force (QR25DE) : 160 - 350 N (16.3 - 35.7 kg, 36.0 - 78.7 lb)**

**Maximum force deviation : 98 N (10 kg, 22 lb)**

- d. Check sliding force outside the above range at rack speed of 40 mm (1.75 in)/s.

**Maximum rack sliding force : Not more than 294 N (30 kg, 66 lb)**

**Maximum force deviation : 147 N (15 kg, 33 lb)**

6. If rack sliding force is not within specification, overhaul steering gear assembly.
7. If rack sliding force is OK, inspect steering column. Refer [PS-14, "Inspection"](#).

## Checking Hydraulic System

Before starting, check belt tension, driving pulley and tire pressure.

1. Set Tool. Open shut-off valve. Then bleed air. Refer to [PS-8, "Bleeding Hydraulic System"](#).
2. Run engine at idle speed or 1,000 rpm.

**Make sure temperature of fluid in tank rises to 60 to 80°C (140 to 176°F).**

### WARNING:

**Warm up engine with shut-off valve fully opened. If engine is started with shut-off valve closed, fluid pressure in oil pump increases to maximum. This will raise oil temperature abnormally.**

3. Check pressure with steering wheel fully turned to left and right positions with engine idling at 1,000 rpm.

### CAUTION:

**Do not hold the steering wheel in a locked position for more than 15 seconds.**

## ON-VEHICLE SERVICE

---

### Oil pump maximum standard pressure

(QG18DE) : 7,649 - 8,238 kPa (78 - 84 kg/cm<sup>2</sup> , 1,109 - 1,194 psi)

(QR25DE) : 8,000 - 8,800 kPa (82 - 90 kg/cm<sup>2</sup> , 1,160 - 1,276 psi)

- If pressure reaches maximum operating pressure, system is OK.
  - If pressure increases above maximum operating pressure, check power steering pump flow control valve. Refer to [PS-21, "COMPONENTS"](#) .
4. If power steering pressure is below the maximum operating pressure, slowly close shut-off valve and check pressure again.

### **CAUTION:**

**Do not close shut-off valve for more than 15 seconds.**

- If pressure increases to maximum operating pressure, gear is damaged. Refer to [PS-16, "Removal and Installation"](#) .
  - If pressure remains below maximum operating pressure, pump is damaged. Refer to [PS-22, "DISASSEMBLY"](#) .
5. After checking hydraulic system, remove Tool and add fluid as necessary. Then completely bleed air out of system. Refer to [PS-8, "Bleeding Hydraulic System"](#) .

# STEERING WHEEL AND STEERING COLUMN

PF:48430

EGS000FT

## STEERING WHEEL AND STEERING COLUMN

### Components

SEC. 484 • 487 • 488

- |                             |                                |                       |
|-----------------------------|--------------------------------|-----------------------|
| 1. Air bag module           | 2. Steering wheel              | 3. Spiral cable       |
| 4. Side lid LH              | 5. Column cover                | 6. Combination switch |
| 7. Steering column assembly | 8. Steering column lower cover | 9. Lower joint        |

### CAUTION:

- The rotation of the spiral cable (SRS "Air bag" component part) is limited. If the steering gear must be removed, set the front wheels in the straight-ahead direction. Do not rotate the steering column while the steering gear is removed.
- Remove the steering wheel before removing the steering lower joint to avoid damaging the SRS spiral cable.

### Removal and Installation STEERING WHEEL

EGS000FU

1. Remove air bag module.  
Refer to [SRS-40, "Removal and Installation"](#).
2. Remove steering wheel mounting nut.
3. Remove steering wheel with Tool.
4. Installation is in the reverse order of removal.

# STEERING WHEEL AND STEERING COLUMN

## STEERING COLUMN

### Removal

#### CAUTION:

- The rotation of the spiral cable (SRS "Air Bag" component part) is limited. If the steering gear must be removed, set the front wheels in the straight-ahead direction. Do not rotate the steering column while the steering gear is removed.
  - Remove the steering wheel before removing the steering lower joint to avoid damaging the SRS spiral cable.
1. Remove the steering wheel, refer to [PS-11, "STEERING WHEEL"](#) .
  2. Removal spiral cable, refer to [SRS-42, "Removal and Installation"](#) .
  3. Remove instrument lower panel and dash lower reinforcement panel.
  4. Remove the column covers.
  5. Disconnect electrical connectors from the ignition switch and combination switch.
  6. Remove three screws securing combination switch and remove combination switch.
  7. Remove key interlock cable (A/T models).
  8. Remove the hole cover, then remove bolt from lower joint.
  9. Remove the steering column lower cover.
  10. Remove four nuts securing steering column and remove steering column.

### Installation

1. Installation is the reverse order of removal.
- When installing steering column, finger tighten all lower bracket and clamp retaining bolts; then tighten them securely. Do not apply undue stress to steering column.
  - When attaching coupling joint, be sure tightening bolt faces cut-out portion.
- Align slit of lower joint with projection on dust cover. Insert joint until surface A contacts surface B.

#### CAUTION:

After installation, turn steering wheel to make sure it moves smoothly. Ensure the number of turns are the same from the straight forward position to left and right locks. Be sure that the steering wheel is in a neutral position when driving straight ahead.

# STEERING WHEEL AND STEERING COLUMN

## Disassembly and Assembly

EGS000FV

SEC. 484 • 488

- |                       |                           |                                     |
|-----------------------|---------------------------|-------------------------------------|
| 1. Combination switch | 2. Lock nut               | 3. Jacket tube assembly             |
| 4. Tilt lever         | 5. Tilt lever stopper     | 6. Steering column mounting bracket |
| 7. Spring             | 8. Adjust bolt            | 9. Adjust bolt stopper              |
| 10. Nut               | 11. Column shaft assembly | 12. Steering column lower cover     |
| 13. Hole cover seal   | 14. Hole cover            | 15. Lower joint                     |

- When disassembling and assembling, unlock steering lock with key.
- Install lock nut on steering column shaft and tighten the nut.

- Steering lock:
  - Break self-shear type screws using a drill or other appropriate tool.

# STEERING WHEEL AND STEERING COLUMN

- Install new self-shear type screws, then tighten until screw heads break off.

EGS000FW

## Inspection

- When steering wheel does not turn smoothly, check the steering column as follows and replace damaged parts.
- Check column bearings for damage or unevenness. Lubricate with recommended multi-purpose grease or replace steering column as an assembly, if necessary.
- Check jacket tube for deformation or breakage. Replace if necessary.
- When the vehicle comes into a light collision, check length "L".

**Steering column length "L"** : 542 - 544 mm  
(21.34 - 21.42 in)

If out of specification, replace steering column as an assembly.

## TILT MECHANISM

- After installing steering column, check tilt mechanism operation.

# POWER STEERING GEAR AND LINKAGE

PF:49001

EGS000FX

## POWER STEERING GEAR AND LINKAGE

### Components

SEC. 492

- |                  |                         |                         |

| 1. Steering gear | 2. Gear housing tube    | 3. Boot clamp           |
| 4. Dust boot     | 5. Boot band            | 6. Tie-rod inner socket |
| 7. Tie-rod       | 8. Tie-rod outer socket | 9. Cotter pin           |

WST007

# POWER STEERING GEAR AND LINKAGE

## Removal and Installation

EGS000FY

- |                              |                            |                                  |
|------------------------------|----------------------------|----------------------------------|
| 1. Lower joint               | 2. Cotter pin              | 3. Low pressure line fitting     |
| 4. Gear and linkage assembly | 5. Rack mounting insulator | 6. Gear housing mounting bracket |

### CAUTION:

- The rotation of the spiral cable (SRS “Air bag” component part) is limited. If the steering gear must be removed, set the front wheels in the straight-ahead direction. Do not rotate the steering column while the steering gear is removed.
- Remove the steering wheel before removing the steering lower joint to avoid damaging the SRS spiral cable.

1. Detach tie-rod outer sockets.
2. Disconnect the power steering lines.
3. Disconnect the steering gear lower joint.
4. Position the bracket for the hoses and harness aside.
5. Remove the return line fitting.

## POWER STEERING GEAR AND LINKAGE

6. Remove the steering gear mounting bolts.
7. Remove the steering gear through the passenger side.

8. Installation is the reverse order of removal.
  - Install power steering line connector.
  - Observe specified tightening torque when tightening high-pressure and low-pressure line connectors. Excessive tightening will damage threads of connector or O-ring.

### Connector tightening torque

**1 Low-pressure side : 28 - 39 N·m (2.8 - 4.0 kg·m, 21 - 28 ft·lb)**

**2 High-pressure side : 15 - 25 N·m (1.5 - 2.5 kg·m, 11 - 18 ft·lb)**

- The O-ring in low-pressure pipe connector is larger than that in high-pressure connector. Take care to install the proper O-ring.
- Initially, tighten nut on tie-rod outer socket and knuckle arm to 29 to 39 N·m (3 to 4 kg·m, 22 to 28 ft·lb). Then tighten further to align nut groove with first pin hole so that cotter pin can be installed.

### CAUTION:

**Tightening torque must not exceed 49 N·m (5 kg·m, 36 ft·lb).**

# POWER STEERING GEAR AND LINKAGE

- Before removing lower joint from gear, set gear in neutral (wheels in straight-ahead position). After removing lower joint, put matching mark on pinion shaft and pinion housing to record neutral position.
- To install, set left and right dust boots to equal deflection. Attach lower joint by aligning matching marks of pinion shaft and pinion housing.

- Tighten gear housing mounting bracket bolts and nut in the order shown.

## Disassembly

1. Prior to disassembling, measure pinion rotating torque.

**Within  $\pm 100^\circ$  from the neutral position**

**Average rotating torque : 0.6 - 2.0 N-m (7 - 20 kg-cm, 6 - 17 in-lb)**

**Maximum torque deviation : 0.6 N-m (7 kg-cm, 5.8 in-lb)**

**Except for above measuring range**

**Maximum rotating torque : 1.9 N-m (19 kg-cm, 17 in-lb)**

**Maximum torque deviation : 0.65 N-m (7 kg-cm, 6 in-lb)**

- If pinion rotating torque is not within the specifications, replace steering gear assembly.
  - Before measuring, disconnect gear housing tube and drain fluid.
  - Use soft jaws when holding steering gear housing. Handle gear housing carefully, as it is made of aluminum. Do not grip cylinder in a vise.
2. Remove tie-rod outer sockets and boots.
  3. Remove tie-rod inner sockets.

## Inspection

Thoroughly clean all parts in cleaning solvent or Genuine NISSAN PSF or equivalent. Blow dry with compressed air, if available.

### BOOT

- Check condition of boot. If cracked excessively, replace it.
- Check boots for accumulation of power steering fluid.

# POWER STEERING GEAR AND LINKAGE

## TIE-ROD OUTER AND INNER SOCKETS

- Check outer and inner ball joints for swinging force "A" and axial end play "C".  
**Refer to [PS-26, "Steering Gear and Linkage"](#) .**
- Check outer ball joint for rotating torque "B".  
**Refer to [PS-26, "Steering Gear and Linkage"](#) .**
- Check condition of dust cover. If excessively cracked, replace outer tie-rod.

## Assembly

1. Install tie-rod inner sockets, dust boots and outer sockets.
2. Tighten outer socket lock nut.

**Tie-rod length "L" : Refer to [PS-26, "Steering Gear and Linkage"](#) .**

3. Measure rack stroke.

**Rack stroke "S" : Refer to [PS-26, "Steering Gear and Linkage"](#) .**

4. Before installing boot, coat the contact surfaces between boot and tie-rod with grease.

## POWER STEERING GEAR AND LINKAGE

5. Install boot clamps.
- Install large boot clamp using suitable tool and crimp securely.
  - Install small boot clamp as shown.

# POWER STEERING OIL PUMP

| 25. Power steering pump bracket | 26. Mounting bracket  | 27. Mounting bracket |

### PRE-DISASSEMBLY INSPECTION

Disassemble the power steering oil pump only if the following items are found.

- Fluid leak from any point shown in the figure.
- Deformed or damaged pulley
- Poor performance

SST984A

# POWER STEERING OIL PUMP

## DISASSEMBLY

### CAUTION:

- Parts which can be disassembled are strictly limited. Never disassemble parts other than those specified.
- Disassemble in as clean a place as possible.
- Clean your hands before disassembly.
- Do not use rags; use nylon cloths or paper towels.
- Refer to [PS-2, "Precautions for Steering System"](#).
- When disassembling and reassembling, do not let foreign matter enter or contact the parts.
- Remove snap ring, then draw drive shaft out.  
**Be careful not to drop drive shaft.**

- Remove oil seal.  
**Be careful not to damage front housing.**

- Remove connector and flow control valve with spring.  
**Be careful not to drop flow control valve.**  
**Do not disassemble flow control valve.**

## INSPECTION

- If pulley is cracked or deformed, replace it.
- If an oil leak is found around pulley shaft oil seal, replace the seal.
- If serration on pulley or pulley shaft is deformed or worn, replace it.

## ASSEMBLY

Assemble oil pump, noting the following instructions.

- Make sure O-rings and oil seal are properly installed.
- Always install new O-rings and oil seal.
- Be careful of oil seal direction.
- Cam ring, rotor and vanes must be replaced as a set if necessary.

# POWER STEERING OIL PUMP

- Coat each part with Genuine NISSAN PSF or equivalent when assembling.
- Pay attention to the direction of rotor.

- When assembling vanes to rotor, flat surfaces of vanes must face inside of rotor (rounded surfaces of vanes face cam ring side).

- Insert pin 2 into pin groove 1 of front housing and front side plate. Then install cam ring 3 as shown.

**Cam ring :  $D_1$  is less than  $D_2$  .**

# SERVICE DATA AND SPECIFICATIONS (SDS)

## SERVICE DATA AND SPECIFICATIONS (SDS)

PF0:00030

### General Specifications

EGS000G3

Applied model	QG18DE	QR25DE
Steering model	Power steering	
Steering gear type	Rack and Pinion (PR25T)	
Steering overall gear ratio	17.48	15.80
Turns of steering wheel (Lock to lock)	3.01	2.4
Steering column type	Collapsible, tilt	

### Steering Wheel

EGS000G4

Applied model	All
Steering wheel axial play mm (in)	0 (0)
Steering wheel play mm (in)	35 (1.38) or less
Movement of gear housing mm (in)	±2 (±0.08) or less

### Steering Column

EGS000G5

SST855C

Applied model	All
Steering column length "L" mm (in)	542 - 544 (21.34 - 21.42)

### Steering Gear and Linkage

EGS000G6

SST867C

Applied model		QG18DE	QR25DE
Steering gear type		Rack and Pinion (PR25T)	
Tie-rod outer socket	Swinging force at cotter pin hole: "A" N (kg, lb)	6.9 - 65.7 (0.66 - 6.59, 1.5 - 14.8)	
	Rotating torque: "B" N·m (kg-cm, in-lb)	0.29 - 2.94 (3.0 - 30.0, 2.6 - 26.0)	
	Axial end play: "C" mm (in)	0.4 (0.016) or less	
	Initial tightening torque N·m (kg-cm, ft-lb)	29 - 39 (3 - 4, 22 - 28)	
	Maximum tightening torque N·m (kg-cm, ft-lb)	49 (5, 36)	
Tie-rod inner socket	Swinging force*: "A" N (kg, lb)	5.9 - 46.1 (0.58 - 4.65, 1.3 - 10.4)	
	Axial end play: "C" mm (in)	0.2 (0.004) or less	
	Initial tightening torque N·m (kg-cm, ft-lb)	29 - 39 (3 - 4, 22 - 28)	
	Maximum tightening torque N·m (kg-cm, ft-lb)	49 (5, 36)	
Tie-rod standard length "L" mm (in)		133.04 (5.238)	136.09 (5.358)

# SERVICE DATA AND SPECIFICATIONS (SDS)

SST086BA

Retainer adjustment Adjusting screw	Initial tightening torque N·m (kg·cm, in·lb)	4.9 - 5.9 (50 - 60, 43 - 52)
	Retightening torque after loosening N·m (kg·cm, in·lb)	0.2 (2, 1.7)
	Tightening torque after gear has settled N·m (kg·cm, in·lb)	4.9 - 5.9 (50 - 60, 43 - 52)
	Returning angle degree	60° - 80°
Steering gear type		PR25T
Rack stroke "S" mm (in)		65 (2.56)
Pinion gear preload without gear fluid Within ±100° from the neutral position	Average rotating torque N·m (kg·cm, in·lb)	0.6 - 2.0 (7 - 20, 6 - 17)
	Maximum torque deviation N·m (kg·cm, in·lb)	0.6 (7, 5.8)
Except above range	Maximum rotating torque N·m (kg·cm, in·lb)	1.9 (19, 17)
	Maximum torque deviation N·m (kg·cm, in·lb)	0.65 (7, 6)

\*: Measuring point [l: 172 mm (6.77 in)]

## Power Steering

EGS000G7

Applied model			QG18DE	QR25DE
Steering gear type			Rack and Pinion (PR25T)	
Pump type			F40	
Rack sliding force N (kg, lb) Under normal operating oil pressure	Range within ±11.5 mm (±0.453 in) from the neutral position at rack speed of 3.5 mm (0.138 in)/s	Average rack sliding force	140 - 330 (14.3 - 33.6, 31.5 - 74.1)	160 - 350 (16.3 - 35.7, 36.0 - 78.7)
		Maximum force deviation	98 (10, 22)	
	Except for the above range	Maximum rack sliding force	294 (30, 66)	
		Maximum force deviation	147 (15, 33)	
Steering wheel turning force (Measured at one full turn from the neutral position) N (kg, lb)			39 (4, 9) or less	
Fluid capacity (Approximate) ℓ (US qt, Imp qt)			1.0 (1-1/8, 7/8)	
Oil pump maximum pressure kPa (kg/cm <sup>2</sup> , psi)			7,649 - 8,238 (78 - 84, 1,109 - 1,194)	8,000 - 8,800 (82 - 90, 1,160 - 1,276)

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions

EDS000QR

- When installing each rubber part, final tightening must be carried out under unladen condition\* with tires on ground.  
\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment.
- Do not jack up at the trailing arm and lateral link.
- Always torque brake lines when installing.

# PREPARATION

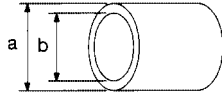

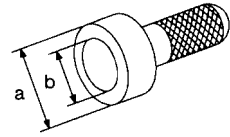

## PREPARATION

PFP:00002

## ON-VEHICLE SERVICE

### Rear Axle Parts

Check axle and suspension parts for excessive play, wear or damage.

- Shake each rear wheel to check for excessive play.
- Retighten all axle and suspension nuts and bolts to the specified torque.

**Tightening torque** : Refer to [RSU-5, "Components"](#) .

### Rear Wheel Bearing

- Check axial end play.

**Axial end play** : 0.05 mm (0.0020 in) or less

- Check that wheel hub bearings operate smoothly.
- Check tightening torque of wheel bearing lock nut.

: 187 - 255 N·m (19 - 26 kg-m, 138 - 188 ft-lb)

- If out of specification or if wheel bearing does not turn smoothly, replace wheel hub assembly. Refer to [RAX-6, "WHEEL HUB"](#) .

# WHEEL HUB

PF0:43200

EDS000QX

## WHEEL HUB

### Components

SEC. 430

- |                               |                               |                           |
|-------------------------------|-------------------------------|---------------------------|
| 1. Spindle                    | 2. Baffle plate               | 3. Back plate             |
| 4. Sensor rotor (if equipped) | 5. Wheel hub                  | 6. Wheel bearing lock nut |
| 7. Hub cap                    | 8. Wheel sensor (if equipped) |                           |

## Removal

EDS000QY

### CAUTION:

- Before removing the rear wheel hub assembly, disconnect the wheel sensor from the assembly. Then move it away from the hub assembly. Failure to do so may result in damage to the sensor wires and the wheel sensor becoming inoperative.
- Wheel hub bearing does not require maintenance. If any of the following symptoms are noted, replace wheel hub bearing assembly.
  1. Growling noise is emitted from wheel hub bearing during operation.
  2. Wheel hub bearing drags or turns roughly. This occurs when turning hub by hand after bearing lock nut is tightened to specified torque.

1. Remove brake caliper assembly.
2. Remove wheel bearing lock nut.
3. Remove brake rotor.
4. Remove wheel hub bearing from spindle.

Brake hose does not need to be disconnected from brake caliper.

Suspend caliper assembly with wire so as not to stretch brake hose.

Be careful not to depress brake pedal, or piston will pop out. Make sure brake hose is not twisted.

# WHEEL HUB

- Remove the sensor rotor, if equipped, using suitable puller, drift and bearing replacer.

## Installation

- With vehicles equipped with ABS, press-fit sensor rotor into wheel hub bearing using a drift. **Do not reuse sensor rotor. When installing, replace it with a new one.**

- Press-fit sensor rotor as far as the location shown in figure at right.

A  
B  
C  
RAX  
E  
F  
G  
H  
I  
J  
K  
L  
M

## WHEEL HUB

- Install wheel hub bearing.
- Tighten wheel bearing lock nut.  
Before tightening, apply oil to threaded portion of rear spindle.  
**Do not reuse wheel bearing lock nut.**

: 187 - 255 N·m (19 - 26 kg·m, 138 - 188 ft·lb)

- Check that wheel bearings operate smoothly.

- Check wheel hub bearing axial end play.

**Axial end play** : 0.05 mm (0.0020 in) or less

- Clinch two places of lock nut.

- Install hub cap using a suitable tool.  
**Do not reuse hub cap. When installing, replace it with a new one.**

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS0016F

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# PREPARATION

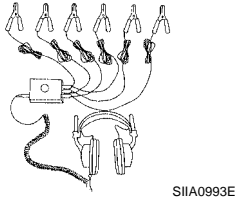

## PREPARATION

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

## SQUEAK AND RATTLE TROUBLE DIAGNOSIS

PF0:00000

### Work Flow

EIS0016I

### CUSTOMER INTERVIEW

Interview the customer, if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to [RF-9, "Diagnostic Worksheet"](#). This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak — (Like tennis shoes on a clean floor)  
Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak — (Like walking on an old wooden floor)  
Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle — (Like shaking a baby rattle)  
Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock — (Like a knock on a door)  
Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick — (Like a clock second hand)  
Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump — (Heavy, muffled knock noise)  
Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz — (Like a bumblebee)  
Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

## DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1. Close a door.
  2. Tap or push/pull around the area where the noise appears to be coming from.
  3. Rev the engine.
  4. Use a floor jack to recreate vehicle "twist".
  5. At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
  6. Raise the vehicle on a hoist and hit a tire with a rubber hammer.
- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
  - If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

## CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.

If a TSB relates to the symptom, follow the procedure to repair the noise.

## LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:
  - Removing the components in the area that you suspect the noise is coming from.  
**Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise.**
  - Tapping or pushing/pulling the component that you suspect is causing the noise.  
**Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.**
  - Feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
  - Placing a piece of paper between components that you suspect are causing the noise.
  - Looking for loose components and contact marks.

Refer to [RF-6, "Generic Squeak and Rattle Troubleshooting"](#).

## REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - Separate components by repositioning or loosening and retightening the component, if possible.
  - Insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

### CAUTION:

**Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information.**

The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.

URETHANE PADS [1.5 mm (0.059 in) thick]

Insulates connectors, harness, etc.

76268-9E005: 100 x 135 mm (3.94 x 5.31 in)/76884-71L01: 60 x 85 mm (2.36 x 3.35 in)/76884-71L02: 15 x 25 mm (0.59 x 0.98 in)

INSULATOR (Foam blocks)

Insulates components from contact. Can be used to fill space behind a panel.

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

73982-9E000: 45 mm (1.77 in) thick, 50 x 50 mm (1.97 x 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 x 50 mm (1.97 x 1.97 in)

INSULATOR (Light foam block)

80845-71L00: 30 mm (1.18 in) thick, 30 x 50 mm (1.18 x 1.97 in)

FELT CLOTH TAPE

Used to insulate where movement does not occur. Ideal for instrument panel applications.

68370-4B000: 15 x 25 mm (0.59 x 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles.

UHMW (TEFLON) TAPE

Insulates where slight movement is present. Ideal for instrument panel applications.

SILICONE GREASE

Used in place of UHMW tape that will be visible or not fit.

Note: Will only last a few months.

SILICONE SPRAY

Use when grease cannot be applied.

DUCT TAPE

Use to eliminate movement.

## CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

## Generic Squeak and Rattle Troubleshooting

EIS0016J

Refer to Table of Contents for specific component removal and installation information.

### INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

#### CAUTION:

**Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.**

### CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and upper/lower cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

### DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

## SQUEAK AND RATTLE TROUBLE DIAGNOSIS

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

---

## TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner. In addition look for:

1. Trunk lid bumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

## SUNROOF/HEADLINER

Noises in the sunroof/headliner area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sun visor shaft shaking in the holder
3. Front or rear windshield touching headliner and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

## SEATS

When isolating seat noises it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holders
2. A squeak between the seat pad cushion and frame
3. The rear seat back lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

## UNDERHOOD

Some interior noises may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noises include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

## Diagnostic Worksheet

EIS0016K

### SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Nissan Customer:

We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

#### I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)

The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

# SQUEAK AND RATTLE TROUBLE DIAGNOSIS

## SQUEAK & RATTLE DIAGNOSTIC WORKSHEET- page 2

Briefly describe the location where the noise occurs:

---

---

---

### II. WHEN DOES IT OCCUR? (check the boxes that apply)

- |  |   |
|--|---|
| <input type="checkbox"/> anytime                             | <input type="checkbox"/> after sitting out in the sun |
| <input type="checkbox"/> 1 <sup>st</sup> time in the morning | <input type="checkbox"/> when it is raining or wet    |
| <input type="checkbox"/> only when it is cold outside        | <input type="checkbox"/> dry or dusty conditions      |
| <input type="checkbox"/> only when it is hot outside         | <input type="checkbox"/> other: _____                 |

### III. WHEN DRIVING:

- through driveways
- over rough roads
- over speed bumps
- only at about \_\_\_\_ mph
- on acceleration
- coming to a stop
- on turns : left, right or either (circle)
- with passengers or cargo
- other: \_\_\_\_\_
- after driving \_\_\_\_ miles or \_\_\_\_ minutes

### IV. WHAT TYPE OF NOISE?

- squeak (like tennis shoes on a clean floor)
- creak (like walking on an old wooden floor)
- rattle (like shaking a baby rattle)
- knock (like a knock on a door)
- tick (like a clock second hand)
- thump (heavy, muffled knock noise)
- buzz (like a bumble bee)

### TO BE COMPLETED BY DEALERSHIP PERSONNEL

SBT844

## SUNROOF

PFP:91210

### System Description POWER

EIS0016L

Power is supplied at all times:

- through 30A fusible link (letter **d** , located in the fuse and fusible link box)
- to sunroof motor assembly terminal 5.

The power circuit is protected by the circuit breaker. The sunroof motor assembly is grounded through body ground R5.

#### NOTE:

**When the battery or sunroof motor harness connector is disconnected during service, the sunroof will not operate properly.**

Procedure for resetting motor memory:

From any sunroof position (full open, partially open, closed, partially vented, and vented), push and hold the button in the forward position until the sunroof vent is in the full up position. This resets the sunroof motor memory and the sunroof will operate correctly.

### TILT AND SLIDE OPERATION

The sunroof is controlled by the sunroof switch. With the sunroof in the closed position, depressing the UP/CLOSE switch will tilt the rear of the sunroof up. The sunroof will stop when the switch is released, or when the sunroof reaches its maximum tilt position.

The sunroof will tilt down when in the tilt up position and the DOWN/OPEN switch is depressed. The sunroof will stop when the switch is released, or when the sunroof is fully closed.

With the sunroof in the closed position, pressing the DOWN/OPEN switch will cause the sunroof to slide open. The sunroof will slide open until the switch is released or until it is all the way open. The sunroof will close when in the open position, and the UP/CLOSE switch is depressed. The sunroof will slide until the switch is released, or when the sunroof is fully closed.

All automatic operations in sunroof are controlled by internal limit switches located in the sunroof motor assembly.

## Memory Reset Adjustment

If the battery is disconnected or the sunroof motor harness connector is disconnected, the sunroof motor memory must be reset. To reset the sunroof motor memory from any sunroof position (full open, partially open, closed, partially vented, and vented), push and hold the sunroof button in the forward position until the sunroof vents in the full up position. This resets the sunroof motor memory and now the sunroof will operate correctly.

**Install motor and limit SW assembly and sunroof rail assembly in the following sequence:**

1. Arrange equal lengths of link and wire assemblies on both sides of the sunroof opening.
2. Connect the sunroof connector to the sunroof switch and positive (+) power supply.
3. Set the lid assembly to the fully closed position **A** by operating the sunroof switch.
4. Fit the outer side of the lid assembly to the surface of the roof outer body panel.
5. Remove the motor and keep the DOWN/OPEN switch depressed until the motor pinion gear reaches the end of its rotating range.
6. Install the motor.
7. Check that the motor drive gear fits properly in wires.
8. Press the UP/CLOSE switch to check the lid assembly for normal tilting.
9. Check the sunroof lid assembly for normal operations (tilt up, tilt down, open and close).

# SUNROOF

EIS0016O

## Removal

SEC. 736

W1IA0001E

- After any repair, check sunroof operation and glass lid alignment.
- Handle the finisher plate and glass lid with care so as not to cause damage.
- To ease installation, mark each point before removal.

### CAUTION:

- Always work with a helper.

# SUNROOF

- Before removal, fully close the glass lid assembly, then after removal, do not move the motor assembly.

## SUNROOF LID ASSEMBLY

1. Open the sunroof shade. **A**
2. Close the glass lid. **B**
3. Remove the six bolts securing the glass lid assembly to the sunroof assembly. **C**

## SHADE ASSEMBLY

1. After removing the glass lid assembly, remove the two screws securing the drain channel. **D**
2. Remove the drain channel. **E**
3. Remove the shade assembly. **F**

## SUNROOF ASSEMBLY

1. Remove the headlining. Refer to [EI-32, "Removal and Installation"](#) .
2. Disconnect the front and rear drain hoses. **G**
3. Remove the two screws securing the sunroof motor to the sunroof assembly. **H**
4. Remove the sunroof motor and bracket. **J**
5. Remove bolts securing the sunroof assembly to the roof. **K**
6. Remove the sunroof assembly. **L**

## Trouble Diagnoses DIAGNOSTIC TABLE

EIS0016P

		Check items (Components)			
		Adjustment	Drain hoses	Weatherstrip	Link and wire assembly
	Reference page	<a href="#">RF-16, "ADJUSTMENT"</a>	<a href="#">RF-17, "DRAIN HOSES"</a>	<a href="#">RF-17, "WEATHER-STRIP"</a>	<a href="#">RF-17, "LINK AND WIRE ASSEMBLY"</a>
Symptom	Excessive wind noise	1		2	
	Water leaks	1	2	3	
	Sunroof rattles	1	4	2	3
	Excessive operation noise	1		2	3

The numbers in this table mean checking order.

## ADJUSTMENT

### SEC. 736

A - A

B - B (When sunroof is tilted up)

Unit: mm (in)

WBT061

If any gap or height difference between glass lid and roof is found, check glass lid fit and adjust as follows:

### Gap Adjustment

1. Open the shade assembly.
2. Tilt the glass lid up then remove the side trim.
3. Loosen the glass lid securing bolts (3 each on left and right sides), then tilt the glass lid down.
4. Adjust the glass lid from outside of vehicle so it resembles "A-A" as shown in the figure above.
5. Tilt the glass lid up and down until it is adjusted to "B-B" as shown in the figure above.
6. After adjusting the glass lid, tilt the glass lid up and tighten the bolts.
7. Tilt the glass lid up and down several times to check that it moves smoothly.

# SUNROOF

## Height Difference Adjustment

1. Tilt the glass lid up and down.
2. Check the height difference between the roof panel and the glass lid to see if it is as "A-A" as shown in the figure above.
3. If necessary, adjust it by using one of following procedures.
  - Adjust by adding or removing adjustment shim(s) between the glass lid and link assembly.
  - If the glass lid protrudes above the roof panel, add shim(s) or plain washer(s) at the sunroof mounting bracket or stud bolt locations to adjust sunroof installation as required.

## DRAIN HOSES

1. Remove the headlining to access the drain hose connections. (Refer to [EI-32, "Removal and Installation"](#) .)

2. Check visually for proper connections, damage or deterioration. **A** (The figure shows only the front side.)
3. If leakage occurs around the trunk room side trim and check connecting area. Check for proper connection or damage.
4. Remove the drain hoses and check visually for any damage, cracks or deterioration.
5. Pour water into the drain hoses to find the damaged portion.
  - If any damaged portion is found at each step, replace the damaged hose.

## WEATHERSTRIP

- In case of leakage around the roof lid, close it and pour water over the roof lid to find the damaged or gap portion.
- If gap is between the weatherstrip and the roof panel, perform gap adjustment. Refer to [RF-16, "Gap Adjustment"](#) .
- If gap is between the weatherstrip and the roof lid, or if weatherstrip is flattened, damaged or deteriorated, replace the roof lid assembly. (Weatherstrip is not serviceable.)

## LINK AND WIRE ASSEMBLY

### NOTE:

Before replacing a suspect part, carefully ensure it is the source of noise being experienced.

1. Check link to determine if coating film has peeled off to such an extent that substrate is visible. Check also to determine if link is the source of noise. If it is, replace it.
2. Visually check to determine if a sufficient amount of petroleum jelly has been applied to wire or rail groove. If not, add petroleum jelly as required.
3. Check wire for any damage or deterioration. If damaged, replace wire.

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions

EES0001T

- When installing each rubber part, final tightening must be carried out under unladen condition\* with tires on ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.  
\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment.
- Do not jack up at the trailing arm and lateral link.
- Always torque brake lines when installing.
- Lock nuts are un reusable parts; always use new ones. When replacing, do not wipe the oil off of the new lock nut before tightening.

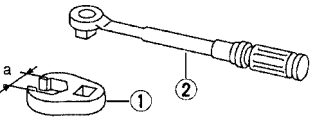

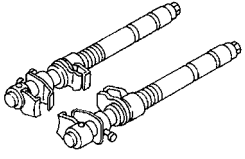

# PREPARATION

# REAR SUSPENSION ASSEMBLY

EES000IX

## On-Vehicle Service

Check axle and suspension parts for excessive play, wear or damage.

- Shake each rear wheel to check for excessive play.
- Retighten all nuts and bolts to the specified torque.

**Tightening torque** : Refer to [RSU-5, "Components"](#) .

- Check shock absorber for oil leakage or other damage.
- Check wheelarch height. Refer to [RSU-13, "Wheel Arch Height \(Unladen\\*\)"](#) .

## Rear Wheel Alignment

EES000IY

Before checking rear wheel alignment, be sure to make a preliminary inspection (Unladen\*).

\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

### PRELIMINARY INSPECTION

1. Check tires for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.
  - a. Remove tire from wheel and mount wheel on a tire balance machine.
  - b. Set dial indicator as shown in the illustration.

**Wheel runout (Dial indicator value)** : Refer to [WT-6, "Road Wheel"](#) .

3. Check front wheel bearings for looseness.
4. Check front suspension for looseness.
5. Check steering linkage for looseness.
6. Check that front shock absorbers work properly.
7. Check vehicle wheelarch height (unladen\*). Refer to [RSU-13, "Wheel Arch Height \(Unladen\\*\)"](#) .

- \*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

# REAR SUSPENSION ASSEMBLY

## CAMBER

Camber is preset at factory and cannot be adjusted.

**Camber** : Refer to [RSU-13, "Rear Wheel Alignment \(Unladen\\*\)"](#) .

1. Measure camber of both right-hand and left-hand wheels with a suitable alignment gauge.
2. If the camber is not within specification, inspect and replace any damaged or worn rear suspension parts.

## TOE-IN

Toe-in is preset at factory and cannot be adjusted.

Measure toe-in using following procedure. If out of specification, inspect and replace any damaged or worn rear suspension parts.

### WARNING:

- Always perform the following procedure on a flat surface.
  - Make sure that no person is in front of the vehicle before pushing it.
1. Bounce rear of vehicle up and down to stabilize the posture.
  2. Push the vehicle straight ahead about 5 m (16 ft).

3. Put a mark on base line of the tread (rear side) of both tires at the same height of hub center. This mark is a measuring point.
4. Measure distance "A" (rear side).
5. Push the vehicle slowly ahead to rotate the wheels 180 degrees (1/2 turn).

If the wheels have rotated more than 180 degrees (1/2 turn), try the above procedure again from the beginning. Never push vehicle backward.

6. Measure distance "B" (front side).

**Total toe-in** :  $A - B$   
Refer to [RSU-13, "Rear Wheel Alignment \(Unladen\\*\)"](#) .

# REMOVAL AND INSTALLATION

PFP:00000

EES0001Z

## REMOVAL AND INSTALLATION

### Removal and Installation REMOVAL

#### CAUTION:

- Before removing the rear suspension assembly, disconnect the ABS wheel sensor from the assembly. Failure to do so may result in damaged sensor wires and sensor becoming inoperative.

- Drain brake fluid before disconnecting brake lines.

1. Disconnect brake hydraulic lines and parking brake cables at toggle levers. (Models with drum brakes.)

2. Disconnect brake hydraulic lines and parking brake cables from calipers and remove brake calipers and rotors. (Models with disc brakes.)

3. Disconnect ABS wheel sensor, if equipped.

4. Using a transmission jack, raise torsion beam a little, and remove nuts and bolts from the trailing arms, shock absorber assemblies (lower side) and lateral link.

5. Lower transmission jack and remove suspension.

6. Remove luggage compartment trim. Refer to [EI-33, "Removal and Installation"](#).

7. Remove shock absorber fixing nuts (upper side). Then pull out shock absorber assemblies.

### INSTALLATION

#### CAUTION:

- Refill with new brake fluid DOT 3.

- Never reuse drained brake fluid.

1. Attach torsion beam at trailing arm and lateral link to vehicle. Do not tighten bolts at this time.

## REMOVAL AND INSTALLATION

- Using a transmission jack, place lateral link and control rod horizontally against torsion beam. Tighten lateral link on vehicle.
- Attach shock absorber assembly to vehicle. Then tighten the lower side of shock absorber assembly.
- Lower torsion beam to fully extended position. Remove transmission jack and tighten torsion beam, at trailing arm, to specified torque. Refer to [RSU-5, "Components"](#).
- Install brake hydraulic lines and tighten flare nuts.

**Flare nut tightening torque** : 15 - 18 N·m (1.5 - 1.8 kg·m, 11 - 13 ft·lb)

- Connect ABS wheel sensor, if equipped.
- Bleed air. Refer to [BR-7, "Bleeding Brake System"](#).
- Install ABS wheel sensor.

# COIL SPRING AND SHOCK ABSORBER

## COIL SPRING AND SHOCK ABSORBER

PFP:56210

### Removal and Installation

EES000J0

Remove shock absorber upper and lower fixing nuts.

**Do not remove piston rod lock nut on vehicle.**

### Disassembly

EES000J1

1. Set shock absorber in vise, then **loosen** piston rod lock nut. **Do not remove piston rod lock nut at this time.**
2. Compress spring with Tool so that the shock absorber upper spring seat can be turned by hand.

#### **WARNING:**

**Make sure that the pawls of the two spring compressors are firmly hooked on the spring. The spring compressors must be tightened alternately so as not to tilt the spring.**

3. Remove piston rod lock nut.

EES000J2

### Inspection

#### SHOCK ABSORBER ASSEMBLY

- Check for smooth operation through a full stroke, both compression and extension.
- Check for oil leakage on welded or gland packing portions.
- Check piston rod for cracks, deformation or other damage. Replace if necessary.

#### UPPER RUBBER SEAT AND BUSHING

Check rubber parts for deterioration or cracks.

Replace if necessary.

#### COIL SPRING

Check for cracks, deformation or other damage. Replace if necessary.

### Assembly

EES000J3

- Locate upper spring seat as shown.

- When installing coil spring, be careful not to reverse top and bottom direction. (Top end is flat.)
- When installing coil spring on shock absorber, it must be positioned as shown.

#### **CAUTION:**

**Do not reuse piston rod lock nut.**

# TORSION BEAM, LATERAL LINK AND CONTROL ROD

PF5:55130

## TORSION BEAM, LATERAL LINK AND CONTROL ROD

EES000J4

### Disassembly

- Remove torsion beam assembly. Refer to [RSU-8, "REMOVAL"](#).
- Remove lateral link and control rod from torsion beam.

### Inspection

EES000J5

- Check for cracks, distortion or other damage. Replace if necessary.

**Standard length** : "A" 207 - 208 mm (8.15 - 8.19 in)  
"B" 394 - 395 mm (15.51 - 15.55 in)  
"C" 601 - 603 mm (23.66 - 23.74 in)  
"D" 106 - 108 mm (4.17 - 4.25 in)

- Check all rubber parts for wear, cracks or deformation. Replace if necessary.

SSU025

### Rubber Bushing Replacement TRAILING ARM

EES000J6

Trailing arm bushings are press fit and must be centered properly in trailing arm collars.

1. Press out old bushing from trailing arm collar.
  2. Press in new bushing until inside edge of bushing is 16.7 to 17.7 mm (0.66 to 0.70 in) from inside edge of trailing arm.
- Do not allow bushing to incline more than 1 degree.
  - During installation, do not allow trailing arm to bend or twist.

ARA063

### LATERAL LINK

Lateral link bushings are press fit. The large lateral link bushing is directional and must be installed in a specific position.

1. Remove lateral link.
2. Press out bushings. Note installation position of large bushing before removing.
3. Press in small bushing until bushing is centered in lateral link collar.
4. Press in large bushing until bushing is centered in lateral link collar.
  - a. Position bushing on lateral link collar.
  - b. Angle between bushing centerline and collar centerline must be within 3 degrees as shown in illustration.

ARA054

### CONTROL ROD

Control rod bushings are not replaceable. If bushings are worn or damaged, replace control rod.

# TORSION BEAM, LATERAL LINK AND CONTROL ROD

EES000J7

## Assembly

1. Temporarily assemble lateral link and control rod.
  - When installing the control rod, connect the bushing with the smaller inner diameter to the lateral link.

2. Temporarily install lateral link and control rod on torsion beam.
  - When installing, place lateral link with the arrow topside.

3. Place lateral link and control rod horizontally against torsion beam, and tighten to the specified torque.
4. Install torsion beam assembly. Refer to [RSU-8, "INSTALLATION"](#).

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EHS000LQ

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precaution for Seat Belt Service

EHS000J7

#### **CAUTION:**

- Before removing the front seat belt pre-tensioner assembly, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.
- Do not use electrical test equipment for front seat belt pre-tensioner connector.
- After replacing or reinstalling front seat belt pre-tensioner assembly, or reconnecting front seat belt pre-tensioner connector, check the system function. Refer to [SRS-17, "SRS Operation Check"](#).
- Do not use disassembled buckle or seat belt assembly.
- Replace anchor bolts if they are deformed or worn out.
- Never oil tongue and buckle.
- If any component of seat belt assembly is questionable, do not repair. Replace the whole seat belt assembly.
- If webbing is cut, frayed, or damaged, replace seat belt assembly.
- When replacing seat belt assembly, use a Genuine NISSAN seat belt assembly.

### AFTER A COLLISION

#### **WARNING:**

Inspect all seat belt assemblies including retractors and attaching hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide, etc.)
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The front seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

# FRONT SEAT BELT

PFP:86880

EHS000J8

## FRONT SEAT BELT

### Removal and Installation

1. Disconnect both battery cables.
2. Slide the seat all the way forward and tilt the seat back toward the front.
3. Remove adjuster cover. **A**
4. Remove floor anchor bolt. **B**
5. Remove shoulder anchor bolt. **C**
6. Remove center pillar upper and lower garnish. Refer to [EI-28, "SIDE AND FLOOR TRIM"](#) for details.
7. Disconnect front seat belt pre-tensioner connector.
  - For removal/installation of the direct-connect SRS connectors, refer to [SRS-6, "Direct-connect SRS Component Connectors"](#).
8. Remove the screw securing front seat belt pre-tensioner retractor, then remove seat belt and seat belt pre-tensioner retractor.
9. Remove bolts securing seat belt adjuster, then remove seat belt adjuster.

## BASIC INSPECTION

### Seat Belt Inspection AFTER A COLLISION

EHS000JA

#### **WARNING:**

Inspect all seat belt assemblies including retractors and attaching hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Front seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions if the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide, etc.)
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The front seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

#### PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:
  - a. Switch ignition ON. With driver seat belt unfastened, the seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about seven seconds.
  - b. Fasten driver seat belt. The seat belt warning lamp should go out and the chime (if sounding) should stop.
2. If the "AIR BAG" warning lamp is blinking, conduct self-diagnosis using CONSULT-II, and "AIR BAG" warning lamp. Refer to [SRS-17, "SRS Operation Check"](#).
3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.
4. Check the shoulder seat belt guide and shoulder belt height adjuster for front seats. Ensure guide swivels freely and that belt lays flat and does not bind in guide. Ensure height adjuster operates properly and holds securely.
5. Check retractor operation:
  - a. Fully extend the seat belt webbing and check for twists, tears or other damage.
  - b. Allow the seat belt to retract. Ensure that belt returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth etc. because dirt built up in the loops of the upper anchors can cause the seat belts to retract slowly.
  - c. Fasten the seat belt. Pull firmly on belt and buckle to ensure belt remains latched. Unfasten seat belt. Ensure belt releases freely and buckle button returns to original position.
6. Repeat steps above as necessary to check the other seat belts.

# BASIC INSPECTION

---

## SEAT BELT RETRACTOR ON-VEHICLE CHECK

### Emergency Locking Retractors (ELR) and Automatic Locking Retractors (ALR)

#### NOTE:

All seat belt retractors are of the Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the belt from extending any further. All 3-point type seat belt retractors except the driver's seat belt also have an Automatic Locking Retractors (ALR) mode. The ALR mode (also called child restraint mode) is used when installing child seats. The ALR mode is activated when the seat belt is fully extended. When the belt is then retracted partially, the ALR mode automatically locks the seat belt in a specific position so the belt cannot be extended any further. To cancel the ALR mode, allow the seat belt to fully wind back into the retractor.

Check the seat belt retractors using the following test(s) to determine if a retractor assembly is operating properly.

#### ELR Function Stationary Check

Grasp the shoulder belt and pull forward quickly. The retractor should lock and prevent the belt from extending further.

#### ALR Function Stationary Check

1. Pull out entire length of seat belt from retractor until a click is heard.
2. Retract the belt partially. A clicking noise should be heard as the belt retracts indicating that the retractor is in the Automatic Locking Retractors (ALR) mode.
3. Grasp the seat belt and try to pull out of the retractor. The belt must lock and not extend any further. If NG, replace the retractor assembly.
4. Allow the entire length of the belt to retract to cancel the automatic locking mode.

#### ELR Function Moving Check

#### WARNING:

**Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. DO NOT perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event the retractor does not lock.**

1. Fasten driver's seat belt. Buckle a passenger into the seat for the belt that is to be tested.
2. Proceed to the designated safe area.
3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop and the driver and passenger must be prepared to brace themselves in the event the retractor does not lock, apply brakes firmly and make a very hard stop.

During stop, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

# BASIC INSPECTION

## SEAT BELT RETRACTOR OFF-VEHICLE CHECK

1. Remove the seat belt retractor assembly.
2. Slowly pull out belt while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the illustration.

**15 degrees or less tilt : Belt can be pulled out.**

**35 degrees or more tilt : Belt locks and cannot be pulled out.**

If NG, replace the retractor assembly.

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS0037L

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Wiring Diagrams and Trouble Diagnosis

EKS0037M

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit.

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#).
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

## BATTERY

### How to Handle Battery

#### CAUTION:

- If it becomes necessary to start the engine with a booster battery and jumper cables, use a 12-volt booster battery.
- After connecting battery cables, ensure that they are tightly clamped to battery terminals for good contact.
- Never add distilled water through the hole used to check specific gravity.

#### METHODS OF PREVENTING OVER-DISCHARGE

The following precautions must be taken to prevent over-discharging a battery.

- The battery surface (particularly its top) should always be kept clean and dry.
- The terminal connections should be clean and tight.
- At every routine maintenance, check the electrolyte level. This also applies to batteries designated as "low maintenance" and "maintenance-free".

- When the vehicle is not going to be used over a long period of time, disconnect the negative battery terminal.

- Check the charge condition of the battery. Periodically check the specific gravity of the electrolyte. Keep a close check on charge condition to prevent over-discharge.

#### CHECKING ELECTROLYTE LEVEL

#### WARNING:

Do not allow battery fluid to come in contact with skin, eyes, fabrics, or painted surfaces. After touching a battery, do not touch or rub your eyes until you have thoroughly washed your hands. If acid contacts eyes, skin or clothing, immediately flush with water for 15 minutes and seek medical attention.

# BATTERY

- Remove the cell plug using a suitable tool.
- Add distilled water up to the MAX level.

## Sulphation

A battery will be completely discharged if it is left unattended for a long time and the specific gravity will become less than 1.100. This may result in sulphation on the cell plates.

To determine if a battery has been “sulphated”, note its voltage and current when charging it. As shown in the figure, less current and higher voltage are observed in the initial stage of charging sulphated batteries.

A sulphated battery may sometimes be brought back into service by means of a long, slow charge, 12 hours or more, followed by a battery capacity test.

## SPECIFIC GRAVITY CHECK

1. Read hydrometer and thermometer indications at eye level.
2. Use the following chart to correct your hydrometer reading according to electrolyte temperature.

## Hydrometer Temperature Correction

Battery electrolyte temperature °C (°F)	Add to specific gravity reading
71 (160)	0.032
66 (150)	0.028
60 (140)	0.024
54 (130)	0.020
49 (120)	0.016
43 (110)	0.012
38 (100)	0.008
32 (90)	0.004
27 (80)	0
21 (70)	-0.004
16 (60)	-0.008
10 (50)	-0.012
4 (40)	-0.016
-1 (30)	-0.020
-7 (20)	-0.024

A  
B  
C  
D  
E  
F  
G  
H  
I  
J  
SC  
L  
M

# BATTERY

Battery electrolyte temperature °C (°F)	Add to specific gravity reading
-12 (10)	-0.028
-18 (0)	-0.032

Corrected specific gravity	Approximate charge condition
1.260 - 1.280	Fully charged
1.230 - 1.250	3/4 charged
1.200 - 1.220	1/2 charged
1.170 - 1.190	1/4 charged
1.140 - 1.160	Almost discharged
1.110 - 1.130	Completely discharged

## CHARGING THE BATTERY

### CAUTION:

- Do not “quick charge” a fully discharged battery.
- Keep the battery away from open flame while it is being charged.
- When connecting the charger, connect the leads first, then turn on the charger. Do not turn on the charger first, as this may cause a spark.
- If battery electrolyte temperature rises above 60°C (140°F), stop charging. Always charge battery at a temperature below 60°C (140°F).

## Charging Rates

Amps	Time
50	1 hour
25	2 hours
10	5 hours
5	10 hours

**Do not charge at more than 50 ampere rate.**

### NOTE:

The ammeter reading on your battery charger will automatically decrease as the battery charges. This indicates that the voltage of the battery is increasing normally as the state of charge improves. The charging amps indicated above refer to initial charge rate.

- If, after charging, the specific gravity of any two cells varies more than .050, the battery should be replaced.

## Trouble Diagnoses with Battery/Starting/Charging System Tester

EKS0037P

### CAUTION:

**When working with batteries, always wear appropriate eye protection.**

### NOTE:

- To ensure a complete and thorough diagnosis, the battery, starter and generator test segments must be done as a set from start to finish.
- If battery surface charge is detected while testing, the tester will prompt you to turn on the headlights to remove the surface charge.
- If necessary, the tester will prompt you to determine if the battery temperature is above or below 0°C (32°F). Choose the appropriate selection by pressing the up or down arrow button, then press “ENTER” to make the selection.

# BATTERY

1. Turn off all loads on the vehicle electrical system. Clean or repair as necessary.
2. Visually inspect the battery, battery terminals and cable ends with ignition switch in "OFF" position.

**NOTE:**

The contact surface between the battery terminals, cable ends and tester leads must be clean for a valid test. A poor connection will prevent testing and a "CHECK CONNECTION" message will appear during the test procedures. If this occurs, clean the battery post and terminals, reconnect them and restart the test.

3. Connect the red tester lead clamp to the positive battery terminal, and the black to the negative terminal.
4. The tester will turn on automatically. Using the arrow keys, select "IN-VEHICLE" on the tester and then press the "ENTER" key.

5. Locate the battery type and rating stamped or written on the top case of the battery to be tested.

**NOTE:**

The battery type and rating will have either of the following.

**CCA:** Cold Cranking Amps (490 CCA, 550 CCA, etc.)

**JIS:** Japanese Industrial Standard.

Battery is stamped with a number such as:

80D26L: 80 (rank of output), D (physical size-depth), 26 (width in cm). The last character L (post configuration) is not input into the tester.

The tester requires the rating for the battery be entered exactly as it is written or stamped on the battery. Do not attempt a CCA conversion for JIS stamped batteries. JIS must be input directly.

6. Using the arrow and "ENTER" keys alternately, select the battery type and rating.

**NOTE:**

The tester lists five choices; CCA, JIS, IEC, DIN, and EN. Only use CCA or JIS.

7. Press "ENTER" to begin the test. Diagnosis results are displayed on the tester. Refer to [SC-8. "DIAGNOSTIC RESULT ITEM CHART"](#).

A  
B  
C  
D

G  
H  
I  
J  
SC  
L  
M

# BATTERY

8. Press "ENTER", then test output code is displayed. Record the test output code on the repair order.
9. Toggle back to the "DIAGNOSTIC SCREEN" for test results.

**NOTE:**

- If necessary, the tester will ask the user to determine if the battery has just been charged. Choose the appropriate selection by pressing the up or down arrow button and then press the "ENTER" button to make the selection.
- When testing a battery installed in a vehicle that has recently been driven, select "BEFORE CHARGE".
- If the battery has just been slow charged due to a "CHARGE & RETEST" decision by the tester, and the tester asks the user "BEFORE CHARGE/AFTER CHARGE", select "AFTER CHARGE".

## DIAGNOSTIC RESULT ITEM CHART

Diagnostic item	Service procedure
GOOD BATTERY	Battery is OK. Refer to <a href="#">SC-6. "Trouble Diagnoses with Battery/Starting/Charging System Tester"</a> .
REPLACE BATTERY	Replace battery. Before replacing battery, clean the battery cable clamps and battery posts. Perform battery test again with Battery/Starting/Charging system tester. If second test result is "Replace Battery", then do so. Perform battery test again to confirm repair.
BAD CELL-REPLACE	Replace the battery. Perform battery test again with Battery/Starting/Charging system tester to confirm repair.
GOOD-RECHARGE	Perform the slow battery charging procedure. (Initial rate of charge is 10A for 12 hours.) Perform battery test again with Battery/Starting/Charging system tester.
CHARGE & RETEST	Perform the slow battery charging. (Initial rate of charge is 10A for 12 hours.) Perform battery test again with Battery/Starting/Charging system tester to confirm repair. <b>NOTE:</b> If the tester asks the user "BEFORE CHARGE/AFTER CHARGE", select "AFTER CHARGE".

## STARTING SYSTEM

### System Description M/T MODEL

EKS0037Q

Power is supplied at all times:

- through 40A fusible link (letter **c** , located in the fuse and fusible link box)
- to ignition switch terminal B.

With the ignition switch in the START position, power is supplied:

- from ignition switch terminal St
- to clutch interlock relay terminal 5.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 20, located in the fuse block (J/B)]
- to clutch interlock relay terminal 1.

When the clutch pedal is depressed, ground is supplied to clutch interlock relay terminal 2 through the clutch interlock switch and body grounds E7 and E37.

The clutch interlock relay is energized and power is supplied:

- from terminal 3 of the clutch interlock relay
- to terminal S of the starter motor windings.

The starter motor plunger closes and provides a closed circuit between the battery and the starter motor. The starter motor is grounded to the cylinder block. With power and ground supplied, the starter motor operates.

### A/T MODEL

Power is supplied at all times:

- through 40A fusible link (letter **c** , located in the fuse and fusible link box)
- to ignition switch terminal B.

With the ignition switch in the START position, power is supplied:

- from ignition switch terminal St
- to park/neutral position relay terminal 5

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 20, located in the fuse block (J/B)]
- to park/neutral position relay terminal 1.

With the selector lever in the P or N position, ground is supplied:

- to park/neutral position relay terminal 2
- through park/neutral position switch.

The park/neutral position relay is energized and power is supplied:

- from ignition switch terminal St
- through park/neutral position relay terminals 5 and 3
- to terminal S of the starter motor windings.

The starter motor plunger closes and provides a closed circuit between the battery and the starter motor. The starter motor is grounded to the cylinder block. With power and ground supplied, the starter motor operates.

## Trouble Diagnoses with Battery/Starting/Charging System Tester

### NOTE:

To ensure a complete and thorough diagnosis, the battery, starter and generator test segments must be done as a set from start to finish.

1. Turn off all loads on the vehicle electrical system.
2. Perform battery test with Battery/Starting/Charging system tester. Refer to [SC-13, "Trouble Diagnoses with Battery/Starting/Charging System Tester"](#).
3. Press "ENTER" to begin the starting system test.

4. Start the engine.

5. Diagnosis result is displayed on the tester. Refer to [SC-13, "DIAGNOSTIC RESULT ITEM CHART"](#).

### NOTE:

- If the starter performs normally but the engine does not start, perform engine diagnosis.
- For intermittent "NO CRANK" or "NO STARTER OPERATION" incidents, refer to [SC-17, "DIAGNOSTIC PROCEDURE 2"](#).

### DIAGNOSTIC RESULT ITEM CHART

Diagnostic item	Service procedure
CRANKING VOLTAGE NORMAL	Go to "WORK FLOW", <a href="#">SC-14, "WORK FLOW"</a> .
CRANKING VOLTAGE LOW	Go to "WORK FLOW", <a href="#">SC-14, "WORK FLOW"</a> .
CHARGE BATTERY	Perform the slow battery charging procedure. (Initial rate of charge is 10A for 12 hours.) Perform battery test again with Battery/Starting/Charging system tester. Refer to <a href="#">SC-13, "Trouble Diagnoses with Battery/Starting/Charging System Tester"</a> .
REPLACE BATTERY	Before replacing battery, clean the battery cable clamps and battery posts. Perform battery test again with Battery/Starting/Charging system tester. Refer to <a href="#">SC-13, "Trouble Diagnoses with Battery/Starting/Charging System Tester"</a> . If second test result is "REPLACE BATTERY", then do so. Perform battery test again to confirm repair.

## DIAGNOSTIC PROCEDURE 1

### Check "B" Terminal Circuit

#### 1. CHECK POWER SUPPLY FOR STARTER MOTOR "B" TERMINAL

1. Remove the fuel pump fuse.
2. Crank or start the engine (where possible) until the fuel pressure is released.
3. Turn the ignition switch OFF.
4. Check that the starter motor connector E202 terminal B (B/Y) connection is clean and tight.
5. Check voltage between starter motor connector E202 terminal B (B/Y) and ground using a digital circuit tester.

OK or NG

OK >> GO TO 2.

NG >> Check harness between the battery and the starter motor for open circuit.

#### 2. CHECK BATTERY CABLE CONNECTION QUALITY (VOLTAGE DROP TEST)

1. Check voltage between starter motor connector E202 terminal B (B/Y) and battery positive terminal using a digital circuit tester.

OK or NG

OK >> GO TO 3.

NG >> Check harness between the battery and the starter motor for poor continuity.

# STARTING SYSTEM

## 3. CHECK STARTER MOTOR GROUND CIRCUIT (VOLTAGE DROP TEST)

1. Check voltage between starter motor case and battery negative terminal using a digital circuit tester.

OK or NG

- OK >> Starter motor "B" terminal circuit is OK. Further inspection is necessary. Refer to [SC-14, "WORK FLOW"](#).
- NG >> Check the starter motor case and ground for poor continuity.

# STARTING SYSTEM

## DIAGNOSTIC PROCEDURE 2

### Check "S" Terminal Circuit

#### 1. CHECK POWER SUPPLY FOR STARTER MOTOR "S" TERMINAL

1. Remove the fuel pump fuse.
2. Crank or start the engine (where possible) until the fuel pressure is released.
3. Turn the ignition switch OFF.
4. Disconnect starter motor connector F53 (QG18DE), F32 (QR25DE) terminal S (B/Y) connector.
5. Check voltage between starter motor connector F53 (QG18DE), F32 (QR25DE) terminal S (B/Y) and ground using a digital circuit tester.

**With the ignition switch ON : Battery voltage should exist**

#### OK or NG

- OK >> GO TO 2.  
NG >> Check the following.
- 40A fusible link (letter **c** , located in fuse and fusible link box)
  - Clutch interlock relay
  - Park/neutral position relay
  - Harness for open or short

#### 2. CHECK "S" TERMINAL CONNECTION QUALITY (VOLTAGE DROP TEST)

1. Connect starter motor connector F53 (QG18DE), F32 (QR25DE) terminal S (B/Y) connector.
2. Check voltage between starter motor connector F53 (QG18DE), F32 (QR25DE) terminal S (B/Y) and battery positive terminal using a digital tester.

**With the ignition switch in START : Voltage less than 1V**

#### OK or NG

- OK >> Starter motor "S" terminal circuit is OK. Further inspection is necessary. Refer to [SC-14, "WORK FLOW"](#) .  
NG >> Check harness between the battery and the starter motor "S" terminal for poor continuity.

# STARTING SYSTEM

## MINIMUM SPECIFICATION OF CRANKING VOLTAGE REFERENCING COOLANT TEMPERATURE

Engine coolant temperature	Voltage V	
	QG18DE	QR25DE
-30°C to -20°C (-22°F to -4°F)	7.4	8.7
-19°C to -10°C (-2°F to 14°F)	8.2	9.2
-9°C to 0°C (16°F to 32°F)	9.3	9.6
More than 1°C (More than 34°F)	9.5	10.0

## Removal and Installation QG18DE

EKS0037U

### Removal

1. Disconnect the negative battery terminal.
2. Remove the upper starter mounting bolt.
3. Remove the harness protector from the starter engine room harness.
4. Disconnect the starter harness connectors.
5. Remove the lower starter mounting bolt.
6. Remove the starter.

# STARTING SYSTEM

## Installation

To install, reverse the removal procedure.

## QR25DE

### Removal

1. Disconnect the negative and positive battery cables.
2. Remove the engine undercover (M/T) or the air duct, fresh air intake hose, and air cleaner lid (A/T).
3. Disconnect the starter harness connectors.
4. Remove the two starter mounting bolts.
5. Remove the starter.

### Installation

To install, reverse the removal procedure.

## Pinion/Clutch Check

1. Inspect pinion assembly teeth.
  - Replace pinion assembly if teeth are worn or damaged. (Also check condition of ring gear teeth.)
2. Inspect planetary gears/planetary gear teeth.
  - Replace planetary gears if teeth are worn or damaged. (Also check condition of pinion shaft/drive shaft gear teeth.)
3. Check to see if pinion assembly locks in one direction and rotates smoothly in the opposite direction.
  - If it locks or rotates in both directions, or unusual resistance is evident, replace.

EKS0037V

---

## CHARGING SYSTEM

PFP:23100

### System Description

EKS0037W

#### NOTE:

For vehicles with QR25DE engine, a low tone whistling noise coming from the generator for less than 10 seconds after engine shut down is normal. This is caused by the rotor "slow-down" function. Do not replace the generator exclusively for this symptom.

The generator provides DC voltage to operate the vehicle's electrical system and to keep the battery charged. The voltage output is controlled by the IC regulator.

Power is supplied at all times to generator terminal B through:

- 100A (QG18DE) or 120A (QR25DE) fusible link (letter **a**, located in the fuse and fusible link box).

Power is supplied at all times to generator terminal S through:

- 10A fuse (No. 33, located in the fuse and fusible link box).

Terminal B supplies power to charge the battery and operate the vehicle's electrical system. Output voltage is controlled by the IC regulator at terminal S detecting the input voltage. The charging circuit is protected by the 100A (QG18DE) or 120A (QR25DE) fusible link.

The generator is grounded to the engine block.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 30, located in the fuse block (J/B)]
- to combination meter terminal 26 (without tachometer) or 41 (with tachometer) for the charge warning lamp.

Ground is supplied to terminal 13 (without tachometer) or 19 (with tachometer) of the combination meter through terminal L of the generator. With power and ground supplied, the charge warning lamp will illuminate. When the generator is providing sufficient voltage with the engine running, the ground is opened and the charge warning lamp will go off.

If the charge warning lamp illuminates with the engine running, a fault is indicated.

## Trouble Diagnoses with Battery/Starting/Charging System Tester

### NOTE:

To ensure a complete and thorough diagnosis, the battery, starter and generator test segments must be done as a set from start to finish.

1. Turn off all loads on the vehicle electrical system.
2. Perform battery and starting system test with Battery/Starting/Charging system tester.
3. Press "ENTER" to begin the charging system test.
4. Start engine.

PRESS ENTER FOR  
CHARGING TEST

SEL417X

5. Press "ENTER" until "LOADS OFF REV ENGINE 5 SEC" is displayed.
6. Raise and hold the engine speed at 1,500 to 2,000 rpm for about 5 seconds, then return the engine to idle. Once the increase in engine rpm is detected, press "ENTER" to continue.

### NOTE:

- If after 30 seconds an increase in engine idle speed is not detected, "RPM NOT DETECTED" will display.
- Some engines may have a higher idle initially after starting, particularly when the engine is cold. The tester may detect this without any other action being taken. If this occurs, continue on with the testing process. The final results will not be affected.

LOADS OFF  
REV ENGINE 5 SEC

SEL418X

7. The tester now checks the engine at idle and performs the DIODE/RIPPLE check.
8. When complete, the tester will prompt you to turn on the following electrical loads.
  - Heater fan set to highest speed. Do not run the A/C or windshield defroster.
  - Headlamp high beam
  - Rear window defogger

### NOTE:

Do not run the windshield wipers or any other cyclical loads.

\*\*\* TESTING \*\*\*  
ENGINE AT IDLE

\*\*\* TESTING \*\*\*  
DIODE/RIPPLE

SEL419X

9. Press "ENTER" to continue.

TURN LOADS ON  
ENTER TO CONT...

SEL420X

# CHARGING SYSTEM

10. Raise and hold the engine speed at 1,500 to 2,000 rpm for about 5 seconds, then return the engine to idle. Once the increase in engine rpm is detected, press "ENTER" to continue.

**NOTE:**

If after 30 seconds an increase in engine idle speed is not detected, "RPM NOT DETECTED" will be displayed. Press "ENTER" to restart the test.

11. Diagnostic result is displayed on the tester. Refer to [SC-25, "DIAGNOSTIC RESULT ITEM CHART"](#).

12. Press "ENTER" then test output code is displayed. Record the test output code on the repair order.  
 13. Toggle back to the "DIAGNOSTIC SCREEN" for test results.

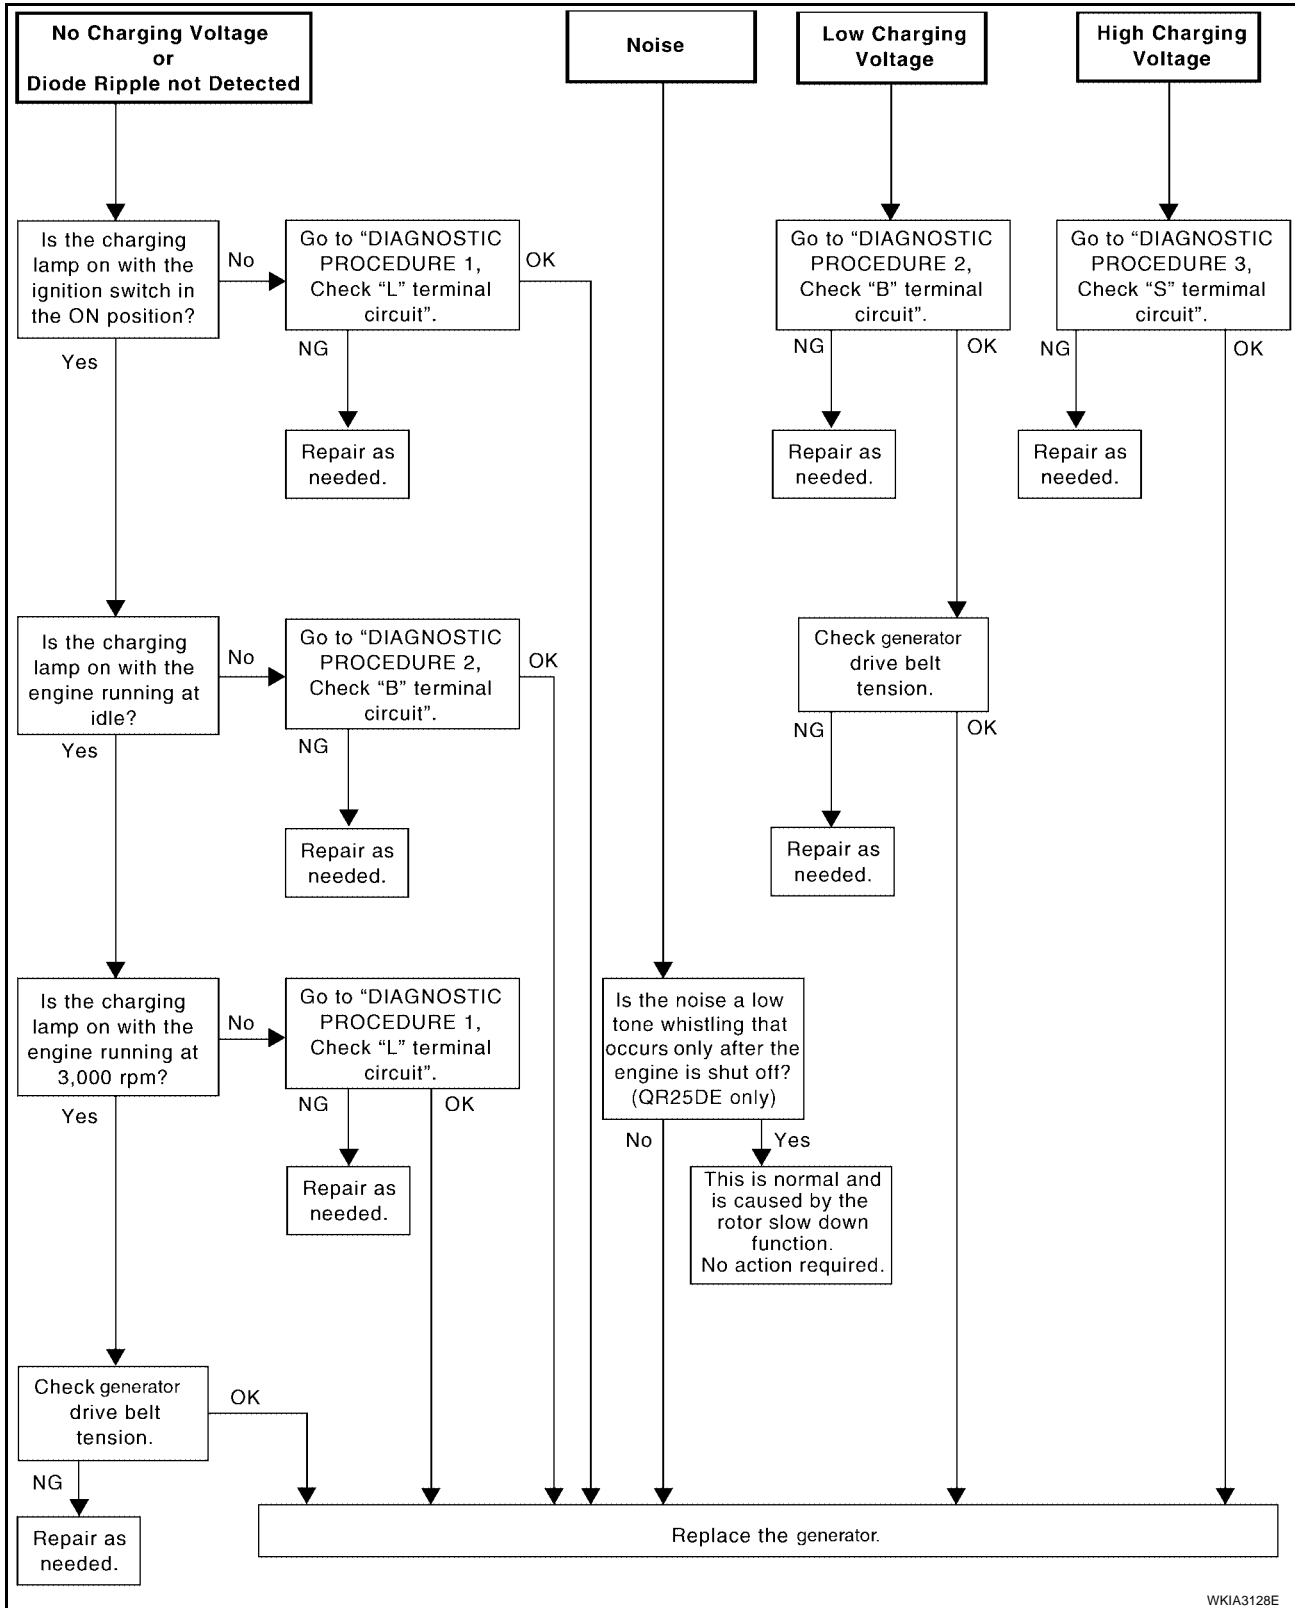

## DIAGNOSTIC RESULT ITEM CHART

Diagnostic item	Service procedure
CHARGING SYSTEM NORMAL	Charging system is normal and will also show DIODE RIPPLE test result.
NO CHARGING VOLTAGE	Go to <a href="#">SC-26, "WORK FLOW"</a> .
LOW CHARGING VOLTAGE	Go to <a href="#">SC-26, "WORK FLOW"</a> .
HIGH CHARGING VOLTAGE	Go to <a href="#">SC-26, "WORK FLOW"</a> .
DIODE RIPPLE NORMAL	Diode ripple is OK and will also show CHARGING VOLTAGE test result.
EXCESS RIPPLE DETECTED	Replace the generator. Perform "DIODE RIPPLE" test again using Battery/Starting/Charging system tester to confirm repair.
DIODE RIPPLE NOT DETECTED	Go to <a href="#">SC-26, "WORK FLOW"</a> .

## WORK FLOW

WKIA3128E

# CHARGING SYSTEM

## DIAGNOSTIC PROCEDURE 1

### Check "L" Terminal Circuit

#### 1. CHECK "L" TERMINAL CONNECTION

Check to see if "L" terminal is clean and tight.

OK or NG

OK >> GO TO 2.

NG >> Repair "L" terminal connection. Confirm repair by performing complete Battery/Starting/Charging system test.

#### 2. CHECK "L" TERMINAL CIRCUIT

1. Disconnect E35 connector from generator.

2. Apply ground to connector E35 terminal L (Y/R) with the ignition switch in the ON position.

OK or NG

OK >> Replace the generator. Confirm repair by performing complete Battery/Starting/Charging system test.

NG >> Check the following.

- 10A fuse [No. 30, located in fuse block (J/B)]
- CHARGE lamp
- Harness for open or short between combination meter and fuse
- Harness for open or short between combination meter and generator

# CHARGING SYSTEM

## DIAGNOSTIC PROCEDURE 2

### Check "B" Terminal Circuit

#### 1. CHECK "B" TERMINAL CONNECTION

Check to see if "B" terminal is clean and tight.

OK or NG

OK >> GO TO 2.

NG >> Repair "B" terminal connection. Confirm repair by performing complete Battery/Starting/Charging system test.

#### 2. CHECK GENERATOR "B" TERMINAL CIRCUIT

Check voltage between generator connector E34 terminal B (B/L) (QG18DE), (W) (QR25DE) and ground using a digital circuit tester.

OK or NG

OK >> GO TO 3.

NG >> Check the following.

- 100A (QG18DE), 120A (QR25DE) fusible link (letter **a** , located in fuse and fusible link box)
- Harness for open or short between generator and fusible link

#### 3. CHECK "B" TERMINAL CONNECTION QUALITY (VOLTAGE DROP TEST)

Check voltage between generator connector E34 terminal B (B/L) (QG18DE), (W) (QR25DE) and battery positive terminal using a digital circuit tester.

OK or NG

OK >> Replace the generator. Confirm repair by performing complete Battery/Starting/Charging system test.

NG >> Check harness between the battery and the generator for poor continuity.

# CHARGING SYSTEM

## DIAGNOSTIC PROCEDURE 3

### Check "S" Terminal Circuit

#### 1. CHECK "S" TERMINAL CONNECTION

Check to see if "S" terminal is clean and tight.

OK or NG

OK >> GO TO 2.

NG >> Repair "S" terminal connection. Confirm repair by performing complete Battery/Starting/Charging system test.

#### 2. CHECK GENERATOR "S" TERMINAL CIRCUIT

Check voltage between generator connector E35 terminal S (G/B) and ground using a digital circuit tester.

OK or NG

OK >> GO TO 3.

NG >> Check the following.

- 10A fuse (No. 33, located in fuse and fusible link box)
- Harness for open or short between generator and fuse

#### 3. CHECK "S" TERMINAL CONNECTION QUALITY (VOLTAGE DROP TEST)

Check voltage between generator connector E35 terminal S (G/B) and battery positive terminal using a digital circuit tester.

OK or NG

OK >> Replace the generator. Confirm repair by performing complete Battery/Starting/Charging system test.

NG >> Check harness between the battery and the generator for poor continuity.

# CHARGING SYSTEM

## MALFUNCTION INDICATOR

The IC regulator warning function activates to illuminate "CHARGE" warning lamp, if any of the following symptoms occur while generator is operating:

- Excessive voltage is produced.
- No voltage is produced.

## Removal and Installation QG18DE

EKS00380

### Removal

1. Disconnect the negative battery terminal.
2. Remove the front/right-side engine undercover.
3. Remove the drive belt.
4. Disconnect the A/C compressor harness connector.
5. Remove the four A/C compressor mounting bolts.
6. Slide the A/C compressor forward and support it.
7. Remove the two generator lower mounting bolts.
8. Disconnect the generator harness connectors.
9. Remove the generator upper bracket.
10. Remove the generator.

# CHARGING SYSTEM

## Installation

To install, reverse the removal procedure.

## QR25DE

### NOTE:

A low tone whistling noise coming from the generator for less than 10 seconds after engine shut down is normal. This is caused by the rotor "slow-down" function. Do not replace the generator exclusively for this symptom.

## Removal

1. Disconnect the negative battery cable.
2. Remove the front/right-side engine undercover.
3. Remove the drive belt.
4. Disconnect the generator harness connectors.
5. Disconnect the engine ground wire from the top mount.
6. Remove the generator upper and lower mount bolts.
7. Set the generator aside and remove the generator top mount.
8. Slide the generator out and remove.

## Installation

To install, reverse the removal procedure.

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS0017C

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

# FRONT SEAT

## FRONT SEAT

PF:87000

### Removal and Installation

EIS0017D

#### **WARNING:**

Removal of front side air bag module should only be done to allow deployment of front side air bag module prior to disposal of seatback assembly.

For Wiring Diagrams, refer to [SRS-3, "Wiring Diagrams and Trouble Diagnosis"](#) .

#### **CAUTION:**

- On vehicles equipped with side air bags, before removing the front seat, turn the ignition switch off, disconnect the negative and positive battery cables and wait a minimum of 3 minutes.
- When checking the power seat circuitry for continuity using a circuit tester, do not confuse the seat connector with the side air bag connector. Doing so could cause the side air bag to deploy.
- Do not drop, tilt, or bump the side air bag module installed in the seat. Always handle it with care.
- Disconnect the side air bag harness connector, if equipped, and the power seat switch harness connector from under the seat before removing the seat. Refer to [SRS-46, "Removal"](#) .
- After front side air bag module inflates, front seatback assembly must be replaced.

#### **NOTE:**

Only complete seatback assemblies can be replaced on vehicles equipped with side air bags.

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EHS000PD

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precautions for SRS “AIR BAG” and “SEAT BELT PRE-TENSIONER” Service

EHS000JE

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch “OFF”, disconnect both battery cables and wait at least 3 minutes.  
For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pre-tensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.
- Diagnosis sensor unit must always be installed with their arrow marks “←” pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformities or rust before installation and replace as required.
- The spiral cable must be aligned with the neutral position since its rotations are limited. Do not attempt to turn steering wheel or column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and front side air bag module standing with the stud bolt side facing down.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.

### Wiring Diagrams and Trouble Diagnosis

EHS000JF

When you read wiring diagrams, refer to the following:

- [GI-13. "How to Read Wiring Diagrams"](#)
- [PG-2. "POWER SUPPLY ROUTING"](#) for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10. "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26. "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

# SRS CONFIGURATION

PFP:00000

## SRS CONFIGURATION

### SRS Configuration

EHS000JI

The air bag deploys if the diagnosis sensor unit activates while the ignition switch is in the "ON" or "START" position.

The collision modes for which supplemental restraint systems are activated are different among the SRS systems. For example, the driver air bag module and front passenger air bag module are activated in a frontal collision but not in a side collision.

SRS configurations which are activated for some collision modes are as follows;

SRS configuration	Frontal collision	Left side collision	Right side collision
Driver air bag module	X	—	—
Front passenger air bag module	X	—	—
Front LH seat belt pre-tensioner	X	—	—
Front RH seat belt pre-tensioner	X	—	—
Front LH side air bag module	—	X	—
Front RH side air bag module	—	—	X

SRS

# SRS CONFIGURATION

## Seat Belt Pre-tensioner with Load Limiter

EHS000JJ

The front seat belt pre-tensioner system with load limiter is installed to both the driver's seat and the front passenger's seat. It operates simultaneously with the SRS air bag system in the event of a frontal collision with an impact exceeding a specified level.

When the frontal collision with an impact exceeding a specified level occurs, seat belt slack resulting from clothing or other factors is immediately taken up by the pre-tensioner. Vehicle passengers are securely restrained.

When passengers in a vehicle are thrown forward in a collision and the restraining force of the seat belt exceeds a specified level, the load limiter permits the specified extension of the seat belt by the twisting of the ELR shaft, and a relaxation of the chest-area seat belt web tension while maintaining force.

## Side Air Bag

EHS000JK

Front side air bag is built-in type.

The front seat backs with built-in type side air bag have the label shown in figure at right.

## Direct-connect SRS Component Connectors

EHS000LD

The following SRS components use direct-connect style harness connectors.

- Driver air bag module
- Front LH seat belt pre-tensioner
- Front RH seat belt pre-tensioner

Always pull up to release black locking tab prior to removing connector from SRS component.

Always push down to lock black locking tab after installing connector to SRS component. When locked, the black locking tab is level with the connector housing.

## TROUBLE DIAGNOSIS

### Trouble Diagnoses Introduction

EHS000JM

**CAUTION:**

- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harness connectors.
- Do not attempt to repair, splice or modify the SRS wiring harness. If the harness is damaged, replace it with a new one.
- Keep ground portion clean.

### DIAGNOSIS FUNCTION

The SRS self-diagnosis results can be read by using “AIR BAG” warning lamp and/or CONSULT-II. The reading of these results is accomplished using one of two modes — “User mode” and “Diagnosis mode”.

The User mode is exclusively prepared for the customer (driver). This mode warns the driver of a system malfunction through the operation of the “AIR BAG” warning lamp.

The Diagnosis mode allows the technician to locate and inspect the malfunctioning part.

The mode applications for the “AIR BAG” warning lamp and CONSULT-II are as follows:

	User mode	Diagnosis mode	Display type
“AIR BAG” warning lamp	X	X	ON-OFF operation
CONSULT-II	—	X	Monitoring

### DIAGNOSIS MODE FOR CONSULT-II

- “SELF-DIAG [CURRENT]”  
A current Self-diagnosis result (also indicated by the number of warning lamp flashes in the Diagnosis mode) is displayed on the CONSULT-II screen in real time. This refers to a malfunctioning part requiring repairs.
- “SELF-DIAG [PAST]”  
Diagnosis results previously stored in the memory are displayed on the CONSULT-II screen. The stored results are not erased until memory erasing is executed.
- “TROUBLE DIAG RECORD”  
With TROUBLE DIAG RECORD, diagnosis results previously erased by a reset operation can be displayed on the CONSULT-II screen.
- “ECU DISCRIMINATED NO.”  
The diagnosis sensor unit for each vehicle model is assigned with its own, individual classification number. This number will be displayed on the CONSULT-II screen, as shown. When replacing the diagnosis sensor unit, refer to the part number for the compatibility. After installation, replacement with a correct unit can be checked by confirming this classification number on the CONSULT-II screen.

**For NISSAN MODEL B15, the diagnosis sensor unit discriminated number assigned is A607 (models with side air bags) or A606 (models without side air bags).**

# TROUBLE DIAGNOSIS

## ④ HOW TO CHANGE SELF-DIAGNOSIS MODE WITH CONSULT-II

### From User Mode to Diagnosis Mode

After selecting “AIR BAG” on the “SELECT SYSTEM” screen, User mode automatically changes to Diagnosis mode.

### From Diagnosis Mode to User Mode

To return to User mode from Diagnosis mode, touch “BACK” key of CONSULT-II until “SELECT SYSTEM” appears, Diagnosis mode automatically changes to User mode.

## ⊗ HOW TO CHANGE SELF-DIAGNOSIS MODE WITHOUT CONSULT-II

### From User Mode to Diagnosis Mode

Diagnosis mode activates only when a malfunction is detected, by turning ignition switch as follows:

1. Turn ignition switch “ON”.
2. After “AIR BAG” warning lamp lights for 7 seconds, turn ignition switch “OFF” within 1 second.
3. Wait more than 3 seconds.
4. Repeat steps 1 to 3 three times.
5. Turn ignition switch “ON”.

SRS will enter Diagnosis mode, if no malfunction is detected.

### From Diagnosis Mode to User Mode

After a malfunction is repaired, turn ignition switch “OFF” for at least one second, then back “ON”. Diagnosis mode is returned to User mode.

If switching Diagnosis mode to User mode is required while malfunction is being detected, turn ignition switch as follows:

1. Turn ignition switch “ON”.
2. After “AIR BAG” warning lamp lights for 7 seconds, turn ignition switch “OFF” within 1 second.
3. Wait more than 3 seconds.
4. Repeat steps 1 to 3 three times.
5. Turn ignition switch “ON”.

## HOW TO ERASE SELF-DIAGNOSIS RESULTS

### ④ With CONSULT-II

- “SELF-DIAG [CURRENT]”  
A current Self-diagnosis result is displayed on the CONSULT-II screen in real time.

## TROUBLE DIAGNOSIS

After the malfunction is repaired completely, no malfunction is detected on "SELF-DIAG [CURRENT]".

- "SELF-DIAG [PAST]"

Return to the "SELF-DIAG [CURRENT]" CONSULT-II screen by pushing "BACK" key of CONSULT-II and select "SELF-DIAG [CURRENT]" in SELECT DIAG MODE. Touch "ERASE" in "SELF-DIAG [CURRENT]" mode.

**NOTE:**

If the memory of the malfunction in "SELF-DIAG [PAST]" is not erased, the User mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.

- "TROUBLE DIAG RECORD"

The memory of "TROUBLE DIAG RECORD" cannot be erased.

SELF-DIAG [CURRENT]	
DTC RESULTS:	
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	

SRS701

⊗ **Without CONSULT-II**

After a malfunction is repaired, switch the ignition "OFF" for at least one second, then back "ON". Diagnosis mode returns to the User mode. At that time, the self-diagnostic result is cleared.

# TROUBLE DIAGNOSIS

## How to Perform Trouble Diagnoses for Quick and Accurate Repair

EHS000JN

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

### INFORMATION FROM CUSTOMER

## SRS Operation Check DIAGNOSTIC PROCEDURE 1

### Checking Air Bag Operation by Using "AIR BAG" Warning Lamp — User Mode

1. After turning ignition switch from "OFF" to "ON", "AIR BAG" warning lamp operates.
2. Compare "AIR BAG" warning lamp operation to the chart below.

"AIR BAG" warning lamp operation — User mode —	SRS condition	Reference item
<p>MRS095A</p>	No malfunction is detected. No further action is necessary.	—
<p>MRS096A</p>	The system is malfunctioning and needs to be repaired as indicated.	Go to <a href="#">SRS-18, "DIAGNOSTIC PROCEDURE 2"</a> or <a href="#">SRS-28, "DIAGNOSTIC PROCEDURE 6"</a> .
<p>MRS097A</p>	<p>Air bag is deployed. Front seat belt pre-tensioner is deployed.</p> <p>Air bag fuse, diagnosis sensor unit or harness is malfunctioning and needs to be repaired.</p>	<p>Go to <a href="#">SRS-53, "COLLISION DIAGNOSIS"</a>.</p> <p>Go to <a href="#">SRS-35, "DIAGNOSTIC PROCEDURE 9"</a>.</p>
<p>MRS098A</p>	<p>One of the following has occurred and needs to be repaired.</p> <ul style="list-style-type: none"> <li>● Meter fuse is blown.</li> <li>● "AIR BAG" warning lamp circuit has open or short.</li> <li>● Diagnosis sensor unit is malfunctioning.</li> </ul>	Go to <a href="#">SRS-36, "DIAGNOSTIC PROCEDURE 10"</a> .

# TROUBLE DIAGNOSIS

## Ⓟ Trouble Diagnoses with CONSULT-II DIAGNOSTIC PROCEDURE 2

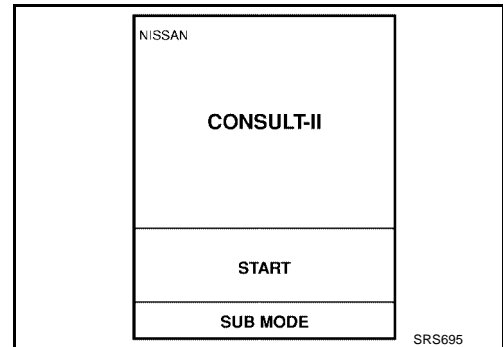

EHS000JR

### Inspecting SRS malfunctioning parts by using CONSULT-II — Diagnosis mode

1. Turn ignition switch "OFF".
2. Connect CONSULT-II to data link connector.

3. Turn ignition switch "ON".
4. Touch "START".

5. Touch "AIR BAG".

6. Touch "SELF-DIAG [CURRENT]".

# TROUBLE DIAGNOSIS

7. Diagnostic codes are displayed on "SELF-DIAG [CURRENT]".

If no malfunction is detected on "SELF-DIAG [CURRENT]" even though malfunction is detected in "SRS Operation Check", refer to [SRS-23, "DIAGNOSTIC PROCEDURE 4 \(CONTINUED FROM DIAGNOSTIC PROCEDURE 2\)"](#), to diagnose the following cases:

- Self-diagnostic result "SELF-DIAG [PAST]" (previously stored in the memory) might not be erased after repair.
  - The SRS system malfunctions intermittently.
8. Touch "PRINT".
  9. Compare diagnostic codes. Refer to [SRS-19, "CONSULT-II Diagnostic Code Chart \("SELF-DIAG \[CURRENT\]\)"](#).
  10. Touch "BACK" key of CONSULT-II until "SELECT SYSTEM" appears in order to return to User mode from Diagnosis mode.
  11. Turn ignition switch "OFF", then turn off and disconnect CONSULT-II and disconnect both battery cables.
  12. Repair the system as outlined by the "Repair order" in "CONSULT-II Diagnostic Code Chart", that corresponds to the self-diagnostic result.
  13. After repairing the system, refer to [SRS-21, "DIAGNOSTIC PROCEDURE 3"](#) for final checking.

## CONSULT-II Diagnostic Code Chart ("SELF-DIAG [CURRENT])"

SRS

Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using the air bag warning lamp or CONSULT-II each time repair is finished. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.

## DIAGNOSTIC PROCEDURE 3

### Final checking after repairing SRS by using CONSULT-II — Diagnosis mode

1. After repairing SRS, connect both battery cables.
2. Connect CONSULT-II to data link connector.
3. Turn ignition switch "ON".

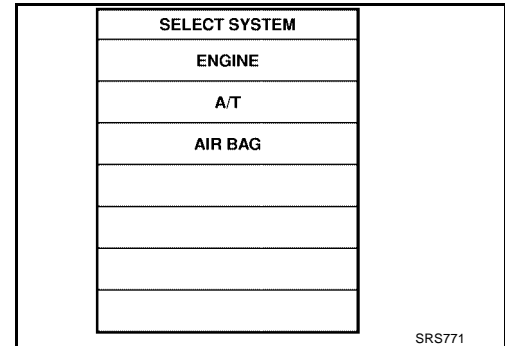

M

# TROUBLE DIAGNOSIS

4. Touch "START".

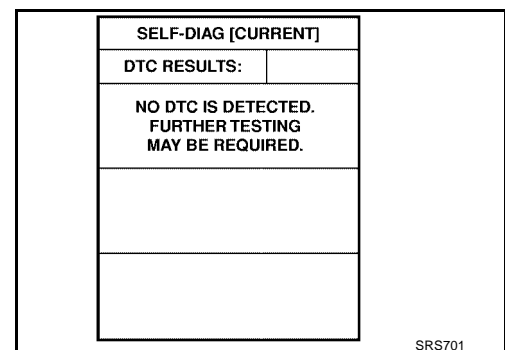

5. Touch "AIR BAG".

6. Touch "SELF-DIAG [CURRENT]".

7. If no malfunction is detected on "SELF-DIAG [CURRENT]", repair of SRS is completed. Go to step 8.  
 If any malfunction is detected on "SELF-DIAG [CURRENT]", the malfunctioning part is not repaired completely or another malfunctioning part is detected. Go to [SRS-18, "DIAGNOSTIC PROCEDURE 2"](#), and repair malfunctioning part completely.

8. Touch "ERASE".

**NOTE:**

**Touch "ERASE" to clear the memory of the malfunction ("SELF-DIAG [PAST])."**

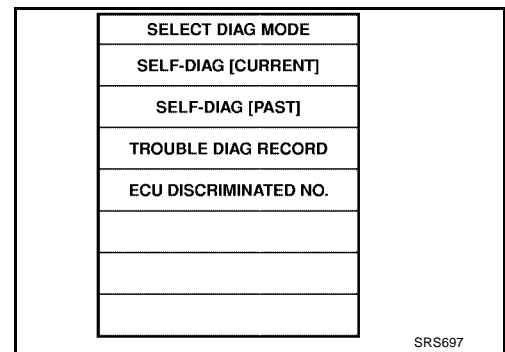

If the memory of the malfunction in "SELF-DIAG [PAST]" is not erased, the User mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.

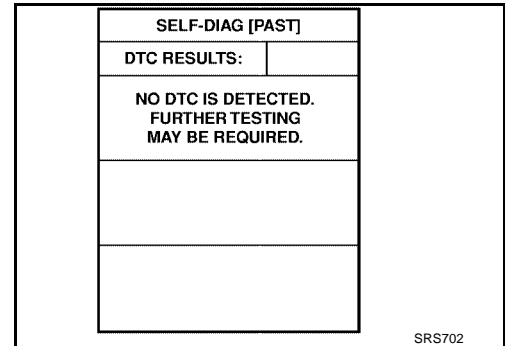

# TROUBLE DIAGNOSIS

9. Touch "BACK" key of CONSULT-II to "SELECT DIAG MODE" screen. Touch "SELF-DIAG [PAST]".

10. Check that no malfunction is detected on "SELF-DIAG [PAST]".  
11. Touch "BACK" key of CONSULT-II until "SELECT SYSTEM" appears in order to return to User mode from Diagnosis mode.  
12. Turn ignition switch "OFF" then turn off and disconnect CONSULT-II.  
13. Go to [SRS-17, "Checking Air Bag Operation by Using "AIR BAG" Warning Lamp — User Mode"](#).

## DIAGNOSTIC PROCEDURE 4 (CONTINUED FROM DIAGNOSTIC PROCEDURE 2) Inspecting SRS malfunctioning record

SRS

### 1. CONSIDER POSSIBILITY OF NOT ERASING SELF-DIAGNOSTIC RESULT AFTER REPAIRING

Is it the first time for maintenance of SRS?

Yes or No

Yes >> Go to [SRS-23, "DIAGNOSTIC PROCEDURE 5"](#).

No >> Self-diagnostic result "SELF-DIAG [PAST]" (previously stored in the memory) might not be erased after repair. Go to [SRS-21, "DIAGNOSTIC PROCEDURE 3"](#).

## DIAGNOSTIC PROCEDURE 5

Inspecting SRS intermittent malfunction by using CONSULT-II  
— Diagnosis mode

1. Turn ignition switch "OFF".
2. Connect CONSULT-II to data link connector.

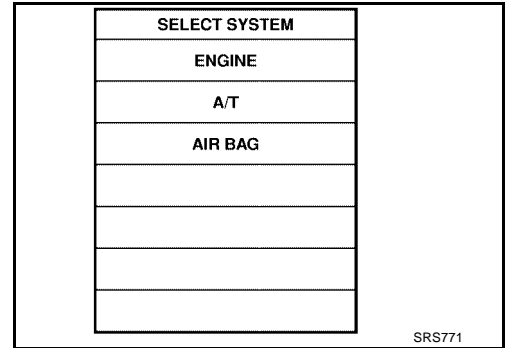

# TROUBLE DIAGNOSIS

3. Turn ignition switch "ON".
4. Touch "START".

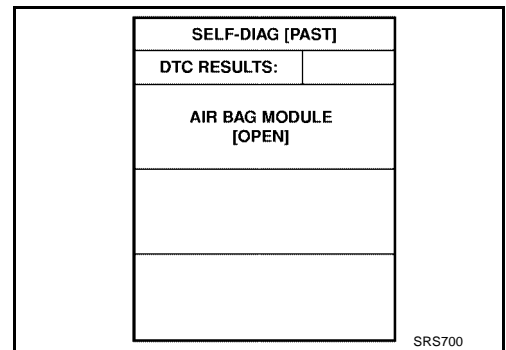

5. Touch "AIR BAG".

6. Touch "SELF-DIAG [PAST]".

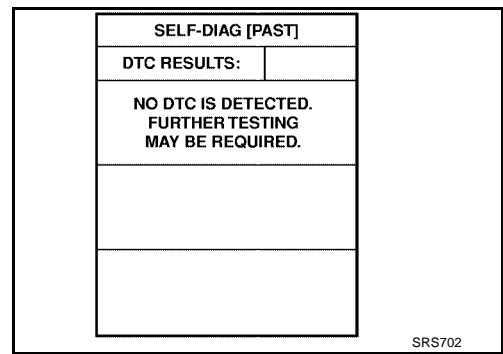

7. If diagnostic codes are displayed on "SELF-DIAG [PAST]", go to step 10.

# TROUBLE DIAGNOSIS

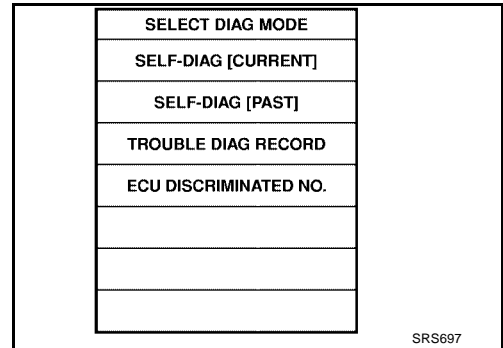

If no malfunction is detected on "SELF-DIAG [PAST]", touch "BACK" and go back to "SELECT DIAG MODE".

8. Touch "TROUBLE DIAG RECORD".

**NOTE:**

With "TROUBLE DIAG RECORD", diagnosis results previously erased by a reset operation can be displayed.

9. Diagnostic code is displayed on "TROUBLE DIAG RECORD".

10. Touch "PRINT".

11. Compare diagnostic codes to [SRS-25, "Intermittent Malfunction Diagnostic Code Chart \("SELF-DIAG \[PAST\]" or "TROUBLE DIAG RECORD"\)"](#).

12. Touch "BACK" key of CONSULT-II until "SELECT SYSTEM" appears.

13. Turn ignition switch "OFF", then turn off and disconnect CONSULT-II, and both battery cables.

14. Repair the system as outlined by the "Repair order" in "Intermittent Malfunction Diagnostic Code Chart", that corresponds to the self-diagnostic result. For replacement procedure of component parts, refer to the Removal and Installation procedure for the appropriate component.

15. Go to [SRS-21, "DIAGNOSTIC PROCEDURE 3"](#), for final checking.

**Intermittent Malfunction Diagnostic Code Chart ("SELF-DIAG [PAST]" or "TROUBLE DIAG RECORD")**

# TROUBLE DIAGNOSIS

EHS000JS

## ⊗ Trouble Diagnoses without CONSULT-II DIAGNOSTIC PROCEDURE 6

Inspecting SRS malfunctioning parts by using "AIR BAG" warning lamp — Diagnosis mode

**NOTE:**

SRS will not enter Diagnosis mode if no malfunction is detected in User mode.

1. Turn ignition switch "ON".
2. After "AIR BAG" warning lamp lights for 7 seconds, turn ignition switch "OFF" within 1 second.
3. Wait more than 3 seconds.
4. Repeat steps 1 to 3 three times.
5. Turn ignition switch "ON".  
SRS is now in Diagnosis mode.
6. "AIR BAG" warning lamp operates in Diagnosis mode as follows:

**NOTE:**

If SRS does not enter Diagnosis mode even though malfunction is detected in User mode, check the battery voltage.

If the battery voltage is less than 9V, charge the battery. Then go to [SRS-33, "DIAGNOSTIC PROCEDURE 7"](#)

If the battery voltage is OK, replace the diagnosis sensor unit.

No.	"AIR BAG" warning lamp flash pattern — Diagnosis mode —	SRS condition
1		<p>a through b are repeated.</p> <ul style="list-style-type: none"> <li>● Diagnosis results (previously stored in the memory) might not be erased after repair.</li> <li>● Intermittent malfunction has been detected in the past.</li> </ul> <p>Go to <a href="#">SRS-34, "DIAGNOSTIC PROCEDURE 8 (CONTINUED FROM DIAGNOSTIC PROCEDURE 6)"</a>.</p>

# TROUBLE DIAGNOSIS

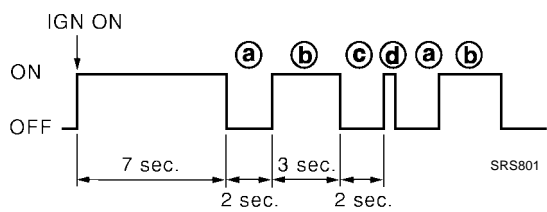

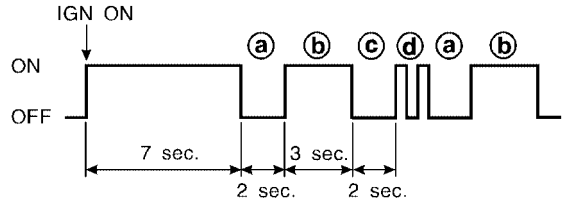

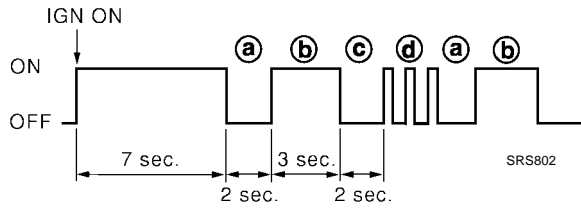

No.	"AIR BAG" warning lamp flash pattern — Diagnosis mode —	SRS condition
2	<p style="text-align: right; font-size: small;">SRS341</p>	<p><b>a</b> through <b>d</b> are repeated.</p> <p><b>b</b> — Driver and front passenger air bag marker (For identifying driver air bag, front passenger air bag and/or seat belt pre-tensioner malfunctioning)</p> <p><b>d</b> — Indicates malfunctioning part. The number of flash varies with malfunctioning part (0.5 sec. ON and 0.5 sec. OFF is counted as one flash.)</p>
3	<p style="text-align: right; font-size: small;">SRS342A</p>	<p><b>a</b> through <b>f</b> are repeated.</p> <p><b>b, c, d</b> — Front side air bag marker (For identifying front side air bag malfunctioning)</p> <p><b>f</b> — Indicates malfunctioning part. Replace the related harness.</li> </ol>		

**Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using the air bag warning lamp or CONSULT-II each time repair is finished. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.**

# TROUBLE DIAGNOSIS

## DIAGNOSTIC PROCEDURE 7

### Final checking after repairing SRS by using "AIR BAG" warning lamp — Diagnosis mode and User mode

1. After repairing SRS connect both battery cables.
2. Open driver's door.
3. Turn ignition switch "ON".
4. "AIR BAG" warning lamp operates in Diagnosis mode as follows:

No.	"AIR BAG" warning lamp flash pattern — Diagnosis mode —	SRS condition
1	<p style="text-align: right;">SRS333</p>	<p>a through b are repeated.</p> <p>No malfunction is detected or repair is completed. No further action is necessary.</p>
2	<p style="text-align: right;">SRS341</p>	<p>a through d are repeated.</p> <p>b — Driver and front passenger air bag marker (For identifying driver air bag, front passenger air bag and/or seat belt pre-tensioner malfunctioning)</p> <p>d — Indicates malfunctioning part. The number of flashes varies with malfunctioning part (0.5 sec. ON and 0.5 sec. OFF is counted as one flash.)</p>
3	<p style="text-align: right;">SRS342A</p>	<p>a through f are repeated.</p> <p>b, c, d — Front side air bag marker (For identifying front side air bag malfunctioning)</p> <p>f — Indicates malfunctioning part. The number of flashes varies with malfunctioning part (0.5 sec. ON and 0.5 sec. OFF is counted as one flash.)</p>

#### NOTE:

When diagnosis sensor unit is replaced with new one, "AIR BAG" warning lamp will operate in User mode. Checking "AIR BAG" warning lamp operation in Diagnosis mode is not required. Go to step 6.

5. If "AIR BAG" warning lamp operates as shown in No. 1 in chart above, turn ignition switch "OFF" to reset from Diagnosis mode to User mode and to erase the memory of the malfunction. Then go to step 6.  
If "AIR BAG" warning lamp operates as shown in No. 2 or No. 3 in chart above, the malfunctioning part is not repaired completely, or another malfunctioning part is detected. Go to [SRS-28, "DIAGNOSTIC PROCEDURE 6"](#), and repair malfunctioning part completely.
6. Turn ignition switch "ON". "AIR BAG" warning lamp operates in User mode. Compare "AIR BAG" warning lamp operation to the chart below.

#### NOTE:

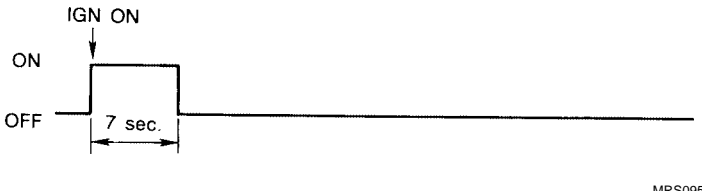

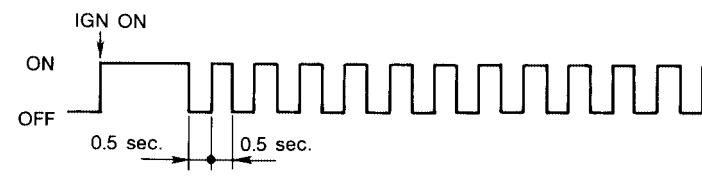

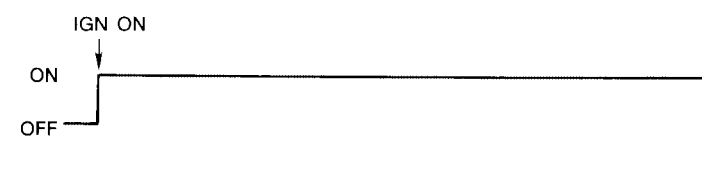

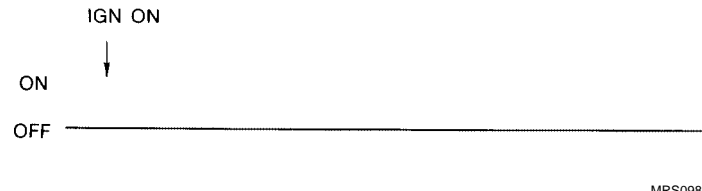

If switching Diagnosis mode to User mode is required while malfunction is being detected, turn ignition switch as follows:

7. Turn ignition switch "ON".
8. After "AIR BAG" warning lamp lights for 7 seconds, turn ignition switch "OFF".

## DIAGNOSTIC PROCEDURE 8 (CONTINUED FROM DIAGNOSTIC PROCEDURE 6)

### Inspecting SRS malfunctioning record

#### 1. CONSIDER POSSIBILITY OF NOT ERASING SELF-DIAGNOSTIC RESULT AFTER REPAIRING

Is it the first time for maintenance of SRS?

Yes or No

- Yes >> Go to [SRS-23, "DIAGNOSTIC PROCEDURE 5"](#) . (Further inspection cannot be performed without CONSULT-II.)
- No >> Diagnosis results (previously stored in the memory) might not be erased after repair. Go to [SRS-33, "DIAGNOSTIC PROCEDURE 7"](#) .

# TROUBLE DIAGNOSIS

## Trouble Diagnoses: "AIR BAG" Warning Lamp Does Not Turn Off DIAGNOSTIC PROCEDURE 9

EHS000JT

### 1. SEE THE DEPLOYMENT OF AIR BAG MODULE

Is air bag module deployed?

Yes or No

- Yes >> Refer to [SRS-53, "COLLISION DIAGNOSIS"](#).
- No >> GO TO 2.

### 2. CHECK AIR BAG FUSE

Check 10A fuse 18 [located in the fuse block (J/B)].

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

### 3. CHECK AIR BAG FUSE AGAIN

Replace "AIR BAG" fuse and turn ignition switch ON.

Is "AIR BAG" fuse blown again?

- Yes >> Repair main harness and/or replace related harness.
- No >> **INSPECTION END.**

### 4. CHECK DIAGNOSIS SENSOR UNIT

Connect CONSULT-II and touch "START".

- Is "AIR BAG" displayed on CONSULT-II?

Yes or No

- Yes >> GO TO 5.
- No >> Visually check the wiring harness connection of diagnosis sensor unit. If the harness connection check result is OK, replace diagnosis sensor unit.

### 5. CHECK HARNESS CONNECTION

Is harness connection between warning lamp and diagnosis sensor unit OK?

OK or NG

- OK >> Replace diagnosis sensor unit.
- NG >> Connect "AIR BAG" warning lamp and diagnosis sensor unit connector properly. If "AIR BAG" warning lamp still does not go off, replace harness.

# TROUBLE DIAGNOSIS

## Trouble Diagnoses: "AIR BAG" Warning Lamp Does Not Turn On DIAGNOSTIC PROCEDURE 10

EHS000JU

### 1. CHECK "METER" FUSE

Check 10A fuse 30 [located in the fuse block (J/B)].

OK or NG

OK >> GO TO 3.

NG >> GO TO 2.

### 2. CHECK "METER" FUSE AGAIN

Replace "METER" fuse and turn ignition switch ON.

Is "METER" fuse blown again?

Yes >> Repair main harness.

No >> **INSPECTION END.**

### 3. CHECK HARNESS CONNECTION BETWEEN DIAGNOSIS SENSOR UNIT AND "AIR BAG" WARNING LAMP

Disconnect diagnosis sensor unit connector and turn ignition switch "ON".

- Does "AIR BAG" warning lamp turn on?

Yes or No

Yes >> Replace diagnosis sensor unit.

No >> Check the ground circuit of "AIR BAG" warning lamp.

# DIAGNOSIS SENSOR UNIT

PFP:28556

EHS000JV

## DIAGNOSIS SENSOR UNIT

### Removal and Installation REMOVAL

#### CAUTION:

- Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait for at least 3 minutes.
  - Do not use old bolts after removal; replace with new ones.
  - Check diagnosis sensor unit for proper installation.
  - Check diagnosis sensor unit to ensure it is free of deformities, dents, cracks or rust. If they show any visible signs of damage, replace them with new ones.
  - Check diagnosis sensor unit brackets to ensure they are free of deformities or rust.
  - Replace diagnosis sensor unit if it has been dropped or sustained an impact.
  - After replacement of diagnosis sensor unit, perform self-diagnosis for SRS. Refer to [SRS-17, "SRS Operation Check"](#) for details.
1. Disconnect driver, front passenger and front side air bag module connectors. Also, disconnect front seat belt pre-tensioner connectors.
  2. Remove console box. Refer to [IP-10, "INSTRUMENT PANEL ASSEMBLY"](#).
  3. Disconnect diagnosis sensor unit connector.
  4. Remove bolts from diagnosis sensor unit.  
Then remove the diagnosis sensor unit.

### INSTALLATION

#### NOTE:

- To install, reverse the removal procedure sequence.

# FRONT SEAT BELT PRE-TENSIONER

---

## FRONT SEAT BELT PRE-TENSIONER

PF:86884

### Removal and Installation

EHS000JW

For removal and installation of front seat belt pre-tensioners, refer to [SB-3, "Removal and Installation"](#) .

# SIDE AIR BAG (SATELLITE) SENSOR

PFP:K8EH0

## SIDE AIR BAG (SATELLITE) SENSOR

EHS000JX

### Removal and Installation

#### REMOVAL

##### CAUTION:

- Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.
  - Do not use old nut or bolt coated with bonding agent after removal; replace with new ones.
  - Check side air bag (satellite) sensor to ensure they are free of deformities, dents, cracks or rust. If it shows any visible signs of damage, replace it with new one.
  - Do not attempt to disassemble side air bag (satellite) sensor.
  - Replace side air bag (satellite) sensor if it has been dropped or sustained an impact.
1. Remove front seat belt pre-tensioner. Refer to [SB-3, "Removal and Installation"](#).
  2. Disconnect side air bag (satellite) sensor connector.
  3. Remove bolt and nuts from side air bag (satellite) sensor unit. Then remove the side air bag (satellite) sensor.

#### INSTALLATION

##### CAUTION:

- Check side air bag (satellite) sensor for proper installation.
- After replacement of side air bag (satellite) sensor, check SRS function and perform self-diagnosis. Refer to [SRS-17, "SRS Operation Check"](#) for details.

To install, reverse the removal procedure sequence.

# DRIVER AIR BAG MODULE

## DRIVER AIR BAG MODULE

PFK:K8510

### Removal and Installation

EHS000JY

### Removal

EHS000JZ

#### CAUTION:

- Do not attempt to repair or replace damaged direct-connect driver air bag module connectors. If a direct-connect harness connector is damaged, the harness must be replaced.
  - Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.
  - Always work from the side of driver air bag module.
1. Remove side lids and ASCD steering switch (if equipped). Using the TAMPER RESISTANT TORX (Size T30) (if equipped), remove left and right special bolts or hex head bolts. Driver air bag module can then be removed.
  2. Disconnect the air bag harness connector and remove the air bag module.
    - For removal/installation of the direct-connect SRS connectors, refer to [SRS-6, "Direct-connect SRS Component Connectors"](#).

#### CAUTION:

- Always place driver air bag module with pad side facing upward.
- Do not attempt to disassemble air bag module.
- The bolts are coated with bonding agent. Do not use old bolts after removal; replace with new ones.
- Do not insert any foreign objects (screwdriver, etc.) into air bag module connector.

# DRIVER AIR BAG MODULE

- Replace driver air bag module if it has been dropped or sustained an impact.
- Do not expose the driver air bag module to temperatures exceeding 90°C (194°F).
- Do not allow oil, grease or water to come in contact with the driver air bag module.

EHS000K0

## Installation

1. Connect driver air bag harness connector.
  - For removal/installation of the direct-connect SRS connectors, refer to [SRS-6, "Direct-connect SRS Component Connectors"](#).
2. Position driver air bag module, press firmly and tighten with new special bolts.
3. Install ASCD steering switch (if equipped) and all lids.
4. Connect both battery cables, then conduct self-diagnosis to ensure entire SRS operates properly. (Use CONSULT-II or warning lamp check.)
5. Turn steering wheel to the left end and then to the right end fully to make sure that spiral cable is set in the neutral position.

- If air bag warning lamp blinks or stays ON (at the user mode), it shows the spiral cable may be snapped due to its improper position. Perform self-diagnosis again (use CONSULT-II or warning lamp). Refer to [SRS-17, "SRS Operation Check"](#). If a malfunction is detected, replace the spiral cable with a new one.
6. Perform self-diagnosis again to check that no malfunction is detected. Go to [SRS-17, "SRS Operation Check"](#) and perform self-diagnosis to ensure entire SRS operates properly. (Use CONSULT-II or warning lamp check.)

# SPIRAL CABLE

## SPIRAL CABLE

PFP:25554

### Removal and Installation

EHS000K1

### Removal

EHS000K2

#### CAUTION:

- Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.

1. Remove driver air bag module. Refer to [SRS-40, "Removal"](#).
2. Set steering wheel in the neutral position.
3. Remove lower lid and disconnect horn connector. Remove steering wheel nut.
4. Using steering wheel puller, remove steering wheel. Be careful not to over-tighten puller bolt on steering wheel.

#### CAUTION:

- Do not tap or bump the steering wheel.
5. Remove steering column cover.

6. Unlock the spiral cable connector. Then disconnect connectors and remove the four screws. The spiral cable can then be removed.

#### CAUTION:

- Do not attempt to disassemble spiral cable.
- Do not apply lubricant to the spiral cable.

# SPIRAL CABLE

EHS000K3

## Installation

1. Set the front wheels in the straight-ahead position.
2. Make sure that the spiral cable is in the neutral position. The neutral position is detected by turning left about 3.5 revolutions from the right end position. Align the two marks (▲).

### CAUTION:

- The spiral cable may snap due to steering operation if the cable is installed in an improper position.
  - Also, with the steering linkage disconnected, the cable may snap by turning the steering wheel beyond the limited number of turns. To set spiral cable to neutral position turn to the left approximately 3.5 turns from the right end position.
3. Connect spiral cable connector and tighten with screws. Install steering column cover.
  4. Install steering wheel, aligning with spiral cable pin guides, and pull spiral cable through.
  5. Connect horn connector and engage spiral cable with pawls in steering wheel. Move driver air bag module connector away from steering wheel lower lid opening.
  6. Tighten nut.

 : 29 - 39 N-m (3.0 - 4.0 kg-m, 22 - 29 ft-lb)

7. Install driver air bag module. Refer to [SRS-41, "Installation"](#).
8. Connect both battery cables, then conduct self-diagnosis to ensure entire SRS operates properly. Refer to [SRS-17, "SRS Operation Check"](#).

# FRONT PASSENGER AIR BAG MODULE

PFK:K8515

EHS000K4

## FRONT PASSENGER AIR BAG MODULE

### Removal and Installation REMOVAL

#### CAUTION:

- Do not attempt to repair or replace damaged direct-connect front passenger air bag module connectors. If a direct-connect harness connector is damaged, the harness must be replaced.
  - Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait for at least 3 minutes.
  - Always work from the side of or under air bag module.
1. Remove glove box assembly. Refer to [IP-10. "INSTRUMENT PANEL ASSEMBLY"](#) for details.
  2. Disconnect front passenger air bag module connector from air bag harness connector.
  3. Remove the nuts and hex bolts from front passenger air bag module.
  4. Remove the front passenger air bag module from the instrument panel.
- The front passenger air bag module is heavy and should be supported using both hands during removal.

#### CAUTION:

- Always place front passenger air bag module with pad side facing upward.
- Do not attempt to disassemble air bag module.
- The special bolts are coated with bonding agent. Do not use old bolts after removal; replace with new coated bolts.
- Do not insert any foreign objects (screwdriver, etc.) into air bag module connector.

- Replace air bag module if it has been dropped or sustained an impact.
- Do not expose the air bag module to temperatures exceeding 90°C (194°F).
- Do not allow oil, grease or water to come in contact with the front passenger air bag module.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.

# FRONT PASSENGER AIR BAG MODULE

## INSTALLATION

### CAUTION:

- **Always work from the side of or under air bag module.**
1. Install front passenger air bag module on steering member.
    - Ensure harness is not caught between rear of air bag module and steering member.
  2. Install glove box assembly. (Glove box lid is open.)
- 
3. Connect front passenger air bag module connector to air bag harness connector.
  4. Close the glove box lid.
  5. Connect both battery cables.
  6. Go to [SRS-17, "SRS Operation Check"](#) and perform self-diagnosis to ensure entire SRS operates properly. (Use CONSULT-II or warning lamp check.)

# FRONT SIDE AIR BAG MODULE

PFP:K8EH0

## FRONT SIDE AIR BAG MODULE

EHS000K5

### Removal

#### WARNING:

Removal of front side air bag module should only be done to allow deployment of front side air bag module prior to disposal of seatback assembly.

Only complete seatback assemblies can be replaced. Refer to [SE-5, "Removal and Installation"](#).

#### CAUTION:

- Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.
  - Always work from the rear of air bag module.
1. Open seat back zipper to access module.
  2. Pull up the seat back trim.
  3. Remove the Torx nuts coated with bonding agent from front side air bag module.
  4. Remove harness clips. Front side air bag module can then be removed.

#### CAUTION:

- Always place front side air bag module with the stud bolt side facing down.
- Do not attempt to disassemble air bag module.
- Do not insert any foreign objects (screwdriver, etc.) into air bag module connector.

- Replace front seatback assembly if it has been dropped or sustained an impact.
- Do not expose front seatback assembly to temperatures exceeding 90°C (194°F).
- Do not allow oil, grease or water to come in contact with the air bag module.
- After air bag inflates, the front seatback assembly must be replaced.

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

## DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

PF0:00014

### Disposal of Air Bag Module and Seat Belt Pre-tensioner

EHS000K6

- Before disposing of air bag module or seat belt pre-tensioner, on vehicles equipped with such systems, deploy the systems. If such systems have already been deployed due to an accident, dispose of them as indicated in [SRS-52, "DISPOSING OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER"](#).
- When deploying the air bag module and seat belt pre-tensioner, always use the Special Service Tool; Deployment tool KV99106400 (Kent-Moore No. J38381).
- When deploying the air bag module or seat belt pre-tensioner, stand at least 5 m (16 ft) away from the deployment component.
- When deploying air bag module or seat belt pre-tensioner, a fairly loud noise is made, followed by smoke being released. The smoke is not poisonous, however, be careful not to inhale smoke since it irritates the throat and can cause choking.
- Only deploy one air bag module at a time.
- Due to heat, leave air bag module unattended for more than 30 minutes after deployment. Leave seat belt pre-tensioner unattended for more than 10 minutes after deployment.
- Be sure to wear gloves when handling a deployed air bag module or seat belt pre-tensioner.
- Never apply water to the deployed air bag module or seat belt pre-tensioner.
- Wash your hands clean after finishing work.
- Place the vehicle outdoors with an open space of at least 6 m (20 ft) on all sides when deploying air bag module or seat belt pre-tensioner while mounted in vehicle.
- Use a voltmeter to make sure the vehicle battery is fully charged.
- Do not dispose of air bag modules or seat belt pre-tensioners un-deployed.

### CHECKING DEPLOYMENT TOOL

#### Connecting to Battery

##### CAUTION:

**The battery must show voltage of 9.6V or more.**

Remove the battery from the vehicle and place it on dry wood blocks approximately 5 m (16 ft) away from the vehicle.

- Wait 3 minutes after the vehicle battery is disconnected before proceeding.
- Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.

**Make sure the polarity is correct. The right side lamp in the tool, marked "deployment tool power", should glow with a green light. If the right side lamp glows red, reverse the connections to the battery.**

#### Deployment Tool Check

Press the deployment tool switch to the "ON" position. The left side lamp in the tool, marked "air bag connector voltage" should illuminate. If it does not illuminate, replace the tool.

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

## Air Bag Deployment Tool Lamp Illumination Chart (Battery connected)

Switch operation	Left side lamp, green* "AIR BAG CONNECTOR VOLTAGE"	Right side lamp, green* "DEPLOYMENT TOOL POWER"
OFF	OFF	ON
ON	ON	ON

\*: If this lamp glows red, the tool is connected to the battery incorrectly. Reverse the connections and make sure the lamp glows green.

## DEPLOYMENT PROCEDURES FOR AIR BAG MODULE (OUTSIDE OF VEHICLE)

Unless the vehicle is being scrapped, deploying the air bag in the vehicle is not recommended. This may cause damage to the vehicle interior.

Anchor air bag module bracket [KV99105300 (J-41246-A)] in a vise secured to a firm foundation during deployment.

## Deployment of Driver Air Bag Module (Outside of vehicle)

- Using wire, secure driver air bag module to air bag module bracket [SST: KV99105300 (J-41246-A)] at two places.

### **CAUTION:**

**Use wire of at least 1 mm (0.04 in) diameter.**

- Firmly secure air bag module bracket [SST: KV99105300 (J-41246-A)] with air bag module attached, in a vise.
- Connect deployment tool [SST: KV99106400 (J38381)] to driver air bag module connector. If adapter is required, use SST: KV99109000 (J44230).

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

4. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked "deployment tool power", should glow green, not red.
6. Press the button on the deployment tool. The left side lamp on the tool, marked "air bag connector voltage", will illuminate and the driver air bag module will deploy.

**CAUTION:**

**When deploying the driver air bag module, stand at least 5 m (16 ft) away from the driver air bag module.**

## Deployment of Front Passenger Air Bag Module (Outside of vehicle)

1. Make an 8.5 mm (0.335 in) diameter hole in air bag module bracket [SST: KV99105300 (J-41246-A)] at the position shown in figure.

2. Firmly secure air bag module bracket [SST: KV99105300 (J-41246-A)] in a vise.

3. Match the two holes in air bag module bracket (held in vise) and front passenger air bag module and fix them with two bolts [M8 x 25 - 30 mm (0.98 - 1.18 in)].

**CAUTION:**

**If a gap exists between front passenger air bag module and air bag module bracket, use a piece of wood inserted in the gap to stabilize the front passenger air bag module.**

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

4. Connect deployment tool adapter [SST: KV99108300 (J38381-35)] to deployment tool [SST: KV99106400 (J38381)] connector and front passenger air bag module connector.
5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked "deployment tool power", should glow green, not red.

7. Press the button on the deployment tool. The left side lamp on the tool, marked "air bag connector voltage", will illuminate and the front passenger air bag module will deploy.

## CAUTION:

- When deploying the front passenger air bag module, do not stand on the deploying side.
- Stand at least 5 m (16 ft) away from the front passenger air bag module.

## Deployment of Front Side Air Bag Module (Outside of vehicle)

1. Make 6.5 mm (0.256 in) diameter holes in air bag module bracket [SST: KV99105300 (J-41246-A)] at the position shown in figure.

2. Firmly secure air bag module bracket [SST: KV99105300 (J-41246-A)] in a vise.
3. Insert the stud bolts of front side air bag module (built-in type) into the two holes in air bag module bracket (held in vise) and fix them with two M6 nuts.

## CAUTION:

Front side air bag module should be secured to air bag module bracket [SST: KV99105300 (J-41246-A)] in a vise with metal portion facing down.

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

4. Connect deployment tool adapter [SST: KV99108300 (J38381-35)] to deployment tool [SST: KV99106400 (J38381)] connector and connector on air bag module.

5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked "deployment tool power", should glow green, not red.
7. Press the button on the deployment tool. The left side lamp on the tool, marked "air bag connector voltage", will illuminate and the front side air bag module will deploy.

**CAUTION:**

**When deploying the front side air bag module, stand at least 5 m (16 ft) away from the front side air bag module.**

## DEPLOYMENT PROCEDURES FOR SEAT BELT PRE-TENSIONER (OUTSIDE OF VEHICLE)

1. Firmly grip front seat belt pre-tensioner in a vise and cut the webbing off.
2. Connect deployment tool adapter to seat belt pre-tensioner.

3. Connect deployment tool [SST: KV99106400 (J38381)] connector to front seat belt pre-tensioner connector.

# DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

4. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked "deployment tool power", should glow green, not red.
6. Press the button on the deployment tool. The left side lamp on the tool, marked "seat belt pre-tensioner connector voltage", will illuminate and the front seat belt pre-tensioner will deploy.

**CAUTION:**

**When deploying the front seat belt pre-tensioner, stand at least 5 m (16 ft) away from the front seat belt pre-tensioner.**

## DEPLOYMENT OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER WHILE MOUNTED IN VEHICLE

When disposing of a vehicle, deploy air bag modules and seat belt pre-tensioners while they are mounted in vehicle.

**CAUTION:**

**When deploying air bag module or seat belt pre-tensioner, ensure vehicle is empty.**

1. Disconnect both the vehicle battery cables and wait 3 minutes.
2. Disconnect air bag module and seat belt pre-tensioner connectors.
3. Connect deployment tool [SST: KV99106400 (J38381)] to air bag module or seat belt pre-tensioner. For driver air bag module, attach deployment tool adapter [SST: KV99109000 (J44230)] to the tool connector. For front passenger air bag module, attach deployment tool adapter [SST: KV99108300 (J38381-35)] to the tool connector. For front side air bag module, attach deployment tool adapter [SST: KV99108300 (J38381-35)]. For front seat belt pre-tensioner, attach deployment tool adapter to the tool connector.

4. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked "deployment tool power", should glow green, not red.
6. Press the button on the deployment tool. The left side lamp on the tool, marked "air bag connector voltage", will illuminate and the air bag module or seat belt pre-tensioner will deploy.

**CAUTION:**

**Activate only one air bag module or seat belt pre-tensioner at a time.**

## DISPOSING OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

Deployed air bag modules and seat belt pre-tensioners are very hot. Before disposing of air bag modules or seat belt pre-tensioners, wait at least 30 minutes or 10 minutes, respectively. Seal them in a plastic bag before disposal.

**CAUTION:**

- **Never apply water to a deployed air bag module or seat belt pre-tensioner.**
- **Be sure to wear gloves when handling a deployed air bag module or seat belt pre-tensioner.**
- **No poisonous smoke is produced upon air bag module deployment. However, be careful not to inhale smoke since it irritates throat and can cause choking.**
- **Do not attempt to disassemble air bag module or seat belt pre-tensioner.**
- **Air bag modules and seat belt pre-tensioners cannot be reused.**
- **Wash your hands clean after finishing work.**

# COLLISION DIAGNOSIS

PFP:00015

EHS000K7

## COLLISION DIAGNOSIS FOR FRONTAL COLLISION

To repair the SRS, perform the following steps.

### When SRS (except the side air bag) is activated in a collision:

1. Replace the diagnosis sensor unit and (LH and RH) side airbag sensors.
2. Remove the air bag modules (except the side air bag modules) and front seat belt pre-tensioner assemblies.
3. Check the SRS components using the table shown below:
  - Replace any SRS components showing visible signs of damage (dents, cracks and deformation).
4. Install new air bag modules (except the side air bag modules), spiral cable and front seat belt pre-tensioner assemblies.
5. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to [SRS-17, "SRS Operation Check"](#) for details. Ensure entire SRS operates properly.

### When SRS is not activated in a collision:

1. Check the SRS components using the table shown below:
  - Replace any SRS components showing visible signs of damage (dents, cracks and deformation).
2. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to [SRS-17, "SRS Operation Check"](#) for details. Ensure entire SRS operates properly.

### SRS INSPECTION (FOR FRONTAL COLLISION)

Part	SRS is activated	SRS is NOT activated
Air bag module (driver and front passenger side)	REPLACE Install with new bolts.	1. Remove air bag module. Check terminals for deformities, and harness for binding. 2. Install air bag modules. <ul style="list-style-type: none"> <li>– Install driver air bag module into the steering wheel to check fit and alignment with the wheel.</li> <li>– Install front passenger air bag module into the instrument panel to check fit with the instrument panel.</li> </ul> 3. If no damage is found, reinstall with new bolts. 4. If damaged—REPLACE. Install air bag modules with new bolts. Air bag must be deployed before discarding.
Front seat belt pre-tensioner assembly	REPLACE Install front seat belt pre-tensioner with new bolts.	1. Remove front seat belt pre-tensioners. Check terminals for deformities, and harness for binding. 2. Check belts for damage and anchors for loose mounting. 3. Check retractor for smooth operation. 4. If no damage is found, reinstall the front seat belt pre-tensioner assembly. 5. If damaged—REPLACE. Install the front seat belt pre-tensioners with new bolts coated with bonding agent. Front seat belt pre-tensioners must be deployed before discarding.
Diagnosis sensor unit	REPLACE (LH and RH) side air bag (satellite) sensor Diagnosis sensor unit	1. Check case and bracket for dents, cracks or deformities. 2. Check connectors for damage, and terminals for deformities. 3. If no damage is found, reinstall with new bolts and ground bolt coated with bonding agent. 4. If damaged—REPLACE. Install with new bolts and ground bolt.
Steering wheel		1. Visually check steering wheel for deformities. 2. Check harness (built into steering wheel) and connectors for damage, and terminals for deformities. 3. Install driver air bag module to check fit or alignment with steering wheel. 4. Check steering wheel for excessive free play. 5. If no damage is found, reinstall with new bolts. 6. If damaged—REPLACE.

## FOR SIDE COLLISION

EHS000K8

To repair the SRS for a side collision, perform the following steps.

### When the side air bag is activated in the side collision:

1. Replace the following components:
  - Front seatback assembly (on the side on which side air bag is activated)

# COLLISION DIAGNOSIS

- Diagnosis sensor unit
  - (LH and RH) side air bag (satellite) sensors
2. Check the SRS components and the related parts using the table shown below.
    - Replace any SRS components and the related parts showing visible signs of damage (dents, cracks, deformation).
  3. Conduct self-diagnosis using CONSULT-II and "AIR BAG" warning lamp. Refer to [SRS-17, "SRS Operation Check"](#) for details. Ensure entire SRS operates properly.

**When SRS is not activated in the side collision:**

1. Check the SRS components and the related parts using the table shown below.
  - If the front seatback assembly is damaged, the front seatback assembly must be replaced.
2. Conduct self-diagnosis using CONSULT-II and "AIR BAG" warning lamp. Refer to [SRS-17, "SRS Operation Check"](#) for details. Ensure entire SRS operates properly.

**SRS INSPECTION (FOR SIDE COLLISION)**

Part	Side air bag is activated	SRS is NOT activated
Front (LH or RH) side air bag module	REPLACE front seatback assembly.	<ol style="list-style-type: none"> <li>1. Check for visible signs of damage (dents, tears, deformation) of the seat back on the collision side.</li> <li>2. Check harness and connectors for damage, and terminals for deformities.</li> <li>3. If damaged—REPLACE the front seatback assembly. Air bag must be deployed before disposing of it.</li> </ol>
(LH or RH) side air bag (satellite) sensor	REPLACE (LH and RH) side air bag (satellite sensor and diagnosis sensor unit). (Repair the center pillar inner, etc. before installing new one if damaged.)	<ol style="list-style-type: none"> <li>1. Remove the side air bag (satellite) sensor on the collision side. Check harness connectors for damage, terminals for deformities, and harness for binding.</li> <li>2. Check for visible signs of damage (dents, cracks, deformation) of the satellite sensor.</li> <li>3. Install the side air bag (satellite) sensor to check fit.</li> <li>4. If no damage is found, reinstall the side air bag (satellite) sensor with new nuts coated with bonding agent.</li> <li>5. If damaged—REPLACE the (LH and RH) side air bag (satellite sensor and diagnosis sensor unit) with new nut and bolt coated with bonding agent.</li> </ol>
Diagnosis sensor unit	REPLACE (LH and RH) side air bag (satellite sensor and diagnosis sensor unit with new bolts.	<ol style="list-style-type: none"> <li>1. # ROAD WHEEL

## ROAD WHEEL

PFP:40300

EES000JC

### Inspection

1. Check tires for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.
- a. Remove tire from wheel and mount wheel on a tire balance machine.
- b. Set dial indicator as shown in the illustration.

**Wheel runout (Dial indicator value):**

**Refer to [WT-6, "Road Wheel"](#) .**

3. Check front wheel bearings for looseness.
4. Check front suspension for looseness.

# WHEEL AND TIRE ASSEMBLY

## WHEEL AND TIRE ASSEMBLY

PF:40300

### Balancing Wheels REMOVAL

EES000KI

1. Remove inner and outer balance weights from the wheel.

**CAUTION:**

- Be careful not to scratch the wheel during removal procedures.

2. Using releasing agent, remove double-faced adhesive tape from the wheel.

**CAUTION:**

- Be careful not to scratch the wheel during removal.
- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the wheel.

### WHEEL BALANCE ADJUSTMENT

- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for wheels.

1. Set wheel on wheel balancer using the center hole as a guide. Start the tire balance machine.
2. When inner and outer unbalance values are shown on the wheel balancer indicator, multiply outer unbalance value by 1.6 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

**CAUTION:**

- Do not install the inner balance weight before installing the outer balance weight.
- Before installing the balance weight, be sure to clean the mating surface of the wheel.

Indicated unbalance value  $\times 5/3$  = balance weight to be installed

Calculation example:

23 g (0.81 oz.)  $\times 5/3$  = 38.33 g (1.35 oz.) = 40 g (1.41 oz.) balance weight (closer to calculated balance weight value)

Note that balance weight value must be closer to the calculated balance weight value.

Example:

37.4 g = 35 g (1.23 oz.)

37.5 g = 40 g (1.41 oz.)

# WHEEL AND TIRE ASSEMBLY

- Install balance weight in the position shown.
- When installing balance weight to wheels, set it into the grooved area on the inner wall of the wheel as shown so that the balance weight center is aligned with the wheel balancer indication position (angle).

**CAUTION:**

- Always use genuine Nissan adhesion balance weights.
- Balance weights are not reusable; always replace with new ones.
- Do not install more than three sheets of balance weight.

- If calculated balance weight value exceeds 50 g (1.76 oz.), install two balance weight sheets in line with each other as shown.

**CAUTION:**

**Do not install one balance weight sheet on top of another.**

- Start wheel balancer again.
- Install drive-in balance weight on inner side of road wheel in the wheel balancer indication position (angle).

**CAUTION:**

**Do not install more than two balance weights.**

- Start wheel balancer. Make sure that inner and outer residual unbalance values are 10 g (0.35 oz.) each or below.
  - If either residual unbalance value exceeds 10 g (0.35 oz.), repeat installation procedures.

**Wheel balance (Maximum allowable unbalance):**

Maximum allowable unbalance	Dynamic (At rim flange)	10 g (0.35 oz.) (one side)
	Static	20 g (0.71 oz.)

## Rotation

EES000KJ

- Follow the maintenance schedule for tire rotation service intervals. Refer to [MA-31, "Tire Rotation"](#).
- Do not include the T-type spare tire when rotating the tires.

**CAUTION:**

**When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.**

**Tightening torque of wheel nut : 98 - 117N-m (10 - 12 kg-m, 73 - 86 ft-lb)**

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS0039R

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Wiring Diagrams and Trouble Diagnosis

EKS0039S

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#), and
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit.

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#), and
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#).

Check for any Service bulletins before servicing the vehicle.

## FRONT WIPER AND WASHER

PFP:28810

### System Description WIPER OPERATION

EKS0039T

The wiper switch is controlled by a lever built into the combination switch. There are three wiper switch positions:

- LO speed
- HI speed
- INT (with intermittent operation)

With the ignition switch in the ON or START position, power is supplied:

- through 20A fuse [No. 25, located in the fuse block (J/B)]
- to wiper motor terminal B, and
- to front wiper switch terminal 15 (with intermittent operation).

### Low and High Speed Wiper Operation

Ground is supplied to wiper switch terminal 17 through body grounds E7 and E37.

When the wiper switch is placed in the LO position, ground is supplied:

- through terminal 14 of the wiper switch
- to wiper motor terminal L.

With power and ground supplied, the wiper motor operates at low speed.

When the wiper switch is placed in the HI position, ground is supplied:

- through terminal 16 of the wiper switch
- to wiper motor terminal H.

With power and ground supplied, the wiper motor operates at high speed.

### Auto Stop Operation

With the wiper switch turned OFF, the wiper motor will continue to operate until wiper arms reach windshield base.

When wiper arms are not located at base of windshield with wiper switch OFF, ground is provided:

- from terminal 14 of the wiper switch
- to wiper motor terminal L, in order to continue wiper motor operation at low speed.

Ground is also supplied:

- through terminal 13 of the wiper switch
- to wiper motor terminal P
- through terminal E of the wiper motor, and
- through body grounds E7 and E37.

When wiper arms reach base of windshield, wiper motor terminals P and B are connected instead of terminals P and E. Wiper motor will then stop wiper arms at the STOP position.

### Intermittent Operation

The wiper motor operates the wiper arms one time at low speed at a set interval of approximately 3 to 13 seconds. This feature is controlled by the wiper amplifier (INT SW) combined with wiper switch.

When the wiper switch is placed in the INT position, ground is supplied to wiper amplifier.

The desired interval time is input to wiper amplifier (INT VR) from wiper volume switch combined with wiper switch.

Then intermittent ground is supplied:

- to wiper motor terminal L
- from terminal 14 of wiper switch
- through wiper amplifier (OUTPUT).

The wiper motor operates at low speed at the desired interval.

### WASHER OPERATION

With the ignition switch in the ON or START position, power is supplied:

- through 20A fuse [No. 25, located in the fuse block (J/B)]
- to front washer motor terminal +.

WW

## FRONT WIPER AND WASHER

---

When the lever is pulled to the WASH position, ground is supplied:

- to front washer motor terminal -
- from terminal 18 of the wiper switch
- through terminal 17 of the wiper switch, and
- through body grounds E7 and E37.

With power and ground supplied, the washer motor operates.

Without intermittent operation, the wiper motor operates while the lever is pulled to the WASH position.

With intermittent operation, when the lever is pulled to the WASH position for one second or more, the wiper motor operates at low speed for approximately 3 seconds to clean windshield. This feature is controlled by the wiper amplifier in the same manner as intermittent operation.

## Removal and Installation

### WIPER ARMS

1. Prior to wiper arm installation, turn on wiper switch to operate wiper motor and then turn it "OFF" (Auto Stop).
2. Lift the blade up approximately 100 mm (3.94 in) and then set it down onto glass surface to set the blade center to clearance "L1" & "L2" immediately before tightening nut.
3. Eject washer fluid. Turn on wiper switch to operate wiper motor and then turn it "OFF".
4. Ensure that wiper blades stop within clearance "L1" & "L2".

**Clearance "L1" : 27.5 - 42.5 mm (1.08 - 1.67 in)**

**Clearance "L2" : 34.5 - 49.5 mm (1.36 - 1.95 in)**

- Tighten wiper arm nuts to specified torque.

**Front wiper : 21 - 26 N-m (2.1 - 2.7 kg-m, 16 - 19 ft-lb)**

- Before reinstalling wiper arm, clean the pivot area as illustrated. This will reduce possibility of wiper arm looseness.

### WIPER LINKAGE

### Removal

1. Remove 4 bolts that secure wiper motor.
2. Detach wiper motor from wiper linkage at ball joint.
3. Remove wiper linkage.

**Be careful not to break ball joint rubber boot.**

### Installation

- Grease ball joint portion before installation.
