# FOREWORD

---

This manual contains maintenance and repair procedures for the 2003 NISSAN SENTRA.

In order to assure your safety and the efficient functioning of the vehicle, this manual should be read thoroughly. It is especially important that the PRECAUTIONS in the GI section be completely understood before starting any repair task.

All information in this manual is based on the latest product information at the time of publication. The right is reserved to make changes in specifications and methods at any time without notice.

---

## IMPORTANT SAFETY NOTICE

The proper performance of service is essential for both the safety of the technician and the efficient functioning of the vehicle.

The service methods in this Service Manual are described in such a manner that the service may be performed safely and accurately. Service varies with the procedures used, the skills of the technician and the tools and parts available. Accordingly, anyone using service procedures, tools or parts which are not specifically recommended by NISSAN must first be completely satisfied that neither personal safety nor the vehicle's safety will be jeopardized by the service method selected.

# QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 1.8L, QG ENGINE)

2003

## QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 1.8L, QG ENGINE) Engine Tune-Up Data

Engine	QG18DE	
Classification	Gasoline	
Cylinder arrangement	4, in-line	
Displacement cm <sup>3</sup> (cu in)	1,769 (107.94)	
Bore × stroke mm (in)	80.0 x 88.0 (3.150 x 3.465)	
Valve arrangement	DOHC	
Firing order	1-3-4-2	
Number of piston rings	Compression	2
	Oil	1
Number of main bearings	5	
Compression ratio	9.5	

### Drive Belt Deflection and Tension

Component		Deflection Adjustment Unit: mm (in)			Tension Adjustment *1 Unit: N (kg, lb)		
		Used Belt		New Belt	Used Belt		New Belt
		Limit	After Adjustment		Limit	After Adjustment	
Generator	With air conditioner compressor	8.1 (0.319)	5.3 - 5.7 (0.209 - 0.244)	4.5 - 5.0 (0.177 - 0.197)	292 (30, 66)	652 - 740 (66.5 - 75.5, 146.6 - 166.4)	789 - 877 (80.5 - 89.5, 177.4 - 197.1)
	Without air conditioner compressor	10.2 (0.402)	6.5 - 7.0 (0.256 - 0.276)	5.5 - 6.1 (0.217 - 0.240)	292 (30, 60)	652 - 740 (66.5 - 75.5, 146.6 - 166.4)	789 - 877 (80.5 - 89.5, 177.4 - 197.1)
Power steering oil pump		7.1 (0.280)	4.4 - 4.9 (0.173 - 0.193)	3.9 - 4.4 (0.154 - 0.173)	196 (20, 44)	495 - 583 (50.5 - 59.5, 111.4 - 131.2)	603 - 691 (61.5 - 70.5, 135.6 - 155.5)
Applied pushing force		98 N (10 kg, 22 lb)			—		

\*1: If the belt tension gauge cannot be installed at check points shown, check belt tension at a different location on the belt.

### Spark Plugs (Double Platinum - Tipped)

Type	Standard	PLFR5A-11
	Hot	PLFR4A-11
	Cold	PLFR6A-11
Plug gap		nominal 1.1 mm (0.043 in)

**Front Wheel Alignment (Unladen\*1)**

Camber Degree minute (decimal degree)	Minimum	-1°10' (-1.17°)	
	Nominal	-0°25' (-0.42°)	
	Maximum	0°20' (0.33°)	
	Left and right difference	45' (0.75°) or less	
Caster Degree minute (decimal degree)	Minimum	0°51' (0.85°)	
	Nominal	1°36' (1.60°)	
	Maximum	2°21' (2.35°)	
	Left and right difference	45' (0.75°) or less	
Kingpin inclination Degree minute (decimal degree)	Minimum	13°58' (13.97°)	
	Nominal	14°43' (14.72°)	
	Maximum	15°28' (15.47°)	
Total toe-in	Distance (A - B) mm (in)	Minimum	1 (0.039")
		Nominal	2 (0.079")
		Maximum	3 (0.118")
	Angle (left plus right) Degree minute (decimal degree)	Minimum	5.5' (0.08°)
		Nominal	11' (0.18°)
		Maximum	16' (0.27°)
Wheel turning angle Full turn*2	Inside Degree minute (decimal degree)	Minimum	34° (34.0°)
		Nominal	37° (37.0°)
		Maximum	38° (38.0°)
	Outside Degree minute (decimal degree)	Nominal	31° (31.0°)

\*1: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

\*2: On power steering models, wheel turning force (at circumference of steering wheel) of 98 to 147 N (10 to 15 kg, 22 to 33 lb) with engine idle.

**Rear Wheel Alignment (Unladen\*)**

Camber Degree minute (decimal degree)	Minimum	-1°45' (-1.75°)	
	Nominal	-1°00' (-1.00°)	
	Maximum	-0°15' (-0.25°)	
Total toe-in	Distance (A - B) mm (in)	Minimum	-3 (-0.12)
		Nominal	1 (0.04)
		Maximum	5 (0.20)
	Angle (left plus right) Degree minute (decimal degree)	Minimum	-16' (-0.27°)
		Nominal	5'30" (0.09°)
		Maximum	26' (0.43°)

\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

**Brake**

Unit: mm (in)

Front brake	Brake model	CL25VA
	Cylinder bore diameter	57.2 (2.252)
	Pad length × width × thickness	125.6 × 46.0 × 11.0 (4.94 × 1.811 × 0.433)
	Rotor outer diameter × thickness	257 × 22 (10.12 × 0.87)
Rear brake	Brake model	LT20G
	Cylinder bore diameter/caliper bore diameter	15.87 (5/8) type a 17.45 (11/16) type b
	Lining length × width × thickness	219.4 × 35 × 4.5 (8.64 × 1.38 × 0.177)
	Drum inner diameter/Disc diameter × thickness	203.2 (8)
Master cylinder	Cylinder bore diameter	23.81 (15/16)
Control valve	Valve model	Dual proportioning valve
	Split point [kPa (kg/cm <sup>2</sup> , psi)] × reducing ratio	1,961 (20,284) × 0.2
Brake booster	Booster model	M215T
	Diaphragm diameter	Primary: 230 (9.06) Secondary: 205 (8.07)
Brake fluid	Recommended brake fluid	Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent, DOT 3 (US FMVSS No. 116)

**Disc Brake - Repair Limits**

Unit: mm (in)

Brake model	CL25VA
Pad wear limit Minimum thickness	2.0 (0.079)
Rotor repair limit Minimum thickness	20 (0.79)

# QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 1.8L, QG ENGINE)

**2003**

## Drum Brake - Repair Limits

Unit: mm (in)

Brake model		LT20G
Lining wear limit	Minimum thickness	1.5 (0.059)
Drum repair limit	Maximum inner diameter	204.5 (8.05)
	Maximum out-of round	0.03 (0.0012)

## Refill Capacities

### Engine Coolant Capacity (Approximate)

Unit: ℓ (US qt, Imp qt)

Drain and refill without reservoir	M/T (RS5F70A)	6.0 (6 3/8, 5 1/4)
	A/T (RE4F03B)	5.9 (6 1/4, 5 1/4)
Reservoir tank (at MAX level)		0.7 (3/4, 5/8)

### Engine Oil Capacity (Approximate)

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	2.7 (2 7/8, 2 3/8)
	Without oil filter change	2.5 (2 5/8, 2 1/4)
Dry engine (engine overhaul)		3.1 (3 1/4, 2 3/4)

### Miscellaneous Capacities (Approximate)

System description		Metric measurement	US measurement	Imp measurement
Fuel tank		50 ℓ	13 1/4 gal	11 gal
Power steering system		1.0 ℓ	2 1/8 pt	1 3/4 pt
Transaxle	M/T (RS5F70A)	3.0 ℓ	3 1/8 qt	2 5/8 qt
	A/T (RE4F03B)	7.0 ℓ	7 3/8 qt	6 1/8 qt
Air conditioning system	Refrigerant	0.45 - 0.55 kg	0.99 - 1.21 lb	0.99 - 1.21 lb
	Compressor oil	180 mℓ	6.1 fl oz	6.3 fl oz

# QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 2.5L, QR ENGINE)

2003

## QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 2.5L, QR ENGINE)

### Engine Tune-Up Data

Engine		QR25DE
Cylinder arrangement		4 in-line
Displacement cm <sup>3</sup> (cu in)		2,488 (151.82)
Bore and stroke mm (in)		89.0 x 100 (3.50 - 3.94)
Valve arrangement		DOHC
Firing order		1-3-4-2
Number of piston rings	Compression	2
	Oil	1
Compression ratio		9.5
Compression pressure kPa (kg/cm <sup>2</sup> , psi) / 250 rpm	Standard	1,250 (12.8, 182)
	Minimum	1,060 (10.8, 154)
	Differential limit between cylinders	100 (1.0, 14)

### Drive Belt Deflection and Tension

Tension of drive belts	Auto adjustment by auto-tensioner
------------------------	-----------------------------------

### Spark Plugs (Double Platinum Tipped)

Type	Standard	PLFR5A-11
	Hot	PLFR4A-11
	Cold	PLFR6A-11
Plug gap		nominal 1.1 mm (0.043 in)

### Front Wheel Alignment (Unladen\*1)

Camber Degree minute (decimal degree)	Minimum	-1°12' (-1.2°)
	Nominal	-0°27' (-0.45°)
	Maximum	0°18' (0.3°)
	Left and right difference	45' (0.75°) or less
Caster Degree minute (decimal degree)	Minimum	0°58' (0.97°)
	Nominal	1°43' (1.72°)
	Maximum	2°28' (2.47°)
	Left and right difference	45' (0.75°) or less
Kingpin inclination Degree minute (decimal degree)	Minimum	14°03' (14.05°)
	Nominal	14°46' (14.77°)
	Maximum	15°31' (15.52°)

# QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 2.5L, QR ENGINE)

2003

Total toe-in	Distance (A - B) mm (in)	Minimum	1 (0.039")
		Nominal	2 (0.079")
		Maximum	3 (0.118")
	Angle (left plus right) Degree minute (decimal degree)	Minimum	5.5' (0.08°)
		Nominal	11' (0.18°)
		Maximum	16' (0.27°)
Wheel turning angle Full turn*2	Inside Degree minute (decimal degree)	Minimum	29° (29.0°)
		Nominal	32° (32.0°)
		Maximum	33° (33.0°)
	Outside Degree minute (decimal degree)	Nominal	27° (27.0°)

\*1: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

\*2: On power steering models, wheel turning force (at circumference of steering wheel) of 98 to 147 N (10 to 15 kg, 22 to 33 lb) with engine idle.

## Rear Wheel Alignment (Unladen\*)

Camber Degree minute (decimal degree)	Minimum	-1°45' (-1.75°)	
	Nominal	-1°00' (-1.00°)	
	Maximum	-0°15' (-0.25°)	
Total toe-in	Distance (A - B) mm (in)	Minimum	-3 (-0.12)
		Nominal	1 (0.04)
		Maximum	5 (0.20)
	Angle (left plus right) Degree minute (decimal degree)	Minimum	-16' (-0.27°)
		Nominal	5'30" (0.09°)
		Maximum	26' (0.43°)

\*: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.

## Brake

Unit: mm (in)

Front brake	Brake model	CL25VB
	Cylinder bore diameter	57.2 (2.252)
	Pad length × width × thickness	125.6 × 46.0 × 11.0 (4.94 × 1.811 × 0.433)
	Rotor outer diameter × thickness	280 × 22 (11.02 × 0.87)
Rear brake	Brake model	CL9HC
	Cylinder bore diameter/caliper bore diameter	33.96 (1 11/32)
	Lining length × width × thickness	89.1 × 39.5 × 10 (3.508 × 1.555 × 0.39)
	Drum inner diameter/Disc diameter × thickness	258 × 9 (10.16 × 0.35)
Master cylinder	Cylinder bore diameter	23.81 (15/16)

# QUICK REFERENCE CHART: SENTRA (EQUIPPED WITH 2.5L, QR ENGINE)

**2003**

Control valve	Valve model	Dual proportioning valve
	Split point [kPa (kg/cm <sup>2</sup> , psi)] × reducing ratio	2,942 (30,427) × 0.2
Brake booster	Booster model	M215T
	Diaphragm diameter	Primary: 230 (9.06) Secondary: 205 (8.07)
Brake fluid	Recommended brake fluid	Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent, DOT 3 (US FMVSS No. 116)

## Disc Brake - Repair Limits

Unit: mm (in)

Brake model	CL25VB (Front)	CL9HC (Rear)
Pad wear limit Minimum thickness	2.0 (0.079)	2.0 (0.079)
Rotor repair limit Minimum thickness	20 (0.79)	8 (0.31)

## Refill Capacities

### Engine Coolant Capacity (Approximate)

Unit: ℓ (US qt, Imp qt)

Drain and refill (without reservoir)	M/T (RS5F51A, RS6F51H)	6.1 (6 1/2, 5 3/8)
	A/T (RE4F04B)	6.0 (6 3/8, 5 1/4)
Reservoir tank (at MAX level)		0.7 (3/4, 5/8)

### Engine Oil Capacity (Approximate)

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	3.9 (4 1/8, 3 3/8)
	Without oil filter change	3.7 (3 7/8, 3 1/4)
Dry engine (engine overhaul)		4.4 (4 5/8, 3 7/8)

### Miscellaneous Capacity (Approximate)

System description	Metric measurement	US measurement	Imp measurement
Fuel tank	50 ℓ	13 1/4 gal	11 gal
Power steering system	1.0 ℓ	2 1/8 pt	1 3/4 pt
Transaxle	M/T (RS5F51A, RS6F51H)	2.3 ℓ	2 3/8 qt
	A/T (RE4F04B)	8.5 ℓ	9 qt
Air conditioning system	Refrigerant	0.45 - 0.55 kg	0.99 - 1.21 lb
	Compressor oil	180 m ℓ	6.1 fl oz

# ACCELERATOR CONTROL SYSTEM

## ACCELERATOR CONTROL SYSTEM

PF18005

### Removal and Installation

EBS00DTP

1. Disconnect the accelerator pedal position sensor electrical connector.
  - a. Pull the connector lock back to unlock the connector from the accelerator pedal position sensor.
  - b. Pull up on the connector to disconnect it from the accelerator pedal position sensor.

2. Remove the upper and lower pedal assembly nuts.

3. Remove the pedal assembly.
  - For electrical inspection of the accelerator pedal position sensor. Refer to [EC-503, "DTC P2122, P2123 APP SENSOR"](#) (QG18DE ULEV), [EC-1125, "DTC P2122, P2123 APP SENSOR"](#) (QG18DE SULEV) or [EC-1751, "DTC P2122, P2123 APP SENSOR"](#) (QR25DE).

#### **CAUTION:**

- Do not disassemble the pedal assembly. Do not remove the accelerator pedal position sensor from the pedal assembly.
- Avoid impact from dropping during handling.
- Keep the pedal assembly away from water.

# ACCELERATOR CONTROL SYSTEM

4. Installation is in the reverse order of removal.

- Check the accelerator pedal for smooth operation. There should be no binding or sticking when applying or releasing the accelerator pedal.

- Check that the accelerator pedal moves through the full specified distance of pedal travel.

**Pedal Travel "A" : 52.6 - 58.2 mm (2.07 - 2.29 in)**

## CAUTION:

When the harness connector of the accelerator pedal position sensor is disconnected, perform the "Accelerator Pedal Released Position Learning". Refer to [EC-1255, "Accelerator Pedal Released Position Learning"](#).

**PRECAUTIONS**

PF0:00001

**Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”**

ECS005VV

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**Precautions for On Board Diagnostic (OBD) System of A/T and Engine**

ECS005VV

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

**CAUTION:**

- Be sure to turn the ignition switch “OFF” and disconnect the negative battery terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. may cause the MIL to light up due to a short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to a malfunction of the EGR system or fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.

**Precautions**

ECS005VX

- Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect negative battery terminal. Failure to do so may damage the TCM. Because battery voltage is applied to TCM even if ignition switch is turned off.

# PRECAUTIONS

[RE4F03B]

- When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).  
Make sure that there are not any bends or breaks on TCM pin terminal, when connecting pin connectors.

- Before replacing TCM, perform TCM input/output signal inspection and make sure whether TCM functions properly or not. See page [AT-110](#) .

- After performing each TROUBLE DIAGNOSIS, perform "DTC (Diagnostic Trouble Code) CONFIRMATION PROCEDURE".  
The DTC should not be displayed in the "DTC CONFIRMATION PROCEDURE" if the repair is completed.

- Before proceeding with disassembly, thoroughly clean the outside of the transaxle. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- Disassembly should be done in a clean work area.
- Use lint-free cloth or towels for wiping parts clean. Common shop rags can leave fibers that could interfere with the operation of the transaxle.
- Place disassembled parts in order for easier and proper assembly.
- All parts should be carefully cleaned with a general purpose, non-flammable solvent before inspection or reassembly.
- Gaskets, seals and O-rings should be replaced any time the transaxle is disassembled.
- It is very important to perform functional tests whenever they are indicated.
- The valve body contains precision parts and requires extreme care when parts are removed and serviced. Place disassembled valve body parts in order for easier and proper assembly. Care will also prevent springs and small parts from becoming scattered or lost.
- Properly installed valves, sleeves, plugs, etc. will slide along bores in valve body under their own weight.
- Before assembly, apply a coat of recommended ATF to all parts. Apply petroleum jelly to protect O-rings and seals, or hold bearings and washers in place during assembly. Do not use grease.
- Extreme care should be taken to avoid damage to O-rings, seals and gaskets when assembling.
- Replace ATF cooler if excessive foreign material is found in oil pan or clogging strainer. Refer to [AT-11, "ATF COOLER SERVICE"](#) .
- After overhaul, refill the transaxle with new ATF.
- When the A/T drain plug is removed, only some of the fluid is drained. Old A/T fluid will remain in torque converter and ATF cooling system.  
Always follow the procedures under "Changing A/T Fluid" in the MA section when changing A/T fluid. Refer to [MA-31, "Changing A/T Fluid"](#) .

**Service Notice or Precautions****FAIL-SAFE**

The TCM has an electronic Fail-Safe (limp home mode). This allows the vehicle to be driven even if a major electrical input/output device circuit is damaged.

Under Fail-Safe, the vehicle always runs in third gear, even with a shift lever position of "1", "2" or "D". The customer may complain of sluggish or poor acceleration.

When the ignition key is turned "ON" following Fail-Safe operation, O/D OFF indicator lamp blinks for about 8 seconds. [For "TCM Self-diagnostic Procedure (No Tools)", refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) .]

The blinking of the O/D OFF indicator lamp for about 8 seconds will appear only once and be cleared. The customer may resume normal driving conditions.

Always follow the "Work Flow". Refer to [AT-61, "Work Flow"](#) .

The SELF-DIAGNOSIS results will be as follows:

- The first SELF-DIAGNOSIS will indicate damage to the vehicle speed sensor or the revolution sensor.
- During the next SELF-DIAGNOSIS, performed after checking the sensor, no damages will be indicated.

**TORQUE CONVERTER SERVICE**

The torque converter should be replaced under any of the following conditions:

- External leaks in the hub weld area.
- Converter hub is scored or damaged.
- Converter pilot is broken, damaged or fits poorly into crankshaft.
- Steel particles are found after flushing the cooler and cooler lines.
- Pump is damaged or steel particles are found in the converter.
- Vehicle has TCC shudder and/or no TCC apply. Replace only after all hydraulic and electrical diagnoses have been made. (Converter clutch material may be glazed.)
- Converter is contaminated with engine coolant containing antifreeze.
- Internal failure of stator roller clutch.
- Heavy clutch debris due to overheating (blue converter).
- Steel particles or clutch lining material found in fluid filter or on magnet when no internal parts in unit are worn or damaged — indicates that lining material came from converter.

The torque converter should not be replaced if:

- The fluid has an odor, is discolored, and there is no evidence of metal or clutch facing particles.
- The threads in one or more of the converter bolt holes are damaged.
- Transaxle failure did not display evidence of damaged or worn internal parts, steel particles or clutch plate lining material in unit and inside the fluid filter.
- Vehicle has been exposed to high mileage (only). The exception may be where the torque converter clutch dampener plate lining has seen excess wear by vehicles operated in heavy and/or constant traffic, such as taxi, delivery or police use.

**ATF COOLER SERVICE**

Replace ATF cooler if excessive foreign material is found in oil pan or clogging strainer.

Replace radiator lower tank (which includes ATF cooler) with a new one and flush cooler line using cleaning solvent and compressed air.

Refer to [CO-13, "RADIATOR"](#) .

**OBD-II SELF-DIAGNOSIS**

- A/T self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the O/D OFF indicator or the malfunction indicator lamp (MIL). Refer to the table on [AT-55, "Judgement of Self-diagnosis Code"](#) for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MIL are automatically stored in the ECM and TCM memories. **Always perform the procedure "HOW TO ERASE DTC" on page [AT-40](#) to complete the repair and avoid unnecessary blinking of the MIL.**
- The following self-diagnostic items can be detected using ECM self-diagnostic results mode\* only when the O/D OFF indicator lamp does not indicate any malfunctions.
- PNP switch

# PRECAUTIONS

[RE4F03B]

\*: For details of OBD-II, refer to [EC-58, "ON BOARD DIAGNOSTIC \(OBD\) SYSTEM"](#) [QG18DE (ULEV)] or [EC-639, "ON BOARD DIAGNOSTIC \(OBD\) SYSTEM"](#) [QG18DE (SULEV)].

- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to [PG-47, "HARNES CONNECTOR \(SLIDE-LOCKING TYPE\)"](#) .

## Wiring Diagrams and Trouble Diagnosis

ECS005VZ

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#).
- [PG-2, "POWER SUPPLY ROUTING"](#).

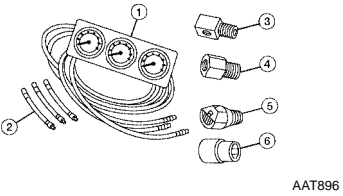

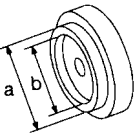

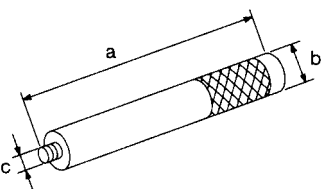

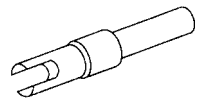

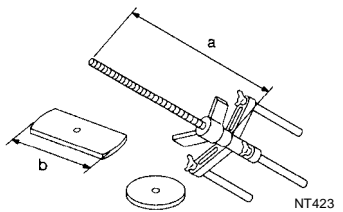

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#).
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#).

## PREPARATION

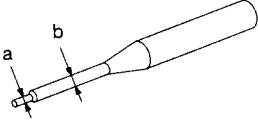

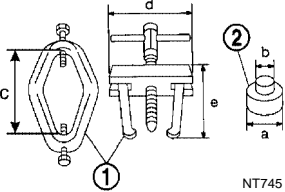

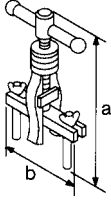

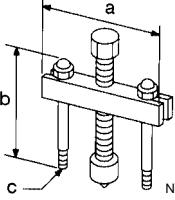

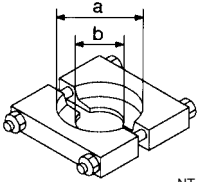

### Special Service Tools

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
<p>(J34301-C) Oil pressure gauge set 1 (J34301-1) Oil pressure gauge 2 (J34301-2) Hoses 3 (J34298) Adapter 4 (J34282) Adapter 5 (790-301-1230-A) 60° Adapter 6 (J34301-15) Square socket</p>	<p>Measuring line pressure</p>

## CLUTCH AND BAND CHART

Shift position	Reverse clutch 5	High clutch 6	Forward clutch 15	Over-run clutch 17	Band servo			Forward one-way clutch 16	Low one-way clutch 18	Low & reverse brake 19	Lock-up	Remarks
					2nd apply	3rd release	4th apply					
P												PARK POSITION
R	O									O		REVERSE POSITION
N												NEUTRAL POSITION
D *4	1st		O	*1 D				B	B			Automatic shift 1 ↔ 2 ↔ 3 ↔ 4
	2nd		O	*1 A	O			B				
	3rd		O	O	*1 A	*2 C	C				*1 O	
	4th		O	C		*3 C	C	O			O	
2	1st		O	O	*2 C			B	B			Automatic shift 1 ↔ 2 ↔ 3
	2nd		O	O	O			B				
	3rd		O	O	*2 C			B				
1	1st		O	O				B		O		Locks (held stationary) in 1st speed 1 ← 2 ← 3
	2nd		O	O	O			B				
	3rd		O	O	*2 C			B				

- \*1: Operates when overdrive control switch is set in "OFF" position.
- \*2: Oil pressure is applied to both 2nd "apply" side and 3rd "release" side of band servo piston. However, brake band does not contract because oil pressure area on the "release" side is greater than that on the "apply" side.
- \*3: Oil pressure is applied to 4th "apply" side in condition \*2 above, and brake band contracts.
- \*4: A/T will not shift to 4th when overdrive control switch is set in "OFF" position.
- O: Operates.
- A: Operates when throttle opening is less than 3/16, activating engine brake.
- B: Operates during "progressive" acceleration.
- C: Operates but does not affect power transmission.
- D: Operates when throttle opening is less than 3/16, but does not affect engine brake.

**POWER TRANSMISSION**

**“N” and “P” Positions**

- “N” position  
Power from the input shaft is not transmitted to the output shaft because the clutches do not operate.
- “P” position  
Similar to the “N” position, the clutches do not operate. The parking pawl engages with the parking gear to mechanically hold the output shaft so that the powertrain is locked.

# OVERALL SYSTEM

[RE4F03B]

ECS005W7

## Control System OUTLINE

The automatic transaxle senses vehicle operating conditions through various switches and sensors. It always controls the optimum shift position and reduces shifting and lock-up shocks.

SWITCHES & SENSORS	TCM	ACTUATORS
Park/neutral position (PNP) switch Throttle position sensor [accelerator pedal position (APP) sensor] Engine speed signal A/T fluid temperature sensor Revolution sensor Vehicle speed sensor Overdrive control switch ASCD control unit Stop lamp switch Turbine revolution sensor	Shift control Line pressure solenoid Lock-up control Overrun clutch control Timing control Fail-safe control Self-diagnosis CONSULT-II communication line control	Shift solenoid valve A Shift solenoid valve B Overrun clutch solenoid valve Torque converter clutch solenoid valve Line pressure solenoid valve O/D OFF indicator lamp

## CONTROL SYSTEM

**TCM FUNCTION**

The function of the TCM is to:

- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, lock-up operation, and engine brake operation.
- Send required output signals to the respective solenoids.

**INPUT/OUTPUT SIGNAL OF TCM**

	Sensors, switches and solenoid valves	Function
Input	PNP switch	Detects select lever position and sends a signal to TCM.
	Throttle position sensor [accelerator pedal position (APP) sensor]	Detects accelerator pedal position and requested throttle opening and sends a signal to TCM.
	Engine speed signal	From ECM.
	A/T fluid temperature sensor	Detects transmission fluid temperature and sends a signal to TCM.
	Revolution sensor	Detects output shaft rpm and sends a signal to TCM.
	Vehicle speed sensor	Used as an auxiliary vehicle speed sensor. Sends a signal when revolution sensor (installed on transmission) malfunctions.
	Overdrive control switch	Sends a signal, which prohibits a shift to "D4" (overdrive) position, to the TCM.
	ASCD control unit	Sends the cruise signal and "D4" (overdrive) cancellation signal from ASCD control unit to TCM.
	Stop lamp switch	Releases lock-up system when depressing pedal in lock-up condition.
Output	Shift solenoid valve A/B	Selects shifting point suited to driving conditions in relation to a signal sent from TCM.
	Line pressure solenoid valve	Regulates (or decreases) line pressure suited to driving conditions in relation to a signal sent from TCM.
	Torque converter clutch solenoid valve	Regulates (or decreases) lock-up pressure suited to driving conditions in relation to a signal sent from TCM.
	Overrun clutch solenoid valve	Controls an "engine brake" effect suited to driving conditions in relation to a signal sent from TCM.
	O/D OFF indicator lamp	Shows TCM faults, when A/T control components malfunction.

**CAN Communication SYSTEM DESCRIPTION**

ECS006H7

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

**CAN COMMUNICATION UNIT**

**System diagram**

LKIA0132E

## Input/output signal chart

T: Transmit R: Receive

Signals	ECM	TCM	Combination Meter

ASCD CRUISE lamp signal	T		R

## Control Mechanism LINE PRESSURE CONTROL

*ECS005W8*

TCM has various line pressure control characteristics to match the driving conditions.

An ON-OFF duty signal is sent to the line pressure solenoid valve based on TCM characteristics.

Hydraulic pressure on the clutch and brake is electronically controlled through the line pressure solenoid valve to accommodate engine torque. This results in smooth shift operation.

### Normal Control

The line pressure to throttle opening characteristics is set for suitable clutch operation.

### Back-up Control (Engine brake)

If the selector lever is shifted to "2" position while driving in D4 (OD) or D3, great driving force is applied to the clutch inside the transmission. Clutch operating pressure (line pressure) must be increased to deal with this driving force.

**During Shift Change**

The line pressure is temporarily reduced corresponding to a change in engine torque when shifting gears (that is, when the shift solenoid valve is switched for clutch operation) to reduce shifting shock.

**At Low Fluid Temperature**

- Fluid viscosity and frictional characteristics of the clutch facing change with fluid temperature. Clutch engaging or band-contacting pressure is compensated for, according to fluid temperature, to stabilize shifting quality.
- The line pressure is reduced below 60°C (140°F) to prevent shifting shock due to low viscosity of automatic transmission fluid when temperature is low.

- Line pressure is increased to a maximum, irrespective of the throttle opening, when fluid temperature drops to -10°C (14°F). This pressure rise is adopted to prevent a delay in clutch and brake operation due to extreme drop of fluid viscosity at low temperature.

**SHIFT CONTROL**

The shift is regulated entirely by electronic control to accommodate vehicle speed and varying engine operations. This is accomplished by electrical signals transmitted by the revolution sensor and throttle position sensor [accelerator pedal position (APP) sensor]. This results in improved acceleration performance and fuel economy.

**Control of Shift Solenoid Valves A and B**

The TCM activates shift solenoid valves A and B according to signals from the throttle position sensor [accelerator pedal position (APP) sensor] and revolution sensor to select the optimum gear position on the basis of the shift schedule memorized in the TCM. The shift solenoid valve performs simple ON-OFF operation. When set to "ON", the drain circuit closes and pilot pressure is applied to the shift valve.

## Relation Between Shift Solenoid Valves A and B and Gear Positions

Shift solenoid valve	Gear position				
	D1 , 21 , 11	D2 , 22 , 12	D3	D4 (OD)	N-P
A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)	ON (Closed)
B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)

### Control of Shift Valves A and B

Pilot pressure generated by the operation of shift solenoid valves A and B is applied to the end face of shift valves A and B.

The drawing above shows the operation of shift valve B. When the shift solenoid valve is “ON”, pilot pressure applied to the end face of the shift valve overcomes spring force, moving the valve upward.

### LOCK-UP CONTROL

The torque converter clutch piston in the torque converter is locked to eliminate torque converter slip to increase power transmission efficiency. The solenoid valve is controlled by an ON-OFF duty signal sent from the TCM. The signal is converted to an oil pressure signal which controls the torque converter clutch piston.

### Conditions for Lock-up Operation

When vehicle is driven in 3rd and 4th gear position, vehicle speed and throttle opening are detected. If the detected values fall within the lock-up zone memorized in the TCM, lock-up is performed.

Overdrive control switch	ON	OFF
Selector lever	“D” position	
Gear position	D4	D3
Vehicle speed sensor	More than set value	
Throttle position sensor [accelerator pedal position (APP) sensor]	Less than set opening	
A/T fluid temperature sensor	More than 40°C (104°F)	

### Torque Converter Clutch Solenoid Valve Control

The torque converter clutch solenoid valve is controlled by the TCM. The plunger closes the drain circuit during the “OFF” period, and opens the circuit during the “ON” period. If the percentage of OFF-time increases in one cycle, the pilot pressure drain time is reduced and pilot pressure remains high.

# OVERALL SYSTEM

[RE4F03B]

The torque converter clutch piston is designed to slip to adjust the ratio of ON-OFF, thereby reducing lock-up shock.  
OFF-time INCREASING

↓  
Amount of drain DECREASING

↓  
Pilot pressure HIGH

↓  
Lock-up RELEASING

## Torque Converter Clutch Control Valve Operation

### Lock-up released

The OFF-duration of the torque converter clutch solenoid valve is long, and pilot pressure is high. The pilot pressure pushes the end face of the torque converter clutch control valve in combination with spring force to move the valve to the left. As a result, converter pressure is applied to chamber A (torque converter clutch piston release side). Accordingly, the torque converter clutch piston remains unlocked.

### Lock-up applied

When the OFF-duration of the torque converter clutch solenoid valve is short, pilot pressure drains and becomes low. Accordingly, the control valve moves to the right by the pilot pressure of the other circuit and converter pressure. As a result, converter pressure is applied to chamber B, keeping the torque converter clutch piston applied.

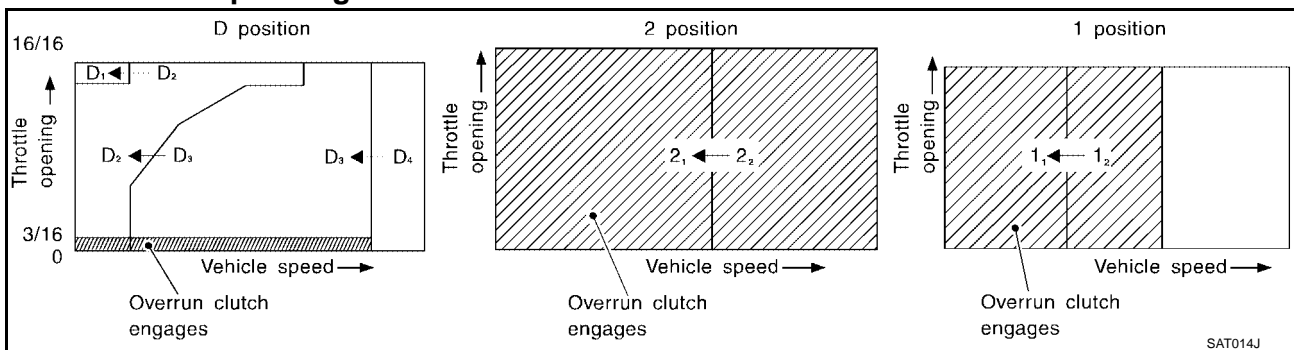

Also smooth lock-up is provided by transient application and release of the lock-up.

## OVERRUN CLUTCH CONTROL (ENGINE BRAKE CONTROL)

Forward one-way clutch is used to reduce shifting shocks in downshifting operations. This clutch transmits engine torque to the wheels. However, drive force from the wheels is not transmitted to the engine because the one-way clutch rotates idle. This means the engine brake is not effective.

The overrun clutch operates when the engine brake is needed.

## Overrun Clutch Operating Conditions

Selector lever position	Gear position	Throttle opening
"D" position	D1, D2, D3 gear position	Less than 3/16
"2" position	21, 22 gear position	
"1" position	11, 12 gear position	At any position

**Overrun Clutch Solenoid Valve Control**

The overrun clutch solenoid valve is operated by an ON-OFF signal transmitted by the TCM to provide overrun clutch control (engine brake control).

When this solenoid valve is "ON", the pilot pressure drain port closes. When it is "OFF", the drain port opens.

During the solenoid valve "ON", pilot pressure is applied to the end face of the overrun clutch control valve.

**Overrun Clutch Control Valve Operation**

When the solenoid valve is "ON", pilot pressure is applied to the overrun clutch control valve. This pushes up the overrun clutch control valve. The line pressure is then shut off so that the clutch does not engage.

When the solenoid valve is "OFF", pilot pressure is not generated. At this point, the overrun clutch control valve moves downward by spring force. As a result, overrun clutch operation pressure is provided by the overrun clutch reducing valve. This causes the overrun clutch to engage.

In the 1 position, the overrun clutch control valve remains pushed down so that the overrun clutch is engaged at all times.

**Control Valve  
FUNCTION OF CONTROL VALVES**

ECS005W9

Valve name	Function
Pressure regulator valve, plug and sleeve	Regulates oil discharged from the oil pump to provide optimum line pressure for all driving conditions.
Pressure modifier valve and sleeve	Used as a signal supplementary valve to the pressure regulator valve. Regulates pressure-modifier pressure (signal pressure) which controls optimum line pressure for all driving conditions.
Pilot valve	Regulates line pressure to maintain a constant pilot pressure level which controls lock-up mechanism, overrun clutch, shift timing.
Accumulator control valve	Regulates accumulator back-pressure to pressure suited to driving conditions.
Manual valve	Directs line pressure to oil circuits corresponding to select positions. Hydraulic pressure drains when the shift lever is in Neutral.
Shift valve A	Simultaneously switches four oil circuits using output pressure of shift solenoid valve A to meet driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve B.
Shift valve B	Simultaneously switches three oil circuits using output pressure of shift solenoid valve B in relation to driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve A.

# OVERALL SYSTEM

**[RE4F03B]**

Valve name	Function
Overrun clutch control valve	Switches hydraulic circuits to prevent engagement of the overrun clutch simultaneously with application of the brake band in D4 . (Interlocking occurs if the overrun clutch engages during D4 .)
1st reducing valve	Reduces low & reverse brake pressure to dampen engine-brake shock when down-shifting from the "1" position 12 to 11 .
Overrun clutch reducing valve	Reduces oil pressure directed to the overrun clutch and prevents engine-brake shock. In "1" and "2" positions, line pressure acts on the overrun clutch reducing valve to increase the pressure-regulating point, with resultant engine brake capability.
Torque converter relief valve	Prevents an excessive rise in torque converter pressure.
Torque converter clutch control valve, plug and sleeve	Activates or inactivates the lock-up function. Also provides smooth lock-up through transient application and release of the lock-up system.
1-2 accumulator valve and piston	Dampens the shock encountered when 2nd gear band servo contracts, and provides smooth shifting.
3-2 timing valve	Switches oil pressure with 3-2 timing valve according to throttle opening.
Shuttle control valve	Reduces shock when down-shifting from 3rd to 2nd and regulates overrun clutch.
Cooler check valve	Regulates oil pressure which causes lock-up when driving at low speeds.

**ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION**

PFP:00000

**Introduction**

ECS005WA

The A/T system has two self-diagnostic systems.

The first is the emission-related on board diagnostic system (OBD-II) performed by the TCM in combination with the ECM. The malfunction is indicated by the MIL (malfunction indicator lamp) and is stored as a DTC in the ECM memory but not the TCM memory.

The second is the TCM original self-diagnosis indicated by the O/D OFF indicator lamp. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD-II self-diagnostic items. For detail, refer to [AT-43, "SELF-DIAGNOSTIC RESULT TEST MODE"](#) .

**OBD-II Function for A/T System**

ECS005WB

The ECM provides emission-related on board diagnostic (OBD-II) functions for the A/T system. One function is to receive a signal from the TCM used with OBD-related parts of the A/T system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MIL (malfunction indicator lamp) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.

The MIL automatically illuminates in One or Two Trip Detection Logic when a malfunction is sensed in relation to A/T system parts.

**One or Two Trip Detection Logic of OBD-II**

ECS005WC

**ONE TRIP DETECTION LOGIC**

If a malfunction is sensed during the first test drive, the MIL will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

**TWO TRIP DETECTION LOGIC**

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MIL will not illuminate. — First Trip

If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MIL will illuminate. — Second Trip

A/T-related parts for which the MIL illuminates during the first or second test drive are listed below.

Items	MIL	
	One trip detection	Two trip detection
Shift solenoid valve A — DTC: P0750	X	
Shift solenoid valve B — DTC: P0755	X	
Throttle position sensor [accelerator pedal position (APP) sensor] or switch — DTC: P1705	X	
Except above		X

The “trip” in the “One or Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.

**OBD-II Diagnostic Trouble Code (DTC)**

ECS005WD

**HOW TO READ DTC AND 1ST TRIP DTC**

DTC and 1st trip DTC can be read by the following methods.

 with **CONSULT-II** or  **GST** CONSULT-II or GST (Generic Scan Tool) Examples: P0705, P0710, P0720, P0725, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal. CONSULT-II can identify them as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown. DTC or 1st trip DTC of a malfunction is displayed in SELF DIAGNOSIS mode for "ENGINE" with CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

### Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For detail, refer to [EC-62, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"](#) [QG18DE (ULEV Model) or [EC-643, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"](#) (SULEV Model)].

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM.

The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

L  
M

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased.

## HOW TO ERASE DTC

The diagnostic trouble code can be erased by CONSULT-II, GST or ECM DIAGNOSTIC TEST MODE as follows.

- **If the battery terminal is disconnected, the diagnostic trouble code will be lost within 24 hours.**
- **When you erase the DTC, using CONSULT-II or GST is easier and quicker than switching the mode selector on the ECM.**

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD-II. For details, refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (ULEV)] or [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (SULEV)].

- **Diagnostic trouble codes (DTC)**
- **1st trip diagnostic trouble codes (1st trip DTC)**
- **Freeze frame data**
- **1st trip freeze frame data**
- **System readiness test (SRT) codes**
- **Test values**

## HOW TO ERASE DTC (WITH CONSULT-II)

- **If a DTC is displayed for both ECM and TCM, it needs to be erased for both ECM and TCM.**
1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
  2. Turn CONSULT-II "ON" and touch "A/T".
  3. Touch "SELF DIAGNOSIS".
  4. Touch "ERASE". (The DTC in the TCM will be erased.) Then touch "BACK" twice.
  5. Touch "ENGINE".
  6. Touch "SELF DIAGNOSIS".
  7. Touch "ERASE". (The DTC in the ECM will be erased.)

## How to erase DTC (With CONSULT-II)

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.

7. Touch "ERASE". (The DTC in the ECM will be erased.)

SCIA5586E

## HOW TO ERASE DTC (WITH GST)

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 5 seconds and then turn it "ON" (engine stopped) again.
2. Perform TCM Self-diagnostic Procedure. Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with Generic Scan Tool (GST). For details, refer to [EC-71, "How to Erase DTC \( With GST\)"](#) [QG18DE (ULEV)] or [EC-652, "How to Erase DTC \(With GST\)"](#) [QG18DE (SULEV)].

## HOW TO ERASE DTC (NO TOOLS)

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 5 seconds and then turn it "ON" (engine stopped) again.
2. Perform TCM Self-diagnostic Procedure. Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Perform OBD-II Self-diagnostic Procedure. Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) .

## Malfunction Indicator Lamp (MIL)

1. The malfunction indicator lamp will light up when the ignition switch is turned ON without the engine running. This is for checking the lamp.

- If the malfunction indicator lamp does not light up, refer to [DI-27, "WARNING LAMPS"](#) .  
(Or see MIL & CONSULT-II in EC section. Refer to [EC-72, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (ULEV)] or [EC-653, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (SULEV)], and [EC-113, "CONSULT-II Function"](#) [QG18DE (ULEV)] or [EC-694, "CONSULT-II Function"](#) [QG18DE (SULEV)].

2. When the engine is started, the malfunction indicator lamp should go off.

If the lamp remains on, the on board diagnostic system has detected an emission-related (OBD-II) malfunction. For detail, refer to [EC-59, "Emission-related Diagnostic Information"](#) [QG18DE (ULEV)] or [EC-640, "Emission-related Diagnostic Information"](#) [QG18DE (SULEV)].

## CONSULT-II

After performing "SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)" ([AT-43, "SELF-DIAGNOSTIC PROCEDURE \(WITH CONSULT-II\)"](#) ), place check marks for results on the "DIAGNOSTIC WORKSHEET", ([AT-58, "DIAGNOSTIC WORKSHEET"](#) ). Reference pages are provided following the items.

### NOTICE:

1. The CONSULT-II electrically displays shift timing and lock-up timing (that is, operation timing of each solenoid).  
Check for time difference between actual shift timing and the CONSULT-II display. If the difference is noticeable, mechanical parts (except solenoids, sensors, etc.) may be malfunctioning. Check mechanical parts using applicable diagnostic procedures.
2. Shift schedule (which implies gear position) displayed on CONSULT-II and that indicated in Service Manual may differ slightly. This occurs because of the following reasons:
  - Actual shift schedule has more or less tolerance or allowance,
  - Shift schedule indicated in Service Manual refers to the point where shifts start, and
  - Gear position displayed on CONSULT-II indicates the point where shifts are completed.
3. Shift solenoid valve "A" or "B" is displayed on CONSULT-II at the start of shifting. Gear position is displayed upon completion of shifting (which is computed by TCM).
4. Additional CONSULT-II information can be found in the Operation Manual supplied with the CONSULT-II unit.

## FUNCTION

Diagnostic test mode	Function	Reference Page
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.	—
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	<a href="#">AT-43</a>
Data monitor	Input/Output data in the ECM can be read.	<a href="#">AT-45</a>
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.	<a href="#">AT-43</a>
Function test	Performed by CONSULT-II instead of a technician to determine whether each system is "OK" or "NG".	—
DTC work support	Select the operating condition to confirm Diagnosis Trouble Codes.	—
TCM part number	TCM part number can be read.	—

### Ⓜ SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)

- Turn on CONSULT-II and touch "ENGINE" for OBD-II detected items or touch "A/T" for TCM self-diagnosis.  
If A/T is not displayed, check TCM power supply and ground circuit. Refer to [AT-113, "TROUBLE DIAGNOSIS FOR POWER SUPPLY"](#) . If result is NG, refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

- Touch "SELF DIAG RESULTS".  
Display shows malfunction experienced since the last erasing operation.  
CONSULT-II performs "REAL TIME DIAG".  
Also, any malfunction detected while in this mode will be displayed at real time.

# ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

[RE4F03B]

Item	Display	Monitor item		Description	Remarks
		TCM input signals	Main signals		
Throttle position	THROTTLE POSI [8]	—	X	● Throttle position data, used for computation by TCM, is displayed.	● A specific value used for control is displayed if fail-safe is activated due to error.
Line pressure duty	LINE PRES DTY [%]	—	X	● Control value of line pressure solenoid valve, computed by TCM from each input signal, is displayed.	
Torque converter clutch solenoid valve duty	TCC S/V DUTY [%]	—	X	● Control value of torque converter clutch solenoid valve, computed by TCM from each input signal, is displayed.	
Shift solenoid valve A	SHIFT S/V A [ON/OFF]	—	X	● Control value of shift solenoid valve A, computed by TCM from each input signal, is displayed.	Control value of solenoid is displayed even if solenoid circuit is disconnected. The "OFF" signal is displayed if solenoid circuit is shorted.
Shift solenoid valve B	SHIFT S/V B [ON/OFF]	—	X	● Control value of shift solenoid valve B, computed by TCM from each input signal, is displayed.	
Overrun clutch solenoid valve	OVERRUN/C S/V [ON/OFF]	—	X	● Control value of overrun clutch solenoid valve computed by TCM from each input signal is displayed.	
Self-diagnosis display lamp (O/D OFF indicator lamp)	SELF-D DP LMP [ON/OFF]	—	X	● Control status of O/D OFF indicator lamp is displayed.	

X: Applicable

—: Not applicable

## DTC WORK SUPPORT MODE WITH CONSULT-II

### CONSULT-II Setting Procedure

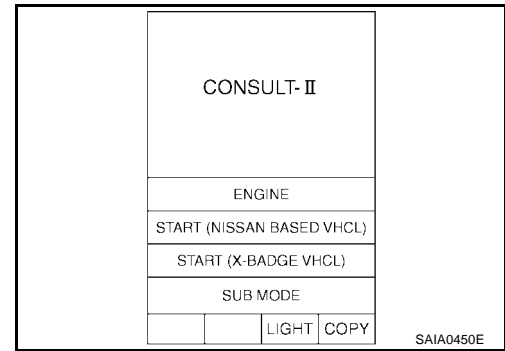

1. Turn ignition switch "OFF".
2. Connect CONSULT-II to Data link connector which is located in left side lower dash panel.

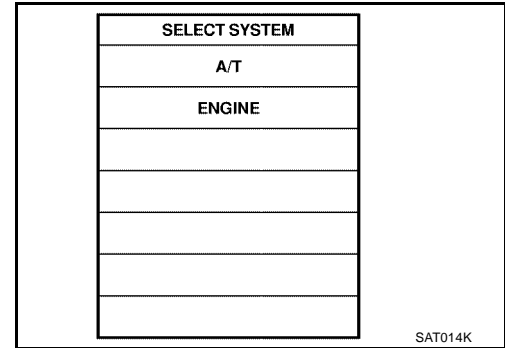

# ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

[RE4F03B]

3. Turn ignition switch "ON".
4. Touch "START (NISSAN BASED VHCL)".

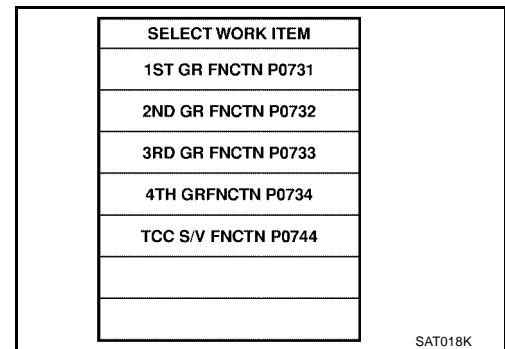

5. Touch "A/T".

6. Touch "DTC WORK SUPPORT".

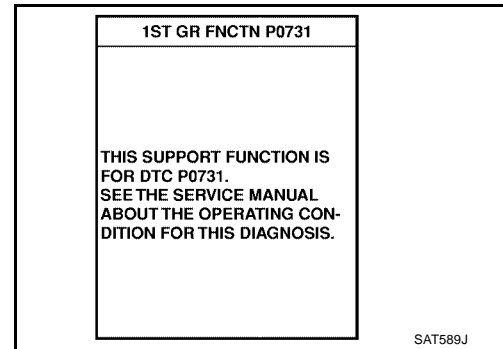

7. Touch select item menu (1ST, 2ND, etc.).

# ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

[RE4F03B]

8. Touch "START".

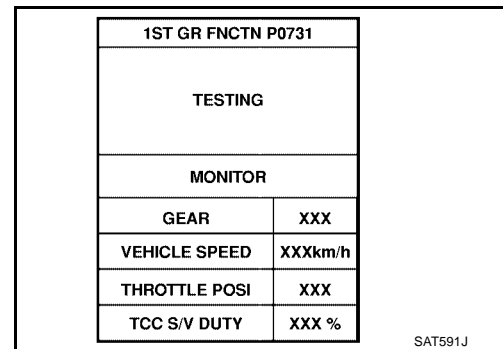

A  
B  
AT

9. Perform driving test according to "DTC CONFIRMATION PROCEDURE" in "TROUBLE DIAGNOSIS FOR DTC".

D  
E  
F  
G

- When testing conditions are satisfied, CONSULT-II screen changes from "OUT OF CONDITION" to "TESTING".

H  
I  
J  
K

10. Stop vehicle. If "NG" appears on the screen, malfunction may exist. Go to "DIAGNOSTIC PROCEDURE".

## DIAGNOSTIC PROCEDURE WITHOUT CONSULT-II

### OBD-II Self-diagnostic Procedure (With GST)

Refer to [EC-125, "Generic Scan Tool \(GST\) Function"](#) [QG18DE (ULEV)], [EC-709, "Generic Scan Tool \(GST\)"](#) [QG18DE (SULEV)].

### OBD-II Self-diagnostic Procedure (No Tools)

Refer to [EC-72, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (ULEV)] or [EC-653, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (SULEV)].

## TCM Self-diagnostic Procedure (No Tools)

### 1. CHECK O/D OFF INDICATOR LAMP

1. Move A/T selector lever to "P" position.  
Start the engine.  
Warm engine to normal operating temperature.
2. Turn ignition switch to "OFF" position.
3. Wait 5 seconds.
4. Turn ignition switch to "ON" position.  
(Do not start engine.)
5. Does O/D OFF indicator lamp come on for about 2 seconds?

#### Yes or No

- Yes >> GO TO 2.  
 No >> GO TO [AT-221, "1. O/D OFF Indicator Lamp Does Not Come On"](#) .

## 2. JUDGEMENT PROCEDURE STEP 1

1. Turn ignition switch to "OFF" position.
2. Turn ignition switch to "ACC" position.
3. Move A/T selector lever from "P" to "D" position.
4. Turn ignition switch to "ON" position.  
(Do not start engine.)
5. Depress and hold overdrive control switch (the O/D OFF indicator lamp will be "ON") until directed to release the switch.  
If O/D OFF indicator lamp does not come on, go to [AT-250, "21. TCM Self-diagnosis Does Not Activate {Park/neutral Position \(PNP\), Overdrive Control and Throttle Position Sensor \[Accelerator Pedal Position \(APP\) Sensor\] Switches Circuit Checks}"](#).
6. Turn ignition switch to "OFF" position.
7. Turn ignition switch to "ON" position.  
(Do not start engine.)
8. Release the overdrive control switch (the O/D OFF indicator lamp will be "OFF").
9. Wait 2 seconds.
10. Move A/T selector lever to "2" position.
11. Depress and release the overdrive control switch (the O/D OFF indicator lamp will be "ON").
12. Depress and hold the overdrive control switch (the O/D OFF indicator lamp will be "OFF") until directed to release the switch.

>> GO TO 3.

A  
B  
AT  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

## 3. JUDGEMENT PROCEDURE STEP 2

1. Move A/T selector lever to "1" position.
2. Release the overdrive control switch.
3. Depress and release the overdrive control switch (the O/D OFF indicator lamp will be "ON").
4. Depress and release the overdrive control switch (the O/D OFF indicator lamp will be "OFF").
5. Depress and hold the overdrive control switch (the O/D OFF indicator lamp will be "ON") until directed to release the switch.

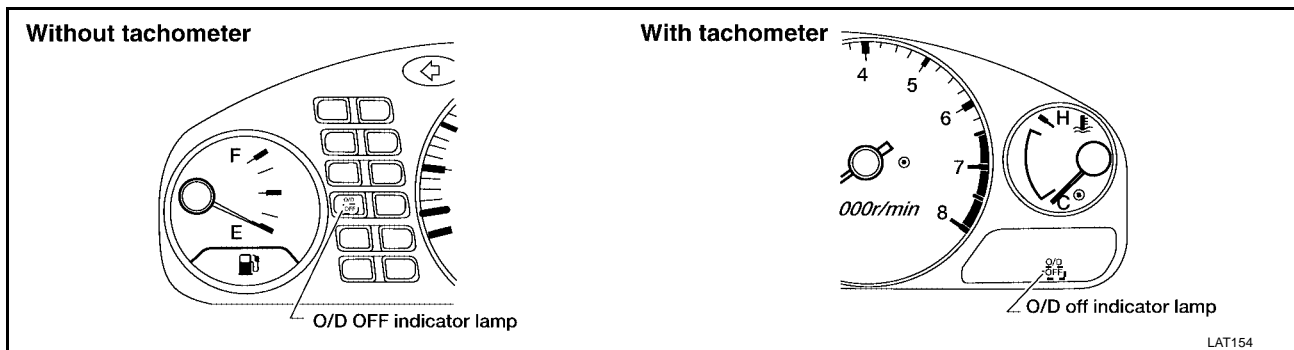

6. Depress accelerator pedal fully and release.
7. Release the overdrive control switch (the O/D OFF indicator lamp will begin to flash "ON" and "OFF").

>> GO TO 4.

## 4. CHECK SELF-DIAGNOSIS CODE

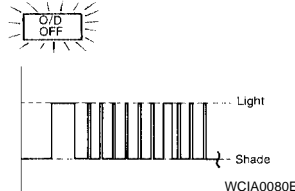

Check O/D OFF indicator lamp. Refer to [AT-55, "Judgement of Self-diagnosis Code"](#) .

>> DIAGNOSIS END

## Judgement of Self-diagnosis Code

O/D OFF indicator lamp:

<p>All judgement flickers are the same.</p>  <p>All circuits that can be confirmed by self-diagnosis are OK.</p>	<p>1st judgement flicker is longer than others.</p>  <p>Revolution sensor circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)"</a> .</p>
<p>2nd judgement flicker is longer than others.</p>  <p>Vehicle speed sensor circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"</a> .</p>	<p>3rd judgement flicker is longer than others.</p>  <p>Throttle position sensor [accelerator pedal position (APP) sensor] circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-188, "DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]"</a> .</p>
<p>4th judgement flicker is longer than others.</p>  <p>Shift solenoid valve A circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-180, "DTC P0750 SHIFT SOLENOID VALVE A"</a> .</p>	<p>5th judgement flicker is longer than others.</p>  <p>Shift solenoid valve B circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-184, "DTC P0755 SHIFT SOLENOID VALVE B"</a> .</p>
<p>6th judgement flicker is longer than others.</p>  <p>Overrun clutch solenoid valve circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-194, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"</a> .</p>	<p>7th judgement flicker is longer than others.</p>  <p>Torque converter clutch solenoid valve circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-160, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"</a> .</p>
<p>8th judgement flicker is longer than others.</p>  <p>A/T fluid temperature sensor is disconnected or TCM power source circuit is damaged.                  ⇒ Go to <a href="#">AT-198, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"</a> .</p>	<p>9th judgement flicker is longer than others.</p>  <p>Engine speed signal circuit is short-circuited or disconnected.                  ⇒ Go to <a href="#">AT-132, "DTC P0725 ENGINE SPEED SIGNAL"</a> .</p>

O/D OFF indicator lamp:

10th judgement flicker is longer than others.

WCIA0083E

Line pressure solenoid valve circuit is short-circuited or disconnected.

⇒ **Go to AT-174. "DTC P0745 LINE PRESSURE SOLENOID VALVE"** .

11th judgement flicker is longer than others.

SAT599J

The ECM-A/T communication line is open or shorted.

⇒ **Go to AT-209. "DTC U1000 CAN COMMUNICATION LINE"** .

Flickers as shown below.

WCIA0084E

Battery power is low.

Battery has been disconnected for a long time.

Battery is connected conversely.

(When reconnecting TCM connectors. — This is not a problem.)

Lamp comes on.

WCIA0085E

PNP switch, overdrive control switch or throttle position switch circuit is disconnected or TCM is damaged.

⇒ **Go to AT-250. "21. TCM Self-diagnosis Does Not Activate {Park/neutral Position (PNP), Overdrive Control and Throttle Position Sensor [Accelerator Pedal Position (APP) Sensor] Switches Circuit Checks}"** .

t1 = 2.5 seconds    t2 = 2.0 seconds    t3 = 1.0 second    t4 = 1.0 second

## TROUBLE DIAGNOSIS — INTRODUCTION

## Introduction

The TCM receives a signal from the vehicle speed sensor, throttle position sensor [accelerator pedal position (APP) sensor] or PNP switch and provides shift control or lock-up control via A/T solenoid valves.

The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the OBD-related parts of the A/T system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.

Input and output signals must always be correct and stable in the operation of the A/T system. The A/T system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.

It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the problems. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the "Work Flow". Refer to [AT-61, "Work Flow"](#).

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such problems, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "Diagnostic Worksheet" like the example ([AT-59, "Diagnostic Worksheet"](#)) should be used.

Start your diagnosis by looking for "conventional" problems first. This will help troubleshoot driveability problems on an electronically controlled engine vehicle.

**Also check related Service bulletins for information.**

## Work Flow

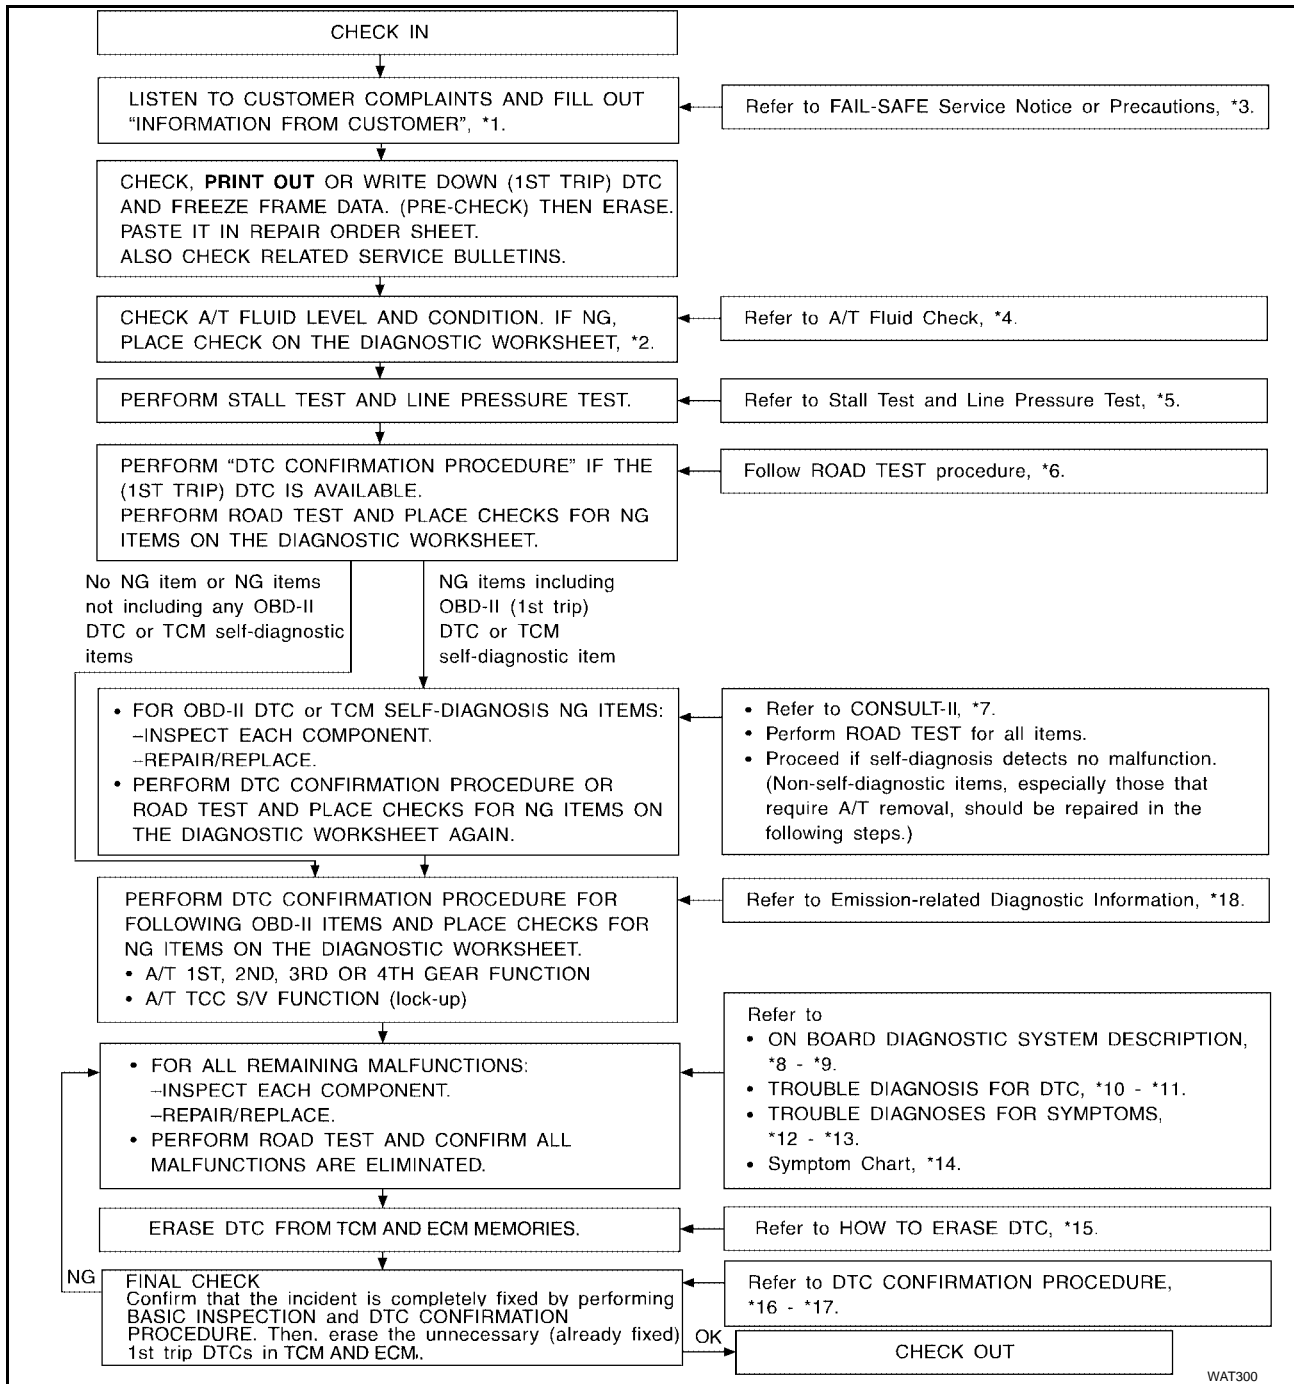

### HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

ECS005WH

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a problem. It is important to fully understand the symptoms or conditions for a customer complaint.

Make good use of the two sheets provided, "Information from Customer" ([AT-58, "Information from Customer"](#)) and "Diagnostic Worksheet" ([AT-59, "Diagnostic Worksheet"](#)), to perform the best troubleshooting possible.

## WORK FLOW CHART

---	---	---	--

**TROUBLE DIAGNOSIS — BASIC INSPECTION**

PF0:0000

**A/T Fluid Check**

ECS005WJ

**FLUID LEAKAGE CHECK**

1. Clean area suspected of leaking, for example, mating surface of converter housing and transmission case.
2. Start engine, apply foot brake, place selector lever in "D" position and wait a few minutes.
3. Stop engine.

4. Check for fresh leakage.

**FLUID CONDITION CHECK**

Fluid color	Suspected problem
Dark or black with burned odor	Wear of frictional material
Milky pink	Water contamination — Road water entering through filler tube or breather
Varnished fluid, light to dark brown and tacky	Oxidation — Over or under filling, — Overheating

**FLUID LEVEL CHECK**

Refer to [MA-30, "Checking A/T Fluid"](#) .

**Stall Test**

ECS005WJ

**STALL TEST PROCEDURE**

1. Check A/T fluid and engine oil levels. If necessary, add.
2. Drive vehicle for approx. 10 minutes or until fluid and oil reach operating temperature.

**ATF operating temperature : 50 - 80°C (122 - 176°F)**  
**ture**

3. Set parking brake and block wheels.
4. Install a tachometer where it can be seen by driver during test.
  - **It is good practice to mark the point of specified engine rpm on indicator.**

5. Start engine, apply foot brake, and place selector lever in "D" position.
6. Accelerate to wide open throttle gradually while applying foot brake.
7. Quickly note the engine stall revolution and immediately release throttle.
  - **During test, never hold throttle wide open for more than 5 seconds.**

**Stall revolution**  
**QG18DE : 2,350 - 2,800 rpm**

8. Move selector lever to "N" position.
9. Cool off ATF.
  - **Run engine at idle for at least one minute.**
10. Repeat steps 5 through 9 with selector lever in "2", "1" and "R" positions.

## JUDGEMENT OF STALL TEST

The test result and possible damaged components relating to each result are shown in the illustrations that follow.

In order to pinpoint the possible damaged components, follow the "Work Flow" shown in [AT-61, "Work Flow"](#).

### NOTE:

Stall revolution is too high in "D", "2" or "1" position:

- Slippage occurs in 1st gear but not in 2nd and 3rd gears..... Low one-way clutch slippage
- Slippage occurs in the following gears:  
1st through 3rd gears in "D" position and engine brake functions with overdrive control switch set to "OFF".  
1st and 2nd gears in "2" position and engine brake functions with accelerator pedal released (fully closed throttle)..... Forward clutch or forward one-way clutch slippage

Stall revolution is too high in R position:

- Engine brake does not function in "1" position..... Low & reverse brake slippage
- Engine brake functions in "1" position..... Reverse clutch slippage

Stall revolution within specifications:

- Vehicle does not achieve speed of more than 80 km/h (50 MPH)..... One-way clutch seizure in torque converter housing

### CAUTION:

**Be careful since automatic fluid temperature increases abnormally.**

- Slippage occurs in 3rd and 4th gears in "D" position..... High clutch slippage

## TROUBLE DIAGNOSIS — BASIC INSPECTION

[RE4F03B]

- 
- Slippage occurs in 2nd and 4th gear in “D” position..... Brake band slippage
  - Engine brake does not function in 2nd and 3rd gears in “D” position, 2nd gear in “2” position, and 1st gear in “1” position with overdrive control switch set to “OFF”..... Overrun clutch slippage

### **Stall revolution less than specifications:**

- Poor acceleration during starts..... One-way clutch slippage in torque converter

# TROUBLE DIAGNOSIS — BASIC INSPECTION

## Line Pressure Test

### LINE PRESSURE TEST PORTS

Location of line pressure test ports are shown in the illustration.

- Always replace pressure plugs as they are self-sealing bolts.

### LINE PRESSURE TEST PROCEDURE

1. Check A/T fluid and engine oil levels. If necessary, add fluid or oil.
2. Drive vehicle for approx. 10 minutes or until engine oil and ATF reach operating temperature.

**ATF operating temperature : 50 - 80°C (122 - 176°F)**

3. Install pressure gauge to corresponding line pressure port.

4. Set parking brake and block wheels.
  - Continue to depress brake pedal fully while line pressure test is being performed at stall speed.

5. Start engine and measure line pressure at idle and stall speed.
- When measuring line pressure at stall speed, follow the stall test procedure.

Refer to [AT-68, "Line Pressure Test"](#) .

A  
B  
AT

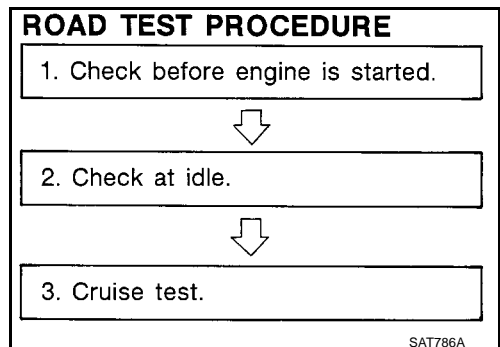

**JUDGEMENT OF LINE PRESSURE TEST**

Judgement		Suspected parts
At idle	Line pressure is low in all positions.	<ul style="list-style-type: none"> <li>● Oil pump wear</li> <li>● Control piston damage</li> <li>● Pressure regulator valve or plug sticking</li> <li>● Spring for pressure regulator valve damaged</li> <li>● Fluid pressure leakage between oil strainer and pressure regulator valve</li> <li>● Clogged strainer</li> </ul>
	Line pressure is low in particular position.	<ul style="list-style-type: none"> <li>● Fluid pressure leakage between manual valve and particular clutch</li> <li>● For example, line pressure is:                             <ul style="list-style-type: none"> <li>– Low in "R" and "1" positions, but</li> <li>– Normal in "D" and "2" positions.</li> </ul>                             Therefore, fluid leakage exists at or around low and reverse brake circuit.                         </li> </ul> Refer to <a href="#">AT-22, "CLUTCH AND BAND CHART"</a> .
	Line pressure is high.	<ul style="list-style-type: none"> <li>● Maladjustment of throttle position sensor [accelerator pedal position (APP) sensor]</li> <li>● A/T fluid temperature sensor damaged</li> <li>● Line pressure solenoid valve sticking</li> <li>● Short circuit of line pressure solenoid valve circuit</li> <li>● Pressure modifier valve sticking</li> <li>● Pressure regulator valve or plug sticking</li> <li>● Open in dropping resistor circuit</li> </ul>
At stall speed	Line pressure is low.	<ul style="list-style-type: none"> <li>● Maladjustment of throttle position sensor [accelerator pedal position (APP) sensor]</li> <li>● Line pressure solenoid valve sticking</li> <li>● Short circuit of line pressure solenoid valve circuit</li> <li>● Pressure regulator valve or plug sticking</li> <li>● Pressure modifier valve sticking</li> <li>● Pilot valve sticking</li> </ul>

**Road Test DESCRIPTION**

- The purpose of the test is to determine overall performance of the transmission and analyze causes of problems.
- The road test consists of the following three parts:
  1. Check before engine is started
  2. Check at idle

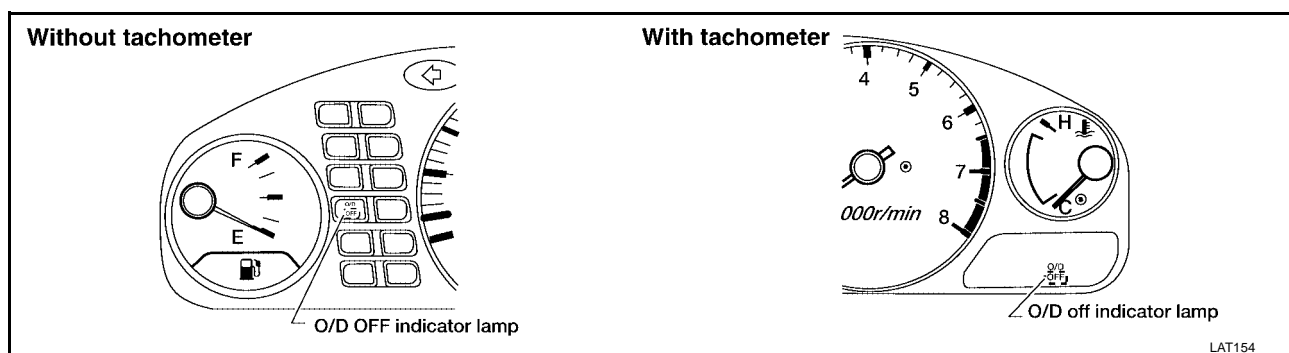

## 3. Cruise test

- Before road test, familiarize yourself with all test procedures and items to check.
- Conduct tests on all items until specified symptom is found. Troubleshoot items which check out No Good after road test. Refer to [AT-38, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION"](#) and [AT-216, "TROUBLE DIAGNOSES FOR SYMPTOMS"](#).

**1. CHECK BEFORE ENGINE IS STARTED****1. CHECK O/D OFF INDICATOR LAMP**

1. Park vehicle on flat surface.
2. Move A/T selector lever to "P" position.
3. Turn ignition switch to "OFF" position. Wait at least 5 seconds.
4. Turn ignition switch to "ON" position. (Do not start engine.)
5. Does O/D OFF indicator lamp come on for about 2 seconds?

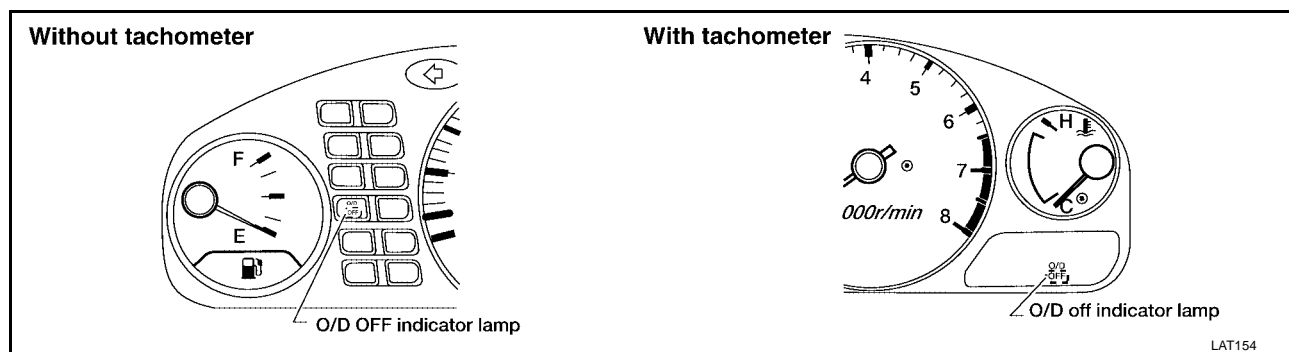

**Yes or No**

Yes >> GO TO 2.

No >> Stop ROAD TEST. Go to [AT-221, "1. O/D OFF Indicator Lamp Does Not Come On"](#) .

**2. CHECK O/D OFF INDICATOR LAMP**

Does O/D OFF indicator lamp flicker for about 8 seconds?

**Yes or No**

Yes >> TCM is in fail-safe mode. Perform self-diagnosis and check NG items on the [AT-59, "Diagnostic Worksheet"](#) . Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) .

No >> 1. Turn ignition switch to "OFF" position.

2. Perform self-diagnosis and note NG items.

Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) .

3. Go to [AT-72, "2. CHECK AT IDLE"](#) .

**2. CHECK AT IDLE**

**1. CHECK ENGINE START**

1. Park vehicle on flat surface.
2. Move A/T selector lever to "P" position.
3. Turn ignition switch to "OFF" position.
4. Turn ignition switch to "START" position.
5. Is engine started?

Yes or No

- Yes >> GO TO 2.  
 No >> Stop ROAD TEST. Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-223, "2. Engine Cannot Be Started In "P" and "N" Position"](#) .

SAT769B

**2. CHECK ENGINE START**

1. Turn ignition switch to "ACC" position.
2. Move A/T selector lever to "D", "1", "2" or "R" position.
3. Turn ignition switch to "START" position.
4. Is engine started?

Yes or No

- Yes >> Stop ROAD TEST. Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-223, "2. Engine Cannot Be Started In "P" and "N" Position"](#) .  
 No >> GO TO 3.

SAT770B

**3. CHECK VEHICLE MOVE**

1. Move A/T selector lever to "P" position.
2. Turn ignition switch to "OFF" position.
3. Release parking brake.

>> GO TO 4.

SAT768B

**4. CHECK VEHICLE MOVE**

1. Push vehicle forward or backward.
2. Does vehicle move when it is pushed forward or backward?
3. Apply parking brake.

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-224, "3. In "P" Position, Vehicle Moves Forward Or Backward When Pushed"](#) . Continue ROAD TEST.
- No >> GO TO 5.

**5. CHECK VEHICLE MOVE**

1. Start engine.
2. Move A/T selector lever to "N" position.
3. Release parking brake.
4. Does vehicle move forward or backward?

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-225, "4. In "N" Position, Vehicle Moves"](#) . Continue ROAD TEST.
- No >> GO TO 6.

**6. CHECK SHIFT SHOCK**

1. Apply foot brake.

2. Move A/T selector lever to "R" position.
3. Is there large shock when changing from "N" to "R" position?

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-226, "5. Large Shock. "N" → "R" Position"](#) . Continue ROAD TEST.
- No >> GO TO 7.

## 7. CHECK VEHICLE MOVE

1. Release foot brake for several seconds.
2. Does vehicle creep backward when foot brake is released?

Yes or No

- Yes >> GO TO 8.  
 No >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-227, "6. Vehicle Does Not Creep Backward In "R" Position"](#) . Continue ROAD TEST.

## 8. CHECK VEHICLE MOVE

1. Move A/T selector lever to "D", "2" and "1" positions and check if vehicle creeps forward.
2. Does vehicle creep forward in all three positions?

Yes or No

- Yes >> Go to [AT-74, "3. CRUISE TEST"](#) .  
 No >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-229, "7. Vehicle Does Not Creep Forward In "D", "2" Or "1" Position"](#) . Continue ROAD TEST.

## 3. CRUISE TEST

- Check all items listed in Parts 1 through 3 of Diagnostic Worksheet.

### Ⓜ With CONSULT-II

- Using CONSULT-II, conduct a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.

### CONSULT-II Setting Procedure

1. Turn ignition switch "OFF".
2. Connect CONSULT-II to Data link connector which is located in left side lower dash panel.

9. Touch "SETTING" to recording condition ("AUTO TRIG" or "MANU TRIG") and touch "BACK".
10. Touch "START".

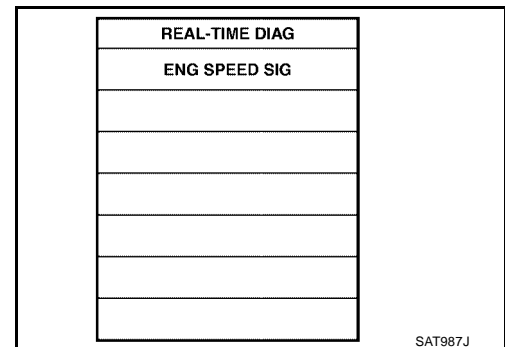

11. When performing cruise test, touch "RECORD".

12. After finishing cruise test part 1, touch "STOP".

13. Touch "STORE" and touch "BACK".

Cruise Test — Part 1

1. CHECK STARTING GEAR (D1) POSITION

1. Drive vehicle for approx. 10 minutes to warm engine oil and ATF up to operating temperature.

**ATF operating temperature : 50 - 80°C (122 - 176°F)**  
**ture**

2. Park vehicle on flat surface.
3. Set overdrive control switch to "ON" position.
4. Move A/T selector lever to "P" position.
5. Start engine.

6. Move A/T selector lever to "D" position.

7. Accelerate vehicle by constantly depressing accelerator pedal halfway.
8. Does vehicle start from D1 ?

Ⓜ **Read gear position.**

Yes or No

- Yes >> GO TO 2.
- No >> Go to [AT-231, "8. Vehicle Cannot Be Started From D1"](#). Continue ROAD TEST.

**2. CHECK SHIFT UP (D1 TO D2 )**

Does A/T shift from D1 to D2 at the specified speed?

④ Read gear position, throttle opening and vehicle speed.

**Specified speed when shifting from D1 to D2 : Refer to AT-386, "Shift Schedule" .**

Yes or No

Yes >> GO TO 3.

No >> Go to AT-234, "9. A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2" . Continue ROAD TEST.

**3. CHECK SHIFT UP (D2 TO D3 )**

Does A/T shift from D2 to D3 at the specified speed?

④ Read gear position, throttle position and vehicle speed.

**Specified speed when shifting from D2 to D3 : Refer to AT-386, "Shift Schedule" .**

Yes or No

Yes >> GO TO 4.

No >> Go to AT-236, "10. A/T Does Not Shift: D2 → D3" . Continue ROAD TEST.

**4. CHECK SHIFT UP (D3 TO D4 )**

Does A/T shift from D3 to D4 at the specified speed?

④ Read gear position, throttle position and vehicle speed.

**Specified speed when shifting from D3 to D4 : Refer to AT-386, "Shift Schedule" .**

Yes or No

Yes >> GO TO 5.

No >> Go to AT-238, "11. A/T Does Not Shift: D3 → D4" . Continue ROAD TEST.

A  
B  
AT  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

**5. CHECK LOCK-UP (D4 TO D4 L/U)**

Does A/T perform lock-up at the specified speed?

Ⓜ **Read vehicle speed, throttle position when lock-up duty becomes 94%.**

**Specified speed when lock-up occurs** : Refer to [AT-386, "Shift Schedule"](#) .

Yes or No

- Yes >> GO TO 6.
- No >> Go to [AT-240, "12. A/T Does Not Perform Lock-up"](#) . Continue ROAD TEST.

**6. CHECK HOLD LOCK-UP**

Does A/T hold lock-up condition for more than 30 seconds?

Yes or No

- Yes >> GO TO 7.
- No >> Go to [AT-241, "13. A/T Does Not Hold Lock-up Condition"](#) .

**7. CHECK SHIFT DOWN (D4 L/U TO D4)**

1. Release accelerator pedal.
2. Is lock-up released when accelerator pedal is released?

Yes or No

- Yes >> GO TO 8.
- No >> Go to [AT-243, "14. Lock-up Is Not Released"](#) . Continue ROAD TEST.

**8. CHECK SHIFT DOWN (D4 TO D3)**

1. Decelerate vehicle by applying foot brake lightly.
2. Does engine speed return to idle smoothly when A/T is shifted from D4 to D3 ?

Ⓜ **Read gear position and engine speed.**

Yes or No

- Yes >> 1. Stop vehicle.  
2. Go to [AT-81, "Cruise Test — Part 2"](#) .
- No >> Go to [AT-244, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) . Continue ROAD TEST.

Cruise Test — Part 2

1. CHECK STARTING GEAR (D1 ) POSITION

1. Confirm overdrive control switch is in "ON" position.
2. Confirm A/T selector lever is in "D" position.
3. Accelerate vehicle by half throttle again.
4. Does vehicle start from D1 ?

 **Read gear position.**

Yes or No

- Yes >> GO TO 2.
- No >> Go to [AT-245, "16. Vehicle Does Not Start From D1"](#) . Continue ROAD TEST.

2. CHECK SHIFT UP AND SHIFT DOWN (D3 TO D4 TO D2 )

1. Accelerate vehicle to 80 km/h (50 MPH) as shown in illustration.
2. Release accelerator pedal and then quickly depress it fully.
3. Does A/T shift from D4 to D2 as soon as accelerator pedal is depressed fully?

 **Read gear position and throttle position.**

Yes or No

- Yes >> GO TO 3.
- No >> Go to [AT-234, "9. A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2"](#) . Continue ROAD TEST.

3. CHECK SHIFT UP (D2 TO D3 )

Does A/T shift from D2 to D3 at the specified speed?

 **Read gear position, throttle position and vehicle speed.**

**Specified speed when shifting from D2 to D3 : Refer to [AT-386, "Shift Schedule"](#) .**

Yes or No

- Yes >> GO TO 4.
- No >> Go to [AT-236, "10. A/T Does Not Shift: D2 → D3"](#) . Continue ROAD TEST.

**4. CHECK SHIFT UP (D<sub>3</sub> TO D<sub>4</sub>) AND ENGINE BRAKE**

Release accelerator pedal after shifting from D<sub>2</sub> to D<sub>3</sub>.

Does A/T shift from D<sub>3</sub> to D<sub>4</sub> and does vehicle decelerate by engine brake?

 **Read gear position, throttle position and vehicle speed.**

Yes or No

- Yes >> 1. Stop vehicle.  
2. Go to [AT-83, "Cruise Test — Part 3"](#).
- No >> Go to [AT-238, "11. A/T Does Not Shift: D<sub>3</sub> → D<sub>4</sub>"](#). Continue ROAD TEST.

SAT405H

Cruise Test — Part 3

1. VEHICLE SPEED D4 POSITION

1. Confirm overdrive control switch is in "ON" position.
2. Confirm selector lever is in "D" position.
3. Accelerate vehicle using half-throttle to D4 .

>> GO TO 2.

2. CHECK SHIFT DOWN (D4 TO D3 )

1. Release accelerator pedal.
2. Set overdrive control switch to "OFF" position while driving in D4 .
3. Does A/T shift from D4 to D3 (O/D OFF)?

 Read gear position and vehicle speed.

Yes or No

- Yes >> GO TO 3.
- No >> Go to [AT-247, "17. A/T Does Not Shift: D4 → D3 , When Overdrive Control Switch "ON" → "OFF" . Continue ROAD TEST.](#)

3. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> GO TO 4.
- No >> Go to [AT-244, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\) . Continue ROAD TEST.](#)

#### 4. CHECK SHIFT DOWN (D3 TO D2)

1. Move A/T selector lever from "D" to "2" position while driving in D3 (O/D OFF).
2. Does A/T shift from D3 (O/D OFF) to D2 ?

 **Read gear position.**

Yes or No

- Yes >> GO TO 5.  
 No >> Go to [AT-248, "18. A/T Does Not Shift: D3 → 2<sub>2</sub> , When Selector Lever "D" → "2" Position"](#) . Continue ROAD TEST.

#### 5. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> GO TO 6.  
 No >> Go to [AT-244, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) . Continue ROAD TEST.

#### 6. CHECK SHIFT DOWN

1. Move A/T selector lever from "2" to "1" position while driving in 2<sub>2</sub> .
2. Does A/T shift from 2<sub>2</sub> to 1<sub>1</sub> position?

 **Read gear position.**

Yes or No

- Yes >> GO TO 7.  
 No >> Go to [AT-249, "19. A/T Does Not Shift: 2<sub>2</sub> → 1<sub>1</sub> , When Selector Lever "2" → "1" Position"](#) . Continue ROAD TEST.

#### 7. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> 1. Stop vehicle.  
 2. Perform self-diagnosis. Refer to [AT-52, "TCM Self-diagnostic Procedure \(No Tools\)"](#) .  
 No >> Go to [AT-250, "20. Vehicle Does Not Decelerate By Engine Brake"](#) . Continue ROAD TEST.

TROUBLE DIAGNOSIS — GENERAL DESCRIPTION

PF0:0000

ECS005WM

Symptom Chart

Numbers are arranged in order of inspection.  
Perform inspections starting with number one and work up.

Items	Symptom	Condition	Diagnostic Item	Reference Page	
				QG18DE (SULEV)	QG18DE (ULEV)
Not Used	Engine cannot start in "P" and "N" positions. <a href="#">AT-223, "2. Engine Cannot Be Started In "P" and "N" Position"</a>	ON vehicle	1. Ignition switch and starter	<a href="#">PG-2, "POWER SUPPLY ROUTING"</a> and <a href="#">SC-9, "STARTING SYSTEM"</a>	
			2. Control cable adjustment	<a href="#">AT-263, "Control Cable Adjustment"</a>	
			3. PNP switch adjustment	<a href="#">AT-263, "Park/Neutral Position (PNP) Switch Adjustment"</a>	
	Engine starts in position other than "N" and "P" positions. <a href="#">AT-223, "2. Engine Cannot Be Started In "P" and "N" Position"</a>	ON vehicle	1. Control cable adjustment	<a href="#">AT-263, "Control Cable Adjustment"</a>	
			2. PNP switch adjustment	<a href="#">AT-263, "Park/Neutral Position (PNP) Switch Adjustment"</a>	
Not Used	Transaxle noise in "P" and "N" positions.	ON vehicle	1. Fluid level	<a href="#">AT-64, "FLUID LEVEL CHECK"</a>

TROUBLE DIAGNOSIS FOR POWER SUPPLY

PF0:0000

Wiring Diagram — AT — MAIN

ECS005WO

AT-MAIN-01

TRANSMISSION CONTROL MODULE TERMINALS AND REFERENCE VALUE BETWEEN TERMINAL AND GROUND

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC) (Approx.)
10	BR/R	POWER SOURCE	WHEN TURNING IGNITION SWITCH TO "ON"	BATTERY VOLTAGE
			WHEN TURNING IGNITION SWITCH TO "OFF"	0V
19	BR/R	POWER SOURCE	WHEN TURNING IGNITION SWITCH TO "ON"	BATTERY VOLTAGE
			WHEN TURNING IGNITION SWITCH TO "OFF"	0V
25	B	GROUND	—	0C
28	R/B	POWER SOURCE (MEMORY BACKUP)	WHEN TURNING IGNITION SWITCH TO "OFF"	BATTERY VOLTAGE
			WHEN TURNING IGNITION SWITCH TO "ON"	BATTERY VOLTAGE
48	B	GROUND	—	0V

## Diagnostic Procedure

### 1. CHECK TCM POWER SOURCE STEP 1

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

OK or NG

- OK    >> GO TO 2.  
NG    >> GO TO 3.

### 2. CHECK TCM POWER SOURCE STEP 2

1. Turn ignition switch to OFF position.
2. Check voltage between TCM terminal 28 and ground.

OK or NG

- OK    >> GO TO 4.  
NG    >> GO TO 3.

### 3. DETECT MALFUNCTIONING ITEM

- Check the following items:
  - Harness for short or open between ignition switch and TCM terminals 10, 19 and 28 (Main harness)
  - Fuse
  - Ignition switch
 Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

OK or NG

- OK    >> GO TO 4.  
NG    >> Repair or replace damaged parts.

---

**4. CHECK TCM GROUND CIRCUIT**

---

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground. Refer to [AT-113, "Wiring Diagram — AT — MAIN"](#).

**Continuity should exist.**

If OK, check harness for short to ground and short to power.

OK or NG

OK >> **INSPECTION END**

NG >> Repair open circuit or short to ground or short to power in harness connectors.

## DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH

PFP:32006

### Description

ECS005WQ

- The PNP switch assembly includes a transmission range switch.
- The transmission range switch detects the selector lever position and sends a signal to the TCM.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
Ⓜ : PNP SW/CIRC Ⓜ : P0705	TCM does not receive the correct voltage signal from the switch based on the gear position.	<ul style="list-style-type: none"> <li>● Harness or connectors (The PNP switch circuit is open or shorted.)</li> <li>● PNP switch</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

Ⓜ With CONSULT-II

1. Turn ignition switch “ON”.

2. Select “DATA MONITOR” mode for “ENGINE” with CONSULT-II.

3. Start engine and maintain the following conditions for at least 5 consecutive seconds.

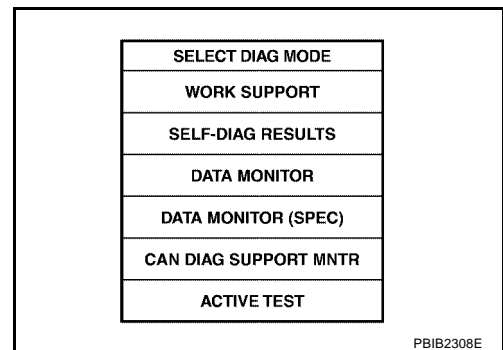

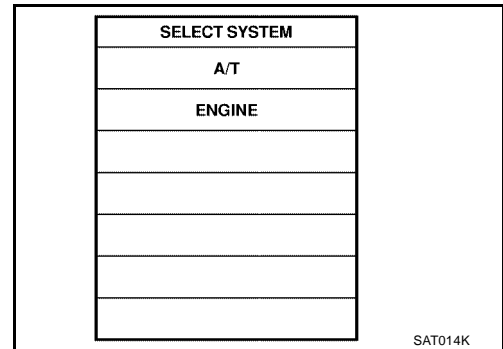

**VHCL SPEED SE: 10 km/h (6 MPH) or more**

**THRTL POS SEN: More than 1.3V**

**Selector lever: D position (OD “ON” or “OFF”)**

Ⓜ With GST

Follow the procedure “With CONSULT-II”.

			WHEN SETTING SELECTOR LEVER TO OTHER POSITIONS	0V

## Diagnostic Procedure

ECS005WS

### 1. CHECK PNP SWITCH CIRCUIT (WITH CONSULT-II)

#### Ⓢ With CONSULT-II

- Turn ignition switch to "ON" position.  
(Do not start engine.)
- Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
- Read out "P/N", "R", "D", "2" and "1" position switches moving selector lever to each position.  
Check the signal of the selector lever position is indicated properly.

#### OK or NG

OK >> GO TO 3.

NG >> Check the following items:

- PNP switch  
Refer to [AT-120, "Component Inspection"](#) .
- Harness for short or open between ignition switch and PNP switch (Main harness)
- Harness for short or open between PNP switch and TCM (Main harness)
- Ignition switch and fuse  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

DATA MONITOR	
MONITORING	
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

SAT701J

## 2. CHECK PNP SWITCH CIRCUIT (WITHOUT CONSULT-II)

⊗ **Without CONSULT-II**

1. Turn ignition switch to "ON" position.  
(Do not start engine.)
2. Check voltage between TCM terminals 26, 27, 34, 35, 36 and ground while moving selector lever through each position.

Lever position	Terminal No.				
	36	35	34	27	26
P, N	B	0	0	0	0
R	0	B	0	0	0
D	0	0	B	0	0
2	0	0	0	B	0
1	0	0	0	0	B

**Voltage**

**B** : Battery voltage

**0** : 0V

OK or NG

OK >> GO TO 3.

NG >> Check the following items:

- PNP switch  
Refer to [AT-120, "Component Inspection"](#) .
- Harness for short or open between ignition switch and PNP switch (Main harness)
- Harness for short or open between PNP switch and TCM (Main harness)
- Ignition switch and fuse  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

## 3. CHECK DTC

Perform [AT-116, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

# DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH

[RE4F03B]

ECS005WT

## Component Inspection PARK/NEUTRAL POSITION SWITCH

1. Check continuity between terminals 1 and 2 and between terminals 3 and 4, 5, 6, 7, 8, 9 while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 — 7	1 — 2
R	3 — 8	
N	3 — 9	1 — 2
D	3 — 6	
2	3 — 5	
1	3 — 4	

2. If NG, check again with control cable disconnected from manual shaft of A/T assembly. Refer to step 1.
3. If OK on step 2, adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#).
4. If NG on step 2, remove PNP switch from A/T and check continuity of PNP switch terminals. Refer to step 1.
5. If OK on step 4, adjust PNP switch. Refer to [AT-263, "Park/Neutral Position \(PNP\) Switch Adjustment"](#).
6. If NG on step 4, replace PNP switch.

DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

PF3:31940

ECS005WU

Description

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approx.)	
A/T fluid temperature sensor	Cold [20°C (68°F)]	1.5V	2.5 kΩ
	↓ Hot [80°C (176°F)]	0.5V	0.3 kΩ

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
ⓘ : ATF TEMP SEN/CIRC ⓘ : P0710	TCM receives an excessively low or high voltage from the sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● A/T fluid temperature sensor</li> </ul>

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

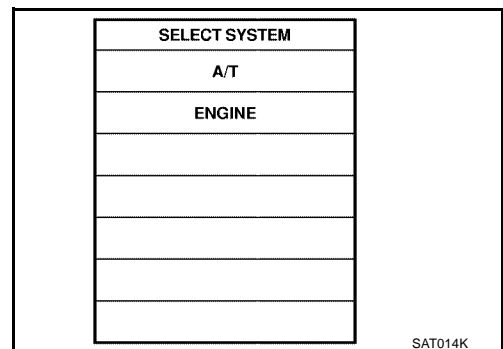

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

# DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

[RE4F03B]

## ④ With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine and maintain the following conditions for at least 10 minutes (Total). (It is not necessary to maintain continuously.)  
**CMPS-RPM (REF): 450 rpm or more**  
**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**THRTL POS SEN: More than 1.2V**  
**Selector lever: D position (OD "ON")**

NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## 5. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

1. Turn ignition switch to "OFF" position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminals 6 and 7 when A/T is cold.

4. Reinstall any part removed.

### OK or NG

- OK (With CONSULT-II)>> GO TO 2.
- OK (Without CONSULT-II)>> GO TO 3.
- NG >> 1. Remove oil pan.

2. Check the following items:
  - A/T fluid temperature sensor  
Refer to [AT-126, "Component Inspection"](#) .
  - Harness of terminal cord assembly for short or open

### Component Inspection A/T FLUID TEMPERATURE SENSOR

ECS005WX

- For removal, refer to [AT-260, "Control Valve Assembly and Accumulators"](#) .
- Check resistance between two terminals while changing temperature as shown at left.

Temperature °C (°F)	Resistance (Approx.)
20 (68)	2.5 kΩ
80 (176)	0.3 kΩ

# DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

[RE4F03B]

## DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

PF0:32702

### Description

ECS005WY

The revolution sensor detects the revolution of the idler gear parking pawl lock gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
<ul style="list-style-type: none"> <li>Ⓜ : VEH SPD SEN/CIR AT</li> <li>Ⓜ : P0720</li> </ul>	TCM does not receive the proper voltage signal from the sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Revolution sensor</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

#### CAUTION:

- Always drive vehicle at a safe speed.
- Be careful not to rev engine into the red zone on the tachometer.

#### NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

Ⓜ With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Drive vehicle and check for an increase of "VHCL/S SE-MTR" value increase.  
If the check result is NG, go to [AT-127, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#).  
If the check result is OK, go to following step.
3. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
4. Start engine and maintain the following conditions for at least 5 consecutive seconds.

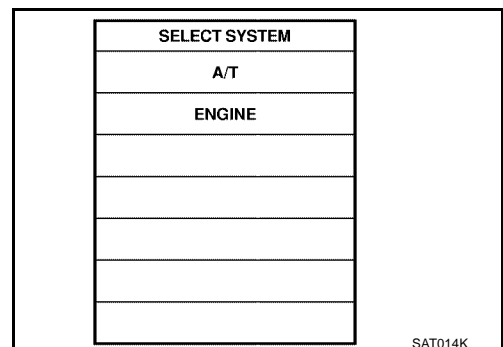

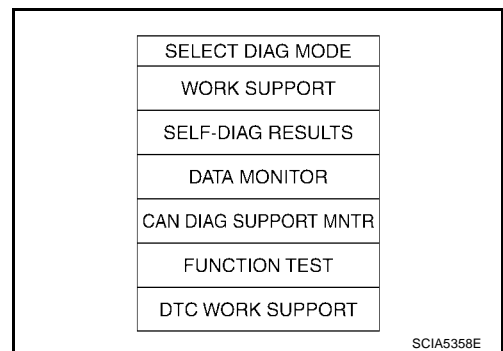

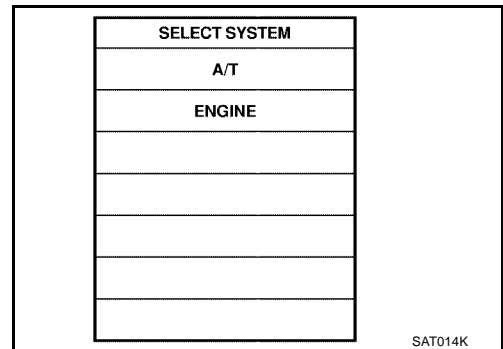

**VHCL SPEED SE: 30 km/h (19 MPH) or more**

**THRTL POS SEN: More than 1.2V**

**Selector lever: D position (OD "ON")**

**Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

If the check result is NG, go to [AT-130, "Diagnostic Procedure"](#).

# DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

[RE4F03B]

If the check result is OK, go to following step.

5. Maintain the following conditions for at least 5 consecutive seconds.

**CMPS-RPM (REF): 3,500 rpm or more**

**THRTL POS SEN: More than 1.2V**

**Selector lever: D position (OD "ON")**

**Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

**With GST**

Follow the procedure "With CONSULT-II".

**DTC P0725 ENGINE SPEED SIGNAL**

**Description**

The engine speed signal is sent from the ECM to the TCM.

**ON BOARD DIAGNOSIS LOGIC**

Diagnostic trouble code	Malfunction is detected when ...	Check item (Possible cause)
(H) : ENGINE SPEED SIG (GST) : P0725	TCM does not receive the proper voltage signal from ECM.	● Harness or connectors (The sensor circuit is open or shorted.)

**DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

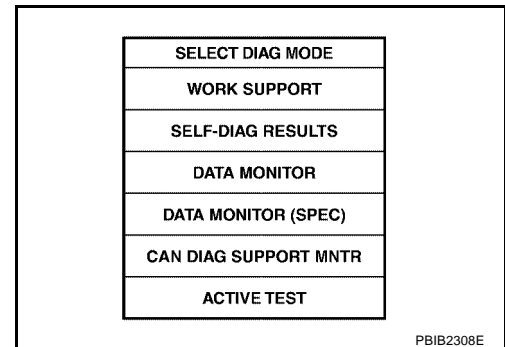

After the repair, perform the following procedure to confirm the malfunction is eliminated.

(H) With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine and maintain the following conditions for at least 10 consecutive seconds.  
**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**THRTL POS SEN: More than 1.2V**  
**Selector lever: D position (OD "ON")**

(GST) With GST

Follow the procedure "With CONSULT-II".

R POSITION SW	OFF

SAT645J

### 3. CHECK INPUT SIGNAL (WITHOUT CONSULT-II)

#### ⊗ Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 39 and ground.

Voltage (Idle speed) : Refer to [AT-110, "TCM Terminals and Reference Value"](#) .

#### OK or NG

OK >> GO TO 4.

NG >> Check the following items:

- Harness for short or open between TCM and ECM
- Resistor and ignition coil  
Refer to [EC-38, "SYSTEM DESCRIPTION"](#) [QG18DE (ULEV)] or [EC-619, "SYSTEM DESCRIPTION"](#) [QG18DE (SULEV)].

### 4. CHECK DTC

Perform [AT-132, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

#### OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**DTC P0731 A/T 1ST GEAR FUNCTION**

**Description**

ECS005X4

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into first gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

**ON BOARD DIAGNOSTIC LOGIC**

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is higher than the position (1st) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when either shift solenoid valve A is stuck open or shift solenoid valve B is stuck open.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve A stuck open	2*	2	3	3
In case of gear position with shift solenoid valve B stuck open	4*	3	3	4

\*: P0731 is detected.

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
 : A/T 1ST GR FNCTN  : P0731	A/T cannot be shifted to the 1st gear position even if electrical circuit is good.	<ul style="list-style-type: none"> <li>● Shift solenoid valve A</li> <li>● Shift solenoid valve B</li> <li>● Each clutch</li> <li>● Hydraulic control circuit</li> </ul>

**DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE**

**CAUTION:**

- Always drive vehicle at a safe speed.
- Be careful not to rev engine into the red zone on the tachometer.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

**TESTING CONDITION:**

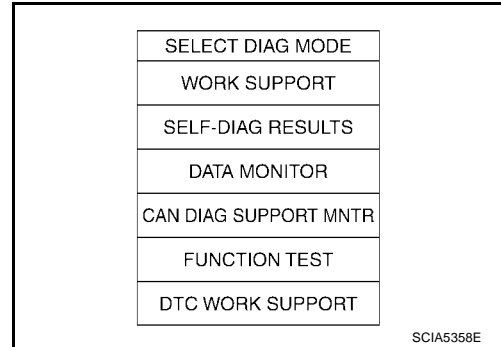

Always drive vehicle on a level road to improve the accuracy of test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

**With CONSULT-II**

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "1ST GR FNCTN P0731" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".
4. Accelerate vehicle to 20 to 25 km/h (12 to 16 MPH) under the following condition and release the accelerator pedal completely.  
**THROTTLE POSI: Less than 1.0/8 (at all times during step 4)**  
**Selector lever: D position (OD "ON")**
  - Check that "GEAR" shows "2" after releasing pedal.
5. Depress accelerator pedal to WOT (more than 7.0/8 of "THROTTLE POSI") quickly from a speed of 20 to 25 km/h (12 to 16 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)  
 If the check result NG appears on CONSULT-II screen, go to [AT-139, "Diagnostic Procedure"](#).  
 If "STOP VEHICLE" appears on CONSULT-II screen, go to the following step.
  - Check that "GEAR" shows "1" when depressing accelerator pedal to WOT.
  - If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAGNOSIS" for "ENGINE". In case a 1st trip DTC other than P0731 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".
6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0731 exists.	2 → 2 → 3 → 3
	4 → 3 → 3 → 4

8. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "Diagnostic Procedure".)  
 Refer to [AT-139, "Diagnostic Procedure"](#).  
 Refer to [AT-386, "Shift Schedule"](#).

**With GST**

Follow the procedure "With CONSULT-II".

### 3. CHECK DTC

Perform [AT-136, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#).

#### OK or NG

- OK >> **INSPECTION END**  
 NG >> Check transaxle internal components (clutch, brake, etc.).

## Component Inspection SHIFT SOLENOID VALVE A AND B

- Refer to [AT-260, "Control Valve Assembly and Accumulators"](#) .

### Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω
Shift solenoid valve B	1		5 - 20Ω

### Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

DTC P0732 A/T 2ND GEAR FUNCTION

PF3:31940

ECS005X8

Description

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into second gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is higher than the position (2nd) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when shift solenoid valve B is stuck open.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve B stuck open	4	3*	3	4

\*: P0732 is detected.

- Refer to [AT-260, "REMOVAL"](#) .

### Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω

### Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

DTC P0734 A/T 4TH GEAR FUNCTION

PFP:31940

Description

ECS005XG

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into fourth gear position or when the line pressure is low. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning oil pump or torque converter clutch, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approx.)
Line pressure solenoid valve duty	Small throttle opening (Low line pressure)	24%
	↓ Large throttle opening (High line pressure)	↓ 95%

ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is much lower than the position (4th) supposed by TCM, the slip ratio will be much less than normal. In case the ratio does not reach the specified value, TCM judges this diagnosis malfunction. This malfunction will be caused when shift solenoid valve B is stuck closed.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve B stuck closed	1	2	2	1*

\*: P0734 is detected.

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)

 : P0734		

## DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

- Always drive vehicle at a safe speed.
- If conducting this “DTC CONFIRMATION PROCEDURE” again, always turn ignition switch “OFF” and wait at least 5 seconds before continuing.
- Be careful not to rev engine into the red zone on the tachometer.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

**TESTING CONDITION:**

Always drive vehicle on a level road to improve the accuracy of test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

Ⓟ With CONSULT-II

1. Start engine and select “DATA MONITOR” mode for “A/T” with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.

**FLUID TEMP SEN: 0.4 - 1.5V**

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).

3. Select “4TH GR FNCTN P0734” of “DTC WORK SUPPORT” mode for “A/T” with CONSULT-II and touch “START”.
4. Accelerate vehicle to 45 to 55 km/h (28 to 34 MPH) under the following condition and release the accelerator pedal completely.

**THROTTLE POSI: Less than 5.5/8 (at all times during step 4)**

**Selector lever: D position (OD “ON”)**

- Check that “GEAR” shows “3” after releasing pedal.
- 5. Depress accelerator pedal steadily with 1.0/8 - 2.0/8 of “THROTTLE POSI” from a speed of 45 to 55 km/h (28 to 34 MPH) until “TESTING” has turned to “STOP VEHICLE” or “COMPLETED”. (It will take approximately 3 seconds.)  
If the check result NG appears on CONSULT-II screen, go to [AT-155, "Diagnostic Procedure"](#) .  
If “STOP VEHICLE” appears on CONSULT-II screen, go to following step.
- Check that “GEAR” shows “4” when depressing accelerator pedal with 1.0/8 - 2.0/8 of “THROTTLE POSI”.
- If “TESTING” does not appear on CONSULT-II for a long time, select “SELF-DIAGNOSIS” for “ENGINE”. In case a 1st trip DTC other than P0734 is shown, refer to applicable “TROUBLE DIAGNOSIS FOR DTC”.
- 6. Stop vehicle.
- 7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0734 exists.	1 → 2 → 2 → 1

8. Make sure that “OK” is displayed. (If “NG” is displayed, refer to “Diagnostic Procedure”.)  
Refer to [AT-155, "Diagnostic Procedure"](#) .  
Refer to [AT-386, "Shift Schedule"](#) .

## With GST

Follow the procedure "With CONSULT-II".

TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
1	R/W	LINE PRESSURE SOLENOID VALVE	WHEN RELEASING ACCELERATOR PEDAL (ENGINE WARM)	1.5 - 2.5V
			WHEN DEPRESSING ACCELERATOR PEDAL (ENGINE WARM)	0V
2	P/B	LINE PRESSURE SOLENOID VALVE (WITH DROPPING RESISTOR)	WHEN RELEASING ACCELERATOR PEDAL (ENGINE WARM)	5 - 14V
			WHEN DEPRESSING ACCELERATOR PEDAL (ENGINE WARM)	0.5V OR LESS
11	L/W	SHIFT SOLENOID VALVE A	WHEN SHIFT SOLENOID VALVE A OPERATES	BATTERY VOLTAGE
			WHEN SHIFT SOLENOID VALVE A DOES NOT OPERATES	0V
12	L/Y	SHIFT SOLENOID VALVE B	WHEN SHIFT SOLENOID VALVE B OPERATES	BATTERY VOLTAGE
			WHEN SHIFT SOLENOID VALVE B DOES NOT OPERATES	0V

## Diagnostic Procedure

ECS005XI

### 1. CHECK SHIFT UP (D3 TO D4)

During "Cruise Test – Part 1" ([AT-78, "Cruise Test — Part 1"](#)), does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 9.
- No >> GO TO 2.

### 2. CHECK LINE PRESSURE

Perform line pressure test.

Refer to [AT-68, "Line Pressure Test"](#).

Engine speed rpm	Line pressure kPa (kg/cm <sup>2</sup> , psi)	
	D, 2 and 1 positions	R position
Idle	500 (5.1, 73)	778 (7.9, 113)
Stall	1,167 (11.9, 169)	1,816 (18.5, 263)

LAT236

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 6.

### 3. CHECK SOLENOID VALVES

1. Remove control valve assembly.  
Refer to [AT-260, "REMOVAL"](#) .
2. Refer to [AT-159, "SOLENOID VALVES"](#) .

OK or NG

- OK >> GO TO 4.  
 NG >> Replace solenoid valve assembly.

### 4. CHECK CONTROL VALVE

1. Disassemble control valve assembly.  
Refer to [AT-299, "Disassembly"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

OK or NG

- OK >> GO TO 5.  
 NG >> Repair control valve.

### 5. CHECK SHIFT UP (D3 TO D4 )

Does A/T shift from D3 to D4 at the specified speed?

OK or NG

- OK >> GO TO 9.  
 NG >> Check transaxle internal components (clutch, brake, etc.).

**6. CHECK LINE PRESSURE SOLENOID VALVE**

1. Remove control valve assembly.  
Refer to [AT-260, "REMOVAL"](#) .
2. Refer to [AT-159, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
 NG >> Replace solenoid valve assembly.

**7. CHECK CONTROL VALVE**

1. Disassemble control valve assembly.  
Refer to [AT-299, "Disassembly"](#) .
2. Check line pressure circuit valves for sticking.
  - Pressure regulator valve
  - Pilot valve
  - Pressure modifier valve

OK or NG

- OK >> GO TO 8.  
 NG >> Repair control valve.

**8. CHECK SHIFT UP (D3 TO D4 )**

Does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 9.  
 No >> Check transaxle internal components (clutch, brake, etc.).

---

## 9. CHECK DTC

---

Perform [AT-152, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

### OK or NG

OK >> **INSPECTION END**

NG >> Perform "Cruise Test — Part 1" ([AT-78, "Cruise Test — Part 1"](#)) again and return to the start point of this test group.

## Component Inspection SOLENOID VALVES

- Refer to [AT-260, "REMOVAL"](#).

### Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω
Shift solenoid valve B	1		5 - 20Ω
Line pressure solenoid valve	4		2.5 - 5Ω

### Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

# DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

[RE4F03B]

## DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PF3:31940

### Description

ECS005XK

The torque converter clutch solenoid valve is activated, with the gear in "D4", by the TCM in response to signals sent from the vehicle speed sensor and throttle position sensor [accelerator pedal position (APP) sensor]s. Lock-up piston operation will then be controlled.

Lock-up operation, however, is prohibited when A/T fluid temperature is too low.

When the accelerator pedal is depressed (less than 2/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

WAT237

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approx.)
Torque converter clutch solenoid valve duty	Lock-up "OFF"	4%
	↓ Lock-up "ON"	↓ 94%

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: TCC SOLENOID/CIRC : P0740	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	<ul style="list-style-type: none"> <li>● Harness or connectors (The solenoid circuit is open or shorted.)</li> <li>● T/C clutch solenoid valve</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

#### NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Turn ignition switch "ON".

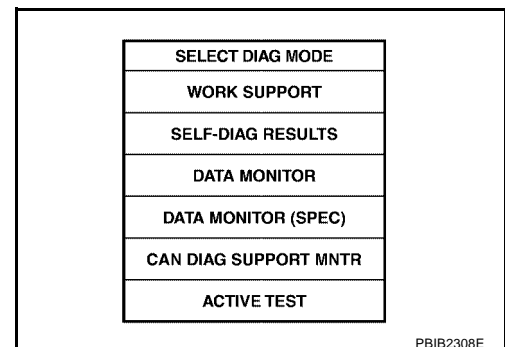

SAT014K

2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II and wait at least 1 second.

With GST

Follow the procedure "With CONSULT-II".

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND GROUND

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
3	Y/G	TORQUE CONVERTER CLUTCH SOLENOID VALVE	WHEN A/T PERFORMS LOCK-UP	8 - 15V
			WHEN A/T DOES NOT PERFORM LOCK-UP	0V

## Diagnostic Procedure

ECS005XM

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to "OFF" position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 5 and ground.

OK or NG

OK >> GO TO 2.

NG >> 1. Remove oil pan. Refer to [AT-260, "REMOVAL"](#).

2. Check the following items:

- Torque converter clutch solenoid valve  
Refer to [AT-163, "TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#).
- Harness of terminal cord assembly for short or open

### 2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect TCM harness connector F56.
3. Check continuity between terminal cord assembly F50 terminal 5 (Y/G) and TCM harness connector terminal 3 (Y/G).

**Continuity should exist.**

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK DTC

Perform [AT-160, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#).

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

# DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

# DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

[RE4F03B]

## DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

PF3:31940

### Description

ECS005X0

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into fourth gear position or the torque converter clutch does not lock up as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning oil pump or torque converter clutch, etc.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approx.)
Torque converter clutch solenoid valve duty	Lock-up "OFF"	4%
	↓ Lock-up "ON"	↓ 94%

## ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is much lower than the position (4th) supposed by TCM, the slip ratio will be much less than normal. In case the ratio does not reach the specified value, TCM judges this diagnosis malfunction. This malfunction will be caused when shift solenoid valve B is stuck closed.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve B stuck closed	1	2	2	1*

\*: P0744 is detected.

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
 : A/T TCC S/V FNCTN  : P0744	A/T cannot perform lock-up even if electrical circuit is good.	<ul style="list-style-type: none"> <li>● Torque converter clutch solenoid valve</li> <li>● Line pressure solenoid valve</li> <li>● Each clutch</li> <li>● Hydraulic control circuit</li> </ul>

## DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

### CAUTION:

Always drive vehicle at a safe speed.

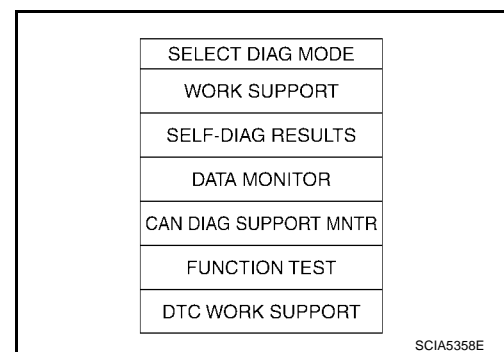

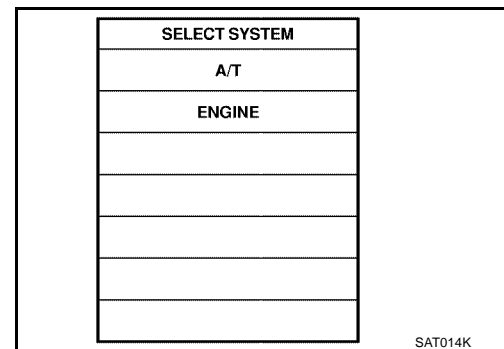

### NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

 With CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "TCC S/V FNCTN P0744" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

## DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

[RE4F03B]

- Accelerate vehicle to more than 80 km/h (50 MPH) and maintain the following condition continuously until "TESTING" has turned to "COMPLETE". (It will take approximately 30 seconds after "TESTING" shows.)

**THROTTLE POSI: 1.0/8 - 2.0/8 (at all times during step 4)**

**Selector lever: D position (OD "ON")**

**TCC S/V DUTY: More than 94%**

**VHCL/S SE-A/T: Constant speed of more than 80 km/h (50 MPH)**

- Check that "GEAR" shows "4".
  - If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAGNOSIS". In case a 1st trip DTC other than P0744 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".
- Make sure that "OK" is displayed. (If "NG" is displayed, refer to [AT-168, "Diagnostic Procedure"](#) .)  
Refer to [AT-168, "Diagnostic Procedure"](#) .  
Refer to [AT-386, "Shift Schedule"](#) .

### With GST

Follow the procedure "With CONSULT-II".

## Diagnostic Procedure

ECS005XQ

### 1. CHECK SHIFT UP (D3 TO D4)

During "Cruise Test – Part 1" ([AT-78, "Cruise Test — Part 1"](#)), does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 10.
- No >> GO TO 2.

### 2. CHECK LINE PRESSURE

Perform line pressure test.

Refer to [AT-68, "Line Pressure Test"](#).

Engine speed rpm	Line pressure kPa (kg/cm <sup>2</sup> , psi)	
	D, 2 and 1 positions	R position
Idle	500 (5.1, 73)	778 (7.9, 113)
Stall	1,167 (11.9, 169)	1,816 (18.5, 263)

LAT236

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 6.

### 3. CHECK CONTROL VALVE

1. Disassemble control valve assembly.  
Refer to [AT-299, "Disassembly"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair control valve.

### 4. CHECK SHIFT UP (D<sub>3</sub> TO D<sub>4</sub>)

Does A/T shift from D<sub>3</sub> to D<sub>4</sub> at the specified speed?

#### Yes or No

- Yes >> GO TO 5.  
No >> Check transaxle internal components (clutch, brake, etc.).

### 5. CHECK DTC

Perform [AT-165, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

#### OK or NG

- OK >> **INSPECTION END**  
NG >> GO TO 10. Check lock-up condition.

## 6. CHECK LINE PRESSURE SOLENOID VALVE

1. Remove control valve assembly.  
Refer to [AT-260, "REMOVAL"](#) .
2. Check line pressure solenoid valve operation.  
Refer to [AT-178, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 7.  
NG >> Replace solenoid valve assembly.

## 7. CHECK CONTROL VALVE

1. Disassemble control valve assembly.  
Refer to [AT-299, "Disassembly"](#) .
2. Check line pressure circuit valves for sticking.
  - Pressure regulator valve
  - Pilot valve
  - Pressure modifier valve

OK or NG

- OK >> GO TO 8.  
NG >> Repair control valve.

## 8. CHECK SHIFT UP (D3 TO D4 )

Does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 9.  
No >> Check transaxle internal components (clutch, brake, etc.).

9. CHECK DTC

Perform [AT-165, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 10. Check for proper lock-up.

10. CHECK LOCK-UP CONDITION

During "Cruise Test – Part 1" ([AT-78, "Cruise Test — Part 1"](#) ), does A/T perform lock-up at the specified speed?

Yes or No

- Yes >> Perform "Cruise Test – Part 1" ([AT-78, "Cruise Test — Part 1"](#) ) again and return to the start point of this test group.
- No >> GO TO 11.

11. CHECK TORQUE CONVERTER CLUTCH SOLENOID VALVE

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check torque converter clutch solenoid valve operation. Refer to [AT-163, "TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#)

OK or NG

- OK >> GO TO 12.
- NG >> Replace solenoid valve assembly.

## 12. CHECK CONTROL VALVE

1. Disassemble control valve assembly.  
Refer to [AT-299, "Disassembly"](#) .
2. Check control valves for sticking.
  - Torque converter clutch control valve
  - Torque converter clutch relief valve

OK or NG

- OK >> GO TO 13.  
NG >> Repair control valve.

## 13. CHECK LOCK-UP CONDITION

Does A/T perform lock-up at the specified speed?

Yes or No

- Yes >> GO TO 14.  
No >> Check transaxle internal components (clutch, brake, etc.).

## 14. CHECK DTC

Perform [AT-165, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

OK or NG

- OK >> **INSPECTION END**  
NG >> Perform "Cruise Test — Part 1" ([AT-78, "Cruise Test — Part 1"](#)) again and return to the start point of this test group.

## Component Inspection SOLENOID VALVES

- Refer to [AT-260, "REMOVAL"](#).

### Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Line pressure solenoid valve	4	Ground	2.5 - 5Ω
Torque converter clutch solenoid valve	5		5 - 20Ω

### Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

DTC P0745 LINE PRESSURE SOLENOID VALVE

PF3:31940

Description

ECS005XS

The line pressure solenoid valve regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

The line pressure duty cycle value is not consistent when the closed throttle position switch is "ON". To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is "OFF".

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approx.)
Line pressure solenoid valve duty	Small throttle opening (Low line pressure)	24%
	↓ Large throttle opening (High line pressure)	↓ 95%

NOTE:

The line pressure duty cycle value is not consistent when the closed throttle position switch is "ON". To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is "OFF".

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
ⓘ : L/PRESS SOL/CIRC ⓘ : P0745	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	<ul style="list-style-type: none"> <li>● Harness or connectors (The solenoid circuit is open or shorted.)</li> <li>● Line pressure solenoid valve</li> </ul>

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

ⓘ With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

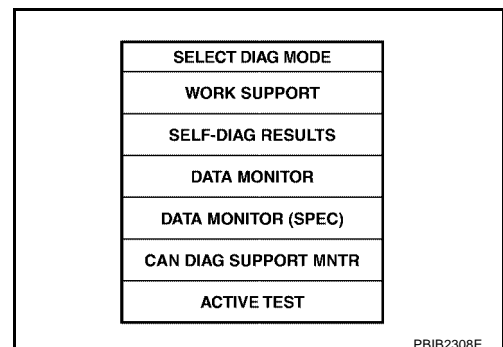

SAT014K

2. Depress accelerator pedal completely and wait at least 5 seconds.

ⓘ With GST

Follow the procedure "With CONSULT-II".

DTC P0750 SHIFT SOLENOID VALVE A

Description

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and throttle position sensor [accelerator pedal position (APP) sensor]. Gears will then be shifted to the optimum position.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
: SFT SOL A/CIRC : P0750	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	<ul style="list-style-type: none"> <li>● Harness or connectors (The solenoid circuit is open or shorted.)</li> <li>● Shift solenoid valve A</li> </ul>

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

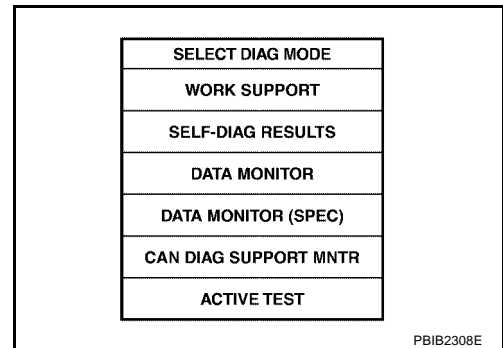

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for “ENGINE” with CONSULT-II.
2. Start engine.
3. Drive vehicle in D position and allow the transmission to shift “1” → “2” (“GEAR”).

**With GST**

Follow the procedure “With CONSULT-II”.

			WHEN SHIFT SOLENOID VALVE A DOES NOT OPERATE	0V

WAT345

## Diagnostic Procedure

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to "OFF" position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 2 and ground.

OK or NG

OK >> GO TO 2.

- NG >> 1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
- Shift solenoid valve A  
Refer to [AT-183, "Component Inspection"](#) .
  - Harness of terminal cord assembly for short or open

### 2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 2 and TCM harness connector terminal 11.

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK DTC

Perform [AT-180, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

OK or NG

OK >> **INSPECTION END**

- NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

# DTC P0750 SHIFT SOLENOID VALVE A

[RE4F03B]

ECS005XZ

## Component Inspection SHIFT SOLENOID VALVE A

- Refer to [AT-183, "Component Inspection"](#).

## Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω

## Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

## DTC P0755 SHIFT SOLENOID VALVE B

PFP:31940

### Description

ECS005Y0

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed and throttle position sensors. Gears will then be shifted to the optimum position.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
 : SFT SOL B/CIRC  : P0755	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	<ul style="list-style-type: none"> <li>● Harness or connectors (The solenoid circuit is open or shorted.)</li> <li>● Shift solenoid valve B</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

 With CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for “ENGINE” with CONSULT-II.
2. Start engine.
3. Drive vehicle in D position and allow the transmission to shift 1 → 2 → 3 (“GEAR”).

 **With GST**

Follow the procedure “With CONSULT-II”.

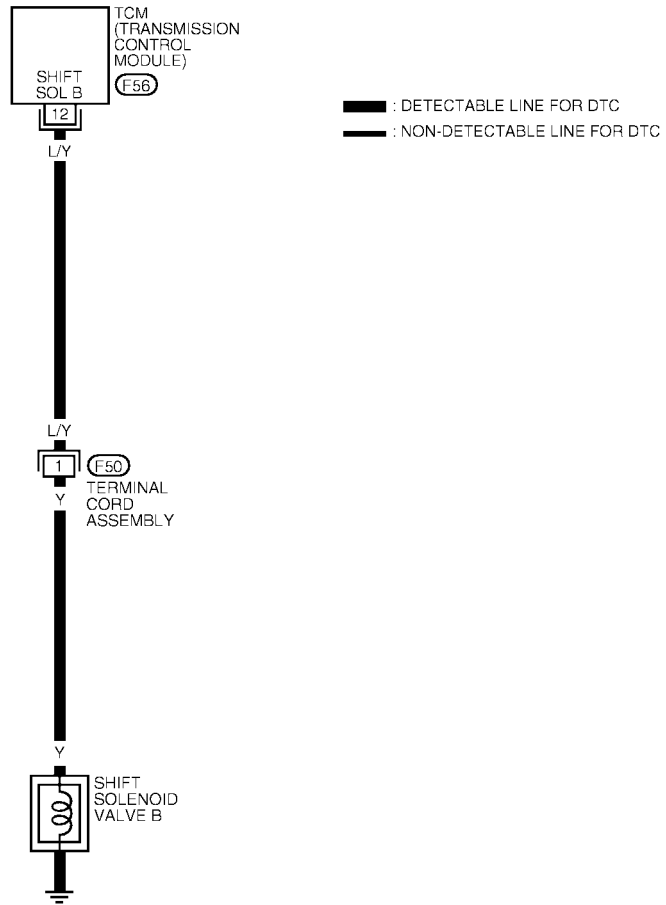

# DTC P0755 SHIFT SOLENOID VALVE B

WAT344

## Diagnostic Procedure

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to "OFF" position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 1 and ground.

#### OK or NG

OK >> GO TO 2.

- NG >> 1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
- Shift solenoid valve B  
Refer to [AT-187, "Component Inspection"](#) .
  - Harness of terminal cord assembly for short or open

### 2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 1 and TCM harness connector terminal 12.

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

#### OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

### 3. CHECK DTC

Perform [AT-184, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

#### OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

# DTC P0755 SHIFT SOLENOID VALVE B

[RE4F03B]

ECS005Y3

## Component Inspection SHIFT SOLENOID VALVE B

- Refer to [AT-260, "REMOVAL"](#).

## Resistance Check

- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve B	1	Ground	5 - 20Ω

## Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

[RE4F03B]

## DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

PFM:22560

### Description

ECS006GS

The throttle position sensor [accelerator pedal position (APP) sensor] is part of the system that controls throttle position. This system also uses an electric throttle control actuator which consists of a throttle control motor and throttle position sensors. Accelerator pedal position signal is sent to the ECM.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Throttle position sensor [accelerator pedal position (APP) sensor]	Fully-closed throttle	Approximately 0.5V
	Fully-open throttle	Approximately 4V

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

[RE4F03B]

## On Board Diagnosis Logic

ECS006GT

Diagnostic trouble code TP SEN/CIRC A/T with CONSULT-II or P1705 without CONSULT-II is detected when TCM receives an excessively low or high voltage from the ECM.

## Possible Cause

ECS006GU

Check the following items.

- Harness or connectors  
(The sensor circuit is open or shorted.)

## Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS006GV

### CAUTION:

Always drive vehicle at a safe speed.

### NOTE:

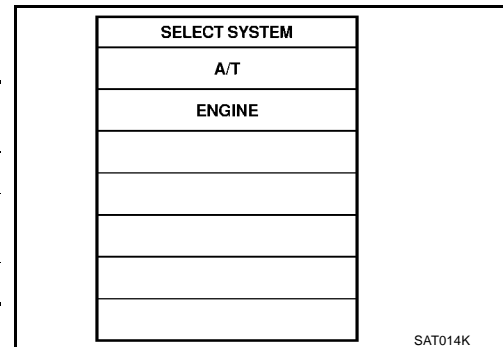

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

## WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for "A/T" with CONSULT-II.

Accelerator pedal condition	THRTL POS SEN	CLOSED THL/SW	W/O THRL/P-SW
Fully released	Less than 4.7V	ON	OFF
Partially depressed	0.1 - 4.6V	OFF	OFF
Fully depressed	1.9 - 4.6V	OFF	ON

If the check result is NG, go to [AT-192, "Diagnostic Procedure"](#).  
If the check result is OK, go to following step.

2. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
3. Start engine and maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.

**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**THRTL POS SEN: Approximately 3V or less**  
**Selector lever: D position (O/D ON)**

If the check result is NG, go to [AT-192, "Diagnostic Procedure"](#).  
If the check result is OK, go to following step.

4. Maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.

**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**Accelerator pedal: Wide open throttle**  
**Selector lever: D position (O/D ON)**

42	B/W	SENSOR GROUND	—	—

## Diagnostic Procedure

ECS006GX

### 1. CHECK DTC WITH ECM

- Check P code with CONSULT-II "ENGINE".  
Turn ignition switch ON and select "SELF DIAGNOSTIC RESULTS" mode for "ENGINE" with CONSULT-II.

Refer to [EC-72, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (ULEV)] or [EC-653, "Malfunction Indicator Lamp \(MIL\)"](#) [QG18DE (SULEV)].

OK or NG

OK (with CONSULT-II)>>GO TO 2.

OK (without CONSULT-II)>>GO TO 3.

NG >> Check throttle position sensor [accelerator pedal position (APP) sensor] circuit for engine control.  
Refer to [EC-260, "DTC P0222, P0223 TP SENSOR"](#) [QG18DE (ULEV)] or [EC-818, "DTC P0222, P0223 TP SENSOR"](#) [QG18DE (SULEV)] and [EC-503, "DTC P2122, P2123 APP SENSOR"](#) [QG18DE (ULEV)] or [EC-1125, "DTC P2122, P2123 APP SENSOR"](#) [QG18DE (SULEV)].

### 2. CHECK INPUT SIGNAL (WITH CONSULT-II)

Ⓜ With CONSULT-II

- Turn ignition switch to ON position.  
(Do not start engine.)
- Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
- Read out the value of "THRTL POS SEN".

DATA MONITOR	
MONITORING	VALUE
VHCL/S SE-A/T	XXX km/h
VHCL/S SE-MTR	XXX km/h
THRTL POS SEN	XXX V
FLUID TEMP SE	XXX V
BATTERY VOLT	XXX V

SAT614J

**Voltage:**

**Fully-closed throttle :Approximately 0.5V**

**Fully-open throttle :Approximately 4V**

OK or NG

OK >> GO TO 4.

NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor [accelerator pedal position (APP) sensor] circuit. (Main harness)

## 3. CHECK INPUT SIGNAL (WITHOUT CONSULT-II)

### ⊗ Without CONSULT-II

1. Turn ignition switch to ON position. (Do not start engine.)
2. Check voltage between TCM terminals 41 (GY) and 42 (B/W) while accelerator pedal is depressed slowly.

#### Voltage:

Fully-closed throttle valve :Approximately 0.5V

Fully-open throttle valve :Approximately 4V

(Voltage rises gradually in response to throttle position.)

#### OK or NG

OK >> GO TO 4.

NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor [accelerator pedal position (APP) sensor] circuit. (Main harness)

## 4. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

#### OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

## DTC P1760 OVERRUN CLUTCH SOLENOID VALVE

PFP:31940

### Description

ECS005Y8

The overrun clutch solenoid valve is activated by the TCM in response to signals sent from the inhibitor switch, overdrive control switch, vehicle speed and throttle position sensors. The overrun clutch operation will then be controlled.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
⊕ : O/R CLTCH SOL/CIRC ⊕ : P1760	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	<ul style="list-style-type: none"> <li>● Harness or connectors (The solenoid circuit is open or shorted.)</li> <li>● Overrun clutch solenoid valve</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

**TESTING CONDITION:**

Always drive vehicle on a level road to improve accuracy of test.

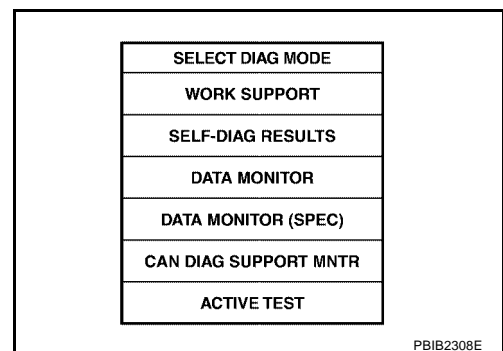

After the repair, perform the following procedure to confirm the malfunction is eliminated.

⊕ With CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for “ENGINE” with CONSULT-II.
2. Start engine.
3. Accelerate vehicle to a speed of more than 10 km/h (6 MPH) with “D” position (OD “ON”).
4. Release accelerator pedal completely with “D” position (OD “OFF”).

⊕ With GST

Follow the procedure “With CONSULT-II”.

Perform [AT-198, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#).

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

### Component Inspection A/T FLUID TEMPERATURE SENSOR

ECS005YF

- Refer to [AT-260, "REMOVAL"](#).
- Check resistance between two terminals while changing temperature as shown.

Temperature °C (°F)	Resistance (approx.)
20 (68)	2.5 kΩ
80 (176)	0.3 kΩ

DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR

PFP:24814

Description

ECS005YG

The vehicle speed sensor-MTR is built into the speedometer assembly. The sensor functions as an auxiliary device to the revolution sensor when it is malfunctioning. The TCM will then use a signal sent from the vehicle speed sensor-MTR.

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check items (Possible cause)
<p>Ⓟ : VHCL SPEED SEN-MTR</p> <p>⊗ : 2nd judgement flicker</p>	TCM does not receive the proper voltage signal from the sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Vehicle speed sensor</li> </ul>

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

CAUTION:

- Always drive vehicle at a safe speed.
- If conducting this “DTC CONFIRMATION PROCEDURE” again, always turn ignition switch “OFF” and wait at least 5 seconds before continuing.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

Ⓟ With CONSULT-II

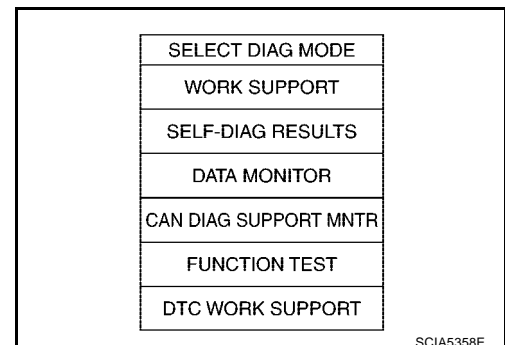

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for “A/T” with CONSULT-II.

2. Start engine and accelerate vehicle from 0 to 25 km/h (0 to 16 MPH).

⊗ Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:  
Selector lever in “D” and vehicle speed higher than 25 km/h (16 MPH).

3. Perform self-diagnosis.  
Refer to "TCM Self-diagnostic Procedure (No Tools)", [AT-52](#),  
["TCM Self-diagnostic Procedure \(No Tools\)"](#) .

## 2. CHECK DTC

---

Perform [AT-204, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## DTC U1000 CAN COMMUNICATION LINE

PFP:23710

### Description

*ECS006GM*

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### On Board Diagnosis Logic

*ECS006GN*

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "CAN COMM CIRCUIT" with CONSULT-II or U1000 without CONSULT-II is detected when TCM cannot communicate to other control unit.

### Possible Cause

*ECS006GO*

Harness or connectors  
(CAN communication line is open or shorted.)

### DTC Confirmation Procedure

*ECS006GP*

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### ④ WITH CONSULT-II

1. Turn ignition switch to ON position. (Do not start engine.)
2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
3. Start engine and wait for at least 6 seconds.
4. If DTC is detected, go to [AT-211, "Diagnostic Procedure"](#).

#### ④ WITH GST

Follow the procedure "WITH CONSULT-II".

# DTC U1000 CAN COMMUNICATION LINE

[RE4F03B]

## Wiring Diagram — AT — CAN

ECS006GQ

### AT-CAN-01

WCWA0072E

**Diagnostic Procedure**

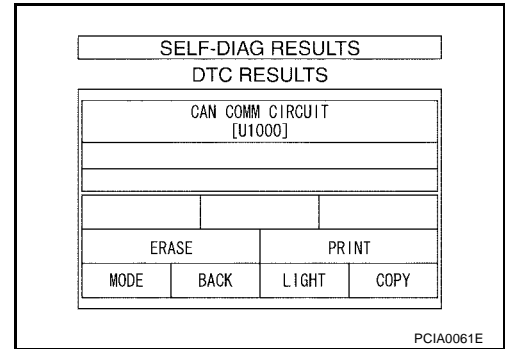

**1. CHECK CAN COMMUNICATION CIRCUIT**

① With CONSULT-II

1. Turn ignition switch "ON" and start engine.
2. Select "SELF-DIAG RESULTS" mode for "A/T" with CONSULT-II.

Is any malfunction of the "CAN COMM CIRCUIT" indicated?

- Yes >> Print out CONSULT-II screen, GO TO LAN section.  
 Refer to [LAN-3, "CAN Communication Unit"](#) .
- No >> Inspection End.

## DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)

PFP:31036

### Description

ECS005YJ

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The unit controls the A/T.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic Trouble Code No.	Malfunction is detected when ...	Check Item (Possible Cause)
④ : CONTROL UNIT (RAM), CONTROL UNIT (ROM)	TCM memory (RAM) or (ROM) is malfunctioning.	● TCM

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**NOTE:**

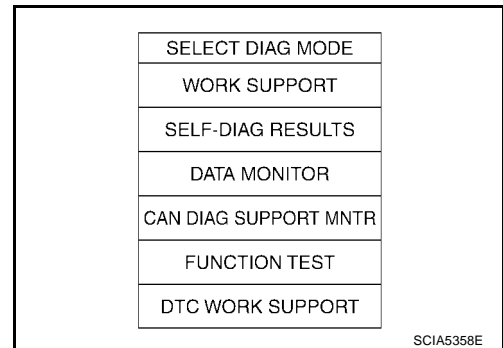

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

④ With CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for A/T with CONSULT-II.
2. Start engine.

3. Run engine for at least 2 seconds at idle speed.

### Diagnostic Procedure

ECS005YK

#### 1. INSPECTION START (WITH CONSULT-II)

④ With CONSULT-II

1. Turn ignition switch “ON” and select “SELF DIAGNOSIS” mode for A/T with CONSULT-II.
2. Touch “ERASE”.

>> GO TO 2.

# DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)

[RE4F03B]

---

## 2. CHECK DTC

---

Perform [AT-212, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

>> GO TO 3.

---

## 3. CHECK DTC AGAIN

---

Is the "CONTROL UNIT (RAM)" or "CONTROL UNIT (ROM)" displayed again?

Yes or No

Yes >> Replace TCM.

No >> **INSPECTION END**

## DTC CONTROL UNIT (EEP ROM)

PFP:31036

### Description

ECS005YL

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The unit controls the A/T.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when ...	Check item (Possible cause)
Ⓜ : CONT UNIT (EEP ROM)	TCM memory (EEP ROM) is malfunctioning.	● TCM

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**NOTE:**

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.

Ⓜ With CONSULT-II

1. Turn ignition switch “ON” and select “DATA MONITOR” mode for A/T with CONSULT-II.
2. Start engine.

3. Run engine for at least 2 seconds at idle speed.

**Diagnostic Procedure**

ECS005YM

**1. CHECK DTC****With CONSULT-II**

1. Turn ignition switch "ON" and select "SELF DIAGNOSIS" mode for A/T with CONSULT-II.
2. Move selector lever to "R" position.
3. Depress accelerator pedal (Full throttle position).
4. Touch "ERASE".
5. Turn ignition switch "OFF" position for 10 seconds.

Perform [AT-214, "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

Is the "CONT UNIT (EEP ROM)" displayed again?

Yes >> Replace TCM.

No >> **INSPECTION END**

32	R	SENSOR POWER	IGNITION SWITCH ON	APPROX. 4.5 - 5.5V
			IGNITION SWITCH OFF	APPROX. 0V

1. O/D OFF Indicator Lamp Does Not Come On

SYMPTOM:

O/D OFF indicator lamp does not come on for about 2 seconds when turning ignition switch to "ON".

1. CHECK TCM POWER SOURCE

1. Turn ignition switch to "ON" position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

**Voltage** : **Battery voltage**

3. Turn ignition switch to "OFF" position.
4. Check voltage between TCM terminal 28 and ground.

**Voltage** : **Battery voltage**

OK or NG

OK >> GO TO 2.

NG >> Check the following items:

- Harness for short or open between ignition switch and TCM (Main harness). Refer to [AT-113, "Wiring Diagram — AT — MAIN"](#) .
- Harness for short or open between battery and TCM (Main harness) Refer to [AT-113, "Wiring Diagram — AT — MAIN"](#) .
- Ignition switch and fuse. Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

2. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground.

**Continuity should exist.**

If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.

NG >> Repair open circuit or short to ground or short to power in harness or connectors. Refer to [AT-113, "Wiring Diagram — AT — MAIN"](#) .

---

### 3. CHECK SELF-DIAGNOSIS RESULTS

---

 With CONSULT-II

Does "SELECTION FORM MENU" in "DATA MONITOR" show damage to O/D OFF indicator lamp (SELF D DP LMP) signal circuit?

 No Tools

Execute the self-diagnosis. Is a malfunction in the CAN communication indicated in the results?

YES or NO

YES >> Check the CAN communication line. Refer to [AT-209, "DTC U1000 CAN COMMUNICATION LINE"](#).

NO >> GO TO 4.

---

### 4. CHECK O/D OFF INDICATOR LAMP CIRCUIT

---

1. Turn ignition switch to "OFF" position.
2. Check the combination meter.  
Refer to [DI-8, "Combination Meter"](#)

OK or NG

OK >> GO TO 5.

NG >> Replace the combination meter.

---

### 5. CHECK SYMPTOM

---

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## 2. Engine Cannot Be Started In "P" and "N" Position

### SYMPTOM:

- Engine cannot be started with selector lever in "P" or "N" position.
- Engine can be started with selector lever in "D", "2", "1" or "R" position.

### 1. CHECK PNP SWITCH CIRCUIT

#### With CONSULT-II

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to PNP switch circuit?

#### Without CONSULT-II

Does self-diagnosis show damage to PNP switch circuit?

#### Yes or No

- Yes >> Check PNP switch circuit. Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) .
- No >> GO TO 2.

### 2. CHECK PNP SWITCH INSPECTION

Check for short or open of PNP switch harness connector terminals 1 and 2.

Refer to [AT-118, "Diagnostic Procedure"](#) .

#### OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace PNP switch.

### 3. CHECK CONTROL CABLE

Check control cable. Refer to [AT-263, "Control Cable Adjustment"](#)

#### OK or NG

- OK >> GO TO 4.
- NG >> Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .

### 4. CHECK STARTING SYSTEM

Check starting system. Refer to [SC-9, "STARTING SYSTEM"](#) .

#### OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

**3. In "P" Position, Vehicle Moves Forward Or Backward When Pushed****SYMPTOM:**

Vehicle moves when it is pushed forward or backward with selector lever in "P" position.

**1. CHECK CONTROL CABLE**

Check control cable. Refer to [AT-263, "Control Cable Adjustment"](#)

**OK or NG**

OK >> GO TO 2.

NG >> Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .

**2. CHECK PARKING COMPONENTS**

Check parking components. Refer to [AT-268, "Components"](#) .

**OK or NG**

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

**4. In "N" Position, Vehicle Moves**

**SYMPTOM:**

Vehicle moves forward or backward when selecting "N" position.

**1. CHECK CONTROL CABLE**

Check control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .

OK or NG

OK >> GO TO 2.

NG >> Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .

**2. CHECK A/T FLUID LEVEL**

Check A/T fluid level again.

OK or NG

OK >> GO TO 3.

NG >> Refill ATF.

**3. CHECK A/T FLUID CONDITION**

1. Remove oil pan.

2. Check A/T fluid condition.

OK or NG

OK >> GO TO 4.

NG >> 1. Disassemble A/T.

2. Check the following items:

- Forward clutch assembly
- Overrun clutch assembly
- Reverse clutch assembly

**4. CHECK SYMPTOM**

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## 5. Large Shock. "N" → "R" Position

### SYMPTOM:

There is large shock when changing from "N" to "R" position.

### 1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to A/T fluid temperature sensor, line pressure solenoid valve or throttle position sensor [accelerator pedal position (APP) sensor] circuit?

#### Yes or No

Yes >> Check damaged circuit. Refer to [AT-121, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#), [AT-174, "DTC P0745 LINE PRESSURE SOLENOID VALVE"](#) or [AT-188, "DTC P1705 THROTTLE POSITION SENSOR \[ACCELERATOR PEDAL POSITION \(APP\) SENSOR\]"](#).

No >> GO TO 2.

### 2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in "D" position. Refer to [AT-68, "Line Pressure Test"](#).

#### OK or NG

OK >> GO TO 3.

NG >> 1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).

2. Check the following items:

- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve
- Oil pump assembly

### 3. CHECK SYMPTOM

Check again.

#### OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**6. Vehicle Does Not Creep Backward In “R” Position**

**SYMPTOM:**

Vehicle does not creep backward when selecting “R” position.

**1. CHECK A/T FLUID LEVEL**

Check A/T fluid level again.

OK or NG

- OK >> GO TO 2.
- NG >> Refill ATF.

**2. CHECK LINE PRESSURE**

Check line pressure at idle with selector lever in “R” position. Refer to [AT-68, "Line Pressure Test"](#).

OK or NG

- OK >> GO TO 3.
- NG >> 1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
  - 2. Check the following items:
    - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
    - Line pressure solenoid valve
  - 3. Disassemble A/T.
  - 4. Check the following item:
    - Oil pump assembly

**3. CHECK STALL TEST**

Check stall revolution with selector lever in “1” and “R” positions.

OK or NG

- OK >> GO TO 4.
- OK in “1” position, NG in “R” position >> 1. Disassemble A/T.
  - 2. Check the following items:
    - Reverse clutch assembly
- NG in both “1” and “R” positions >> GO TO 6.

**4. CHECK A/T FLUID CONDITION**

---

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 6.

**5. CHECK SYMPTOM**

---

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> 1. Perform TCM input/output signal inspection.  
 2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**6. DETECT MALFUNCTIONING ITEM**

---

1. Disassemble A/T.
2. Check the following items:
  - Reverse clutch assembly
  - High clutch assembly
  - Low & reverse brake assembly
  - Forward clutch assembly
  - Overrun clutch assembly

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace damaged parts.

**7. Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position****SYMPTOM:**

Vehicle does not creep forward when selecting “D”, “2” or “1” position.

**1. CHECK A/T FLUID LEVEL**

Check A/T fluid level again.

**OK or NG**

- OK >> GO TO 2.  
 NG >> Refill ATF.

SAT638A

**2. CHECK LINE PRESSURE**

Check line pressure at idle with selector lever in “D” position. Refer to [AT-68, "Line Pressure Test"](#).

**OK or NG**

- OK >> GO TO 3.  
 NG >> 1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).  
 2. Check the following items:  
 - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)  
 - Line pressure solenoid valve  
 3. Disassemble A/T.  
 4. Check the following item:  
 - Oil pump assembly

SAT494G

**3. CHECK STALL TEST**

Check stall revolution with selector lever in “D” position. Refer to [AT-64, "Stall Test"](#).

**OK or NG**

- OK >> GO TO 4.  
 NG >> GO TO 6.

SAT493G

**4. CHECK A/T FLUID CONDITION**

---

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 6.

**5. CHECK SYMPTOM**

---

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> 1. Perform TCM input/output signal inspection.  
 2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**6. DETECT MALFUNCTIONING ITEM**

---

1. Disassemble A/T.
2. Check the following items:
  - Forward clutch assembly
  - Forward one-way clutch
  - Low one-way clutch
  - Reverse clutch assembly
  - High clutch assembly

OK or NG

- OK >> GO TO 5.  
 NG >> Repair or replace damaged parts.

**8. Vehicle Cannot Be Started From D1**

**SYMPTOM:**

Vehicle cannot be started from D1 on Cruise Test — Part 1.

**1. CHECK SYMPTOM**

Is "6. Vehicle Does Not Creep Backward In R Position" OK?

Yes or No

Yes >> GO TO 2.

No >> Go to [AT-227, "6. Vehicle Does Not Creep Backward In "R" Position"](#) .

**2. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to vehicle speed sensor-A/T (revolution sensor), overrun clutch solenoid valve, torque converter clutch solenoid valve, shift solenoid valve A, B or vehicle speed sensor-MTR after cruise test?

Yes or No

Yes >> Check damaged circuit. Refer to [AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#) , [AT-160, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#) , [AT-180, "DTC P0750 SHIFT SOLENOID VALVE A"](#) , [AT-184, "DTC P0755 SHIFT SOLENOID VALVE B"](#) , [AT-194, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"](#) or [AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"](#) .

No >> GO TO 3.

**3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-186, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (ULEV)] or [EC-818, "DTC P0222, P0223 TP SENSOR"](#) [QG18DE (SULEV)].

OK or NG

OK >> GO TO 4.

NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**4. CHECK LINE PRESSURE**

Check line pressure at stall point with selector lever in "D" position. Refer to [AT-68, "Line Pressure Test"](#) .

OK or NG

OK >> GO TO 5.

NG >> GO TO 8.

**5. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 8.

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 7.  
 NG >> Repair or replace damaged parts.

**7. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> 1. Perform TCM input/output signal inspection.  
 2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**8. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - High clutch assembly
  - Torque converter
  - Oil pump assembly
  - Reverse clutch assembly
  - Low and reverse brake assembly

OK or NG

- OK >> GO TO 7.

**9. A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2****SYMPTOM:**

A/T does not shift from D1 to D2 at the specified speed.

A/T does not shift from D4 to D2 when depressing accelerator pedal fully at the specified speed.

**1. CHECK SYMPTOM**

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1 " OK?

Yes or No

Yes >> GO TO 2.

No >> Go to [AT-229, "7. Vehicle Does Not Creep Forward In "D", "2" Or "1" Position"](#) , [AT-231, "8. Vehicle Cannot Be Started From D1"](#) .

**2. CHECK CONTROL CABLE**

Check control cable. Refer to [AT-263, "Control Cable Adjustment"](#)

OK or NG

OK >> GO TO 3.

NG >> Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .

**3. CHECK VEHICLE SPEED SENSOR-A/T AND CHECK VEHICLE SPEED SENSOR-MTR CIRCUIT**

Check vehicle speed sensor-A/T (revolution sensor) and vehicle speed sensor-MTR circuit. Refer to [AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#) , [AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"](#) .

OK or NG

OK >> GO TO 4.

NG >> Repair or replace vehicle speed sensor-A/T (revolution sensor) and vehicle speed sensor-MTR circuits.

**4. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-186, "DTC P0122, P0123 TP SENSOR" \[QG18DE \(ULEV\)\]](#) or [EC-765, "DTC P0122, P0123 TP SENSOR" \[QG18DE \(SULEV\)\]](#).

OK or NG

OK >> GO TO 5.

NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

## 5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

### OK or NG

- OK >> GO TO 6.  
NG >> GO TO 8.

## 6. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

### OK or NG

- OK >> GO TO 7.  
NG >> Repair or replace damaged parts.

## 7. CHECK SYMPTOM

Check again.

### OK or NG

- OK >> **INSPECTION END**  
NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## 8. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - Brake band

### OK or NG

- OK >> GO TO 7.  
NG >> Repair or replace damaged parts.

## 10. A/T Does Not Shift: D2 → D3

### SYMPTOM:

A/T does not shift from D2 to D3 at the specified speed.

### 1. CHECK SYMPTOM

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1" OK?

Yes or No

Yes >> GO TO 2.

No >> Go to [AT-229, "7. Vehicle Does Not Creep Forward In "D", "2" Or "1" Position"](#) , [AT-231, "8. Vehicle Cannot Be Started From D1"](#) .

### 2. CHECK PNP SWITCH CIRCUIT

#### With CONSULT-II

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to PNP switch circuit?

#### Without CONSULT-II

Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) .

No >> GO TO 3.

### 3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-765, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (ULEV)] or [EC-186, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (SULEV)].

OK or NG

OK >> GO TO 4.

NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**4. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 7.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve B
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

**6. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> 1. Perform TCM input/output signal inspection.
- 2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**7. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve B
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - High clutch assembly
  - Brake band

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

**11. A/T Does Not Shift: D3 → D4**

**SYMPTOM:**

- A/T does not shift from D3 to D4 at the specified speed.
- A/T must be warm before D3 to D4 shift will occur.

**1. CHECK SYMPTOM**

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1" OK?

Yes or No

- Yes >> GO TO 2.
- No >> Go to [AT-229, "7. Vehicle Does Not Creep Forward In "D", "2" Or "1" Position"](#) , [AT-231, "8. Vehicle Cannot Be Started From D1"](#) .

**2. CHECK SELF-DIAGNOSTIC RESULTS**

**Ⓜ With CONSULT-II**

Does self-diagnosis, after cruise test, show damage to any of the following circuits?

- PNP switch
- Overdrive control switch
- A/T fluid temperature sensor
- Vehicle speed sensor-A/T (revolution sensor)
- Shift solenoid valve A or B
- Vehicle speed sensor-MTR

Yes or No

- Yes >> Check damaged circuit. Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) , [AT-121, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#) , [AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#) , [AT-180, "DTC P0750 SHIFT SOLENOID VALVE A"](#) , [AT-184, "DTC P0755 SHIFT SOLENOID VALVE B"](#) , [AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"](#) .
- No >> GO TO 3.

**3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-186, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (ULEV)] or [EC-765, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (SULEV)].

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**4. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 5.  
 NG >> GO TO 7.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Overrun clutch control valve
  - Shift solenoid valve A
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 6.  
 NG >> Repair or replace damaged parts.

**6. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> 1. Perform TCM input/output signal inspection.  
 2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**7. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Overrun clutch control valve
  - Shift solenoid valve A
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - Brake band

OK or NG

- OK >> GO TO 6.  
 NG >> Repair or replace damaged parts.

## 12. A/T Does Not Perform Lock-up

### SYMPTOM:

A/T does not perform lock-up at the specified speed.

### 1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to A/T fluid temperature sensor, vehicle speed sensor-A/T (revolution sensor), engine speed signal, torque converter clutch solenoid valve, or vehicle speed sensor-MTR circuit after cruise test?

#### Yes or No

Yes >> Check torque converter clutch solenoid valve circuit. Refer to [AT-121, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#), [AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#), [AT-132, "DTC P0725 ENGINE SPEED SIGNAL"](#), [AT-160, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#), and [AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"](#).

No >> GO TO 2.

### 2. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-186, "DTC P0122, P0123 TP SENSOR" \[QG18DE \(ULEV\)\]](#) or [EC-765, "DTC P0122, P0123 TP SENSOR" \[QG18DE \(SULEV\)\]](#).

#### OK or NG

OK >> GO TO 3.

NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

### 3. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to [AT-260, "REMOVAL"](#).

2. Check the following items:

- Torque converter clutch control valve
- Torque converter relief valve
- Pilot valve
- Pilot filter

3. Remove A/T.

4. Check torque converter.

#### OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

### 4. CHECK SYMPTOM

Check again.

#### OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**13. A/T Does Not Hold Lock-up Condition**

**SYMPTOM:**

A/T does not hold lock-up condition for more than 30 seconds.

**1. CHECK DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to engine speed signal circuit after cruise test?

Yes or No

- Yes >> Check engine speed signal circuit. Refer to [AT-132](#), "[DTC P0725 ENGINE SPEED SIGNAL](#)".
- No >> GO TO 2.

**2. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 5.

**3. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260](#), "[REMOVAL](#)".
2. Check the following items:
  - Torque converter clutch control valve
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace damaged parts.

**4. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> 1. Perform TCM input/output signal inspection.
  2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

---

## 5. DETECT MALFUNCTIONING ITEM

---

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
  - Torque converter clutch control valve
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check torque converter and oil pump assembly.

### OK or NG

- OK >> GO TO 4.  
NG >> Repair or replace damaged parts.

**14. Lock-up Is Not Released****SYMPTOM:**

Lock-up is not released when accelerator pedal is released.

**1. CHECK THROTTLE POSITION SWITCH CIRCUIT****Ⓜ With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to closed throttle position switch circuit?

**ⓧ Without CONSULT-II**

Does self-diagnosis show damage to closed throttle position switch circuit?

Yes or No

- Yes >> Check closed throttle position switch circuit. Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#).
- No >> GO TO 2.

**2. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**15. Engine Speed Does Not Return To Idle (Light Braking D4 → D3 )**

**SYMPTOM:**

- Engine speed does not smoothly return to idle when A/T shifts from D4 to D3 .
- Vehicle does not decelerate by engine brake when turning overdrive control switch OFF.
- Vehicle does not decelerate by engine brake when shifting A/T from “D” to “2” position.

**1. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to overrun clutch solenoid valve circuit after cruise test?

Yes or No

- Yes >> Check overrun clutch solenoid valve circuit. Refer to [AT-194, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"](#) .
- No >> GO TO 2.

**2. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-186, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (ULEV)] or [EC-765, "DTC P0122, P0123 TP SENSOR"](#) [QG18DE (SULEV)].

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**3. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 6.

**4. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
  - Overrun clutch control valve
  - Overrun clutch reducing valve
  - Overrun clutch solenoid valve

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

**5. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-260, "REMOVAL"](#) .
2. Check the following items:
  - Overrun clutch control valve
  - Overrun clutch reducing valve
  - Overrun clutch solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Overrun clutch assembly

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

**16. Vehicle Does Not Start From D1**

ECS005Z3

**SYMPTOM:**

Vehicle does not start from D1 on Cruise test — Part 2.

**1. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to vehicle speed sensor-A/T (revolution sensor), shift solenoid valve A, B or vehicle speed sensor-MTR after cruise test?

Yes or No

- Yes >> Check damaged circuit. Refer to [AT-127, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#) , [AT-180, "DTC P0750 SHIFT SOLENOID VALVE A"](#) , [AT-184, "DTC P0755 SHIFT SOLENOID VALVE B"](#) , [AT-204, "DTC VHCL SPEED SEN-MTR VEHICLE SPEED SENSOR-MTR"](#) .
- No >> GO TO 2.

---

## 2. CHECK SYMPTOM

---

Check again.

OK or NG

- OK >> Go to [AT-231, "8. Vehicle Cannot Be Started From D1"](#) .
- NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

**17. A/T Does Not Shift: D4 → D3 , When Overdrive Control Switch “ON” → “OFF”**

ECS005Z4

**SYMPTOM:**

A/T does not shift from D4 to D3 when changing overdrive control switch to “OFF” position.

**1. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT**

**With CONSULT-II**

Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to overdrive control switch circuit?

**Without CONSULT-II**

Does self-diagnosis show damage to overdrive control switch circuit?

Yes or No

Yes >> Check overdrive control switch circuit. Refer to [AT-250, "21. TCM Self-diagnosis Does Not Activate {Park/neutral Position \(PNP\), Overdrive Control and Throttle Position Sensor \[Accelerator Pedal Position \(APP\) Sensor\] Switches Circuit Checks}"](#) .

No >> Go to [AT-236, "10. A/T Does Not Shift: D2 → D3"](#) .

**18. A/T Does Not Shift: D3 → 22 , When Selector Lever “D” → “2” Position**

ECS005Z5

**SYMPTOM:**

A/T does not shift from D3 to 22 when changing selector lever from “D” to “2” position.

**1. CHECK PNP SWITCH CIRCUIT****④ With CONSULT-II**

Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

**⊗ Without CONSULT-II**

Does self-diagnosis show damage to PNP switch circuit?

Yes or No

- Yes >> Check PNP switch circuit. Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#)
- No >> Go to [AT-234, "9. A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2"](#) .

19. A/T Does Not Shift: 22 → 11 , When Selector Lever “2” → “1” Position

ECS005Z6

SYMPTOM:

A/T does not shift from 22 to 11 when changing selector lever from “2” to “1” position.

1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II

Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II

Does self-diagnosis show damage to PNP switch circuit?

Yes or No

- Yes >> Check PNP switch circuit. Refer to [AT-116. "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#) .
- No >> GO TO 2.

2. CHECK SYMPTOM

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> 1. Perform TCM input/output signal inspection.  
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

## 20. Vehicle Does Not Decelerate By Engine Brake

### SYMPTOM:

Vehicle does not decelerate by engine brake when shifting from 22 (12) to 11.

### 1. CHECK SYMPTOM

Is "6. Vehicle Does Not Creep Backward In R Position" OK?

Yes or No

- Yes >> Go to [AT-244, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) .  
 No >> Go to [AT-227, "6. Vehicle Does Not Creep Backward In "R" Position"](#) .

## 21. TCM Self-diagnosis Does Not Activate {Park/neutral Position (PNP), Overdrive Control and Throttle Position Sensor [Accelerator Pedal Position (APP) Sensor] Switches Circuit Checks}

ECS006GY

### SYMPTOM:

O/D OFF indicator lamp does not come on in TCM self-diagnostic procedure even if the lamp circuit is good.

### DESCRIPTION

- Park/neutral position (PNP) switch  
 The park/neutral (PNP) switch assembly includes a transmission range switch. The transmission range switch detects the selector lever position and sends a signal to the TCM.
- Overdrive control switch  
 Detects the overdrive control switch position (ON or OFF) and sends a signal to the TCM.
- Throttle position sensor [accelerator pedal position (APP) sensor]  
 The throttle position sensor [accelerator pedal position (APP) sensor] is part of the system that controls the throttle position. This system also uses an electric throttle control actuator, which consists of a throttle control motor and throttle position sensors. Accelerator pedal position signal is sent to the ECM.

## DIAGNOSTIC PROCEDURE

### NOTE:

The diagnostic procedure includes inspections for the overdrive control switch circuits.

## 1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT (WITH CONSULT-II)

### With CONSULT-II

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out P/N, R, D, 2 and 1 position switches moving selector lever to each position.  
Check that the signal of the selector lever position is indicated properly.

#### OK or NG

OK >> GO TO 2.

NG >> Check the following items:

- PNP switch (Refer to [AT-116, "DTC P0705 PARK/NEUTRAL POSITION \(PNP\) SWITCH"](#))
- Harness for short or open between ignition switch and PNP switch
- Harness for short or open between PNP switch and TCM

DATA MONITOR	
MONITORING	
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

SAT701J

## 2. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT (WITH CONSULT-II)

### With CONSULT-II

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out "OVERDRIVE SW".  
Check the signal of the overdrive control switch is indicated properly.  
(Overdrive control switch "ON" displayed on CONSULT-II means overdrive "OFF".)

#### OK or NG

OK >> GO TO 3.

NG >> Check the following items:

- Overdrive control switch (Refer to [AT-252, "Overdrive Control Switch"](#))
- Harness for short or open between TCM and overdrive control switch
- Harness of ground for overdrive control switch for short or open

DATA MONITOR	
MONITORING	
ENGINE SPEED	XXX rpm
TURBINE REV	XXX rpm
OVERDRIVE SW	ON
PN POSI SW	OFF
R POSITION SW	OFF

SAT645J

## 3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

- Perform throttle position sensor [accelerator pedal position (APP) sensor] inspection. Refer to [AT-188, "DTC P1705 THROTTLE POSITION SENSOR \[ACCELERATOR PEDAL POSITION \(APP\) SENSOR\]"](#).

#### OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

4. CHECK TCM INSPECTION

1. Perform [AT-251, "DIAGNOSTIC PROCEDURE"](#)

OK or NG

OK >> INSPECTION END.

NG >> ● Perform TCM input/output signal inspection.

- If NG, recheck TCM pin terminals for damage or loose connections with harness connector.

COMPONENT INSPECTION

Overdrive Control Switch

- Check continuity between terminals 1 and 2.

Switch position	Continuity
RELEASED	No
DEPRESSED	Yes

PNP Switch

1. Check continuity between terminals 1 and 2 and between terminals 3 and 4, 5, 6, 7, 8, 9 while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 — 7	1 — 2
R	3 — 8	
N	3 — 9	1 — 2
D	3 — 6	
2	3 — 5	
1	3 — 4	

- If NG, check again with manual control cable disconnected from manual shaft of A/T assembly. Refer to step 1.
- If OK on step 2, adjust manual control cable. Refer to [AT-263, "Control Cable Adjustment"](#).
- If NG on step 2, remove PNP switch from A/T and check continuity of PNP switch terminals. Refer to step 1.
- If OK on step 4, adjust PNP switch. Refer to [AT-263, "Park/Neutral Position \(PNP\) Switch Adjustment"](#).
- If NG on step 4, replace PNP switch.

## A/T SHIFT LOCK SYSTEM

PFP:34950

ECS006H0

### Description

- The mechanical key interlock mechanism also operates as a shift lock:  
With the key switch turned to ON, the selector lever cannot be shifted from "P" (parking) to any other position unless the brake pedal is depressed.  
With the key removed, the selector lever cannot be shifted from "P" to any other position.  
The key cannot be removed unless the selector lever is placed in "P".
- The shift lock and key interlock mechanisms are controlled by the ON-OFF operation of the shift lock solenoid and by the operation of the rotator and slider located inside the key cylinder.

### Shift Lock System Electrical Parts Location

ECS006H1

SAT862J

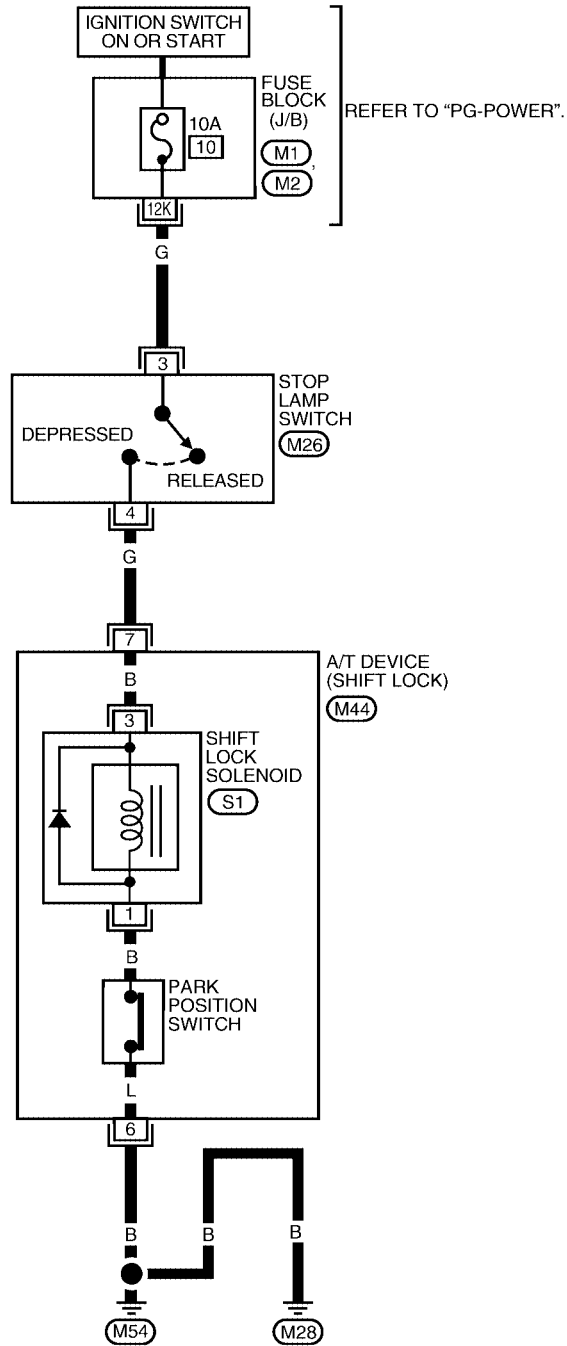

# A/T SHIFT LOCK SYSTEM

[RE4F03B]

## Wiring Diagram — SHIFT —

ECS006H2

AT-SHIFT-01

\*: THIS CONNECTOR IS NOT SHOWN IN "HARNES LAYOUT" OF PG SECTION.

WCWA0076E

## Diagnostic Procedure

### SYMPTOM 1:

- Selector lever cannot be moved from "P" position with key in ON position and brake pedal applied.
- Selector lever can be moved from "P" position with key in ON position and brake pedal released.
- Selector lever can be moved from "P" position when key is removed from key cylinder.

### SYMPTOM 2:

Ignition key cannot be removed when selector lever is set to "P" position. It can be removed when selector lever is set to any position except "P".

## 1. CHECK KEY INTERLOCK CABLE

Check key interlock cable for damage.

### OK or NG

- OK >> GO TO 2.
- NG >> Repair key interlock cable. Refer to [AT-642, "Components"](#).

## 2. CHECK SELECTOR LEVER POSITION

Check selector lever position for damage.

### OK or NG

- OK >> GO TO 3.
- NG >> Check selector lever. Refer to [AT-647, "Control Cable Adjustment"](#).

## 3. CHECK POWER SOURCE

Turn ignition switch to "OFF" position.  
(Do not start engine.)

- Check voltage between A/T device harness connector M44 terminal 7 (G) and ground.

### Voltage:

**Brake pedal depressed: Battery voltage**

**Brake pedal released: 0V**

### OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING ITEM

Check the following items.

1. Harness for open or short between fuse block (J/B) connector M1 terminal 12K and stop lamp switch harness connector M26 terminal 3.
2. Harness for open or short stop lamp switch harness connector M26 terminal 4 and A/T device harness connector M44 terminal 7 (G).
3. 10A fuse [10, located in the fuse block (J/B)].
4. Check continuity between stop lamp switch harness connector M26 terminals 3 (G) and 4 (G).

Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal —refer to [BR-12, "STOP LAMP SWITCH AND ASCD CANCEL SWITCH CLEARANCE"](#)

### OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

## 5. CHECK GROUND CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect A/T device harness connector.
3. Check continuity between A/T device harness M44 terminal 6 (B) and ground.

**Continuity should exist**

Continuity should exist.  
If OK, check harness for short to power.

### OK or NG

- OK >> GO TO 6.
- NG >> Repair open circuit in harness.

## 6. CHECK PARK POSITION SWITCH

Check continuity between A/T device harness connector M44 terminals 6 (B) and 7 (G).

Brake pedal	Operation sound
Depressed	No
Released	Yes

### OK or NG

- OK >> GO TO 7.
- NG >> Replace park position switch.

## 7. CHECK SHIFT LOCK SOLENOID

1. Connect A/T device harness connector.
2. Turn ignition switch to "ON" position.
3. Check operation sound.

Condition	Brake pedal	Operation sound
When ignition switch is turned to "ON" position and selector lever is in the "P" position.	Depressed	Yes
	Released	No

OK or NG

- OK >> GO TO 8.
- NG >> Replace shift lock solenoid.

## 8. CHECK SHIFT LOCK OPERATION

1. Reconnect shift lock harness connector.
2. Turn ignition switch from "OFF" to "ON" position. (Do not start engine.)
3. Recheck shift lock operation.

OK or NG

- OK >> INSPECTION END
- NG >> GO TO .9

## 9. CHECK A/T DEVICE INSPECTION

1. Perform A/T device input/output signal inspection test.
2. If NG, recheck harness connector connection.

OK or NG

- OK >> INSPECTION END
- NG >> Repair or replace damaged parts.

## KEY INTERLOCK CABLE

### Components

ECS005ZD

WAT242

### CAUTION:

- Install key interlock cable in such a way that it will not be damaged by sharp bends, twists or interference with adjacent parts.
- After installing key interlock cable to control device, make sure that casing cap and bracket are firmly secured in their positions.

### Removal

ECS005ZE

1. Unlock slider by squeezing lock tabs on slider from adjuster holder and remove interlock rod from cable.

SAT853J

# KEY INTERLOCK CABLE

[RE4F03B]

2. Remove lock plate from steering lock assembly and remove key interlock cable.

## Installation

1. Turn ignition key to lock position.
2. Set A/T selector lever to "P" position.
3. Set key interlock cable to steering lock assembly and install lock plate.
4. Clamp cable to steering column and attach to control cable with band.

5. Insert interlock rod into adjuster holder.

6. Install casing cap to bracket.
7. Move slider in order to connect adjuster holder to interlock rod.

M

**ON-VEHICLE SERVICE****Control Valve Assembly and Accumulators  
REMOVAL**

1. Drain ATF from transaxle.
2. Remove oil pan and gasket.
  - Always replace oil pan bolts as they are self-sealing bolts.

3. Disconnect A/T solenoid valve harness connector.

4. Remove stopper ring from A/T solenoid harness terminal body.
5. Remove A/T solenoid harness by pushing terminal body into transmission case.

6. Remove control valve assembly mounting bolts A, B and C.

**Bolt length, number and location:**

Bolt symbol	A	B	C
Bolt length "l" 	40.0 mm (1.575 in)	33.0 mm (1.299 in)	43.5 mm (1.713 in)
Number of bolts	5	6	2

- **Be careful not to drop manual valve and servo release accumulator return springs.**

7. Disassemble and inspect control valve assembly if necessary. Refer to [AT-298, "Components"](#) .

8. Remove servo release and N-D accumulators by applying compressed air if necessary.

- **Hold each piston with a clean, lint-free towel.**

**INSTALLATION**

- Tighten mounting bolts A, B and C to specification.

: 7 - 9 N·m (0.7 - 0.9 kg-m, 61 - 78 in-lb)

- Set manual shaft in Neutral position, then align manual plate with groove in manual valve.
- After installing control valve assembly to transmission case, make sure that selector lever can be moved to all positions.

ECS005ZH

## Control Cable Adjustment

Move selector lever from the "P" position to the "1" position. You should be able to feel the detents in each position. If the detents cannot be felt or if the pointer indicating the position is improperly aligned, the control cable needs adjustment.

1. Place selector lever in "P" position.
2. Loosen control cable lock nut and place manual shaft in "P" position.
3. Push control cable, by specified force, in the direction of the arrow shown in the illustration.

**Specified force : 9.8 N (1.0 kg, 2.2 lb)**

4. Release control cable in the opposite direction of the arrow for 1.0 mm (0.039 in).
5. Tighten control cable lock nut by hand.
6. Tighten control cable lock nut.

**⌚ : 11.8 - 14.7 N·m (1.20 - 1.50 kg·m, 8.7 - 10.8 ft-lb)**

7. Move selector lever from "P" to "1" position again. Make sure that selector lever moves smoothly.
8. Apply grease to contacting areas of selector lever and control cable. Install any part removed.

## Park/Neutral Position (PNP) Switch Adjustment

1. Remove control cable end from manual shaft.
2. Set manual shaft in "N" position.
3. Loosen PNP switch fixing bolts.

4. Use a 4 mm (0.157 in) pin for this adjustment.
  - a. Insert the pin straight into the manual shaft adjustment hole.
  - b. Rotate PNP switch until the pin can also be inserted straight into hole in PNP switch.
5. Tighten PNP switch fixing bolts.
6. Remove pin from adjustment hole after adjusting PNP switch.
7. Reinstall any part removed.
8. Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#).
9. Check continuity of PNP switch. Refer to [AT-120, "Component Inspection"](#).

ECS005ZJ

### Differential Side Oil Seal Replacement

1. Remove drive shaft assemblies using Tool. Refer to [FAX-14](#), "[Removal](#)".
2. Remove oil seals.

3. Install oil seals using Tool.
  - Apply ATF to oil seal surface before installing.

- Install oil seals so that dimensions "A" and "B" are within specifications.

Unit: mm (in)

A	B
5.5 - 6.5 (0.217 - 0.256)	-0.5 to 0.5 (-0.020 to 0.020)

4. Reinstall any part removed.

### Revolution Sensor Replacement

ECS005ZK

1. Disconnect revolution sensor harness connector.
2. Remove harness bracket from A/T.
3. Remove revolution sensor from A/T.
4. Reinstall any part removed.

**Always use new sealing parts.**

### REMOVAL AND INSTALLATION

#### Removal

**CAUTION:**

Before separating transaxle from engine, remove the crankshaft position sensor (OBD) from transaxle. Be careful not to damage sensor.

1. Remove battery and bracket.
2. Remove air duct between throttle body and air cleaner.
3. Disconnect terminal cord assembly, PNP switch harness connector and revolution sensor harness connector.

4. Drain ATF from transaxle.
5. Disconnect control cable from transaxle.
6. Disconnect oil cooler hoses.
7. Remove drive shafts. Refer to [FAX-14, "Removal"](#).
8. Remove the intake manifold support bracket. Refer to [EM-12, "Removal and Installation"](#).
9. Remove starter motor from transaxle.

**Tighten bolts to specified torque.**

 : 33.3 - 46.1 N·m (3.4 - 4.7 kg·m, 25 - 34 ft·lb)

10. Remove upper bolts fixing transaxle to engine.
11. Support transaxle with a jack.
12. Remove center member.
  - Tighten center member fixing bolts to specified torque, Refer to [EM-66, "INSTALLATION"](#).

# REMOVAL AND INSTALLATION

[RE4F03B]

13. Remove rear plate cover.
14. Remove torque converter bolts.  
Rotate crankshaft to gain access to securing bolts.
15. Remove rear transaxle to engine bracket. Refer to [EM-64](#), "REMOVAL".
16. Support engine with a jack.
17. Remove rear transaxle mount. Refer to [EM-63](#).
18. Remove lower bolts fixing transaxle to engine.
19. Lower transaxle while supporting it with a jack.

ECS005ZM

## Installation

1. Check drive plate runout.

### CAUTION:

Do not allow any magnetic materials to contact the ring gear teeth.

Maximum allowable runout : [EM-77, "Flywheel Runout"](#).

- If this runout is out of allowance, replace drive plate with ring gear.

2. When connecting torque converter to transaxle, measure distance "A" to be certain that they are correctly assembled.

Distance "A" : 21.1 mm (0.831 in)

3. Install torque converter to drive plate.

- With converter installed, rotate crankshaft several turns to check that transaxle rotates freely without binding.

# REMOVAL AND INSTALLATION

[RE4F03B]

## 4. Tighten bolts fixing transaxle.

Bolt No.	Tightening torque N·m (kg-m, ft-lb)	Bolt length "l" mm (in)
1	30 - 40 (3.1 - 4.1, 23 - 29)	50 (1.97)
2	16 - 20 (1.6 - 2.1, 12 - 15)	25 (0.98)
3	31 - 40 (3.1 - 4.1, 23 - 29)	30 (1.18)

5. Reinstall any part removed.
6. Adjust control cable. Refer to [AT-263, "Control Cable Adjustment"](#) .
7. Check continuity of PNP switch. Refer to [AT-120, "PARK/NEUTRAL POSITION SWITCH"](#) .
8. Refill transaxle with ATF and check fluid level.
9. Move selector lever through all positions to be sure that transaxle operates correctly. With parking brake applied, idle engine. Move selector lever through "N" to "D", to "2", to "1" and "R" positions. A slight shock should be felt through the hand gripping the selector each time the transaxle is shifted.
10. Perform road test. Refer to [AT-69, "Road Test"](#) .

WAT246

### Disassembly

1. Drain ATF through drain plug.

2. Remove torque converter.

3. Check torque converter one-way clutch using check tool as shown.
  - a. Insert check tool into the groove of bearing support built into one-way clutch outer race.
  - b. While fixing bearing support with check tool, rotate one-way clutch spline using flat-bladed screwdriver.
  - c. Check to make sure the inner race rotates clockwise only. If not, replace torque converter assembly.

# OVERHAUL

[RE4F03B]

4. Remove oil charging pipe and oil cooler tube.

5. Set manual shaft to "P" position.
6. Remove PNP switch.

7. Remove oil pan and oil pan gasket.
  - Always replace oil pan bolts as they are self-sealing bolts.
8. Check foreign materials in oil pan to help determine cause of malfunction. If the fluid is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and may inhibit pump pressure.
  - If frictional material is detected, replace radiator after repair of A/T. Refer to [CO-13. "Removal and Installation"](#).

9. Remove control valve assembly according to the following procedures.

- a. Remove control valve assembly mounting bolts A, B and C.

- b. Remove stopper ring from terminal body.  
 c. Push terminal body into transmission case and draw out solenoid harness.

10. Remove manual valve from control valve assembly as a precaution.

11. Remove return spring from servo release accumulator piston.

4. Remove O-ring from oil pump housing.

5. Remove oil pump housing oil seal.

## Inspection

### OIL PUMP HOUSING, OIL PUMP COVER, INNER GEAR AND OUTER GEAR

- Check for wear or damage.

ECS005ZX

## SIDE CLEARANCES

- Measure side clearance of inner and outer gears in at least four places around each outside edge. Maximum measured values should be within specified range.

**Standard clearance : 0.02 - 0.04 mm (0.0008 - 0.0016 in)**

- If clearance is less than standard, select inner and outer gear as a set so that clearance is within specifications.

**Inner and outer gear : Refer to AT-295, "SIDE CLEARANCES" .**

- If clearance is more than standard, replace whole oil pump assembly except oil pump cover.

- Measure clearance between outer gear and oil pump housing.

**Standard clearance : 0.08 - 0.15 mm (0.0031 - 0.0059 in)**

**Allowable limit : 0.15 mm (0.0059 in)**

- If not within allowable limit, replace whole oil pump assembly except oil pump cover.

## SIDE RING CLEARANCE

- Install new seal rings onto oil pump cover.
- Measure clearance between seal ring and ring groove.

**Standard clearance : 0.1 - 0.25 mm (0.0039 - 0.0098 in)**

**Allowable limit : 0.25 mm (0.0098 in)**

- If not within allowable limit, replace oil pump cover assembly.

### Assembly

1. Install oil seal on oil pump housing using Tool.

2. Install O-ring on oil pump housing.

- Apply ATF to O-ring.

3. Install inner and outer gears on oil pump housing.

- Take care with the direction of the inner gear.

4. Install oil pump cover on oil pump housing.

- Wrap masking tape around splines of oil pump cover assembly to protect seal. Position oil pump cover assembly on oil pump housing assembly, then remove masking tape.
- Tighten bolts in numerical order.

# OIL PUMP

[RE4F03B]

5. Install new seal rings carefully after packing ring groove with petroleum jelly.
  - Do not spread gap of seal ring excessively while installing. It may deform the ring.

## Inspection

### LOWER AND UPPER BODIES

- Check to see that retainer plates are properly positioned in lower body.

- Check to see that retainer plates are properly positioned in upper body.

### OIL STRAINER

- Check wire netting of oil strainer for damage.

### SHIFT SOLENOID VALVES A AND B, LINE PRESSURE SOLENOID VALVE, TORQUE CONVERTER CLUTCH SOLENOID VALVE AND OVERRUN CLUTCH SOLENOID VALVE

- Refer to [AT-183, "SHIFT SOLENOID VALVE A"](#), [AT-187, "SHIFT SOLENOID VALVE B"](#), [AT-178, "LINE PRESSURE SOLENOID VALVE"](#), [AT-178, "LINE PRESSURE SOLENOID VALVE"](#) and [AT-197, "OVERRUN CLUTCH SOLENOID VALVE"](#)

## OIL COOLER RELIEF VALVE SPRING

- Check springs for damage or deformation.
- Measure free length and outer diameter.

**Inspection standard** : Refer to [AT-389, "Clutch and Brake Return Springs"](#)

ECS00602

## Assembly

1. Install upper, inter and lower body.

- a. Place oil circuit of upper body face up. Install steel balls in their proper positions.
- b. Install upper separating gasket, upper inter separating gasket and upper separating plate in order shown in illustration.

- **Always use new gaskets.**

- c. Install reamer bolts **F** from bottom of upper body. Using reamer bolts as guides, install separating plate and gaskets as a set.

# CONTROL VALVE ASSEMBLY

[RE4F03B]

d. Install pilot filter.

e. Place inter body as shown in the illustration. Install steel balls in their proper positions.

f. Install inter body on upper body using reamer bolts **F** as guides.

● **Be careful not to dislocate or drop steel balls.**

g. Install steel balls, oil cooler relief valve springs and T/C pressure holding spring in their proper positions in lower body.

# CONTROL VALVE ASSEMBLY

[RE4F03B]

- h. Install lower separating gasket, inter separating gasket and lower separating plate in order shown in the illustration.

- i. Install bolts **E** from bottom of lower body. Using bolts **E** as guides, install separating plate and gaskets as a set.

- j. Install support plates on lower body.  
k. Install lower body on inter body using reamer bolts **F** as guides and tighten reamer bolts **F** slightly.

2. Install O-rings to solenoid valves and terminal body.  
● **Apply ATF to O-rings.**  
3. Install and tighten bolts.

# CONTROL VALVE UPPER BODY

[RE4F03B]

## CONTROL VALVE UPPER BODY

PF3:31711

### Components

ECS00603

Numbers preceding valve springs correspond with those shown in [AT-387, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#).

### Disassembly

ECS00604

1. Remove valves at retainer plates.
  - Do not use a magnetic "hand".

# CONTROL VALVE UPPER BODY

[RE4F03B]

- a. Use a screwdriver to remove retainer plates.

- b. Remove retainer plates while holding spring, plugs or sleeves.

- Remove plugs slowly to prevent internal parts from jumping out.
- c. Place mating surface of valve body face down, and remove internal parts.
- If a valve is hard to remove, place valve body face down and lightly tap it with a soft hammer.
  - Be careful not to drop or damage valves and sleeves.

ECS00605

## Inspection VALVE SPRING

- Measure free length and outer diameter of each valve spring. Also check for damage or deformation.

**Inspection standard** : Refer to [AT-387, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#) .

- Replace valve springs if deformed or fatigued.

## CONTROL VALVES

- Check sliding surfaces of valves, sleeves and plugs.

# CONTROL VALVE UPPER BODY

[RE4F03B]

ECS00606

## Assembly

- Lay control valve body down when installing valves. Do not stand the control valve body upright.

1. Lubricate the control valve body and all valves with ATF. Install control valves by sliding them carefully into their bores.

- Be careful not to scratch or damage valve body.
- Wrap a small screwdriver with vinyl tape and use it to insert the valves into their proper positions.

## 1-2 ACCUMULATOR VALVE

- Install 1-2 accumulator valve. Align 1-2 accumulator retainer plate from opposite side of control valve body.
- Install return spring, 1-2 accumulator piston and plug.

# CONTROL VALVE UPPER BODY

[RE4F03B]

1. Install retainer plates.
  - Install retainer plate while pushing plug or return spring.

## RETAINER PLATE (FOR CONTROL VALVE UPPER BODY)

Refer to [AT-308, "CONTROL VALVE UPPER BODY"](#) .

Unit: mm (in)

Name of valve and piston	No.	Width A	Length B
Pilot valve	22	6.0 (0.236)	21.5 (0.846)
1-2 accumulator valve	17		40.5 (1.594)
1-2 accumulator piston	25		21.5 (0.846)
1st reducing valve	30		24.0 (0.945)
Overrun clutch reducing valve	5		21.5 (0.846)
Torque converter relief valve	8		28.0 (1.102)
Torque converter clutch control valve	13		21.5 (0.846)
3-2 timing valve	34		24.0 (0.945)
Cooler check valve	21		

- Install proper retainer plates.

## CONTROL VALVE LOWER BODY

PF3:31713

### Components

ECS00607

Numbers preceding valve springs correspond with those shown in [AT-387, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#).

### Disassembly

ECS00608

Remove valves at retainer plate.  
For removal procedures, refer to [AT-312, "Disassembly"](#).

# CONTROL VALVE LOWER BODY

[RE4F03B]

ECS00609

## Inspection VALVE SPRINGS

- Check each valve spring for damage or deformation. Also measure free length and outer diameter.

**Inspection standard** : Refer to [AT-387, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#) .

- Replace valve springs if deformed or fatigued.

## CONTROL VALVES

- Check sliding surfaces of control valves, sleeves and plugs for damage.

## Assembly

- Install control valves. For installation procedures, refer to [AT-313, "Assembly"](#) .

ECS0060A

## RETAINER PLATE (FOR CONTROL VALVE LOWER BODY)

Refer to [AT-312, "CONTROL VALVE LOWER BODY"](#) .

Unit: mm (in)

Name of control valve	No.	Width A	Length B	Type
Pressure regulator valve	14	6.0 (0.236)	28.0 (1.102)	I
Accumulator control valve	24			
Shift valve A	28			
Overrun clutch control valve	20			
Pressure modifier valve	12			
Shuttle control valve	31	—	—	II
Shift valve B	5			

- Install proper retainer plates.

# REVERSE CLUTCH

[RE4F03B]

4. Set Tool on spring retainer and remove snap ring from reverse clutch drum while compressing return springs.
  - **Set Tool directly above springs.**
  - **Do not expand snap ring excessively.**

5. Remove spring retainer and return springs.
  - **Do not remove return springs from spring retainer.**

6. Remove piston from reverse clutch drum by turning it.

7. Remove D-ring and oil seal from piston.

## Inspection

### REVERSE CLUTCH SNAP RING, SPRING RETAINER AND RETURN SPRINGS

- Check for deformation, fatigue or damage.
- Replace if necessary.
- **When replacing spring retainer and return springs, replace them as a set.**

ECS0060D

## REVERSE CLUTCH DRIVE PLATES

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

### Thickness of drive plate

**Standard value** : 2.0 mm (0.079 in)

**Wear limit** : 1.8 mm (0.071 in)

- If not within wear limit, replace.

## REVERSE CLUTCH DISH PLATES

- Check for deformation or damage.
- Measure thickness of dish plate.

**Thickness of dish plate** : 2.8 mm (0.110 in)  
"t"

- If deformed or fatigued, replace.

## REVERSE CLUTCH PISTON

- Make sure check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure that there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure air leaks past ball.

ECS0060E

## Assembly

1. Install D-ring and oil seal on piston.
  - Take care with the direction of the oil seal.
  - Apply ATF to both parts.

# REVERSE CLUTCH

[RE4F03B]

2. Install piston assembly by turning it slowly.
  - Apply ATF to inner surface of drum.

3. Install return springs and spring retainer on piston.

**Return spring**

**: Refer to AT-389, "Clutch and Brake Return Springs".**

4. Set Tool on spring retainer and install snap ring while compressing return springs.

- **Set Tool directly above return springs.**

5. Install drive plates, driven plates, retaining plate and dish plates.
  - **Do not align the projections of any two dish plates.**
  - **Take care with the order and direction of plates.**

# REVERSE CLUTCH

[RE4F03B]

6. Install snap ring.
- Do not expand snap ring excessively.

7. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

**Specified clearance**

**Standard** : 0.5 - 0.8 mm (0.020 - 0.031 in)

**Allowable limit** : 1.2 mm (0.047 in)

**Retaining plate** : Refer to [AT-387, "REVERSE CLUTCH"](#)

8. Check operation of reverse clutch.  
Refer to [AT-314, "Components"](#) .

### HIGH CLUTCH

#### Components

##### SEC. 315

For the number of clutch sheets (drive plates and driven plates), refer to the below cross-section.

#### Disassembly

1. Check operation of high clutch.
  - a. Apply compressed air to oil hole of input shaft.
    - **Stop up a hole on opposite side of input shaft.**
  - b. Check to see that retaining plate moves to snap ring.
  - c. If retaining plate does not contact snap ring:
    - D-ring might be damaged.
    - Oil seal might be damaged.
    - Fluid might be leaking past piston check ball.

# HIGH CLUTCH

[RE4F03B]

2. Remove seal rings from input shaft.

3. Remove snap ring.  
● Do not expand snap ring excessively.
4. Remove drive plates, driven plates and retaining plate.

5. Set Tool on spring retainer and remove snap ring from high clutch drum while compressing return springs.  
● Set Tool directly above springs.  
● Do not expand snap ring excessively.
6. Remove spring retainer and return springs.  
● Do not remove return spring from spring retainer.

7. Remove piston from high clutch drum by turning it.

- Remove D-ring and oil seal from piston.

ECS0060H

### Inspection

#### REVERSE CLUTCH SNAP RING, SPRING RETAINER AND RETURN SPRINGS

- Check for deformation, fatigue or damage.
- Replace if necessary.
- When replacing spring retainer and return springs, replace them as a set.**

#### HIGH CLUTCH DRIVE PLATES

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

**Thickness of drive plate**

**Standard value : 2.0 mm (0.079 in)**

**Wear limit : 1.8 mm (0.071 in)**

- If not within wear limit, replace.

#### HIGH CLUTCH PISTON

- Make sure check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure air leaks past ball.

#### SEAL RING CLEARANCE

- Install new seal rings onto input shaft.
- Measure clearance between seal ring and ring groove.

**Standard clearance : 0.08 - 0.23 mm (0.0031 - 0.0091 in)**

**Allowable limit : 0.23 mm (0.0091 in)**

- If not within wear limit, replace input shaft assembly.

### Assembly

1. Install D-ring and oil seal on piston.
  - Take care with the direction of the oil seal.
  - Apply ATF to both parts.

2. Install piston assembly by turning it slowly.
  - Apply ATF to inner surface of drum.

3. Install return springs and spring retainer on piston.
  - Return spring** : Refer to [AT-389, "Clutch and Brake Return Springs"](#) .

4. Set Tool on spring retainer and install snap ring while compressing return springs.
  - Set Tool directly above return springs.
  - Do not expand snap ring excessively.

# HIGH CLUTCH

[RE4F03B]

- Do not align snap ring gap with spring retainer stopper.

5. Install drive plates, driven plates and retaining plate.  
**Take care with the order and direction of plates.**
6. Install snap ring.
  - Do not expand snap ring excessively.

7. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

### Specified clearance

**Standard : 1.4 - 1.8 mm (0.055 - 0.071 in)**

**Allowable limit : 2.4 mm (0.094 in)**

**Retaining plate : Refer to [AT-388, "HIGH CLUTCH"](#) .**

8. Check operation of high clutch.  
Refer to [AT-319, "HIGH CLUTCH"](#) .

# HIGH CLUTCH

[RE4F03B]

9. Install seal rings to input shaft.
- Apply petroleum jelly to seal rings.

- Roll paper around seal rings to prevent seal rings from spreading.

## FORWARD CLUTCH AND OVERRUN CLUTCH

### Components

### Disassembly

1. Check operation of forward clutch and overrun clutch.

- a. Install bearing retainer on forward clutch drum.
- b. Apply compressed air to oil hole of forward clutch drum.
- c. Check to see that retaining plate moves to snap ring.

# FORWARD CLUTCH AND OVERRUN CLUTCH

[RE4F03B]

- d. If retaining plate does not contact snap ring:
- D-ring might be damaged.
  - Oil seal might be damaged.
  - Fluid might be leaking past piston check ball.

2. Remove snap ring for forward clutch.
- **Do not expand snap ring excessively.**
3. Remove drive plates, driven plates, retaining plate and dish plate for forward clutch.

4. Remove snap ring for overrun clutch.
- **Do not expand snap ring excessively.**
5. Remove drive plates, driven plates, retaining plate and dish plate for overrun clutch.

6. Set Tool on spring retainer and remove snap ring from forward clutch drum while compressing return springs.
- **Set Tool directly above return springs.**
  - **Do not expand snap ring excessively.**
7. Remove spring retainer and return springs.

# FORWARD CLUTCH AND OVERRUN CLUTCH

[RE4F03B]

8. Remove forward clutch piston with overrun clutch piston from forward clutch drum by turning it.

9. Remove overrun clutch piston from forward clutch piston by turning it.

10. Remove D-rings and oil seals from forward clutch piston and overrun clutch piston.

## Inspection

### SNAP RINGS AND SPRING RETAINER

- Check for deformation, fatigue or damage.

### FORWARD CLUTCH AND OVERRUN CLUTCH RETURN SPRINGS

- Check for deformation or damage.
- Measure free length and outer diameter.

**Inspection standard** : Refer to [AT-389, "Clutch and Brake Return Springs"](#) .

- Replace if deformed or fatigued.

## FORWARD CLUTCH AND OVERRUN CLUTCH DRIVE PLATES

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

### Thickness of drive plate

#### Forward clutch

Standard value : 1.8 mm (0.071 in)

Wear limit : 1.6 mm (0.063 in)

#### Overrun clutch

Standard value : 1.6 mm (0.063 in)

Wear limit : 1.4 mm (0.055 in)

- If not within wear limit, replace.

## FORWARD CLUTCH AND OVERRUN CLUTCH DISH PLATES

- Check for deformation or damage.
- Measure thickness of dish plate.

### Thickness of dish plate "t"

Forward clutch : 2.5 mm (0.098 in)

Overrun clutch : 2.15 mm (0.0846 in)

- If deformed or fatigued, replace.

## FORWARD CLUTCH DRUM

- Make sure check balls are not fixed.
- Apply compressed air to check ball oil hole from outside of forward clutch drum. Make sure air leaks past ball.
- Apply compressed air to oil hole from inside of forward clutch drum. Make sure there is no air leakage.

## OVERRUN CLUTCH PISTON

- Make sure check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side. Make sure air leaks past ball.

# FORWARD CLUTCH AND OVERRUN CLUTCH

[RE4F03B]

ECS0060M

## Assembly

1. Install D-rings and oil seals on forward clutch piston and overrun clutch piston.

- Take care with direction of oil seal.
- Apply ATF to both parts.

2. Install overrun clutch piston assembly on forward clutch piston while turning it slowly.

- Apply ATF to inner surface of forward clutch piston.

3. Install forward clutch piston assembly on forward clutch drum while turning it slowly.

- Apply ATF to inner surface of drum.

4. Align notch in forward clutch piston with groove in forward clutch drum.

### LOW & REVERSE BRAKE

#### Components

#### Disassembly

1. Check operation of low & reverse brake.
  - a. Apply compressed air to oil hole of transmission case.
  - b. Check to see that retaining plate moves to snap ring.
  - c. If retaining plate does not contact snap ring:
    - D-ring might be damaged.
    - Oil seal might be damaged.
    - Fluid might be leaking past piston check ball.
2. Stand transmission case.
3. Remove snap ring.
  - **Do not expand snap ring excessively.**
4. Remove drive plates, driven plates, retaining plate from transmission case.

## LOW & REVERSE BRAKE

[RE4F03B]

5. Set Tool on spring retainer and remove snap ring while compressing return springs.
  - **Set Tool directly above return springs.**
  - **Do not expand snap ring excessively.**
6. Remove spring retainer and return springs.

- **Do not remove return springs from spring retainer.**

7. Apply compressed air to oil hole of transmission case while holding piston.
8. Remove piston from transmission case by turning it.

- Remove D-ring and oil seal from piston.

ECS0060P

### Inspection

#### LOW & REVERSE CLUTCH SNAP RING, SPRING RETAINER AND RETURN SPRINGS

- Check for deformation, fatigue or damage.
- Replace if necessary.
- When replacing spring retainer and return springs, replace them as a set.**

#### LOW & REVERSE BRAKE DRIVE PLATES

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

**Thickness of drive plate**

**Standard value : 2.0 mm (0.079 in)**

**Wear limit : 1.8 mm (0.071 in)**

- If not within wear limit, replace.

ECS0060Q

### Assembly

- Install D-ring and oil seal on piston.
  - Take care with the direction of the oil seal.
  - Apply ATF to both parts.

- Stand transmission case.
- Install piston assembly on transmission case while turning it slowly.
  - Apply ATF to inner surface of transmission case.

4. Install return springs and spring retainer on piston.

**Return spring**

**:Refer to [AT-389. "Clutch and Brake Return Springs"](#) .**

5. Install snap ring while compressing return springs.

- **Set Tool** directly above return springs.

6. Install drive plates, driven plates, retaining plates and dished plates.

- **Do not align the projections on the two dished plates.**
- **Make sure to put the plates in the correct order and direction.**

7. Install snap ring.

- **Do not expand snap ring excessively.**

# LOW & REVERSE BRAKE

[RE4F03B]

8. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate (front side).

**Specified clearance**

**Standard** : 1.4 - 1.8 mm (0.055 - 0.071 in)

**Allowable limit** : 2.8 mm (0.110 in)

**NOTE:**

Do not align gaps in seal rings.

- Roll paper around seal rings to prevent seal rings from spreading.

## BAND SERVO PISTON ASSEMBLY

PFP:31615

ECS0060Z

### Components

### Disassembly

ECS00610

1. Remove band servo piston snap ring.

2. Apply compressed air to oil hole in transmission case to remove OD servo piston retainer and band servo piston assembly.
  - Hold band servo piston assembly with a rag or nylon waste.

# BAND SERVO PISTON ASSEMBLY

[RE4F03B]

3. Apply compressed air to oil hole in OD servo piston retainer to remove OD servo piston from retainer.
  - **Hold OD servo piston while applying compressed air.**

4. Remove D-ring from OD servo piston.

5. Remove O-rings from OD servo piston retainer.

6. Remove band servo piston assembly from servo piston retainer by pushing it forward.

# BAND SERVO PISTON ASSEMBLY

[RE4F03B]

7. Place piston stem end on a wooden block. While pushing servo piston spring retainer down, remove E-ring.

8. Remove OD servo return spring, band servo thrust washer and band servo piston stem from band servo piston.

9. Remove O-rings from servo piston retainer.

10. Remove D-rings from band servo piston.

## Inspection

### PISTONS, RETAINERS AND PISTON STEM

- Check frictional surfaces for abnormal wear or damage.

## RETURN SPRINGS

- Check for deformation or damage.
- Measure free length and outer diameter.

**Band servo inspection standard** : Refer to [AT-394](#), "[RETURN SPRING](#)".

## Assembly

1. Install D-rings to band servo piston retainer.
  - Apply ATF to D-rings.
  - Pay attention to position of each D-ring.

2. Install band servo piston stem, band servo thrust washer, OD servo return spring and spring retainer to band servo piston.

# BAND SERVO PISTON ASSEMBLY

[RE4F03B]

3. Place piston stem end on a wooden block. While pushing servo piston spring retainer down, install E-ring.

4. Install O-rings to servo piston retainer.
- Apply ATF to O-rings.
  - Pay attention to the positions of the O-rings.

5. Install band servo piston assembly to servo piston retainer by pushing it inward.

6. Install D-ring to OD servo piston.
- Apply ATF to D-ring.

## FINAL DRIVE

PF3:38411

### Components

ECS00613

### Disassembly

ECS00614

1. Remove final gear.

2. Press out differential side bearings.

3. Remove speedometer drive gear.

4. Drive out pinion mate shaft lock pin.

5. Draw out pinion mate shaft from differential case.
6. Remove pinion mate gears and side gears.

### Inspection

#### GEAR, WASHER, SHAFT AND CASE

- Check mating surfaces of differential case, side gears and pinion mate gears.
- Check washers for wear.

### BEARINGS

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.
- **When replacing taper roller bearing, replace outer and inner race as a set.**

### Assembly

1. Install side gear and thrust washers in differential case.
2. Install pinion mate gears and thrust washers in differential case while rotating them.
  - **When inserting, be careful not to damage pinion mate gear washers.**
  - **Apply ATF to any parts.**

3. Measure clearance between side gear and differential case with washers using the following procedure.
  - a. Set Tool and dial indicator on side gear.
  - b. Move side gear up and down to measure dial indicator deflection. Always measure indicator deflection on both side gears.

**Clearance between side gear and differential case with washers : 0.1 - 0.2 mm (0.004 - 0.008 in)**

# FINAL DRIVE

[RE4F03B]

- c. If not within specification adjust clearance by changing thickness of side gear thrust washers.

**Side gear thrust washer**

**: Refer to [AT-390, "DIFFERENTIAL SIDE GEAR THRUST WASHERS"](#) .**

4. Install lock pin.  
● **Make sure that lock pin is flush with case.**

5. Install speedometer drive gear on differential case.  
● **Align the projection of speedometer drive gear with the groove of differential case.**

6. Install final gear and tighten fixing bolts in numerical order.

 : **113 - 127 N·m (11.5 - 13.0 kg·m, 83 - 94 ft·lb)**

# FINAL DRIVE

[RE4F03B]

7. Press on differential side bearings.

### ASSEMBLY

PFP:00000

ECS00617

#### Assembly (1)

1. Install revolution sensor onto transmission case.  
**Always use new sealing parts.**

2. Install differential side oil seals on transmission case and converter housing, so that "A" and "B" are within specifications.

Unit: mm (in)

A	B
5.5 - 6.5 (0.217 - 0.256)	-0.5 to 0.5 (-0.020 to 0.020)

3. Install parking actuator support to transmission case.  
  - Pay attention to direction of parking actuator support.

4. Install parking pawl on transmission case and fix it with parking shaft.

5. Install return spring.

### Adjustment (1) DIFFERENTIAL SIDE BEARING PRELOAD

ECS00618

1. Install differential side bearing outer race without adjusting shim on transmission case.
2. Install differential side bearing outer race on converter housing.

3. Place final drive assembly on transmission case.
4. Install transmission case on converter housing. Tighten transmission case fixing bolts **A** and **B** to the specified torque.

5. Attach dial indicator on differential case at transmission case side.
6. Insert Tool into differential side gear from converter housing.
7. Move Tool up and down and measure dial indicator deflection.

**Differential side bearing preload "T"** : 0.04 - 0.09 mm (0.0016 - 0.0035 in)

8. Select proper thickness of differential side bearing adjusting shim(s) using SDS table as a guide.

**Differential side bearing adjusting shim** : Refer to **AT-390, "DIFFERENTIAL SIDE BEARING ADJUSTING SHIMS"**.

9. Remove converter housing from transmission case.
10. Remove final drive assembly from transmission case.
11. Remove differential side bearing outer race from transmission case.
12. Reinstall differential side bearing outer race and shim(s) selected from SDS table on transmission case.
13. Reinstall converter housing on transmission case and tighten transmission case fixing bolts to the specified torque.

14. Insert Tool into differential case and measure turning torque of final drive assembly.

- Turn final drive assembly in both directions several times to seat bearing rollers correctly.

**Turning torque of final drive assembly (New bearing)** : 0.49 - 1.08 N·m (5.0 - 11.0 kg·cm, 4.3 - 9.5 in·lb)

- When old bearing is used again, turning torque will be slightly less than the above.
- Make sure torque is within the specified range.

## REDUCTION PINION GEAR BEARING PRELOAD

- Be sure to remove final drive assembly before doing this procedure.
- Using caliper and straightedge, calculate a dimension "T" (adjuster shim thickness) using the following formula. Adjust the inspection standard for preload (rotating slide torque) as shown below.

$$T = A - E$$

**Inspection standard for preload** : 0.1 - 0.69 N·m (1.1 - 7.0 kg·cm, 0.95 - 6.08 in·lb)

1. Remove transmission case and final drive assembly from converter housing.
2. Select proper thickness of reduction pinion gear bearing adjusting shim using the following procedures.
  - a. Place reduction pinion gear on transmission case as shown.

- b. Place idler gear bearing on transmission case.
- c. Measure dimensions "B", "C" and "D" and calculate dimension "A".

$$A = D - (B + C)$$

"A"

: Distance between the surface of idler gear bearing inner race and the adjusting shim mating surface of reduction pinion gear.

- Measure dimension "B" between the end of reduction pinion gear and the surface of transmission case.
- Measure dimension "B" in at least two places.

# ASSEMBLY

[RE4F03B]

- Measure dimension "C" between the surface of idler gear bearing inner race and the surface of transmission case.
- Measure dimension "C" in at least two places.

- Measure dimension "D" between the end of reduction pinion gear and the adjusting shim mating surface of reduction pinion gear.
- Measure dimension "D" in at least two places.
- Calculate dimension "A".

$$A = D - (B + C)$$

- d. Measure dimension "E" between the end of idler gear and the idler gear bearing inner race mating surface of idler gear.
- Measure dimension "E" in at least two places.
- e. Calculate "T" and select proper thickness of reduction pinion gear bearing adjusting shim using SDS table as a guide.

$$T = A - E - 0.05 \text{ mm (0.0020 in)*}$$

Reduction pinion gear bearing adjusting shim : Refer to [AT-392](#).  
"REDUCTION PINION GEAR BEARING ADJUSTING SHIMS" .

\*: Bearing preload

3. Install reduction pinion gear and reduction pinion gear bearing adjusting shim selected in step 2-e on transmission case using Tool.
4. Press idler gear bearing inner race on idler gear.
5. Press idler gear on reduction pinion gear.
  - Press idler gear so that idler gear can be locked by parking pawl.

6. Tighten idler gear lock nut to the specified torque.
  - Lock idler gear with parking pawl when tightening lock nut.

7. Measure turning torque of reduction pinion gear.
  - When measuring turning torque, turn reduction pinion gear in both directions several times to seat bearing rollers correctly.

Turning torque of reduction pinion gear : 0.1 - 0.69 N·m (1.1 - 7.0 kg-cm, 0.95 - 6.08 in-lb)

### OUTPUT SHAFT END PLAY

- Measure clearance between side cover and the end of the output shaft bearing.
- Select proper thickness of adjusting shim so that clearance is within specifications.

1. Install bearing retainer for output shaft.

# ASSEMBLY

[RE4F03B]

2. Install output shaft thrust needle bearing on bearing retainer.

A

B

AT

3. Install output shaft on transmission case.

D

E

F

G

4. Measure dimensions "l1" and "l2" at side cover and then calculate dimension "A".

- Measure dimension "l1" and "l2" in at least two places  
**"A": Distance between transmission case fitting surface and adjusting shim mating surface**

$$A = l_1 - l_2$$

$l_2$  : Height of gauge

H

I

J

K

5. Measure dimensions "l2" and "l3" and then calculate dimension "B".

- Measure "l2" and "l3" in at least two places.  
**"B": Distance between the end of output shaft bearing outer race and the side cover fitting surface of transmission case**

$$B = l_2 - l_3$$

$l_2$  : Height of gauge

L

M

# ASSEMBLY

[RE4F03B]

6. Select proper thickness of adjusting shim so that output shaft end play (clearance between side cover and output shaft bearing) is within specifications.

**Output shaft end play (A – B) : 0 - 0.5 mm (0 - 0.020 in)**

**Output shaft end play adjusting shim : Refer to [AT-393, "OUTPUT SHAFT END PLAY ADJUSTING SHIMS"](#) .**

7. Install adjusting shim on output shaft bearing.

8. Apply locking sealant (Loctite 5/8 or equivalent) to transmission case as shown in illustration.

9. Install side cover on transmission case.

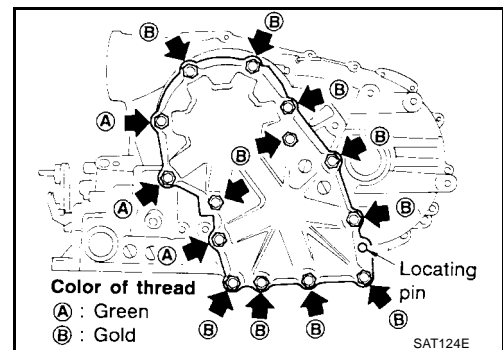

- **Apply locking sealant to the mating surface of transmission case.**

10. Tighten side cover fixing bolts to specified torque.

 : **26 - 30 N·m (2.7 - 3.1 kg-m, 20 - 22 ft-lb)**

- **Do not mix bolts A and B.**
- **Always replace bolts A as they are self-sealing bolts.**

### Assembly (2)

1. Remove paper rolled around bearing retainer.
2. Install thrust washer on bearing retainer.
  - Apply petroleum jelly to thrust washer.

3. Install forward clutch assembly.
  - Align teeth of low & reverse brake drive plates before installing.
  - Make sure that bearing retainer seal rings are not spread.

4. Install thrust needle bearing on bearing retainer.
  - Apply petroleum jelly to thrust bearing.
  - Pay attention to direction of thrust needle bearing.

5. Install thrust needle bearing on rear internal gear.
  - Apply petroleum jelly to thrust needle bearing.
  - Pay attention to direction of thrust needle bearing.

# ASSEMBLY

[RE4F03B]

6. Hold forward clutch hub and turn overrun clutch hub.  
Check overrun clutch hub for directions of lock and unlock.
- If not as shown in illustration, check installed direction of forward one-way clutch.

7. Install rear internal gear assembly.
- **Align teeth of forward clutch and overrun clutch drive plate.**

8. Install needle bearing on rear planetary carrier.
- **Apply petroleum jelly to needle bearing.**
  - **Pay attention to direction of needle bearing.**

9. Install rear sun gear on rear planetary carrier.
- **Pay attention to direction of rear sun gear.**

10. Install rear planetary carrier on transmission case.

11. Install thrust needle bearing on front planetary carrier.

- Apply petroleum jelly to thrust needle bearing.
- Pay attention to direction of thrust needle bearing.

12. Install low one-way clutch to front planetary carrier by turning it in the direction of the arrow as shown.

13. While holding front planetary carrier, turn low one-way clutch. Check low one-way clutch for correct directions of lock and unlock.

14. Install front planetary carrier assembly on transmission case.

# ASSEMBLY

[RE4F03B]

15. Install snap ring with screwdriver.

- Forward clutch and bearings must be correctly installed for snap ring to fit groove of transmission case.

16. Install needle bearing on front sun gear.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

17. Install front sun gear on front planetary carrier.

18. Install needle bearing on front sun gear.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

19. Install high clutch hub on front sun gear.

20. Install needle bearing on high clutch hub.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

21. Remove paper rolled around input shaft.

22. Install input shaft assembly.

- Align teeth of high clutch drive plates before installing.

23. Install reverse clutch assembly.

- Align teeth of reverse clutch drive plates before installing.

## Adjustment (2)

ECS0061A

When any parts listed below are replaced, adjust total end play and reverse clutch end play.

Part name	Total end play	Reverse clutch end play
Transmission case	●	●
Overrun clutch hub	●	●

Part name	Total end play	Reverse clutch end play
Rear sun gear	●	●
Front planetary carrier	●	●
Front sun gear	●	●
High clutch hub	●	●
High clutch drum	●	●
Oil pump cover	●	●
Reverse clutch drum	—	●

## TOTAL END PLAY

- Measure clearance between reverse clutch drum and needle bearing for oil pump cover.
- Select proper thickness of bearing race so that end play is within specifications.

1. Measure dimensions "K" and "L" and then calculate dimension "J".

- a. Measure dimension "K".

# ASSEMBLY

[RE4F03B]

- b. Measure dimension "L".
- c. Calculate dimension "J".  
**"J": Distance between oil pump fitting surface of transmission case and needle bearing mating surface of high clutch drum**

$$J = K - L$$

2. Measure dimension "M".

- a. Place bearing race and needle bearing on oil pump assembly.
- b. Measure dimension "M".  
**"M": Distance between transmission case fitting surface and needle bearing on oil pump cover**  
**"M1": Indication of gauge**

- c. Measure thickness of straightedge "t".

$$M = M_1 - t$$

3. Adjust total end play "T3".

$$T_3 = J - M$$

**Total end play "T3" : 0.25 - 0.55 mm (0.0098 - 0.0217 in)**

- Select proper thickness of bearing race so that total end play is within specifications.

**Bearing races**

**: Refer to [AT-394](#). "[BEARING RACE FOR ADJUSTING TOTAL END PLAY](#)"**

## REVERSE CLUTCH END PLAY

- Measure clearance between oil pump cover and thrust washer for reverse clutch drum.
- Select proper thickness of thrust washer so that end play is within specifications.

1. Measure dimensions "O" and "P" and then calculate dimension "N".

- a. Place thrust washer on reverse clutch drum.

- b. Measure dimension "O".
  - c. Measure dimension "P".
  - d. Calculate dimension "N".
- "N": Distance between oil pump fitting surface of transmission case and thrust washer on reverse clutch drum**

$$N = O - P$$

# ASSEMBLY

[RE4F03B]

2. Measure dimensions "R" and "S" and then calculate dimension "Q".

- a. Measure dimension "R".

- b. Measure dimension "S".
  - c. Calculate dimension "Q".
- "Q": Distance between transmission case fitting surface and thrust washer mating surface**

$$Q = R - S$$

3. Adjust reverse clutch end play "T4".

$$T4 = N - Q$$

**Reverse clutch end play : 0.65 - 1.00 mm (0.0256 - 0.0394 in)**

- Select proper thickness of thrust washer so that reverse clutch end play is within specifications.

**Thrust washer : Refer to AT-394, "THRUST WASHERS FOR ADJUSTING REVERSE CLUTCH END PLAY"**

## Assembly (3)

ECS0061B

1. Remove reverse clutch assembly and install needle bearing on high clutch assembly.
  - Pay attention to direction of needle bearing.
2. Install reverse clutch assembly.

# ASSEMBLY

[RE4F03B]

3. Install anchor end pin and lock nut on transmission case.
4. Place brake band on outside of reverse clutch drum. Tighten anchor end pin just enough so that brake band is evenly fitted on reverse clutch drum.

5. Place bearing race selected in total end play adjustment step on oil pump cover.
  - **Apply petroleum jelly to bearing race.**

6. Place thrust washer selected in reverse clutch end play step on reverse clutch drum.
  - **Apply petroleum jelly to thrust washer.**

7. Install oil pump assembly on transmission case.

8. Tighten oil pump fixing bolts to specified torque.

 : 18 - 21 N·m (1.8 - 2.1 kg·m, 13 - 15 ft·lb)

9. Install O-ring to input shaft.

● Apply ATF to O-ring.

10. Adjust brake band.

a. Tighten anchor end pin to specified torque.

**Anchor end pin** : 3.9 - 5.9 N·m (0.4 - 0.6 kg·m, 35 - 52 in·lb)

b. Back off anchor end pin two and a half turns.

c. While holding anchor end pin, tighten lock nut.

11. Apply compressed air to oil holes of transmission case and check operation of brake band.

ECS0061C

### Assembly (4)

1. Install final drive assembly on transmission case.

2. Install oil tube on converter housing.

# ASSEMBLY

[RE4F03B]

3. Install O-ring on differential oil port of transmission case.
4. Install converter housing on transmission case.
  - **Apply locking sealant to mating surface of converter housing.**

Bolt	Length mm (in)
A	32.8 (1.291)
B	40 (1.57)

5. Install accumulator piston.
  - a. Check contact surface of accumulator piston for damage.

- b. Install O-rings on accumulator piston.
        - Apply ATF to O-rings.
- Accumulator piston O-rings** : Refer to [AT-394, "O-RING"](#).

- c. Install accumulator pistons and return springs on transmission case.
          - **Apply ATF to inner surface of transmission case.**
- Return springs** : Refer to [AT-394, "RETURN SPRING"](#).

6. Install lip seals for band servo oil holes on transmission case.

- Apply petroleum jelly to lip seals.

7. Install control valve assembly.

a. Insert manual valve into control valve assembly.

- Apply ATF to manual valve.

b. Pass solenoid harness through transmission case and install terminal body on transmission case by pushing it.

c. Install stopper ring to terminal body.

d. Tighten bolts **A** , **B** and **C** .

: 7 - 9 N-m (0.7 - 0.9 kg-m,  
61 - 78 in-lb)

### Bolt length, number and location

Bolt symbol	<b>A</b>	<b>B</b>	<b>C</b>
Bolt length "l" 	40.0 mm (1.575 in)	33.0 mm (1.299 in)	43.5 mm (1.713 in)
Number of bolts	5	6	2

8. Install oil pan.

a. Attach magnet to oil pan.

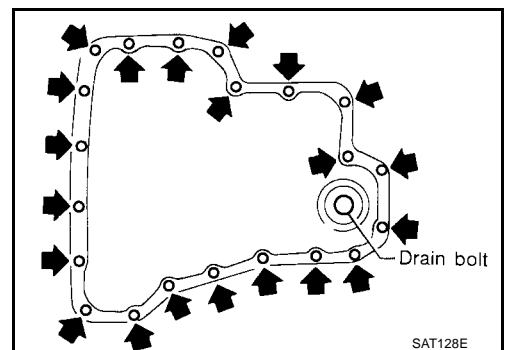

b. Install new oil pan gasket on transmission case.

c. Install oil pan on transmission case.

- **Always replace oil pan bolts as they are self-sealing bolts.**
- **Tighten the bolts in a criss-cross pattern to prevent dislocation of gasket.**

d. Tighten drain plug to specified torque.

# ASSEMBLY

[RE4F03B]

9. Install PNP switch.
  - a. Set manual shaft in "P" position.
  - b. Temporarily install PNP switch on manual shaft.
  - c. Move selector lever to "N" position.

- d. Use a 4 mm (0.157 in) pin for this adjustment.
  1. Insert the pin straight into the manual shaft adjustment hole.
  2. Rotate PNP switch until the pin can also be inserted straight into hole in PNP switch.
- e. Tighten PNP switch fixing bolts.
- f. Remove pin from adjustment hole after adjusting PNP switch.

10. Install oil charging pipe and oil cooler tube to transmission case.

11. Install torque converter.
  - a. Pour ATF into torque converter.
    - **Approximately 1 liter (1-1/8 US qt, 7/8 Imp qt) of fluid is required for a new torque converter.**
    - **When reusing old torque converter, add the same amount of fluid as was drained.**

# ASSEMBLY

[RE4F03B]

- b. Install torque converter while aligning notches of torque converter with notches of oil pump.

- c. Measure distance "A" to check that torque converter is in proper position.

**Distance "A" : 21.1 mm (0.831 in)**

## Clutch, Brake and Brake Band REVERSE CLUTCH

ECS0061I

Number of drive plates	2	
Number of driven plates	2	
Drive plate thickness mm (in)	Standard	2.0 (0.079)
	Allowable limit	1.8 (0.071)
Clearance mm (in)	Standard	0.5 - 0.8 (0.020 - 0.031)
	Allowable limit	1.2 (0.047)
Thickness of retaining plates	Thickness mm (in)	Part number*
	4.4 (0.173)	31537-31X00
	4.6 (0.181)	31537-31X01
	4.8 (0.189)	31537-31X02
	5.0 (0.197)	31537-31X03
5.2 (0.205)	31537-31X04	

\*: Always check with the Parts Department for the latest parts information.

# SERVICE DATA AND SPECIFICATIONS (SDS)

[RE4F03B]

## HIGH CLUTCH

Number of drive plates		3
Number of driven plates		5
Drive plate thickness mm (in)	Standard	2.0 (0.079)
	Allowable limit	1.8 (0.071)
Clearance mm (in)	Standard	1.4 - 1.8 (0.055 - 0.071)
	Allowable limit	2.4 (0.094)
Thickness of retaining plates	Thickness mm (in)	Part number*
	4.8 (0.189)	31537-32X05
	5.0 (0.197)	31537-32X06
	5.2 (0.205)	31537-32X07
	5.4 (0.213)	31537-32X08
	5.6 (0.220)	31537-32X09
	5.8 (0.228)	31537-32X10
6.0 (0.236)	31537-32X11	

\*: Always check with the Parts Department for the latest parts information.

## FORWARD CLUTCH

Number of drive plates		5
Number of driven plates		5
Drive plate thickness mm (in)	Standard	1.8 (0.071)
	Allowable limit	1.6 (0.063)
Clearance mm (in)	Standard	0.45 - 0.85 (0.0177 - 0.0335)
	Allowable limit	1.85 (0.0728)
Thickness of retaining plate	Thickness mm (in)	Part number*
	3.6 (0.142)	31537-31X60
	3.8 (0.150)	31537-31X61
	4.0 (0.157)	31537-31X62
	4.2 (0.165)	31537-31X63
	4.4 (0.173)	31537-31X64
	4.6 (0.181)	31537-31X65

\*: Always check with the Parts Department for the latest parts information.

## OVERRUN CLUTCH

Number of drive plates		3
Number of driven plates		4
Drive plate thickness mm (in)	Standard	1.6 (0.063)
	Allowable limit	1.4 (0.055)
Clearance mm (in)	Standard	1.0 - 1.4 (0.039 - 0.055)
	Allowable limit	2.0 (0.079)
Thickness of retaining plate	Thickness mm (in)	Part number*
	3.6 (0.142)	31567-31X79
	3.8 (0.150)	31567-31X80
	4.0 (0.157)	31567-31X81
	4.2 (0.165)	31567-31X82
	4.4 (0.173)	31567-31X83

\*: Always check with the Parts Department for the latest parts information.

## LOW & REVERSE BRAKE

Number of drive plates		5
Number of driven plates		4 + 1

# SERVICE DATA AND SPECIFICATIONS (SDS)

**PRECAUTIONS**

PF0:00001

**Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”**

ECS00622

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**Precautions for On Board Diagnostic (OBD) System of A/T and Engine**

ECS00623

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

**CAUTION:**

- Be sure to turn the ignition switch OFF and disconnect the negative battery terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. may cause the MIL to light up due to a short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to a malfunction of the EGR system or fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM or ECM before returning the vehicle to the customer.

**Precautions**

ECS00624

- Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect negative battery terminal. Failure to do so may damage the TCM, because battery voltage is applied to TCM even if ignition switch is turned off.

# PRECAUTIONS

[RE4F04B]

- When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).  
Make sure that there are not any bends or breaks on TCM pin terminal, when connecting pin connectors.

- Before replacing TCM, perform TCM input/output signal inspection and verify whether TCM functions properly or not. Refer to [AT-420, "INPUT/OUTPUT SIGNAL OF TCM"](#).

- After performing each TROUBLE DIAGNOSIS, perform "DTC (Diagnostic Trouble Code) CONFIRMATION PROCEDURE".  
The DTC should not be displayed in the "DTC CONFIRMATION PROCEDURE" if the repair is completed.

- Before proceeding with disassembly, thoroughly clean the outside of the transaxle. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- Disassembly should be done in a clean work area.
- Use lint-free cloth or towels for wiping parts clean. Common shop rags can leave fibers that could interfere with the operation of the transaxle.
- Place disassembled parts in order for easier and proper assembly.
- All parts should be carefully cleaned with a general purpose, non-flammable solvent before inspection or reassembly.
- Gaskets, seals and O-rings should be replaced any time the transaxle is disassembled.
- It is very important to perform functional tests whenever they are indicated.
- The valve body contains precision parts and requires extreme care when parts are removed and serviced. Place disassembled valve body parts in order for easier and proper assembly. Care will also prevent springs and small parts from becoming scattered or lost.
- Properly installed valves, sleeves, plugs, etc. will slide along bores in valve body under their own weight.
- Before assembly, apply a coat of recommended ATF to all parts. Apply petroleum jelly to protect O-rings and seals, or hold bearings and washers in place during assembly. Do not use grease.
- Extreme care should be taken to avoid damage to O-rings, seals and gaskets when assembling.
- Replace ATF cooler if excessive foreign material is found in oil pan or clogging strainer. Refer to [AT-400, "ATF COOLER SERVICE"](#).
- After overhaul, refill the transaxle with new ATF.
- When the A/T drain plug is removed, only some of the fluid is drained. Old A/T fluid will remain in torque converter and ATF cooling system.  
Always follow the procedures when changing A/T fluid. Refer to [MA-31, "Changing A/T Fluid"](#).

## Service Notice or Precautions

### FAIL-SAFE

The TCM has an electronic Fail-Safe (limp home mode). This allows the vehicle to be driven even if a major electrical input/output device circuit is damaged.

Under Fail-Safe, the vehicle always runs in third gear, even with a shift lever position of 1, 2 or D. The customer may complain of sluggish or poor acceleration.

When the ignition key is turned ON following Fail-Safe operation, O/D OFF indicator lamp blinks for about 8 seconds. [Or, refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) ].

The blinking of the O/D OFF indicator lamp for about 8 seconds will appear only once and be cleared. The customer may resume normal driving conditions.

Always follow the "Work Flow". Refer to [AT-450, "Work Flow"](#) .

The SELF-DIAGNOSIS results will be as follows:

- The first SELF-DIAGNOSIS will indicate damage to the vehicle speed sensor or the revolution sensor.
- During the next SELF-DIAGNOSIS, performed after checking the sensor, no damages will be indicated.

### TORQUE CONVERTER SERVICE

The torque converter should be replaced under any of the following conditions:

- External leaks in the hub weld area.
- Converter hub is scored or damaged.
- Converter pilot is broken, damaged or fits poorly into crankshaft.
- Steel particles are found after flushing the cooler and cooler lines.
- Pump is damaged or steel particles are found in the converter.
- Vehicle has TCC shudder and/or no TCC apply. Replace only after all hydraulic and electrical diagnoses have been made. (Converter clutch material may be glazed.)
- Converter is contaminated with engine coolant containing antifreeze.
- Internal failure of stator roller clutch.
- Heavy clutch debris due to overheating (blue converter).
- Steel particles or clutch lining material found in fluid filter or on magnet when no internal parts in unit are worn or damaged — indicates that lining material came from converter.

The torque converter should not be replaced if:

- The fluid has an odor, is discolored, and there is no evidence of metal or clutch facing particles.
- The threads in one or more of the converter bolt holes are damaged.
- Transaxle failure did not display evidence of damaged or worn internal parts, steel particles or clutch plate lining material in unit and inside the fluid filter.
- Vehicle has been exposed to high mileage (only). The exception may be where the torque converter clutch dampener plate lining has seen excess wear by vehicles operated in heavy and/or constant traffic, such as taxi, delivery or police use.

### ATF COOLER SERVICE

If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to [CO-30, "RADIATOR"](#) .

### OBD-II SELF-DIAGNOSIS

- A/T self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the O/D OFF indicator or the malfunction indicator lamp (MIL). Refer to the table on [AT-433](#) for the indicator used to display each self-diagnostic result.

- The self-diagnostic results indicated by the MIL are automatically stored in both the ECM and TCM memories.

**Always perform the procedure "HOW TO ERASE DTC" on [AT-430](#) to complete the repair and avoid unnecessary blinking of the MIL.**

- The following self-diagnostic items can be detected using ECM self-diagnostic results mode\* only when the O/D OFF indicator lamp does not indicate any malfunctions.

- park/neutral position (PNP) switch

\*: For details of OBD-II, refer to [EC-1260, "ON BOARD DIAGNOSTIC \(OBD\) SYSTEM"](#) .

- **Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector.**

For description and how to disconnect, refer to [GI-23, "How to Check Terminal"](#) .

## Wiring Diagrams and Trouble Diagnosis

ECS00626

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

	2nd		O	O	O			B				
	3rd		O	O	*2 C			B				

\*1: Operates when overdrive control switch is set in OFF position.

\*2: Oil pressure is applied to both 2nd "apply" side and 3rd "release" side of band servo piston. However, brake band does not contract because oil pressure area on the "release" side is greater than that on the "apply" side.

\*3: Oil pressure is applied to 4th "apply" side in condition \*2 above, and brake band contracts.

\*4: A/T will not shift to 4th when overdrive control switch is set in OFF position.

O: Operates

A: Operates when throttle opening is less than 3/16, activating engine brake.

B: Operates during "progressive" acceleration.

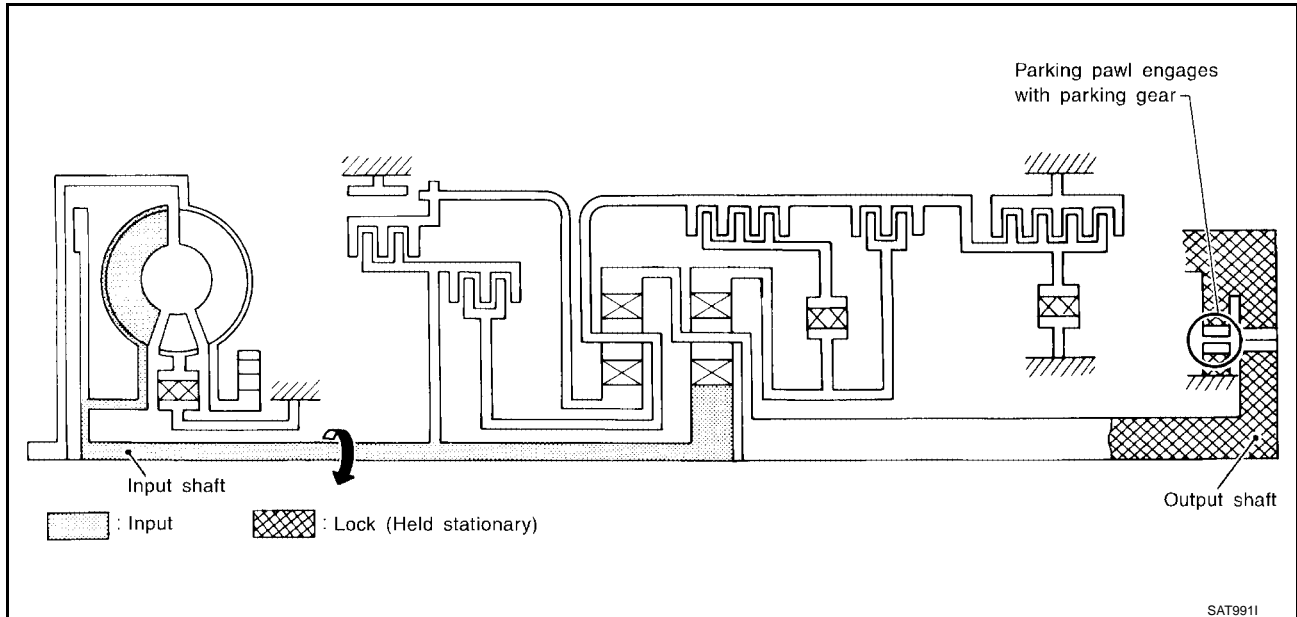

C: Operates but does not affect power transmission.

D: Operates when throttle opening is less than 3/16, but does not affect engine brake.

## POWER TRANSMISSION

### P and N Positions

- P position  
Similar to the N position, the clutches do not operate. The parking pawl engages with the parking gear to mechanically hold the output shaft so that the powertrain is locked.
- N position  
Power from the input shaft is not transmitted to the output shaft because the clutches do not operate.

## CONTROL SYSTEM

WCIA0113E

**TCM FUNCTION**

The function of the TCM is to:

- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, lock-up operation, and engine brake operation.
- Send required output signals to the respective solenoids.

**INPUT/OUTPUT SIGNAL OF TCM**

	Sensors and solenoid valves	Function
Input	Park/neutral position (PNP) switch	Detects select lever position and sends a signal to TCM.
	Throttle position sensor [accelerator pedal position (APP) sensor]	Detects accelerator pedal position and requested throttle opening and sends a signal to TCM.
	Engine speed signal	Receives signal from ECM and controls lock-up control solenoid valve.
	A/T fluid temperature sensor	Detects transmission fluid temperature and sends a signal to TCM.
	Revolution sensor	Detects output shaft rpm and sends a signal to TCM.
	Vehicle speed sensor	Used as an auxiliary vehicle speed sensor. Sends a signal which is used if revolution sensor (installed on transmission) malfunctions.
	Overdrive control switch	Sends a signal to the TCM which prohibits a shift to D4 (overdrive) position.
	ASCD control unit	Sends the cruise signal and D4 (overdrive) cancellation signal from ASCD control unit to TCM.
	Stop lamp switch	Send the lock-up release signal to the TCM at time of D4 (lock-up).
	CAN communication	Control units are connected to two communication lines (CAN H and CAN L) allowing a high rate of information transmission.
Output	Shift solenoid valve A/B	Selects shifting point suited to driving conditions in relation to a signal sent from TCM.
	Line pressure solenoid valve	Regulates line pressure suited to driving conditions in relation to a signal sent from TCM.
	Torque converter clutch solenoid valve	Regulates lock-up pressure suited to driving conditions in relation to a signal sent from TCM.
	Overrun clutch solenoid valve	Controls an "engine brake" effect suited to driving conditions in relation to a signal sent from TCM.
	O/D OFF indicator lamp	Shows TCM faults, when A/T control components malfunction.
	CAN communication	Control units are connected to two communication lines (CAN H and CAN L) allowing a high rate of information transmission.

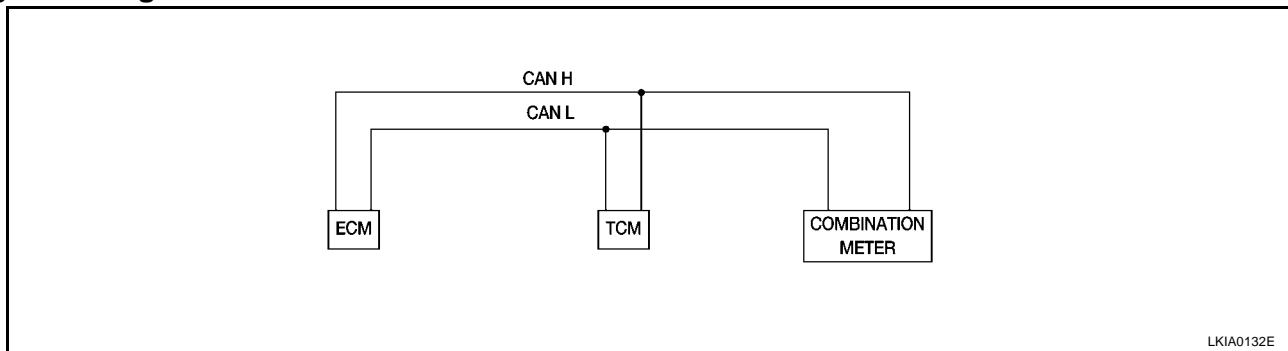

**CAN Communication SYSTEM DESCRIPTION**

ECS006H8

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

**CAN COMMUNICATION UNIT**

**Control Mechanism**  
**LINE PRESSURE CONTROL**

TCM has various line pressure control characteristics to meet the driving conditions. An ON-OFF duty signal is sent to the line pressure solenoid valve based on TCM characteristics. Hydraulic pressure on the clutch and brake is electronically controlled through the line pressure solenoid valve to accommodate engine torque. This results in smooth shift operation.

**Normal Control**

The line pressure to throttle opening characteristics is set for suitable clutch operation.

**Back-up Control (Engine brake)**

If the selector lever is shifted to 2 position while driving in D4 (O/D) or D3, great driving force is applied to the clutch inside the transmission. Clutch operating pressure (line pressure) must be increased to deal with this driving force.

**During Shift Change**

The line pressure is temporarily reduced corresponding to a change in engine torque when shifting gears (that is, when the shift solenoid valve is switched for clutch operation) to reduce shifting shock.

**At Low Fluid Temperature**

- Fluid viscosity and frictional characteristics of the clutch facing change with fluid temperature. Clutch engaging or band-contacting pressure is compensated for, according to fluid temperature, to stabilize shifting quality.

- The line pressure is reduced below 60°C (140°F) to prevent shifting shock due to low viscosity of automatic transmission fluid when temperature is low.

- Line pressure is increased to a maximum irrespective of the throttle opening when fluid temperature drops to -10°C (14°F). This pressure rise is adopted to prevent a delay in clutch and brake operation due to extreme drop of fluid viscosity at low temperature.

**SHIFT CONTROL**

The shift is regulated entirely by electronic control to accommodate vehicle speed and varying engine operations. This is accomplished by electrical signals transmitted by the revolution sensor and the ECM (throttle opening). This results in improved acceleration performance and fuel economy.

**Control of Shift Solenoid Valves A and B**

The TCM activates shift solenoid valves A and B according to signals from the ECM (throttle opening) and revolution sensor to select the optimum gear position on the basis of the shift schedule memorized in the TCM.

The shift solenoid valve performs simple ON-OFF operation. When set to ON, the drain circuit closes and pilot pressure is applied to the shift valve.

# OVERALL SYSTEM

[RE4F04B]

## Relation between shift solenoid valves A and B and gear positions

Shift solenoid valve	Gear position				
	D1 , 21 , 11	D2 , 22 , 12	D3	D4 (O/D)	N-P
A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)	ON (Closed)
B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)

## Control of Shift Valves A and B

Pilot pressure generated by the operation of shift solenoid valves A and B is applied to the end face of shift valves A and B.

The drawing above shows the operation of shift valve B. When the shift solenoid valve is ON, pilot pressure applied to the end face of the shift valve overcomes spring force, moving the valve upward.

## LOCK-UP CONTROL

The torque converter clutch piston in the torque converter is locked to eliminate torque converter slip to increase power transmission efficiency. The solenoid valve is controlled by an ON-OFF duty signal sent from the TCM. The signal is converted to an oil pressure signal which controls the lock-up piston.

## Conditions for Lock-up Operation

When vehicle is driven in 3rd and 4th gear position, vehicle speed and throttle opening are detected. If the detected values fall within the lock-up zone memorized in the TCM, lock-up occurs.

Overdrive control switch	ON	OFF
Selector lever	D position	
Gear position	D4	D3
Vehicle speed sensor	More than set value	
ECM (throttle opening)	Less than set opening	
A/T fluid temperature sensor	More than 40°C (104°F)	

## Torque Converter Clutch Solenoid Valve Control

The torque converter clutch solenoid valve is controlled by the TCM. The plunger closes the drain circuit during the OFF period, and opens the circuit during the ON period. If the percentage of OFF-time increases in one cycle, the pilot pressure drain time is reduced and pilot pressure remains high.

# OVERALL SYSTEM

[RE4F04B]

The torque converter clutch piston is designed to slip to adjust the ratio of ON-OFF, thereby reducing lock-up shock.  
OFF-time INCREASING

↓  
Amount of drain DECREASING

↓  
Pilot pressure HIGH

↓  
Lock-up RELEASING

## Torque Converter Clutch Control Valve Operation

### Lock-up released

The OFF-duration of the torque converter clutch solenoid valve is long, and pilot pressure is high. The pilot pressure pushes the end face of the torque converter clutch control valve in combination with spring force to move the valve to the left. As a result, converter pressure is applied to chamber A (torque converter clutch piston release side). Accordingly, the torque converter clutch piston remains unlocked.

### Lock-up applied

When the OFF-duration of the torque converter clutch solenoid valve is short, pilot pressure drains and becomes low. Accordingly, the control valve moves to the right by the pilot pressure of the other circuit and converter pressure. As a result, converter pressure is applied to chamber B, keeping the torque converter clutch piston applied.

Also smooth lock-up is provided by transient application and release of the lock-up.

## OVERRUN CLUTCH CONTROL (ENGINE BRAKE CONTROL)

Forward one-way clutch is used to reduce shifting shocks in downshifting operations. This clutch transmits engine torque to the wheels. However, drive force from the wheels is not transmitted to the engine because the one-way clutch rotates idle. This means the engine brake is not effective.

The overrun clutch operates when the engine brake is needed.

### Overrun Clutch Operating Conditions

	Gear position	Throttle opening
D position	D1, D2, D3 gear position	Less than 3/16
2 position	21, 22 gear position	
1 position	11, 12 gear position	At any position

**Overrun Clutch Solenoid Valve Control**

The overrun clutch solenoid valve is operated by an ON-OFF signal transmitted by the TCM to provide overrun clutch control (engine brake control).

When this solenoid valve is ON, the pilot pressure drain port closes. When it is OFF, the drain port opens.

During the solenoid valve ON pilot pressure is applied to the end face of the overrun clutch control valve.

**Overrun Clutch Control Valve Operation**

When the solenoid valve is ON, pilot pressure is applied to the overrun clutch control valve. This pushes up the overrun clutch control valve. The line pressure is then shut off so that the clutch does not engage.

When the solenoid valve is OFF, pilot pressure is not generated. At this point, the overrun clutch control valve moves downward by spring force. As a result, overrun clutch operation pressure is provided by the overrun clutch reducing valve. This causes the overrun clutch to engage.

In the 1 position, the overrun clutch control valve remains pushed down so that the overrun clutch is engaged at all times.

**Control Valve**

**FUNCTION OF CONTROL VALVES**

Valve name	Function
Pressure regulator valve, plug and sleeve plug	Regulates oil discharged from the oil pump to provide optimum line pressure for all driving conditions.
Pressure modifier valve and sleeve	Used as a signal supplementary valve to the pressure regulator valve. Regulates pressure-modifier pressure (signal pressure) which controls optimum line pressure for all driving conditions.
Pilot valve	Regulates line pressure to maintain a constant pilot pressure level which controls lock-up mechanism, overrun clutch, shift timing.
Accumulator control valve	Regulates accumulator back-pressure to pressure suited to driving conditions.
Manual valve	Directs line pressure to oil circuits corresponding to select positions. Hydraulic pressure drains when the shift lever is in Neutral.
Shift valve A	Simultaneously switches three oil circuits using output pressure of shift solenoid valve A to meet driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve B.

# OVERALL SYSTEM

**[RE4F04B]**

Valve name	Function
Shift valve B	Simultaneously switches two oil circuits using output pressure of shift solenoid valve B in relation to driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve A.
Overrun clutch control valve	Switches hydraulic circuits to prevent engagement of the overrun clutch simultaneously with application of the brake band in D4 . (Interlocking occurs if the overrun clutch engages during D4 .)
"1" reducing valve	Reduces low & reverse brake pressure to dampen engine-brake shock when down-shifting from the 1 position 12 to 11 .
Overrun clutch reducing valve	Reduces oil pressure directed to the overrun clutch and prevents engine-brake shock. In 1 and 2 positions, line pressure acts on the overrun clutch reducing valve to increase the pressure-regulating point, with resultant engine brake capability.
Torque converter relief valve	Prevents an excessive rise in torque converter pressure.
Torque converter clutch control valve, plug and sleeve	Activates or inactivates the lock-up function. Also provides smooth lock-up through transient application and release of the lock-up system.
1-2 accumulator valve and piston	Dampens the shock encountered when 2nd gear band servo contracts, and provides smooth shifting.
3-2 timing valve	Switches the pace that oil pressure is released depending on vehicle speed; maximizes the high clutch release timing, and allows for soft down shifting.
Shuttle valve	Determines if the overrun clutch solenoid valve should control the 3-2 timing valve or the overrun clutch control valve and switches between the two.
Cooler check valve	At low speeds and with a small load when little heat is generated, saves the volume of cooler flow, and stores the oil pressure for lock up.

**ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION**

PFP:00000

**Introduction**

ECS0062H

The A/T system has two self-diagnostic systems. The first is the emission-related on board diagnostic system (OBD-II) performed by the TCM (transmission control module) in combination with the ECM. The malfunction is indicated by the MIL (malfunction indicator lamp) and is stored as a DTC in the ECM memory but not the TCM memory. The second is the TCM original self-diagnosis indicated by the O/D OFF indicator lamp. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD-II self-diagnostic items. For details, refer to [AT-428, "OBD-II Function for A/T System"](#).

**OBD-II Function for A/T System**

ECS0062I

The ECM provides emission-related on board diagnostic (OBD-II) functions for the A/T system. One function is to receive a signal from the TCM used with OBD-related parts of the A/T system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MIL (malfunction indicator lamp) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements. The MIL automatically illuminates in One or Two Trip Detection Logic when a malfunction is sensed in relation to A/T system parts.

**One or Two Trip Detection Logic of OBD-II  
ONE TRIP DETECTION LOGIC**

ECS0062J

If a malfunction is sensed during the first test drive, the MIL will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

**TWO TRIP DETECTION LOGIC**

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MIL will not illuminate. — First Trip  
If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MIL will illuminate. — Second Trip  
A/T-related parts for which the MIL illuminates during the first or second test drive are listed below.

Items	MIL	
	One trip detection	Two trip detection
Shift solenoid valve A — DTC: P0750	X	
Shift solenoid valve B — DTC: P0755	X	
Throttle position sensor [accelerator pedal position (APP) sensor] — DTC: P1705	X	
Except above		X

The “trip” in the “One or Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.

**OBD-II Diagnostic Trouble Code (DTC)  
HOW TO READ DTC AND 1ST TRIP DTC**

ECS0062K

DTC and 1st trip DTC can be read by the following methods.

 **With CONSULT-II** or  **GST** CONSULT-II or GST (Generic Scan Tool) Examples: P0705, P0710, P0720, P0725, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal. CONSULT-II can identify them as shown below. Therefore, using CONSULT-II (if available) is recommended.**

# ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

[RE4F04B]

A sample of CONSULT-II display for DTC and 1st trip DTC is shown in the following page. DTC or 1st trip DTC of a malfunction is displayed in "SELF DIAGNOSIS" mode for "ENGINE" with CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

SELECT SYSTEM

## Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For detail, refer to [EC-1264, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"](#).

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

L  
M

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased.

## HOW TO ERASE DTC

The diagnostic trouble code can be erased by CONSULT-II, GST or ECM DIAGNOSTIC TEST MODE as described in the following.

- **If the battery terminal is disconnected, the diagnostic trouble code will be lost within 24 hours.**
- **When you erase the DTC, using CONSULT-II or GST is easier and quicker than switching the mode selector on the ECM.**

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD-II. For details, refer to [EC-1261, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS"](#) .

- **Diagnostic trouble codes (DTC)**
- **1st trip diagnostic trouble codes (1st trip DTC)**
- **Freeze frame data**
- **1st trip freeze frame data**
- **System readiness test (SRT) codes**
- **Test values**

## Ⓜ HOW TO ERASE DTC (WITH CONSULT-II)

- **If a DTC is displayed for both ECM and TCM, it needs to be erased for both ECM and TCM.**
1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
  2. Turn CONSULT-II "ON" and touch "A/T".
  3. Touch "SELF-DIAG RESULTS".
  4. Touch "ERASE". (The DTC in the TCM will be erased.) Then touch "BACK" twice.
  5. Touch "ENGINE".
  6. Touch "SELF DIAGNOSIS".

7. Touch "ERASE". (The DTC in the ECM will be erased.)

**How to erase DTC (With CONSULT-II)**

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.

7. Touch "ERASE". (The DTC in the ECM will be erased.)

SCIA5586E

**HOW TO ERASE DTC (WITH GST)**

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform TCM self-diagnostic procedure. Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with Generic Scan Tool (GST). For details, refer to [EC-1274, "How to Erase DTC \( With GST\)"](#) .

**HOW TO ERASE DTC (NO TOOLS)**

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform TCM self-diagnostic procedure. Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Perform OBD-II self-diagnostic procedure. Refer to [AT-441, "OBD-II SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)

## Malfunction Indicator Lamp (MIL)

1. The malfunction indicator lamp will light up when the ignition switch is turned ON without the engine running. This is for checking the lamp.
  - If the malfunction indicator lamp does not light up, refer to [DI-27, "WARNING LAMPS"](#).  
(Or see [AT-432, "Malfunction Indicator Lamp \(MIL\)"](#) .)
2. When the engine is started, the malfunction indicator lamp should go off.  
If the lamp remains on, the on board diagnostic system has detected an emission-related (OBD-II) malfunction. For details, refer to [AT-428, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION"](#) .

## CONSULT-II

After performing [AT-433, "SELF-DIAGNOSTIC PROCEDURE \(WITH CONSULT-II\)"](#) , place check marks for results on the [AT-447, "DIAGNOSTIC WORKSHEET"](#) . Reference pages are provided following the items.

### NOTICE:

1. The CONSULT-II electrically displays shift timing and lock-up timing (that is, operation timing of each solenoid).  
Check for time difference between actual shift timing and the CONSULT-II display. If the difference is noticeable, mechanical parts (except solenoids, sensors, etc.) may be malfunctioning. Check mechanical parts using applicable diagnostic procedures.
2. Shift schedule (which implies gear position) displayed on CONSULT-II and that indicated in Service Manual may differ slightly. This occurs because of the following reasons:
  - Actual shift schedule has more or less tolerance or allowance,
  - Shift schedule indicated in Service Manual refers to the point where shifts start, and
  - Gear position displayed on CONSULT-II indicates the point where shifts are completed.
3. Shift solenoid valve "A" or "B" is displayed on CONSULT-II at the start of shifting. Gear position is displayed upon completion of shifting (which is computed by TCM).
4. Additional CONSULT-II information can be found in the Operation Manual supplied with the CONSULT-II unit.

## FUNCTION

Diagnostic test mode	Function	Reference Page
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.	—
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	<a href="#">AT-433</a>
Data monitor	Input/Output data in the ECM can be read.	<a href="#">AT-435</a>
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.	—
Function test	Performed by CONSULT-II instead of a technician to determine whether each system is "OK" or "NG".	—
DTC work support	Select the operating condition to confirm Diagnosis Trouble Codes.	<a href="#">AT-437</a>
TCM part number	TCM part number can be read.	—

### Ⓜ SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)

- Turn on CONSULT-II and touch "ENGINE" for OBD-II detected items or touch "A/T" for TCM self-diagnosis.  
If A/T is not displayed, check TCM power supply and ground circuit. Refer to [AT-488, "TROUBLE DIAGNOSIS FOR POWER SUPPLY"](#) . If result is NG, refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

- Touch "SELF DIAGNOSIS".  
Display shows malfunction experienced since the last erasing operation.  
CONSULT-II performs "Real Time Diagnosis".  
Also, any malfunction detected while in this mode will be displayed at real time.

## DTC WORK SUPPORT MODE

DTC work support item	Description	Check item
1ST GR FNCTN P0731	Following items for "A/T 1st gear function (P0731)" can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
2ND GR FNCTN P0732	Following items for "A/T 2nd gear function (P0732)" can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
3RD GR FNCTN P0733	Following items for "A/T 3rd gear function (P0733)" can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Each clutch ● Hydraulic control circuit
4TH GR FNCTN P0734	Following items for "A/T 4th gear function (P0734)" can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Shift solenoid valve B ● Line pressure solenoid valve ● Each clutch ● Hydraulic control circuit
TCC S/V FNCTN P0744	Following items for "A/T TCC S/V function (lock-up) (P0744)" can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Torque converter clutch solenoid valve ● Each clutch ● Hydraulic control circuit

### Diagnostic Procedure Without CONSULT-II OBD-II SELF-DIAGNOSTIC PROCEDURE (WITH GST)

ECS0062N

Refer to [EC-1329, "Generic Scan Tool \(GST\) Function"](#) .

### OBD-II SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

Refer to [EC-1275, "Malfunction Indicator Lamp \(MIL\)"](#) .

## TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

### 1. CHECK O/D OFF INDICATOR LAMP

1. Move selector lever to P position.  
Start engine and warm it up to normal engine operating temperature.
2. Turn ignition switch to OFF position.
3. Wait 5 seconds.
4. Turn ignition switch to ON position.  
(Do not start engine.)

5. Does O/D OFF indicator lamp come on for about 2 seconds?

#### Yes or No

- Yes >> GO TO 2.  
 No >> Stop procedure. Perform [AT-602, "1. O/D OFF Indicator Lamp Does Not Come On"](#) before proceeding.

## 2. JUDGEMENT PROCEDURE STEP 1

1. Turn ignition switch to OFF position.
2. Turn ignition switch to ACC position.
3. Move selector lever from P to D position.
4. Turn ignition switch to ON position.  
(Do not start engine.)
5. Depress and hold overdrive control switch in OFF position (the O/D OFF indicator lamp will be ON) until directed to release the switch. (If O/D OFF indicator lamp does not come on, refer to "Steps 3 and 4" in [AT-602, "1. O/D OFF Indicator Lamp Does Not Come On"](#) ).
6. Turn ignition switch to OFF position.
7. Turn ignition switch to ON position (Do not start engine.)
8. Release the overdrive control switch (the O/D OFF indicator lamp will be OFF).
9. Wait 2 seconds.
10. Move selector lever to 2 position.
11. Depress and release overdrive control switch in ON position until next step is completed (the O/D OFF indicator lamp will be ON).

12. Depress and hold the overdrive control switch (the O/D OFF indicator lamp will be OFF) until directed to release the switch.

>> GO TO 3.

## 3. JUDGEMENT PROCEDURE STEP 2

1. Move selector lever to 1 position.
2. Release the overdrive control switch.
3. Depress and release the overdrive control switch (the O/D OFF indicator lamp will be ON).
4. Depress and release the overdrive control switch (the O/D OFF indicator lamp will be OFF).
5. Depress and hold the overdrive control switch (the O/D OFF indicator lamp will be ON) until directed to release the switch.
6. Depress accelerator pedal fully and release it.
7. Release the overdrive control switch (the O/D OFF indicator lamp will begin to flash ON and OFF).

>> GO TO 4.

4. CHECK SELF-DIAGNOSTIC CODE

Check O/D OFF indicator lamp.

Refer to [AT-444, "JUDGEMENT OF SELF-DIAGNOSIS CODE"](#) .

>> DIAGNOSIS END

JUDGEMENT OF SELF-DIAGNOSIS CODE

O/D OFF indicator lamp:

<p>All judgement flickers are the same.</p> <p>All circuits that can be confirmed by self-diagnosis are OK.</p>	<p>1st judgement flicker is longer than others.</p> <p>Revolution sensor circuit is short-circuited or disconnected. ⇒ Go to <a href="#">AT-503, "DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)"</a> .</p>

6th judgement flicker is longer than others.

Overrun clutch solenoid valve circuit is short-circuited or disconnected.

⇒ Go to [AT-568. "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"](#) .

7th judgement flicker is longer than others.

Torque converter clutch solenoid valve circuit is short-circuited or disconnected.

⇒ Go to [AT-534. "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#) .

8th judgement flicker is longer than others.

A/T fluid temperature sensor is disconnected or TCM power source circuit is damaged.

⇒ Go to [AT-497. "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#) .

9th judgement flicker is longer than others.

Engine speed signal circuit is short-circuited or disconnected.

⇒ Go to [AT-508. "DTC P0725 ENGINE SPEED SIGNAL"](#) .

10th judgement flicker is longer than others.

Line pressure solenoid valve circuit is short-circuited or disconnected.

⇒ Go to [AT-547. "DTC P0745 LINE PRESSURE SOLENOID VALVE"](#) .

11th judgement flicker is longer than others.

The ECM-A/T communication line is open or shorted.

⇒ Go to [AT-590. "DTC U1000 CAN COMMUNICATION LINE"](#) .

Lamp comes on.

Park/neutral position (PNP) switch, overdrive control switch or throttle position switch circuit is disconnected or TCM is damaged.

⇒ Go to [AT-632. "21. TCM Self-diagnosis Does Not Activate {Park/neutral Position \(PNP\), Overdrive Control and Throttle Position Sensor \[Accelerator Pedal Position \(APP\) Sensor\] Switches Circuit Checks}"](#) .

Flickers as shown below.

Battery power is low.

Battery has been disconnected for a long time.

Battery is connected conversely.

(When reconnecting TCM connectors. — This is not a problem.)

t1 = 2.5 seconds t2 = 2.0 seconds t3 = 1.0 second t4 = 1.0 second

**TROUBLE DIAGNOSIS - INTRODUCTION**

**Introduction**

The TCM receives a signal from the vehicle speed sensor, ECM (throttle opening) or park/neutral position (PNP) switch and provides shift control or lock-up control via A/T solenoid valves.

The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the OBD-related parts of the A/T system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.

Input and output signals must always be correct and stable in the operation of the A/T system. The A/T system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.

It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only, may not find the cause of the problems. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the "Work Flow". Refer to [AT-450, "Work Flow"](#)

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such problems, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "DIAGNOSTIC WORKSHEET" like the example referenced at [AT-447](#) should be used.

Start your diagnosis by looking for "conventional" problems first. This will help troubleshoot driveability problems on an electronically controlled engine vehicle.

**Also check related Service bulletins for information.**

### HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a problem. It is important to fully understand the symptoms or conditions for a customer complaint.

Make good use of the two sheets provided, [AT-447, "Information from Customer"](#) and [AT-448, "Diagnostic Worksheet"](#), to perform the best troubleshooting possible.

## WORK FLOW CHART

- |                             |                                    |                              |

SAT086JI

**TROUBLE DIAGNOSIS - BASIC INSPECTION**

PF0:0000

**A/T Fluid Check**

ECS0062Q

**FLUID LEAKAGE CHECK**

1. Clean area suspected of leaking. For example, mating surface of converter housing and transmission case.
2. Start engine, apply foot brake, place selector lever in D position and wait a few minutes.
3. Stop engine.

4. Check for fresh leakage.

**FLUID CONDITION CHECK**

Fluid color	Suspected problem
Dark or black with burned odor	Wear of frictional material
Milky pink	Water contamination — Road water entering through filler tube or breather
Varnished fluid, light to dark brown and tacky	Oxidation — Over or under filling, — Overheating

**FLUID LEVEL CHECK**

Refer to [MA-30, "Checking A/T Fluid"](#) .

**Stall Test**

ECS0062R

**STALL TEST PROCEDURE**

1. Check A/T fluid and engine oil levels. If necessary, add fluid and oil.
2. Drive vehicle for approx. 10 minutes or until fluid and oil reach operating temperature.

**ATF operating temperature :50 - 80°C (122 - 176°F)**

3. Set parking brake and block wheels.
4. Install a tachometer where it can be seen by driver during test.
  - It is good practice to mark the point of specified engine rpm on indicator.

5. Start engine, apply foot brake, and place selector lever in D position.
6. Accelerate to wide open throttle gradually while applying foot brake.
7. Quickly note the engine stall revolution and immediately release throttle.
  - During test, never hold throttle wide open for more than 5 seconds.

**Stall revolution :2,350 - 2,800 rpm**

8. Move selector lever to N position.
9. Cool off ATF.
  - Run engine at idle for at least one minute.
10. Repeat steps 5 through 9 with selector lever in 2, 1 and R positions.

## JUDGEMENT OF STALL TEST

The test result and possible damaged components relating to each result are shown in the illustrations on next page.

In order to pinpoint the possible damaged components, follow the procedure shown in [AT-451, "WORK FLOW CHART"](#).

### NOTE:

Stall revolution is too high in D, 2 or 1 position:

- Slippage occurs in 1st gear but not in 2nd and 3rd gears. .... Low one-way clutch slippage
- Slippage occurs in the following gears:  
1st through 3rd gears in D position and engine brake functions with overdrive control switch set to OFF.  
1st and 2nd gears in 2 position and engine brake functions with accelerator pedal released (fully closed throttle). .... Forward clutch or forward one-way clutch slippage

Stall revolution is too high in R position:

- Engine brake does not function in 1 position. .... Low & reverse brake slippage
- Engine brake functions in 1 position. .... Reverse clutch slippage

Stall revolution within specifications:

- Vehicle does not achieve speed of more than 80 km/h (50 MPH). .... One-way clutch seizure in torque converter housing

### CAUTION:

**Be careful since automatic fluid temperature increases abnormally.**

- Slippage occurs in 3rd and 4th gears in D position. .... High clutch slippage

## TROUBLE DIAGNOSIS - BASIC INSPECTION

[RE4F04B]

- 
- Slippage occurs in 2nd and 4th gear in D position. .... Brake band slippage
  - Engine brake does not function in 2nd and 3rd gears in D position, 2nd gear in 2 position, and 1st gear in 1 position with overdrive control switch set to OFF. .... Overrun clutch slippage
- Stall revolution less than specifications:
- Poor acceleration during starts. .... One-way clutch seizure in torque converter

# TROUBLE DIAGNOSIS - BASIC INSPECTION

[RE4F04B]

Selector lever position	Judgement		
D	H	O	L
2	H	O	L
1	H	O	L
R	O	H	L

O : Stall revolution is normal.  
 H : Stall revolution is higher than specified.  
 L : Stall revolution is lower than specified.

Damaged components

D	H	O
2	H	O
1	H	O
R	H	O
Selector lever position	Judgement	

Clutches and brakes except high clutch, brake band and overrun clutch are OK. (Condition of high clutch, brake band and overrun clutch cannot be confirmed by stall test.)

## Line Pressure Test LINE PRESSURE TEST PORTS

Location of line pressure test ports are shown in the illustration.

- Always replace pressure plugs as they are self-sealing bolts.

## LINE PRESSURE TEST PROCEDURE

1. Check A/T fluid and engine oil levels. If necessary, add fluid and oil.
2. Drive vehicle for approx. 10 minutes or until fluid and oil reach operating temperature.

ATF operating temperature :50 - 80°C (122 - 176°F)

3. Install pressure gauge to corresponding line pressure port.

4. Set parking brake and block wheels.
  - Continue to depress brake pedal fully while line pressure test is being performed at stall speed.

5. Start engine and measure line pressure at idle and stall speed.
- When measuring line pressure at stall speed, follow the stall test procedure.

[AT-456, "Line Pressure Test"](#) : Refer to SDS, [AT-753, "Line Pressure"](#)

## Road Test DESCRIPTION

EC50062T

- The purpose of the test is to determine overall performance of A/T and analyze causes of problems.
- The road test consists of the following three parts:
  1. Check before engine is started
  2. Check at idle
  3. Cruise test

SAT786A

## TROUBLE DIAGNOSIS - BASIC INSPECTION

[RE4F04B]

- Before road test, familiarize yourself with all test procedures and items to check.
- Conduct tests on all items until specified symptom is found. Troubleshoot items which check out No Good after road test. Refer to [AT-428, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION"](#) and [AT-597, "TROUBLE DIAGNOSIS FOR SYMPTOMS"](#).

**1. CHECK BEFORE ENGINE IS STARTED**

**1. CHECK O/D OFF INDICATOR LAMP**

1. Park vehicle on flat surface.
2. Move selector lever to P position.
3. Turn ignition switch to OFF position. Wait at least 5 seconds.
4. Turn ignition switch to ON position. (Do not start engine.)
5. Does O/D OFF indicator lamp come on for about 2 seconds?

Yes or No

- Yes >> GO TO 2.  
 No >> Stop ROAD TEST. Go to [AT-602, "1. O/D OFF Indicator Lamp Does Not Come On"](#) .

**2. CHECK O/D OFF INDICATOR LAMP**

Does O/D OFF indicator lamp flicker for about 8 seconds?

Yes or No

- Yes >> TCM is in fail-safe mode. Perform self-diagnosis and check NG items on the DIAGNOSTIC WORKSHEET, [AT-448](#) . Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) .  
 No >> 1. Turn ignition switch to OFF position.  
 2. Perform self-diagnosis and note NG items. Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) .  
 3. Go to [AT-459, "2. CHECK AT IDLE"](#) .

**2. CHECK AT IDLE**

**1. CHECK ENGINE START**

1. Park vehicle on flat surface.
2. Move selector lever to P position.
3. Turn ignition switch to OFF position.
4. Turn ignition switch to START position.
5. Is engine started?

Yes or No

- Yes >> Stop ROAD TEST.  
 No >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-604, "2. Engine Cannot Be Started In P and N Position"](#) .

## 2. CHECK ENGINE START

1. Turn ignition switch to ACC position.
2. Move selector lever to D, 1, 2 or R position.
3. Turn ignition switch to START position.
4. Is engine started?

Yes or No

- Yes >> Stop ROAD TEST. Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-604, "2. Engine Cannot Be Started In P and N Position"](#) .
- No >> GO TO 3.

## 3. CHECK VEHICLE MOVE

1. Move selector lever to P position.
2. Turn ignition switch to OFF position.
3. Release parking brake.

4. Push vehicle forward or backward.
5. Does vehicle move when it is pushed forward or backward?
6. Apply parking brake.

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-605, "3. In P Position, Vehicle Moves Forward or Backward When Pushed"](#) . Continue ROAD TEST.
- No >> GO TO 4.

## 4. CHECK VEHICLE MOVE

1. Start engine.
2. Move selector lever to N position.
3. Release parking brake.
4. Does vehicle move forward or backward?

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-605, "4. In N Position, Vehicle Moves"](#) . Continue ROAD TEST.
- No >> GO TO 5.

**5. CHECK SHIFT LOCK**

1. Apply foot brake.

2. Move selector lever to R position.
3. Is there large shock when changing from N to R position?

Yes or No

- Yes >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-607, "5. Large Shock N → R Position"](#) . Continue ROAD TEST.
- No >> GO TO 6.

**6. CHECK VEHICLE MOVE**

1. Release foot brake for several seconds.
2. Does vehicle creep backward when foot brake is released?

Yes or No

- Yes >> GO TO 7.
- No >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-609, "6. Vehicle Does Not Creep Backward In R Position"](#) . Continue ROAD TEST.

**7. CHECK VEHICLE MOVE**

1. Move selector lever to D, 2 and 1 positions and check if vehicle creeps forward.
2. Does vehicle creep forward in all three positions?

Yes or No

- Yes >> Go to [AT-462, "3. CRUISE TEST"](#) .
- No >> Mark the box on the DIAGNOSTIC WORKSHEET. Go to [AT-612, "7. Vehicle Does Not Creep Forward in D, 2 or 1 Position"](#) . Continue ROAD TEST.

## 3. CRUISE TEST

- Check all items listed in Parts 1 through 3.

### With CONSULT-II

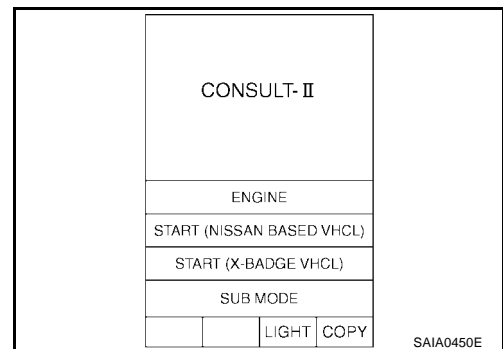

- Using CONSULT-II, conduct a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule. Refer to [AT-752](#), "[Shift Schedule](#)".

### CONSULT-II Setting Procedure

1. Turn ignition switch OFF.
2. Connect CONSULT-II to data link connector, which is located in left side dash panel.
3. Turn ignition switch ON.

4. Touch "START (NISSAN BASED VHCL)".

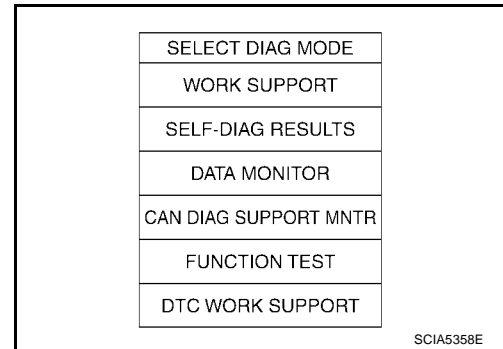

5. Touch "A/T".

# TROUBLE DIAGNOSIS - BASIC INSPECTION

[RE4F04B]

6. Touch "DATA MONITOR".

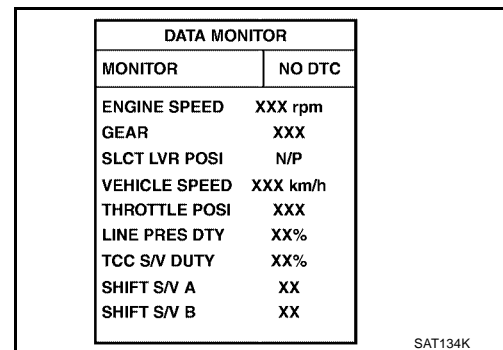

7. Touch "MAIN SIGNAL" or "TCM INPUT SIGNALS".  
 8. See "NUMERICAL DISPLAY", "BARCHART DISPLAY" or "LINE GRAPH DISPLAY".

9. Touch "SETTING" to set recording condition ("AUTO TRIG" or "MANU TRIG") and touch "BACK".  
 10. Touch "START".

11. When performing cruise test, touch "RECORD".

## Cruise Test — Part 1

### 1. CHECK STARTING GEAR (D1) POSITION

1. Drive vehicle for approx. 10 minutes to warm engine oil and ATF up to operating temperature.

**ATF operating temperature** :50 - 80°C (122 - 176°F)

2. Park vehicle on flat surface.
3. Set overdrive control switch to ON position.
4. Move selector lever to P position.
5. Start engine.

6. Move selector lever to D position.

7. Accelerate vehicle by constantly depressing accelerator pedal half-way.
8. Does vehicle start from D1 ?

⊕ **Read gear position.**

**Yes or No**

- Yes >> GO TO 2.
- No >> Go to [AT-614, "8. Vehicle Cannot Be Started From D1"](#). Continue ROAD TEST.

**2. CHECK SHIFT UP (D1 TO D2 )**

Does A/T shift from D1 to D2 at the specified speed?

① Read gear position, throttle opening and vehicle speed.

**Specified speed when shifting from D1 to D2** :Refer to [AT-752, "Shift Schedule"](#) .

Yes or No

Yes >> GO TO 3.

No >> Go to [AT-617, "9. A/T Does Not Shift: D1 → D2 or Does Not Kickdown: D4 → D2"](#) . Continue ROAD TEST.

**3. CHECK SHIFT UP (D2 TO D3 )**

Does A/T shift from D2 to D3 at the specified speed?

① Read gear position, throttle opening and vehicle speed.

**Specified speed when shifting from D2 to D3** :Refer to [AT-752, "Shift Schedule"](#) .

Yes or No

Yes >> GO TO 4.

No >> Go to [AT-619, "10. A/T Does Not Shift: D2 → D3"](#) . Continue ROAD TEST.

**4. CHECK SHIFT UP (D3 TO D4 )**

Does A/T shift from D3 to D4 at the specified speed?

① Read gear position, throttle opening and vehicle speed.

**Specified speed when shifting from D3 to D4** :Refer to [AT-752, "Shift Schedule"](#) .

Yes or No

Yes >> GO TO 5.

No >> Go to [AT-622, "11. A/T Does Not Shift: D3 → D4"](#) . Continue ROAD TEST.

**5. CHECK LOCK-UP (D4 TO D4 L/U)**

Does A/T perform lock-up at the specified speed?

**Read vehicle speed, throttle opening when lock-up duty becomes 94%.**

**Specified speed when lock-up occurs** :Refer to [AT-752, "Shift Schedule"](#) .

Yes or No

- Yes >> GO TO 6.
- No >> Go to [AT-624, "12. A/T Does Not Perform Lock-up"](#) . Continue ROAD TEST.

**6. CHECK HOLD LOCK-UP**

Does A/T hold lock-up condition for more than 30 seconds?

Yes or No

- Yes >> GO TO 7.
- No >> Go to [AT-625, "13. A/T Does Not Hold Lock-up Condition"](#) .

**7. CHECK SHIFT DOWN (D4 L/U TO D4)**

1. Release accelerator pedal.
2. Is lock-up released when accelerator pedal is released?

Yes or No

- Yes >> GO TO 8.
- No >> Go to [AT-626, "14. Lock-up Is Not Released"](#) . Continue ROAD TEST.

**8. CHECK SHIFT DOWN (D4 TO D3)**

1. Decelerate vehicle by applying foot brake lightly.
2. Does engine speed return to idle smoothly when A/T is shifted from D4 to D3 ?

**Read gear position and engine speed.**

Yes or No

- Yes >> 1. Stop vehicle.  
2. Go to [AT-468, "Cruise Test — Part 2"](#) .
- No >> Go to [AT-627, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) . Continue ROAD TEST.

Cruise Test — Part 2

**1. CHECK STARTING GEAR (D1 ) POSITION**

1. Confirm overdrive control switch is in ON position.
2. Confirm selector lever is in D position.
3. Accelerate vehicle by half throttle again.
4. Does vehicle start from D1 ?

Ⓜ **Read gear position.**

Yes or No

- Yes >> GO TO 2.  
 No >> Go to [AT-629, "16. Vehicle Does Not Start From D1"](#) .  
 Continue ROAD TEST.

**2. CHECK SHIFT UP AND SHIFT DOWN (D3 TO D4 TO D2 )**

1. Accelerate vehicle to 80 km/h (50 MPH) as shown in illustration.
2. Release accelerator pedal and then quickly depress it fully.
3. Does A/T shift from D4 to D2 as soon as accelerator pedal is depressed fully?

Ⓜ **Read gear position and throttle opening.**

Yes or No

- Yes >> GO TO 3.  
 No >> Go to [AT-617, "9. A/T Does Not Shift: D1 → D2 or Does Not Kickdown: D4 → D2"](#) . Continue ROAD TEST.

**3. CHECK SHIFT UP (D2 TO D3 )**

Does A/T shift from D2 to D3 at the specified speed?

Ⓜ **Read gear position, throttle opening and vehicle speed.**

**Specified speed when shifting from D2 to D3** :Refer to [AT-752, "Shift Schedule"](#) .

Yes or No

- Yes >> GO TO 4.  
 No >> Go to [AT-619, "10. A/T Does Not Shift: D2 → D3"](#) . Continue ROAD TEST.

**4. CHECK SHIFT UP (D3 TO D4 ) AND ENGINE BRAKE**

Release accelerator pedal after shifting from D2 to D3 .  
Does A/T shift from D3 to D4 and does vehicle decelerate by engine brake?

 **Read gear position, throttle opening and vehicle speed.**

Yes or No

- Yes >> 1. Stop vehicle.  
2. Go to [AT-470, "Cruise Test — Part 3"](#) .
- No >> Go to [AT-622, "11. A/T Does Not Shift: D3 → D4"](#) . Continue ROAD TEST.

Cruise Test — Part 3

1. VEHICLE SPEED (D4 ) POSITION

1. Confirm overdrive control switch is in ON position.
2. Confirm selector lever is in D position.
3. Accelerate vehicle using half-throttle to D4 .

4. Release accelerator pedal.
5. Set overdrive control switch to OFF position while driving in D4 .
6. Does A/T shift from D4 to D3 (O/D OFF)?  
 **Read gear position and vehicle speed.**

Yes or No

- Yes >> GO TO 2.  
 No >> Go to [AT-630, "17. A/T Does Not Shift: D4 → D3 , When Overdrive Control Switch ON → OFF"](#) .  
 Continue ROAD TEST.

**2. CHECK ENGINE BRAKE**

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> GO TO 3.
- No >> Go to [AT-627, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) . Continue ROAD TEST.

**3. CHECK SHIFT DOWN (D3 TO D2 )**

1. Move selector lever from D to 2 position while driving in D3 (O/D OFF).
2. Does A/T shift from D3 (O/D OFF) to 2<sub>2</sub> ?

**Read gear position.**

Yes or No

- Yes >> GO TO 4.
- No >> Go to [AT-630, "18. A/T Does Not Shift: D3 → 2<sub>2</sub> , When Selector Lever D → 2 Position"](#) . Continue ROAD TEST.

**4. CHECK ENGINE BRAKE**

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> GO TO 5.
- No >> Go to [AT-627, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) . Continue ROAD TEST.

**5. CHECK SHIFT DOWN (2<sub>2</sub> TO 1<sub>1</sub>)**

1. Move selector lever from 2 to 1 position while driving in 2<sub>2</sub> .
2. Does A/T shift from 2<sub>2</sub> to 1<sub>1</sub> position?

**Read gear position.**

Yes or No

- Yes >> GO TO 6.
- No >> Go to [AT-631, "19. A/T Does Not Shift: 2<sub>2</sub> → 1<sub>1</sub> , When Selector Lever 2 → 1 Position"](#) . Continue ROAD TEST.

**6. CHECK ENGINE BRAKE**

Does vehicle decelerate by engine brake?

Yes or No

- Yes >> 1. Stop vehicle.  
2. Perform self-diagnosis. Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#).
- No >> Go to [AT-632, "20. Vehicle Does Not Decelerate By Engine Brake"](#). Continue ROAD TEST.

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

		7. Control valve assembly	<a href="#">AT-644</a>	
		8. Accumulator N-D	<a href="#">AT-657</a>	
		OFF vehicle	9. Forward clutch	<a href="#">AT-702</a>

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

[RE4F04B]

Items	Symptom	Condition	Diagnostic Item	Reference Page
Shift Shock	Too sharp a shock in change from D1 to D2 .	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor]	<a href="#">AT-563</a>
			2. Line pressure test	<a href="#">AT-456</a>
			3. Accumulator servo release	<a href="#">AT-657</a>
			4. Control valve assembly	<a href="#">AT-644</a>
			5. A/T fluid temperature sensor	<a href="#">AT-573</a>
		OFF vehicle	6. Brake band	<a href="#">AT-657</a>
	Too sharp a shock in change from D2 to D3 .	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor]	<a href="#">AT-563</a>
			2. Line pressure test	<a href="#">AT-456</a>
			3. Control valve assembly	<a href="#">AT-644</a>
			4. A/T fluid temperature sensor	<a href="#">AT-497</a>
		OFF vehicle	5. High clutch	<a href="#">AT-697</a>
			6. Brake band	<a href="#">AT-657</a>
	Too sharp a shock in change from D3 to D4 .	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor]	<a href="#">AT-563</a>
			2. Line pressure test	<a href="#">AT-456</a>
			3. Control valve assembly	<a href="#">AT-644</a>
			4. A/T fluid temperature sensor	<a href="#">AT-497</a>
		OFF vehicle	5. Brake band	<a href="#">AT-657</a>
			6. Overrun clutch	<a href="#">AT-702</a>
			7. Forward one-way clutch	<a href="#">AT-657#####</a>
	Gear change shock felt during deceleration by releasing accelerator pedal.	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor] (Adjustment)	<a href="#">EC-1255</a>
2. Line pressure test			<a href="#">AT-456</a>	
3. Overrun clutch solenoid valve			<a href="#">AT-568</a>	
4. Control valve assembly			<a href="#">AT-644</a>	
Large shock changing from 12 to 11 in 1 position.	ON vehicle	1. Control valve assembly	<a href="#">AT-644</a>	
	ON vehicle	2. Low & reverse brake	<a href="#">AT-708</a>	

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

[RE4F04B]

Items	Symptom	Condition	Diagnostic Item	Reference Page
Improper Shift Timing	Too high a gear change point from D1 to D2 , from D2 to D3 , from D3 to D4 .	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor] (Adjustment)	<a href="#">EC-1255</a>
			2. Vehicle speed sensor-A/T (Revolution sensor) and vehicle speed sensor-MTR	<a href="#">AT-503, AT-580</a>
			3. Shift solenoid valve A	<a href="#">AT-553</a>
			4. Shift solenoid valve B	<a href="#">AT-558</a>
	Gear change directly from D1 to D3 occurs.	ON vehicle	1. Fluid level	<a href="#">AT-452</a>
		2. Accumulator servo release	<a href="#">AT-657</a>	
	OFF vehicle	3. Brake band	<a href="#">AT-657</a>	
		Too high a change point from D4 to D3 , from D3 to D2 , from D2 to D1 .	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor] (Adjustment)
	2. Vehicle speed sensor-A/T (Revolution sensor) and vehicle speed sensor-MTR			<a href="#">AT-503, AT-580</a>
	Kickdown does not operate when depressing pedal in D4 within kickdown vehicle speed.	ON vehicle	1. Throttle position sensor [accelerator pedal position (APP) sensor] (Adjustment)	<a href="#">EC-1255</a>
			2. Vehicle speed sensor-A/T (Revolution sensor) and vehicle speed sensor-MTR	<a href="#">AT-503, AT-580</a>
			3. Shift solenoid valve A	<a href="#">AT-553</a>
4. Shift solenoid valve B			<a href="#">AT-558</a>	
Improper Shift Timing	Kickdown operates or engine overruns when depressing pedal in D4 beyond kickdown vehicle speed limit.	ON vehicle	1. Vehicle speed sensor-A/T (Revolution sensor) and vehicle speed sensor-MTR	<a href="#">AT-503, AT-580</a>
			2. Throttle position sensor [accelerator pedal position (APP) sensor] (Adjustment)	<a href="#">EC-1255</a>

## TCM Terminals and Reference Value PREPARATION

- Measure voltage between each terminal and terminal 25 or 48 by following "TCM INSPECTION TABLE".

## TCM HARNESS CONNECTOR TERMINAL LAYOUT

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

[RE4F04B]

## TCM INSPECTION TABLE

(Data are reference values.)

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
1	R/W	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	P/B	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	4 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V
3	GY/R	Torque converter clutch solenoid valve		When A/T performs lock-up.	8 - 15V
				When A/T does not perform lock-up.	0V
5*	L	CAN-H	—	—	—
6*	Y	CAN-L	—	—	—
10	BR/R	Power source	 	When turning ignition switch to ON.	Battery voltage
				When turning ignition switch to OFF.	0V
11	L/W	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in D1 or D4 .)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in D2 or D3 .)	0V
12	L/Y	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in D1 or D2 .)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in D3 or D4 .)	0V
13	G/R	O/D OFF indicator lamp		When setting overdrive control switch in OFF position.	0V
				When setting overdrive control switch in ON position.	Battery voltage
19	BR/R	Power source	 	With ignition switch ON.	Battery voltage
				With ignition switch OFF.	0V
20	L/B	Overrun clutch solenoid valve		When overrun clutch solenoid valve operates.	Battery voltage
				When overrun clutch solenoid valve does not operate.	0V
22	OR/B	Overdrive control switch	 	When setting overdrive control switch in ON position.	Battery voltage
				When setting overdrive control switch in OFF position.	0V
25	B	Ground	—	—	—

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

[RE4F04B]

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
26	OR	PNP switch 1 position		When setting selector lever to 1 position.	Battery voltage
				When setting selector lever to other positions.	0V
27	L	PNP switch 2 position		When setting selector lever to 2 position.	Battery voltage
				When setting selector lever to other positions.	0V
28	R/B	Power source (Memory back-up)	 	With ignition switch OFF.	Battery voltage
				With ignition switch ON.	Battery voltage
29	W	Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 <b>CAUTION:</b> <b>Connect the diagnosis data link cable to the vehicle diagnosis connector.</b> *1: A circuit tester cannot be used to test this item.	450 Hz
				When vehicle is parked.	Under 1.3V or over 4.5V
30**	G/B	Data link connector (RX)		—	—
31**	GY/L	Data link connector (TX)		—	—
32	R	Sensor power	 	Ignition switch ON.	4.5 - 5.5V
				Ignition switch OFF.	0V
34	W/G	PNP switch D position		When setting selector lever to D position.	Battery voltage
				When setting selector lever to other positions.	0V
35	G/W	PNP switch R position	 	When setting selector lever to R position.	Battery voltage
				When setting selector lever to other positions.	0V
36	BR/W	PNP switch P or N position	 	When setting selector lever to P or N position.	Battery voltage
				When setting selector lever to other positions.	0V
38	G	Turbine revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 <b>CAUTION:</b> <b>Connect the diagnosis data link cable to the vehicle diagnosis connector.</b> *1: A circuit tester cannot be used to test this item.	240 Hz
				When vehicle is parked.	Under 1.3V or over 4.5V

# TROUBLE DIAGNOSIS - GENERAL DESCRIPTION

[RE4F04B]

Terminal No.	Wire color	Item	Condition	Judgement standard (Approx.)	
39	L/OR	Engine speed signal		Refer to <a href="#">EC-1308, "ECM INSPECTION TABLE"</a>	
40	PU/R	Vehicle speed sensor		When moving vehicle at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.	Voltage varies between less than 1V and more than 4.5V
41	S/B	Throttle position sensor [accelerator pedal position (APP) sensor]		When depressing accelerator pedal slowly after warming up engine. (Voltage rises gradually in response to throttle position.)	Fully-closed throttle: 0.5V Fully-open throttle: 4V
42	B	Sensor ground	—	—	—
45	R/G	Stop lamp switch		With brake pedal depressed	Battery voltage
		With brake pedal released		0V	
47	BR	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
		When ATF temperature is 80°C (176°F).		0.5V	
48	B	Ground	—	—	—

\*: These terminals are connected to the ECM.

\*\* : These terminals are connected to the Data link connector.

## System Description

ECS0062W

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

## INPUT/OUTPUT SIGNAL CHART

T: Transmit R: Receive

Signals	ECM	TCM
Accelerator pedal position signal	T	R
Output shaft revolution signal	R	T

# TROUBLE DIAGNOSIS FOR POWER SUPPLY

**[RE4F04B]**

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

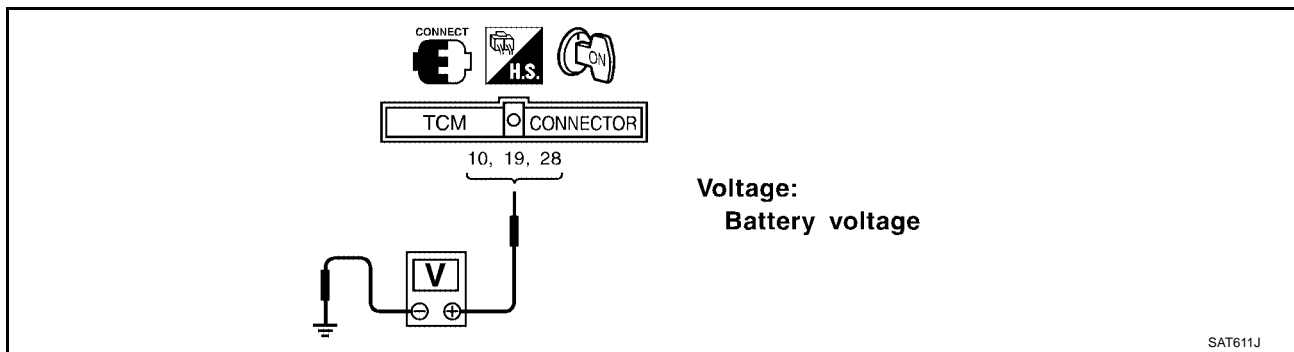

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
10	BR/R	POWER SOURCE	IGNITION ON	BATTERY VOLTAGE
			IGNITION OFF	APPROX. 0V
19	BR/R	POWER SOURCE	IGNITION ON	BATTERY VOLTAGE
			IGNITION OFF	APPROX. 0V
25	B	GROUND	—	—
28	R/B	POWER SOURCE (MEMORY BACKUP)	IGNITION ON	BATTERY VOLTAGE
			IGNITION OFF	BATTERY VOLTAGE
48	B	GROUND	—	—

## Diagnostic Procedure

ECS0062Y

### 1. CHECK TCM POWER SOURCE STEP 1

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Check voltage between TCM terminals 10 (BR/R), 19 (BR/R), 28 (R/B) and ground.

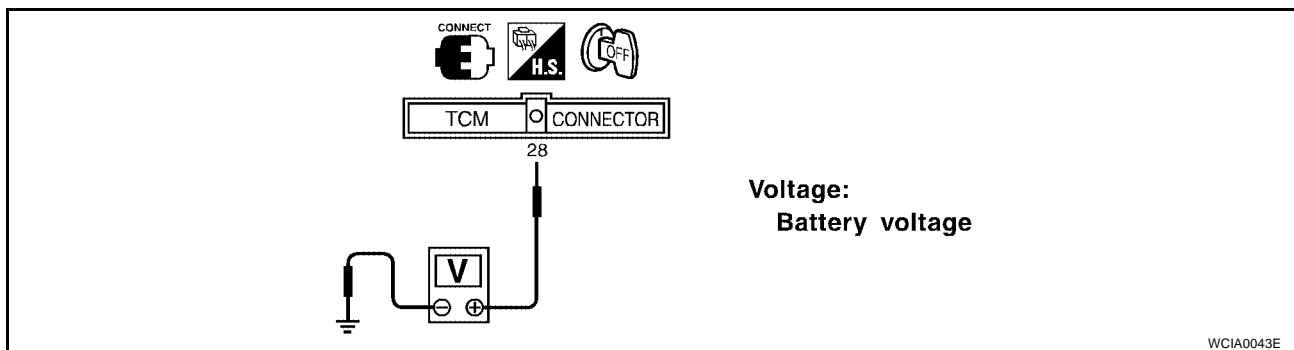

OK or NG

- OK >> GO TO 2.
- NG >> GO TO 3.

### 2. CHECK TCM POWER SOURCE STEP 2

1. Turn ignition switch to OFF position.
2. Check voltage between TCM terminal 28 (R/B) and ground.

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

---

## 3. DETECT MALFUNCTIONING ITEM

---

Check the following items:

- Harness for short or open between ignition switch and TCM terminals 10, 19 and 28 (Main harness)
- Fuse
- Ignition switch  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

OK or NG

- OK >> GO TO 4.  
NG >> Repair or replace damaged parts.

---

## 4. CHECK TCM GROUND CIRCUIT

---

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground. Refer to [AT-488, "Wiring Diagram — AT — MAIN"](#) .

**Continuity should exist.**

OK or NG

- OK >> **INSPECTION END**  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## DTC P0705 PARK/NEUTRAL POSITION SWITCH

PF3:32006

### Description

ECS0062Z

- The park/neutral position (PNP) switch includes a transmission range switch.
- The transmission range switch detects the selector lever position and sends a signal to the TCM.

### On Board Diagnosis Logic

ECS00630

Diagnostic trouble code PNP SW/CIRC with CONSULT-II or P0705 without CONSULT-II is detected when TCM does not receive the correct voltage signal from the switch based on the gear position.

### Possible Cause

ECS00631

Check the following items.

- Harness or connectors  
(The park/neutral position (PNP) switch circuit is open or shorted.)
- Park/neutral position (PNP) switch

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS00632

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

1. Turn ignition switch ON.

2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

## DTC P0705 PARK/NEUTRAL POSITION SWITCH

[RE4F04B]

---

3. Start engine and maintain the following conditions for at least 5 consecutive seconds.  
**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**THRTL POS SEN: More than 1.3V**  
**Selector lever: D position (O/D ON or OFF)**

### WITH GST

Follow the procedure "With CONSULT-II".

			IGNITION ON AND SELECTOR LEVER IN OTHER POSITIONS	APPROX. 0V

## Diagnostic Procedure

ECS00634

### 1. INSPECTION START

Do you have CONSULT-II?

Yes or No

- Yes >> GO TO 2.
- No >> GO TO 6.

### 2. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT (WITH CONSULT-II)

#### With CONSULT-II

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out P, R, N, D, 2 and 1 position switches moving selector lever to each position.  
Check that the signal of the selector lever position is indicated properly.

OK or NG

- OK >> GO TO 7.
- NG >> GO TO 3.

DATA MONITOR	
MONITORING	
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

SAT701J

### 3. DETECT MALFUNCTIONING ITEM

Check the following item:

- Park/neutral position (PNP) switch  
Check continuity between park/neutral position (PNP) switch F29 terminals 1 (G/OR) and 2 (B) and between terminals 3 (Y) and 4 (OR), 5 (L), 6 (W/G), 7 (BR/W), 8 (G/W) and 9 (G) while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 - 7	1 - 2
R	3 - 8	
N	3 - 9	1 - 2
D	3 - 6	
2	3 - 5	
1	3 - 4	

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

### 4. CHECK MANUAL CONTROL CABLE ADJUSTMENT

Check PNP switch again with manual control cable disconnected from manual shaft of A/T assembly. Refer to test group 1.

OK or NG

- OK >> Adjust manual control cable. Refer to [AT-647, "Control Cable Adjustment"](#).
- NG >> Repair or replace PNP switch.

### 5. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between ignition switch and park/neutral position (PNP) switch (Main harness)
- Harness for short or open between park/neutral position (PNP) switch and TCM (Main harness)
- Fuse
- Ignition switch  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#).

OK or NG

- OK >> GO TO 7.
- NG >> Repair or replace damaged parts.

## 6. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT (WITHOUT CONSULT-II)

⊗ **Without CONSULT-II**

1. Turn ignition switch to ON position. (Do not start engine.)
2. Check voltage between TCM terminals 26 (OR), 27 (L), 34 (W/G), 35 (G/W), 36 (BR/W) and ground while moving selector lever through each position.

Voltage:  
**B: Battery voltage**  
**0: 0V**

Lever position	Terminal No.				
	36	35	34	27	26
P, N	<b>B</b>	0	0	0	0
R	0	<b>B</b>	0	0	0
D	0	0	<b>B</b>	0	0
2	0	0	0	<b>B</b>	0
1	0	0	0	0	<b>B</b>

SAT840J

OK or NG

- OK    >> GO TO 7.  
 NG    >> GO TO 5.

## 7. CHECK DTC

Perform [AT-491, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK    >> **INSPECTION END**  
 NG    >> GO TO 8.

## 8. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK    >> **INSPECTION END**  
 NG    >> Repair or replace damaged parts.

DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

PFP:31940

Description

ECS00635

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approximately)	
A/T fluid temperature sensor	Cold [20°C (68°F)]	1.5V	2.5 kΩ
	↓ Hot [80°C (176°F)]	0.5V	0.3 kΩ

On Board Diagnosis Logic

ECS00636

Diagnostic trouble code ATF TEMP SEN/CIRC with CONSULT-II or P0710 without CONSULT-II is detected when TCM receives an excessively low or high voltage from the sensor.

Possible Cause

ECS00637

Check the following items.

- Harness or connectors (The sensor circuit is open or shorted.)
- A/T fluid temperature sensor

Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS00638

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

# DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

[RE4F04B]

## WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

2. Start engine and maintain the following conditions for at least 10 minutes (Total). (It is not necessary to maintain continuously.)

**CMPS-RPM (REF): 450 rpm or more**

**VHCL SPEED SE: 10 km/h (6 MPH) or more**

**THRTL POS SEN: More than 1.2V**

**Selector lever: D position (O/D ON)**

## WITH GST

Follow the procedure "With CONSULT-II".

**Voltage :Cold [20°C (68°F)] → Hot [80°C (176°F)]**

**:Approximately 1.5V → 0.5V**

OK or NG

OK >> GO TO 7.

NG >> GO TO 3.

## 3. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

1. Turn ignition switch to OFF position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal cord assembly F30 terminals 6 and 7 (component side) when A/T is cold.

4. Reinstall any part removed.

OK or NG

- OK >> GO TO 4.
- NG >> GO TO 5.

## 4. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short to ground or short to power or open between TCM, ECM and terminal cord assembly (Main harness)
- Ground circuit for ECM  
Refer to [AT-488, "TROUBLE DIAGNOSIS FOR POWER SUPPLY"](#).

OK or NG

- OK >> GO TO 7.
- NG >> Repair or replace damaged parts.

## 5. DETECT MALFUNCTIONING ITEM

1. Remove oil pan.
2. Check the following items:
  - A/T fluid temperature sensor  
Check resistance between two terminals while changing temperature as shown in figure.

Temperature	Resistance (Approx.)
20°C (68°F)	2.5kΩ
80°C (176°F)	0.3kΩ

- Harness of terminal cord assembly for short or open

OK or NG

- OK >> GO TO 7.
- NG >> Repair or replace damaged parts.

**6. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR (WITHOUT CONSULT-II)****⊗ Without CONSULT-II**

1. Start engine.
2. Check voltage between TCM connector F57 terminal 47 (BR) and ground while warming up A/T.

**Voltage** :Cold [20°C (68°F)] → Hot [80°C (176°F)]  
 :Approximately 1.5V → 0.5V

OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 3.

WCIA0049E

**7. CHECK DTC**

Perform [AT-497, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 8.

**8. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

# DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

[RE4F04B]

## DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

PF3:32702

### Description

ECS0063B

The revolution sensor detects the revolution of the idler gear parking pawl lock gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed.

### On Board Diagnosis Logic

ECS0063C

Diagnostic trouble code VEH SPD SEN/CIR AT with CONSULT-II or P0720 without CONSULT-II is detected when TCM does not receive the proper voltage signal from the sensor.

### Possible Cause

ECS0063D

Check the following items.

- Harness or connectors  
(The sensor circuit is open or shorted.)
- Revolution sensor

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0063E

#### CAUTION:

- Always drive vehicle at a safe speed.
- Be careful not to rev engine into the red zone on the tachometer.

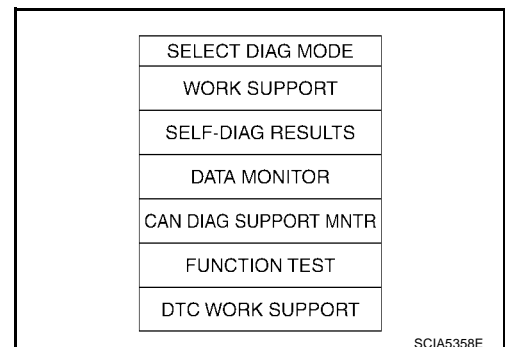

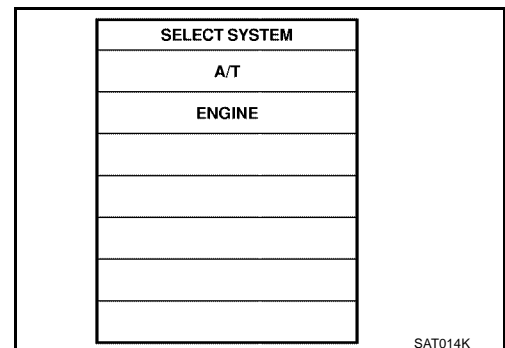

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for "A/T" with CONSULT-II.

# DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

[RE4F04B]

2. Drive vehicle and check for an increase of "VHCL/S SE-MTR" value.  
If the check result is NG, go to [AT-506, "Diagnostic Procedure"](#) .  
If the check result is OK, go to following step.
3. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

4. Start engine and maintain the following conditions for at least 5 consecutive seconds.  
**VHCL SPEED SE: 30 km/h (19 MPH) or more**  
**THRTL POS SEN: More than 1.2V**  
**Selector lever: D position (O/D ON)**  
**Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**  
If the check result is NG, go to [AT-506, "Diagnostic Procedure"](#) .  
If the check result is OK, go to following step.
5. Maintain the following conditions for at least 5 consecutive seconds.  
**CMPS-RPM (REF): 3,500 rpm or more**  
**THRTL POS SEN: More than 1.2V**  
**Selector lever: D position (O/D ON)**  
**Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

## WITH GST

Follow the procedure "With CONSULT-II".

# DTC P0720 VEHICLE SPEED SENSOR-A/T (REVOLUTION SENSOR)

[RE4F04B]

## Wiring Diagram — AT — VSSA/T

ECS0063F

AT-VSSA/T-01

REFER TO THE FOLLOWING.

### With CONSULT-II

1. Start engine.

Condition	Judgement standard (Approx.)
When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function. *1 <b>CAUTION:</b> Connect the diagnosis data link cable to the vehicle diagnosis connector. *1: A circuit tester cannot be used to test this item.	450 Hz
When vehicle parks.	Under 1.3V or over 4.5V

MTBL0594

- Harness for short or open between TCM, ECM and revolution sensor (Main harness)

#### OK or NG

- OK >> GO TO 3.  
NG >> Repair or replace damaged parts.

## 3. CHECK DTC

Perform [AT-503, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

#### OK or NG

- OK >> **INSPECTION END**  
NG >> GO TO 4.

## 4. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

#### OK or NG

- OK >> **INSPECTION END**  
NG >> Repair or replace damaged parts.

**DTC P0725 ENGINE SPEED SIGNAL**

PF2:24825

**Description**

ECS0063H

The engine speed signal is sent from the ECM to the TCM.

**On Board Diagnosis Logic**

ECS0063I

Diagnostic trouble code ENGINE SPEED SIG with CONSULT-II or P0725 without CONSULT-II is detected when TCM does not receive the proper voltage signal from ECM.

**Possible Cause**

ECS0063J

Check harness or connectors. (The sensor circuit is open or shorted.)

**Diagnostic Trouble Code (DTC) Confirmation Procedure**

ECS0063K

**CAUTION:**

Always drive vehicle at a safe speed.

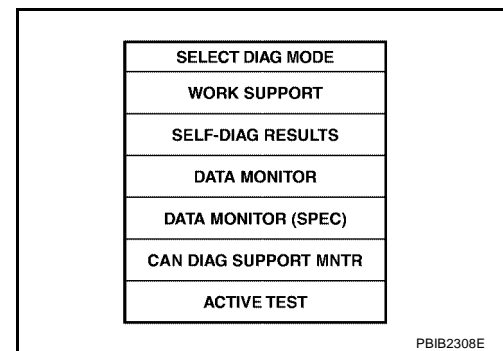

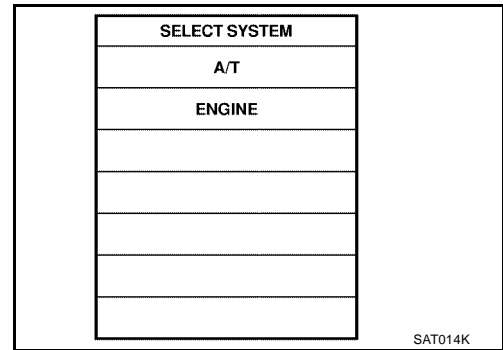

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

**WITH CONSULT-II**

1. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

2. Start engine and maintain the following conditions for at least 10 consecutive seconds.

**VHCL SPEED SE: 10 km/h (6 MPH) or more**

**THRTL POS SEN: More than 1.2V**

**Selector lever: D position (O/D ON)**

**WITH GST**

Follow the procedure "With CONSULT-II".

- Resistor and ignition coil  
Refer to [EC-1777, "IGNITION SIGNAL"](#).

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

**6. CHECK DTC**

Perform [AT-508, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#).

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 7.

**7. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

**DTC P0731 A/T 1ST GEAR FUNCTION**

PFP:31940

**Description**

ECS0063N

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into first gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

**On Board Diagnosis Logic**

ECS0063O

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is higher than the position (1st) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when either shift solenoid valve A is stuck open or shift solenoid valve B is stuck open.

Gear positions supposed by TCM are as follows.

In case of gear position with no malfunctions: **1** , 2, 3 and 4 positions

In case of gear position with shift solenoid valve A stuck open: **2\*** , 2, 3 and 3 positions

In case of gear position with shift solenoid valve B stuck open: **4\*** , 3, 3 and 4 positions to each gear position above

\*: P0731 is detected.

Diagnostic trouble code A/T 1ST GR FNCTN with CONSULT-II or P0731 without CONSULT-II is detected when A/T cannot be shifted to the 1st gear position even if electrical circuit is good.

**Possible Cause**

ECS0063P

Check the following items.

- Shift solenoid valve A
- Shift solenoid valve B
- Each clutch
- Hydraulic control circuit

**Diagnostic Trouble Code (DTC) Confirmation Procedure**

ECS0063Q

**CAUTION:**

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

**Always drive vehicle on a level road to improve the accuracy of test.**

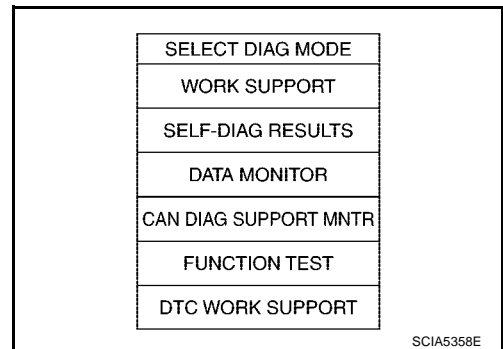

After the repair, perform the following procedure to confirm the malfunction is eliminated.

## WITH CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "1ST GR FNCTN P0731" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

4. Accelerate vehicle to 20 to 25 km/h (12 to 16 MPH) under the following condition and release the accelerator pedal completely.  
**THROTTLE POSI: Less than 1.0/8 (at all times during step 4)**  
**Selector lever: D position (O/D ON)**

- Check that "GEAR" shows "2" after releasing pedal.
5. Depress accelerator pedal to WOT (more than 7.0/8 of "THROTTLE POSI") quickly from a speed of 20 to 25 km/h (12 to 16 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)

If the check result NG appears on CONSULT-II screen, go to [AT-515, "Diagnostic Procedure"](#).

If "STOP VEHICLE" appears on CONSULT-II screen, go to the following step.

- Check that "GEAR" shows "1" when depressing accelerator pedal to WOT.
  - If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAG RESULTS" for "ENGINE". In case a 1st trip DTC other than P0731 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".
6. Stop vehicle.
  7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists.	1 → 2 → 3 → 4
Malfunction for P0731 exists.	2 → 2 → 3 → 3
	4 → 3 → 3 → 4

8. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "DIAGNOSTIC PROCEDURE".)  
 Refer to [AT-515, "Diagnostic Procedure"](#).  
 Refer to [AT-752, "Shift Schedule"](#).

## WITH GST

Follow the procedure "With CONSULT-II".

			WHEN SHIFT SOLENOID VALVE A IS NOT OPERATING (DRIVING IN D2 OR D3)	APPROX. 0V
12	L/Y	SHIFT SOLENOID VALVE B	WHEN SHIFT SOLENOID VALVE B IS OPERATING (DRIVING IN D1 OR D2)	BATTERY VOLTAGE
			WHEN SHIFT SOLENOID VALVE B IS NOT OPERATING (DRIVING IN D3 OR D4)	APPROX. 0V

## Diagnostic Procedure

ECS0063S

### 1. CHECK VALVE RESISTANCE

- Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
  - Shift solenoid valve A
  - Shift solenoid valve B
- Check resistance between terminal cord assembly F30 terminals 1 and 2, and ground.

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace damaged parts.

## 2. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Shift solenoid valve A
  - Shift solenoid valve B
2. Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace shift solenoid valve assembly.

## 3. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

OK or NG

- OK >> GO TO 4.
- NG >> Repair control valve assembly.

## 4. CHECK DTC

Perform [AT-512, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> Check control valve again. Repair or replace control valve assembly.

DTC P0732 A/T 2ND GEAR FUNCTION

PFP:31940

Description

ECS0063T

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into second gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

On Board Diagnosis Logic

ECS0063U

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is higher than the position (2nd) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when shift solenoid valve B is stuck open.

Gear positions supposed by TCM are as follows.

In case of gear position with no malfunctions: 1, 2, 3 and 4 positions

In case of gear position with shift solenoid valve B stuck open: 4, 3\*, 3 and 4 positions to each gear position above

\*: P0732 is detected.

Diagnostic trouble code A/T 2ND GR FNCTN with CONSULT-II or P0732 without CONSULT-II is detected when A/T cannot be shifted to the 2nd gear position even if electrical circuit is good.

Possible Cause

ECS0063V

Check the following items.

- Shift solenoid valve B
- Each clutch
- Hydraulic control circuit

Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0063W

CAUTION:

- Always drive vehicle at a safe speed.
- Be careful not to rev engine into the red zone on the tachometer.

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Always drive vehicle on a level road to improve the accuracy of test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

**WITH CONSULT-II**

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "2ND GR FNCTN P0732" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

4. Accelerate vehicle to 63 to 68 km/h (39 to 42 MPH) under the following condition and release the accelerator pedal completely.

**THROTTLE POSI: Less than 1.0/8**  
**Selector lever: D position (O/D ON)**

- Check that "GEAR" shows "3" or "4" after releasing pedal.
5. Depress accelerator pedal to WOT (more than 7.0/8 of "THROTTLE POSI") quickly from a speed of 63 to 68 km/h (39 to 42 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETE". (It will take approximately 3 seconds.)

If the check result NG appears on CONSULT-II screen, go to [AT-520, "Diagnostic Procedure"](#).

If "STOP VEHICLE" appears on CONSULT-II screen, go to following step.

- Check that "GEAR" shows "2" when depressing accelerator pedal to WOT.
- If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAG RESULTS" for "ENGINE". In case a 1st trip DTC other than P0732 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0732 exists.	4 → 3 → 3 → 4

8. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "DIAGNOSTIC PROCEDURE".)  
 Refer to [AT-520, "Diagnostic Procedure"](#).  
 Refer to [AT-752, "Shift Schedule"](#).

**WITH GST**

Follow the procedure "With CONSULT-II".

## DTC P0733 A/T 3RD GEAR FUNCTION

PFP:31940

### Description

*ECS0063Z*

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into third gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning servo piston or brake band, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

### On Board Diagnosis Logic

*ECS00640*

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is higher than the position (3rd) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when shift solenoid valve A is stuck closed.

Gear positions supposed by TCM are as follows.

In case of gear position with no malfunctions: 1, 2, **3** and 4 positions

In case of gear position with shift solenoid valve A stuck closed: 1, 1, **4\*** and 4 positions to each gear position above

\*: P0733 is detected.

Diagnostic trouble code A/T 3RD GR FNCTN with CONSULT-II or P0733 without CONSULT-II is detected when A/T cannot be shifted to the 3rd gear position even if electrical circuit is good.

### Possible Cause

*ECS00641*

Check the following items.

- Shift solenoid valve A
- Each clutch
- Hydraulic control circuit

### Diagnostic Trouble Code (DTC) Confirmation Procedure

*ECS00642*

#### CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

#### TESTING CONDITION:

**Always drive vehicle on a level road to improve the accuracy of test.**

After the repair, perform the following procedure to confirm the malfunction is eliminated.

**WITH CONSULT-II**

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "3RD GR FNCTN P0733" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

4. Accelerate vehicle to 80 to 95 km/h (50 to 59 MPH) under the following condition and release the accelerator pedal completely.

**THROTTLE POSI: Less than 1.0/8 (at all times during step 4)**  
**Selector lever: D position (OD "ON")**

- Check that "GEAR" shows "4" after releasing pedal.
5. Depress accelerator pedal steadily with 3.5/8 - 4.5/8 of "THROTTLE POSI" from a speed of 80 to 95 km/h (50 to 59 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)

If the check result NG appears on CONSULT-II screen, go to [AT-525, "Diagnostic Procedure"](#).

If "STOP VEHICLE" appears on CONSULT-II screen, go to following step.

- Check that "GEAR" shows "3" when depressing accelerator pedal with 3.5/8 - 4.5/8 of "THROTTLE POSI".
- If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAG RESULTS" for "ENGINE". In case a 1st trip DTC other than P0733 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists.	1 → 2 → 3 → 4
Malfunction for P0733 exists.	1 → 1 → 4 → 4

8. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "DIAGNOSTIC PROCEDURE".)  
 Refer to [AT-525, "Diagnostic Procedure"](#).  
 Refer to [AT-752, "Shift Schedule"](#).

**WITH GST**

Follow the procedure "With CONSULT-II".

			WHEN SHIFT SOLENOID VALVE A IS NOT OPERATING (DRIVING IN D2 OR D3)	APPROX. 0V

## Diagnostic Procedure

ECS00644

### 1. CHECK VALVE RESISTANCE

- Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
  - Shift solenoid valve A
- Check resistance between terminal cord assembly F30 terminal 2 and ground.

OK or NG

- OK >> GO TO 2.
- NG >> Repair or replace shift solenoid valve assembly.

### 2. CHECK VALVE OPERATION

- Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
  - Shift solenoid valve A
- Check solenoid valve by listening for its operating sound while applying battery voltage and ground of the solenoid.

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace shift solenoid valve assembly.

### 3. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair control valve assembly.

### 4. CHECK DTC

Perform [AT-522, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

#### OK or NG

- OK >> **INSPECTION END**  
NG >> Check control valve again. Repair or replace control valve assembly.

DTC P0734 A/T 4TH GEAR FUNCTION

PF3:31940

Description

ECS00645

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into fourth gear position or the torque converter clutch does not lock up as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning oil pump or torque converter clutch, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Torque converter clutch solenoid valve duty	Lock-up OFF	Approximately 4%
	↓ Lock-up ON	Approximately 94%
Line pressure solenoid valve duty	Small throttle opening (Low line pressure)	Approximately 24%
	↓ Large throttle opening (High line pressure)	Approximately 95%

On Board Diagnosis Logic

ECS00646

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is much lower than the position (4th) supposed by TCM, the slip ratio will be much less than normal. In case the ratio does not reach the specified value, TCM judges this diagnosis malfunction.

This malfunction will be caused when shift solenoid valve B is stuck closed.

Gear positions supposed by TCM are as follows.

In case of gear position with no malfunctions: 1, 2, 3 and 4 positions

In case of gear position with shift solenoid valve B stuck closed: 1, 2, 2 and 1\* positions to each gear position above

\*: P0734 is detected.

Diagnostic trouble code A/T 4TH GR FNCTN with CONSULT-II or P0734 without CONSULT-II is detected when A/T cannot be shifted to the 4th gear position even if electrical circuit is good.

Possible Cause

ECS00647

Check the following items.

- Shift solenoid valve A
- Shift solenoid valve B
- Line pressure solenoid valve
- Each clutch
- Hydraulic control circuit

Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS00648

CAUTION:

- Always drive vehicle at a safe speed.
- If conducting this "DTC CONFIRMATION PROCEDURE" again, always turn ignition switch OFF and wait at least 10 seconds before continuing.
- Be careful not to rev engine into the red zone on the tachometer.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

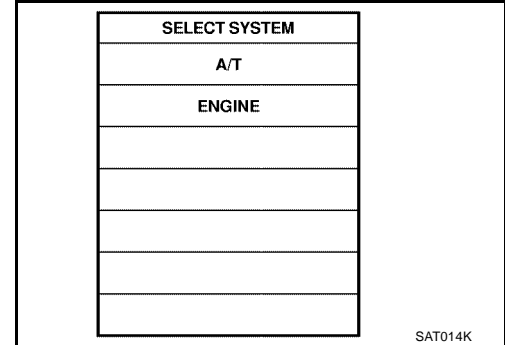

**TESTING CONDITION:**

**Always drive vehicle on a level road to improve the accuracy of test.**

After the repair, perform the following procedure to confirm the malfunction is eliminated.

**WITH CONSULT-II**

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "4TH GR FNCTN P0734" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

4. Accelerate vehicle to 60 to 70 km/h (37 to 43 MPH) under the following condition and release the accelerator pedal completely.

**THROTTLE POSI: Less than 5.5/8 (at all times during step 4)**  
**Selector lever: D position (O/D ON)**

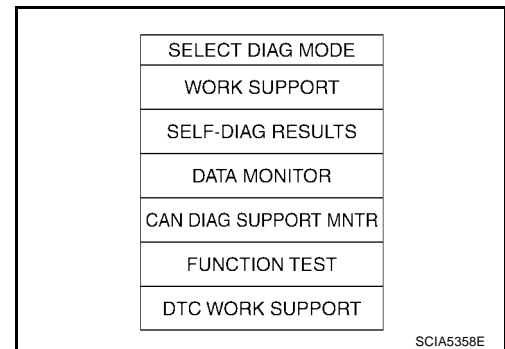

- Check that "GEAR" shows "3" after releasing pedal.
5. Depress accelerator pedal steadily with 1.0/8 - 2.0/8 of "THROTTLE POSI" from a speed of 60 to 70 km/h (37 to 43 MPH) until "TESTING" has turned to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)

If the check result NG appears on CONSULT-II screen, go to [AT-530, "Diagnostic Procedure"](#).

If "STOP VEHICLE" appears on CONSULT-II screen, go to following step.

- Check that "GEAR" shows "4" when depressing accelerator pedal with 1.0/8 - 2.0/8 of "THROTTLE POSI".
- If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAG RESULTS" for "ENGINE". In case a 1st trip DTC other than P0734 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0734 exists.	1 → 2 → 2 → 1

8. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "DIAGNOSTIC PROCEDURE".)  
 Refer to [AT-530, "Diagnostic Procedure"](#).  
 Refer to [AT-752, "Shift Schedule"](#).

**WITH GST**

Follow the procedure "With CONSULT-II".

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
1	R/W	LINE PRESSURE SOLENOID VALVE	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 1.5 - 3.0V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V
2	P/B	LINE PRESSURE SOLENOID VALVE (DROPPING RESISTOR)	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 4 - 14V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V
11	L/W	SHIFT SOLENOID VALVE A	WHEN SHIFT SOLENOID VALVE A IS OPERATING (DRIVING IN D1 OR D4 )	BATTERY VOLTAGE
			WHEN SHIFT SOLENOID VALVE A IS NOT OPERATING (DRIVING IN D2 OR D3 )	APPROX. 0V
12	L/Y	SHIFT SOLENOID VALVE B	WHEN SHIFT SOLENOID VALVE B IS OPERATING (DRIVING IN D1 OR D2 )	BATTERY VOLTAGE
			WHEN SHIFT SOLENOID VALVE BE IS NOT OPERATING (DRIVING IN D3 OR D4 )	APPROX. 0V

## Diagnostic Procedure

ECS0064A

### 1. CHECK SHIFT UP (D3 TO D4 )

During [AT-465, "Cruise Test — Part 1"](#) , does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 11.
- No >> GO TO 2.

SAT988H

### 2. CHECK LINE PRESSURE

Perform line pressure test.

Engine Speed RPM	Line Pressure kPa (kg/cm <sup>2</sup> , psi)	
	D, 2 and 1 Position	R Position
Idle	500 (5.1, 73)	778 (7.9, 113)
Stall	1,223 (12.6, 179)	1,918 (19.6, 278)

Refer to [AT-456, "Line Pressure Test"](#) .

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 7.

### 3. CHECK VALVE RESISTANCE

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Shift solenoid valve A
  - Shift solenoid valve B
2. Check resistance between terminal cord assembly connector F30 terminals 1 and 2 and ground.

OK or NG

- OK >> GO TO 5.
- NG >> Replace solenoid valve assembly.

### 4. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Shift solenoid valve A
  - Shift solenoid valve B
2. Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

OK or NG

- OK >> GO TO 5.
- NG >> Replace solenoid valve assembly.

### 5. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

**OK or NG**

- OK >> GO TO 6.
- NG >> Repair control valve.

### 6. CHECK SHIFT UP (D3 TO D4 )

Does A/T shift from D3 to D4 at the specified speed?

**Yes or No**

- Yes >> GO TO 11.
- No >> Check control valve again. Repair or replace control valve assembly.

### 7. CHECK VALVE RESISTANCE

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Line pressure solenoid valves
2. Check resistance between the terminal cord assembly connector F30 terminal 4 and ground.

Solenoid valve	Terminal No.		Resistance (Approx.)
Line pressure solenoid valve	4	Ground	2.5 - 5Ω

WCIA0032E

**OK or NG**

- OK >> GO TO 9.
- NG >> Replace solenoid valve assembly.

## 8. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Line pressure solenoid valves
2. Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

OK or NG

- OK >> GO TO 9.
- NG >> Replace solenoid valve assembly.

## 9. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check line pressure circuit valves for sticking.
  - Pressure regulator valve
  - Pilot valve
  - Pressure modifier valve

OK or NG

- OK >> GO TO 10.
- NG >> Repair control valve.

## 10. CHECK SHIFT UP (D<sub>3</sub> TO D<sub>4</sub>)

Does A/T shift from D<sub>3</sub> to D<sub>4</sub> at the specified speed?

Yes or No

- Yes >> GO TO 11.
- No >> Check control valve again. Repair or replace control valve assembly.

## 11. CHECK DTC

Perform [AT-527, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> Perform "Cruise test — Part 1" again and return to the start point of this test group.

# DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

[RE4F04B]

## DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

### Description

ECS0064B

The torque converter clutch solenoid valve is activated, with the gear in D4, by the TCM in response to signals sent from the vehicle speed and the ECM (throttle opening). Lock-up piston operation will then be controlled.

Lock-up operation, however, is prohibited when A/T fluid temperature is too low.

When the accelerator pedal is depressed (less than 2/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Torque converter clutch solenoid valve duty	Lock-up OFF	Approximately 4%
	↓ Lock-up ON	↓ Approximately 94%

### On Board Diagnosis Logic

ECS0064C

Diagnostic trouble code TCC SOLENOID/CIRC with CONSULT-II or P0740 without CONSULT-II is detected when TCM detects an improper voltage drop when it tries to operate the solenoid valve.

### Possible Cause

ECS0064D

Check the following items.

- Torque converter clutch solenoid valve
- Harness or connectors  
(The solenoid circuit is open or shorted.)

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0064E

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

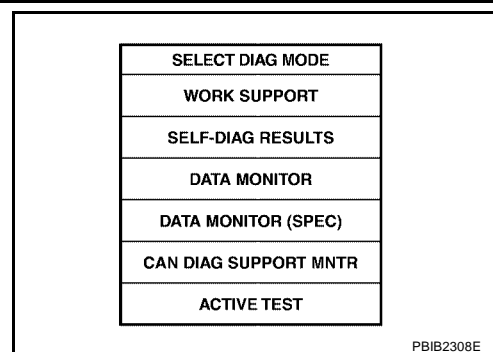

1. Turn ignition switch ON.

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
3	GY/R	TORQUE CONVERTER CLUTCH SOLENOID VALVE	WITH TORQUE CONVERTER LOCK-UP	APPROX. 8 - 15V
			WITHOUT TORQUE CONVERTER LOCK-UP	APPROX. 0V

## Diagnostic Procedure

ECS0064G

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to OFF position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal cord assembly connector F30 terminal 5 and ground.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. CHECK VALVE OPERATION

1. Remove oil pan.
2. Check the following items:
  - Torque converter clutch solenoid valve
  - Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

- Harness of terminal cord assembly for short or open

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace damaged parts.

---

## 3. CHECK POWER SOURCE CIRCUIT

---

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal cord assembly harness connector F30 terminal 5 and TCM harness connector F56 terminal 3. Refer to [AT-536, "Wiring Diagram — AT — TCV"](#) .

**Continuity should exist.**

4. Reinstall any part removed.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK DTC

---

Perform [AT-534, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 5.

---

## 5. CHECK TCM INSPECTION

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

PF3:31940

Description

ECS0064H

- This is an OBD-II self-diagnostic item and not available in TCM self-diagnosis.
- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into fourth gear position or the torque converter clutch does not lock up as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning oil pump or torque converter clutch, etc.

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Torque converter clutch solenoid valve duty	Lock-up OFF	Approximately 4%
	↓ Lock-up ON	↓ Approximately 94%

On Board Diagnosis Logic

ECS0064I

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:

Torque converter slip ratio = A x C/B

A: Output shaft revolution signal from revolution sensor

B: Engine speed signal from ECM

C: Gear ratio determined as gear position which TCM supposes

If the actual gear position is much lower than the position (4th) supposed by TCM, the slip ratio will be much less than normal. In case the ratio does not reach the specified value, TCM judges this diagnosis malfunction. This malfunction will be caused when shift solenoid valve B is stuck closed.

Gear positions supposed by TCM are as follows.

In case of gear position with no malfunctions: 1, 2, 3 and 4 positions

In case of gear position with shift solenoid valve B stuck closed: 1, 2, 2 and 1\* positions to each gear position above

\*: P0744 is detected.

Diagnostic trouble code A/T TCC S/V FNCTN with CONSULT-II or P0744 without CONSULT-II is detected when A/T cannot perform lock-up even if electrical circuit is good.

Possible Cause

ECS0064J

Check the following items.

- Line pressure solenoid valve
- Torque converter clutch solenoid valve
- Each clutch
- Hydraulic control circuit

Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0064K

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

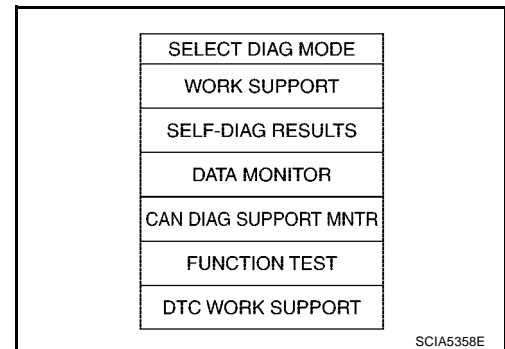

After the repair, perform the following procedure to confirm the malfunction is eliminated.

## WITH CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.  
**FLUID TEMP SEN: 0.4 - 1.5V**  
 If out of range, drive vehicle to decrease voltage (warm up the fluid) or stop engine to increase voltage (cool down the fluid).
3. Select "TCC S/V FNCTN P0744" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".

4. Accelerate vehicle to more than 70 km/h (43 MPH) and maintain the following condition continuously until "TESTING" has turned to "COMPLETE". (It will take approximately 30 seconds after "TESTING" shows.)  
**THROTTLE POSI: 1.0/8 - 2.0/8 (at all times during step 4)**  
**Selector lever: D position (O/D ON)**  
**TCC S/V DUTY: More than 94%**  
**VHCL/S SE-A/T: Constant speed of more than 70 km/h (43 MPH)**

- Check that "GEAR" shows "4".
  - For shift schedule, refer to [AT-752, "Shift Schedule"](#).
  - If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAG RESULTS". In case a 1st trip DTC other than P0744 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".
5. Make sure that "OK" is displayed. (If "NG" is displayed, refer to "DIAGNOSTIC PROCEDURE".)  
 Refer to [AT-542, "Diagnostic Procedure"](#).  
 Refer to [AT-752, "Shift Schedule"](#).

## WITH GST

Follow the procedure "With CONSULT-II".

[RE4F04B]

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
1	R/W	LINE PRESSURE SOLENOID VALVE	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 1.5 - 3.0V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V
2	P/B	LINE PRESSURE SOLENOID VALVE (DROPPING RESISTOR)	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 4 - 14V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V
3	GY/R	TORQUE CONVERTER CLUTCH SOLENOID VALVE	WITH TORQUE CONVERTER LOCK-UP	APPROX. 8 - 15V
			WITHOUT TORQUE CONVERTER LOCK-UP	APPROX. 0V

## Diagnostic Procedure

ECS0064M

### 1. CHECK SHIFT UP (D3 TO D4)

During [AT-465, "Cruise Test — Part 1"](#), does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 11.
- No >> GO TO 2.

### 2. CHECK LINE PRESSURE

Perform line pressure test.

Engine Speed RPM	Line Pressure kPa (kg/cm <sup>2</sup> , psi)	
	D, 2 and 1 Position	R Position
Idle	500 (5.1, 73)	778 (7.9, 113)
Stall	1,223 (12.6, 179)	1,918 (19.6, 278)

Refer to [AT-456, "Line Pressure Test"](#).

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 6.

### 3. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check to ensure that:
  - Valve, sleeve and plug slide along valve bore under their own weight.
  - Valve, sleeve and plug are free from burrs, dents and scratches.
  - Control valve springs are free from damage, deformation and fatigue.
  - Hydraulic line is free from obstacles.

OK or NG

- OK >> GO TO 4.
- NG >> Repair control valve.

### 4. CHECK SHIFT UP (D3 TO D4 )

Does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 5.
- No >> Check control valve again. Repair or replace control valve assembly.

### 5. CHECK DTC

Perform [AT-539, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 11. Check for proper lock-up.

### 6. CHECK VALVE RESISTANCE

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Line pressure solenoid valve
2. Check resistance to the terminal and ground.

Solenoid valve	Terminal No.		Resistance (Approx.)
Line pressure solenoid valve	4	Ground	2.5 - 5Ω

OK or NG

- OK >> GO TO 8.
- NG >> Replace solenoid valve assembly.

## 7. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
  - Line pressure solenoid valve
2. Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

OK or NG

- OK >> GO TO 8.
- NG >> Replace solenoid valve assembly.

## 8. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check line pressure circuit valves for sticking.
  - Pressure regulator valve
  - Pilot valve
  - Pressure modifier valve

OK or NG

- OK >> GO TO 9.
- NG >> Repair control valve.

## 9. CHECK SHIFT UP (D3 TO D4 )

Does A/T shift from D3 to D4 at the specified speed?

Yes or No

- Yes >> GO TO 10.
- No >> Check control valve again. Repair or replace control valve assembly.

## 10. CHECK DTC

Perform [AT-539, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 11. Check for proper lock-up.

### 11. CHECK LOCK-UP

During [AT-465, "Cruise Test — Part 1"](#), does A/T perform lock-up at the specified speed?

Yes or No

- Yes >> Perform "Cruise test — Part 1" again and return to the start point of this test group.
- No >> GO TO 12.

### 12. CHECK VALVE RESISTANCE

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
  - Torque converter clutch solenoid valve
2. Check resistance between terminal cord assembly connector F30 terminal 5 and ground.

Solenoid valve	Terminal No.	Resistance (Approx.)
Torque converter clutch solenoid valve	5 Ground	5 - 20Ω

WCIA0036E

OK or NG

- OK >> GO TO 14.
- NG >> Replace solenoid valve assembly.

### 13. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
  - Torque converter clutch solenoid valve
2. Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

WCIA0035E

OK or NG

- OK >> GO TO 14.
- NG >> Replace solenoid valve assembly.

**14. CHECK CONTROL VALVE**

1. Disassemble control valve assembly. Refer to [AT-679, "DISASSEMBLY"](#) .
2. Check control valves for sticking.
  - Torque converter clutch control valve
  - Torque converter clutch relief valve

OK or NG

OK &gt;&gt; GO TO 15.

NG &gt;&gt; Repair control valve.

**15. CHECK LOCK-UP**

Does A/T perform lock-up at the specified speed?

Yes or No

Yes &gt;&gt; GO TO 16.

No &gt;&gt; Check control valve again. Repair or replace control valve assembly.

**16. CHECK DTC**Perform [AT-539, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

OK >> **INSPECTION END**

NG &gt;&gt; Perform "Cruise test — Part 1" again and return to the start point of this test group.

# DTC P0745 LINE PRESSURE SOLENOID VALVE

[RE4F04B]

## DTC P0745 LINE PRESSURE SOLENOID VALVE

PF3:31940

ECS0064N

### Description

The line pressure solenoid valve regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Line pressure solenoid valve duty	Small throttle opening (Low line pressure)	Approximately 24%
	↓ Large throttle opening (High line pressure)	↓ Approximately 95%

### On Board Diagnosis Logic

ECS0064O

Diagnostic trouble code L/PRESS SOL/CIRC with CONSULT-II or P0745 without CONSULT-II is detected when TCM detects an improper voltage drop when it tries to operate the solenoid valve.

### Possible Cause

ECS0064P

Check the following items.

- Harness or connectors  
(The solenoid circuit is open or shorted.)
- Line pressure solenoid valve

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0064Q

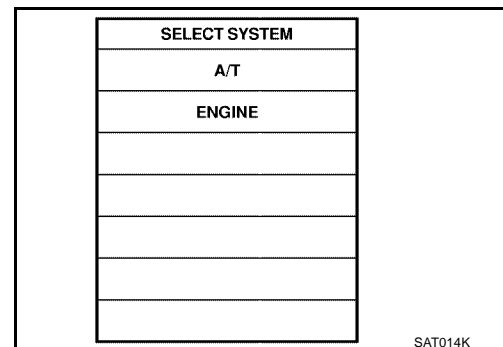

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

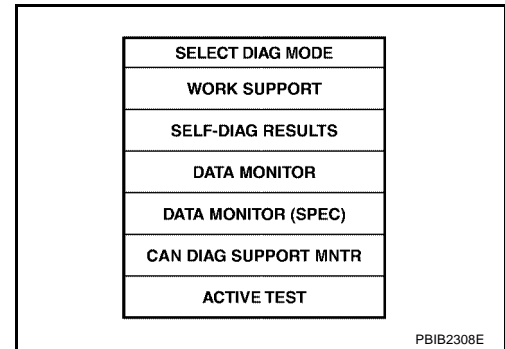

1. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.

# DTC P0745 LINE PRESSURE SOLENOID VALVE

[RE4F04B]

2. Depress accelerator pedal completely and wait at least 1 second.

## WITH GST

Follow the procedure "With CONSULT-II".

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

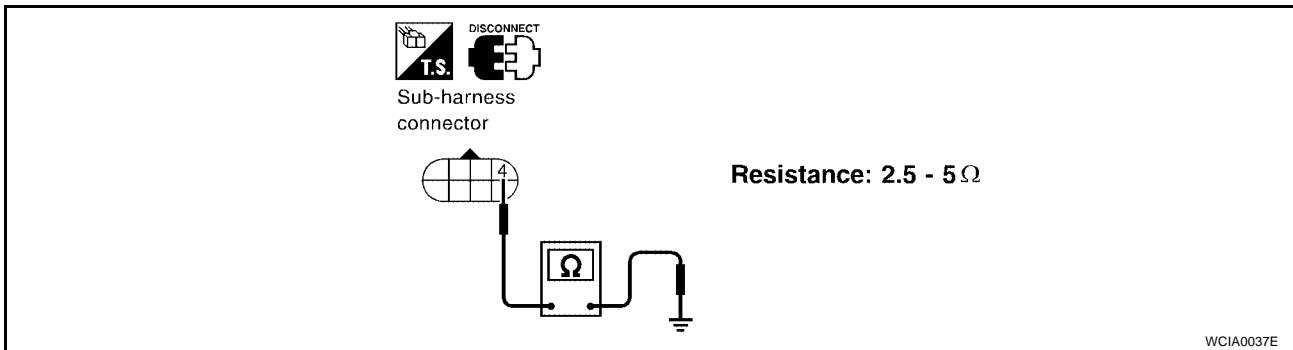

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
1	R/W	LINE PRESSURE SOLENOID VALVE	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 1.5 - 3.0V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V
2	P/B	LINE PRESSURE SOLENOID VALVE (DROPPING RESISTOR)	WHEN ACCELERATOR PEDAL IS RELEASED WHILE DRIVING	APPROX. 4 - 14V
			WHEN ACCELERATOR PEDAL IS DEPRESSED WHILE DRIVING	APPROX. 0V

## Diagnostic Procedure

ECS0064S

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to OFF position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal cord assembly connector F30 terminal 4 and ground.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Line pressure solenoid valve
  - Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.

- Harness of terminal cord assembly for short or open

OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace damaged parts.

**3. CHECK POWER SOURCE AND DROPPING RESISTOR CIRCUIT**

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check resistance between terminal cord assembly harness connector F30 terminal 4 and TCM harness connector F56 terminal 2.

**Resistance : Approximately 12Ω**

OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

**4. DETECT MALFUNCTIONING ITEM**

Check the following items:

- Dropping resistor
- Check resistance between two terminals.

**Resistance : Approximately 12Ω**

- Harness for short or open between TCM terminal 2 and terminal cord assembly (Main harness)

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

**5. CHECK POWER SOURCE CIRCUIT**

1. Turn ignition switch to OFF position.
2. Check continuity between terminal cord assembly connector F30 terminal 4 and TCM harness connector F56 terminal 1. Refer to [AT-549, "Wiring Diagram — AT — LPSV"](#).

**Continuity should exist.**

3. Reinstall any part removed.

OK or NG

- OK >> GO TO 6.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**6. CHECK DTC**

Perform [AT-547, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#).

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 7.

---

## 7. CHECK TCM INSPECTION

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

DTC P0750 SHIFT SOLENOID VALVE A

PF3:31940

Description

ECS0064T

Shift solenoid valves A and B are turned ON or OFF by the TCM in response to signals sent from the park/neutral position (PNP) switch, vehicle speed and ECM (throttle opening). Gears will then be shifted to the optimum position.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

On Board Diagnosis Logic

ECS0064U

Diagnostic trouble code SFT SOL A/CIRC with CONSULT-II or P0750 without CONSULT-II is detected when TCM detects an improper voltage drop when it tries to operate the solenoid valve.

Possible Cause

ECS0064V

Check the following items.

- Harness or connectors  
(The solenoid circuit is open or shorted.)
- Shift solenoid valve A

Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0064W

**CAUTION:**

Always drive vehicle at a safe speed.

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

[RE4F04B]

## DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

PF2:22560

### Description

ECS00655

The throttle position sensor [accelerator pedal position (APP) sensor] is part of the system that controls throttle position. This system also uses an electric throttle control actuator which consists of a throttle control motor and throttle position sensors. Accelerator pedal position signal is sent to the ECM.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Throttle position sensor [accelerator pedal position (APP) sensor]	Fully-closed throttle	Approximately 0.5V
	Fully-open throttle	Approximately 4V

### On Board Diagnosis Logic

ECS00656

Diagnostic trouble code TP SEN/CIRC A/T with CONSULT-II or P1705 without CONSULT-II is detected when TCM receives an excessively low or high voltage from the ECM.

### Possible Cause

ECS00657

Check the following items.

- Harness or connectors (The sensor circuit is open or shorted.)

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS00658

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for "A/T" with CONSULT-II.

Accelerator pedal condition	THRTL POS SEN	CLOSED THL/SW	W/O THRL/P·SW
Fully released	Less than 4.7V	ON	OFF
Partially depressed	0.1 - 4.6V	OFF	OFF
Fully depressed	1.9 - 4.6V	OFF	ON

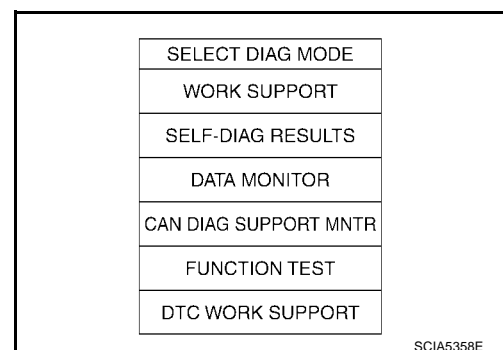

If the check result is NG, go to [AT-566, "Diagnostic Procedure"](#).  
If the check result is OK, go to following step.

2. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
3. Start engine and maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.

**VHCL SPEED SE: 10 km/h (6 MPH) or more**  
**THRTL POS SEN: Approximately 3V or less**  
**Selector lever: D position (O/D ON)**

If the check result is NG, go to [AT-566, "Diagnostic Procedure"](#).  
If the check result is OK, go to following step.

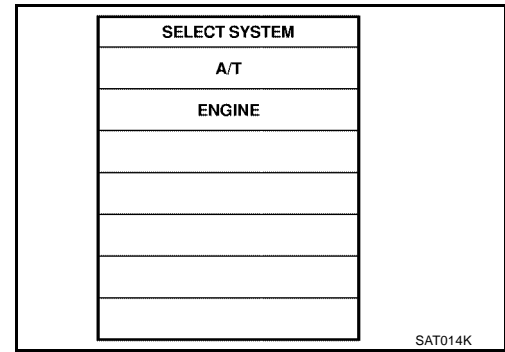

4. Maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

[RE4F04B]

VHCL SPEED SE: 10 km/h (6 MPH) or more  
Accelerator pedal: Wide open throttle  
Selector lever: D position (O/D ON)

## WITH GST

Follow the procedure "With CONSULT-II".

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

**[RE4F04B]**

TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
32	R	SENSOR POWER	IGNITION SWITCH ON	4.5 - 5.5V
			IGNITION SWITCH OFF	0V
41	SB	THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]	IGNITION ON AND ACCELERATOR PEDAL IS DEPRESSED SLOWLY AFTER WARMING UP ENGINE	FULLY CLOSED THROTTLE: 0.5V
				WIDE OPEN THROTTLE: 4.0V
42	B	SENSOR GROUND	—	—

## Diagnostic Procedure

ECS0065A

### 1. CHECK DTC WITH ECM

- Check P code with CONSULT-II "ENGINE".  
Turn ignition switch ON and select "SELF DIAGNOSTIC RESULTS" mode for "ENGINE" with CONSULT-II.

Refer to [EC-1275, "Malfunction Indicator Lamp \(MIL\)"](#) .

OK or NG

OK (with CONSULT-II)>>GO TO 2.

OK (without CONSULT-II)>>GO TO 3.

NG >> Check throttle position sensor [accelerator pedal position (APP) sensor] circuit for engine control.  
Refer to [EC-1475, "DTC P0222, P0223 TP SENSOR"](#) and [EC-1770, "DTC P2138 APP SENSOR"](#) .

### 2. CHECK INPUT SIGNAL (WITH CONSULT-II)

#### Ⓜ With CONSULT-II

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out the value of "THRTL POS SEN".

DATA MONITOR	
MONITORING	VALUE
VHCL/S SE-A/T	XXX km/h
VHCL/S SE-MTR	XXX km/h
THRTL POS SEN	XXX V
FLUID TEMP SE	XXX V
BATTERY VOLT	XXX V

SAT614J

**Voltage:**

**Fully-closed throttle :Approximately 0.5V**

**Fully-open throttle :Approximately 4V**

OK or NG

OK >> GO TO 4.

NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor [accelerator pedal position (APP) sensor] circuit. (Main harness)

# DTC P1705 THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

[RE4F04B]

## 3. CHECK INPUT SIGNAL (WITHOUT CONSULT-II)

### ⊗ Without CONSULT-II

1. Turn ignition switch to ON position. (Do not start engine.)
2. Check voltage between TCM terminals 41 and 42 while accelerator pedal is depressed slowly.

#### Voltage:

Fully-closed throttle valve :Approximately 0.5V

Fully-open throttle valve :Approximately 4V

(Voltage rises gradually in response to throttle position.)

### OK or NG

OK >> GO TO 4.

NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor [accelerator pedal position (APP) sensor] circuit. (Main harness)

## 4. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

### OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

## DTC P1760 OVERRUN CLUTCH SOLENOID VALVE

PF:31940

### Description

ECS0065B

The overrun clutch solenoid valve is activated by the TCM in response to signals sent from the park/neutral position (PNP) switch, overdrive control switch, vehicle speed and ECM (throttle opening). The overrun clutch operation will then be controlled.

SAT283HB

### On Board Diagnosis Logic

ECS0065C

Diagnostic trouble code O/R CLTCH SOL/CIRC with CONSULT-II or P1760 without CONSULT-II is detected when TCM detects an improper voltage drop when it tries to operate the solenoid valve.

### Possible Cause

ECS0065D

Check the following items.

- Harness or connectors  
(The solenoid circuit is open or shorted.)
- Overrun clutch solenoid valve

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0065E

#### CAUTION:

Always drive vehicle at a safe speed.

#### NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

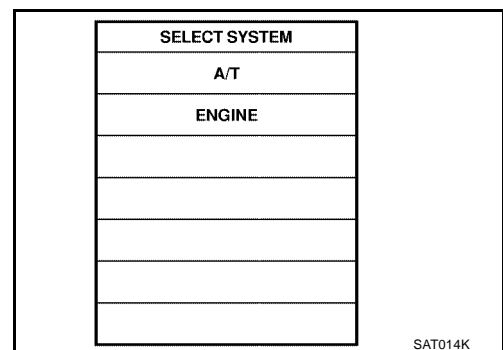

#### TESTING CONDITION:

Always drive vehicle on a level road to improve accuracy of test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

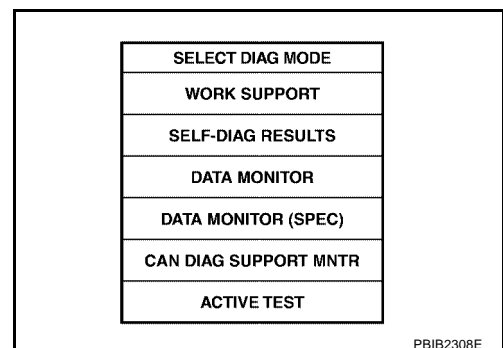

#### WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine.
3. Accelerate vehicle to a speed of more than 10 km/h (6 MPH) with D position (O/D ON).

SAT014K

4. Release accelerator pedal completely with D position (O/D OFF).

PBIB2308E

# DTC P1760 OVERRUN CLUTCH SOLENOID VALVE

[RE4F04B]

TCM TERMINALS AND REFERENCE VALUE MEASURED BETWEEN EACH TERMINAL AND 25 OR 48 (TCM GROUND)

TERMINAL	WIRE COLOR	ITEM	CONDITION	DATA (DC)
20	L/B	OVERRUN CLUTCH SOLENOID VALVE	WHEN OVERRUN CLUTCH SOLENOID VALVE OPERATES	BATTERY VOLTAGE
			WHEN OVERRUN CLUTCH SOLENOID VALVE DOES NOT OPERATE	APPROX. 0V

## Diagnostic Procedure

ECS0065G

### 1. CHECK VALVE RESISTANCE

1. Turn ignition switch to OFF position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal cord assembly F30 terminal 3 (component side) and ground.

**Resistance : 20 - 30Ω**

OK or NG

- OK >> GO TO 3.  
 NG >> GO TO 2.

### 2. CHECK VALVE OPERATION

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Overrun clutch solenoid valve
  - Operation check
  - Check solenoid valve by listening for its operating sound while applying battery voltage and ground to the solenoid.
  - Harness of terminal cord assembly for short or open

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace damaged parts.

### 3. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal cord assembly connector F30 terminal 3 and TCM harness connector F56 terminal 20. Refer to [AT-570, "Wiring Diagram — AT — OVRCSV"](#).

**Continuity should exist.**

4. Reinstall any part removed.

OK or NG

- OK >> GO TO 4.  
 NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK DTC

---

Perform [AT-568, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

OK or NG

OK >> **INSPECTION END**  
NG >> GO TO 5.

---

## 5. CHECK TCM INSPECTION

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**  
NG >> Repair or replace damaged parts.

# DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

[RE4F04B]

## DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

PFP:31940

### Description

ECS0065H

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.

### CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approximately)	
A/T fluid temperature sensor	Cold [20°C (68°F)]	1.5V	2.5 kΩ
	↓ Hot [80°C (176°F)]	0.5V	0.3 kΩ

### On Board Diagnosis Logic

ECS0065I

Diagnostic trouble code BATT/FLUID TEMP SEN with CONSULT-II or 8th judgement flicker without CONSULT-II is detected when TCM receives an excessively low or high voltage from the sensor.

### Possible Cause

ECS0065J

Check the following items.

- Harness or connectors  
(The sensor circuit is open or shorted.)
- A/T fluid temperature sensor

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0065K

After the repair, perform the following procedure to confirm the malfunction is eliminated.

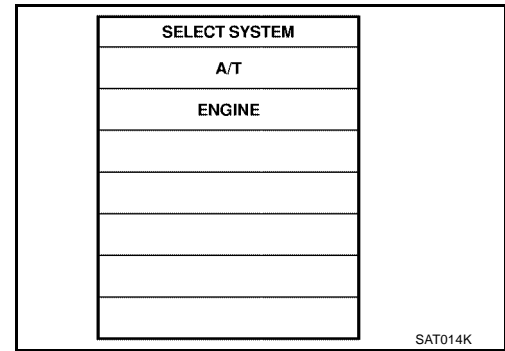

#### WITH CONSULT-II

1. Start engine.

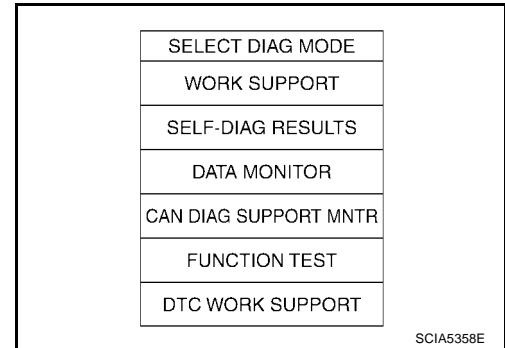

# DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

[RE4F04B]

2. Select "DATA MONITOR" mode for "A/T" with CONSULT-II.

3. Drive vehicle under the following conditions:  
Selector lever in D, vehicle speed higher than 20 km/h (12 MPH).

## WITHOUT CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:  
Selector lever in D, vehicle speed higher than 20 km/h (12 MPH).
3. Perform self-diagnosis.  
Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#).

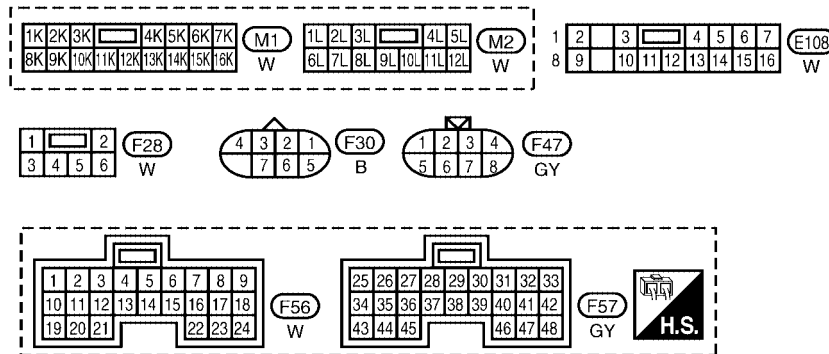

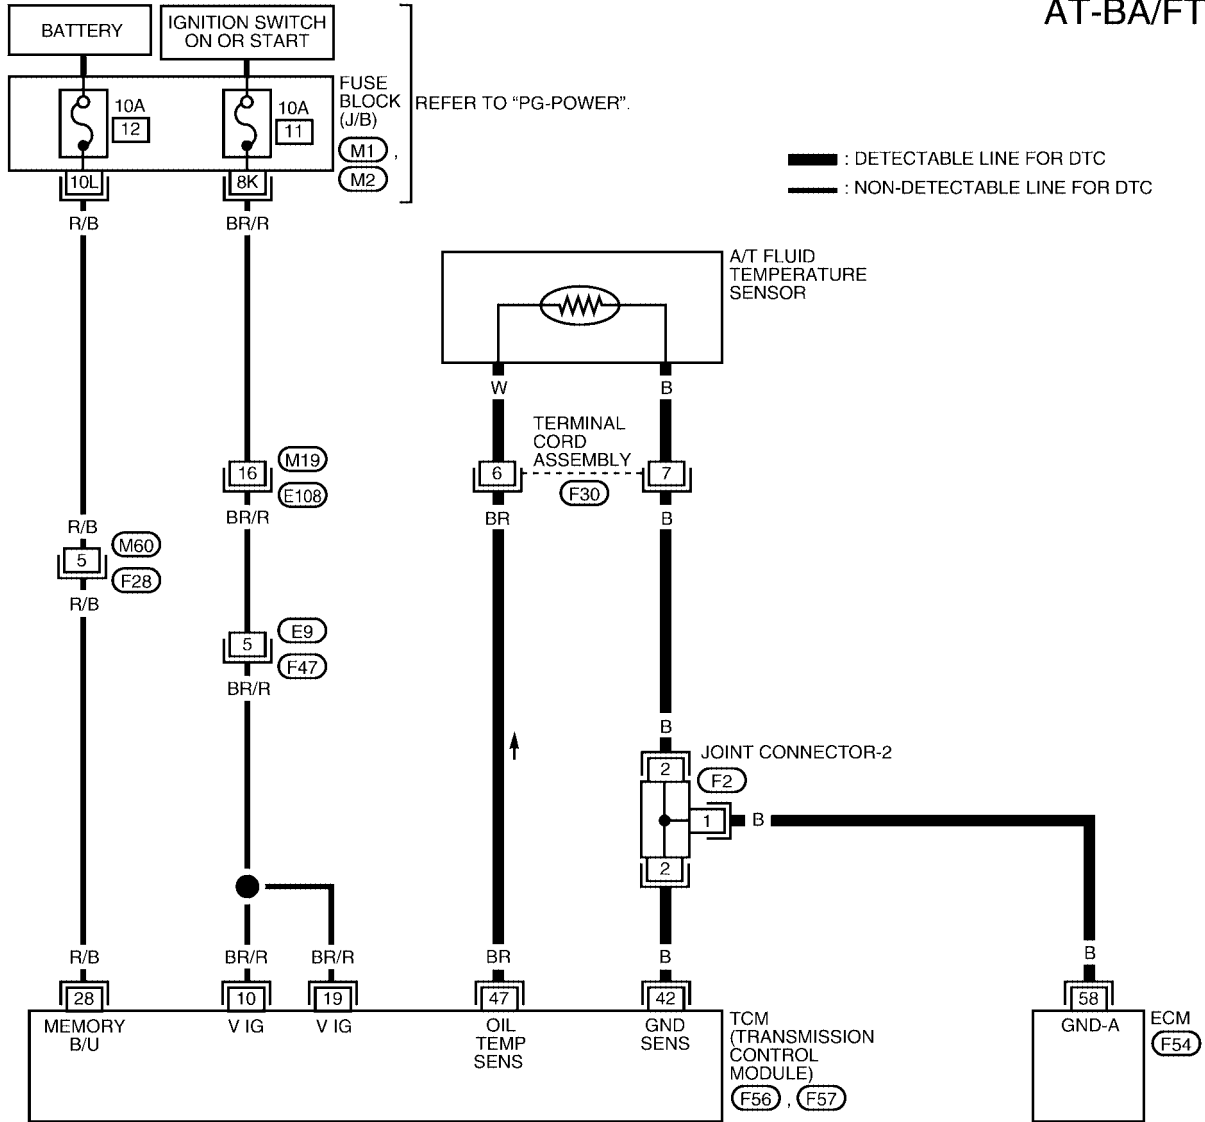

# DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

[RE4F04B]

ECS0065L

## Wiring Diagram — AT — BA/FTS

			IGNITION ON WITH ATF TEMPERATURE AT 80°C (176°F)	APPROX. 0.5V

## Diagnostic Procedure

ECS0065M

### 1. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR (WITH CONSULT-II)

#### With CONSULT-II

1. Start engine.
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out the value of "FLUID TEMP SE".

DATA MONITOR	
MONITORING	
VHCL/S SE-A/T	XXX km/h
VHCL/S SE-MTR	XXX km/h
THRTL POS SEN	XXX V
FLUID TEMP SE	XXX V
BATTERY VOLT	XXX V

SAT614J

**Voltage :Cold [20°C (68°F)] → Hot [80°C (176°F)]**  
**:Approximately 1.5V → 0.5V**

#### OK or NG

- OK >> GO TO 9.  
 NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between TCM, ECM and terminal cord assembly (Main harness)
- Harness for short or open between battery and TCM (Main harness)
- Ground circuit for ECM  
 Refer to [EC-1342, "POWER SUPPLY CIRCUIT FOR ECM"](#) .

#### OK or NG

- OK >> GO TO 9.  
 NG >> Repair or replace damaged parts.

## 3. CHECK TCM POWER SOURCE STEP 1

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

OK or NG

- OK    >> GO TO 4.  
NG    >> GO TO 5.

## 4. CHECK TCM POWER SOURCE STEP 2

1. Turn ignition switch to OFF position.
2. Check voltage between TCM terminal 28 and ground.

OK or NG

- OK    >> GO TO 6.  
NG    >> GO TO 5.

## 5. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between ignition switch and TCM (Main harness)
- Harness for short or open between battery and TCM (Main harness)
- Ignition switch and fuse  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#).

OK or NG

- OK    >> GO TO 6.  
NG    >> Repair or replace damaged parts.

## 6. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

1. Turn ignition switch to OFF position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal cord assembly F30 terminals 6 and 7 (component side) when A/T is cold.

4. Reinstall any part removed.

OK or NG

OK (without CONSULT-II) >> GO TO 8.

NG >> GO TO 7.

## 7. DETECT MALFUNCTIONING ITEM

1. Remove oil pan.
2. Check the following items:
  - A/T fluid temperature sensor
  - Check resistance between two terminals while changing temperature as shown.

Temperature	Resistance (Approx.)
20°C (68°F)	2.5kΩ
80°C (176°F)	0.3kΩ

- Harness of terminal cord assembly for short or open

OK or NG

OK (without CONSULT-II) >> GO TO 8.

NG >> Repair or replace damaged parts.

**8. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR (WITHOUT CONSULT-II)**

**⊗ Without CONSULT-II**

1. Start engine.
2. Check voltage between TCM terminal 47 and ground while warming up A/T.

**Voltage :Cold [20°C (68°F)] → Hot [80°C (176°F)]**  
**:Approximately 1.5V → 0.5V**

3. Turn ignition switch to OFF position.
4. Disconnect TCM harness connector.
5. Check resistance between TCM harness connector terminal 42 and ground. Refer to [AT-575, "Wiring Diagram — AT — BA/FTS"](#)

**Continuity should exist.**

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 9.

**9. DETECT MALFUNCTIONING ITEM**

Check the following items:

- Harness for short or open between TCM, ECM and terminal cord assembly (Main harness)
- Ground circuit for ECM  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#).

OK or NG

- OK >> GO TO 10.
- NG >> Repair or replace damaged parts.

**10. CHECK DTC**

Perform [AT-573, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#).

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 11.

**11. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

## DTC VEHICLE SPEED SENSOR MTR

PFP:24814

### Description

ECS0065N

The vehicle speed sensor-MTR is built into the speedometer assembly. The sensor functions as an auxiliary device to the revolution sensor when it is malfunctioning. The TCM will then use a signal sent from the vehicle speed sensor-MTR.

### On Board Diagnosis Logic

ECS0065O

Diagnostic trouble code VHCL SPEED SEN-MTR with CONSULT-II or 2nd judgement flicker without CONSULT-II is detected when TCM does not receive the proper voltage signal from the sensor.

### Possible Cause

ECS0065P

Check the following items.

- Harness or connectors  
(The sensor circuit is open or shorted.)
- Vehicle speed sensor

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS0065Q

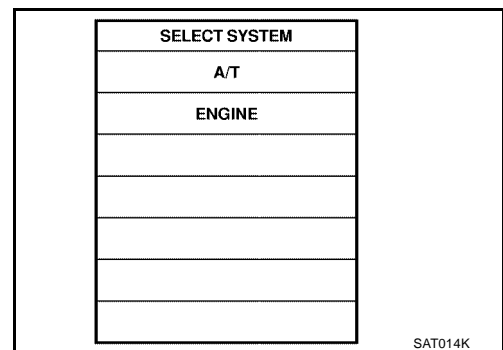

#### CAUTION:

- Always drive vehicle at a safe speed.
- If conducting this “DTC Confirmation Procedure” again, always turn ignition switch OFF and wait at least 10 seconds before continuing.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode for “A/T” with CONSULT-II.

2. Start engine and accelerate vehicle from 0 to 25 km/h (0 to 16 MPH).

#### WITHOUT CONSULT-II

1. Start engine.

# DTC VEHICLE SPEED SENSOR MTR

[RE4F04B]

2. Drive vehicle under the following conditions:  
Selector lever in D and vehicle speed higher than 25 km/h (16 MPH).
3. Perform self-diagnosis.  
Refer to [AT-442, "TCM SELF-DIAGNOSTIC PROCEDURE \(NO TOOLS\)"](#) .

## Diagnostic Procedure

### 1. CHECK INPUT SIGNAL

#### With CONSULT-II

DATA MONITOR	
MONITORING	
VHCL/S SE-A/T	XXX km/h
VHCL/S SE-MTR	XXX km/h
THRTL POS SEN	XXX V
FLUID TEMP SE	XXX V
BATTERY VOLT	XXX V

SAT614J

1. Start engine.
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out the value of "VHCL/S SE·MTR" while driving.  
Check the value changes according to driving speed.

#### Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 40 and ground while driving at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.

**Voltage** :Voltage varies between less than 1V and more than 4.5V.

#### OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. DETECT MALFUNCTIONING ITEM

Check the following items:

- Vehicle speed sensor and ground circuit for vehicle speed sensor  
Refer to [DI-3, "METERS AND GAUGES"](#) .
- Harness for short or open between TCM and vehicle speed sensor (Main harness)

#### OK or NG

- OK >> GO TO 3.  
NG >> Repair or replace damaged parts.

### 3. CHECK DTC

Perform [AT-580, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .

#### OK or NG

- OK >> **INSPECTION END**  
NG >> GO TO 4.

---

## 4. CHECK TCM INSPECTION

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

## DTC TURBINE REVOLUTION SENSOR

### Description

The turbine revolution sensor detects input shaft rpm (revolutions per minute). It is located on the input side of the automatic transaxle. The vehicle speed sensor A/T (Revolution sensor) is located on the output side of the automatic transaxle. With the two sensors, input and output shaft rpms are accurately detected. The result is optimal shift timing during deceleration and improved shifting.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
⊕ : TURBINE REV ⊗ : 10th judgement flicker	TCM does not receive the proper voltage signal from the sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Turbine revolution sensor</li> </ul>

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

**CAUTION:**

- Always drive vehicle at a safe speed.
- If conducting this "DTC CONFIRMATION PROCEDURE" again, always turn ignition switch OFF and wait at least 5 seconds before continuing.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

⊕ With CONSULT-II

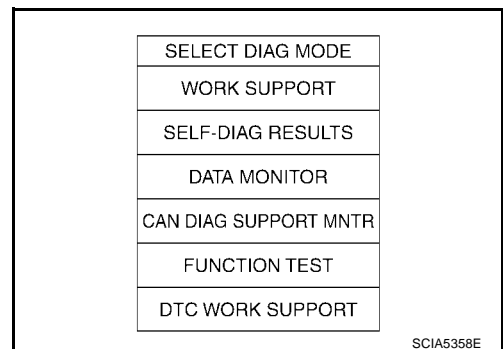

1. Start engine.

2. Select "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Drive vehicle under the following conditions:  
Selector lever in D, vehicle speed higher than 40 km/h (25 MPH), engine speed higher than 1,500 rpm, throttle opening greater than 1.0/8 of the full throttle position and driving for more than 5 seconds.

⊗ Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:  
Selector lever in "D" and vehicle speed higher than 40 km/h (25 MPH), engine speed higher than 1,500 rpm, throttle opening greater than 1/8 of the full throttle position and driving for more than 5 seconds.

# DTC TURBINE REVOLUTION SENSOR

[RE4F04B]

Terminal No.		Resistance (Approx.)
1	2	2.4 - 2.8kΩ
1	3	No continuity
2	3	No continuity

## DTC U1000 CAN COMMUNICATION LINE

PFP:23710

### Description

*ECS0065X*

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### On Board Diagnosis Logic

*ECS0065Y*

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code "CAN COMM CIRCUIT" with CONSULT-II or U1000 without CONSULT-II is detected when TCM cannot communicate to other control unit.

### Possible Cause

*ECS0065Z*

Harness or connectors  
(CAN communication line is open or shorted.)

### DTC Confirmation Procedure

*ECS00660*

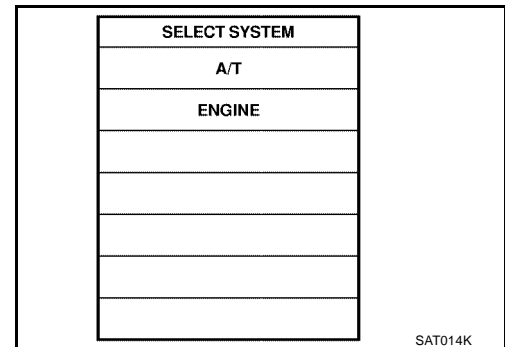

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

#### ④ WITH CONSULT-II

1. Turn ignition switch to ON position. (Do not start engine.)
2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
3. Start engine and wait for at least 6 seconds.
4. If DTC is detected, go to [AT-592, "Diagnostic Procedure"](#).

#### ④ WITH GST

Follow the procedure "WITH CONSULT-II".

# DTC U1000 CAN COMMUNICATION LINE

[RE4F04B]

## Wiring Diagram — AT — CAN

ECS00661

AT-CAN-01

LCWA0002E

## Diagnostic Procedure

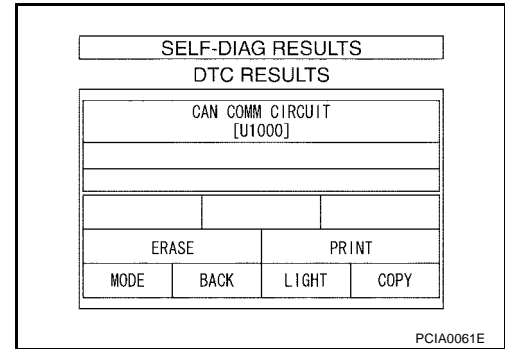

### 1. CHECK CAN COMMUNICATION CIRCUIT

 With CONSULT-II

1. Turn ignition switch "ON" and start engine.
2. Select "SELF-DIAG RESULTS" mode for "A/T" with CONSULT-II.

Is any malfunction of the "CAN COMM CIRCUIT" indicated?

- Yes >> Print out CONSULT-II screen, GO TO LAN section.  
           Refer to [LAN-3, "CAN Communication Unit"](#) .
- No >> Inspection End.

## DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)

PF3:31036

### Description

ECS00663

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The unit controls the A/T.

### On Board Diagnosis Logic

ECS00664

Diagnostic trouble code CONTROL UNIT (RAM), CONTROL UNIT (ROM) with CONSULT-II is detected when TCM memory (RAM) or (ROM).

### Possible Cause

ECS00665

Check TCM.

### Diagnostic Trouble Code (DTC) Confirmation Procedure

ECS00666

#### NOTE:

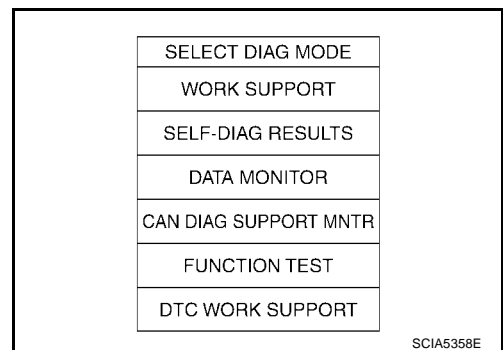

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch ON and select "DATA MONITOR" mode for A/T with CONSULT-II.
2. Start engine.

3. Run engine for at least 2 seconds at idle speed.

## Diagnostic Procedure

ECS00667

### 1. INSPECTION START

---

#### With CONSULT-II

1. Turn ignition switch ON and select "SELF DIAGNOSIS" mode for A/T with CONSULT-II.
2. Touch "ERASE".
3. Perform [AT-593, "Diagnostic Trouble Code \(DTC\) Confirmation Procedure"](#) .
4. Is the "CONTROL UNIT (RAM)" or "CONTROL UNIT (ROM)" displayed again?

#### Yes or No

- Yes >> Replace TCM.  
No >> **INSPECTION END**

## DTC CONTROL UNIT (EEP ROM)

PFP:31036

### Description

ECS00668

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The unit controls the A/T.

### ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check item (Possible cause)
Ⓜ : CONT UNIT (EEP ROM)	TCM memory (EEP ROM) is malfunctioning.	● TCM

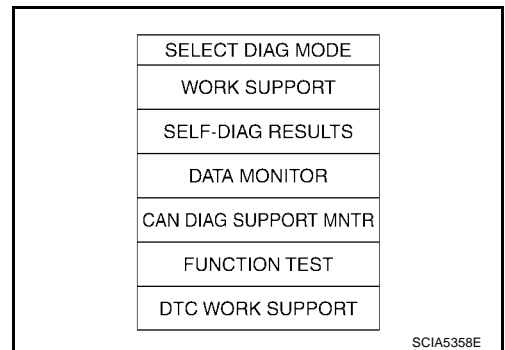

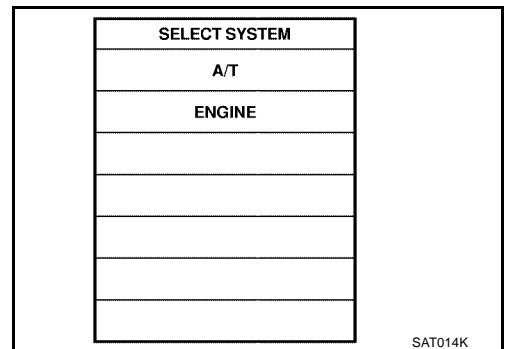

### DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

#### NOTE:

If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch OFF and wait at least 5 seconds before conducting the next test.

Ⓜ With CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode for A/T with CONSULT-II.
2. Start engine.
  
3. Run engine for at least 2 seconds at idle speed.

## Diagnostic Procedure

---

### 1. CHECK DTC

---

#### With CONSULT-II

1. Turn ignition switch ON and select "SELF DIAGNOSIS" mode for A/T with CONSULT-II.
2. Move selector lever to "R" position.
3. Depress accelerator pedal (Full throttle position).
4. Touch "ERASE".
5. Turn ignition switch OFF position for 10 seconds.

Perform [AT-595. "DIAGNOSTIC TROUBLE CODE \(DTC\) CONFIRMATION PROCEDURE"](#) .

Is the "CONT UNIT (EEP ROM)" displayed again?

Yes >> Replace TCM.

No >> **INSPECTION END**

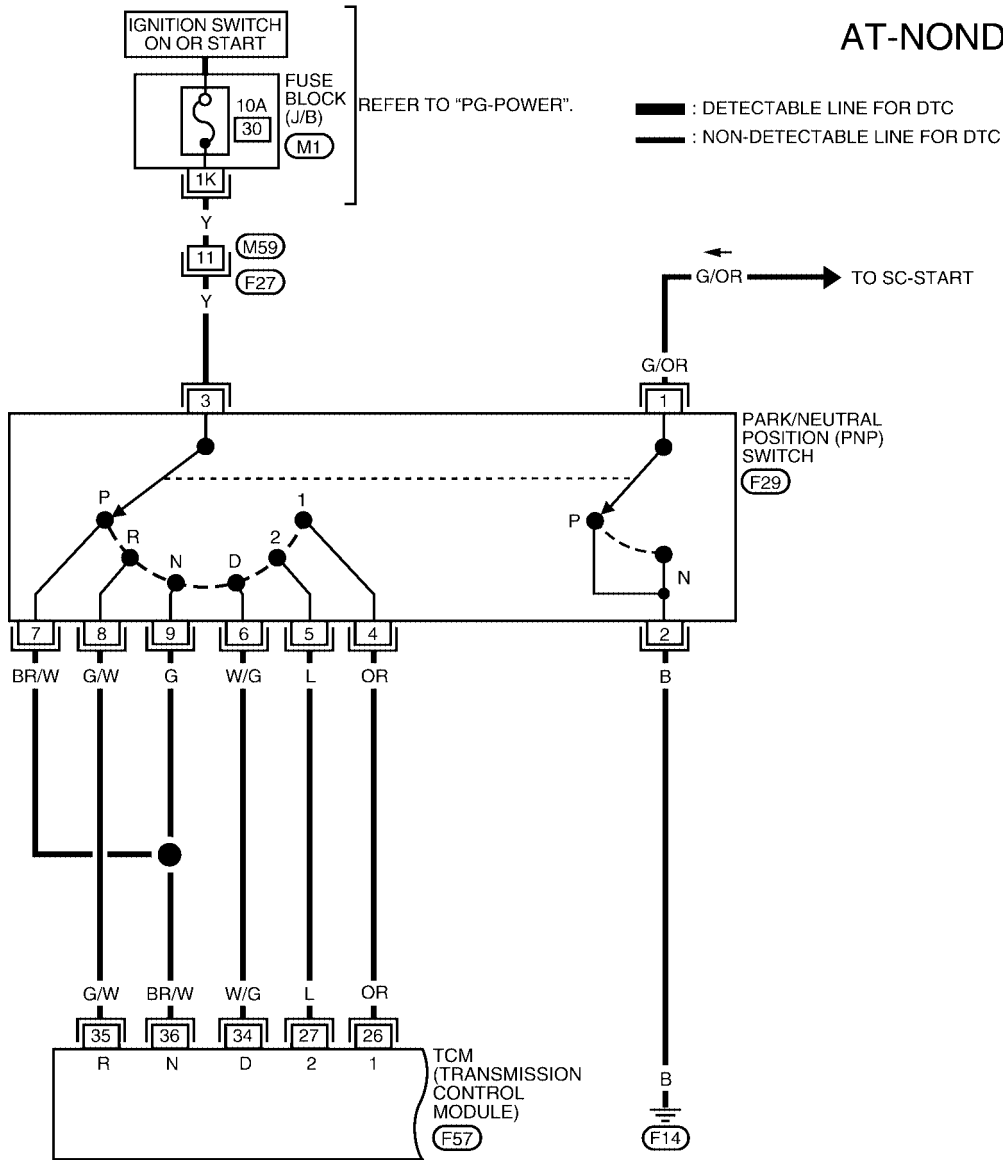

TROUBLE DIAGNOSIS FOR SYMPTOMS

## 1. O/D OFF Indicator Lamp Does Not Come On

ECS0066B

### SYMPTOM:

O/D OFF indicator lamp does not come on for about 2 seconds when turning ignition switch to ON.

### 1. CHECK TCM POWER SOURCE

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

SAT611J

OK or NG

- OK >> GO TO 2.  
NG >> GO TO 3.

### 2. CHECK POWER SOURCE STEP 2

1. Turn ignition switch to OFF position.
2. Check voltage between TCM terminal 28 and ground.

WCIA0043E

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

### 3. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between ignition switch and TCM (Main harness)  
Refer to [AT-488, "Wiring Diagram — AT — MAIN"](#) .
- Harness for short or open between battery and TCM (Main harness)  
Refer to [AT-488, "Wiring Diagram — AT — MAIN"](#) .
- Ignition switch and fuse  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .

OK or NG

- OK >> GO TO 4.  
NG >> Repair or replace damaged parts.

### 4. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground.

**Continuity should exist.**

OK or NG

- OK >> GO TO 5.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors. Refer to [AT-488, "Wiring Diagram — AT — MAIN"](#) .

### 5. CHECK LAMP CIRCUIT

1. Turn ignition switch to OFF position.
2. Check resistance between TCM terminals 10 and 13.

**Resistance :50 - 100Ω**

3. Reinstall any part removed.

OK or NG

- OK >> GO TO 7.  
NG >> GO TO 6.

### 6. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness and fuse for short or open between ignition switch and O/D OFF indicator lamp (Main harness)  
Refer to [PG-2, "POWER SUPPLY ROUTING"](#) .
- Harness for short or open between O/D OFF indicator lamp and TCM.

OK or NG

- OK >> GO TO 7.  
NG >> Repair or replace damaged parts.

## 7. CHECK SYMPTOM

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 8.

## 8. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

## 2. Engine Cannot Be Started In P and N Position

ECS0066C

**SYMPTOM:**

- Engine cannot be started with selector lever in P or N position.
- Engine can be started with selector lever in D, 2, 1 or R position.

### 1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT

 **With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

 **Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

Yes or No

- Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#).  
 No >> GO TO 2.

### 2. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH

Check for short or open of park/neutral position (PNP) switch harness connector terminals 1 and 2. Refer to [AT-493, "Wiring Diagram — AT — PNP/SW"](#).

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace park/neutral position (PNP) switch.

### 3. CHECK STARTING SYSTEM

Check starting system. Refer to [SC-9, "STARTING SYSTEM"](#).

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**3. In P Position, Vehicle Moves Forward or Backward When Pushed**

ECS0066D

**SYMPTOM:**

Vehicle moves when it is pushed forward or backward with selector lever in P position.

**1. CHECK PARKING COMPONENTS**Check parking components. Refer to [AT-652, "OVERHAUL"](#) and [AT-729, "ASSEMBLY"](#).**OK or NG**

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**4. In N Position, Vehicle Moves**

ECS0066E

**SYMPTOM:**

Vehicle moves forward or backward when selecting N position.

**1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT****④ With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

**⊗ Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

**Yes or No**

- Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#).  
 No >> GO TO 2.

**2. CHECK CONTROL LINKAGE**

Check control cable.

**OK or NG**

- OK >> GO TO 4.  
 NG >> GO TO 3.

### 3. ADJUST CONTROL CABLE

Adjust control cable.

>> Refer to [AT-647, "Control Cable Adjustment"](#) .

### 4. CHECK A/T FLUID LEVEL

Check A/T fluid level.

OK or NG

OK >> GO TO 5.  
NG >> Refill ATF.

### 5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 7.  
NG >> GO TO 6.

### 6. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T.
2. Check the following items:
  - Forward clutch assembly
  - Overrun clutch assembly
  - Reverse clutch assembly

OK or NG

OK >> GO TO 7.  
NG >> Repair or replace damaged parts.

**7. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 8.

**8. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**5. Large Shock N → R Position**

ECS0066F

**SYMPTOM:**

There is large shock when changing from N to R position.

**1. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to A/T fluid temperature sensor, line pressure solenoid valve or throttle position sensor [accelerator pedal position (APP) sensor] circuit?

Yes or No

- Yes >> GO TO 2.  
 No >> GO TO 3.

**2. CHECK DAMAGED CIRCUIT**

Check damaged circuit.

- >> Refer to [AT-497, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#), [AT-547, "DTC P0745 LINE PRESSURE SOLENOID VALVE"](#), and [AT-563, "DTC P1705 THROTTLE POSITION SENSOR \[ACCELERATOR PEDAL POSITION \(APP\) SENSOR\]"](#).

**3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1475, "DTC P0222, P0223 TP SENSOR"](#), and [EC-1751, "DTC P2122, P2123 APP SENSOR"](#).

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

#### 4. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in D position. Refer to [AT-456, "Line Pressure Test"](#).

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

#### 5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

#### 6. CHECK SYMPTOM

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 7.

#### 7. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

**6. Vehicle Does Not Creep Backward In R Position****SYMPTOM:**

Vehicle does not creep backward when selecting R position.

**1. CHECK A/T FLUID LEVEL**

Check A/T fluid level.

**OK or NG**

- OK >> GO TO 2.  
NG >> Refill ATF.

**2. CHECK STALL REVOLUTION**

Check stall revolution with selector lever in 1 and R positions.

**OK or NG**

- OK >> GO TO 5.  
OK in 1 position, NG in R position >> GO TO 3.  
NG in both 1 and R positions >> GO TO 4.

**3. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Oil pump assembly
  - Torque converter
  - Reverse clutch assembly
  - High clutch assembly

**OK or NG**

- OK >> GO TO 5.  
NG >> Repair or replace damaged parts.

**4. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Oil pump assembly
  - Torque converter
  - Reverse clutch assembly
  - High clutch assembly
  - Low & reverse brake assembly
  - Low one-way clutch

**OK or NG**

- OK >> GO TO 5.  
 NG >> Repair or replace damaged parts.

**5. CHECK LINE PRESSURE**

Check line pressure at idle with selector lever in R position. Refer to [AT-456, "Line Pressure Test"](#) .

**OK or NG**

- OK >> GO TO 7.  
 NG >> GO TO 6.

SAT494G

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following item:
  - Oil pump assembly

**OK or NG**

- OK >> GO TO 7.  
 NG >> Repair or replace damaged parts.

**7. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 9.  
 NG >> GO TO 8.

**8. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Oil pump assembly
  - Torque converter
  - Reverse clutch assembly
  - High clutch assembly
  - Low & reverse brake assembly
  - Low one-way clutch

OK or NG

- OK >> GO TO 9.  
 NG >> Repair or replace damaged parts.

**9. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 10.

**10. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

## 7. Vehicle Does Not Creep Forward in D, 2 or 1 Position

### SYMPTOM:

Vehicle does not creep forward when selecting D, 2 or 1 position.

### 1. CHECK A/T FLUID LEVEL

Check A/T fluid level.

#### OK or NG

- OK >> GO TO 2.
- NG >> Refill ATF.

### 2. CHECK STALL REVOLUTION

Check stall revolution with selector lever in D position. Refer to [AT-452, "Stall Test"](#).

#### OK or NG

- OK >> GO TO 4.
- NG >> GO TO 3.

### 3. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Oil pump assembly
  - Forward clutch assembly
  - Forward one-way clutch
  - Low one-way clutch
  - Low & reverse brake assembly
  - Torque converter

#### OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace damaged parts.

**4. CHECK LINE PRESSURE**

Check line pressure at idle with selector lever in D position. Refer to [AT-456, "Line Pressure Test"](#) .

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following item:
  - Oil pump assembly

OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

**6. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

**7. DETECT MALFUNCTIONING ITEM**

---

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
  - Line pressure solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Oil pump assembly
  - Forward clutch assembly
  - Forward one-way clutch
  - Low one-way clutch
  - Low & reverse brake assembly
  - Torque converter

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace damaged parts.

**8. CHECK SYMPTOM**

---

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 9.

**9. CHECK TCM INSPECTION**

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**8. Vehicle Cannot Be Started From D1**

ECS0066I

**SYMPTOM:**

**Vehicle cannot be started from D1 on Cruise test — Part 1.**

**1. CHECK SYMPTOM**

---

Is "6. Vehicle Does Not Creep Backward In R Position" OK?

Yes or No

- Yes >> GO TO 2.  
 No >> Go to [AT-609, "6. Vehicle Does Not Creep Backward In R Position"](#) .

## 2. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to vehicle speed sensor-A/T (revolution sensor), shift solenoid valve A, B or vehicle speed sensor-MTR after cruise test?

Yes or No

Yes >> Check damaged circuit. Refer to [AT-503, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#), [AT-553, "DTC P0750 SHIFT SOLENOID VALVE A"](#), or [AT-558, "DTC P0755 SHIFT SOLENOID VALVE B"](#).

No >> GO TO 3.

## 3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1751, "DTC P2122, P2123 APP SENSOR"](#).

OK or NG

OK >> GO TO 4.

NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

## 4. CHECK LINE PRESSURE

Check line pressure at stall point with selector lever in D position. Refer to [AT-456, "Line Pressure Test"](#).

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Forward clutch assembly
  - Forward one-way clutch
  - Low one-way clutch
  - High clutch assembly
  - Torque converter
  - Oil pump assembly

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace damaged parts.

**6. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 7.  
 NG >> GO TO 5.

**7. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve A
  - Shift valve B
  - Shift solenoid valve A
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace damage parts.

**8. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 9.

**9. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**9. A/T Does Not Shift: D1 → D2 or Does Not Kickdown: D4 → D2**

ECS0066J

**SYMPTOM:**

**A/T does not shift from D1 to D2 at the specified speed.**

**A/T does not shift from D4 to D2 when depressing accelerator pedal fully at the specified speed.**

**1. CHECK SYMPTOM**

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1" OK?

Yes or No

- Yes >> GO TO 2.  
 No >> Go to [AT-612, "7. Vehicle Does Not Creep Forward in D, 2 or 1 Position"](#) and [AT-614, "8. Vehicle Cannot Be Started From D1"](#).

**2. CHECK SELF-DIAGNOSTIC RESULTS**

**Ⓜ With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

**ⓧ Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

Yes or No

- Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#).  
 No >> GO TO 3.

**3. CHECK VEHICLE SPEED SENSOR-A/T AND VEHICLE SPEED SENSOR-MTR CIRCUIT**

Check vehicle speed sensor-A/T (revolution sensor) and vehicle speed sensor-MTR circuit. Refer to [AT-503, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#) and [AT-580, "DTC VEHICLE SPEED SENSOR MTR"](#).

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace vehicle speed sensor-A/T (revolution sensor) and vehicle speed sensor-MTR circuits.

**4. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1751, "DTC P2122, P2123 APP SENSOR"](#).

**OK or NG**

- OK >> GO TO 5.  
 NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**5. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

**OK or NG**

- OK >> GO TO 7.  
 NG >> GO TO 6.

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Shift valve A
  - Shift solenoid valve A
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - Brake band
  - Oil pump assembly

**OK or NG**

- OK >> GO TO 8.  
 NG >> Repair or replace damaged parts.

**7. DETECT MALFUNCTIONING ITEM**

1. Remove control valve. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve A
  - Shift solenoid valve A
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace damaged parts.

**8. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 9.

**9. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**10. A/T Does Not Shift: D2 → D3**

ECS0066K

**SYMPTOM:****A/T does not shift from D2 to D3 at the specified speed.****1. CHECK SYMPTOM**

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1 " OK?

Yes or No

- Yes >> GO TO 2.  
 No >> Go to [AT-612, "7. Vehicle Does Not Creep Forward in D, 2 or 1 Position"](#) and [AT-614, "8. Vehicle Cannot Be Started From D1"](#) .

**2. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT**

**With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

**Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

Yes or No

- Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#).
- No >> GO TO 3.

**3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1751, "DTC P2122, P2123 APP SENSOR"](#).

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**4. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve B
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - High clutch assembly
  - Oil pump assembly

OK or NG

OK >> GO TO 7.

NG >> Repair or replace damaged parts.

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Shift valve B
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

OK or NG

OK >> GO TO 7.

NG >> Repair or replace damaged parts.

**7. CHECK SYMPTOM**

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 8.

**8. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

**11. A/T Does Not Shift: D3 → D4****SYMPTOM:**

- A/T does not shift from D3 to D4 at the specified speed.
- A/T must be warm before D3 to D4 shift will occur.

**1. CHECK SYMPTOM**

Are "7. Vehicle Does Not Creep Forward In D, 2 Or 1 Position" and "8. Vehicle Cannot Be Started From D1" OK?

**Yes or No**

- Yes >> GO TO 2.  
 No >> Go to [AT-612, "7. Vehicle Does Not Creep Forward in D, 2 or 1 Position"](#) and [AT-614, "8. Vehicle Cannot Be Started From D1"](#).

**2. CHECK SELF-DIAGNOSTIC RESULTS****With CONSULT-II**

Does self-diagnosis, after cruise test, show damage to any of the following circuits?

- Park/neutral position (PNP) switch
- Overdrive control switch
- A/T fluid temperature sensor
- Vehicle speed sensor-A/T (revolution sensor)
- Shift solenoid valve A or B
- Vehicle speed sensor-MTR

**Yes or No**

- Yes >> Check damaged circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#), [AT-497, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT"](#), [AT-503, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#), [AT-553, "DTC P0750 SHIFT SOLENOID VALVE A"](#), [AT-558, "DTC P0755 SHIFT SOLENOID VALVE B"](#), or [AT-580, "DTC VEHICLE SPEED SENSOR MTR"](#).
- No >> GO TO 3.

**3. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1770, "DTC P2138 APP SENSOR"](#).

**OK or NG**

- OK >> GO TO 4.  
 NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

**4. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 5.

**5. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Shift valve B
  - Overrun clutch control valve
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check the following items:
  - Servo piston assembly
  - Brake band
  - Torque converter
  - Oil pump assembly

OK or NG

- OK >> GO TO 7.  
 NG >> Repair or replace damaged parts.

**6. DETECT MALFUNCTIONING ITEM**

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Shift valve B
  - Overrun clutch control valve
  - Shift solenoid valve B
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 7.  
 NG >> Repair or replace damaged parts.

**7. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 8.

## 8. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

## 12. A/T Does Not Perform Lock-up

ECS0068M

**SYMPTOM:**

**A/T does not perform lock-up at the specified speed.**

### 1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to torque converter clutch solenoid valve circuit after cruise test?

Yes or No

- Yes >> Check torque converter clutch solenoid valve circuit. Refer to [AT-534, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"](#).  
 No >> GO TO 2.

### 2. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1475, "DTC P0222, P0223 TP SENSOR"](#) and [EC-1770, "DTC P2138 APP SENSOR"](#).

OK or NG

- OK >> GO TO 3.  
 NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

### 3. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to [AT-644, "REMOVAL"](#).
2. Check following items:
  - Torque converter clutch control valve
  - Torque converter relief valve
  - Torque converter clutch solenoid valve
  - Pilot valve
  - Pilot filter

OK or NG

- OK >> GO TO 4.  
 NG >> Repair or replace damaged parts.

**4. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 5.

**5. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**13. A/T Does Not Hold Lock-up Condition**

ECS0066N

**SYMPTOM:**

**A/T does not hold lock-up condition for more than 30 seconds.**

**1. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to engine speed signal circuit after cruise test?

Yes or No

- Yes >> Check engine speed signal circuit. Refer to [AT-508](#), "[DTC P0725 ENGINE SPEED SIGNAL](#)".  
 No >> GO TO 2.

**2. CHECK A/T FLUID CONDITION**

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 3.

---

### 3. DETECT MALFUNCTIONING ITEM

---

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Torque converter clutch control valve
  - Pilot valve
  - Pilot filter
3. Disassemble A/T.
4. Check torque converter and oil pump assembly.

#### OK or NG

- OK >> GO TO 5.  
NG >> Repair or replace damaged parts.

---

### 4. DETECT MALFUNCTIONING ITEM

---

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#) .
2. Check the following items:
  - Torque converter clutch control valve
  - Pilot valve
  - Pilot filter

#### OK or NG

- OK >> GO TO 5.  
NG >> Repair or replace damaged parts.

---

### 5. CHECK SYMPTOM

---

Check again.

#### OK or NG

- OK >> **INSPECTION END**  
NG >> GO TO 6.

---

### 6. CHECK TCM INSPECTION

---

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

#### OK or NG

- OK >> **INSPECTION END**  
NG >> Repair or replace damaged parts.

---

## 14. Lock-up Is Not Released

ECS00660

#### **SYMPTOM:**

**Lock-up is not released when accelerator pedal is released.**

## 1. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR] CIRCUIT

### With CONSULT-II

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to the throttle position switch [accelerator pedal position (APP) sensor] circuit?

### Without CONSULT-II

Does self-diagnosis show damage to the throttle position sensor [accelerator pedal position (APP) sensor] circuit?

Yes or No

- Yes >> Check the throttle position switch [accelerator pedal position (APP) sensor] circuit. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1770, "DTC P2138 APP SENSOR"](#).
- No >> GO TO 2.

## 2. CHECK SYMPTOM

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 3.

## 3. CHECK TCM INSPECTION

- Perform TCM input/output signal inspection.
- If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

## 15. Engine Speed Does Not Return To Idle (Light Braking D4 → D3)

EC50066P

SYMPTOM:

- Engine speed does not smoothly return to idle when A/T shifts from D4 to D3.
- Vehicle does not decelerate by engine brake when turning overdrive control switch OFF.
- Vehicle does not decelerate by engine brake when shifting A/T from D to 2 position.

## 1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to overrun clutch solenoid valve circuit after cruise test?

Yes or No

- Yes >> Check overrun clutch solenoid valve circuit. Refer to [AT-568, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"](#).
- No >> GO TO 2.

## 2. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]

Check throttle position sensor [accelerator pedal position (APP) sensor]. Refer to [EC-1391, "DTC P0122, P0123 TP SENSOR"](#) and [EC-1770, "DTC P2138 APP SENSOR"](#).

### OK or NG

- OK >> GO TO 3.
- NG >> Repair or replace throttle position sensor [accelerator pedal position (APP) sensor].

## 3. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

### OK or NG

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Overrun clutch control valve
  - Overrun clutch reducing valve
  - Overrun clutch solenoid valve
3. Disassemble A/T.
4. Check the following items:
  - Overrun clutch assembly
  - Oil pump assembly

### OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

## 5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to [AT-644, "REMOVAL"](#).
2. Check the following items:
  - Overrun clutch control valve
  - Overrun clutch reducing valve
  - Overrun clutch solenoid valve

### OK or NG

- OK >> GO TO 6.
- NG >> Repair or replace damaged parts.

**6. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 7.

**7. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**16. Vehicle Does Not Start From D1**

ECS0066Q

**SYMPTOM:**

Vehicle does not start from D1 on Cruise test — Part 2.

**1. CHECK SELF-DIAGNOSTIC RESULTS**

Does self-diagnosis show damage to vehicle speed sensor-A/T (revolution sensor), shift solenoid valve A, B or vehicle speed sensor-MTR after cruise test?

Yes or No

- Yes >> Check damaged circuit. Refer to [AT-503, "DTC P0720 VEHICLE SPEED SENSOR-A/T \(REVOLUTION SENSOR\)"](#), [AT-553, "DTC P0750 SHIFT SOLENOID VALVE A"](#), [AT-558, "DTC P0755 SHIFT SOLENOID VALVE B"](#) or [AT-580, "DTC VEHICLE SPEED SENSOR MTR"](#).
- No >> GO TO 2.

**2. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> Go to [AT-614, "8. Vehicle Cannot Be Started From D1"](#).  
 NG >> GO TO 3.

**3. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**  
 NG >> Repair or replace damaged parts.

**17. A/T Does Not Shift: D4 → D3 , When Overdrive Control Switch ON → OFF**

ECS0066R

**SYMPTOM:**

A/T does not shift from D4 to D3 when changing overdrive control switch to OFF position.

**1. CHECK OVERDRIVE SWITCH CIRCUIT**

**④ With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to overdrive control switch circuit?

**⊗ Without CONSULT-II**

Does self-diagnosis show damage to overdrive control switch circuit?

**Yes or No**

Yes >> Check overdrive control switch circuit. Refer to [AT-632, "21. TCM Self-diagnosis Does Not Activate {Park/neutral Position \(PNP\), Overdrive Control and Throttle Position Sensor \[Accelerator Pedal Position \(APP\) Sensor\] Switches Circuit Checks}"](#).

No >> Go to [AT-619, "10. A/T Does Not Shift: D2 → D3"](#).

**18. A/T Does Not Shift: D3 → 22 , When Selector Lever D → 2 Position**

ECS0066S

**SYMPTOM:**

A/T does not shift from D3 to 22 when changing selector lever from D to 2 position.

**1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT**

**④ With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

**⊗ Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

**Yes or No**

Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491, "DTC P0705 PARK/NEUTRAL POSITION SWITCH"](#).

No >> Go to [AT-617, "9. A/T Does Not Shift: D1 → D2 or Does Not Kickdown: D4 → D2"](#).

**19. A/T Does Not Shift: 22 → 11 , When Selector Lever 2 → 1 Position**

**SYMPTOM:**

A/T does not shift from 22 to 11 when changing selector lever from 2 to 1 position.

**1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT**

**With CONSULT-II**

Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to park/neutral position (PNP) switch circuit?

**Without CONSULT-II**

Does self-diagnosis show damage to park/neutral position (PNP) switch circuit?

Yes or No

- Yes >> Check park/neutral position (PNP) switch circuit. Refer to [AT-491](#), "DTC P0705 PARK/NEUTRAL POSITION SWITCH".
- No >> GO TO 2.

**2. CHECK SYMPTOM**

Check again.

OK or NG

- OK >> **INSPECTION END**
- NG >> GO TO 3.

**3. CHECK TCM INSPECTION**

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

- OK >> **INSPECTION END**
- NG >> Repair or replace damaged parts.

## 20. Vehicle Does Not Decelerate By Engine Brake

### SYMPTOM:

Vehicle does not decelerate by engine brake when shifting from 22 (12 ) to 11 .

### 1. CHECK SYMPTOM

Is "6. Vehicle Does Not Creep Backward In R Position" OK?

Yes or No

- Yes >> Go to [AT-627, "15. Engine Speed Does Not Return To Idle \(Light Braking D4 → D3\)"](#) .  
 No >> Go to [AT-609, "6. Vehicle Does Not Creep Backward In R Position"](#) .

## 21. TCM Self-diagnosis Does Not Activate {Park/neutral Position (PNP), Overdrive Control and Throttle Position Sensor [Accelerator Pedal Position (APP) Sensor] Switches Circuit Checks}

### SYMPTOM:

O/D OFF indicator lamp does not come on in TCM self-diagnostic procedure even if the lamp circuit is good.

### DESCRIPTION

- Park/neutral position (PNP) switch  
 The park/neutral (PNP) switch assembly includes a transmission range switch. The transmission range switch detects the selector lever position and sends a signal to the TCM.
- Overdrive control switch  
 Detects the overdrive control switch position (ON or OFF) and sends a signal to the TCM.
- Throttle position sensor [accelerator pedal position (APP) sensor]  
 The throttle position sensor [accelerator pedal position (APP) sensor] is part of the system that controls the throttle position. This system also uses an electric throttle control actuator, which consists of a throttle control motor and throttle position sensors. Accelerator pedal position signal is sent to the ECM.

## DIAGNOSTIC PROCEDURE

### NOTE:

The diagnostic procedure includes inspections for the overdrive control switch circuits.

## 1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT (WITH CONSULT-II)

### With CONSULT-II

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out P/N, R, D, 2 and 1 position switches moving selector lever to each position.  
Check that the signal of the selector lever position is indicated properly.

### OK or NG

- OK >> GO TO 5.
- NG >> GO TO 2.

DATA MONITOR	
MONITORING	MONITORING
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

SAT701J

## 2. DETECT MALFUNCTIONING ITEM

Check the following items:

- Park/neutral position (PNP) switch
  - Check continuity between park/neutral position (PNP) switch F29 terminals 1 (G/OR) and 2 (B) and between terminals 3 (Y) and 4 (OR), 5 (L), 6 (W/G), 7 (BR/W), 8 G/W, 9 (G) while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 - 7	1 - 2
R	3 - 8	
N	3 - 9	1 - 2
D	3 - 6	
2	3 - 5	
1	3 - 4	

- If NG, check again with manual control cable disconnected from manual shaft of A/T assembly. Refer to step a.
- If OK on step b, adjust manual control cable. Refer to [AT-647, "Control Cable Adjustment"](#) .
- If NG on step b, remove park/neutral position (PNP) switch from A/T and check continuity of park/neutral position (PNP) switch terminals. Refer to step a.
- If OK on step d, adjust park/neutral position (PNP) switch. Refer to [AT-646, "Park/Neutral Position \(PNP\) Switch Adjustment"](#) .
- If NG on step d, replace park/neutral position (PNP) switch.
- Harness for short or open between ignition switch and park/neutral position (PNP) switch (Main harness)
- Harness for short or open between park/neutral position (PNP) switch and TCM (Main harness)

### OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

**3. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH CIRCUIT (WITHOUT CONSULT-II)**

⊗ **Without CONSULT-II**

1. Turn ignition switch to ON position. (Do not start engine.)
2. Check voltage between TCM terminals 26 (OR), 27 (L), 34 (W/G), 35 (G/W), 36 (BR/W) and ground while moving selector lever through each position.

Lever position	Terminal No.				
	36	35	34	27	26
P,N	B	0	0	0	0
R	0	B	0	0	0
D	0	0	B	0	0
2	0	0	0	B	0
1	0	0	0	0	B

**Voltage:**

**B : Battery voltage**

**0 : 0V**

OK or NG

- OK >> GO TO 6.  
 NG >> GO TO 4.

**4. DETECT MALFUNCTIONING ITEM**

Check the following items:

- Park/neutral position (PNP) switch
- Check continuity between park/neutral position (PNP) switch F29 terminals 1 (G/OR) and 2 (B) and between terminals 3 (Y) and 4 (OR), 5 (L), 6 (W/G), 7 (BR/W), 8 G/W, 9 (G) while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 - 7	1 - 2
R	3 - 8	
N	3 - 9	1 - 2
D	3 - 6	
2	3 - 5	
1	3 - 4	

- If NG, check again with manual control cable disconnected from manual shaft of A/T assembly. Refer to step a.
- If OK on step b, adjust manual control cable. Refer to [AT-647, "Control Cable Adjustment"](#) .
- If NG on step b, remove park/neutral position (PNP) switch from A/T and check continuity of park/neutral position (PNP) switch terminals. Refer to step a.
- If OK on step d, adjust park/neutral position (PNP) switch. Refer to [AT-646, "Park/Neutral Position \(PNP\) Switch Adjustment"](#) .
- If NG on step d, replace park/neutral position (PNP) switch.
- Harness for short or open between ignition switch and park/neutral position (PNP) switch (Main harness)
- Harness for short or open between park/neutral position (PNP) switch and TCM (Main harness)

**OK or NG**

- OK >> GO TO 7.
- NG >> Repair or replace damaged parts.

**5. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT (WITH CONSULT-II)**

**Ⓜ With CONSULT-II**

1. Turn ignition switch to ON position.  
(Do not start engine.)
2. Select "TCM INPUT SIGNALS" in "DATA MONITOR" mode for "A/T" with CONSULT-II.
3. Read out "OVERDRIVE SW".  
Check the signal of the overdrive control switch is indicated properly.  
(Overdrive control switch "ON" displayed on CONSULT-II means overdrive "OFF".)

**OK or NG**

- OK >> GO TO 7.
- NG >> GO TO 6.

DATA MONITOR	
MONITORING	
ENGINE SPEED	XXX rpm
TURBINE REV	XXX rpm
OVERDRIVE SW	ON
PN POSI SW	OFF
R POSITION SW	OFF

**6. DETECT MALFUNCTIONING ITEM**

Check the following items:

- Overdrive control switch M44.
- Check continuity between terminals 1 and 2.

Switch position	Continuity
ON	No
OFF	Yes

- Harness for short or open between TCM and overdrive control switch (Main harness)
- Harness of ground circuit for overdrive control switch (Main harness) for short or open

OK or NG

- OK >> GO TO 7.  
 NG >> Repair or replace damaged parts.

**7. CHECK THROTTLE POSITION SENSOR [ACCELERATOR PEDAL POSITION (APP) SENSOR]**

- Perform throttle position sensor [accelerator pedal position (APP) sensor] inspection. Refer to [AT-563, "DTC P1705 THROTTLE POSITION SENSOR \[ACCELERATOR PEDAL POSITION \(APP\) SENSOR\]"](#).

OK or NG

- OK >> GO TO 8.  
 NG >> Repair or replace damaged parts.

**8. CHECK TCM INSPECTION**

1. Perform TCM input/output inspection. Refer to [AT-487, "Input/Output Signal Chart"](#).

OK or NG

- OK >> INSPECTION END.  
 NG >> Inspect TCM terminals and related wiring harnesses for damage or loose connections. Repair or replace damaged parts.

## A/T SHIFT LOCK SYSTEM

PFP:34950

ECS0066W

### Description

- The mechanical key interlock mechanism also operates as a shift lock:  
 With the key switch turned to ON, the selector lever cannot be shifted from "P" (parking) to any other position unless the brake pedal is depressed.  
 With the key removed, the selector lever cannot be shifted from "P" to any other position.  
 The key cannot be removed unless the selector lever is placed in "P".
- The shift lock and key interlock mechanisms are controlled by the ON-OFF operation of the shift lock solenoid and by the operation of the rotator and slider located inside the key cylinder.

### Shift Lock System Electrical Parts Location

ECS0066X

SAT862J

**Diagnostic Procedure****SYMPTOM 1:**

- Selector lever cannot be moved from "P" position with key in ON position and brake pedal applied.
- Selector lever can be moved from "P" position with key in ON position and brake pedal released.
- Selector lever can be moved from "P" position when key is removed from key cylinder.

**SYMPTOM 2:**

Ignition key cannot be removed when selector lever is set to "P" position. It can be removed when selector lever is set to any position except "P".

**1. CHECK KEY INTERLOCK CABLE**

Check key interlock cable for damage.

**OK or NG**

- OK >> GO TO 2.
- NG >> Repair key interlock cable. Refer to [AT-642, "Components"](#).

**2. CHECK SELECTOR LEVER POSITION**

Check selector lever position for damage.

**OK or NG**

- OK >> GO TO 3.
- NG >> Check selector lever. Refer to [AT-647, "Control Cable Adjustment"](#).

**3. CHECK POWER SOURCE**

Turn ignition switch to "OFF" position.  
(Do not start engine.)

- Check voltage between A/T device harness connector M44 terminal 7 (G) and ground.

**Voltage:**

**Brake pedal depressed: Battery voltage**

**Brake pedal released: 0V**

**OK or NG**

- OK >> GO TO 5.
- NG >> GO TO 4.

## 4. DETECT MALFUNCTIONING ITEM

Check the following items.

1. Harness for open or short between fuse block (J/B) connector M1 terminal 12K and stop lamp switch harness connector M26 terminal 3.
2. Harness for open or short stop lamp switch harness connector M26 terminal 4 and A/T device harness connector M44 terminal 7 (G).
3. 10A fuse [10, located in the fuse block (J/B)].
4. Check continuity between stop lamp switch harness connector M26 terminals 3 (G) and 4 (G).

Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal —refer to [BR-12, "STOP LAMP SWITCH AND ASCD CANCEL SWITCH CLEARANCE"](#)

### OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace damaged parts.

## 5. CHECK GROUND CIRCUIT

1. Turn ignition switch to "OFF" position.
2. Disconnect A/T device harness connector.
3. Check continuity between A/T device harness M44 terminal 6 (B) and ground.

**Continuity should exist**

Continuity should exist.

If OK, check harness for short to power.

### OK or NG

- OK >> GO TO 6.
- NG >> Repair open circuit in harness.

## 6. CHECK PARK POSITION SWITCH

Check continuity between A/T device harness connector M44 terminals 6 (B) and 7 (G).

Brake pedal	Operation sound
Depressed	No
Released	Yes

### OK or NG

- OK >> GO TO 7.
- NG >> Replace park position switch.

## 7. CHECK SHIFT LOCK SOLENOID

1. Connect A/T device harness connector.
2. Turn ignition switch to "ON" position.
3. Check operation sound.

Condition	Brake pedal	Operation sound
When ignition switch is turned to "ON" position and selector lever is in the "P" position.	Depressed	Yes
	Released	No

OK or NG

- OK    >> GO TO 8.
- NG    >> Replace shift lock solenoid.

## 8. CHECK SHIFT LOCK OPERATION

1. Reconnect shift lock harness connector.
2. Turn ignition switch from "OFF" to "ON" position. (Do not start engine.)
3. Recheck shift lock operation.

OK or NG

- OK    >> INSPECTION END
- NG    >> GO TO 9.

## 9. CHECK A/T DEVICE INSPECTION

1. Perform A/T device input/output signal inspection test.
2. If NG, recheck harness connector connection.

OK or NG

- OK    >> INSPECTION END
- NG    >> Repair or replace damaged parts.

## KEY INTERLOCK CABLE

### Components

ECS00670

WAT242

### CAUTION:

- Install key interlock cable in such a way that it will not be damaged by sharp bends, twists or interference with adjacent parts.
- After installing key interlock cable to control device, make sure that casing cap and bracket are firmly secured in their positions.

### Removal

ECS00671

1. Unlock slider by squeezing lock tabs on slider from adjuster holder and remove interlock rod from cable.

SAT853J

# KEY INTERLOCK CABLE

[RE4F04B]

2. Remove lock plate from steering lock assembly and remove key interlock cable.

## Installation

1. Turn ignition key to lock position.
2. Set A/T selector lever to P position.
3. Set key interlock cable to steering lock assembly and install lock plate.
4. Clamp cable to steering column and attach to control cable with band.

5. Insert interlock rod into adjuster holder.

6. Install casing cap to bracket.
7. Move slider in order to connect adjuster holder to interlock rod.

## ON-VEHICLE SERVICE

Control Valve Assembly and Accumulators  
REMOVAL

1. Drain ATF from transaxle.
2. Remove oil pan and gasket.
  - Always replace oil pan bolts as they are self-sealing bolts.

3. Disconnect A/T solenoid harness connector.

4. Remove snap ring from terminal cord assembly harness terminal body.
5. Remove terminal cord assembly harness from transmission case by pushing on terminal body.

- Remove control valve assembly by removing fixing bolts I , X and ●.

Bolt length, number and location are shown in the illustration.

- **Be careful not to drop manual valve and servo release accumulator return spring.**
- Disassemble and inspect control valve assembly if necessary. Refer to [AT-679, "Control Valve Assembly"](#).

- Remove servo release and N-D accumulators by applying compressed air if necessary.
  - **Hold each piston with a rag.**

### INSTALLATION

- **Set manual shaft in Neutral, then align manual plate with groove in manual valve.**
- **After installing control valve assembly, make sure that selector lever can be moved to all positions.**

## Revolution Sensor Replacement

ECS00674

1. Remove under cover.
2. Remove revolution sensor from A/T.
3. Reinstall any part removed.
  - Always use new sealing parts.

## Park/Neutral Position (PNP) Switch Adjustment

ECS00675

1. Remove control cable from manual shaft.
2. Set manual shaft in N position.
3. Loosen park/neutral position (PNP) switch fixing bolts.

4. Insert pin into adjustment holes in both park/neutral position (PNP) switch and manual shaft as near vertical as possible.
5. Reinstall any part removed.
6. Check continuity of park/neutral position (PNP) switch. Refer to [AT-494, "Diagnostic Procedure"](#) .

ECS00676

## Control Cable Adjustment

Move selector lever from the P position to the 1 position. You should be able to feel the detents in each position. If the detents cannot be felt or the pointer indicating the position is improperly aligned, the control cable needs adjustment.

1. Place selector lever in P position.
2. Loosen control cable lock nut and place manual shaft in P position.

**CAUTION:**

**Turn wheels more than 1/4 rotations and apply the park lock.**

3. Push control cable in the direction of the arrow shown in the illustration by specified force.

**Specified force : 4.9 - 9.8 N (0.5 - 1.0 kg, 1.1 - 2.2 lb)**

4. Tighten control cable lock nut.
5. Move selector lever from P to 1 position again. Make sure that selector lever moves smoothly.
  - Make sure that the starter operates when the selector lever is placed in the N or P position.
  - Make sure that the transmission is locked properly when the selector lever is placed in the P position.

## Differential Side Oil Seal Replacement

ECS00677

1. Remove drive shaft assembly. Refer to [FAX-14, "Removal"](#).
2. Remove oil seal.

3. Install oil seal.
  - Apply ATF before installing.

## ON-VEHICLE SERVICE

[RE4F04B]

- Install oil seals so dimension A is within specification

**A** : -0.5 mm (-0.02 in) to 0.5 mm (0.02 in)

4. Reinstall any part removed.

## REMOVAL AND INSTALLATION

### Removal

1. Remove battery and bracket.
2. Remove air duct and air cleaner assembly, refer to [EM-103, "REMOVAL"](#) .
3. Disconnect terminal cord assembly harness connector and park/neutral position (PNP) switch harness connectors.
4. Disconnect harness connectors of mass air flow sensor, intake air temperature sensor, revolution sensor, turbine revolution sensor, vehicle speed sensor and ground cable.
5. Remove LH mounting bracket from transaxle and body.
6. Disconnect control cable at transaxle side.
7. Remove drive shafts, refer to [FAX-14, "Removal"](#) .
8. Drain ATF.
9. Remove push clips and engine undercover.
10. Disconnect fluid cooler piping.
11. Disconnect and remove starter motor from transaxle, refer to [SC-21, "Removal"](#) .

12. Support engine by placing a jack under oil pan.
  - **Do not place jack under oil pan drain plug.**
13. Remove center member.
14. Remove rear cover plate and bolts securing torque converter to drive plate.
  - **Rotate crankshaft for access to securing bolts.**

# REMOVAL AND INSTALLATION

[RE4F04B]

15. Support transaxle with a jack.
16. Remove bolts fixing A/T to engine.
17. Lower transaxle while supporting it with a jack.

ECS00679

## Installation

- Drive plate runout

**CAUTION:**

Do not allow any magnetic materials to contact the ring gear teeth.

Maximum allowable runout:

EM-186. "SERVICE DATA AND SPECIFICATIONS (SDS)".

- If this runout is out of allowance, replace drive plate and ring gear.
- When connecting torque converter to transaxle, measure distance "A" to be certain that they are correctly assembled.

Distance "A" : 14 mm (0.55 in) or more

- Install bolts fixing converter to drive plate.
- **With converter installed, rotate crankshaft several turns to check that transaxle rotates freely without binding.**

# REMOVAL AND INSTALLATION

[RE4F04B]

- Tighten bolts securing transaxle.
- Tighten LH mounting bracket bolts to the specified torque. Refer to [EM-156, "Removal and Installation"](#) .
- Tighten center member bolts to the specified torque. Refer to [EM-156, "Removal and Installation"](#) .
- Tighten rear plate cover bolts to the specified torque. Refer to [EM-112, "OIL PAN AND OIL STRAINER"](#) .

Bolt No.	Tightening torque N-m (kg-m, ft-lb)	l mm (in)
1	70 - 79 (7.1 - 8.1, 52 - 58)	65 (2.56)
2	70 - 79 (7.1 - 8.1, 52 - 58)	52 (2.05)
3	70 - 79 (7.1 - 8.1, 52 - 58)	40 (1.57)
4	78 - 98 (7.9 - 10.0, 58 - 72)	124 (4.88)

- Reinstall any part removed.
- Check fluid level in transaxle.
- Move selector lever through all positions to be sure that transaxle operates correctly. With parking brake applied, rotate engine at idling. Move selector lever through N to D, to 2, to 1 and to R position. A slight shock should be felt by hand gripping selector each time transaxle is shifted.
- Perform road test. Refer to [AT-457, "Road Test"](#) .

## DISASSEMBLY

## Disassembly

1. Drain ATF through drain plug.
2. Remove torque converter.

3. Check torque converter one-way clutch using check tool.
  - a. Insert check tool into the groove of bearing support built into one-way clutch outer race.
  - b. When fixing bearing support with check tool, rotate one-way clutch spline using screwdriver.
  - c. Check that inner race rotates clockwise only. If not, replace torque converter assembly.

4. Remove A/T fluid charging pipe and fluid cooler tube.

# DISASSEMBLY

[RE4F04B]

5. Set manual shaft to position P.
6. Remove park/neutral position (PNP) switch.

7. Remove oil pan and oil pan gasket.
  - **Always replace oil pan bolts as they are self-sealing bolts.**
8. Check foreign materials in oil pan to help determine causes of malfunction. If the fluid is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
  - **If frictional material is detected, replace radiator after repair of A/T. Refer to [CO-30, "RADIATOR"](#) .**
9. Remove control valve assembly according to the following procedures.
  - a. Remove control valve assembly mounting bolts I , X and ●.
  - b. Remove snap ring from terminal cord assembly connector.

- c. Push terminal body into transmission case and draw out solenoid harness.

# DISASSEMBLY

[RE4F04B]

10. Remove manual valve from control valve assembly.

11. Remove return spring from servo release accumulator piston.

12. Remove servo release accumulator piston with compressed air.

13. Remove O-rings from servo release accumulator piston.

14. Remove N-D accumulator piston and return spring with compressed air.

15. Remove O-rings from N-D accumulator piston.

- Remove O-ring from oil pump housing.

- Remove oil pump housing oil seal.

## INSPECTION

### Oil Pump Housing, Oil Pump Cover, Inner Gear and Outer Gear

- Check for wear or damage.

#### Side Clearances

- Measure side clearance of inner and outer gears in at least four places around each outside edge. Maximum measured values should be within specified positions.

**Standard clearance** : 0.030 - 0.050 mm  
(0.0012 - 0.0020 in)

- If clearance is less than standard, select inner and outer gear as a set so that clearance is within specifications.

**Inner and outer gear** : Refer to [AT-757, "OIL PUMP"](#) .

- If clearance is more than standard, replace whole oil pump assembly except oil pump cover.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

- Measure clearance between outer gear and oil pump housing.

**Standard clearance** : 0.111 - 0.181 mm  
(0.0044 - 0.0071 in)

**Allowable limit** : 0.181 mm (0.0071 in)

- If not within allowable limit, replace whole oil pump assembly except oil pump cover.

## SEAL RING CLEARANCE

- Measure clearance between seal ring and ring groove.

**Standard clearance** : 0.1 - 0.25 mm  
(0.0039 - 0.0098 in)

**Allowable limit** : 0.25 mm (0.0098 in)

- If not within allowable limit, replace oil pump cover assembly.

## ASSEMBLY

1. Install oil seal on oil pump housing.

2. Install O-ring on oil pump housing.
  - Apply ATF to O-ring.

3. Remove O-rings from solenoid valves and terminal body.

4. Place upper body facedown, and remove bolts **b** , **c** and nut **f** .

5. Remove inter body from lower body.

6. Turn over lower body, and remove accumulator support plate.

7. Remove bolts **e** , separating plate and separating gasket from lower body.

8. Remove check balls and oil cooler relief valve springs from lower body.

- Be careful not to lose check balls and oil cooler relief valve springs.

9. Remove inter body from upper body.

10. Check to see that steel balls are properly positioned in inter body and then remove them.

- Be careful not to lose steel balls.

11. Check to see that steel balls are properly positioned in upper body and then remove them.

- Be careful not to lose steel balls.

## INSPECTION

### Lower and Upper Bodies

- Check to see that retainer plates are properly positioned in lower body.

- Check to see that retainer plates are properly positioned in upper body.
- **Be careful not to lose these parts.**

## Oil Strainer

- Check wire netting of oil strainer for damage.

## Shift Solenoid Valves “A” and “B”, Line Pressure Solenoid Valve, Torque Converter Clutch Solenoid Valve and Overrun Clutch Solenoid Valve

- Measure resistance.
- For shift solenoid valve A, refer to [AT-556](#) .
- For shift solenoid valve B, refer to [AT-561](#) .
- For line pressure solenoid valve, refer to [AT-550](#) .
- For torque converter clutch solenoid valve, refer to [AT-537](#) .
- For overrun clutch solenoid valve, refer to [AT-571](#) .

## Oil Cooler Relief Valve Spring

- Check springs for damage or deformation.
- Measure free length and outer diameter.

**Inspection standard** : Refer to [AT-753, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#) .

## ASSEMBLY

1. Install upper, inter and lower body.
  - a. Place oil circuit of upper body face up. Install steel balls in their proper positions.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

- b. Install upper separating gasket, upper inter separating gasket and upper separating plate in order shown in illustration.

- c. Install reamer bolts **f** from bottom of upper body. Using reamer bolts as guides, install separating plate and gaskets as a set.

- d. Install pilot filter.

- e. Place lower body as shown in illustration (side of inter body face up). Install steel balls in their proper positions.

- f. Install inter body on upper body using reamer bolts **f** as guides.  
● Be careful not to dislocate or drop steel balls.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

- g. Install check balls and oil cooler relief valve springs in their proper positions in lower body.

- h. Install lower separating gasket, lower inter separating gasket and lower separating plate in order shown in illustration.

- i. Install bolts **e** from bottom of lower body. Using bolts **e** as guides, install separating plate and gaskets as a set.

- j. Temporarily install support plates on lower body.
- k. Install lower body on inter body using reamer bolts **f** as guides and tighten reamer bolts **f** slightly.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

2. Install O-rings to solenoid valves and terminal body.
  - Apply ATF to O-rings.

3. Install and tighten bolts.

### Bolt length, number and location:

Bolt symbol	a	b	c	d	e	f	g
Bolt length "ℓ" mm (in)	13.5 (0.531)	58.0 (2.283)	40.0 (1.575)	66.0 (2.598)	33.0 (1.299)	78.0 (3.071)	18.0 (0.709)
							
Number of bolts	6	3	6	11	2	2	1

- a. Install and tighten bolts **b** to specified torque.

**: 7 - 9 N·m (0.7 - 0.9 kg·m, 61 - 78 in-lb)**

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

- b. Install solenoid valve assembly and line pressure solenoid valve to lower body.

- c. Set oil strainer, then tighten bolts **a** , **c** , **d** and nuts **f** to specified torque.

 : 7 - 9 N·m (0.7 - 0.9 kg-m, 61 - 78 in-lb)

- d. Tighten bolts **e** to specified torque.

 : 3.4 - 4.4 N·m (0.35 - 0.45 kg-m, 30.4 - 39.1 in-lb)

## Control Valve Upper Body COMPONENTS

Apply ATF to all components before installation.

### DISASSEMBLY

1. Remove valves at retainer plates.
  - Do not use a magnetic pick-up tool.

- a. Use a screwdriver to remove retainer plates.

- b. Remove retainer plates while holding spring, plugs or sleeves.
  - Remove plugs slowly to prevent internal parts from jumping out.

- c. Place mating surface of valve body face down, and remove internal parts.
  - If a valve is hard to remove, place valve body face down and lightly tap it with a soft hammer.
  - Be careful not to drop or damage valves and sleeves.

## INSPECTION

### Valve Spring

- Measure free length and outer diameter of each valve spring. Also check for damage or deformation.

**Inspection standard** : Refer to [AT-753, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#) .

- Replace valve springs if deformed or fatigued.

### Control Valves

- Check sliding surfaces of valves, sleeves and plugs.

## ASSEMBLY

- Lay control valve body down when installing valves. Do not stand the control valve body upright.

1. Lubricate the control valve body and all valves with ATF. Install control valves by sliding them carefully into their bores.

- Be careful not to scratch or damage valve body.

- Wrap a small screwdriver with vinyl tape and use it to insert the valves into their proper positions.

## 1-2 Accumulator Valve

- Install 1-2 accumulator valve. Align 1-2 accumulator retainer plate from opposite side of control valve body.
- Install return spring, 1-2 accumulator piston and plug.

1. Install retainer plates.
  - While pushing plug or return spring, install retainer plate.

## Retainer Plate (Upper Body)

Unit: mm (in)

No.	Name of control valve	Width A	Length B
22	Pilot valve	6.0 (0.236)	21.5 (0.846)
30	1st reducing valve		
34	3-2 timing valve		
17	Torque converter relief valve		38.5 (1.516)
9	1-2 accumulator valve		
25	1-2 accumulator piston valve		24.0 (0.945)
21	Overrun clutch reducing valve		
5	Cooler check valve		28.0 (1.102)
14	Torque converter clutch control valve		

- Install proper retainer plates.  
Refer to [AT-687, "Control Valve Upper Body"](#).

## Control Valve Lower Body COMPONENTS

ECS00671

Apply ATF to all components before installation.

# REPAIR FOR COMPONENT PARTS

**DISASSEMBLY**

- Remove valves at retainer plate.  
For removal procedures, refer to [AT-689, "DISASSEMBLY"](#).

**INSPECTION**

**Valve Springs**

- Check each valve spring for damage or deformation. Also measure free length and outer diameter.

**Inspection standard** : Refer to [AT-753, "CONTROL VALVE AND PLUG RETURN SPRINGS"](#).

- Replace valve springs if deformed or fatigued.

**Control Valves**

- Check sliding surfaces of control valves, sleeves and plugs for damage.

**ASSEMBLY**

- Install control valves.  
For installation procedures, refer to [AT-690, "ASSEMBLY"](#).

**Retainer Plate (Lower Body)**

Unit: mm (in)

No.	Name of control valve and plug	Width A	Length B	Type
19	Pressure regulator valve	6.0 (0.236)	28.0 (1.102)	I
27	Accumulator control valve			
30	Shift valve A			
23	Overrun clutch control valve			
2	Pressure modifier valve			
35	Shuttle valve	—	—	II
9	Shift valve B			

- Install proper retainer plates.  
Refer to [AT-691, "Control Valve Lower Body"](#).

**Reverse Clutch COMPONENTS**

**DISASSEMBLY**

1. Check operation of reverse clutch
  - a. Install seal ring onto drum support of oil pump cover and install reverse clutch assembly. Apply compressed air to oil hole.
  - b. Check to see that retaining plate moves to snap ring.
  - c. If retaining plate does not contact snap ring:
    - D-ring might be damaged.
    - Oil seal might be damaged.
    - Fluid might be leaking past piston check ball.
2. Remove snap ring.
3. Remove drive plates, driven plates, retaining plate, and dish plates.
4. Set Tool on spring retainer and remove snap ring from reverse clutch drum while compressing return springs.
  - **Set Tool directly over springs.**
  - **Do not expand snap ring excessively.**
5. Remove spring retainer and return springs.

6. Remove piston from reverse clutch drum by turning it.
7. Remove D-ring and oil seal from piston.

### INSPECTION

#### Reverse Clutch Snap Ring, Spring Retainer and Return Springs

- Check for deformation, fatigue or damage. If necessary, replace.

#### Reverse Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

##### Thickness of drive plate:

**Standard value : 1.6 mm (0.063 in)**

**Wear limit : 1.4 mm (0.055 in)**

- If not within wear limit, replace.

#### Reverse Clutch Dish Plates

- Check for deformation or damage.
- Measure thickness of dish plate.

**Thickness of dish plate : 3.08 mm (0.1213 in)**

- If deformed or fatigued, replace.

#### Reverse Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure that air leaks past ball.

### ASSEMBLY

1. Install D-ring and oil seal on piston.
  - **Take care with the direction of oil seal.**
  - **Apply ATF to both parts.**

## REPAIR FOR COMPONENT PARTS

[RE4F04B]

2. Install piston assembly by turning it slowly.
  - **Apply ATF to inner surface of drum.**

3. Install return springs and spring retainer on piston.

4. Set Tool on spring retainer and install snap ring while compressing return springs.
  - **Set Tool directly over return springs.**
5. Install drive plates, driven plates, retaining plate and dish plates.
  - **Take care with order of plates.**
6. Install snap ring.

7. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

**Specified clearance**

**Standard** : 0.5 - 0.8 mm (0.020 - 0.031 in)

**Allowable limit** : 1.2 mm (0.047 in)

**Retaining plate** : Refer to [AT-754](#), "**REVERSE CLUTCH**".

8. Check operation of reverse clutch.  
Refer to [AT-694, "DISASSEMBLY"](#).

SAT092F

ECS0067K

## High Clutch COMPONENTS

SAT774J

## DISASSEMBLY

1. Check operation of high clutch.
  - a. Apply compressed air to oil hole of input shaft with nylon cloth.
    - Stop up hole on opposite side of input shaft with nylon cloth.
  - b. Check to see that retaining plate moves to snap ring.
  - c. If retaining plate does not contact snap ring:
    - D-ring might be damaged.
    - Oil seal might be damaged.
    - Fluid might be leaking past piston check ball.
2. Remove seal rings from input shaft.
  - Always replace when removed.

SAT176D

SAT177D

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

3. Remove snap ring.
4. Remove drive plates, driven plates and retaining plate.

5. Set Tool on spring retainer and remove snap ring from high clutch drum while compressing return springs.
  - **Set Tool directly over springs.**
  - **Do not expand snap ring excessively.**
6. Remove spring retainer and return springs.

7. Remove piston from high clutch drum by turning it.

8. Remove D-rings from piston.

## INSPECTION

### High Clutch Snap Ring, Spring Retainer and Return Springs

- Check for deformation, fatigue or damage. If necessary, replace.
- **When replacing spring retainer and return springs, replace them as a set.**

### High Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

**Thickness of drive plate:**

**Standard value : 1.6 mm (0.063 in)**

**Wear limit : 1.4 mm (0.055 in)**

- If not within wear limit, replace.

### High Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure that air leaks past ball.

### Seal Ring Clearance

- Install new seal rings onto input shaft.
- Measure clearance between seal ring and ring groove.

**Standard clearance : 0.08 - 0.23 mm (0.0031 - 0.0091 in)**

**Allowable limit : 0.23 mm (0.0091 in)**

- If not within allowable limit, replace input shaft assembly.

### ASSEMBLY

1. Install D-rings on piston.
  - Apply ATF to both parts.

## REPAIR FOR COMPONENT PARTS

[RE4F04B]

2. Install piston assembly by turning it slowly.

- Apply ATF to inner surface of drum.

3. Install return springs and spring retainer on piston.

4. Set Tool on spring retainer and install snap ring while compressing return springs.

- Set Tool directly over return springs.

- Do not align snap ring gap with spring retainer stopper.

5. Install drive plates, driven plates and retaining plate.

- Take care with the order and direction of plates.

6. Install snap ring.
7. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

**Specified clearance**

**Standard** : 1.8 - 2.2 mm (0.071 - 0.087 in)

**Allowable limit** : 2.8 mm (0.110 in)

**Retaining plate** : Refer to [AT-754, "HIGH CLUTCH"](#) .

8. Check operation of high clutch.  
Refer to [AT-697, "DISASSEMBLY"](#) .

9. Install seal rings to input shaft.
  - Apply petroleum jelly to seal rings.
  - Always replace when removed.

- Roll paper around seal rings to prevent seal rings from spreading.

## INSPECTION

### Snap Rings, Spring Retainer and Return Springs

- Check for deformation, fatigue or damage.
- Replace if necessary.
- **When replacing spring retainer and return springs, replace them as a set.**

### Forward Clutch and Overrun Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

#### Thickness of drive plate:

##### Forward clutch

**Standard value : 1.6 mm (0.063 in)**

**Wear limit : 1.4 mm (0.055 in)**

##### Overrun clutch

**Standard value : 1.6 mm (0.063 in)**

**Wear limit : 1.4 mm (0.055 in)**

- If not within wear limit, replace.

### Forward Clutch and Overrun Clutch Dish Plates

- Check for deformation or damage.
- Measure thickness of dish plate.

#### Thickness of dish plate

**Forward clutch : 2.7 mm (0.106 in)**

**Overrun clutch : 2.7 mm (0.106 in)**

- If deformed or fatigued, replace.

### Forward Clutch Drum

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole from outside of forward clutch drum. Make sure air leaks past ball.
- Apply compressed air to oil hole from inside of forward clutch drum. Make sure there is no air leakage.

### Overrun Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side. Make sure that air leaks past ball.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

## ASSEMBLY

1. Install D-rings and oil seals on forward clutch piston and overrun clutch piston.
  - Take care with direction of oil seal.
  - Apply ATF to both parts.

2. Install overrun clutch piston assembly on forward clutch piston by turning it slowly.
  - Apply ATF to inner surface of forward clutch piston.

3. Install forward clutch piston assembly on forward clutch drum by turning it slowly.
  - Apply ATF to inner surface of drum.

4. Install return spring on overrun clutch piston.

## REPAIR FOR COMPONENT PARTS

[RE4F04B]

- Align the mark on spring retainer with check ball in overrun clutch piston.

5. Set Tool on spring retainer and install snap ring while compressing return springs.

- **Set Tool directly over return springs.**

- **Do not align snap ring gap with spring retainer stopper.**

6. Install drive plates, driven plates, retaining plate and dish plate for overrun clutch.

- **Take care with order of plates.**

7. Install snap ring for overrun clutch.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

8. Measure clearance between overrun clutch retaining plate and snap ring.  
If not within allowable limit, select proper retaining plate.

**Specified clearance**

**Standard : 0.7 - 1.1 mm (0.028 - 0.043 in)**

**Allowable limit : 1.7 mm (0.067 in)**

**Overrun clutch retaining plate : Refer to [AT-755, "OVERRUN CLUTCH"](#) .**

9. Install drive plates, driven plates, retaining plate and dish plate for forward clutch.

● **Take care with order of plates.**

10. Install snap ring for forward clutch.

11. Measure clearance between forward clutch retaining plate and snap ring.

If not within allowable limit, select proper retaining plate.

**Specified clearance**

**Standard : 0.45 - 0.85 mm (0.0177 - 0.0335 in)**

**Allowable limit : 1.85 mm (0.0728 in)**

**Forward clutch retaining plate : Refer to [AT-754, "FORWARD CLUTCH"](#) .**

12. Check operation of forward clutch.  
Refer to [AT-702, "DISASSEMBLY"](#) .
13. Check operation of overrun clutch.

## Low & Reverse Brake COMPONENTS

### DISASSEMBLY

1. Check operation of low & reverse brake.
  - a. Apply compressed air to oil hole of transmission case.
  - b. Check to see that retaining plate moves to snap ring.
  - c. If retaining plate does not contact snap ring:
    - D-ring might be damaged.
    - Fluid might be leaking past piston check ball.
  
2. In order to remove piston, apply compressed air to oil hole of retainer while holding piston.
  - **Apply air gradually and allow piston to come out evenly.**
  
3. Remove D-rings from piston.

## INSPECTION

### Low and Reverse Brake Snap Ring, Spring Retainer and Return Springs

- Check for deformation, fatigue or damage. If necessary, replace.
- **When replacing spring retainer and return springs, replace them as a set.**

### Low and Reverse Brake Drive Plate

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

#### Thickness of drive plate

**Standard value** : 1.8 mm (0.071 in)

**Wear limit** : 1.6 mm (0.063 in)

- If not within wear limit, replace.

## ASSEMBLY

1. Install D-rings on piston.
  - Apply ATF to both parts.

2. Set and align piston with retainer.
  - **This operation is required in order to engage the protrusions of piston to return springs correctly. Further procedures are given in "ASSEMBLY". Refer to [AT-729, "ASSEMBLY"](#).**

3. Install driven plates, drive plates, retaining plate and dish plate on transmission case.
  - **Take care with order of plates and direction of dish plate.**

5. Remove idler gear bearing inner race from idler gear.

6. Remove idler gear bearing outer race from transmission case.

7. Press out reduction pinion gear bearing inner race from reduction pinion gear.

8. Remove reduction pinion gear bearing outer race from transmission case.

## INSPECTION

### Output Shaft, Idler Gear and Reduction Pinion Gear

- Check shafts for cracks, wear or bending.
- Check gears for wear, chips and cracks.

## Bearing

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.
- **When replacing taper roller bearing, replace outer and inner race as a set.**

## Seal Ring Clearance

- Install new seal rings to output shaft.
- Measure clearance between seal ring and ring groove of output shaft.

**Standard clearance** : 0.10 - 0.25 mm  
(0.0039 - 0.0098 in)

**Allowable limit** : 0.25 mm (0.0098 in)

- If not within allowable limit, replace output shaft.
- Install new seal rings to bearing retainer.
- Measure clearance between seal ring and ring groove of bearing retainer.

**Standard clearance** : 0.10 - 0.30 mm  
(0.0039 - 0.0118 in)

**Allowable limit** : 0.30 mm (0.0118 in)

- If not within allowable limit, replace bearing retainer.

## ASSEMBLY

1. Press reduction pinion gear bearing inner race on reduction pinion gear.

2. Install reduction pinion gear bearing outer race on transmission case.

 : 109 - 123 N·m (11.1 - 12.5 kg-m, 80 - 90 ft-lb)

3. Press idler gear bearing inner race on idler gear.

4. Install idler gear bearing outer race on transmission case.

5. Press output shaft bearing on output shaft.

6. Press needle bearing on bearing retainer.

7. Install snap ring to bearing retainer.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

- After packing ring grooves with petroleum jelly, carefully install new seal rings on output shaft and bearing retainer.

- Roll paper around seal rings to prevent seal rings from spreading.

## Band Servo Piston Assembly COMPONENTS

ECS0067P

## DISASSEMBLY

- Remove band servo piston fixing bolts.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

2. Apply compressed air to oil hole in transmission case to remove O/D servo piston retainer and band servo piston assembly.
  - Hold band servo piston assembly with a rag or nylon waste.

3. Apply compressed air to oil hole in O/D servo piston retainer to remove O/D servo piston from retainer.
  - Hold O/D band servo piston while applying compressed air.

4. Remove D-ring from O/D servo piston.

5. Remove O-rings from O/D servo piston retainer.

6. Remove band servo piston assembly from servo piston retainer by pushing it forward.

# REPAIR FOR COMPONENT PARTS

[RE4F04B]

7. Place piston stem end on a wooden block. While pushing servo piston spring retainer down, remove E-ring.

8. Remove O/D servo return spring, band servo thrust washer and band servo piston stem from band servo piston.

9. Remove O-rings from servo piston retainer.

10. Remove D-rings from band servo piston.

## INSPECTION

### Pistons, Retainers and Piston Stem

5. Drive out pinion mate shaft lock pin.

6. Draw out pinion mate shaft lock pin.

7. Remove pinion mate gears and side gears.

## INSPECTION

### Gear, Washer, Shaft and Case

- Check mating surfaces of differential case, side gears and pinion mate gears.
- Check washers for wear.

### Bearings

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.
- **When replacing taper roller bearing, replace outer and inner race as a set.**

## ASSEMBLY

1. Attach side gear thrust washers to side gears, then install pinion mate thrust washers and pinion mate gears in place.
  - **Apply ATF to any parts.**

2. Insert pinion mate shaft.
  - **When inserting, be careful not to damage pinion mate thrust washers.**

3. Measure clearance between side gear and differential case with washers following the procedure below:
  - a. Set Tool and dial indicator on side gear.

- b. Move side gear up and down to measure dial indicator deflection. Always measure indicator deflection on both side gears.

**Clearance between side gear and differential case with washer : 0.1 - 0.2 mm (0.004 - 0.008 in)**

- c. If not within specification, adjust clearance by changing thickness of differential side gear thrust washers.

**Differential side gear thrust washers : Refer to [AT-756, "DIFFERENTIAL SIDE GEAR THRUST WASHERS"](#) .**

## REPAIR FOR COMPONENT PARTS

[RE4F04B]

4. Install lock pin.

- Make sure that lock pin is flush with case.

5. Install speedometer drive gear on differential case.

- Align the projection of speedometer drive gear with the groove of differential case.

6. Press on differential side bearings.

7. Install final gear and tighten fixing bolts in a crisscross pattern. Tighten final gear bolts to the specified torque. Refer to [AT-724](#), "[COMPONENTS](#)".

### ASSEMBLY

PFP:00000

ECS0067R

#### Assembly (1)

1. Install differential side oil seals on transmission case and converter housing.

2. Install parking actuator support to transmission case. Tighten parking actuator support bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#).

- Pay attention to direction of parking actuator support.

3. Install parking pawl on transmission case and fix it with parking shaft.
4. Install return spring.

## Adjustment (1) DIFFERENTIAL SIDE BEARING PRELOAD

1. Install differential side bearing outer race without adjusting shim on transmission case.
2. Install differential side bearing outer race on converter housing.

3. Place final drive assembly on transmission case.
4. Install transmission case on converter housing. Tighten transmission case fixing bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#).

5. Attach dial indicator on differential case at converter housing side.
6. Insert Tool into differential side gear from transmission case side.
7. Move Tool up and down and measure dial indicator deflection.
8. Select proper thickness of differential side bearing adjusting shim(s).

**Suitable shim thickness = Dial indicator deflection + Specified bearing preload**

**Differential side bearing preload adjusting shim** : Refer to [AT-756, "DIFFERENTIAL SIDE BEARING PRELOAD ADJUSTING SHIMS"](#).

**Bearing preload** : 0.05 - 0.09 mm  
(0.0020 - 0.0035 in)

9. Remove converter housing from transmission case.
10. Remove final drive assembly from transmission case.
11. Remove differential side bearing outer race from transmission case.
12. Reinstall differential side bearing outer race and shim(s) selected from SDS table on transmission case.
13. Reinstall converter housing on transmission case and tighten transmission case fixing bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#) .

14. Insert Tool and measure turning torque of final drive assembly.
  - Turn final drive assembly in both directions several times to seat bearing rollers correctly.
 

**Turning torque of final drive assembly (New bearing)** : 0.78 - 1.37 N·m (8.0 - 14.0 kg-cm, 6.9 - 12.2 in-lb)
  - When old bearing is used again, turning torque will be slightly less than the above.
  - Make sure torque is close to the specified range.

**Preload adapter** : J39713

### REDUCTION PINION GEAR BEARING PRELOAD

1. Remove transmission case and final drive assembly from converter housing.
2. Select proper thickness of reduction pinion gear bearing adjusting shim using the following procedures.
  - a. Place reduction pinion gear on transmission case as shown.

- b. Place idler gear bearing on transmission case.
  - c. Measure dimensions "B" "C" and "D" and calculate dimension "A".

**A = D - (B + C)**

**"A"** : Distance between the surface of idler gear bearing inner race and the adjusting shim mating surface of reduction pinion gear.

A  
B  
AT  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

# ASSEMBLY

[RE4F04B]

- Measure dimension "B" between the end of reduction pinion gear and the surface of transmission case.
- **Measure dimension "B" in at least two places.**

- Measure dimension "C" between the surface of idler gear bearing inner race and the surface of transmission case.
- **Measure dimension "C" in at least two places.**

- Measure dimension "D" between the end of reduction pinion gear and the adjusting shim mating surface of reduction pinion gear.
- **Measure dimension "D" in at least two places.**
- Calculate dimension "A".

$$A = D - (B + C)$$

- d. Measure dimension "E" between the end of idler gear and the idler gear bearing inner race mating surface of idler gear.
- **Measure dimension "E" in at least two places.**
- e. Select proper thickness of reduction pinion gear bearing adjusting shim.

$$\text{Proper shim thickness} = A - E - 0.05 \text{ mm (0.0020 in)}^*$$

(\*: Bearing preload)

Reduction pinion gear bearing adjusting shim

: Refer to [AT-757](#), "[REDUCTION PINION GEAR BEARING ADJUSTING SHIMS](#)".

# ASSEMBLY

[RE4F04B]

3. Install reduction gear and reduction gear bearing adjusting shim selected in step 2-e on transmission case.
4. Press idler gear bearing inner race on idler gear.
5. Press idler gear on reduction gear.
  - Press idler gear until idler gear fully contacts adjusting shim.

6. Tighten idler gear lock nut to the specified torque. Refer to [AT-652, "OVERHAUL"](#).
  - Lock idler gear with parking pawl when tightening lock nut.

7. Measure turning torque of reduction pinion gear.
  - When measuring turning torque, turn reduction pinion gear in both directions several times to seat bearing rollers correctly.
 

Turning torque of reduction pinion gear : 0.05 - 0.39 N·m (0.5 - 4.0 kg·cm, 0.43 - 3.47 in·lb)
  - If turning torque is out of specification, decrease or increase thickness of reduction pinion gear bearing adjusting shim.

8. After properly adjusting turning torque, clinch idler gear lock nut as shown.

## OUTPUT SHAFT END PLAY

- Measure clearance between side cover and the end of the output shaft bearing.
- Select proper thickness of adjusting shim so that clearance is within specifications.

1. Install bearing retainer for output shaft.

2. Install output shaft thrust needle bearing on bearing retainer.

3. Install output shaft on transmission case.

# ASSEMBLY

[RE4F04B]

4. Measure dimensions " $\ell_1$ " and " $\ell_2$ " at side cover and then calculate dimension "A".

- Measure dimension " $\ell_1$ " and " $\ell_2$ " in at least two places.

"A" : Distance between transmission case fitting surface and adjusting shim mating surface.

$$A = \ell_1 - \ell_2$$

$\ell_2$  : Height of gauge

5. Measure dimensions " $\ell_2$ " and " $\ell_3$ " and then calculate dimension "B".

- Measure " $\ell_2$ " and " $\ell_3$ " in at least two places.

"B" : Distance between the end of output shaft bearing outer race and the side cover fitting surface of transmission case.

$$B = \ell_2 - \ell_3$$

$\ell_2$  : Height of gauge

6. Select proper thickness of adjusting shim so that output shaft end play (clearance between side cover and output shaft bearing) is within specifications.

Output shaft end play : 0 - 0.15 mm (0 - 0.0059 in)  
(A - B)

Output shaft end play : Refer to [AT-759, "OUTPUT SHAFT ADJUSTING SHIMS"](#).

7. Install adjusting shim on output shaft bearing.

## Assembly (2)

1. Apply anaerobic liquid gasket to transmission case as shown in illustration. Refer to [GI-44, "Recommended Chemical Products and Sealants"](#)

# ASSEMBLY

[RE4F04B]

2. Set side cover on transmission case.
  - Apply locking sealant to the mating surface of transmission case.

3. Tighten side cover fixing bolts to specified torque. Refer to [AT-652, "OVERHAUL"](#).
  - Do not mix bolts A and B.
  - Always replace bolts A as they are self-sealing bolts.

4. Remove paper rolled around bearing retainer.
5. Install thrust washer on bearing retainer.
  - Apply petroleum jelly to thrust washer.

# ASSEMBLY

[RE4F04B]

6. Install forward clutch assembly.

- **Align teeth of low & reverse brake drive plates before installing.**
- **Make sure that bearing retainer seal rings are not spread.**
- **If forward clutch assembly is correctly seated, points 1 and 2 are at almost same level.**

7. Install thrust needle bearing on bearing retainer.

- **Apply petroleum jelly to thrust needle bearing.**
- **Pay attention to direction of thrust needle bearing.**

8. Install overrun clutch hub.

- **Apply petroleum jelly to thrust washers.**
- **Align teeth of overrun clutch drive plates before installing.**

A

# ASSEMBLY

[RE4F04B]

9. Hold forward clutch hub and turn rear internal gear.  
Check overrun clutch hub for correct directions of lock and unlock.
- If not shown as illustrated, check installed direction of forward one-way clutch.

10. Install forward clutch hub and rear internal gear assembly.
- Align teeth of forward clutch drive plates before installing.
  - Check that three hooks of thrust washer are correctly aligned after installing.

11. Install rear planetary carrier assembly and rear sun gear according to the following procedures.

- a. Install needle bearings on rear planetary carrier.
- Apply petroleum jelly to needle bearings.
  - Pay attention to direction of needle bearings.

- b. Install rear sun gear on rear planetary carrier.
- Pay attention to direction of rear sun gear.

c. Install rear planetary carrier on transmission case.

12. Install thrust needle bearing on front planetary carrier, then install them together on transmission case.

- Apply petroleum jelly to thrust needle bearing.
- Pay attention to direction of thrust needle bearing.

13. Install low and reverse brake piston according to the following procedures.

a. Set and align return springs to transmission case gutters as shown in illustration.

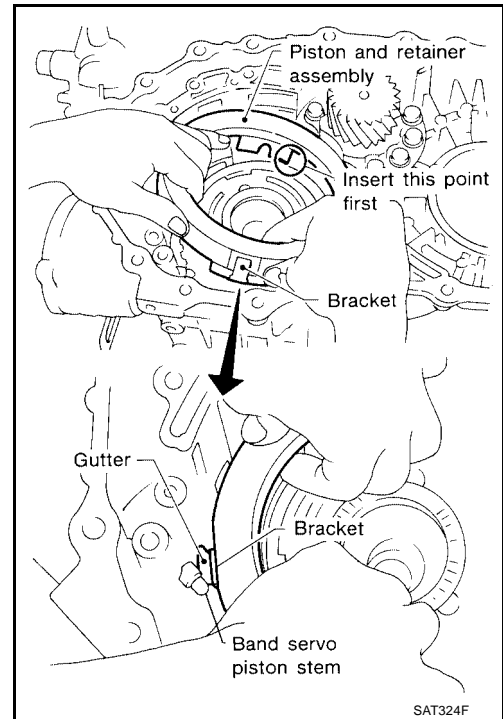

b. Set and align piston with retainer.

# ASSEMBLY

[RE4F04B]

- c. Install piston and retainer assembly on the transmission case.
- **Align bracket to specified gutter as indicated in illustration.**

- d. Check that each protrusion of piston is correctly set to corresponding return spring as follows.
- **Push piston and retainer assembly evenly and confirm they move smoothly.**
  - **If they can not move smoothly, remove piston and retainer assembly and align return spring correctly as instructed in step "a".**

- e. Push down piston and retainer assembly and install snap ring.

14. Install low one-way clutch to front planetary carrier by turning carrier in the direction of the arrow shown.

15. Install snap ring with screwdriver.

- Forward clutch and bearing must be correctly installed for snap ring to fit into groove of transmission case.

16. Install needle bearing on transmission case.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

17. Install bearing race, needle bearing and high clutch hub on front sun gear.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

18. Install needle bearing and high clutch drum on high clutch hub.

K  
L  
M

# ASSEMBLY

[RE4F04B]

19. Install needle bearing on high clutch drum.

- Apply petroleum jelly to needle bearing.
- Pay attention to direction of needle bearing.

20. Remove paper rolled around input shaft.

21. Install input shaft assembly in reverse clutch.

- Align teeth of reverse clutch drive plates before installing.

22. Install reverse clutch assembly on transmission case.

- Align teeth of high clutch drive plates before installing.

## Adjustment (2)

ECS0067U

When any parts listed below are replaced, adjust total end play and reverse clutch end play.

Part name	Total end play	Reverse clutch end play
Transmission case	●	●
Overrun clutch hub	●	●
Rear internal gear	●	●
Rear planetary carrier	●	●
Rear sun gear	●	●
Front planetary carrier	●	●
Front sun gear	●	●
High clutch hub	●	●
High clutch drum	●	●
Oil pump cover	●	●
Reverse clutch drum	—	●

## TOTAL END PLAY

1. Adjust total end play "T<sub>1</sub>".

a. With original bearing race installed, place Tool onto oil pump. The long ends of legs should be placed firmly on machined surface of oil pump assembly. The gauging cylinder should rest on top of bearing race. Lock gauging cylinder in place with set screw.

b. Install gauging plunger into cylinder.

c. With needle bearing installed on high clutch drum, place Tool legs on machined surface of transmission case (with gasket). Then allow plunger to rest on needle bearing.

d. Measure gap between cylinder and plunger. This measurement should give exact total end play.

**Total end play "T<sub>1</sub>" : 0.25 - 0.55 mm  
(0.0098 - 0.0217 in)**

- If end play is out of specification, decrease or increase thickness of bearing race as necessary.

**Available bearing race for adjusting total end play : Refer to [AT-759. "BEARING RACE FOR ADJUSTING TOTAL END PLAY"](#).**

2. Adjust reverse clutch drum end play "T<sub>2</sub>".

a. Place Tool on machined surface of transmission case (with gasket). Then allow gauging cylinder to rest on reverse clutch drum. Lock cylinder in place with set screw.

b. Install gauging plunger into cylinder.

c. With original thrust washer installed on oil pump, place Tool legs onto machined surface of oil pump assembly. Then allow plunger to rest on thrust washer.  
d. Measure gap between cylinder and plunger with feeler gauge. This measurement should give exact reverse clutch drum end play.

**Reverse clutch drum end play "T<sub>2</sub>" : 0.55 - 0.90 mm (0.0217 - 0.0354 in)**

- If end play is out of specification, decrease or increase thickness of thrust washer as necessary.

Available thrust washer for adjusting reverse clutch drum end play : Refer to [AT-759](#), "[THRUST WASHERS FOR ADJUSTING REVERSE CLUTCH DRUM END PLAY](#)".

### Assembly (3)

1. Install anchor end pin and lock nut on transmission case.
2. Place brake band on outside of reverse clutch drum. Tighten anchor end pin just enough so that brake band is evenly fitted on reverse clutch drum.
3. Place bearing race selected in total end play adjustment step on oil pump cover.
  - **Apply petroleum jelly to bearing race.**
4. Place thrust washer selected in reverse clutch end play step on reverse clutch drum.
  - **Apply petroleum jelly to thrust washer.**
5. Install oil pump assembly, baffle plate and gasket on transmission case.
6. Tighten oil pump fixing bolts to the specified torque.
7. Install O-ring to input shaft.
  - **Apply ATF to O-ring.**

# ASSEMBLY

[RE4F04B]

8. Adjust brake band.
  - a. Tighten anchor end pin to the specified torque.

**Anchor end pin** : Refer to [AT-756, "BRAKE BAND"](#) .

- b. Back off anchor end pin two and a half turns.
    - c. While holding anchor end pin, tighten lock nut.

**Lock nut** : Refer to [AT-756, "BRAKE BAND"](#) .

9. Apply compressed air to oil holes of transmission case and check operation of brake band.

10. Install final drive assembly on transmission case.

11. Install differential lubricant tube on converter housing. Tighten differential lubricant tube bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#) .

12. Install O-ring on differential oil port of transmission case.

13. Install converter housing on transmission case.

- Apply locking sealant to mating surface of converter housing.

- Tighten converter housing bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#).

14. Install accumulator piston.

- Check contact surface of accumulator piston for damage.

# ASSEMBLY

[RE4F04B]

b. Install O-rings on accumulator piston.

- Apply ATF to O-rings.

Accumulator piston O-rings : Refer to [AT-753, "O-RING"](#)

c. Install accumulator pistons and return springs on transmission case.

- Apply ATF to inner surface of transmission case.

Return springs : Refer to [AT-754, "RETURN SPRING"](#).

15. Install lip seals for band servo oil holes on transmission case.

- Apply petroleum jelly to lip seals.

16. Install L & R oil tube and oil sleeve. Tighten L & R oil tube bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#).

# ASSEMBLY

[RE4F04B]

17. Install control valve assembly.

a. Insert manual valve into control valve assembly.

- Apply ATF to manual valve.

b. Set manual shaft in Neutral position.

c. Install control valve assembly on transmission case while aligning manual valve with manual plate.

d. Pass terminal cord assembly connector through transmission case and install terminal body on transmission case by pushing it.

e. Install snap ring to terminal cord assembly connector.

f. Tighten bolts I , X and ●.

A

**Bolt length, number and location:**

Bolt	I	X	●
Bolt length "ℓ"  mm (in)	40 (1.57)	33 (1.30)	43.5 (1.713)
Number of bolts	5	6	2

18. Install oil pan.

- a. Attach a magnet to oil pan.
- b. Install new oil pan gasket on transmission case.
- c. Install oil pan on transmission case.
  - **Always replace oil pan bolts as they are self-sealing bolts.**
  - **Tighten four bolts in a criss-cross pattern to prevent dislocation of gasket.**
- d. Tighten oil pan bolts and drain plug to the specified torque. Refer to [AT-652, "OVERHAUL"](#) .

19. Install park/neutral position (PNP) switch.

- a. Set manual shaft in P position.
- b. Temporarily install park/neutral position (PNP) switch on manual shaft.
- c. Move selector lever to N position.

d. Use a 4 mm (0.16 in) pin for this adjustment.

- i. Insert the pin straight into the manual shaft adjustment hole.
  - ii. Rotate park/neutral position (PNP) switch until the pin can also be inserted straight into hole in park/neutral position (PNP) switch.
- e. Tighten park/neutral position (PNP) switch fixing bolts. Refer to [AT-652, "OVERHAUL"](#) .
  - f. Remove pin from adjustment hole after adjusting park/neutral position (PNP) switch.

20. Install A/T fluid charging pipe and fluid cooler tube to transmission case. Tighten A/T fluid charging pipe and fluid cooler tube bolts to the specified torque. Refer to [AT-652, "OVERHAUL"](#) .

# ASSEMBLY

[RE4F04B]

21. Install torque converter.

a. Pour ATF into torque converter.

- Approximately 1 liter (1-1/8 US qt, 7/8 Imp qt) of fluid is required for a new torque converter.
- When reusing old torque converter, add the same amount of fluid as was drained.

b. Install torque converter while aligning notches of torque converter with notches of oil pump.

c. Measure distance "A" to check that torque converter is in proper position.

**Distance A : 14 mm (0.55 in) or more**

# SERVICE DATA AND SPECIFICATIONS (SDS)

[RE4F04B]

## SERVICE DATA AND SPECIFICATIONS (SDS)

PF0:00030

### General Specifications

ECS0067W

Engine		QR25DE
Automatic transaxle model		RE4F04B
Automatic transaxle assembly	Model code number	85X63
Transaxle gear ratio	1st	2.785
	2nd	1.545
	3rd	1.000
	4th	0.694
	Reverse	2.272
	Final drive	4.087
Recommended fluid		Nissan Matic "D" (Continental U.S. and Alaska) or Canada Nissan Automatic Transmission Fluid*
Fluid capacity ℓ (US qt, Imp qt)		8.5 (9, 7.5)

\*: Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#).

### Shift Schedule

ECS0067X

#### VEHICLE SPEED WHEN SHIFTING GEARS THROTTLE POSITION

Throttle position	Shift pattern	Vehicle speed km/h (MPH)					
		D1 → D2	D2 → D3	D3 → D4	D4 → D3	D3 → D2	D2 → D1
Full throttle	Comfort	52 - 60 (32 - 37)	97 - 105 (60 - 66)	153 - 161 (95 - 100)	149 - 157 (93 - 98)	87 - 95 (41 - 54)	41 - 49 (25 - 30)
	Auto power	52 - 60 (32 - 37)	97 - 105 (60 - 66)	153 - 161 (95 - 100)	149 - 157 (93 - 98)	87 - 95 (41 - 54)	41 - 49 (25 - 30)
Half throttle	Comfort	37 - 45 (23 - 28)	67 - 75 (42 - 47)	119 - 127 (74 - 79)	90 - 98 (56 - 61)	39 - 47 (24 - 27)	24 - 32 (15 - 20)
	Auto power	39 - 47 (24 - 29)	73 - 81 (45 - 50)	119 - 127 (74 - 79)	90 - 98 (56 - 61)	46 - 54 (26 - 34)	24 - 32 (15 - 20)

#### VEHICLE SPEED WHEN PERFORMING AND RELEASING LOCK-UP

Unit: km/h (MPH)

Selector lever position	D4 (O/D ON) position		D3 (O/D OFF) position	
	Comfort	Auto power	Comfort	Auto power
Lock-up "ON"	62 - 70 (38 - 43)	62 - 70 (38 - 43)	86 - 94 (53 - 58)	86 - 94 (53 - 58)
Lock-up "OFF"	51 - 59 (31 - 36)	51 - 59 (31 - 36)	83 - 91 (52 - 57)	83 - 91 (52 - 57)

#### NOTE:

- Lock-up vehicle speed indicates the speed in D4 (O/D ON) position.
- Perform lock-up inspection after warming up engine.
- Lock-up vehicle speed may vary depending on the driving conditions and circumstances.

### Stall Revolution

ECS0067Y

Engine	Stall revolution rpm
QR25DE	2,350 - 2,800

## AUDIO

### System Description BASE SYSTEM

Refer to Owner's Manual for audio system operating instructions.

Power is supplied at all times:

- through 15A fuse (No. 32, located in the fuse and fusible link box)
- to audio unit terminal 6.

With the ignition switch in the ACC or ON position, power is supplied:

- through 10A fuse [No. 1, located in the fuse block (J/B)]
- to audio unit terminal 10.

Ground is supplied through the case of the audio unit.

Audio signals are supplied:

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to terminals + and - of front door speaker LH and RH
- to terminals + and - of rear speaker LH and RH.

### MID LEVEL SYSTEM

Refer to Owner's Manual for audio system operating instructions.

Power is supplied at all times:

- through 15A fuse (No. 32, located in the fuse and fusible link box)
- to audio unit terminal 6,
- to CD changer terminal 24 (with CD changer), and
- to subwoofer amp. terminal 8.

With the ignition switch in the ACC or ON position, power is supplied:

- through 10A fuse [No. 1, located in the fuse block (J/B)]
- to audio unit terminal 10, and
- to CD changer terminal 21 (with CD changer).

Ground is supplied through the case of the audio unit and CD changer (with CD changer).

Ground is supplied to subwoofer amp. terminal 7 through body grounds B13 and B19.

Audio signals are supplied:

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to terminals + and - of front door speaker LH and RH
- to terminals + and - of rear speaker LH and RH
- to terminals + and - of pillar tweeter LH and RH and
- to terminals 1, 2, 3 and 4 of subwoofer amp.

### PREMIUM SYSTEM

Refer to Owner's Manual for audio system operating instructions.

Power is supplied at all times:

- through 15A fuse (No. 32, located in the fuse and fusible link box)
- to audio unit terminal 6 and
- to CD changer terminal 24 (with CD changer), and
- through 20A fuse (No. 42, located in the fuse and fusible link box)
- to audio amplifier terminals 5 and 12.

With the ignition switch in the ACC or ON position, power is supplied:

- through 10A fuse [No. 1, located in the fuse block (J/B)]
- to audio unit terminal 10 and
- to CD changer terminal 21 (with CD changer).

Ground is supplied through the case of the audio unit and CD changer (with CD changer).

Ground is supplied

- to audio amplifier terminals 4 and 11

# AUDIO

---

- through body grounds B13 and B19.

Audio signals are supplied:

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to audio amplifier terminals 15, 16, 17, 20, 21, 22, 23 and 24.

The audio signals are amplified by the audio amplifier and then supplied:

- through audio amplifier terminals 1, 2, 3, 6, 7, 8, 9 and 10.
- to terminals + and - of front door speaker LH and RH
- to terminals + and - of rear speaker LH and RH
- to terminals + and - of pillar tweeter LH and RH and
- to terminals 1, 2, 3 and 4 of subwoofer.

Individual speaker is noisy or inoperative.	<ol style="list-style-type: none"> <li>Speaker</li> <li>Output circuit to individual speaker</li> <li>Audio unit</li> <li>Audio amplifier</li> </ol>	<ol style="list-style-type: none"> <li>Check speaker.</li> <li>Check the output circuits to individual speaker                             <ul style="list-style-type: none"> <li>between audio unit and audio amplifier.</li> <li>between audio amplifier and speaker.</li> </ul> </li> <li>Remove audio unit for repair.</li> <li>Remove audio amplifier for repair.</li> </ol>
Subwoofer does not operate.	<ol style="list-style-type: none"> <li>Output circuit to subwoofer</li> <li>Subwoofer</li> <li>Audio amplifier</li> </ol>	<ol style="list-style-type: none"> <li>Check circuits for open or short between the audio amplifier and the subwoofer.</li> <li>Check subwoofer.</li> <li>Remove audio amplifier for repair.</li> </ol>

## Inspection AUDIO UNIT

EKS003AM

All voltage inspections are made with:

- Ignition switch ON or ACC
- Audio unit ON
- Audio unit connected (If audio unit is removed for inspection, supply a ground to the case using a jumper wire.)

## ANTENNA

Using a jumper wire, clip an auxiliary ground between antenna and body.

- If reception improves, check antenna ground (at body surface).
- If reception does not improve, check main feeder cable for short circuit or open circuit.

# AUDIO

## Audio Unit/CD Changer (If Equipped) Removal and Installation

EKS003AN

### CAUTION:

Prior to removing a malfunctioning CD changer unit that will be shipped for repair, the changer mechanism **MUST BE LOCKED** to prevent the mechanism from being damaged during shipping. Refer to [AV-10, "LOCKING CD CHANGER UNIT MECHANISM"](#).

1. Remove upper cluster lid C by firmly grasping and carefully pulling rearward from instrument panel.
2. Remove lower cluster lid C by firmly grasping and carefully pulling rearward from instrument panel. Refer to [IP-10, "Removal and Installation"](#).
3. Remove six screws and remove audio unit and storage bin or CD changer (if equipped) as an assembly.

4. Disconnect audio unit connectors and CD changer connectors (if equipped).

### CAUTION:

Be sure to disconnect the harness connectors before disconnecting the antenna connector or damage may result to audio unit.

5. Release two tabs using a screwdriver and carefully remove heater A/C control bezel from audio unit face plate.

### CAUTION:

Do not pry or forcibly remove heater A/C control bezel from audio unit face plate or audio unit damage could result.

6. Remove brackets from audio unit and CD changer (if equipped).
7. Install in reverse order of removal.

### CAUTION:

Be sure to connect the antenna connector before connecting harness connectors or damage may result to audio unit.

## LOCKING CD CHANGER UNIT MECHANISM

### CAUTION:

- Prior to removing a malfunctioning CD changer unit that will be shipped for repair, the changer mechanism **MUST BE LOCKED** to prevent the mechanism from being damaged during shipping.
- If a CD is jammed or unable to be removed from the unit, do **NOT** lock the changer mechanism. If the unit is to be shipped for repair, carefully package the unit to prevent vibration and shock.

1. Eject and remove any CDs from the CD changer unit.
2. Turn ignition switch OFF. Wait until CD changer unit display is off and mechanism stops moving (mechanism sound stops).
3. Press any one of the disc selection buttons once. When a display shows on the CD changer unit, press the same disc selection button again within 5 seconds.
  - The changer mechanism will lock itself within 10 seconds.
4. After mechanism stops moving (mechanism sound stops), disconnect the CD changer unit connectors.
5. Remove the CD changer unit.

### NOTE:

After installing a new or remanufactured CD changer unit, switching the CD changer unit ON will automatically unlock the mechanism. A special unlocking procedure is not required.

## Subwoofer (With Premium Audio System) Removal and Installation

EKS003KW

1. Partially remove RH trunk room trim. Refer to [EI-33, "Removal and Installation"](#).

## AUDIO

- Pull cable to release RH rear seat back.
- Remove rear seat bottom. Refer to [SE-5, "Removal and Installation"](#).

- Fold RH rear seatback forward.

**NOTE:**

When using the fold down rear seatback, the rear center seat belt retractor may lock up and prevent folding down the seatback.

If the rear center seat belt retractor has inadvertently locked up, push the seat belt webbing toward the retractor as shown. This will unlock the seat belt retractor and allow the rear seatback to fold down.

- Remove 2 upper subwoofer bolts.
- Disconnect subwoofer connector.

- Remove 2 bolts from rear seatback center hinge. Refer to [SE-5, "Removal and Installation"](#).
- Remove subwoofer through trunk.
- Install in reverse order of removal.

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS003A0

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Wiring Diagrams and Trouble Diagnosis

EKS003A1

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#), and
- [PG-2, "POWER SUPPLY ROUTING"](#).

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#), and
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#).

Check for any Service bulletins before servicing the vehicle.

# SMART ENTRANCE CONTROL UNIT

PFP:28596

EKS003A2

## SMART ENTRANCE CONTROL UNIT

### Description OUTLINE

The smart entrance control unit totally controls the following body electrical system operations.

- Warning chime
- Rear window defogger and door mirror defogger
- Power door locks
- Remote keyless entry system
- Vehicle security system
- Interior lamp
- Battery saver control

### BATTERY SAVER CONTROL

#### Interior Lamp/Map Lamp/Vanity Lamps

The lamps turn off automatically when the interior lamp, map lamp or/and vanity lamps are illuminated with the ignition key in the OFF position, if the lamp remains lit by the door switch open signal or if the lamp switch is in the ON position for approximately 10 minutes.

After lamps are turned off by the battery saver system, the lamps illuminate again when:

- Driver's door is locked or unlocked,
- Door is opened or closed,
- Key is inserted into or removed from the ignition key cylinder.

#### Rear Window Defogger/Door Mirror Defogger

Rear window defogger and door mirror defogger are turned off approximately 15 minutes after the rear window defogger switch is turned on.

### INPUT/OUTPUT

System	Input	Output
Power door lock	Door lock and unlock switch LH and RH Key switch (Insert) Door switches Door key cylinder switch	Door lock actuator
Remote keyless entry	Key switch (Insert) Ignition switch (ACC) Door switches Front door unlock sensor LH Keyfob signal	Vehicle security lamp relay Vehicle security horn relay Interior lamp Remote keyless entry relay Door lock actuator Trunk lid opener actuator
Warning chime	Key switch (Insert) Ignition switch (ON) Lighting switch (1st or 2nd) Seat belt buckle switch LH Front door switch LH	Warning chime (located in smart entrance control unit)
Rear window defogger and door mirror defogger	Ignition switch (ON) Rear window defogger switch	Rear window defogger relay
Vehicle security	Ignition switch (ACC, ON) Door switches Hood switch (if equipped) Door lock/unlock switches Door key cylinder switch (lock/unlock) Trunk lid key cylinder switch (unlock) Door unlock sensors	Vehicle security lamp relay Horn relay Security indicator lamp

## CONSULT-II DIAGNOSTIC ITEMS APPLICATION

EKS003A3

Item (CONSULT-II screen terms)	Diagnosed system	DATA MONITOR	ACTIVE TEST	WORK SUPPORT
DOOR LOCK	Power door lock	X	X	
REAR DEFOGGER	Rear window defogger	X	X	
KEY WARN ALM	Warning chime	X	X	
LIGHT WARN ALM	Warning chime	X	X	
SEAT BELT ALM	Warning chime	X	X	
INT LAMP	Interior lamps	X	X	
BATTERY SAVER	Battery saver control for interior lamp	X	X	
THEFT WAR ALM	Vehicle security system	X	X	X
MULTI REMOTE ENT	Remote keyless entry system	X	X	X

X: Applicable

For diagnostic item in each control system, refer to the relevant pages for each system.

## DIAGNOSTIC ITEM DESCRIPTION

MODE	Description
DATA MONITOR	Input/output data in the smart entrance control unit can be read.
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-II drives some systems apart from the smart entrance control unit.
WORK SUPPORT for THEFT WAR ALM	The recorded trigger signal when vehicle security system was activated can be checked.
WORK SUPPORT for MULTI REMOTE ENT	ID code of keyfob can be registered and erased.

# SMART ENTRANCE CONTROL UNIT

## CONSULT-II INSPECTION PROCEDURE

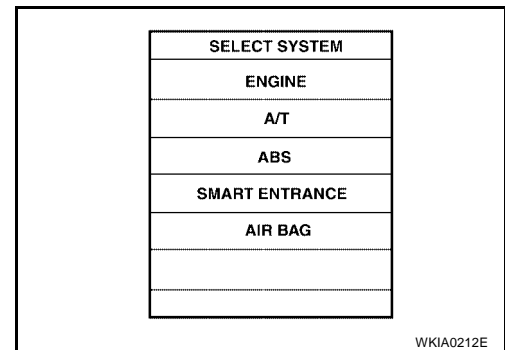

1. Turn the ignition switch "OFF".
2. Connect "CONSULT-II" to the data link connector.

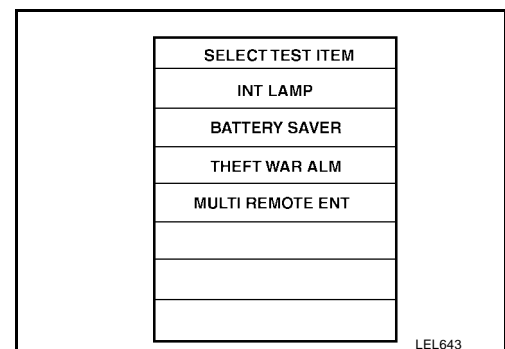

3. Turn ignition switch "ON".
4. Touch "START".

5. Touch "SMART ENTRANCE".

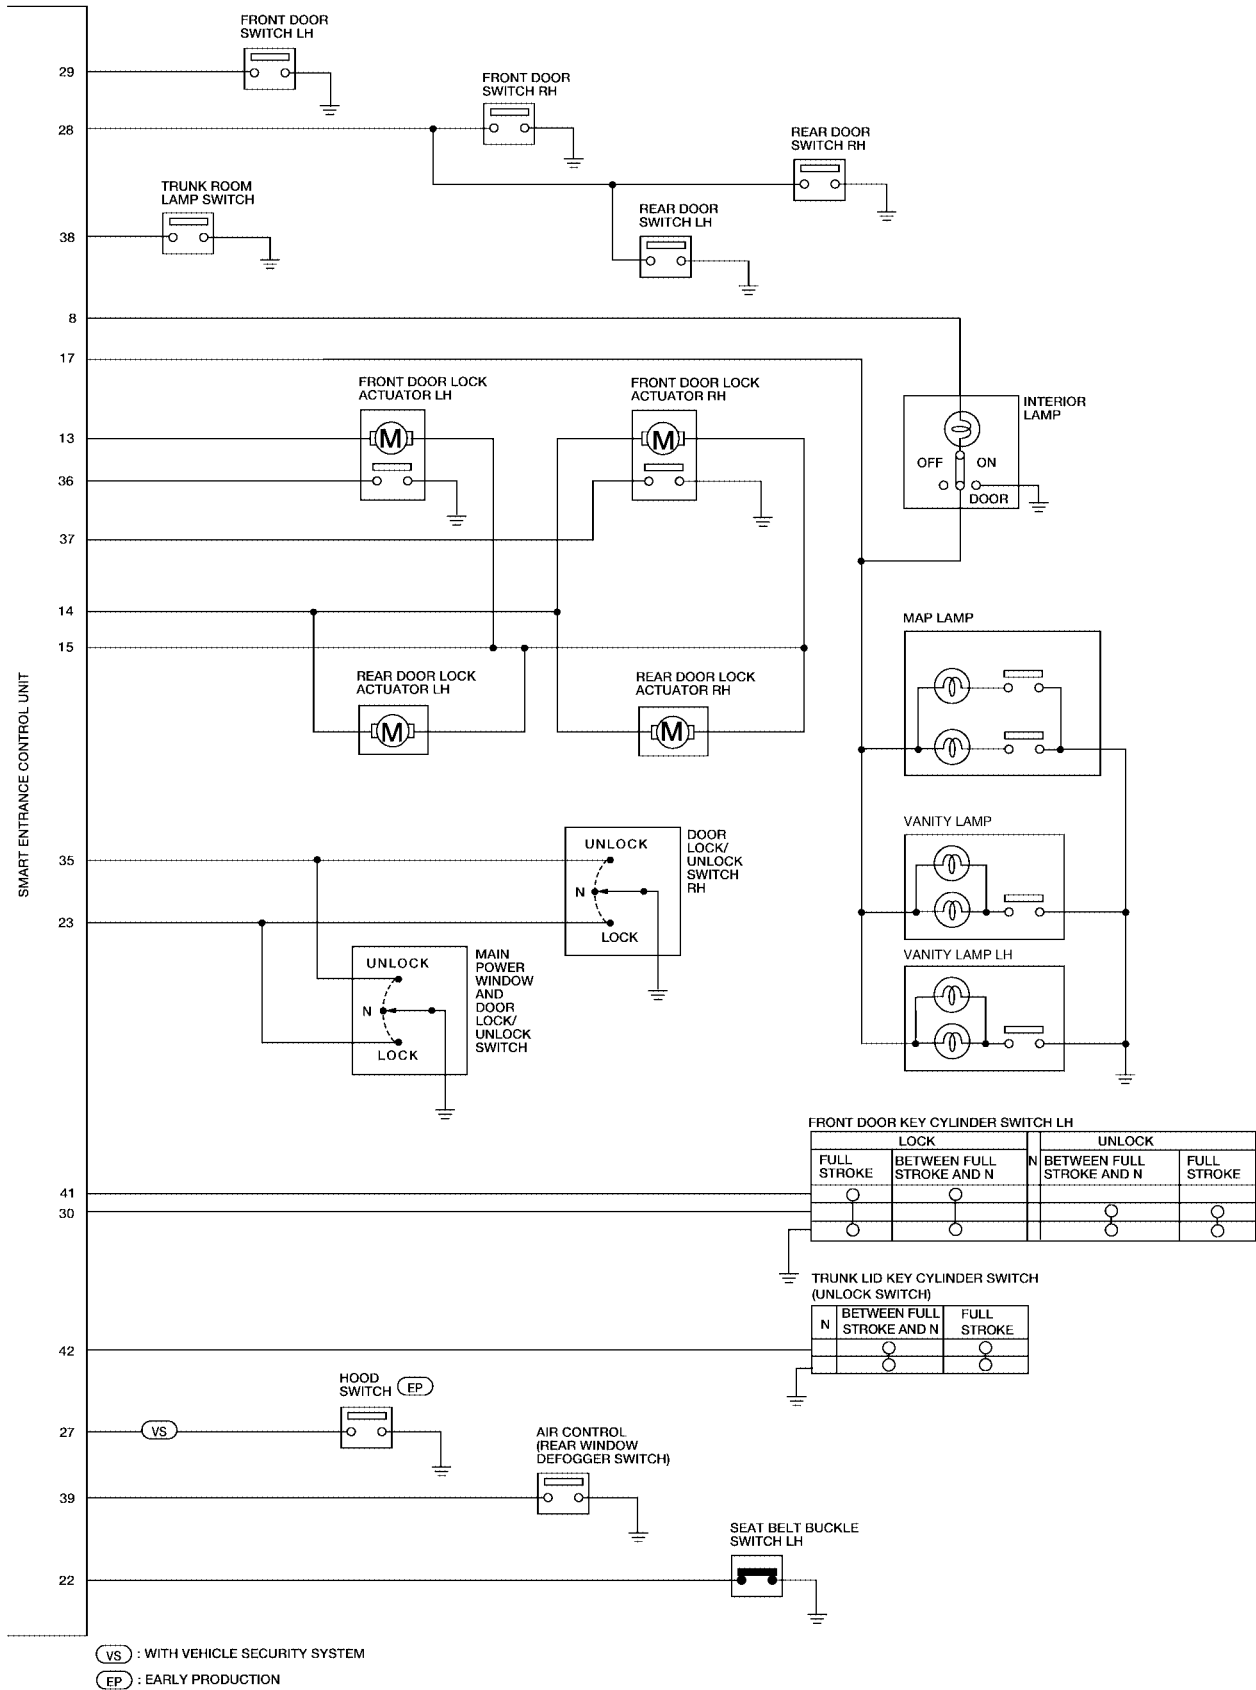

6. Perform each diagnostic item according to "DIAGNOSTIC ITEMS APPLICATION". Refer to [BCS-5, "DIAGNOSTIC ITEMS APPLICATION"](#).

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS00140

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Special Service Tools

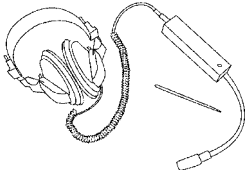

EIS0014P

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
— (J-39570) Chassis ear	 <p style="text-align: center;">SIIA0993E</p> Locating the noise
— (J-43980) Nissan Squeak and Rattle kit	 <p style="text-align: center;">SIIA0994E</p> Repairing the cause of noise
— (J-43241) Remote Keyless Entry Tester	 <p style="text-align: center;">LEL946A</p> Used to test keyfobs

### Commercial Service Tools

EIS0014Q

Tool name	Description
Engine ear (J-39565)	 <p style="text-align: center;">SIIA0995E</p> Locating the noise

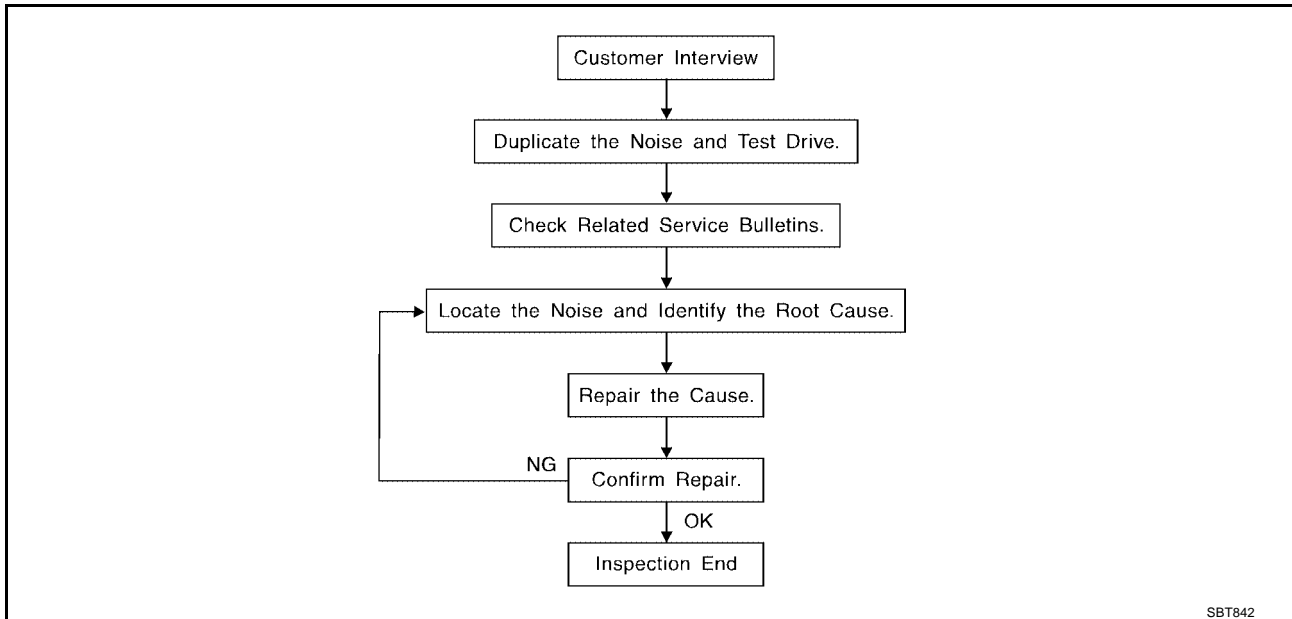

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK AND RATTLE TROUBLE DIAGNOSES

PF0:00003

### Work Flow

EIS0014R

### CUSTOMER INTERVIEW

Interview the customer, if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to [BL-10, "Diagnostic Worksheet"](#). This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak — (Like tennis shoes on a clean floor)  
Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak — (Like walking on an old wooden floor)  
Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle — (Like shaking a baby rattle)  
Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock — (Like a knock on a door)  
Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick — (Like a clock second hand)  
Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump — (Heavy, muffled knock noise)  
Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz — (Like a bumblebee)  
Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

---

## DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1. Close a door.
  2. Tap or push/pull around the area where the noise appears to be coming from.
  3. Rev the engine.
  4. Use a floor jack to recreate vehicle "twist".
  5. At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
  6. Raise the vehicle on a hoist and hit a tire with a rubber hammer.
- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
  - If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

## CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.

If a TSB relates to the symptom, follow the procedure to repair the noise.

## LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:
  - Removing the components in the area that you suspect the noise is coming from.  
**Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise.**
  - Tapping or pushing/pulling the component that you suspect is causing the noise.  
**Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.**
  - Feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
  - Placing a piece of paper between components that you suspect are causing the noise.
  - Looking for loose components and contact marks.

Refer to [BL-7, "Generic Squeak and Rattle Troubleshooting"](#).

## REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - Separate components by repositioning or loosening and retightening the component, if possible.
  - Insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

### CAUTION:

**Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information.**

The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.

URETHANE PADS [1.5 mm (0.059 in) thick]

Insulates connectors, harness, etc.

76268-9E005: 100 x 135 mm (3.94 x 5.31 in)/76884-71L01: 60 x 85 mm (2.36 x 3.35 in)/76884-71L02: 15 x 25 mm (0.59 x 0.98 in)

INSULATOR (Foam blocks)

Insulates components from contact. Can be used to fill space behind a panel.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

73982-9E000: 45 mm (1.77 in) thick, 50 x 50 mm (1.97 x 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 x 50 mm (1.97 x 1.97 in)

INSULATOR (Light foam block)

80845-71L00: 30 mm (1.18 in) thick, 30 x 50 mm (1.18 x 1.97 in)

FELT CLOTH TAPE

Used to insulate where movement does not occur. Ideal for instrument panel applications.

68370-4B000: 15 x 25 mm (0.59 x 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll

The following materials, not found in the kit, can also be used to repair squeaks and rattles.

UHMW (TEFLON) TAPE

Insulates where slight movement is present. Ideal for instrument panel applications.

SILICONE GREASE

Used in place of UHMW tape that will be visible or not fit.

Note: Will only last a few months.

SILICONE SPRAY

Use when grease cannot be applied.

DUCT TAPE

Use to eliminate movement.

## CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

## Generic Squeak and Rattle Troubleshooting

EIS0014S

Refer to Table of Contents for specific component removal and installation information.

## INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

### CAUTION:

**Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.**

## CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and upper/lower cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

## DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

## SQUEAK AND RATTLE TROUBLE DIAGNOSES

---

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner. In addition look for:

1. Trunk lid bumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

## SUNROOF/HEADLINER

Noises in the sunroof/headliner area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sun visor shaft shaking in the holder
3. Front or rear windshield touching headliner and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

## SEATS

When isolating seat noises it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holders
2. A squeak between the seat pad cushion and frame
3. The rear seat back lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

## UNDERHOOD

Some interior noises may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noises include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

## Diagnostic Worksheet

EIS0014T

### SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Nissan Customer:

We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

#### I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)

The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

SBT843

# SQUEAK AND RATTLE TROUBLE DIAGNOSES

## SQUEAK & RATTLE DIAGNOSTIC WORKSHEET- page 2

**Briefly describe the location where the noise occurs:**

**II. WHEN DOES IT OCCUR? (check the boxes that apply)**

- |  |   |
|--|---|
| <input type="checkbox"/> anytime                             | <input type="checkbox"/> after sitting out in the sun |
| <input type="checkbox"/> 1 <sup>st</sup> time in the morning | <input type="checkbox"/> when it is raining or wet    |
| <input type="checkbox"/> only when it is cold outside        | <input type="checkbox"/> dry or dusty conditions      |
| <input type="checkbox"/> only when it is hot outside         | <input type="checkbox"/> other: _____                 |

**III. WHEN DRIVING:**

- through driveways
- over rough roads
- over speed bumps
- only at about \_\_\_\_ mph
- on acceleration
- coming to a stop
- on turns : left, right or either (circle)
- with passengers or cargo
- other: \_\_\_\_\_
- after driving \_\_\_\_ miles or \_\_\_\_ minutes

**IV. WHAT TYPE OF NOISE?**

- squeak (like tennis shoes on a clean floor)
- creak (like walking on an old wooden floor)
- rattle (like shaking a baby rattle)
- knock (like a knock on a door)
- tick (like a clock second hand)
- thump (heavy, muffled knock noise)
- buzz (like a bumble bee)

**TO BE COMPLETED BY DEALERSHIP PERSONNEL**

**Test Drive Notes:**

# POWER DOOR LOCK

## System Description OPERATION

EIS0014V

- The lock/unlock switches (LH and RH) on door trim can lock and unlock all doors.
- With the door key inserted in the key cylinder on front LH, turning it to "LOCK", will lock all doors; turning it to "UNLOCK" once unlocks the corresponding door; turning it to "UNLOCK" again within 5 seconds after the first unlock operation unlocks all of the other doors. (Signals from door key cylinder switch.)
- If the ignition key is in the ignition key cylinder and one or more of the doors are open, setting the lock/unlock switch (LH or RH) to "LOCK" locks the doors once but then immediately unlocks them (KEY REMINDER DOOR SYSTEM).

## CONSULT-II Inspection Procedure "DOOR LOCK"

1. Turn ignition switch "OFF".

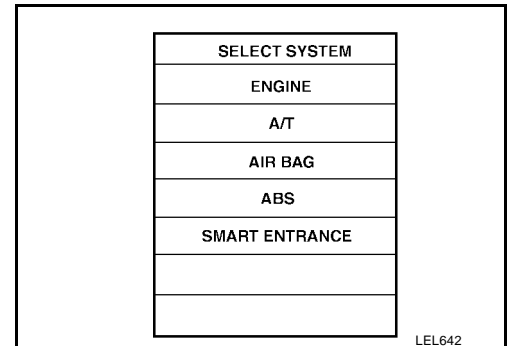

2. Connect "CONSULT-II" to the data link connector.

3. Turn ignition switch "ON".

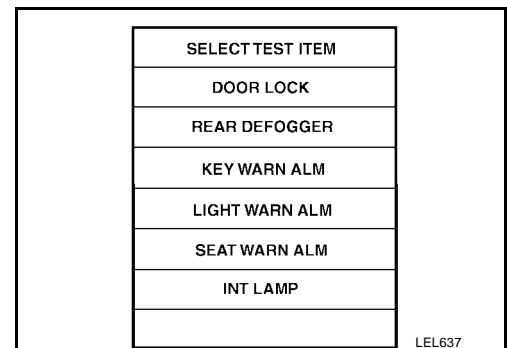

4. Touch "START".

5. Touch "SMART ENTRANCE".

6. Touch "DOOR LOCK".

7. Select diagnosis mode.

# POWER DOOR LOCK

“DATA MONITOR” and “ACTIVE TEST” are available.

## CONSULT-II Application Items “DOOR LOCK”

E/S0014Z

### Data Monitor

Monitored Item	Description
KEY ON SW	Indicates [ON/OFF] condition of key switch.
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from lock/unlock switch LH and RH.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch LH and RH.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from key cylinder.
KEY CYL UN SW	Indicates [ON/OFF] condition of unlock signal from key cylinder.
DOOR SW-ALL	Indicates [ON/OFF] condition of door switch (All).
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from keyfob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from keyfob.
UN BUTTON ON	Indicates [ON/OFF] condition of second unlock signal from keyfob within 5 seconds after first unlock operation.

### Active Test

Test Item	Description
ALL D/LK MTR	This test is able to check all door lock actuators lock operation. These actuators lock when “ON” on CONSULT-II screen is touched.
DR D/UN MTR	This test is able to check front door lock actuator LH unlock operation. The actuator unlocks when “ON” on CONSULT-II screen is touched.
NON DR D/UN	This test is able to check door lock actuators (except front door lock actuator LH) unlock operation. These actuators unlock when “ON” on CONSULT-II screen is touched.

## DOOR SWITCH CHECK

### 1. CHECK DOOR SWITCHES INPUT SIGNAL

#### Ⓜ With CONSULT-II

Check door switches ("DOOR SW-ALL") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
DOOR SW-ALL	OFF

When any doors are open:  
**DOOR SW-ALL ON**

When all doors are closed:  
**DOOR SW-ALL OFF**

SEL323W

#### ⊗ Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminals 28 or 29 and ground.

	Terminals		Condition	Voltage [V]
	(+)	(-)		
Front door switch LH	29	Ground	Open	0
			Closed	Approx. 5
Other door switches	28	Ground	Open	0
			Closed	Approx. 5

WEL500

Refer to [BL-15, "FIG. 1"](#).

#### OK or NG

- OK >> Door switch is OK.
- NG >> GO TO 2.

### 2. CHECK DOOR SWITCHES

1. Disconnect door switch harness connector.
2. Check continuity between door switch connector terminals.

	Terminals	Condition	Continuity
Front door switch LH	2 - 3	Closed	No
		Open	Yes
Front door switch RH	1 - Ground	Closed	No
		Open	Yes
Rear door switches	(+) - Ground	Closed	No
		Open	Yes

WEL491

#### OK or NG

- OK >> Check the following.
  - Door switch ground circuit or door switch ground condition
  - Harness for open or short between smart entrance control unit and door switch
- NG >> Replace door switch.

# POWER DOOR LOCK

## KEY SWITCH (INSERT) CHECK

### 1. CHECK KEY SWITCH INPUT SIGNAL

#### With CONSULT-II

Check key switch ("KEY ON SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
KEY ON SW	ON

When key is inserted to ignition key cylinder:  
**KEY ON SW ON**

When key is removed from ignition key cylinder:  
**KEY ON SW OFF**

WEL495

### OK or NG

- OK >> Check the following.
- Ground circuit for door lock/unlock switch
  - Harness for open or short between door lock/unlock switch and smart entrance control unit connector
- NG >> Replace door lock/unlock switch.

# POWER DOOR LOCK

## FRONT DOOR KEY CYLINDER SWITCH CHECK

### 1. CHECK FRONT DOOR KEY CYLINDER SWITCH INPUT SIGNAL (LOCK/UNLOCK SIGNAL)

#### Ⓜ With CONSULT-II

Check front door key cylinder switch ("KEY CYL LK-SW"/"KEY CYL UN-SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
KEY CYL LK-SW	OFF
KEY CYL UN-SW	OFF

When key inserted in front key cylinder is turned to LOCK:  
**KEY CYL LK-SW ON**

When key inserted in front key cylinder is turned to UNLOCK:  
**KEY CYL UN-SW ON**

SEL342W

#### ⊗ Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminals 30 or 41 and ground.

Smart entrance control unit connector (M39)

Terminals		Key position	Voltage [V]
(+)	(-)		
41	Ground	Neutral/Unlock	Approx. 5
		Lock	0
30	Ground	Neutral/Lock	Approx. 5
		Unlock	0

WEL502

Refer to [BL-16, "FIG. 2"](#).

#### OK or NG

- OK >> Door key cylinder switch is OK.
- NG >> GO TO 2.

### 2. CHECK DOOR KEY CYLINDER SWITCH

1. Disconnect door key cylinder switch harness connector.
2. Check continuity between door key cylinder switch connector D8 terminals L, E, and U, E.

Front door key cylinder switch LH connector

Ⓜ : Ground terminal  
Ⓧ : Door unlock switch terminal  
Ⓛ : Door lock switch terminal

Terminals	Key position	Continuity
Ⓛ - Ⓜ	Neutral/Unlock	No
	Lock	Yes
Ⓧ - Ⓜ	Neutral/Lock	No
	Unlock	Yes

LEL101A

#### OK or NG

- OK >> Check the following.
  - Door key cylinder switch ground circuit
  - Harness for open or short between smart entrance control unit and door key cylinder switch
- NG >> Replace door key cylinder switch.

# POWER DOOR LOCK

## DOOR LOCK ACTUATOR CHECK

### 1. CHECK DOOR LOCK ACTUATOR OPERATION

#### With CONSULT-II

1. Select "ACTIVE TEST" in "DOOR LOCK" with CONSULT-II.
2. Select "ALL D/LK MTR" and touch "ON".
3. Then, select "DR D/UN MTR" and touch "ON".
4. Select "NON DR D/UN" and touch "ON".

#### NOTE:

If CONSULT-II is not available, skip this procedure and go to the next step.

#### OK or NG

- OK >> Door lock actuator is OK.
- NG >> GO TO 2.

# POWER DOOR LOCK

## 2. CHECK DOOR LOCK ACTUATOR CIRCUIT

Check voltage for door lock actuator.

- Door lock actuator front LH

Door lock/unlock switch condition	Terminals		Voltage [V]
	(+)	(-)	
Lock	15	Ground	Approx. 12
Unlock	13	Ground	

WEL504

- Door lock actuator front RH and rear

Door lock/unlock switch condition	Terminals		Voltage [V]
	(+)	(-)	
Lock	15	Ground	Approx. 12
Unlock	14	Ground	

WEL505

Refer to [BL-18, "FIG. 4"](#) .

OK or NG

OK >> GO TO 3.

NG >> Replace smart entrance control unit. (Before replacing the smart entrance control unit, perform [BL-26, "DOOR LOCK/UNLOCK SWITCH CHECK"](#) .)

## 3. CHECK DOOR LOCK ACTUATOR

1. Disconnect door lock actuator harness connector.
2. Apply 12V direct current to door lock actuator and check operation.

Door lock actuator connector

Front LH : (D7)

Front RH : (D109)

Rear LH : (D204)

Rear RH : (D304)

**Door lock actuator operation:**

Terminals between (+): 1 and (-): 3  
 Unlocked → Locked

Terminals between (+): 3 and (-): 1  
 Locked → Unlocked

WEL499

OK or NG

OK >> Check harness for open or short between smart entrance control unit connector and door lock actuator.

NG >> Replace door lock actuator.

# REMOTE KEYLESS ENTRY SYSTEM

EIS00155

## System Description

### INPUTS

Power is supplied at all times:

- to key switch terminal 2
- through 10A fuse [No. 12, located in the fuse block (J/B)].

When the key switch is ON (ignition key is inserted in key cylinder), power is supplied:

- through key switch terminal 1
- to smart entrance control unit terminal 32.

When the front door switch LH is ON (door is OPEN), ground is supplied:

- to smart entrance control unit terminal 29
- through front door switch LH terminal 2
- to front door switch LH terminal 3
- through body grounds B13 and B19.

When the front door switch RH and rear door switches are ON (doors are OPEN), ground is supplied:

- to smart entrance control unit terminal 28
- through front door switch RH terminal 1 and rear door switches terminal +
- to front door switch RH case ground and rear door switches case grounds.

When main power window and door lock/unlock switch is LOCKED, ground is supplied:

- to smart entrance control unit terminal 23
- through main power window and door lock/unlock switch terminal 14 and
- through body grounds M28 and M54.

When main power window and door lock/unlock switch is UNLOCKED, ground is supplied:

- to smart entrance control unit terminal 35
- through main power window and door lock/unlock switch terminal 7 and
- through body grounds M28 and M54.

When front door unlock sensor LH is UNLOCKED, ground is supplied:

- to smart entrance control unit terminal 36
- through front door unlock sensor LH terminal 2
- to front door unlock sensor LH terminal 4
- through body grounds M28 and M54.

Keyfob signal is input to smart entrance control unit (the antenna of the system is combined with smart entrance control unit).

The remote keyless entry system controls operation of the:

- power door locks
- trunk lid opener
- interior lamp
- panic alarm
- hazard and horn reminder.

### OPERATED PROCEDURE

#### Power Door Lock Operation

Smart entrance control unit receives a LOCK signal from keyfob. Smart entrance control unit locks all doors with input of LOCK signal from keyfob.

When an UNLOCK signal is sent from keyfob once, driver door will be unlocked.

Then, if an UNLOCK signal is sent from keyfob again within 5 seconds, all other doors will be unlocked.

#### Hazard and Horn Reminder

Power is supplied at all times:

- to remote keyless entry relay terminals 1, 3 and 6
- through 15A fuse [No. 5, located in the fuse block (J/B)], and
- to horn relay terminals 1 and 5

A

B

C

D

E

F

G

H

BL

J

K

L

M

# REMOTE KEYLESS ENTRY SYSTEM

- through 10A fuse (No. 33, located in the fuse and fusible link box).

When smart entrance control unit receives LOCK or UNLOCK signal from keyfob, ground is supplied:

- to remote keyless entry relay terminal 2
- through smart entrance control unit terminal 7, and
- to horn relay terminal 2
- through smart entrance control unit terminal 19.

Remote keyless entry relay and horn relay are now energized, and hazard warning lamp flashes and horn sounds as a reminder.

The hazard and horn reminder has C mode (horn chirp mode) and S mode (non-horn chirp mode).

## Operating function of hazard and horn reminder

	C mode (Horn chirp mode)		S mode (Non-horn chirp mode)	
	Hazard warning lamp flash	Horn sound	Hazard warning lamp flash	Horn sound
Lock	Twice	Once	Twice	—
Unlock	Once	—	—	—

## How to change hazard and horn reminder mode

④ With CONSULT-II

Hazard and horn reminder can be changed using “WORK SUPPORT” mode in “MULTI REMOTE ENT”.

⊗ Without CONSULT-II

When LOCK and UNLOCK signals are sent from the keyfob for more than 2 seconds at the same time, the hazard and horn reminder mode is changed and hazard warning lamp flashes and horn sounds as follows:

## Interior Lamp Operation

When the following input signals are both supplied:

- front door switch LH CLOSED (when driver door is closed);
- driver door LOCKED;

remote keyless entry system turns on interior lamp (for 30 seconds) with input of UNLOCK signal from keyfob. For detailed description, refer to [LT-35, "INTERIOR, MAP, VANITY AND TRUNK ROOM LAMPS"](#) .

## Panic Alarm Operation

When key switch is OFF (when ignition key is not inserted in key cylinder), remote keyless entry system turns on and off horn and headlamp intermittently with input of PANIC ALARM signal from keyfob.

The alarm automatically turns off after 25 seconds or when smart entrance control unit receives any signal from keyfob.

For detailed description, refer to [BL-69, "PANIC ALARM OPERATION"](#) .

## Trunk Lid Operation

Power is supplied at all times:

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to trunk lid opener actuator terminal +.

When a TRUNK OPEN signal is sent with key OFF (ignition key removed from key cylinder) from keyfob, ground is supplied:

- to trunk lid opener actuator terminal -

# REMOTE KEYLESS ENTRY SYSTEM

---

- through smart entrance control unit terminal 12.

Then power and ground are supplied, trunk lid opener actuator opens trunk lid.

Test Item	Description
INT/IGN ILLUM	This test is able to check interior lamp operation. The interior lamp is turned on when “ON” on CONSULT-II screen is touched.
HAZARD	This test is able to check hazard reminder operation. The hazard lamps turn on when “ON” on CONSULT-II screen is touched.
ALARM	This test is able to check panic alarm operation. The alarm activates for 0.5 seconds after “ON” on CONSULT-II screen is touched.
MULTI REM HRN	This test is able to check horn reminder operation. The horn sounds for 0.02 seconds after “ON” on CONSULT-II screen is touched.
TRUNK OUTPUT	This test is able to check trunk lid opener actuator operation. The trunk is unlocked when “ON” on CONSULT-II screen is touched.

### Work Support

Test Item	Description
REMO CONT ID CONFIR	It can be checked whether keyfob ID code is registered or not in this mode.
REMO CONT ID REGIST	Keyfob ID code can be registered.
REMO CONT ID ERASUR	Keyfob ID code can be erased.
HZRD REM SET	Hazard and horn reminder mode can be changed in this mode. The reminder mode will be changed when “MODE SET” on CONSULT-II screen is touched.

# REMOTE KEYLESS ENTRY SYSTEM

EIS0015A

## Trouble Diagnoses SYMPTOM CHART

### NOTE:

- Always check keyfob battery before replacing keyfob.
- The panic alarm operation and trunk lid opener operation of remote keyless entry system do not activate with the ignition key inserted in the ignition key cylinder.
- Use Remote Keyless Entry Tester J-43241 (follow instructions on tester) to check operation of keyfob before replacing keyfob.

Symptom	Diagnoses/service procedure	Reference page (BL- )
All functions of remote keyless entry system do not operate.	1. Keyfob battery and function check Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-46</a>
	2. Power supply and ground circuit for smart entrance control unit check	<a href="#">BL-47</a>
	3. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>
The new ID of keyfob cannot be entered.	1. Keyfob battery and function check Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-46</a>
	2. Key switch (insert) check	<a href="#">BL-50</a>
	3. Door switch check	<a href="#">BL-49</a>
	4. Door lock/unlock switch LH check	<a href="#">BL-51</a>
	5. Power supply and ground circuit for smart entrance control unit check	<a href="#">BL-47</a>
	6. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>
Door lock or unlock does not function. [If the power door lock system does not operate manually, check power door lock system. Refer to <a href="#">BL-22</a> , "Trouble Diagnoses" .)	1. Keyfob battery and function check Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-46</a>
	2. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>
Hazard and horn reminder does not activate properly when pressing lock or unlock button of keyfob.	1. Keyfob battery and function check Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-46</a>
	2. Hazard reminder check	<a href="#">BL-56</a>
	3. Horn reminder check* *: Horn chirp can be activated or deactivated. First check the horn chirp setting. Refer to <a href="#">BL-35</a> , "Hazard and Horn Reminder" .	<a href="#">BL-58</a>
	4. Door switch check	<a href="#">BL-49</a>
	5. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>
Interior lamp illumination operations do not activate properly.	1. Interior lamp operation check	<a href="#">BL-59</a>
	2. Door switch check	<a href="#">BL-49</a>
	3. Front LH door unlock sensor check	<a href="#">BL-53</a>

# REMOTE KEYLESS ENTRY SYSTEM

Symptom	Diagnoses/service procedure	Reference page (BL- )
Panic alarm (horn and headlamp) does not activate when panic alarm button is continuously pressed. Keyfob check (use Remote Keyless Entry Tester J-43241).	1. Keyfob battery and function check	<a href="#">BL-46</a>
	2. Vehicle security operation check. Refer to <a href="#">BL-77, "PRELIMINARY CHECK"</a> .	<a href="#">BL-77</a>
	3. Key switch (insert) check	<a href="#">BL-50</a>
	4. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>
Trunk lid does not open when trunk opener button is continuously pressed.	1. Keyfob battery and function check	<a href="#">BL-46</a>
	2. Trunk lid opener actuator check	<a href="#">BL-55</a>
	3. Key switch (insert) check	<a href="#">BL-50</a>
	4. Replace keyfob. Refer to ID Code Entry Procedure. NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning. Keyfob check (use Remote Keyless Entry Tester J-43241).	<a href="#">BL-60</a>

## KEYFOB BATTERY AND FUNCTION CHECK

### 1. CHECK KEYFOB BATTERY

Remove battery (refer to [BL-63, "Keyfob Battery Replacement"](#) ) and measure voltage across battery positive and negative terminals, (+) and (-).

**Voltage [V] : 2.5 - 3.0**

**NOTE:**

Keyfob does not function if battery is not set correctly.

**OK or NG**

- OK >> GO TO 2.
- NG >> Replace battery.

### 2. CHECK KEYFOB FUNCTION

**With CONSULT-II**

Check keyfob function ("LK BUTTON/SIG", "UN BUTTON/SIG", "TRUNK BTN/SIG", "PANIC BTN", "UN BUTTON ON" and "LK/UN BTN ON") in "DATA MONITOR" mode with CONSULT-II. When pushing each button of keyfob, the corresponding monitor item should be turned as follows.

Condition	Monitor item	
Pushing LOCK	LK BUTTON/SIG	ON
Pushing UNLOCK	UN BUTTON/SIG	ON
Pushing TRUNK	TRUNK BTN/SIG	ON
Pushing PANIC	PANIC BTN/SIG	ON
Pushing UNLOCK within 5 seconds after pushing UNLOCK	UN BUTTON ON	ON
Pushing LOCK and UNLOCK at the same time	LK/UN BTN ON	ON

DATA MONITOR	
MONITOR	
LK BUTTON/SIG	ON
UN BUTTON/SIG	ON
TRUNK BTN/SIG	ON
PANIC BTN	ON
UN BUTTON ON	ON
LK/UN BTN ON	ON

WIIA0008E

**OK or NG**

- OK >> Keyfob is OK. Further inspection is necessary. Refer to [BL-44, "SYMPTOM CHART"](#) .
- NG >> Replace keyfob. Refer to [BL-60, "ID Code Entry Procedure"](#) .

# REMOTE KEYLESS ENTRY SYSTEM

## POWER SUPPLY AND GROUND CIRCUIT CHECK

### 1. CHECK MAIN POWER SUPPLY CIRCUIT FOR SMART ENTRANCE CONTROL UNIT

1. Disconnect smart entrance control unit harness connector.
2. Check voltage between smart entrance control unit harness connector terminals 10, 11 and ground.

Refer to [BL-39, "FIG. 1"](#) .

#### OK or NG

OK >> GO TO 2.

NG >> Check the following.

- 30A fusible link (letter **d** , located in fuse and fusible link box)
- 10A fuse (No. 37, located in fuse and fusible link box)
- M6 circuit breaker
- Harness for open or short between smart entrance control unit and fuse

### 2. CHECK IGNITION SWITCH “ACC” CIRCUIT

1. Disconnect smart entrance control unit harness connector.
2. Check voltage between smart entrance control unit harness connector terminal 21 and ground while ignition switch is “ACC”.

Refer to [BL-39, "FIG. 1"](#) .

#### OK or NG

OK >> GO TO 3.

NG >> Check the following.

- 10A fuse [No. 1, located in fuse block (J/B)]
- Harness for open or short between smart entrance control unit and fuse

# REMOTE KEYLESS ENTRY SYSTEM

## 3. CHECK GROUND CIRCUIT FOR SMART ENTRANCE CONTROL UNIT

Check continuity between smart entrance control unit harness connector terminal 16 and ground.

Refer to [BL-39, "FIG. 1"](#) .

OK or NG

- OK >> Power supply and ground circuits are OK.
- NG >> Check ground harness.

# REMOTE KEYLESS ENTRY SYSTEM

## DOOR SWITCH CHECK

### 1. CHECK DOOR SWITCH INPUT SIGNAL

#### With CONSULT-II

Check door switches ("DOOR SW-ALL") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
DOOR SW-ALL	OFF

When any doors are open:  
**DOOR SW-ALL ON**

When all doors are closed:  
**DOOR SW-ALL OFF**

SEL323W

#### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminals 28 or 29 and ground.

Smart entrance control unit connector (M39)

 NG    >> GO TO 2.

# REMOTE KEYLESS ENTRY SYSTEM

## 2. CHECK DOOR LOCK/UNLOCK SWITCH

1. Disconnect door lock/unlock switch harness connector.
2. Check continuity between door lock/unlock switch LH terminals.

### OK or NG

OK >> Check the following.

- Ground circuit for door lock/unlock switch
- Harness for open or short between door lock/unlock switch and smart entrance control unit connector

NG >> Replace door lock/unlock switch.

# REMOTE KEYLESS ENTRY SYSTEM

## FRONT LH DOOR UNLOCK SENSOR CHECK

### 1. CHECK FRONT LH DOOR UNLOCK SENSOR INPUT SIGNAL

#### With CONSULT-II

1. Select "DATA MONITOR" mode in "INT LAMP" with CONSULT-II.
2. Check front LH door unlock sensor ("LOCK SIG DR") in "DATA MONITOR" mode.

DATA MONITOR	
MONITOR	VALUE
LOCK SIG DR	OFF

When front LH door is locked:  
**LOCK SIG DR OFF**

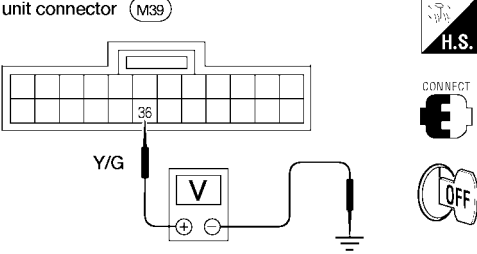

When front LH door is unlocked:  
**LOCK SIG DR ON**

SEL344W

#### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 36 and ground.

Smart entrance control unit connector (M39)

	Terminals		Condition	Voltage [V]
	(+)	(-)		
Front LH door	36	Ground	Locked	Approx. 5
			Unlocked	0

LEL452

Refer to [BL-40, "FIG. 2"](#) .

#### OK or NG

- OK    >> Door unlock sensor is OK.  
 NG    >> GO TO 2.

# REMOTE KEYLESS ENTRY SYSTEM

## 2. CHECK FRONT LH DOOR UNLOCK SENSOR

1. Disconnect front LH door unlock sensor harness connector.
2. Check continuity between door unlock sensor terminals.

### OK or NG

OK >> Check the following.

- Door unlock sensor ground circuit
- Harness for open or short between smart entrance control unit and door unlock sensor

NG >> Replace door unlock sensor.

# REMOTE KEYLESS ENTRY SYSTEM

## TRUNK LID OPENER ACTUATOR CHECK

### 1. CHECK TRUNK LID OPENER

Check trunk lid opener operation with trunk lid opener switch.  
NOTE: First check trunk lid opener cancel lever position.

Does trunk lid open?

Yes >> GO TO 2.

No >> Check trunk lid opener actuator and the circuit.

### 2. CHECK TRUNK LID OPENER ACTUATOR OPERATION

ⓑ With CONSULT-II

1. Select "ACTIVE TEST" in "MULTI REMOTE ENT" with CONSULT-II.
2. Select "TRUNK OUTPUT" and touch "ON".

**NOTE: If CONSULT-II is not available, skip this procedure and go to the next step.**

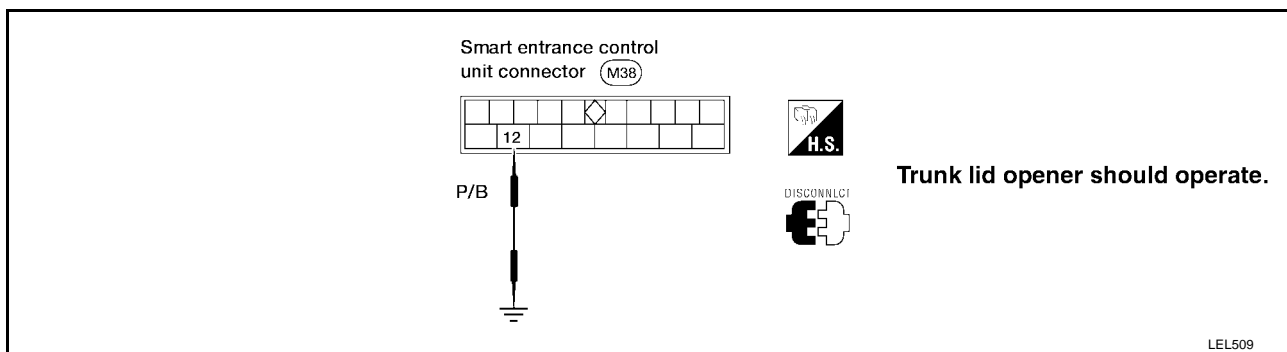

OK or NG

OK >> Trunk lid opener actuator circuit is OK.

NG >> GO TO 3.

### 3. CHECK TRUNK LID OPENER ACTUATOR CIRCUIT

1. Disconnect smart entrance control unit harness connector.
2. Apply ground to smart entrance control unit harness connector terminal 12.

Refer to [BL-39, "FIG. 1"](#) .

Does trunk lid open?

Yes >> Replace smart entrance control unit.

No >> Check harness for open or short between smart entrance control unit and trunk lid opener actuator.

# REMOTE KEYLESS ENTRY SYSTEM

## HAZARD REMINDER CHECK

### 1. CHECK HAZARD INDICATOR

Check if hazard indicator flashes with hazard switch.

Does hazard indicator operate?

- Yes >> GO TO 2.
- No >> Check hazard indicator circuit.

### 2. CHECK HAZARD REMINDER OPERATION

Ⓟ With CONSULT-II

1. Select "ACTIVE TEST" in "MULTI REMOTE ENT" with CONSULT-II.
2. Select "HAZARD" and touch "ON".

**NOTE:** If CONSULT-II is not available, skip this procedure and go to the next step.

OK or NG

- OK >> Hazard reminder operation is OK.
- NG >> GO TO 3.

### 3. CHECK HAZARD REMINDER OPERATION

1. Disconnect smart entrance control unit harness connector.
2. Apply ground to smart entrance control unit harness connector terminal 7.

Refer to [BL-41, "FIG. 3"](#).

OK or NG

- OK >> Replace smart entrance control unit.
- NG >> GO TO 4.

### 4. CHECK REMOTE KEYLESS ENTRY RELAY

Check remote keyless entry relay.

OK or NG

- OK >> GO TO 5.
- NG >> Replace remote keyless entry relay.

# REMOTE KEYLESS ENTRY SYSTEM

## 5. CHECK POWER SUPPLY FOR REMOTE KEYLESS ENTRY RELAY

1. Disconnect remote keyless entry relay harness connector.
2. Check voltage between remote keyless entry relay harness connector M11 terminal 1 (W/G) and ground.

**Battery voltage should exist.**

OK or NG

OK >> GO TO 6.

NG >> Check the following.

- 15A fuse [No. 5, located in fuse block (J/B)]
- Harness for open or short between remote keyless entry relay and fuse

## 6. CHECK REMOTE KEYLESS ENTRY RELAY CIRCUIT

1. Disconnect remote keyless entry relay harness connector.
2. Check voltage between remote keyless entry relay harness connector M11 terminals 3 (W/G) and 5 (G/B).
3. Check voltage between remote keyless entry relay harness connector M11 terminals 6 (W/G) and 7 (G/Y).

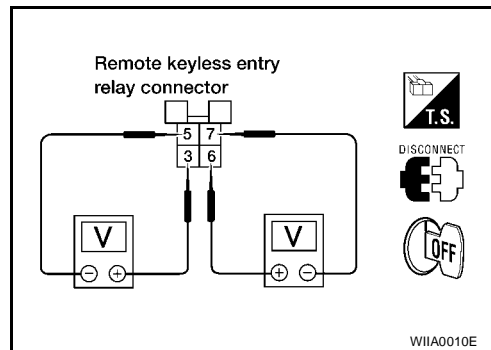

**Battery voltage should exist.**

OK or NG

OK >> Check harness for open or short between smart entrance control unit and remote keyless entry relay.

NG >> Check the following.

- Harness for open or short between remote keyless entry relay and fuse
- Harness for open or short between remote keyless entry relay and turn signal lamps

# REMOTE KEYLESS ENTRY SYSTEM

## HORN REMINDER CHECK

### 1. CHECK HORN

Check if horn sounds with horn switch.

Does horn operate?

Yes >> GO TO 2.

No >> Check horn circuit.

### 2. CHECK HORN REMINDER OPERATION

Ⓟ With CONSULT-II

1. Select "ACTIVE TEST" in "MULTI REMOTE ENT" with CONSULT-II.

2. Select "MULTI REM HRN" and touch "ON".

**NOTE:** If CONSULT-II is not available, skip this procedure and go to the next step.

OK or NG

OK >> Horn reminder operation is OK.

NG >> GO TO 3.

### 3. CHECK HORN REMINDER OPERATION

1. Disconnect smart entrance control unit harness connector.

2. Apply ground to smart entrance control unit harness connector terminal 19.

Refer to [BL-41, "FIG. 3"](#) .

Does horn sound?

Yes >> Replace smart entrance control unit.

No >> Check harness for open or short between smart entrance control unit and horn relay.

# REMOTE KEYLESS ENTRY SYSTEM

## INTERIOR LAMP OPERATION CHECK

### 1. CHECK INTERIOR LAMP

Check if the interior lamp switch is in the "ON" position and the lamp illuminates.

Does interior lamp illuminate?

Yes >> GO TO 2.

No >> Check the following.

- Harness for open or short between smart entrance control unit and interior lamp
- Interior lamp

### 2. CHECK INTERIOR LAMP OPERATION

#### With CONSULT-II

1. Select "ACTIVE TEST" in "MULTI REMOTE ENT" with CONSULT-II.
2. Select "INT/IGN ILLUM" and touch "ON".

#### Without CONSULT-II

Push unlock button of keyfob with all doors closed, and check voltage between smart entrance control unit harness connector terminal 8 and ground.

Refer to [BL-40, "FIG. 2"](#) .

OK or NG

OK >> System is OK.

NG >> Check harness open or short between smart entrance control unit and interior lamp.

# REMOTE KEYLESS ENTRY SYSTEM

EIS0015B

## ID Code Entry Procedure KEYFOB ID SET UP WITH CONSULT-II

### NOTE:

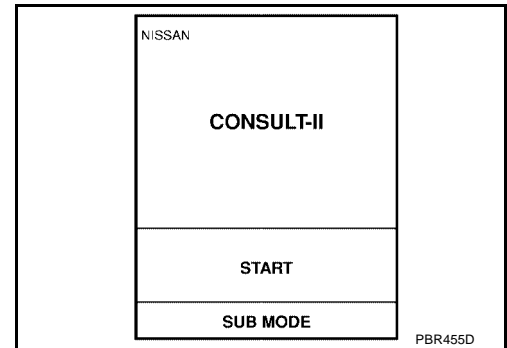

If a keyfob is lost, the ID code of the lost keyfob must be erased to prevent unauthorized use. When the ID code of a lost keyfob is not known, all keyfob ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.

1. Turn ignition switch "OFF".

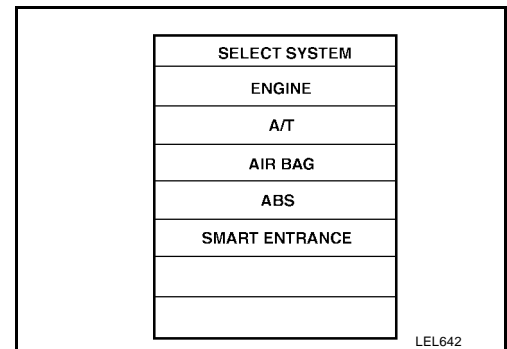

2. Connect "CONSULT-II" to the data link connector.

3. Turn ignition switch "ON".

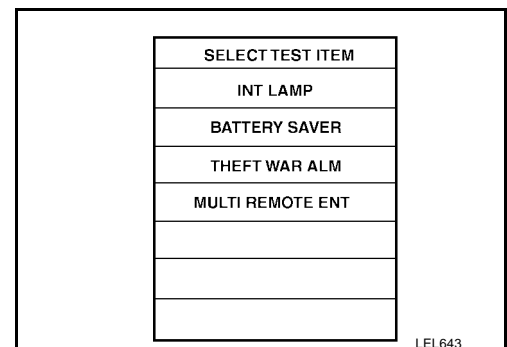

4. Touch "START".

5. Touch "SMART ENTRANCE".

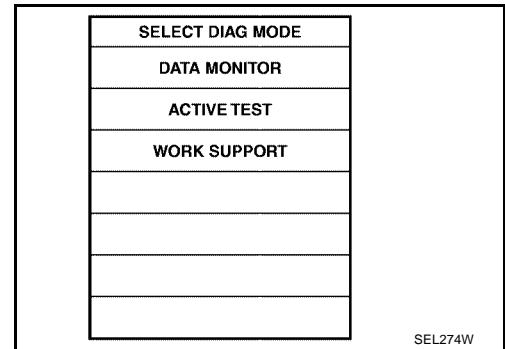

6. Touch "MULTI REMOTE ENT".

# REMOTE KEYLESS ENTRY SYSTEM

7. Touch "WORK SUPPORT".

A  
B  
C  
D

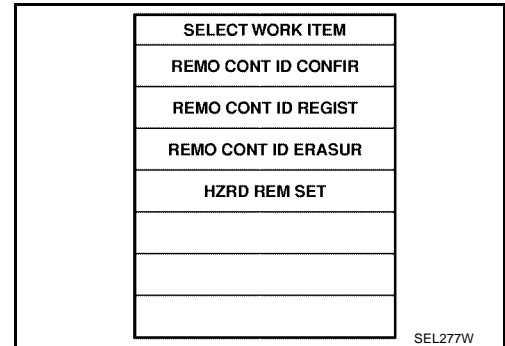

8. The items are shown that can be set up.

- "REMO CONT ID CONFIR"  
Use this mode to confirm if a keyfob ID code is registered or not.
- "REMO CONT ID REGIST"  
Use this mode to register a keyfob ID code.

**NOTE:**

**Register the ID code when keyfob or smart entrance control unit is replaced, or when additional keyfob is required.**

- "REMO CONT ID ERASUR"  
Use this mode to erase a keyfob ID code.
- "HZRD REM SET"  
Use this mode to activate or deactivate the hazard and horn reminder.

# REMOTE KEYLESS ENTRY SYSTEM

## KEYFOB ID SET UP WITHOUT CONSULT-II

W11A0011E

# REMOTE KEYLESS ENTRY SYSTEM

## NOTE:

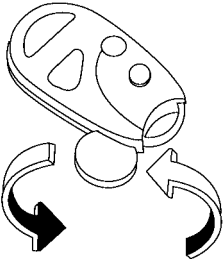

- If a keyfob is lost, the ID code of the lost keyfob must be erased to prevent unauthorized use. A specific ID code can be erased with CONSULT-II. However, when the ID code of a lost keyfob is not known, all keyfob ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.  
To erase all ID codes in memory, register one ID code (keyfob) four times. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.
- When registering an additional keyfob, the existing ID codes in memory may or may not be erased. If four ID codes are stored in memory, when an additional code is registered, only the oldest code is erased. If less than four ID codes are stored in memory, when an additional ID code is registered, the new ID code is added and no ID codes are erased.
- If you need to activate more than two additional new keyfobs, repeat the procedure "Additional ID code entry" for each new keyfob.
- Entry of maximum four ID codes is allowed. When more than four ID codes are entered, the oldest ID code will be erased.
- Even if same ID code that is already in the memory is input, the same ID code can be entered. The code is counted as an additional code.

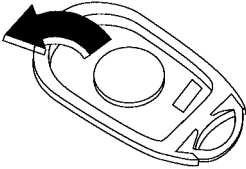

## Keyfob Battery Replacement

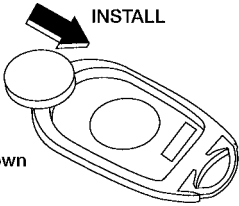

EIS0015C

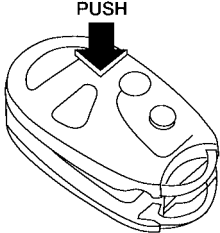

### NOTE:

- Be careful not to touch the circuit board or the battery terminal.
- The keyfob is water-resistant. However, if it does get wet, immediately wipe it dry.

- 

1. Open the lid using a coin.
- 

2. Remove the battery.
- 

3. **INSTALL**  
"+/+" side facing down  
Insert the new battery.
- 

4. **PUSH**  
Close the lid securely.  
Push the keyfob button two or three times to check its operation.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

EIS0015E

## System Description DESCRIPTION

### 1. Operation Flow

### 2. Setting The Vehicle Security System

#### Initial condition

1. Ignition switch is in OFF position.

#### Disarmed phase

When the vehicle security system is in the disarmed phase, the security indicator lamp blinks every 2.6 seconds.

#### Pre-armed phase and armed phase

When the following operation 1 or 2 is performed, the vehicle security system turns into the “pre-armed” phase. (The security indicator lamp illuminates.)

1. Smart entrance control unit receives LOCK signal from key cylinder switch or keyfob after hood, trunk lid and all doors are closed.
2. Hood (if equipped with hood switch), trunk lid and all doors are closed after front doors are locked by key, lock/unlock switch or keyfob.

After about 30 seconds, the system automatically shifts into the “armed” phase (the system is set). (The security indicator lamp blinks every 2.6 seconds.)

### 3. Canceling The Set Vehicle Security System

When the following 1 or 2 operation is performed, the armed phase is canceled.

1. Unlock the doors with the key or keyfob.
2. Open the trunk lid with the key or keyfob.

### 4. Activating The Alarm Operation of The Vehicle Security System

Make sure the system is in the armed phase. (The security indicator lamp blinks every 2.6 seconds.)

When the following operation 1 or 2 is performed, the system sounds the horns and flashes the headlamps for about 50 seconds.

1. Engine hood (if equipped with hood switch), trunk lid or any door is opened during armed phase.
2. Disconnecting and connecting the battery connector before canceling armed phase.

### POWER SUPPLY AND GROUND

Power is supplied at all times:

- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to security indicator lamp terminal 1 and
- to key switch terminal 2.

Power is supplied at all times:

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

- through 10A fuse (No. 37, located in the fuse and fusible link box)
- to smart entrance control unit terminal 10.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to smart entrance control unit terminal 33.

With the ignition switch in the ACC or ON position, power is supplied:

- through 10A fuse [No. 1, located in the fuse block (J/B)]
- to smart entrance control unit terminal 21.

Ground is supplied:

- to smart entrance control unit terminal 16
- through body grounds M28 and M54.

## INITIAL CONDITION TO ACTIVATE THE SYSTEM

The operation of the vehicle security system is controlled by the doors, hood (if equipped with hood switch) and trunk lid.

### Pattern A

To activate the vehicle security system, the smart entrance control unit must receive signals indicating the doors, hood (if equipped with hood switch) and trunk lid are closed.

When a door is open, smart entrance control unit terminal 28 or 29 receives a ground signal from each door switch.

On vehicles equipped with hood switch, when the hood is open, smart entrance control unit terminal 27 receives a ground signal:

- from terminal + of the hood switch
- to terminal - of the hood switch
- through body grounds E7 and E37.

When the trunk lid is open, smart entrance control unit terminal 38 receives a ground signal:

- from terminal + of the trunk room lamp switch
- to terminal - of the trunk room lamp switch
- through body grounds B13 and B19.

When smart entrance control unit receives LOCK signal from key cylinder switch or keyfob and none of the described conditions exist, the vehicle security system will automatically shift to armed mode.

### Pattern B

To activate the vehicle security system, the smart entrance control unit must receive signal indicating any door [including hood (if equipped with hood switch) and trunk lid] is opened.

When the front doors are locked with key, lock/unlock switch or keyfob and then all doors are closed, the vehicle security system will automatically shift to armed mode.

## VEHICLE SECURITY SYSTEM ACTIVATION

### Pattern A

With all doors closed (including hood and trunk lid), if the key is used to lock doors, smart entrance control unit terminal 41 receives a ground signal:

- from terminal L of the front door key cylinder switch LH
- to terminal E of the front door key cylinder switch LH
- through body grounds M28 and M54.

If this signal, or lock signal from keyfob is received by the smart entrance control unit, the vehicle security system will activate automatically.

#### NOTE:

Vehicle security system can be set even though all doors are not locked.

### Pattern B

With any door open, if lock/unlock switch is used to lock doors, smart entrance control unit terminal 23 receives a ground signal:

- from terminal 14 of main power window and door lock/unlock switch

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

---

- to terminal 3 of main power window and door lock/unlock switch, or
- from terminal 1 of door lock/unlock switch RH
- to terminal 5 of door lock/unlock switch RH
- through body grounds M28 and M54.

With any door open, if the key is used to lock doors, smart entrance control unit terminal 41 receives a ground signal:

- from terminal L of the front door key cylinder switch LH
- to terminal E of the front door key cylinder switch LH
- through body grounds M28 and M54.

If these signals and lock signal from keyfob are received by the smart entrance control unit and ground signals of terminals 36 and 37 are interrupted (both front doors locked), the vehicle security system will activate automatically.

## **NOTE:**

Vehicle security system can be set even though the rear door is not locked.

Once the vehicle security system has been activated, smart entrance control unit terminal 31 supplies ground to terminal 2 of the security indicator lamp.

The security indicator lamp will illuminate for approximately 30 seconds and then blink every 2.6 seconds.

Now the vehicle security system is in armed phase.

## **VEHICLE SECURITY SYSTEM ALARM OPERATION**

The vehicle security system is triggered by:

- opening a door
- opening the hood (if equipped with hood switch) or the trunk lid
- detection of battery disconnect and connect.

Once the vehicle security system is in armed phase, if the smart entrance control unit receives a ground signal at terminal 28 or 29 (door switch), 38 (trunk room lamp switch) or 27 [hood switch (if equipped)], the vehicle security system will be triggered. The headlamps flash and the horn sounds intermittently.

Power is supplied at all times:

- through 15A fuse (No. 39, located in fuse and fusible link box)
- to vehicle security lamp relay terminal 3,
- through 15A fuse (No. 40, located in fuse and fusible link box)
- to vehicle security lamp relay terminal 6,
- through 10A fuse (No. 35 located in fuse and fusible link box)
- to vehicle security lamp relay terminal 1
- through 10A fuse (No. 33, located in fuse and fusible link box)
- to horn relay terminals 1 and 5.

When the vehicle security system is triggered, ground is supplied intermittently:

- from smart entrance control unit terminal 4
- to horn relay terminal 2 and
- to vehicle security lamp relay terminal 2.

The headlamps flash and the horn sounds intermittently.

The alarm automatically turns off after about 50 seconds but will reactivate if the vehicle is tampered with again.

## **VEHICLE SECURITY SYSTEM DEACTIVATION**

To deactivate the vehicle security system, a door or trunk lid must be unlocked with the key or keyfob.

When the key is used to unlock the door, smart entrance control unit terminal 30 receives a ground signal:

- from terminal U of front door key cylinder switch LH
- to terminal E of front door key cylinder switch LH
- through body grounds M28 and M54.

When the key is used to open the trunk lid, smart entrance control unit terminal 42 receives a ground signal:

- from terminal + of the trunk lid key cylinder switch (unlock switch)
- to terminal - of the trunk lid key cylinder switch (unlock switch)

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

---

- through body grounds B13 and B19.

When the smart entrance control unit receives either one of these signals or unlock signal from keyfob, the vehicle security system is deactivated. (Disarmed phase)

## PANIC ALARM OPERATION

When the remote keyless entry system (panic alarm) is triggered, ground is supplied intermittently:

- from smart entrance control unit terminal 4
- to vehicle security lamp relay terminal 2 and
- to horn relay terminal 2.

The headlamp flashes and the horn sounds intermittently.

The alarm automatically turns off after 25 seconds or when smart entrance control unit receives any signal from keyfob.

## CONSULT-II Inspection Procedure "THEFT WAR ALM"

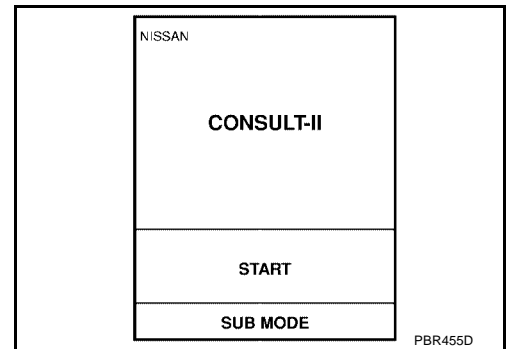

EIS0015H

1. Turn ignition switch "OFF".

2. Connect "CONSULT-II" to the data link connector.

3. Turn ignition switch "ON".

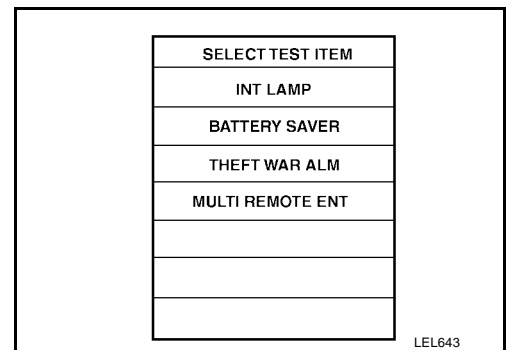

4. Touch "START".

5. Touch "SMART ENTRANCE".

6. Touch "THEFT WAR ALM".

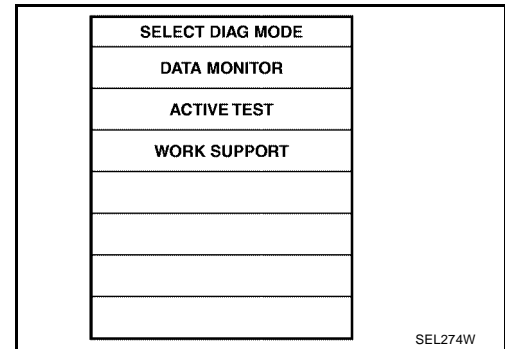

7. Select diagnosis mode.

“DATA MONITOR”, “ACTIVE TEST” and “WORK SUPPORT” are available.

## CONSULT-II Application Item “THEFT WAR ALM”

EIS0015I

### Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from key cylinder switch.
KEY CYL UN SW	Indicates [ON/OFF] condition of unlock signal from key cylinder switch.
DOOR SW-ALL	Indicates [ON/OFF] condition of door switch (All).
LOCK SIG DR	Indicates [ON/OFF] condition of front door unlock sensor LH.
LOCK SIG AS	Indicates [ON/OFF] condition of front door unlock sensor RH.
TRUNK SW	Indicates [ON/OFF] condition of trunk switch.
TRUNK KEY SW	Indicates [ON/OFF] condition of trunk key cylinder switch.
HOOD SWITCH (if equipped)	Indicates [ON/OFF] condition of hood switch.
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from door lock/unlock switch LH and RH.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from door lock/unlock switch LH and RH.
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from keyfob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from keyfob.
TRUNK BTN/SIG	Indicates [ON/OFF] condition of trunk open signal from keyfob.

### Active Test

Test Item	Description
THEFT IND	This test is able to check security indicator lamp operation. The lamp will be turned on when “ON” on CONSULT-II screen is touched.
THEFT WAR ALM	This test is able to check theft warning alarm operation. The alarm will be activated for 0.5 seconds after “ON” on CONSULT-II screen is touched.

### Work Support

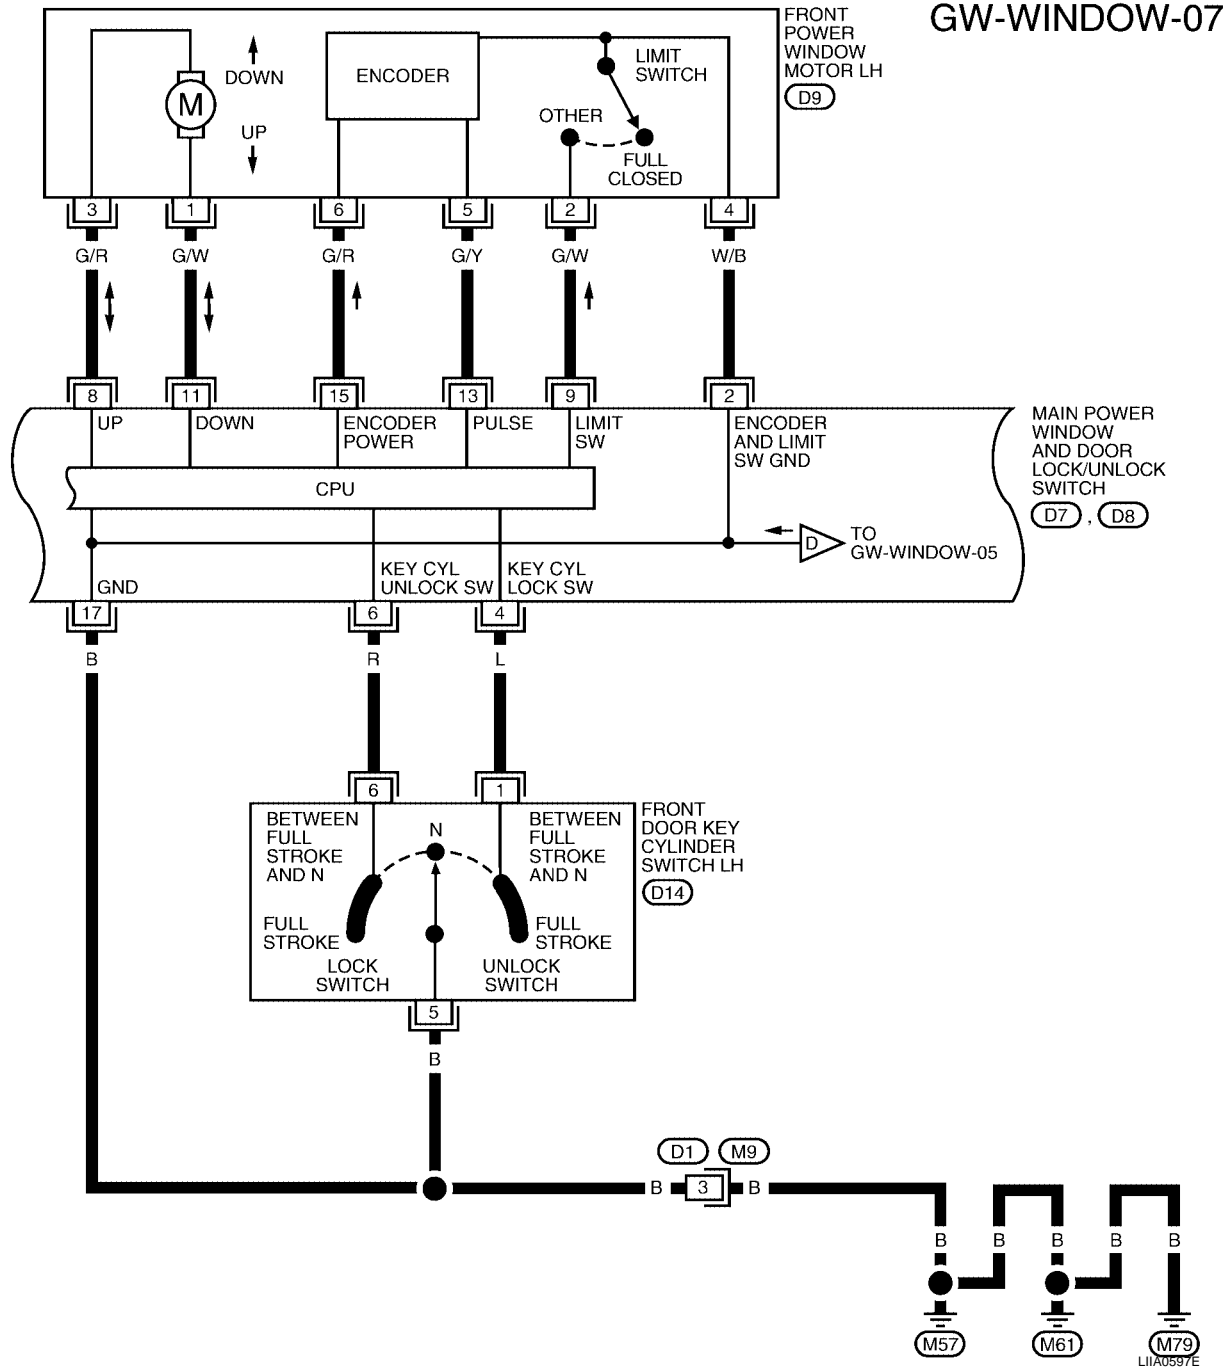

Test Item	Description
THEFT ALM TRG	The switch which triggered theft warning alarm is recorded. This mode is able to confirm and erase the record of theft warning alarm. The trigger data can be erased by touching “CLEAR” on CONSULT-II screen.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

EIS0015J

## Trouble Diagnoses PRELIMINARY CHECK

The system operation is canceled by turning ignition switch to "ACC" at any step between START and ARMED in the following flow chart.

For details of "Pattern A" and "Pattern B" vehicle security system settings, refer to [BL-67, "INITIAL CONDITION TO ACTIVATE THE SYSTEM"](#).

\*: Refer to [BL-95, "NVIS \(NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS\)"](#).

After performing preliminary check, go to symptom chart on next page.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## DOOR, HOOD AND TRUNK ROOM LAMP SWITCH CHECK

### Door Switch Check

#### 1. CHECK DOOR SWITCH INPUT SIGNAL

##### With CONSULT-II

Check door switches ("DOOR SW-ALL") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
DOOR SW-ALL	OFF

When any doors are open:  
**DOOR SW-ALL ON**

When all doors are closed:  
**DOOR SW-ALL OFF**

SEL323W

##### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminals 28 or 29 and ground.

Smart entrance control unit connector (M39)

	Terminals		Condition	Voltage [V]
	(+)	(-)		
Front door switch LH	29	Ground	Open	0
			Closed	Approx. 5
Other door switches	28	Ground	Open	0
			Closed	Approx. 5

WEL500

Refer to [BL-71, "FIG. 1"](#) .

#### OK or NG

- OK >> Door switch is OK. Check hood switch (if equipped), refer to [BL-82, "Hood Switch Check \(if equipped\)"](#) or check trunk room lamp switch, refer to [BL-84, "Trunk Room Lamp Switch Check"](#) .
- NG >> GO TO 2.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## 2. CHECK DOOR SWITCH

1. Disconnect door switch connector.
2. Check continuity between door switch terminals.

OK or NG

OK >> Check the following.

- Door switch ground circuit (Front, rear door) or door switch ground condition
- Harness for open or short between smart entrance control unit and door switch

NG >> Replace door switch.

## Hood Switch Check (if equipped)

### 1. CHECK HOOD SWITCH FITTING CONDITION

Check condition and installation of hood switch.

OK or NG

OK >> GO TO 2.

NG >> Adjust installation of hood switch or hood.

### 2. CHECK HOOD SWITCH INPUT SIGNAL

#### ① With CONSULT-II

Check hood switch ("HOOD SWITCH") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
HOOD SWITCH	OFF

When hood is open:  
**HOOD SWITCH ON**

When hood is closed:  
**HOOD SWITCH OFF**

SEL354W

#### ⊗ Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 27 and ground.

Smart entrance control unit connector (M39)

Voltage [V]:  
Engine hood is open.  
0  
Engine hood is closed.  
Approx. 5

LEL528

Refer to [BL-72, "FIG. 2"](#) .

OK or NG

OK >> Hood switch is OK, and go to trunk room lamp switch check.

NG >> GO TO 3.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## 3. CHECK HOOD SWITCH

1. Disconnect hood switch connector.
2. Check continuity between hood switch terminals + and -.

### OK or NG

OK >> Check the following.

- Hood switch ground circuit
- Harness for open or short between smart entrance control unit and hood switch

NG >> Replace hood switch.

## Trunk Room Lamp Switch Check

### 1. CHECK TRUNK ROOM LAMP SWITCH INPUT SIGNAL

#### ④ With CONSULT-II

Check trunk room lamp switch ("TRUNK SW"), in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
TRUNK SW	OFF

When trunk lid is open:  
**TRUNK SW ON**

When trunk lid is closed:  
**TRUNK SW OFF**

SEL355W

#### ⊗ Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 38 and ground.

Smart entrance control unit connector (M39)

Voltage [V]:  
Trunk lid is open.  
Approx. 0  
Trunk lid is closed.  
Approx. 12

LEL530

Refer to [BL-72, "FIG. 2"](#).

OK or NG

- OK >> Trunk room lamp switch is OK.
- NG >> GO TO 2.

### 2. CHECK TRUNK ROOM LAMP SWITCH

1. Disconnect trunk room lamp switch connector.
2. Check continuity between trunk room lamp switch terminals + and -.

Trunk room lamp switch connector (B48)

Continuity:  
Condition: Closed  
No  
Condition: Open  
Yes

LEL531

OK or NG

- OK >> Check the following.
  - Trunk room lamp switch ground circuit
  - Harness for open or short between smart entrance control unit and trunk room lamp switch
- NG >> Replace trunk room lamp switch.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

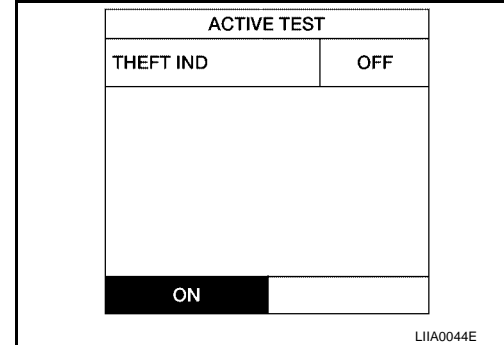

## SECURITY INDICATOR LAMP CHECK

### 1. CHECK INDICATOR LAMP OPERATION

#### ④ With CONSULT-II

1. Select "ACTIVE TEST" in "THEFT WAR ALM" with CONSULT-II.
2. Select "THEFT IND" and touch "ON".

Security indicator lamp should illuminate.

#### ⊗ Without CONSULT-II

1. Disconnect smart entrance control unit harness connector.
2. Check voltage between smart entrance control unit harness connector terminal 31 and ground.

Refer to [BL-71, "FIG. 1"](#) .

OK or NG

- OK >> Security indicator lamp is OK.
- NG >> GO TO 2.

### 2. CHECK SECURITY INDICATOR LAMP

Refer to [BL-71, "FIG. 1"](#) .

OK or NG

- OK >> GO TO 3.
- NG >> Replace security indicator lamp.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## 3. CHECK POWER SUPPLY CIRCUIT FOR SECURITY INDICATOR LAMP

1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp terminal 1 and ground.

Does battery voltage exist?

- Yes >> Check harness for open or short between security indicator lamp and smart entrance control unit.
- No >> Check the following.
- 10A fuse [No. 12, located in fuse block (J/B)]
  - Harness for open or short between security indicator lamp and fuse

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## FRONT DOOR UNLOCK SENSOR CHECK

### 1. CHECK FRONT DOOR UNLOCK SENSOR INPUT SIGNAL

#### With CONSULT-II

Check front unlock sensor ("LOCK SIG DR", "LOCK SIG AS") in "DATA MONITOR" with CONSULT-II.

DATA MONITOR	
MONITOR	
LOCK SIG DR	OFF
LOCK SIG AS	OFF

When door is locked:  
**LOCK SIG DR OFF**  
**LOCK SIG AS OFF**

When door is unlocked:  
**LOCK SIG DR ON**  
**LOCK SIG AS ON**

SEL357W

#### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 36 or 37 and ground.

Smart entrance control unit connector (M39)

	Terminals		Condition	Voltage [V]
	(+)	(-)		
Front door LH	36	Ground	Locked	Approx. 5
			Unlocked	0
Front door RH	37	Ground	Locked	Approx. 5
			Unlocked	0

LEL534

Refer to [BL-73, "FIG. 3"](#) .

OK or NG

- OK >> Door unlock sensor is OK.
- NG >> GO TO 2.

### 2. CHECK FRONT DOOR UNLOCK SENSOR

1. Disconnect door lock actuator connector.
2. Check continuity between door lock actuator terminals.

Front door lock actuator connector

LH: (D7)

RH: (D109)

**Continuity:**

Condition: Locked  
No

Condition: Unlocked  
Yes

LEL535

OK or NG

- OK >> Check the following.
  - Door unlock sensor ground circuit
  - Harness for open or short between smart entrance control unit and door unlock sensor
- NG >> Replace door lock actuator.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## DOOR KEY CYLINDER SWITCH CHECK

### 1. CHECK DOOR KEY CYLINDER SWITCH INPUT SIGNAL (LOCK/UNLOCK SIGNAL)

#### Ⓜ With CONSULT-II

Check front door key cylinder switch ("KEY CYL LK-SW"/"KEY CYL UN-SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
KEY CYL LK-SW	OFF
KEY CYL UN-SW	OFF

When key inserted in front key cylinder is turned to LOCK:  
**KEY CYL LK-SW ON**

When key inserted in front key cylinder is turned to UNLOCK:  
**KEY CYL UN-SW ON**

SEL342W

#### ⊗ Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 30 or 41 and ground.

Smart entrance control unit connector (M39)

Terminals		Key position	Voltage [V]
(+)	(-)		
41	Ground	Neutral/Unlock	Approx. 5
		Lock	0
30	Ground	Neutral/Lock	Approx. 5
		Unlock	0

WEL502

Refer to [BL-73, "FIG. 3"](#).

#### OK or NG

- OK >> Door key cylinder switch is OK.
- NG >> GO TO 2.

### 2. CHECK DOOR KEY CYLINDER SWITCH

1. Disconnect door key cylinder switch connector.
2. Check continuity between door key cylinder switch connector D8 terminals.

Front door key cylinder switch LH connector

Terminals	Key position	Continuity
Ⓛ - ⓔ	Neutral/Unlock	No
	Lock	Yes
Ⓤ - ⓔ	Neutral/Lock	No
	Unlock	Yes

ⓔ : Ground terminal  
Ⓤ : Door unlock switch terminal  
Ⓛ : Door lock switch terminal

LEL101A

#### OK or NG

- OK >> Check the following.
  - Door key cylinder switch ground circuit
  - Harness for open or short between smart entrance control unit and door key cylinder switch
- NG >> Replace door key cylinder switch.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## TRUNK LID KEY CYLINDER SWITCH CHECK

### 1. CHECK TRUNK LID KEY CYLINDER SWITCH INPUT SIGNAL (UNLOCK SIGNAL)

#### With CONSULT-II

Check trunk lid key cylinder switch ("TRUNK KEY SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
TRUNK KEY SW	OFF

When key in key cylinder is at Neutral position:  
**TRUNK KEY SW OFF**

When key in key cylinder is at Unlock position:  
**TRUNK KEY SW ON**

SEL358W

#### Without CONSULT-II

Check voltage between smart entrance control unit harness connector terminal 42 and ground.

Terminals		Key position	Voltage [V]
(+)	(-)		
42	Ground	Neutral	Approx. 5
		Unlock	0

LEL536

Refer to [BL-72, "FIG. 2"](#) .

#### OK or NG

- OK >> Trunk lid key cylinder switch is OK.
- NG >> GO TO 2.

### 2. CHECK TRUNK LID KEY CYLINDER SWITCH

1. Disconnect trunk lid key cylinder switch connector.
2. Check continuity between trunk lid key cylinder switch terminals.

Key position	Continuity
Neutral	No
Unlock	Yes

LEL537

#### OK or NG

- OK >> Check the following.
  - Trunk lid key cylinder switch ground circuit
  - Harness for open or short between smart entrance control unit and trunk lid key cylinder switch
- NG >> Replace trunk lid key cylinder switch.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## DOOR LOCK/UNLOCK SWITCH CHECK

### 1. CHECK DOOR LOCK/UNLOCK SWITCH INPUT SIGNAL

#### Ⓟ With CONSULT-II

Check door lock/unlock switch ("LOCK SW DR/AS"/"UNLK SW DR/AS") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
LOCK SW DR/AS	OFF
UNLK SW DR/AS	OFF

When lock/unlock switch is turned to LOCK:  
**LOCK SW DR/AS ON**

When lock/unlock switch is turned to UNLOCK:  
**UNLK SW DR/AS ON**

SEL341W

#### ⊗ Without CONSULT-II

1. Disconnect smart entrance control unit harness connector.
2. Check continuity between smart entrance control unit harness connector terminal 23 or 35 and ground.

Smart entrance control unit connector (M39)

DISCONNECT

Terminals	Door lock/unlock switch (LH or RH) condition	Continuity

## HORN AND HEADLAMP ALARM CHECK

### 1. CHECK BASE HORN SYSTEM OPERATION

Operate vehicle horn.

OK or NG

OK >> GO TO 2.

NG >> Check base horn system. Refer to [WW-9, "Wiring Diagram — HORN —"](#).

### 2. CHECK HORN AND HEADLAMP ALARM OPERATION

#### Ⓟ With CONSULT-II

1. Select "ACTIVE TEST" in "THEFT WAR ALM" with CONSULT-II.

2. Select "THEFT WAR ALM" and touch "ON".

#### ⊗ Without CONSULT-II

1. Disconnect smart entrance control unit harness connector.

2. Apply ground to smart entrance control unit harness connector terminal 4.

Refer to [BL-74, "FIG. 4"](#).

OK or NG

OK >> Horn and headlamp alarm is OK.

NG >> GO TO 3.

### 3. CHECK VEHICLE SECURITY LAMP RELAY

Check vehicle security lamp relay. Refer to [BL-94, "VEHICLE SECURITY LAMP RELAY"](#).

OK or NG

OK >> GO TO 4.

NG >> Replace relay.

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

## 4. CHECK POWER SUPPLY FOR VEHICLE SECURITY LAMP RELAY

1. Disconnect vehicle security lamp relay connector.
2. Check voltage between vehicle security lamp relay connector E43 terminal 1 (G/R) and ground.

Does battery voltage exist?

Yes >> GO TO 5.

No >> Check the following.

- 10A fuse (No. 35 located in the fuse and fusible link box)
- Harness for open or short between relay and fuse

## 5. CHECK VEHICLE SECURITY LAMP RELAY CIRCUIT

1. Check voltage between terminals of vehicle security lamp relay connector E43.

OK or NG

OK >> Check the following.

- Harness for open between smart entrance control unit terminal 4 and relay
- Harness for open or short between smart entrance control unit terminal 4 and horn relay
- Diode-4 for open
- Replace smart entrance control unit

NG >> Check the following.

- Harness for open or short between vehicle security lamp relay and fuses
- Harness for open or short between vehicle security lamp relay and headlamp system

# VEHICLE SECURITY (THEFT WARNING) SYSTEM

EIS0015K

## Electrical Components Inspection VEHICLE SECURITY LAMP RELAY

Check continuity between terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
No current supply	No

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

EIS0015M

## System Description

NVIS (Nissan Vehicle Immobilizer System—NATS) has the following immobilizer functions:

- Since only NVIS (NATS) ignition keys, whose ID nos. have been registered into the ECM and IMMU of NVIS (NATS), allow the engine to run, operation of a stolen vehicle without a NVIS (NATS) registered key is prevented by NVIS (NATS).  
That is to say, NVIS (NATS) will immobilize the engine if someone tries to start it without the registered key of NVIS (NATS).
- All of the originally supplied ignition key IDs have been NVIS (NATS) registered.  
If requested by the vehicle owner, a maximum of five key IDs can be registered into the NVIS (NATS) components.
- The security indicator lamp blinks when the ignition switch is in “OFF” or “ACC” position. Therefore, NVIS (NATS) warns outsiders that the vehicle is equipped with the system.
- When NVIS (NATS) detects trouble, the security indicator lamp lights up while ignition key is in the “ON” position.
- NVIS (NATS) trouble diagnoses, system initialization and additional registration for other NVIS (NATS) ignition key IDs must be carried out using CONSULT-II hardware and CONSULT-II NVIS (NATS) software. Regarding the procedures for NVIS (NATS) initialization and NVIS (NATS) ignition key ID registration, refer to CONSULT-II OPERATION MANUAL IVIS/NVIS.
- **When servicing a malfunction of the NVIS (indicated by lighting up of Security Indicator Lamp) or registering another NVIS ignition key ID no., it is necessary to re-register original key identification.**

Therefore, be sure to receive ALL KEYS from vehicle owner.

## System Composition

EIS0015N

The immobilizer function of the NVIS (NATS) consists of the following:

- NVIS (NATS) ignition key
- NVIS (NATS) immobilizer control unit (IMMU) located in the ignition key cylinder
- ECM
- Security indicator lamp

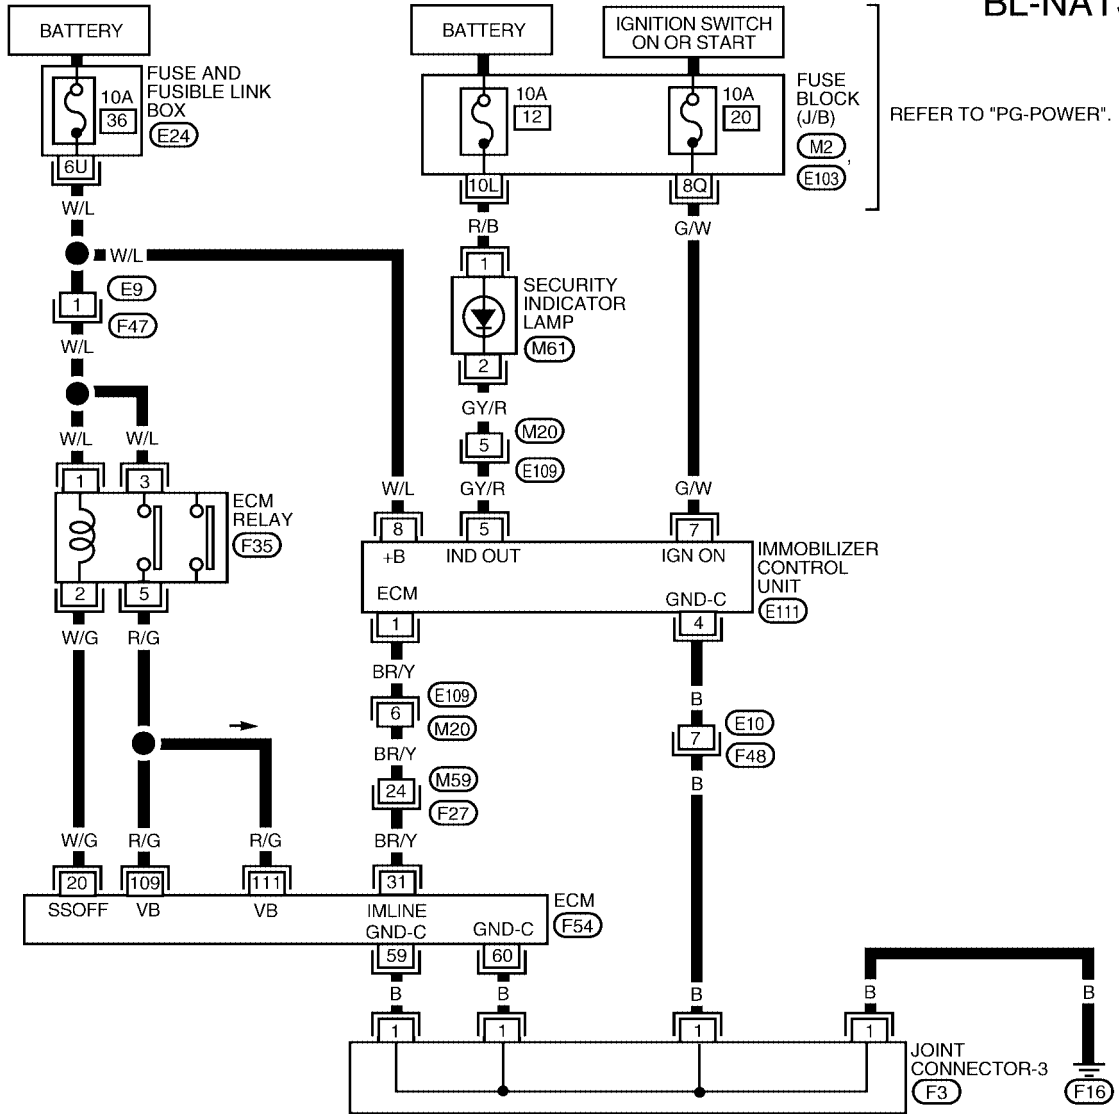

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## CONSULT-II CONSULT-II INSPECTION PROCEDURE

EIS0015Q

1. Turn ignition switch OFF.

2. Connect "CONSULT-II" to data link connector.
3. Insert NVIS (NATS) program card into CONSULT-II.

**Program card : NATS (AEN02C)**

4. Turn ignition switch ON.
5. Touch "START".
6. Select "NATS V.5.0".

## DIAGNOSTIC SYSTEM DIAGRAM

## DIAGNOSTIC PROCEDURE 1

### Self-diagnostic results:

#### “ECM INT CIRC-IMMU” displayed on CONSULT-II screen

1. Confirm SELF-DIAGNOSTIC RESULTS “ECM INT CIRC-IMMU” displayed on CONSULT-II screen. Ref. part No. B.
2. Replace ECM.
3. Perform initialization with CONSULT-II.  
For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

SELF DIAGNOSIS	
DTC RESULTS	TIME
ECM INT CIRC-IMMU	0

SEL314W

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 2

### Self-diagnostic results:

“CHAIN OF ECM-IMMU” displayed on CONSULT-II screen

## 1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF ECM-IMMU” displayed on CONSULT-II screen.

### NOTE:

In rare cases, “CHAIN OF ECM-IMMU” might be stored during key registration procedure, even if the system is not malfunctioning.

Is CONSULT-II screen displayed as shown?

Yes >> GO TO 2.

No >> GO TO [BL-102, "SYMPTOM MATRIX CHART 1 \(SELF-DIAGNOSIS RELATED ITEM\)"](#).

SELF DIAGNOSIS	
DTC RESULTS	TIME
CHAIN OF ECM-IMMU	0

SEL292W

## 2. CHECK POWER SUPPLY CIRCUIT FOR NVIS (NATS) IMMU

1. Disconnect NVIS (NATS) IMMU connector.
2. Check voltage between terminal 8 of NVIS (NATS) IMMU and ground with CONSULT-II or tester.

### OK or NG

OK >> GO TO 3.

NG >> Check the following

- 10A fuse (No. 36, located in the fuse and fusible link box)
  - Harness for open or short between fuse and NVIS (NATS) IMMU connector
- Ref. Part No. C1**

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## 3. CHECK IGN SW. ON SIGNAL

1. Turn ignition switch ON.
2. Check voltage between NVIS (NATS) IMMU harness connector E111 terminal 7 (BR) (QG18DE) or (G/W) (QR25DE) and ground with CONSULT-II or tester.

**Battery voltage should exist.**

OK or NG

OK >> GO TO 4.

NG >> Check the following

- 10A fuse [No. 20, located in the fuse block (J/B)]
  - Harness for open or short between fuse and NVIS (NATS) IMMU connector
- Ref. part No. C2**

## 4. CHECK GROUND CIRCUIT FOR NVIS (NATS) IMMU

1. Turn ignition switch OFF.
2. Check harness continuity between NVIS (NATS) IMMU terminal 4 and ground.

OK or NG

OK >> GO TO 5.

NG >> Repair harness. **Ref. part No. C3**

## 5. CHECK COMMUNICATION LINE OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check harness continuity between ECM harness connector F22 (QG18DE) or F54 (QR25DE) terminal 116 (QG18DE) or 31 (QR25DE) (BR/Y) and NVIS (NATS) IMMU connector E111 terminal 1 (BR/Y).

**Continuity should exist.**

OK or NG

OK >> GO TO 6.

NG >> ● Repair harness or connector.

- **Ref. part No. C4**

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## 6. CHECK COMMUNICATION LINE BATTERY SHORT CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between ECM harness connector F22 (QG18DE) or F54 (QR25DE) terminal 116 (QG18DE) or 31 (QR25DE) (BR/Y) or NVIS (NATS) IMMU harness connector E111 terminal 1 (BR/Y) and ground.

**Voltage** : **0V**

OK or NG

OK >> GO TO 7.

NG >> ● Communication line is short-circuited with battery voltage line or ignition switch ON line.

- Repair harness or connectors.
- **Ref. part No. C4**

## 7. CHECK COMMUNICATION LINE GROUND SHORT CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between ECM harness connector F22 (QG18DE) or F54 (QR25DE) terminal 116 (QG18DE) or 31 (QR25DE) (BR/Y) or NVIS (NATS) IMMU connector E111 terminal 1 (BR/Y) and ground.

**Continuity should not exist.**

OK or NG

OK >> GO TO 8.

NG >> ● Communication line is short-circuited with ground line.

- Repair harness or connectors.
- **Ref. part No. C4**

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## 8. SIGNAL FROM ECM TO NVIS (NATS) IMMU CHECK

1. Check the signal between ECM terminal 116 and ground with CONSULT-II or oscilloscope when ignition switch is turned "ON".
2. Make sure signals which are shown in the figure below can be detected during 750 msec. just after ignition switch is turned "ON".

### OK or NG

- OK >>
- NVIS (NATS) IMMU is malfunctioning.
  - Replace NVIS (NATS) IMMU. **Ref. part No. A**
  - Perform initialization with CONSULT-II.
  - For the operation of initialization, refer to "CONSULT-II OPERATION MANUAL IVIS/NVIS".
- NG >>
- ECM is malfunctioning.
  - Replace ECM. **Ref. part No. B**
  - Perform initialization with CONSULT-II.
  - For the operation of initialization, refer to "CONSULT-II OPERATION MANUAL IVIS/NVIS".

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 3

Self-diagnostic results:

“DIFFERENCE OF KEY” displayed on CONSULT-II screen

### 1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “DIFFERENCE OF KEY” displayed on CONSULT-II screen.

SELF DIAGNOSIS	
DTC RESULTS	TIME
DIFFERENCE OF KEY	0

SEL293W

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.

No >> GO TO SYMPTOM MATRIX CHART 1.

### 2. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II. Re-register all NVIS (NATS) ignition key IDs.

For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

IMMU INITIALIZATION
INITIALIZATION FAIL
THEN IGN KEY SW 'OFF' AND 'ON', AFTER CONFIRMING SELF-DIAG AND PASSWORD, PERFORM C/U INITIALIZATION AGAIN.

SEL297W

#### NOTE:

If the initialization is not completed or fails, CONSULT-II shows above message on the screen.

Can the system be initialized?

Yes >> ● Start engine. (END)

- (Ignition key ID was unregistered. **Ref. part No. D**)

No >> ● NVIS (NATS) IMMU is malfunctioning.

- Replace NVIS (NATS) IMMU. **Ref. part No. A**
- Perform initialization with CONSULT-II.
- For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 4

Self-diagnostic results:

“CHAIN OF IMMU-KEY” displayed on CONSULT-II screen

### 1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF IMMU-KEY” displayed on CONSULT-II screen.

SELF DIAGNOSIS	
DTC RESULTS	TIME
CHAIN OF IMMU-KEY	0

SEL294W

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.

No >> GO TO [BL-102, "SYMPTOM MATRIX CHART 1 \(SELF-DIAGNOSIS RELATED ITEM\)"](#) .

### 2. CHECK NVIS (NATS) IGNITION KEY ID CHIP

Start engine with another registered NVIS (NATS) ignition key.

Does the engine start?

Yes >> ● Ignition key ID chip is malfunctioning.

● Replace the ignition key.

● **Ref. part No. E**

● Perform initialization with CONSULT-II.

● For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

No >> GO TO 3.

### 3. CHECK NVIS (NATS) IMMU INSTALLATION

Check NVIS (NATS) IMMU installation.

Refer to [BL-114, "How to Replace NVIS \(NATS\) IMMU"](#) .

OK or NG

OK >> ● NVIS (NATS) IMMU is malfunctioning.

● Replace NVIS (NATS) IMMU. **Ref. part No. A**

● Perform initialization with CONSULT-II.

● For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

NG >> Reinstall NVIS (NATS) IMMU correctly.

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 5

### Self-diagnostic results:

“ID DISCORD, IMM-ECM” displayed on CONSULT-II screen

## 1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “ID DISCORD, IMM-ECM” displayed on CONSULT-II screen.

SELF DIAGNOSIS	
DTC RESULTS	TIME
ID DISCORD, IMM-ECM	0

SEL298W

### NOTE:

“ID DISCORD IMM-ECM”:

Registered ID of NVIS (NATS) IMMU is in discord with that of ECM.

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.

No >> GO TO [BL-102. "SYMPTOM MATRIX CHART 1 \(SELF-DIAGNOSIS RELATED ITEM\)"](#) .

## 2. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II. Re-register all NVIS (NATS) ignition key IDs.

For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

IMMU INITIALIZATION
INITIALIZATION FAIL
THEN IGN KEY SW 'OFF' AND 'ON', AFTER CONFIRMING SELF-DIAG AND PASSWORD, PERFORM C/U INITIALIZATION AGAIN.

SEL297W

### NOTE:

If the initialization is not completed or fails, CONSULT-II shows above message on the screen.

Can the system be initialized?

Yes >> ● Start engine. (END)

- (System initialization had not been completed. **Ref. part No. F**)

No >> ● ECM is malfunctioning.

- Replace ECM. **Ref. part No. F**
- Perform initialization with CONSULT-II.
- For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 6

### “SECURITY INDICATOR LAMP DOES NOT LIGHT UP”

#### 1. CHECK FUSE

Check 10A fuse [No. 12, located in the fuse block (J/B)].

Is 10A fuse OK?

- Yes >> GO TO 2.
- No >> Replace fuse.

#### 2. CHECK SECURITY INDICATOR LAMP

1. Install 10A fuse.
2. Perform initialization with CONSULT-II.  
For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.
3. Turn ignition switch OFF.
4. Start engine and turn ignition switch OFF.
5. Check the security indicator lamp lighting.

**Security indicator lamp should light up.**

OK or NG

- OK >> INSPECTION END
- NG >> GO TO 3.

#### 3. CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp connector terminal 1 and ground.

OK or NG

- OK >> GO TO 4.
- NG >> Check harness for open or short between fuse and security indicator lamp.

#### 4. CHECK SECURITY INDICATOR LAMP

Check security indicator lamp.

Is security indicator lamp OK?

- Yes >> GO TO 5.
- No >> Replace security indicator lamp.

## NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

### 5. CHECK NVIS (NATS) IMMU FUNCTION

1. Connect NVIS (NATS) IMMU connector.
2. Disconnect security indicator lamp connector.
3. Check continuity between NVIS (NATS) IMMU terminal 5 and ground.

#### OK or NG

- OK >> Check harness for open or short between security indicator lamp and NVIS (NATS) IMMU.
- NG >> ● NVIS (NATS) IMMU is malfunctioning.
- Replace NVIS (NATS) IMMU.
  - Perform initialization with CONSULT-II.
  - For initialization, refer to “CONSULT-II OPERATION MANUAL IVIS/NVIS”.

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## DIAGNOSTIC PROCEDURE 7

Self-diagnostic results:

“LOCK MODE” displayed on CONSULT-II screen

### 1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “LOCK MODE” is displayed on CONSULT-II screen.

SELF DIAGNOSIS	
DTC RESULTS	TIME
LOCK MODE	0

SEL295W

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.

No >> GO TO [BL-102, "SYMPTOM MATRIX CHART 1 \(SELF-DIAGNOSIS RELATED ITEM\)"](#) .

### 2. ESCAPE FROM LOCK MODE

1. Turn ignition switch OFF.
2. Turn ignition switch ON with registered key. (Do not start engine.) Wait 5 seconds.
3. Return the key to OFF position.
4. Repeat steps 2 and 3 twice (total of three cycles).
5. Start the engine.

Does engine start?

Yes >> ● System is OK.

- (Now system is escaped from “LOCK MODE”.)

No >> GO TO 3.

### 3. CHECK NVIS (NATS) IMMU INSTALLATION

Check NVIS (NATS) IMMU installation. Refer to [BL-114, "How to Replace NVIS \(NATS\) IMMU"](#) .

OK or NG

OK >> GO TO 4.

NG >> Reinstall NVIS (NATS) IMMU correctly.

# NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM — NATS)

## 4. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II.

For initialization, refer to "CONSULT-II OPERATION MANUAL IVIS/NVIS".

### NOTE:

If the initialization is not completed or fails, CONSULT-II shows the above message on the screen.

Can the system be initialized?

Yes >> System is OK.

No >> Check "CHAIN OF IMMU-KEY". Refer to [BL-109, "DIAGNOSTIC PROCEDURE 4"](#).

## How to Replace NVIS (NATS) IMMU

EIS0015S

### NOTE:

- If NVIS (NATS) IMMU is not installed correctly, NVIS (NATS) system will not operate properly and SELF-DIAG RESULTS on CONSULT-II screen will show "LOCK MODE" or "CHAIN OF IMMU-KEY".

# BODY (ALIGNMENT)

PFP:74312

## BODY (ALIGNMENT)

### Alignment

EIS0015T

- All dimensions indicated in figures are actual ones.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (\*) indicates the measuring point value is the same on both sides.
- The coordinates of the measurement points are the distances measured from the standard line of "X", "Y" and "Z".

# PRECAUTIONS

## PRECAUTIONS

PFP:00001

### Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EFS0022M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

#### **WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

### Precautions for Brake System

EFS0022N

- Recommended fluid is brake fluid “DOT 3”.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.
- To clean or wash all parts of master cylinder, disc brake caliper and wheel cylinder, use clean brake fluid.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use flare nut wrench when removing and installing brake tube.
- Always torque brake lines when installing.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage. Refer to [BR-6, "Brake Burnishing Procedure"](#).

#### **WARNING:**

- Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

### Wiring Diagrams and Trouble Diagnosis

EFS0022O

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#)

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

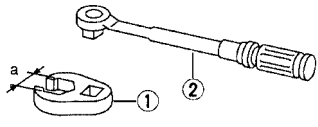

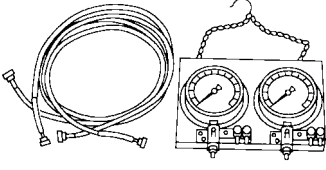

# PREPARATION

## PREPARATION

PFP:00002

### Commercial Service Tools

EFS0022P

Tool name	Description
<p>1 Flare nut crowfoot 2 Torque wrench</p>  <p>S-NT360</p>	<p>Removing and installing brake piping <b>a: 10 mm (0.39 in)</b></p>
<p>Brake fluid pressure gauge</p>  <p>NT151</p>	<p>Measuring brake fluid pressure</p>

## ON-VEHICLE SERVICE

PFP:00000

### Checking Brake Fluid Level

EF50022R

- Check fluid level in reservoir tank. It should be between the "Max" and "Min" lines on reservoir tank.
- If fluid level is extremely low, check brake system for leaks.
- Release parking brake lever and see if brake warning lamp goes off. If not, check brake system for leaks.

### Checking Brake Line

EF50022S

#### CAUTION:

If leakage occurs around joints, retighten or, if necessary, replace damaged parts.

1. Check brake lines (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.
2. Check for oil leakage by fully depressing brake pedal while engine is running.

### Changing Brake Fluid

EF50022T

#### CAUTION:

- Refill with new brake fluid "DOT 3".
- Always keep fluid level higher than minimum line on reservoir tank.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

1. Clean inside of reservoir tank, and refill with new brake fluid.
2. Connect a vinyl tube to each air bleeder valve.
3. Drain brake fluid from each air bleeder valve by depressing brake pedal.
4. Refill until brake fluid comes out of each air bleeder valve. Use same procedure as in bleeding hydraulic system to refill brake fluid. Refer to [BR-7, "Bleeding Brake System"](#).

### Brake Burnishing Procedure

EF50022U

Burnish the brake contact surfaces according to the following procedure after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.

#### CAUTION:

Only perform this procedure under safe road and traffic conditions. Use extreme caution.

1. Drive the vehicle on a straight smooth road at 50 km/h (31 MPH).

## ON-VEHICLE SERVICE

2. Use medium brake pedal/foot effort to bring the vehicle to a complete stop from 50 km/h (31 MPH). Adjust brake pedal/foot pressure so that vehicle stopping time equals 3 to 5 seconds.
3. To cool the brake system, drive the vehicle at 50 km/h (31 MPH) for 1 minute without stopping.
4. Repeat steps 1 to 3, 10 times or more to complete the burnishing procedure.

### Bleeding Brake System

EFS0022V

#### CAUTION:

- Carefully monitor brake fluid level at master cylinder during bleeding operation.
- Fill reservoir with new brake fluid "DOT 3". Make sure it is full at all times while bleeding air out of system.
- Place a container under master cylinder to avoid spillage of brake fluid.
- For models with ABS, turn ignition switch OFF and disconnect ABS actuator and electric unit connectors or battery ground cable.
- Bleed air in the following order.  
Right rear brake → Left front brake → Left rear brake → Right front brake

1. Connect a transparent vinyl tube to air bleeder valve.
2. Fully depress brake pedal several times.
3. With brake pedal depressed, open air bleeder valve to release air.
4. Close air bleeder valve.
5. Release brake pedal slowly.
6. Repeat steps 2. through 5. until clear brake fluid comes out of air bleeder valve.
7. Tighten air bleeder valve to specification.

#### Air bleeder valve

Front and rear disc brake : 7 - 9 N·m (0.7 - 0.9 kg·m, 61 - 78 in·lb)

# BRAKE HYDRAULIC LINE

PFP:46210

## BRAKE HYDRAULIC LINE

### Hydraulic Circuit

EFS0022W

Without anti-lock brake system  
(Models with dual proportioning valve built into master cylinder)  
(built-in type)

With anti-lock brake system

WBR074

## Removal

EFS0022X

### CAUTION:

- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- All hoses must be free from excessive bending, twisting and pulling.

# BRAKE HYDRAULIC LINE

1. Connect vinyl tube to air bleeder valve.
2. Drain brake fluid from each air bleeder valve by depressing brake pedal.
3. Remove flare nut connecting brake tube and hose, then withdraw lock spring.
4. Cover openings to prevent entrance of dirt whenever disconnecting brake line.

EFS0022Y

EFS0022Z

## Inspection

Check brake lines (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.

## Installation

1. Tighten all flare nuts and connecting bolts.

### Specification

**Flare nut : 15 - 18 N-m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)**

**Connecting bolt : 17 - 20 N-m (1.7 - 2.0 kg-m, 12 - 14 ft-lb)**

2. Refill until new brake fluid comes out of each air bleeder valve.

### CAUTION:

- Refill with new brake fluid "DOT 3".
  - Never reuse drained brake fluid.
3. Bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#).

A  
B  
C  
D

# DUAL PROPORTIONING VALVE

PFP:46400

EFS00230

## DUAL PROPORTIONING VALVE

### Inspection

#### CAUTION:

- Carefully monitor brake fluid level at master cylinder.
  - Use new brake fluid "DOT 3".
  - Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on paint areas, wash it away with water immediately.
1. Connect Tool to air bleeders of front and rear brakes on either LH and RH side.
  2. Bleed air from the Tool.
  3. Check fluid pressure by depressing brake pedal.

Unit: kPa (kg/cm<sup>2</sup> , psi)

Applied model	All QG18DE	QR25DE without ABS	QR25DE with ABS
Applied pressure (Front brake)	7,355 (75, 1,067)	6,374 (65, 924)	6,374 (65, 924)
Output pressure (Rear brake)	5,099 - 5,492 (52 - 56, 740 - 796)	3,775 - 4,168 (38 - 42, 548 - 604)	4,119 - 4,511 (42 - 46, 597 - 654)

- If output pressure is out of specification, replace dual proportioning valve.
4. Bleed air after disconnecting the Tool. Refer to [BR-7, "Bleeding Brake System"](#) .

# BRAKE PEDAL AND BRACKET

## BRAKE PEDAL AND BRACKET

PFP:46501

### Removal and Installation

EFS00231

SEC. 465•470

### Inspection

EFS00232

- Check brake pedal for following items:
  - Brake pedal bend
  - Clevis pin deformation
  - Crack of any welded portion
  - Crack or deformation of clevis pin stopper

A  
B  
C  
D  
E  
BR  
G  
H  
I  
J  
K  
L  
M

# BRAKE PEDAL AND BRACKET

EFS00233

## Adjustment BRAKE PEDAL HEIGHT

- Check brake pedal free height from metal panel and adjust if necessary.

- H : Free height**  
Refer to [BR-35, "Brake Pedal"](#) .
- D : Depressed height**  
90 mm (3.54 in)  
Under force of 490 N (50 kg, 110 lb)  
with engine running
- A : Pedal free play at pedal pad**  
1.0 - 3.0 mm (0.039 - 0.118 in)

1. Loosen lock nut and adjust pedal free height by turning brake booster input rod. Then tighten lock nut.
2. Check pedal free play.  
**Make sure that stop lamps go off when pedal is released.**
3. Check brake pedal's depressed height while engine is running. If lower than specification, check brake system for leaks, accumulation of air or any damage to components (master cylinder, wheel cylinder, etc.); then make necessary repairs.

## STOP LAMP SWITCH AND ASCD CANCEL SWITCH CLEARANCE

1. Twist and pull to remove switch.
2. Pull up on brake pedal pad and hold.
3. Insert switch into retainer until switch plunger is completely depressed.
4. Turn the switch until it locks into place in the brake pedal bracket.

### NOTE:

When turning the switch to lock into place, the switch backs off the stopper to the correct clearance automatically.

5. Release the brake pedal pad.

# MASTER CYLINDER

PFP:46010

EFS00234

## MASTER CYLINDER

### Removal

- |                             |                                  |                                       |
|-----------------------------|----------------------------------|---------------------------------------|
| 1. Reservoir cap            | 2. Oil filter                    | 3. Float                              |
| 4. Reservoir tank           | 5. Seal                          | 6. Cylinder body                      |
| 7. Spring pin (with ABS)    | 8. Piston stopper pin (with ABS) | 9. Secondary piston assembly          |
| 10. Primary piston assembly | 11. Stopper cap                  | 12. Proportioning valve (without ABS) |

### CAUTION:

Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.

1. Connect a vinyl tube to air bleeder valve.
2. Drain brake fluid from each air bleeder valve, depressing brake pedal to empty fluid from master cylinder.
3. Remove brake line flare nuts from master cylinder.
4. Remove master cylinder mounting nuts.

### Disassembly

EFS00235

1. Bend claws of stopper cap outward and remove stopper cap.

# MASTER CYLINDER

2. Drive out spring pin from cylinder body (with ABS).
3. Draw out reservoir tank and seals.

4. Remove piston stopper pin while piston is pushed into cylinder (with ABS).
5. Remove piston assemblies.
  - If it is difficult to remove secondary piston assembly, gradually apply compressed air through fluid outlet.

## Inspection

Check for the following items.

**Replace any part if damaged.**

**Master cylinder:**

- Pin holes or scratches on inner wall.

**Piston:**

- Deformation of or scratches on piston cups.

## Assembly

1. Insert secondary piston assembly. Then insert primary piston assembly.
  - Pay attention to alignment of secondary piston slit with valve stopper mounting hole of cylinder body (with ABS).

# MASTER CYLINDER

2. Install piston stopper pin while piston is pushed into cylinder (with ABS).
3. Push reservoir tank seals and reservoir tank into cylinder body.
4. Install spring pin (with ABS).

5. Install stopper cap.
  - **Before installing stopper cap, ensure that claws are bent inward.**

## Installation

1. Place master cylinder onto brake booster and secure mounting nuts lightly.
2. Tighten master cylinder mounting nuts.

**Master cylinder : 12 - 15 N·m (1.2 - 1.5 kg-m, 9 - 11 ft-lb)**

3. Fill reservoir tank with new brake fluid "DOT 3".

### CAUTION:

- **Refill with new brake fluid "DOT 3".**
  - **Never reuse drained brake fluid.**
4. Plug all ports on master cylinder with fingers to prevent air suction while releasing brake pedal.
  5. Have driver depress brake pedal slowly several times until no air comes out of master cylinder.
  6. Fit brake lines to master cylinder.
  7. Tighten flare nuts.

**Flare nuts : 15 - 18 N·m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)**

8. Bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#) .

# BRAKE BOOSTER

## BRAKE BOOSTER

PFP:47200

### On-vehicle Service OPERATING CHECK

EFS00239

1. Stop engine and depress brake pedal several times. Check that pedal stroke does not change.
2. Depress brake pedal, then start engine. If pedal goes down slightly, operation is normal.

### AIRTIGHT CHECK

1. Start engine, and stop it after one or two minutes. Depress brake pedal several times slowly. The pedal should go further down the first time, and then it should gradually rise thereafter.
2. Depress brake pedal while engine is running, and stop engine with pedal depressed. The pedal stroke should not change after holding pedal down for **30 seconds**.

### Removal

EFS0023A

#### CAUTION:

- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- Be careful not to deform or bend brake lines, during removal of booster.

### Inspection

#### OUTPUT ROD LENGTH CHECK

1. Apply vacuum of  $-66.7$  kPa ( $-500$  mmHg,  $-19.69$  inHg) to brake booster with a hand vacuum pump.
2. Add preload of  $19.6$  N ( $2$  kg,  $4.4$  lb) to output rod.
3. Check output rod length.

**Specified length : 10.275 - 10.525 mm  
(0.4045 - 0.4144 in)**

# BRAKE BOOSTER

EFS0023C

## Installation

### CAUTION:

- Be careful not to deform or bend brake lines, during installation of booster.
- Replace clevis pin if damaged.
- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.
- Take care not to damage brake booster mounting bolt thread when installing. Due to the acute angle of installation, the threads can be damaged with the dash panel.

1. Before fitting booster, temporarily adjust clevis to dimension shown.
2. Fit booster, then secure mounting nuts (brake pedal bracket to master cylinder) lightly.
3. Connect brake pedal and booster input rod with clevis pin.
4. Install and tighten brake booster mounting nuts to specification.

**Brake booster : 13 - 16 N·m (1.3 - 1.6 kg·m, 9 - 12 ft·lb)**

5. Install master cylinder. Refer to [BR-15, "Installation"](#) .
6. Connect brake booster vacuum hose.
7. Adjust brake pedal height. Refer to [BR-12, "BRAKE PEDAL HEIGHT"](#) .
8. Bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#) .

# VACUUM HOSE

PFP:41920

## VACUUM HOSE

### Removal and Installation

EFS0023D

#### CAUTION:

When installing vacuum hoses, pay attention to the following points:

- Do not apply any oil or lubricants to vacuum hose with check valve.
- Insert vacuum tube into vacuum hose as shown.
- Install vacuum hose with the internal check valve oriented in the correct direction. The arrow on the hose should point to the engine connection.

EFS0023E

### Inspection

#### HOSES AND CONNECTORS

Check vacuum lines and connections for airtightness, improper attachment, chafing and deterioration.

#### CHECK VALVE

Check vacuum with a vacuum pump.

Connect to booster side	Vacuum should exist
Connect to engine side	Vacuum should not exist

# FRONT DISC BRAKE

PFP:41000

EFS0023F

## FRONT DISC BRAKE

### Component

- |                   |                       |                              |
|-------------------|-----------------------|------------------------------|
| 1. Main pin       | 2. Pin boot           | 3. Torque member fixing bolt |
| 4. Torque member  | 5. Shim cover         | 6. Inner shim                |
| 7. Inner pad      | 8. Pad retainer       | 9. Outer pad                 |
| 10. Outer shim    | 11. Connecting bolt   | 12. Copper washer            |
| 13. Main pin bolt | 14. Air bleeder valve | 15. Cylinder body            |
| 16. Piston seal   | 17. Piston            | 18. Piston boot              |

## Pad Replacement

EFS0023G

### WARNING:

Clean brake pads with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

### CAUTION:

- When cylinder body is open, do not depress brake pedal because piston will pop out.
- Be careful not to damage piston boot or get oil on rotor. Always replace shims when replacing pads.
- If shims are rusted or show peeling of the rubber coat, replace them with new shims.
- It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend cylinder body with wire so as not to stretch brake hose.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.  
Refer to [BR-6, "Brake Burnishing Procedure"](#).

1. Remove master cylinder reservoir cap.
2. Remove wheel and tire. Refer to [MA-31, "Tire Rotation"](#).

# FRONT DISC BRAKE

3. Remove pin bolt.

4. Open cylinder body upward. Then remove pad with retainers, inner and outer shims.

**Standard pad thickness** : 11 mm (0.43 in)  
(CL25VA, CL25VB)

**Pad wear limit** : 2.0 mm (0.079 in)  
(CL25VA, CL25VB)

**NOTE:**

Carefully monitor brake fluid level because brake fluid will return to reservoir when pushing back piston.

## Caliper Removal

EFS0023H

1. Remove wheel and tire. Refer to [MA-31, "Tire Rotation"](#).
2. Remove torque member fixing bolts and brake hose connecting bolt.

**WARNING:**

Clean brake pads with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

- It is not necessary to remove brake hose connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend caliper assembly with wire so as not to stretch brake hose.

## Caliper Disassembly

EFS0023I

1. Push out piston with piston boot with compressed air.

**WARNING:**

Do not place your fingers in front of piston.

2. Remove piston seal with a suitable tool.

**CAUTION:**

Do not scratch or score cylinder wall.

# FRONT DISC BRAKE

3. Remove the pad retainer.

**CAUTION:**

When removing the pad retainer from the torque member, lift it up and out in the direction of the arrows in the figure.

EFS0023J

## Inspection CALIPER

### Cylinder Body

**CAUTION:**

Use brake fluid to clean. Never use mineral oil.

- Check inside surface of cylinder for score, rust, wear, damage or presence of foreign materials. If any of the above conditions are observed, replace cylinder body.
- Minor damage from rust or foreign materials may be eliminated by polishing surface with a fine emery paper. Replace cylinder body if necessary.

### Piston

**CAUTION:**

Piston sliding surface is plated. Do not polish with emery paper even if rust or foreign materials are stuck to sliding surface.

- Check piston for score, rust, wear, damage or presence of foreign materials. Replace if any of the above conditions are observed.

### Slide Pin, Pin Bolt and Pin Boot

Check for wear, cracks or other damage. Replace if any of the above conditions are observed.

## ROTOR

### Rubbing Surface

Check rotor for roughness, cracks or chips.

### Runout

1. Secure rotor to wheel hub with at least two nuts (M12 x 1.25).
2. Check runout using a dial indicator.

**CAUTION:**

Make sure that wheel bearing axial end play is within the specifications before measuring. Refer to [FAX-5, "Front Wheel Bearing"](#)

**Maximum runout : 0.07 mm (0.0028 in)**

3. If the runout is out of specification, find minimum runout mounting position as follows:
  - a. Remove nuts and rotor from wheel hub.
  - b. Shift the rotor one hole and secure rotor to wheel hub with nuts.
  - c. Measure runout.
  - d. Repeat steps a. to c. so that minimum runout position can be found.
4. If the runout is still out of specification, turn rotor with on-car brake lathe ("MAD, DL-8700", "AMMCO 700 and 705" or equivalent).

### Thickness

**Thickness variation :Maximum 0.01 mm (0.0004 in)  
(At least 8 positions)**

# FRONT DISC BRAKE

- If rotor thickness variation exceeds the specification, turn rotor with on-car brake lathe.

**Rotor thickness** : 20.0 mm (0.787 in)  
**repair limit**

## Caliper Assembly

1. Insert piston seal into groove in cylinder body.
2. With piston boot fitted to piston, insert piston boot into groove on cylinder body and install piston.
3. Properly secure piston boot.

## Caliper Installation

### CAUTION:

- Refill with new brake fluid "DOT 3".
  - Never reuse drained brake fluid.
1. Install brake hose to caliper securely.
  2. Install all parts and tighten all bolts. Refer to [BR-19, "Component"](#).
  3. Bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#).

# REAR DISC BRAKE

PF0:44000

| 37. Pin               | 38. Pin boot                  | 39. Pad retainer  |
| 40. Torque member     | 41. Torque member fixing bolt |                   |

### Pad Replacement

EFS0023N

#### WARNING:

Clean brake pads with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

#### CAUTION:

- When cylinder body is open, do not depress brake pedal because piston will pop out.
- Be careful not to damage piston boot or get oil on rotor. Always replace shims in replacing pads.
- If shims are rusted or show peeling of rubber coat, replace them with new shims.
- It is not necessary to remove connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend cylinder body with wire so as not to stretch brake hose.

## REAR DISC BRAKE

- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage. Refer to [BR-6, "Brake Burnishing Procedure"](#).
1. Remove master cylinder reservoir cap.

2. Remove wheel and tire. Refer to [MA-31, "Tire Rotation"](#).
3. Remove brake cable mounting bolt and lock spring.
4. Release parking brake control lever, then disconnect cable from the caliper.
5. Remove upper pin bolt.
6. Open cylinder body downward and secure with wire as shown. Then remove pad retainers, and inner and outer shims.

**Standard pad thickness** : 10 mm (0.39 in)  
**Pad wear limit** : 2.0 mm (0.079 in)

7. When installing new pads, push piston into cylinder body by gently turning piston clockwise, as shown.

**NOTE:**

**Carefully monitor brake fluid level because brake fluid will return to reservoir when pushing back piston.**

# REAR DISC BRAKE

- Adjust the piston to the right angle as shown.

- Align the piston's concave to the pad's convex, then install the cylinder body to the torque member as shown.

## Caliper Removal

EFS00230

### **WARNING:**

Clean brake pads with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

- Remove wheel and tire. Refer to [MA-31, "Tire Rotation"](#).
- Remove brake cable mounting bolt and lock spring.
- Release parking brake control lever, then disconnect cable from the caliper.
- Remove torque member fixing bolts and brake hose connecting bolt.

### **NOTE:**

It is not necessary to remove brake hose connecting bolt except for disassembly or replacement of caliper assembly. In this case, suspend caliper assembly with wire so as not to stretch brake hose.

- Remove caliper assembly.

## Caliper Disassembly

EFS0023P

- Remove piston by turning it counterclockwise with suitable commercial service tool or long nose pliers.

## REAR DISC BRAKE

2. Pry off ring A from piston with suitable pliers and remove cup, adjuster, bearing, spacers, and wave washer.

3. Disassemble cylinder body.
  - a. Pry off ring B with suitable pliers, then remove spring cover, spring and seat.
  - b. Pry off ring C, then remove key plate, push rod and rod.

- c. Remove piston seal with a suitable tool.  
**CAUTION:**  
**Be careful not to damage cylinder body.**

4. Remove return spring, toggle lever and cable guide.

# REAR DISC BRAKE

EFS0023Q

## Inspection

### CALIPER

#### CAUTION:

Use brake fluid to clean cylinder. Never use mineral oil.

#### Cylinder Body

- Check inside surface of cylinder for score, rust, wear, damage or presence of foreign materials. If any of the above conditions are observed, replace cylinder body.
- Minor damage from rust or foreign materials may be eliminated by polishing surface with a fine emery paper. Replace cylinder body if necessary.

#### Torque Member

Check for wear, cracks or other damage. Replace if necessary.

#### Piston

#### CAUTION:

Piston sliding surface is plated. Do not polish with emery paper even if rust or foreign matter is stuck to sliding surface.

Check piston for score, rust, wear, damage or presence of foreign materials. Replace if any of the above conditions are observed.

#### Pin and Pin Boot

Check for wear, cracks or other damage. Replace if any of the above conditions are observed.

## ROTOR

### Rubbing Surface

Check rotor for roughness, cracks or chips.

### Runout

1. Secure rotor to wheel hub with two nuts (M12 x 1.25).
2. Check runout using a dial indicator.

#### CAUTION:

Make sure that axial end play is within the specifications before measuring. Refer to [RAX-5, "Rear Wheel Bearing"](#).

3. Change relative positions of rotor and wheel hub so that runout is minimized.

**Maximum runout : 0.07 mm (0.0028 in)**

### Thickness

#### Rotor repair limit

**Standard thickness : 9 mm (0.35 in)**

**Minimum thickness : 8 mm (0.31 in)**

**Maximum thickness variation : 0.02 mm (0.0008 in)  
(At least 8 portions)**

## Caliper Assembly

EFS0023R

1. Insert cam with depression facing toward open end of cylinder.

2. Generously apply rubber grease to strut and push rod to make insertion easy.

3. Fit push rod into square hole in key plate. Also match convex portion of key plate with concave portion of cylinder.

4. Install ring C with a suitable tool.

# REAR DISC BRAKE

5. Install seat, spring, spring cover and ring B with snap ring pliers and a suitable press and drift.

A  
B  
C  
D

E  
BR

6. Install cup in the specified direction.

H  
I  
J  
K

7. Install cup, adjuster, bearing, spacers, washer and ring A with a suitable tool.  
8. Insert piston seal into groove on cylinder body.

L  
M

9. With piston boot fitted to piston, insert piston boot into groove on cylinder body and fit piston by turning it clockwise with long nose pliers, or suitable tool.

# REAR DISC BRAKE

10. Fit toggle lever, return spring and cable guide.

11. Adjust the piston to the right angle as shown.

## Caliper Installation

1. Install caliper assembly.
  - As shown in the figure, align the piston's concave to the pad's convex, then install the cylinder body to the torque member.
2. Install brake hose to caliper securely.
3. Install all parts and tighten all bolts. Refer to [BR-23, "Component"](#).
4. Bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#).

### CAUTION:

- Refill with new brake fluid "DOT 3".
- Never reuse drained brake fluid.

| 22. Spring           |                          |                        |

### Removal

EFS0023U

#### **WARNING:**

Clean brake lining with a vacuum dust collector to minimize the hazard of airborne materials or other materials.

#### **CAUTION:**

Make sure parking brake lever is completely released.

1. Remove wheel and tire. Refer to [MA-31, "Tire Rotation"](#).

## REAR DRUM BRAKE

2. Release parking brake lever fully, then remove drum.

- If drum is hard to remove, remove adjuster plug. Shorten adjuster as shown to make clearance between brake shoe and drum. Install two bolts as shown. Tighten the two bolts gradually.

3. After removing retainer, remove spring by rotating shoes.

**NOTE:**

**Be careful not to damage parking brake cable when separating it.**

4. Remove adjuster.
5. Disconnect parking brake cable from toggle lever.

6. Remove retainer ring with a suitable tool. Then separate toggle lever and adjusting lever from the brake shoe.

# REAR DRUM BRAKE

EFS0023V

## Inspection

### WHEEL CYLINDER

- Check wheel cylinder for leakage.
- Check for wear, damage and loose conditions. Replace if any such condition exists.

### WHEEL CYLINDER OVERHAUL

- Check all internal parts for wear, rust and damage. Replace if necessary.
- Be careful not to scratch cylinder when installing pistons.

## DRUM

**Maximum inner diameter : 204.5 mm (8.05 in)**

**Out-of-roundness : 0.03 mm (0.0012 in) or less**

- Contact surface should be fine finished with No. 120 to 150 emery paper.
- Using a drum lathe, resurface brake drum if it shows score, partial wear or stepped wear.
- After brake drum has been completely reconditioned or replaced, check drum and shoes for proper contact pattern.

## LINING

Check lining thickness.

**Standard lining thickness : 4.5 mm (0.177 in)**

**Lining wear limit : 1.5 mm (0.059 in)**

# REAR DRUM BRAKE

EFS0023W

## Installation

- Always perform shoe clearance adjustment. Refer to [PB-3, "Adjustment"](#) .
  - Burnish the brake contact surfaces after refinishing or replacing drums, after replacing linings, or if a soft pedal occurs at very low mileage. Refer to [BR-6, "Brake Burnishing Procedure"](#) .
1. Fit toggle lever and adjusting lever to brake shoe with retainer ring.
  2. Apply brake grease to the contact areas shown.

3. Shorten adjuster by rotating it.
  - Pay attention to direction of adjuster.

Wheel	Screw
Left	Left-hand thread
Right	Right-hand thread

4. Connect parking brake cable to toggle lever.
  5. Install all parts.
- Be careful not to damage wheel cylinder piston boots.**
6. Check that all parts are installed properly.
- Pay attention to direction of adjuster assembly.**
7. Install brake drum.
  8. When installing new wheel cylinder or overhauling wheel cylinder, bleed air from brake system. Refer to [BR-7, "Bleeding Brake System"](#) .
  9. Adjust parking brake. Refer to [PB-3, "Adjustment"](#) .
  10. Install wheel and tire. Refer to [MA-31, "Tire Rotation"](#) .

# SERVICE DATA AND SPECIFICATIONS (SDS)

**PRECAUTIONS**

PFP:00001

**Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”**

EFS0028N

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**Precautions for Brake System**

EFS0028O

- Recommended fluid is brake fluid “DOT 3”.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.
- To clean or wash all parts of master cylinder, disc brake caliper and wheel cylinder, use clean brake fluid.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use flare nut wrench when removing and installing brake tube.
- Always torque brake lines when installing.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage. Refer to [BR-6, "Brake Burnishing Procedure"](#).

**WARNING:**

- Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

**Wiring Diagrams and Trouble Diagnosis**

EFS0028P

When you read wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#)

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

## PREPARATION

PFP:00002

### Commercial Service Tools

EFS002RX

Tool name	Description
<p>1 Flare nut crowfoot 2 Torque wrench</p>  <p>S-NT360</p>	<p>Removing and installing brake piping <b>a: 10 mm (0.39 in)</b></p>

DESCRIPTION

PFP:00000

Purpose

EFS00246

The Anti-Lock Brake System (ABS) consists of electronic and hydraulic components. It allows for control of braking force so locking of the wheels can be avoided.

1. Improves proper tracking performance through steering wheel operation.
2. Eases obstacle avoidance through steering wheel operation.
3. Improves vehicle stability.

Operation

EFS00247

- When the vehicle speed is less than 10 km/h (6 MPH), this system does not work.
- The Anti-Lock Brake System (ABS) has a self-test function. The system turns on the ABS warning lamp for 1 second each time the ignition switch is turned "ON". After the engine is started, the ABS warning lamp turns off. The system performs a test the first time the vehicle reaches 6 km/h (4 MPH). A mechanical noise may be heard as the ABS performs this self-test. This is a normal part of the self-test feature. If a malfunction is found during this check, the ABS warning lamp will stay on.
- While driving, a mechanical noise may be heard during ABS operation. This is a normal condition.

ABS Hydraulic Circuit

EFS00248

- |                                  |                          |           |

| 7. Solenoid valve relay actuator |                          |           |

ABR752

System Components

EFS00249

System Description  
SENSOR

EFS0024A

The sensor unit consists of a gear-shaped sensor rotor and a sensor element. The element contains a bar magnet around which a coil is wound. The front sensors are installed on the front spindles and the rear sensors are installed on the rear spindles. As the wheel rotates, the sensor generates a sine-wave pattern. The frequency and voltage increase(s) as the rotating speed increases.

CONTROL UNIT (BUILT-IN ABS ACTUATOR AND ELECTRIC UNIT)

The control unit computes the wheel rotating speed by the signal current sent from the sensor. Then it supplies a DC current to the actuator solenoid valve. It also controls ON-OFF operation of the valve relay and motor relay. If any electrical malfunction should be detected in the system, the control unit causes the warning lamp to light up. In this condition, the ABS will be deactivated by the control unit, and the vehicle's brake system reverts to normal operation. (For control unit layout, refer to [BRC-7, "ABS ACTUATOR AND ELECTRIC UNIT"](#) .)

**ABS ACTUATOR AND ELECTRIC UNIT**

The ABS actuator and electric unit contains:

- An electric motor and pump
- Two relays
- Eight solenoid valves, each inlet and outlet for
  - LH front
  - RH front
  - LH rear
  - RH rear
- ABS control unit

This component controls the hydraulic circuit and increases, holds or decreases hydraulic pressure to all or individual wheels. The ABS actuator and electric unit is serviced as an assembly.

**ABS Actuator Operation**

		Inlet solenoid valve	Outlet solenoid valve	
Normal brake operation		OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is directly transmitted to caliper via the inlet solenoid valve.
ABS operation	Pressure hold	ON (Closed)	OFF (Closed)	Hydraulic circuit is shut off to hold the caliper brake fluid pressure.
	Pressure decrease	ON (Closed)	ON (Open)	Caliper brake fluid is sent to reservoir via the outlet solenoid valve. Then it is pushed up to the master cylinder by pump.
	Pressure increase	OFF (Open)	OFF (Closed)	Master cylinder brake fluid pressure is transmitted to caliper.

## ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

PFP:00000

### Self-diagnosis FUNCTION

EFS0024E

- When a problem occurs in the ABS, the warning lamp on the instrument panel comes on. To start the self-diagnostic results mode, ground the self-diagnostic (check) terminal located on Data Link Connector. The location of the malfunction is indicated by the warning lamp flashing.

### SELF-DIAGNOSIS PROCEDURE

- Drive vehicle over 30 km/h (19 MPH) for at least one minute.
- Turn ignition switch OFF.
- Ground terminal 9 of Data Link Connector with a suitable harness.
- Turn ignition switch ON while grounding terminal 9.  
**Do not depress brake pedal.**

- After 3.0 seconds, the warning lamp starts flashing to indicate the malfunction code No. (See NOTE.)
- Verify the location of the malfunction with the malfunction code chart. Refer to [BRC-26, "Malfunction Code/Symptom Chart"](#). Then make the necessary repairs following the diagnostic procedures.
- After the malfunctions are repaired, erase the malfunction codes stored in the control unit. Refer to [BRC-15, "HOW TO ERASE SELF-DIAGNOSTIC RESULTS \(MALFUNCTION CODES\)"](#).
- Rerun the self-diagnostic results mode to verify that the malfunction codes have been erased.

- Disconnect the check terminal from the ground. The self-diagnostic results mode is now complete.
- Check warning lamp for deactivation after driving vehicle over 30 km/h (19 MPH) for at least one minute.
- After making certain that warning lamp does not come on, test the ABS in a safe area to verify that it functions properly.

**NOTE:**

The indication terminates after 5 minutes. However, when the ignition switch is turned from OFF to ON, the indication starts flashing again.

## HOW TO READ SELF-DIAGNOSTIC RESULTS (MALFUNCTION CODES)

1. Determine the code No. by counting the number of times the warning lamp flashes on and off.
2. When several malfunctions occur at one time, up to three code numbers can be stored; the latest malfunction will be indicated first.
3. The indication begins with the start code 12. After that a maximum of three code numbers appear in the order of the latest one first. The indication then returns to the start code 12 to repeat (the indication will stay on for five minutes at most).
4. Refer to [BRC-26, "Malfunction Code/Symptom Chart"](#) for a list of malfunction codes.

## HOW TO ERASE SELF-DIAGNOSTIC RESULTS (MALFUNCTION CODES)

1. Disconnect the check terminal from ground (ABS warning lamp will stay lit).
2. Within 12.5 seconds, ground the check terminal three times. Each terminal ground must last more than 1 second. The ABS warning lamp goes out after the erase operation has been completed.
3. Perform self-diagnosis again. Refer to [BRC-14, "SELF-DIAGNOSIS PROCEDURE"](#). Only the start code should appear, no malfunction codes.

## CONSULT-II Inspection Procedure SELF-DIAGNOSIS PROCEDURE

1. Turn ignition switch OFF.
2. Connect CONSULT-II to Data Link Connector.
3. Start engine.
4. Drive vehicle over 30 km/h (19 MPH) for at least one minute.

5. Stop vehicle with engine running and touch "START" on CONSULT-II screen.

6. Touch "ABS".

7. Touch "SELF-DIAG RESULTS".
  - The screen shows the detected malfunction and how many times the ignition switch has been turned ON since the malfunction.
8. Make the necessary repairs following the diagnostic procedures.

<sup>1</sup>: If one or more wheels spin on a rough or slippery road for 40 seconds or more, the ABS warning lamp will illuminate. This does not indicate a malfunction. Only in the case of the short-circuit (Code Nos. 26, 22, 32 and 36), after repair the ABS warning lamp also illuminates when the ignition switch is turned ON. In this case, drive the vehicle at speeds greater than 30 km/h (19 MPH) for approximately 1 minute as specified in [BRC-14. "SELF-DIAGNOSIS PROCEDURE"](#). Check to ensure that the ABS warning lamp goes out while the vehicle is being driven.

## DATA MONITOR PROCEDURE

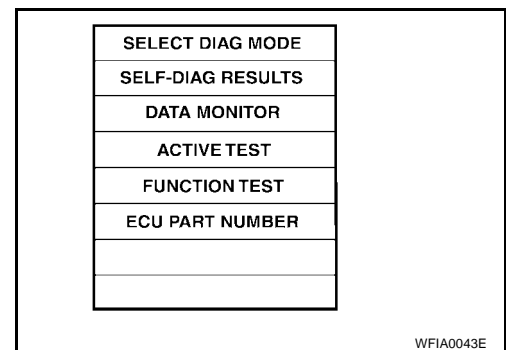

1. Turn ignition switch OFF.
2. Connect CONSULT-II to Data Link Connector.
3. Turn ignition switch ON.
4. Touch "START" on CONSULT-II screen.

5. Touch "ABS".

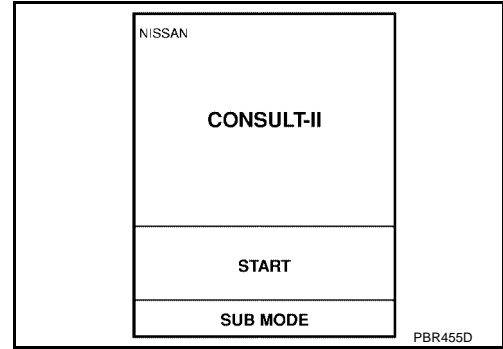

6. Touch "DATA MONITOR".

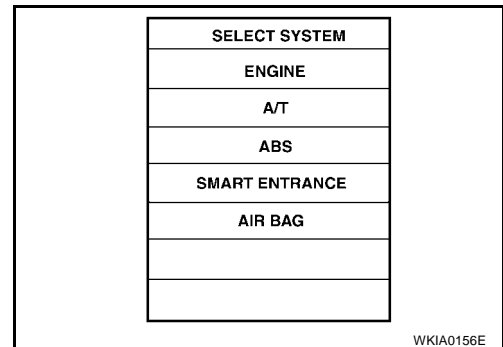

## ACTIVE TEST PROCEDURE

- When conducting Active test, vehicle must be stationary.
  - When ABS warning lamp stays on, never conduct Active test.
1. Turn ignition switch OFF.
  2. Connect CONSULT-II to Data Link Connector.
  3. Start engine.
  4. Touch "START" on CONSULT-II screen.

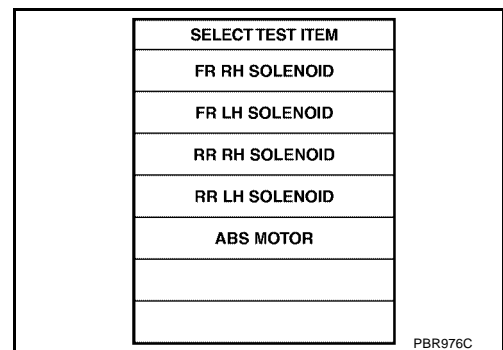

5. Touch "ABS".

6. Touch "ACTIVE TEST".

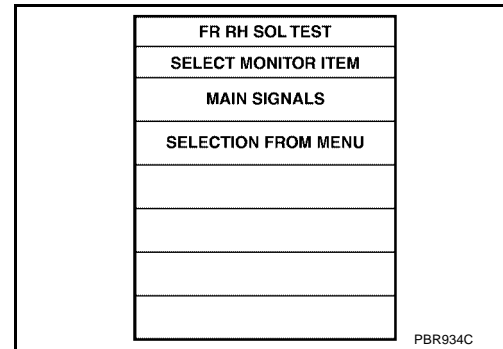

7. Select active test item by touching screen.

## TROUBLE DIAGNOSIS — INTRODUCTION

### How to Perform Trouble Diagnoses for Quick and Accurate Repair INTRODUCTION

The ABS system has an electronic control unit to control major functions. The control unit accepts input signals from sensors and instantly drives the actuators. It is essential that both kinds of signals are proper and stable. It is also important to check for conventional problems: such as air leaks in booster lines, lack of brake fluid, or other problems with the brake system.

It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or faulty wiring. In this case, careful checking of suspicious circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the problems, so a road test should be performed.

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with an ABS complaint. The customer is a very good source of information on such problems; especially intermittent ones. By talking to the customer, find out what symptoms are present and under what conditions they occur. Start your diagnosis by looking for “conventional” problems first. This is one of the best ways to troubleshoot brake problems on an ABS controlled vehicle.

**Also check related Service bulletins for information.**

**TROUBLE DIAGNOSIS — BASIC INSPECTION**

**Preliminary Check**

**1. CHECK BRAKE FLUID**

Check brake fluid for contamination.

Has brake fluid been contaminated?

- Yes >> Replace. GO TO 2.
- No >> GO TO 2.

**2. CHECK BRAKE FLUID LEVEL**

Check brake fluid level in reservoir tank.

Low fluid level may indicate brake pad wear or leakage from brake line.

Is brake fluid filled between MAX and MIN lines on reservoir tank?

- Yes >> GO TO 3.
- No >> Fill brake fluid. GO TO 3.

**3. CHECK BRAKE LINE**

Check brake line for leakage.

Is leakage present at or around brake lines, tubes or hoses or are any of these parts cracked or damaged?

- Yes >> Repair or replace as required. GO TO 4.
- No >> GO TO 4.

**4. CHECK BRAKE BOOSTER OPERATION**

Check brake booster for operation. Refer to [BR-16, "OPERATING CHECK"](#) . Also, check air tightness. Refer to [BR-16, "AIRTIGHT CHECK"](#) .

Is brake booster airtight and functioning properly?

- Yes >> GO TO 5.
- No >> Replace. GO TO 5.

A  
B  
C  
D  
E  
BRC  
G  
H  
I  
J  
K  
L  
M

## 5. CHECK BRAKE PAD, ROTOR, SHOE AND DRUM

Check brake pad, rotor, shoe and drum.

Refer to [BR-19, "Pad Replacement"](#) , [BR-21, "ROTOR"](#) , [BR-27, "ROTOR"](#) , [BR-33, "LINING"](#) , and [BR-33, "DRUM"](#) .

Are brake pads, rotors, shoes and drums functioning properly?

Yes >> GO TO 6.

No >> Replace.

## 6. RECHECK BRAKE FLUID LEVEL

Check brake fluid level in reservoir tank again.

Is brake fluid filled between MAX and MIN lines on reservoir tank?

Yes >> GO TO 7.

No >> Fill brake fluid reservoir to specification.

## 7. CHECK WARNING LAMP ACTIVATION

Check warning lamp activation.

Does warning lamp turn on when ignition switch is turned ON?

Yes >> GO TO 8.

No >> Check fuse, warning lamp bulb and warning lamp circuit.

## 8. CHECK WARNING LAMP DEACTIVATION

Check warning lamp for deactivation after engine is started.

Does warning lamp turn off when engine is started?

Yes >> GO TO 9.

No (with CONSULT-II)>> Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

No (without CONSULT-II)>> Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

## 9. DRIVE VEHICLE

Drive vehicle at speeds over 30 km/h (19 MPH) for at least one minute.

Does warning lamp remain off after vehicle has been driven at 30 km/h (19 MPH) for at least one minute?

Yes >> **INSPECTION END**

No (with CONSULT-II)>> Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

No (without CONSULT-II)>> Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

EFS0024J

ABS works frequently	—	<a href="#">BRC-36</a>

- \*1: If one or more wheels spin on a rough or slippery road for 40 seconds or more, the ABS warning lamp will illuminate. This does not indicate a malfunction. Only in the case of the short-circuit (Code Nos. 26, 22, 32 and 36), after repair the ABS warning lamp also illuminates when the ignition switch is turned ON. In this case, drive the vehicle at speeds greater than 30 km/h (19 MPH) for approximately 1 minute as specified in [BRC-14, "Self-diagnosis"](#). Check to ensure that the ABS warning lamp goes out while the vehicle is being driven.
- \*2: The trouble code "57", which refers to a low power supply voltage, does not indicate that the ABS control unit is malfunctioning. Do not replace the ABS control unit with a new one.
- \*3: The trouble code "61" can sometimes appear when the ABS motor is not properly grounded. If it appears, be sure to check the condition of the ABS motor ground circuit connection.

## WHEEL SENSOR OR ROTOR

### Diagnostic Procedure

Malfunction code No. 21, 22, 25, 26, 31, 32, 35, 36 or 18

**NOTE:**

Wheel position should be distinguished by code No. except code No. 18 (sensor rotor).

## 1. INSPECTION START

Wheel sensor inspection

>> GO TO 2.

## 2. CHECK CONNECTOR

1. Disconnect connectors from ABS actuator and electric unit and wheel sensor of malfunction code No. Check terminals for damage or loose connection, then reconnect connectors.

2. Carry out self-diagnosis again.

Does warning lamp activate again?

Yes >> GO TO 3.

No >> **INSPECTION END**

## 3. CHECK WHEEL SENSOR ELECTRICAL

1. Disconnect ABS actuator and electric unit connector.

2. Check resistance between ABS actuator and electric unit connector E55 (body side) terminals.

Code No. 21 or 22 (Front RH wheel)

Terminals 4 (B) and 5 (W)

Code No. 25 or 26 (Front LH wheel)

Terminals 6 (G) and 7 (R)

Code No. 31 or 32 (Rear RH wheel)

Terminals 1 (LG) and 3 (PU)

Code No. 35 or 36 (Rear LH wheel)

Terminals 8 (L) and 9 (P)

**Resistance**

**Front : 1.45 - 1.85kΩ**

**Rear : 1.05 - 1.35kΩ**

Is resistance within specification?

Yes >> GO TO 5.

No >> GO TO 4.

## 4. CHECK WHEEL SENSOR

Check each sensor for resistance.

**Resistance**

**Front** : 1.45 - 1.85k $\Omega$

**Rear** : 1.05 - 1.35k $\Omega$

Is resistance within specification?

Yes >> Check the following.

- If resistance is within specification range, repair harness or connectors.
- Harness connectors E11, E53, E55, B102, B103
- Harness for open or short between wheel sensor connectors and ABS actuator and electric unit

No >> Replace wheel sensor. Refer to [BRC-44, "FRONT WHEEL SENSOR"](#) or [BRC-44, "REAR WHEEL SENSOR \(REAR DRUM\)"](#).

## 5. CHECK TIRE

Check for inflation pressure, wear and size of each tire. (See NOTE)

Are tire pressure and size correct and is tire wear within specifications?

Yes >> GO TO 6.

No >> Adjust tire pressure or replace tire(s). (See NOTE)

## 6. CHECK WHEEL BEARING

Check wheel bearing axial end play. (See NOTE)

Is wheel bearing axial end play within specifications? Refer to [FAX-5, "Front Wheel Bearing"](#), or [RAX-5, "Rear Wheel Bearing"](#).

Yes >> GO TO 7.

No >> Check wheel bearing. Refer to [FAX-5, "Front Wheel Bearing"](#), or [RAX-5, "Rear Wheel Bearing"](#).

## 7. CHECK SENSOR ROTOR

Check sensor rotor for teeth damage. (See NOTE)

Is sensor rotor free from damage?

Yes >> Check ABS actuator and electric unit pin terminals for damage or the connection of ABS actuator and electric unit harness connector. Reconnect ABS actuator and electric unit harness connector. Then retest.

No >> Replace sensor rotor. Refer to [BRC-45, "SENSOR ROTOR"](#). (See NOTE)

## ABS ACTUATOR SOLENOID VALVE AND SOLENOID VALVE RELAY

PFP:47600

### Diagnostic Procedure

EFS0024M

Malfunction code No. 41, 42, 45, 46, 51, 52, 55, 56, 63

## 1. INSPECTION START

Solenoid valve relay inspection

>> GO TO 2.

## 2. CHECK FUSE

Check 40A fusible link **f** . For fuse layout, refer to [PG-2, "Schematic"](#) .

Is fusible link OK?

- Yes >> GO TO 3.
- No >> GO TO 6.

## 3. CHECK CONNECTOR

1. Disconnect connector from ABS actuator and electric unit. Check terminals for damage or loose connection. Then reconnect connector.
2. Carry out self-diagnosis again.

Does warning lamp activate again?

- Yes >> GO TO 4.
- No >> **INSPECTION END**

A  
B  
C  
D  
E  
BRC  
G  
H  
I  
J  
K  
L  
M

## 4. CHECK ABS ACTUATOR AND ELECTRIC UNIT GROUND CIRCUIT

Refer to [BRC-25, "ABS ACTUATOR AND ELECTRIC UNIT GROUND"](#) .

Is ground circuit OK?

- Yes >> GO TO 5.
- No >> Repair harness or connector.

## 5. CHECK SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Disconnect ABS actuator and electric unit connector.
2. Check voltage between ABS actuator and electric unit connector E55 (body side) terminal 18 (Y) and ground.

Does battery voltage exist?

- Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .
- No >> Check the following.
  - If NG, repair harness or connectors.
  - Harness connector E55
  - Harness for open or short between ABS actuator and electric unit and fusible link.

## 6. REPLACE FUSE

Replace 40A fusible link f . For fuse layout, refer to [PG-2, "Schematic"](#) .

Does the fusible link blow when ignition switch is turned ON?

- Yes >> GO TO 7.
- No >> **INSPECTION END**

## 7. CHECK SOLENOID VALVE RELAY POWER SUPPLY CIRCUIT FOR SHORT

1. Disconnect battery cable and ABS actuator and electric unit connector.
2. Check continuity between ABS actuator and electric unit connector E55 (body side) terminal 18 (Y) and ground.

**Continuity should not exist.**

Does continuity exist?

- Yes >> Check the following.
  - Harness connector E55
  - Harness for short between ABS actuator and electric unit and fusible link.
- No >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .

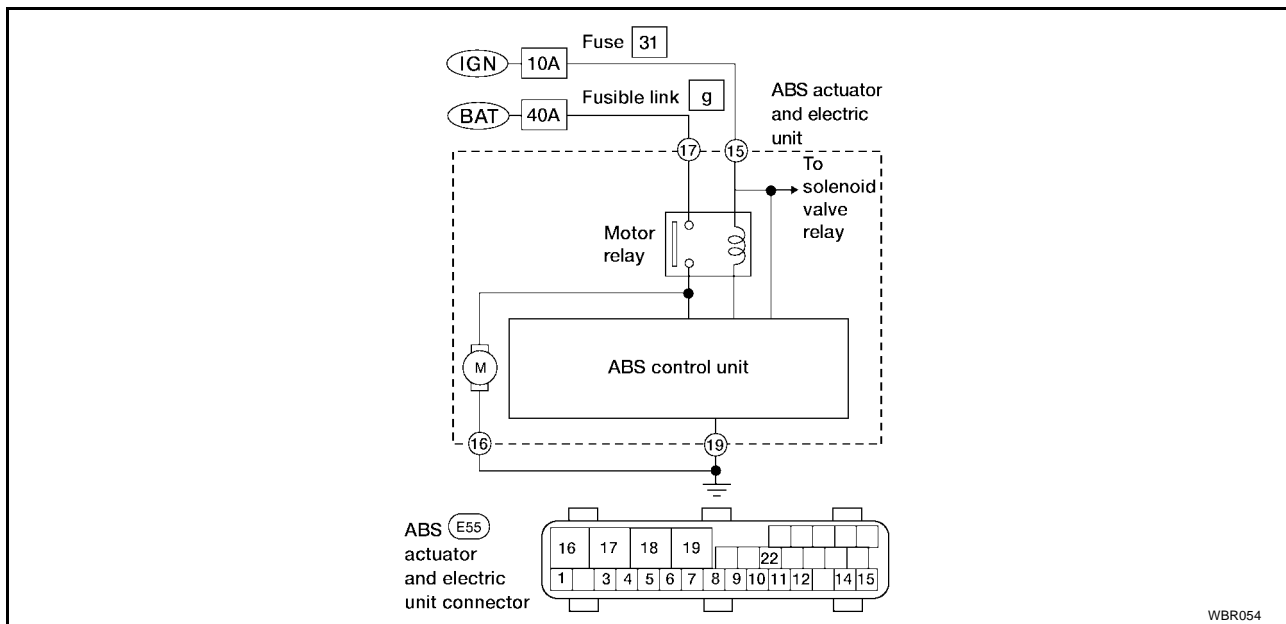

## MOTOR RELAY OR MOTOR

### Diagnostic Procedure

Malfunction code No. 61

## 1. INSPECTION START

ABS motor relay inspection

>> GO TO 2.

## 2. CHECK FUSIBLE LINK

Check 40A fusible link **g** . For fusible link layout, refer to [PG-2, "Schematic"](#) .

Is fusible link OK?

Yes >> GO TO 3.

No >> GO TO 6.

## 3. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit connector. Check terminals for damage or loose connection. Then reconnect connector.

2. Carry out self-diagnosis again.

Does warning lamp activate again?

Yes >> GO TO 4.

No >> **INSPECTION END**

## 4. CHECK ABS ACTUATOR AND ELECTRIC UNIT GROUND CIRCUIT

Refer to [BRC-25, "ABS ACTUATOR AND ELECTRIC UNIT GROUND"](#) .

Is ground circuit OK?

Yes >> GO TO 5.

No >> Repair harness or connector.

## 5. CHECK MOTOR RELAY POWER SUPPLY CIRCUIT

1. Disconnect ABS actuator and electric unit connector.
2. Check voltage between ABS actuator and electric unit connector E55 (body side) terminal 17 (B/Y) and ground.

LBR055

Does battery voltage exist?

- Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .
- No >> Check the following.
- Harness connector E55
  - Harness for open or short between ABS actuator and electric unit and fusible link

## 6. REPLACE FUSIBLE LINK

Replace 40A fusible link **g** . For fuse layout, refer to [PG-2, "Schematic"](#) .

Does the fusible link blow when ignition switch is turned ON?

- Yes >> GO TO 7.
- No >> **INSPECTION END**

## 7. CHECK ABS ACTUATOR MOTOR POWER SUPPLY CIRCUIT FOR SHORT

1. Disconnect battery cable and ABS actuator and electric unit connector.
2. Check continuity between ABS actuator and electric unit connector E55 (body side) terminal 17 (B/Y) and ground.

LBR056

**Continuity should not exist.**

Does continuity exist?

- Yes >> Check the following.
- Harness connector E55
  - Harness for short between ABS actuator and electric unit and fusible link
- No >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .

## LOW VOLTAGE

### Diagnostic Procedure

Malfunction code No. 57

## 1. INSPECTION START

ABS actuator and electric unit power supply and ground circuit inspection

>> GO TO 2.

## 2. CHECK FUSE

Check 10A fuse No. 31. For fuse layout, refer to [PG-2. "Schematic"](#).

Is fuse OK?

- Yes >> GO TO 3.
- No >> GO TO 6.

## 3. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit connector. Check terminals for damage or loose connections. Then reconnect connector.
2. Carry out self-diagnosis again.

Does warning lamp activate again?

- Yes >> GO TO 4.
- No >> **INSPECTION END**

## 4. CHECK ABS ACTUATOR AND ELECTRIC UNIT GROUND CIRCUIT

Refer to [BRC-25. "ABS ACTUATOR AND ELECTRIC UNIT GROUND"](#).

Is ground circuit OK?

- Yes >> GO TO 5.
- No >> Repair harness or connector.

## 5. CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT

1. Disconnect ABS actuator and electric unit connector.
2. Check voltage between ABS actuator and electric unit connector E55 (body side) terminal 15 (GY) and ground.

Does battery voltage exist when ignition switch is turned ON?

- Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .
- No >> Check the following.
- Harness connector E55
  - Harness for open or short between ABS actuator and electric unit and fuse

## 6. REPLACE FUSE

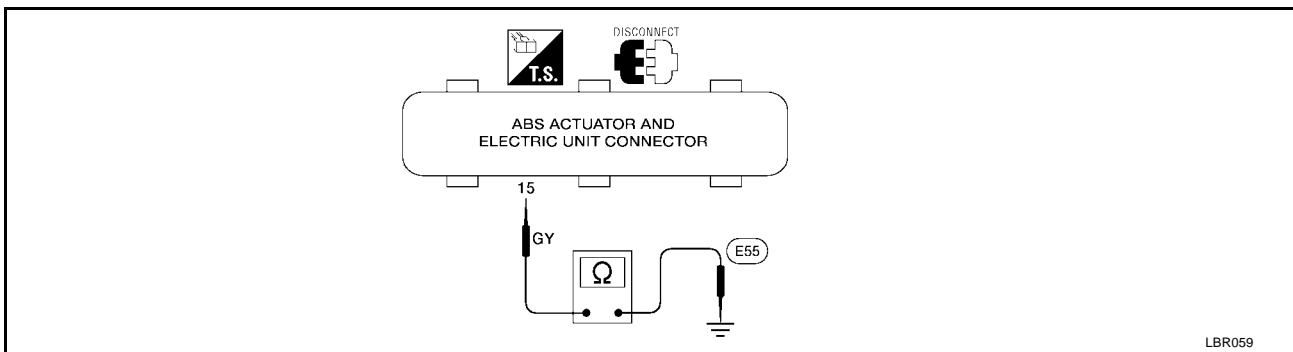

Replace 10A fuse 31. For fuse layout, refer to [PG-2, "Schematic"](#) .

Does the fuse blow when ignition switch is turned ON?

- Yes >> GO TO 7.
- No >> **INSPECTION END**

## 7. CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT FOR SHORT

1. Disconnect battery cable and ABS actuator and electric unit connector.
2. Check continuity between ABS actuator and electric unit connector E55 (body side) terminal 15 (GY) and ground.

**Continuity should not exist.**

Does continuity exist?

- Yes >> Check the following.
- If continuity exists, repair harness or connector.  
Harness connector E55
  - Harness for short between ABS actuator and electric unit and fuse
- No >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#) .

## CONTROL UNIT

### Diagnostic Procedure

Malfunction code No. 71

## 1. INSPECTION START

ABS actuator and electric unit power supply and ground circuit inspection

>> GO TO 2.

## 2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit connector.  
Check terminals for damage or loose connection. Then reconnect connector.
2. Carry out self-diagnosis again.

Does warning lamp activate again?

- Yes >> GO TO 3.  
No >> **INSPECTION END**

## 3. CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT

Check voltage. Refer to [BRC-33, "Diagnostic Procedure"](#).

Does battery voltage exist when ignition switch is turned ON?

- Yes >> GO TO 4.  
No >> Check the following.
- Harness for open or short between ABS actuator and electric unit and fuse

## 4. CHECK WARNING LAMP INDICATION

Does warning lamp indicate code No. 71 again?

Yes or No

- Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#).  
No >> Inspect the system according to the code No.

**TROUBLE DIAGNOSES FOR SYMPTOMS****Symptom 1. ABS Works Frequently****1. CHECK BRAKE FLUID PRESSURE**

Check brake fluid pressure distribution.

Refer to [BR-10, "Inspection"](#).

Is brake fluid pressure distribution normal?

Yes >> GO TO 2.

No >> ● Repair. Then perform Preliminary Check.

- Refer to [BR-11, "Inspection"](#).

**2. CHECK WHEEL SENSOR**

1. Check wheel sensor connector for terminal damage or loose connections.

2. Perform wheel sensor check.

Refer to [BRC-27, "Diagnostic Procedure"](#).

Is wheel sensor mechanism OK?

Yes >> GO TO 3.

No >> Repair.

**3. CHECK FRONT AXLE**

Check front axles for excessive looseness. Refer to [FAX-5, "Front Wheel Bearing"](#).

Is front axle installed properly?

Yes >> Go to [BRC-36, "Symptom 2. Unexpected Pedal Action"](#).

No >> Repair.

**Symptom 2. Unexpected Pedal Action****1. CHECK BRAKE PEDAL STROKE**

Check brake pedal stroke.

Is brake pedal stroke excessive?

Yes >> Perform Preliminary Check. Refer to [BRC-23, "Preliminary Check"](#).

No >> GO TO 2.

**2. CHECK MECHANICAL BRAKE SYSTEM PERFORMANCE**

Disconnect ABS actuator and electric unit connector and check whether brake is effective.

Does brake system function properly when brake pedal is depressed?

Yes >> GO TO 3.

No >> Perform Preliminary Check. Refer to [BRC-23, "Preliminary Check"](#).

### 3. CHECK WARNING LAMP INDICATION

Ensure warning lamp remains off while driving.

Is warning lamp turned off?

Yes >> GO TO 4.

No (with CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#).

No (without CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-14, "SELF-DIAGNOSIS PROCEDURE"](#).

### 4. CHECK WHEEL SENSOR

1. Check wheel sensor connector for terminal damage or loose connection.
2. Perform wheel sensor check. Refer to [BRC-27, "Diagnostic Procedure"](#).

Is wheel sensor mechanism OK?

- Yes >> ● Check ABS actuator and electric unit pin terminals for damage, or the connection of ABS actuator and electric unit harness connector.
- Reconnect ABS actuator and electric unit harness connector.
  - Retest.

No >> Repair.

### Symptom 3. Long Stopping Distance

EFS0024S

#### 1. CHECK MECHANICAL BRAKE SYSTEM PERFORMANCE

Disconnect ABS actuator and electric unit connector and check whether stopping distance is still long.

Does brake system function properly when brake pedal is depressed?

Yes >> Perform Preliminary Check and air bleeding (if necessary).

No >> Go to [BRC-38, "Symptom 4. ABS Does Not Work"](#).

#### NOTE:

Stopping distance may be longer for vehicles without ABS when road condition is slippery.

## Symptom 4. ABS Does Not Work

### 1. CHECK WARNING LAMP INDICATION

Does the ABS warning lamp activate?

Yes or No

Yes (with CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

Yes (without CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-14, "SELF-DIAGNOSIS PROCEDURE"](#)

No >> Go to [BRC-36, "Symptom 2. Unexpected Pedal Action"](#) .

#### NOTE:

ABS does not work when vehicle speed is under 10 km/h (6 MPH).

## Symptom 5. Pedal Vibration and Noise

### 1. INSPECTION START

Pedal vibration and noise inspection.

>> GO TO 2.

### 2. CHECK SYMPTOM

1. Apply brake.
2. Start engine.

Does the symptom appear only when engine is started?

Yes (with CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-17, "SELF-DIAGNOSIS PROCEDURE"](#) .

Yes (without CONSULT-II)>> Carry out self-diagnosis. Refer to [BRC-14, "SELF-DIAGNOSIS PROCEDURE"](#)

No >> Go to [BRC-36, "Symptom 2. Unexpected Pedal Action"](#) .

#### NOTE:

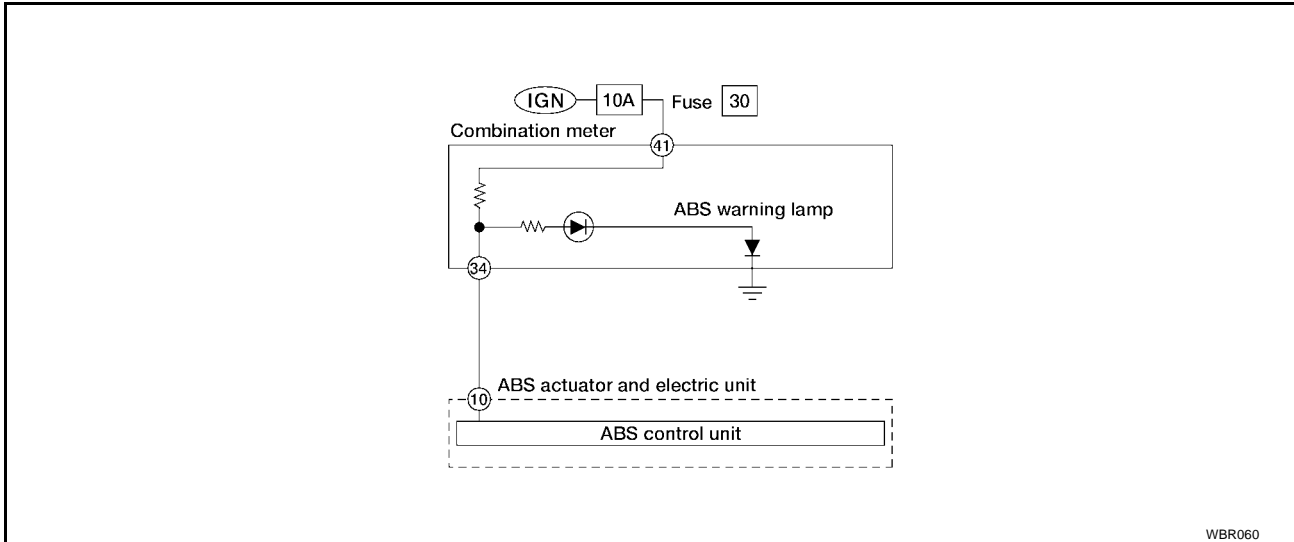

ABS may operate and cause vibration under any of the following conditions.

- Low friction (slippery) road.
- High speed cornering.
- Driving over bumps and potholes.

**Symptom 6. Warning Lamp Does Not Come On When Ignition Switch Is Turned On**

**1. INSPECTION START**

Warning lamp circuit inspection.

>> GO TO 2.

**2. CHECK FUSE**

Check 10A fuse No. 30. For fuse layout, refer to [PG-2, "Schematic"](#).

Is fuse OK?

- Yes >> GO TO 4.
- No >> GO TO 3.

**3. REPLACE FUSE**

Replace 10A fuse No. 30. For fuse layout, refer to [PG-2, "Schematic"](#).

Does the fuse blow when ignition switch is turned ON?

- Yes >> Check wiring for short between fuse and combination meter. Repair as required.
- No >> **INSPECTION END**

**4. CHECK WARNING LAMP ACTIVATION**

Disconnect ABS actuator and electric unit connector.

Does the warning lamp activate?

- Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#).
- No >> GO TO 5.

WBR039

## 5. CHECK HARNESS FOR SHORT

1. Disconnect ABS actuator and electric unit connector and combination meter connector M30.
2. Check continuity between ABS actuator and electric unit connector E55 (body side) terminal 10 (L/B) and ground.

Does continuity exist?

Yes >> Repair harness or connectors.

No >> Check combination meter.

- Refer to [DI-28. "WITH TACHOMETER"](#) .

**Symptom 7. Warning Lamp Stays On When Ignition Switch Is Turned On**

EFS0024W

**1. INSPECTION START**

ABS control unit inspection.

>> GO TO 2.

WBR039

**2. CHECK FUSE**

Check 10A fuse No. 31. For fuse layout, refer to [PG-2. "Schematic"](#).

Is fuse OK?

- Yes >> GO TO 3.
- No >> GO TO 8.

**3. CHECK HARNESS CONNECTOR**

Check ABS actuator and electric unit pin terminals for damage or bad connection of ABS actuator and electric unit harness connector. Reconnect ABS actuator and electric unit harness connector. Then retest.

Does warning lamp stay on when ignition switch is turned ON?

- Yes >> GO TO 4.
- No >> **INSPECTION END**

**4. CHECK ABS ACTUATOR AND ELECTRIC UNIT GROUND CIRCUIT**

Refer to [BRC-25. "ABS ACTUATOR AND ELECTRIC UNIT GROUND"](#).

Is ground circuit OK?

- Yes >> GO TO 5.
- No >> Repair harness or connector.

## 5. CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT

1. Disconnect ABS actuator and electric unit connector.
2. Check voltage between ABS actuator and electric unit connector E55 (body side) terminal 15 (GY) and ground.

Does battery voltage exist when ignition switch is turned ON?

Yes >> GO TO 6.

No >> Check the following.

- Harness connector E55
- Harness for open or short between ABS actuator and electric unit and fuse

## 6. CHECK WARNING LAMP

1. Disconnect ABS actuator and electric unit connector.
2. Connect suitable wire between ABS actuator and electric unit connector E55 (body side) terminal 10 (L/B) and ground.

Does the warning lamp deactivate?

Yes >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#).

No >> GO TO 7.

## 7. CHECK ABS WARNING LAMP CONTROL CIRCUIT FOR OPEN

1. Disconnect combination meter connector M30.
2. Check continuity between combination meter connector M30 (body side) terminal 34 (L/B) and ABS actuator and electric unit connector E55 (body side) terminal 10 (L/B).

**NOTE:**

Connect positive lead of multimeter to combination meter connector M30 (body side) terminal 34 (L/B) and negative lead to ABS actuator and electric unit connector E55 (body side) terminal 10 (L/B).

**Continuity should exist.**

Does continuity exist?

- Yes >> Check combination meter.
- Refer to [DI-28, "WITH TACHOMETER"](#).
- No >> GO TO 8.

## 8. REPLACE FUSE

Replace fuse.

Does the fuse blow when ignition switch is turned ON?

- Yes >> GO TO 9.
- No >> **INSPECTION END**

## 9. CHECK ABS ACTUATOR AND ELECTRIC UNIT POWER SUPPLY CIRCUIT FOR SHORT

1. Disconnect battery cable and ABS actuator and electric unit connector.
2. Check continuity between ABS actuator and electric unit connector E55 (body side) terminal 15 (GY) and ground.

**Continuity should not exist.**

Does continuity exist?

- Yes >> Check the following.
- Harness connector E55
  - Harness for short between ABS actuator and electric unit and fuse
- No >> Replace ABS actuator and electric unit. Refer to [BRC-46, "ACTUATOR"](#).

# REMOVAL AND INSTALLATION

[ABS]

## REMOVAL AND INSTALLATION

PFP:00000

### Removal and Installation

EF50024X

#### CAUTION:

Be careful not to damage sensor edge and sensor rotor teeth. When removing the front or rear wheel hub assembly, disconnect the ABS wheel sensor from the assembly and move it away.

#### FRONT WHEEL SENSOR

#### REAR WHEEL SENSOR (REAR DRUM)

## REAR WHEEL SENSOR (REAR DISC)

## SENSOR ROTOR

### Removal

1. Remove the drive shaft or rear wheel hub. Refer to [FAX-14, "Removal"](#), or [RAX-6, "Removal"](#) respectively.

2. Remove the sensor rotor using suitable puller, drift and bearing replacer.

A  
B  
C  
D  
E  
BRC  
G  
H  
I  
J  
K  
L  
M

## Installation

Install the sensor rotor. For front sensor rotor, use hammer and wooden block. For rear sensor rotor, use suitable drift and press.

- Always replace sensor rotor with new one.

- Pay attention to the dimension of rear sensor rotor as shown in figure.

### Dimension h

Rear Disc : 1.5 - 2.5 mm (0.06 - 0.10 in)

Rear Drum : 17.7 - 18.7 mm (0.70 - 0.74 in)

## ACTUATOR

SEC. 476

### Connector lock

WFIA0092E

## Removal

- Disconnect negative battery cable.
- Drain brake fluid. Refer to [BR-6, "Changing Brake Fluid"](#).
- Remove the A/C high pressure and A/C low pressure lines. Refer to [MTC-84, "Removal and Installation"](#).

# REMOVAL AND INSTALLATION

[ABS]

4. Remove strut tower bar (if equipped). Refer to [FSU-5, "Components"](#) .
5. Remove mounting bracket bolts.
6. Disconnect harness connector and brake lines.

A

## Installation

1. Connect brake lines temporarily.
2. Tighten bolts.
3. Tighten brake lines.
4. Connect harness connector and negative battery cable.
5. Install strut tower bar (if equipped). Refer to [FSU-5, "Components"](#) .
6. Refill and bleed the brake fluid. Then bleed air. Refer to [BR-7, "Bleeding Brake System"](#) .
7. Install the A/C high pressure and A/C low pressure lines. Evacuate and recharge the A/C system. Refer to [MTC-82, "Evacuating System and Charging Refrigerant"](#) .

## PRECAUTIONS

### Precautions

- The recommended clutch system hydraulic fluid is brake fluid “DOT 3”.
- Do not reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If any brake fluid is splashed on painted areas, wash it away with water immediately.
- Use a flare nut wrench (commercial service tool) when removing or installing the clutch hydraulic tubes.

- Use new brake fluid to clean or wash any parts of the clutch master cylinder and operating cylinder.
- Never use any type of mineral oil such as gasoline or kerosene to clean or wash any parts of the clutch system. It will ruin the rubber parts of the hydraulic system.

**WARNING:**

After cleaning the clutch disc, wipe it with a dust collector. Do not use compressed air.

| 19. Operating cylinder             | 20. Clutch hose                     | 21. Spacer                 |
| 22. Release bearing spring         | 23. Clutch tube                     |                            |

## Inspection and Adjustment

### CLUTCH PEDAL INSPECTION AND ADJUSTMENT

1. Check to see if the clutch pedal clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.
  - a. If the pin is not free, check that the ASCD switch or pedal stopper bolt is not applying pressure to the clutch pedal causing the pin to bind. To adjust, loosen the ASCD switch or pedal stopper bolt lock nut and turn the ASCD switch or pedal stopper bolt.
  - b. Tighten the lock nut.
  - c. Verify that the clutch pedal clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.
  - d. If the pin is still not free, remove the pin and check for deformation or damage. Replace the pin if necessary. Leave the pin removed for step 2.
2. Check the clutch pedal stroke for free range of movement.
  - a. With the clutch pedal clevis pin removed, manually move the pedal up and down to determine if it moves freely.
  - b. If any sticking is noted, replace the related parts (clutch pedal, pedal bracket, assist spring, bushing, etc.). Reassemble the pedal and re-verify that the clevis pin floats freely in the bore of the pedal.
3. Adjust the clearance "C" while fully depressing the clutch pedal (with the clutch interlock switch) as shown.

**Clearance "C" : 0.1 - 1.0 mm (0.004 - 0.039 in)**

4. Check the clutch hydraulic system components (clutch master cylinder, clutch operating cylinder, Clutch withdrawal lever, clutch release bearing, etc.) for sticking or binding.
  - a. If any sticking or binding is noted, repair or replace the related parts as necessary.
  - b. If the hydraulic system was necessary, bleed the clutch hydraulic system. Refer to [CL-7, "BLEEDING PROCEDURE"](#).

**NOTE:**

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all of the air from the system.

WCIA0146E

SCL800

### BLEEDING PROCEDURE

**CAUTION:**

Carefully monitor the fluid level at the clutch master cylinder during the bleeding operation.

**NOTE:**

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all of the air from the system.

J  
K  
L  
M

# CLUTCH SYSTEM

[QG18DE]

1. Top off the clutch master cylinder reservoir with the recommended brake fluid "DOT 3". Then attach the additional supply tank as shown.

**CAUTION:**

**Do not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

2. Connect a transparent vinyl tube to the air bleeder valve as shown.
3. Slowly depress the clutch pedal to its full stroke and release it completely. Repeat this operation several times at 2 to 3 seconds intervals.
4. Open the air bleeder valve with the clutch pedal fully depressed.

5. Close the air bleeder valve and tighten to specification.

**Air bleeder valve : 5.9 - 9.8 N·m (0.6 - 1.0 kg·m, 52 - 87 in·lb)**

6. Release the clutch pedal and wait at least 5 seconds.
7. Repeat steps 3 through 6 above until no more air bubbles are in the brake fluid coming out of the vinyl tube attached to the air bleeder valve.

# CLUTCH MASTER CYLINDER

[QG18DE]

PFP:30610

ECS005RP

## CLUTCH MASTER CYLINDER

### Components

- |                    |                                     |                          |
|--------------------|-------------------------------------|--------------------------|
| 1. Cylinder body   | 2. Return spring                    | 3. Piston assembly seals |
| 4. Push rod        | 5. Stopper                          | 6. Stopper ring          |
| 7. Dust cover      | 8. Clevis                           | 9. Hose clamps           |
| 10. Reservoir hose | 11. Reservoir cap                   | 12. Reservoir tank       |
| 13. Bracket        | 14. Clutch damper (not serviceable) | 15. Clutch tube          |
| 16. Seal           | 17. Pin                             | 18. Nipple               |

### Removal

ECS005RQ

1. Drain the brake fluid from the clutch hydraulic system.

#### CAUTION:

**Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

2. Remove the clutch tube flare nut using a flare nut wrench.
3. Remove the reservoir hose.
4. Remove the snap pin from the clevis pin and remove the clutch pedal from the clevis.
5. Remove the master cylinder assembly mounting nuts and reservoir tank bracket mounting nuts to remove master cylinder assembly.

### Disassembly

ECS005RS

1. Loosen the push rod lock nut "A" to remove the clevis and the lock nut "A".
2. Remove the dust cover.
3. Remove the stopper ring and stopper, then remove the push rod from the cylinder body. During removal, keep the push rod depressed, to prevent the piston inside the master cylinder from popping out.

#### NOTE:

Discard the stopper ring and use a new ring for assembly.

4. Remove the piston assembly from the cylinder body.
5. Remove the return spring.
6. Remove the pin using a pin punch, then remove the nipple and seal.

SCL725

## Inspection

Inspect for the following conditions and replace any parts as necessary.

- Damage, wear, rust, and pinholes on the cylinder inner wall
- Damage and deformation of the reservoir tank
- Weak return spring
- Crack or deformation of the dust cover

## Assembly

1. Install the return spring.
2. Apply rubber lubricant to the sliding parts of the piston assembly, and insert the piston assembly into the cylinder body.
3. After installing the stopper to push rod, install a new stopper ring while keeping the piston assembly depressed by hand, so that the piston assembly will not pop out.

### CAUTION:

**The stopper ring cannot be reused. Always use a new stopper ring for assembly.**

4. Apply silicone grease, and install the dust cover.
5. Install the clevis to push rod, and tighten lock nut "A" to specification.

**Lock nut "A" : 7.8 - 11.8 N-m (0.8 - 1.2 kg-m,  
69 - 104 in-lb)**

6. Install the seal and nipple to the cylinder body, and install the pin using a pin punch.

## Installation

1. Install the reservoir hose.
2. Connect the clutch tube to the master cylinder assembly, and hand-tighten the flare nut.
3. Install the master cylinder assembly to the cowl, and tighten the mounting nuts to specification.

**Master cylinder mounting nuts : 10.8 - 14.6 N-m (1.1 - 1.4 kg-m, 8 - 10 ft-lb)**

4. Tighten the reservoir tank bracket mounting nuts to specification.

**Reservoir tank bracket mounting nuts : 2.9 - 5.9 N-m (0.29 - 0.60 kg-m, 26 - 52 in-lb)**

5. Tighten the clutch tube flare nut to specification, using a flare nut torque wrench.

**Clutch tube flare nut : 15 - 18 N-m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)**

6. After installing the clevis pin, install the snap pin to connect the clutch pedal to the push rod.
7. After finishing the component installation, bleed the air from the clutch hydraulic system. Refer to [CL-7, "BLEEDING PROCEDURE"](#).

## OPERATING CYLINDER

### Components

- |                   |                  |               |
|-------------------|------------------|---------------|
| 1. Cylinder body  | 2. Piston spring | 3. Piston cup |
| 4. Piston         | 5. Push rod      | 6. Dust cover |
| 7. Air bleeder    | 8. Spacer        | 9. Union bolt |
| 10. Copper washer | 11. Clutch hose  |               |

### Removal

ECS005RW

1. Drain the brake fluid from the clutch hydraulic system.

**CAUTION:**

**Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

2. Remove the union bolt, the two copper washers, and the clutch hose from the operating cylinder. Discard the copper washers.
3. Remove the operating cylinder bolts, and remove the operating cylinder.

### Disassembly

ECS005RX

1. Remove the dust cover from the operating cylinder body.
2. Remove the push rod.
3. Remove the piston.
4. Remove the piston cup.
5. Remove the piston spring.
6. Remove the air bleeder.

### Inspection

ECS005RY

Inspect for the following, and replace any parts as necessary.

- Damage, foreign material, wear, rust, and pinholes on the cylinder inner surface, piston, and sliding part of piston cup

- Weak piston spring
- Crack or deformation of dust cover

## Assembly

ECS005RZ

### CAUTION:

To assemble the operating cylinder use the specified rubber grease and rubber lubricant. Refer to [GL-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) .

1. Apply rubber lubricant to the overall inside surface of the operating cylinder body.
2. Install the air bleeder, tighten to specification.

**Air bleeder : 6 - 10 N-m (0.6 - 1.0 kg-m, 52 - 87 in-lb)**

3. Install the piston spring with the tapered spring end pointing toward the piston cup.
4. Apply rubber grease and install the piston cup.
5. Apply rubber grease and install the piston.
6. Install the push rod.
7. Apply rubber grease and install the dust cover.

## Installation

ECS005S0

Installation is in the reverse order of removal.

### CAUTION:

- Install the clutch hose without twisting it.
- The two copper washers for the union bolt cannot be reused. Use two new copper washers for installation.
- After finishing the installation, bleed the air from the clutch hydraulic system. Refer to [CL-7, "BLEEDING PROCEDURE"](#) .

**PIPING**

**Removal**

1. Remove the engine air cleaner and air duct.
2. Drain the brake fluid from the clutch hydraulic system.

**CAUTION:**

**Be careful not to splash brake fluid on painted areas, it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

3. Remove the flare nut from the operating cylinder body using a flare nut wrench.
4. Remove the union bolt and two copper washers attaching the clutch hose from the operating cylinder. Discard the two copper washers.
5. Remove the clutch hose from the bracket by removing the lock plate.

**Installation**

1. When installing the clutch hose into the bracket, position the lock plate in the specified direction as shown to secure the clutch hose.

**CAUTION:**

**Install the clutch hose without twisting or bending it.**

2. Tighten the flare nut to specification, using a flare nut wrench.

**Flare nut : 15 - 18 N·m (1.5 - 1.8 kg·m, 11 - 13 ft·lb)**

**CAUTION:**

**Be careful not to damage the flare nut and clutch tube.**

3. Position the clutch hose and install the union bolt and two new copper washers on to the operating cylinder, and tighten the union bolt to specification.

**Union bolt : 17 - 19 N·m (1.7 - 2.0 kg·m, 13 - 14 ft·lb)**

4. Bleed the air from the clutch hydraulic system. Refer to [CL-7, "BLEEDING PROCEDURE"](#).

5. Install the engine air cleaner and air duct.

## CLUTCH RELEASE MECHANISM

PF3:30502

### Components

ECS005S3

### Removal

ECS005S4

1. Remove the manual transaxle. Refer to [MT-16, "Removal and Installation"](#) for RS5F70A, [MT-82, "Removal and Installation"](#) for RS5F51A, or [MT-143, "Removal and Installation"](#) for RS6F51H.
2. Move the withdrawal lever enough to remove the release bearing and release bearing spring, and remove the release bearing from the clutch lever.
3. Support the clutch lever claws with an appropriate wood block, align the retaining pin with "A" as shown, and drive out the spring pins using a pin punch.
4. Pull out the withdrawal lever and remove the clutch lever from the clutch housing.

### Inspection

ECS005S5

- Replace the release bearing if it is seized, damaged, faulty in rotation direction, or has poor alignment.
- Replace the withdrawal lever if the contact surface is worn excessively.
- Replace the clutch lever if its contact surface is worn excessively.

### Installation

ECS005S6

#### CAUTION:

- Apply grease to the clutch components. Otherwise, abnormal noise, poor clutch disengagement, or clutch damage may occur. Wipe the excess grease off completely, as it may cause the clutch components to slip and shudder.
- Keep the clutch disc facing, pressure plate, and flywheel free of oil and grease.

# CLUTCH RELEASE MECHANISM

[QG18DE]

- Clean any old grease and abrasive materials off of the grease application areas as shown.
- Apply approximately a 1 mm (0.04 in) thick coating of clutch sleeve grease evenly on the sliding part of the clutch lever and the release bearing spring.
- Apply just enough clutch sleeve grease to fill up the release bearing inner groove.
- Apply the clutch grease to the clutch disc and the input shaft spline. Install the clutch disc to the input shaft, remove the excess grease around the shaft, and remove the clutch disc.
- Lightly and evenly apply the clutch sleeve grease on the sliding part of the release bearing. Install the release bearing and remove any excess grease around the bearing, then remove the release bearing.

1. Assemble the clutch lever to clutch housing, and insert the withdrawal lever.
2. Support the clutch lever claws with an appropriate wood block, and install new spring pins using a pin punch as shown.

**CAUTION:**

**Spring pins cannot be reused.**

3. Install the release bearing springs on to the release bearing as shown.

## CLUTCH RELEASE MECHANISM

[QG18DE]

4. Operate the withdrawal lever manually, press the clutch spring from both sides, and install the release bearing on to the clutch lever securely.

5. Make sure a click is heard when the release bearing spring is pressed from both sides.
6. Make sure all parts operate smoothly when operating the withdrawal lever.

7. Install the manual transaxle. Refer to [MT-16, "Removal and Installation"](#) for RS5F70A, [MT-82, "Removal and Installation"](#) for RS5F51A, or [MT-143, "Removal and Installation"](#) for RS6F51H.

**CAUTION:**

Remove any excess grease.

## CLUTCH DISC, CLUTCH COVER AND FLYWHEEL

PFP:30100

### Components

ECS005S7

### NOTE:

The following operations are with manual transaxle removed.

### Inspection and Adjustment

#### CLUTCH DISC

ECS005S8

- Check the clutch disc for wear on the facing surface at the rivets as shown.

**Wear limit of facing surface to rivet head : 0.3 mm (0.012 in)**

- Check the clutch disc for backlash on the spline and runout on the facing.

**Maximum backlash of spline : 0.9 mm (0.035 in)**  
**(at outer edge of disc)**

**Runout limit : 1.0 mm (0.039 in)**

**Distance of runout check point : 102.5 mm (4.04 in)**  
**(from hub center)**

- Check the clutch disc for burns, discoloration, and oil or grease leakage. Replace if necessary.

## CLUTCH COVER AND FLYWHEEL

- Check the clutch cover installed for unevenness of the diaphragm spring toe heights.

**Uneven limit : 0.88 mm (0.0346 in)**

If the toe heights are greater than the uneven limit, adjust the height with Tool as shown.

## FLYWHEEL INSPECTION

- Check the contact surface of flywheel for slight burns or discoloration. Clean the flywheel contact surface with emery paper.
- Check the flywheel runout using a dial gauge as shown.

**Maximum allowable runout : Refer to EM-77, "Flywheel Runout".**

## Installation

- Insert Tool into clutch disc hub for proper alignment when installing the clutch cover and disc as shown.

- Tighten the clutch cover bolts in the numerical order as shown, in two steps.

**First step : 10 - 20 N·m (1.0 - 2.0 kg·m, 7 - 14 ft·lb)**

**Final step : 22 - 29 N·m (2.2 - 3.0 kg·m, 16 - 22 ft·lb)**

### CAUTION:

**Do not to allow grease to contaminate the clutch facing.**

# SERVICE DATA AND SPECIFICATIONS (SDS)

[QG18DE]

## SERVICE DATA AND SPECIFICATIONS (SDS)

PF0:00030

### Clutch Control System

ECS005SA

Type of clutch control	Hydraulic
------------------------	-----------

### Clutch Master Cylinder

ECS005SB

Unit: mm (in)

Inner diameter	15.87 (5/8)
----------------	-------------

### Clutch Operating Cylinder

ECS005SC

Unit: mm (in)

Inner diameter	19.05 (3/4)
----------------	-------------

### Clutch Disc

ECS005SD

Unit: mm (in)

Engine model	QG18DE
Model	215
Facing size (Outer dia. × inner dia. × thickness)	215 × 145 × 3.5 (8.46 × 5.71 × 0.138)
Thickness of disc assembly with load	7.7 - 8.3 (0.303 - 0.327) with 4,900 N (499.8 kg, 1,101.5 lb)
Wear limit of facing surface to rivet head	0.3 (0.012)
Runout limit of facing	1.0 (0.039)
Distance of runout check point (from the hub center)	102.5 (4.04)
Maximum backlash of spline (at outer edge of disc)	0.9 (0.035)

### Clutch Cover

ECS005SE

Unit: mm (in)

Engine model	QG18DE
Model	215
Full-load	4,900 N (499.8 kg, 1,101.5 lb)
Uneven limit of diaphragm spring toe height	0.88 (0.0346)

### Clutch Pedal

ECS005SF

Unit: mm (in)

Clearance "C" between pedal stopper rubber and clutch interlock switch threaded end while clutch pedal is fully depressed.	0.1 - 1.0 (0.004 - 0.039)
--	---------------------------

## PRECAUTIONS

### Precautions

- Recommended fluid is brake fluid “DOT 3”.
- Do not reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
- Use a flare nut wrench when removing or installing the clutch hydraulic tubes.
- Use new brake fluid to clean or wash all parts of the master cylinder and operating cylinder.
- Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.

### **WARNING:**

After cleaning the clutch disc, wipe it with a dust collector. Do not use compressed air.

# PREPARATION

[QR25DE]

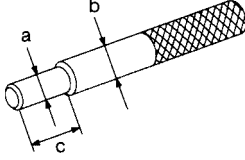

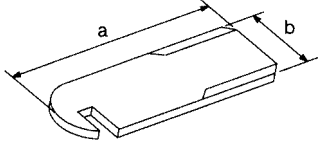

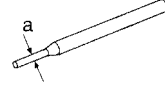

PFP:00002

## PREPARATION

### Special Service Tools

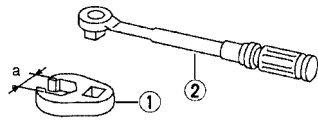

ECS005SH

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description	
ST2063000 (J26366) Clutch aligning bar	 <p style="text-align: center;">NT405</p>	Installing clutch cover and clutch disc <b>a: 15.8 mm (0.622 in) dia.</b> <b>b: 22.9 mm (0.902 in) dia.</b> <b>c: 45 mm (1.772 in)</b>
ST20050240 ( ) Diaphragm spring adjusting wrench	 <p style="text-align: center;">S-NT404</p>	Adjusting unevenness of diaphragm spring of clutch cover <b>a: 150 mm (5.91 in)</b> <b>b: 25 mm (0.98 in)</b>
KV32101000 (J25689-A) Pin punch	 <p style="text-align: center;">S-NT410</p>	Removing and installing spring pin <b>a: 4 mm (0.16 in) dia.</b>

### Commercial Service Tools

ECS005SI

| 22. Clutch disc             |                                      |                            |

## Inspection and Adjustment

### CLUTCH PEDAL INSPECTION AND ADJUSTMENT

1. Check to see if the clutch pedal clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.
  - a. If the pin is not free, check that the ASCD switch or pedal stopper bolt is not applying pressure to the clutch pedal causing the pin to bind. To adjust, loosen the ASCD switch or pedal stopper bolt lock nut and turn the ASCD switch or pedal stopper bolt.
  - b. Tighten the lock nut.
  - c. Verify that the clutch pedal clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.
  - d. If the pin is still not free, remove the pin and check for deformation or damage. Replace the pin if necessary. Leave the pin removed for step 2.
2. Check the clutch pedal stroke for free range of movement.
  - a. With the clutch pedal clevis pin removed, manually move the pedal up and down to determine if it moves freely.
  - b. If any sticking is noted, replace the related parts (clutch pedal, pedal bracket, assist spring, bushing, etc.). Reassemble the pedal and re-verify that the clevis pin floats freely in the bore of the pedal.
3. Adjust the clearance "C" while fully depressing the clutch pedal (with the clutch interlock switch) as shown.

**Clearance "C" : 0.1 - 1.0 mm (0.004 - 0.039 in)**

4. Check the clutch hydraulic system components (clutch master cylinder, clutch operating cylinder, Clutch withdrawal lever, clutch release bearing, etc.) for sticking or binding.
  - a. If any sticking or binding is noted, repair or replace the related parts as necessary.
  - b. If the hydraulic system was necessary, bleed the clutch hydraulic system. Refer to [CL-24, "BLEEDING PROCEDURE"](#).

**NOTE:**

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all of the air from the system.

WCIA0146E

SCL800

### BLEEDING PROCEDURE

**CAUTION:**

Carefully monitor the fluid level at the clutch master cylinder during the bleeding operation.

**NOTE:**

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all of the air from the system.

# CLUTCH SYSTEM

[QR25DE]

1. Top off the clutch master cylinder reservoir with the recommended brake fluid "DOT 3". Then attach the additional supply tank as shown.

**CAUTION:**

**Do not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

2. Connect a transparent vinyl tube to the air bleeder valve as shown.
3. Slowly depress the clutch pedal to its full stroke and release it completely. Repeat this operation several times at 2 to 3 seconds intervals.
4. Open the air bleeder valve with the clutch pedal fully depressed.

5. Close the air bleeder valve and tighten to specification.

**Air bleeder valve : 5.9 - 9.8 N·m (0.6 - 1.0 kg·m, 52 - 87 in·lb)**

6. Release the clutch pedal and wait at least 5 seconds.
7. Repeat steps 3 through 6 above until no more air bubbles are in the brake fluid coming out of the vinyl tube attached to the air bleeder valve.

# CLUTCH MASTER CYLINDER

[QR25DE]

## CLUTCH MASTER CYLINDER

PF3:30610

### Components

ECS005SM

- |                          |                   |                   |
|--------------------------|-------------------|-------------------|
| 1. Bracket               | 2. Reservoir cap  | 3. Reservoir tank |
| 4. Hose clamps           | 5. Reservoir hose | 6. Nipple         |
| 7. Piston assembly seals | 8. Push rod       | 9. Stopper ring   |
| 10. Stopper              | 11. Dust cover    | 12. Clevis        |
| 13. Return spring        | 14. Pin           | 15. Seal          |
| 16. Cylinder body        | 17. Clutch tube   |                   |

### Removal

ECS005SN

1. Drain the brake fluid from the clutch hydraulic system.

#### CAUTION:

**Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

2. Remove the clutch tube flare nut using a flare nut wrench.
3. Remove the reservoir hose.
4. Remove the snap pin from the clevis pin and remove the clutch pedal from the clevis.
5. Unscrew the master cylinder assembly nuts and reservoir tank bracket nuts to remove the master cylinder assembly.

### Disassembly

ECS005SP

1. Loosen the push rod lock nut "A" to remove the clevis and lock nut "A".
2. Remove the dust cover.
3. Remove the stopper ring and stopper, and remove the push rod from the cylinder body. During removal, keep the push rod depressed, to prevent the piston inside the master cylinder from popping out. Discard the stopper ring.
4. Remove the piston assembly from the cylinder body.
5. Remove the return spring.
6. Remove the pin using a pin punch, then remove the nipple and seal.

### Inspection

ECS005SQ

Inspect for the following, and replace parts if necessary.

- Damage, wear, rust, and pinholes on the cylinder inner wall
- Damage and deformation of the reservoir tank
- Weak spring
- Crack or deformation of the dust cover

A

B

ECS005SR

## Assembly

1. Install the return spring.
2. Apply rubber lubricant to the sliding parts of the piston assembly, and insert the piston assembly into cylinder body.
3. After installing the stopper on to the push rod, install the new stopper ring while keeping the piston assembly depressed by hand, so that the piston assembly will not pop out.

CL

D

### CAUTION:

**The stopper ring cannot be reused. Always use a new stopper ring for assembly.**

4. Apply silicone grease to the dust cover and install the dust cover.
5. Install the clevis on to push rod, and tighten the lock nut "A" to specification.

E

**Lock nut "A" : 7.8 - 11.8 N·m (0.8 - 1.2 kg-m, 69 - 104 in-lb)**

F

6. Install the seal and nipple on to the cylinder body, and install the pin using a pin punch.

## Installation

ECS005SO

1. Install the reservoir hose.
2. Connect the clutch tube to the master cylinder assembly, and hand-tighten the flare nut.
3. Install the master cylinder assembly to the cowl, and tighten the nuts to specification.

G

H

**Master cylinder nuts : 10.8 - 14.6 N·m (1.1 - 1.4 kg-m, 8 - 10 ft-lb)**

4. Tighten reservoir tank bracket nuts to specification.

I

**Reservoir tank bracket nuts : 2.9 - 5.9 N·m (0.29 - 0.60 kg-m, 26 - 52 in-lb)**

5. Tighten clutch tube flare nut using a flare nut torque wrench to specification.

J

**Clutch tube flare nut : 15 - 18 N·m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)**

6. After installing the clevis pin, install the snap pin to connect the clutch pedal to the push rod.
7. After finishing the installation, bleed the air out of the clutch hydraulic system. Refer to [CL-24, "BLEEDING PROCEDURE"](#).

K

L

M

## OPERATING CYLINDER

### Components

- |                  |                  |                  |
|------------------|------------------|------------------|
| 1. Cylinder body | 2. Piston spring | 3. Piston cup    |
| 4. Piston        | 5. Push rod      | 6. Dust cover    |
| 7. Air bleeder   | 8. Union bolt    | 9. Copper washer |
| 10. Clutch hose  |                  |                  |

### Removal

ECS005ST

1. Drain the brake fluid from clutch hydraulic system.
- CAUTION:**  
Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.
2. Remove the union bolt, the two copper washers, and the clutch hose from the operating cylinder. Discard the copper washers.
3. Remove the operating cylinder bolts, and remove the operating cylinder.

ECS005SU

### Disassembly

1. Remove the dust cover from the operating cylinder body.
2. Remove the push rod.
3. Remove the piston.
4. Remove the piston cup.
5. Remove the piston spring.
6. Remove the air bleeder.

### Inspection

ECS005SV

Inspect for the following, and replace parts if necessary.

- Damage, foreign material, wear, rust, and pinholes on the cylinder inner surface, piston, and sliding part of piston cup

- Weak piston spring
- Crack or deformation of dust cover

A

## Assembly

ECS005SW

**CAUTION:**

B

To assemble the operating cylinder use the specified rubber grease and rubber lubricant. Refer to [GL-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#) .

1. Apply rubber lubricant to the overall inside surface of the operating cylinder body.
2. Install the air bleeder and tighten to specification.

CL

**Air bleeder : 6 - 10 N·m (0.6 - 1.0 kg·m, 52 - 87 in·lb)**

3. Install the piston spring.
4. Apply rubber grease and install the piston cup.
5. Apply rubber grease and install the piston.
6. Install the push rod.
7. Apply rubber grease and install the dust cover.

D

E

## Installation

ECS005SX

Installation is in the reverse order of removal.

**CAUTION:**

F

- Install the clutch hose without twisting it.
- The two copper washers for the union bolt cannot be reused. Use two new copper washers for installation.
- After finishing the installation, bleed the air from the clutch hydraulic system. Refer to [CL-24, "BLEEDING PROCEDURE"](#) .

G

H

I

J

K

L

M

**PIPING**

**Removal**

1. Remove the engine air cleaner and air duct.
2. Drain the brake fluid from the clutch hydraulic system.

**CAUTION:**

**Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

3. Remove the flare nut from the operating cylinder body using a flare nut wrench.
4. Remove the union bolt and two copper washers attaching the clutch hose from the operating cylinder. Discard the two copper washers.
5. Remove the clutch hose from the bracket by removing the lock plate.

**Installation**

1. When installing the clutch hose into the bracket, position the lock plate in the specified direction as shown to secure the clutch hose.

**CAUTION:**

**Install the clutch hose without twisting or bending it.**

2. Tighten the flare nut to specification, using a flare nut wrench.

**Flare nut : 15 - 18 N·m (1.5 - 1.8 kg-m, 11 - 13 ft-lb)**

**CAUTION:**

**Be careful not to damage the flare nut and clutch tube.**

3. Position the clutch hose and install the union bolt and two new copper washers on to the operating cylinder, and tighten the union bolt to specification.

**Union bolt : 17 - 19 N·m (1.7 - 2.0 kg-m, 13 - 14 ft-lb)**

4. Bleed the air from the clutch hydraulic system. Refer to [CL-24, "BLEEDING PROCEDURE"](#) .

5. Install the engine air cleaner and air duct.

ECS005SZ

SCL730

# CLUTCH RELEASE MECHANISM

[QR25DE]

## CLUTCH RELEASE MECHANISM

PFP:30502

### Components

ECS00570

### Removal

ECS00571

1. Remove the manual transaxle. Refer to [MT-16, "Removal and Installation"](#).
2. Move the withdrawal lever enough to remove the release bearing, and remove the release bearing from the clutch lever.
3. Remove the withdrawal lever retainer spring.
4. Pull out the withdrawal lever and remove the dust cover.

### Inspection After Removal

ECS00572

- Replace the release bearing if it is seized, damaged, faulty in rotation direction, or has poor alignment.
- Replace the withdrawal lever if the contact surface is worn excessively.
- Replace the dust seal if its deformed or cracked.

### Installation

ECS00573

1. Installation is in the reverse order of removal.

#### NOTE:

- Clean any old grease and abrasive materials off of the grease application areas as shown.

## CLUTCH RELEASE MECHANISM

[QR25DE]

- 
- Apply approximately a 1 mm (0.04 in) thick coating of clutch sleeve grease to the withdrawal lever and holder spring friction surfaces.
  - Apply a coat of clutch sleeve grease to the grooves on contact surfaces of the withdrawal lever ball pin and inner surface of the release bearing; make sure the grease is flush with the grooves.
  - Apply a thin coat of clutch sleeve grease to the release bearing friction surface. After the grease application, install the release bearing. Wipe off any excess grease forced out from the bearing installation.

## CLUTCH DISC, CLUTCH COVER AND FLYWHEEL

PF3:30100

ECS005T4

### Components

- |                     |                 |           |
|---------------------|-----------------|-----------|
| 1. Flywheel         | 2. Clutch disc  | 3. Washer |
| 4. Main drive shaft | 5. Clutch cover |           |

### CAUTION:

- Do not clean the clutch disc with solvent.
- When installing the clutch disc, do not allow grease from the main drive shaft to contact the clutch disc friction surface.

### Inspection and Adjustment

ECS005T5

#### NOTE:

The following procedures are done with the manual transaxle removed.

#### CLUTCH DISC

- Check clutch disc for wear of the facing surface at the rivets as shown.

**Wear limit of facing surface to rivet head : 0.3 mm (0.012 in)**

- Check the clutch disc for backlash of the spline and runout of the facing as shown.

**Maximum backlash of spline (at outer edge of disc) : 0.9 mm (0.035 in)**

**Runout limit : 1.0 mm (0.039 in)**

**Distance of runout check point (from hub center) : 115.0 mm (4.53 in)**

# CLUTCH DISC, CLUTCH COVER AND FLYWHEEL

[QR25DE]

- Check the clutch disc for burns, discoloration, or oil and grease leakage. Replace the components as necessary.

## CLUTCH COVER AND FLYWHEEL

Check the spring toe height unevenness of the clutch cover with it installed on the vehicle.

**Uneven limit : 0.7 mm (0.028 in)**

If the measured uneven height is greater than the specified limit, adjust the spring toe height with Tool as shown.

## FLYWHEEL INSPECTION

- Check the contact surface of the flywheel for slight burns or discoloration. Clean the flywheel contact surface with emery paper.
- Check the flywheel runout using a dial gauge as shown.

**Maximum allowable runout : Refer to [EM-184, "MOVEMENT AMOUNT OF FLYWHEEL \(M/T MODEL\)"](#) .**

ECS005T6

## Installation

1. Insert Tool into the clutch disc hub for correct alignment when installing the clutch cover and disc as shown.

### CAUTION:

**Do not allow the grease to contaminate the clutch facing.**

2. Tighten the bolts in numerical order in two steps.

**First step : 10 - 20 N·m (1.0 - 2.0 kg·m, 7 - 14 ft·lb)**

**Final step : 35 - 44 N·m (3.5 - 4.5 kg·m, 26 - 32 ft·lb)**

## PRECAUTIONS

### Precautions For Liquid Gasket REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

**CAUTION:**

**Be careful not to damage the mating surfaces.**

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the liquid gasket applied area.

**CAUTION:**

**If for some unavoidable reason a tool such as a flat-blade screwdriver is used, be careful not to damage the mating surfaces.**

### LIQUID GASKET APPLICATION PROCEDURE

- Using a scraper, remove the old sealant adhering to the application surface and the mating surface.
  - Remove the old sealant completely from the groove of the application surface, mounting bolts, and bolt holes.
- Thoroughly clean the application surface and the mating surface to remove adhering moisture, grease and foreign material.
- Attach the sealant tube to the tube presser.

**Use Genuine RTV Silicone Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply the sealant without breaks to the specified location with the specified dimensions.
  - If there is a groove for the sealant application, apply the sealant to the groove.

- As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.
- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#).

## OVERHEATING CAUSE ANALYSIS

### Troubleshooting Chart

	Symptom		Check items						
Cooling system parts malfunction	Poor heat transfer	Water pump malfunction	Worn or loose drive belt	—	CO				
		Thermostat stuck closed	Coolant circulation						
		Damaged fins	Dust contamination or paper clogging						
			Mechanical damage						
	Reduced air flow	Clogging radiator cooling tube	Excess foreign material (rust, dirt, sand, etc.)	—	C				
		Cooling fan does not operate	Engine cooling fans						
		High resistance to fan rotation							
	Damaged fan blades	Fan shroud		—	D				
	Damaged radiator shroud		Coolant quality, viscosity						
	Improper coolant mixture ratio								
	Poor coolant quality	Coolant leaks		—	E				
	Insufficient coolant		Cooling hose			Loose clamp			
						Cracked hose			
		Water pump	Poor sealing						
			Radiator cap	Loose					
		Radiator		Poor sealing					
			O-ring for damage, deterioration or improper fitting						
	Cracked radiator tank								
Reservoir tank	Cracked radiator core								
	Cracked reservoir tank								
Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration	—	F					
		Cylinder head gasket deterioration							
		Over heating engine			Overload on engine	Abusive driving	—	G	
									High engine RPM under no load
Blocked or restricted air flow	Blocked radiator grille	Installed car brassiere	—	H					
					Blocked bumper	Mud, debris, or paper clogging			
							Blocked radiator		
					Blocked condenser				
Except cooling system parts malfunction	Over heating engine	Overload on engine	—	I					
					Abusive driving	Driving in low gear for extended time			
						Driving at extremely high speed			
						Powertrain system malfunction			
					Installed improper size wheels and tires	Dragging brakes	Improper ignition timing	—	J
Blocked bumper									
	Blocked radiator	Mud, debris, or paper clogging	—	K					
Blocked condenser									

# COOLING SYSTEM

[QG18DE]

## COOLING SYSTEM

PF2:21020

### Cooling Circuit

EBS00CH4

## ENGINE COOLANT

### System Check

#### **WARNING:**

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure fluid escaping from the radiator.

Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it all the way.

### CHECKING COOLING SYSTEM HOSES

Check hoses for the following:

- Improper attachment
- Leaks
- Cracks
- Damage
- Loose connections
- Chafing
- Deterioration

### CHECKING RESERVOIR LEVEL

- Check if the reservoir tank coolant level is within MIN to MAX when the engine is cool.
- Adjust coolant level if it is too much or too little.

### CHECKING COOLING SYSTEM FOR LEAKS

To check for leakage, apply pressure to the cooling system with a tester.

**Testing pressure : 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)**

#### **WARNING:**

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

#### **CAUTION:**

Higher pressure than specified may cause radiator damage.

### CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
  - When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.
1. Apply water by hose to the back side of the radiator core vertically downward.
  2. Apply water again to all radiator core surfaces once per minute.
  3. Stop washing when clear water flows off the radiator.
  4. Blow air into the back side of radiator core vertically downward.
    - Use compressed air lower than 490 kPa (5 kg/cm<sup>2</sup> , 71 psi) and keep distance more than 300 mm (11.8 in).

5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
6. Check for leakage.

## CHECKING RADIATOR CAP

- To check radiator cap, apply pressure to cap with a tester.

**Radiator cap relief  
pressure**

**Standard** : 78 - 98 kPa (0.8 - 1.0 kg/cm<sup>2</sup> ,  
11 - 14 psi)

**Limit** : 59 kPa (0.6 kg/cm<sup>2</sup> , 9 psi)

- Pull the negative pressure valve to open it.
- Check that it closes completely when released.

## Refilling Engine Coolant

EBS00CH6

Changing the engine coolant is part of the required maintenance of the engine. Refer to [MA-16, "Changing Engine Coolant"](#) .

## WATER PUMP

### Removal and Installation

**CAUTION:**

- When removing water pump assembly, be careful not to get coolant on drive belt.
  - Water pump cannot be disassembled and should be replaced as a unit.
  - After installing water pump, check for leaks using radiator cap tester. Refer to [CO-7, "CHECKING COOLING SYSTEM FOR LEAKS"](#) .
1. Drain engine coolant.  
Refer to [MA-16, "DRAINING ENGINE COOLANT"](#) .

2. Remove front RH wheel.
3. Remove engine side cover.
4. Remove drive belts and idler pulley.
5. Loosen water pump pulley bolts.
6. Remove water pump pulley.

# WATER PUMP

[QG18DE]

7. Remove the water pump bolts.
8. Remove the water pump.
  - Remove liquid gasket from water pump and mating surface of cylinder block using a scraper.
9. Installation is in the reverse order of removal.
  - When applying liquid gasket to mating surface of water pump, use Genuine Anaerobic Liquid Gasket or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).
  - When filling radiator with coolant, refer to [MA-17, "REFILLING ENGINE COOLANT"](#).
  - When installing drive belts, refer to [MA-16, "Checking Drive Belts"](#).

## Inspection

1. Rotate water pump shaft, replace the water pump as necessary.
  - **Check body assembly and vane for rust or corrosion.**
  - **Check for rough operation due to excessive end play.**

EBS00CH8

## THERMOSTAT AND THERMOSTAT HOUSING

PFP:21200

### Removal and Installation

EBS00CH9

**CAUTION:**

**Be careful not to spill coolant over the engine compartment. Use a rag to absorb any spilled coolant.**

1. Drain engine coolant. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#).
2. Disconnect the lower radiator hose.
3. Remove water inlet thermostat housing, then remove the thermostat.
4. Before installing the thermostat, make sure the gum ring is properly seated around the thermostat.

5. Install thermostat with jiggle valve or air bleeder at upper side.
6. Refill engine coolant after installation. Run engine for a few minutes, and check for any coolant leaks. Refer to [MA-17, "REFILLING ENGINE COOLANT"](#)

# THERMOSTAT AND THERMOSTAT HOUSING

[QG18DE]

EBS00CHA

## Inspection

1. Check for valve seating condition at normal room temperature. The valve should seat tightly all the way around. If the valve is warped or stuck open, replace the thermostat.
2. Suspend the thermostat, by a string caught in the closed valve, in boiling water while monitoring the temperature.

Valve opening temperature °C (°F)	76.5° (170°)
Valve lift mm/°C (in/°F)	More than 9/90° (0.35/194°)

3. Check the temperature at which the valve begins to open and falls from the string. Check the total valve lift when the valve opens completely.
4. Then check if valve closes at 5°C (41°F) below valve opening temperature.

## RADIATOR

### Removal and Installation

- |                        |                           |                                 |
|------------------------|---------------------------|---------------------------------|
| 1. Reservoir tank      | 2. Reservoir tank bracket | 3. Radiator cap                 |
| 4. Mounting bracket    | 5. Upper radiator hose    | 6. Cooling fans                 |
| 7. Radiator drain plug | 8. Mounting rubber        | 9. Oil cooler hose (A/T models) |
| 10. Radiator           | 11. Lower radiator hose   |                                 |

#### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns can occur from high pressure coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter of a turn to allow the built-up pressure to escape. Carefully remove the cap by pushing down and turning it the rest of the way.

#### REMOVAL

1. Drain engine coolant. Refer to [MA-16, "DRAINING ENGINE COOLANT"](#).
2. Remove the air duct and air cleaner assembly.
3. Disconnect the A/T oil cooler hoses (if equipped) and install a blind plug in the hoses to prevent A/T oil loss.
4. Disconnect the upper and lower radiator hoses and mounting bracket.
5. Remove the radiator and radiator fan assembly as one unit.

#### CAUTION:

Do not damage or scratch the radiator core when removing.

#### INSTALLATION

- Installation is in the reverse order of removal.

## Disassembly and Assembly

SEC. 214

WLC013

### PREPARATION

1. Attach the spacer to the tip of the radiator plate pliers A. Spacer specification: 1.5 mm (0.059 in) thick x 18 mm (0.71 in) wide x 8.5 mm (0.335 in) long.
2. Make sure that when radiator plate pliers A are closed dimension H'' is approx. 7.6 mm (0.299 in).
3. Adjust dimension H'' with the spacer, if necessary.

SLC655CB

### DISASSEMBLY

1. Remove tank with Tool.

SLC903-A

- Grip the crimped edge and bend it upwards so that Tool slips off.

**CAUTION:**  
Do not bend excessively.

SLC893

# RADIATOR

[QG18DE]

- In areas where Tool cannot be used, use a screwdriver to bend the edge up.

**CAUTION:**

**Be careful not to damage tank.**

2. Make sure the edge stands straight up.
3. Remove oil cooler from tank (A/T model only).

## ASSEMBLY

1. Install oil cooler (A/T model only).
  - Pay attention to direction of conical washer.

2. Clean contact portion of tank.

3. Install sealing rubber.
  - Push it in with fingers.
  - Be careful not to twist sealing rubber.

4. Crimp the tank rim in a specified sequence with the Tool.

- Use pliers in the locations where the Tool cannot be used.

5. Make sure that the tank rim is completely crimped down.

**Standard height "H" : 8.0 - 8.4 mm (0.315 - 0.331 in)**

6. Check for any coolant leakage. Refer to [CO-7, "CHECKING COOLING SYSTEM FOR LEAKS"](#).

## Inspection

1. Apply pressure with Tool.

**Specified pressure value** : 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)

**WARNING:**

To prevent the risk of the hose coming undone while under pressure, securely fasten it down with a hose clamp. Attach a hose to the oil cooler as well (A/T model only).

2. Check for leaks.

## PRECAUTIONS

### Precautions For Liquid Gasket REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, disconnect and remove the sealant using a seal cutter.

**CAUTION:**

**Be careful not to damage the mating surfaces.**

- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the sealant applied area.

**CAUTION:**

**If for some unavoidable reason a tool such as a flat-blade screwdriver is used, be careful not to damage the mating surfaces.**

### LIQUID GASKET APPLICATION PROCEDURE

- Using a scraper, remove the old sealant adhering to the application surface and the mating surface.
- Remove the old sealant completely from the groove of the application surface, mounting bolts, and bolt holes.
- Thoroughly clean the application surface and the mating surface to remove adhering moisture, grease and foreign material.
- Attach the sealant tube to the tube presser.

**Use Genuine RTV Silicone Sealant or equivalent. Refer to [GI-44, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"](#).**

- Apply the sealant without breaks to the specified location with the specified dimensions.
- If there is a groove for the sealant application, apply the sealant to the groove.

- As for the bolt holes, normally apply the sealant inside the holes. Occasionally, it should be applied outside the holes.
- Within five minutes of sealant application, install the mating component.
- If the sealant protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine with the specified oil and coolant. Refer to [MA-13, "RECOMMENDED FLUIDS AND LUBRICANTS"](#).

# OVERHEATING CAUSE ANALYSIS

[QR25DE]

## OVERHEATING CAUSE ANALYSIS

PFP:00012

### Troubleshooting Chart

EBS00CHJ

		Symptom	Check items	
Cooling system parts malfunction	Poor heat transfer	Water pump malfunction	Worn or loose drive belt	—
		Thermostat stuck closed	Coolant circulation	
		Damaged fins	Dust contamination or paper clogging	
			Mechanical damage	
	Clogged radiator cooling tube	Excess foreign material (rust, dirt, sand, etc.)		
	Reduced air flow	Cooling fan does not operate	Fan blades	—
		High resistance to fan rotation		
		Damaged fan blades		
		Damaged radiator shroud	Radiator shroud	—
	Improper coolant mixture ratio	—	Coolant quality, viscosity	—
	Poor coolant quality	—		—
	Insufficient coolant	Coolant leaks	Cooling hose	Loose clamp
				Cracked hose
			Water pump	Poor sealing
			Radiator cap	Loose
Poor sealing				
Radiator			O-ring for damage, deterioration or improper fitting	
		Cracked radiator tank		
Cracked radiator core				
Reservoir tank	Cracked reservoir tank			
Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration		
		Cylinder head gasket deterioration		
—	Overload on engine	Abusive driving	High engine rpm under no load	
			Driving in low gear for extended time	
			Driving at extremely high speed	
		Powertrain system malfunction	—	
		Installed improper size wheels and tires		
		Dragging brakes		
Improper ignition timing				
Blocked or restricted air flow	Blocked radiator grille	Installed car brassiere	—	
	Blocked bumper	Mud, debris, or paper clogging		
	Blocked radiator			
	Blocked condenser			
	Installed large fog lamp			

# COOLING SYSTEM

[QR25DE]

## COOLING SYSTEM

PFP:21020

### Cooling Circuit

EBS00CHK

PBIC0234E

PBIC0280E

## ENGINE COOLANT

### System Check

#### **WARNING:**

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure fluid escaping from the radiator.

Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it all the way.

### CHECKING COOLING SYSTEM HOSES

Check hoses for the following:

- Improper attachment
- Leaks
- Cracks
- Damage
- Loose connections
- Chafing
- Deterioration

### CHECKING RESERVOIR LEVEL

- Check if the reservoir tank coolant level is within MIN to MAX when the engine is cool.
- Adjust coolant level if it is too much or too little.

### CHECKING COOLING SYSTEM FOR LEAKS

To check for leakage, apply pressure to the cooling system with a tester.

**Testing pressure** : 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)

#### **WARNING:**

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

#### **CAUTION:**

Higher pressure than specified may cause radiator damage.

### CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
  - When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.
1. Apply water by hose to the back side of the radiator core vertically downward.
  2. Apply water again to all radiator core surfaces once per minute.
  3. Stop washing when clear water flows off of the radiator.
  4. Blow air into the back side of radiator core vertically downward.
    - Use compressed air lower than 490 kPa (5 kg/cm<sup>2</sup> , 71 psi) and keep distance more than 300 mm (11.8 in).

5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
6. Check for leakage.

### CHECKING RADIATOR CAP

- To check radiator cap, apply pressure to cap with a tester.

#### Radiator cap relief pressure

**Standard** : 78 - 98 kPa (0.8 - 1.0 kg/cm<sup>2</sup> , 11 - 14 psi)

**Limit** : 59 kPa (0.6 kg/cm<sup>2</sup> , 14 psi)

- Pull the negative pressure valve to open it.
- Check that it closes completely when released.

EBS00EYT

### Refilling Engine Coolant

Changing the engine coolant is part of the required maintenance of the engine. Refer to [MA-23. "Changing Engine Coolant"](#) .

## INSPECTION AFTER REMOVAL

- Visually check that there is no significant dirt or rust on the water pump body and vane.
- Check that there is no play when rotating the vane shaft, and that it turns smoothly when rotated by hand.
- If necessary, replace the water pump as an assembly.

## INSTALLATION

Installation is in the reverse order of removal.

### NOTE:

When inserting the water pipe end into the thermostat housing, apply coolant to the O-ring seal and install immediately.

## INSPECTION AFTER INSTALLATION

After installing the water pump and pipe, check for leaks using the radiator cap tester. Refer to [CO-34, "CHECKING RADIATOR"](#) .

A

CO

C

D

E

F

G

H

I

J

K

L

M

## INSPECTION AFTER REMOVAL

- Place a string so that it is caught in the valve of the thermostat (or water control valve) and suspend it in boiling water. It must be fully immersed in the water.
- The valve opening temperature is the temperature at which the valve plate begins to rise from the top plate causing the thermostat to fall off of the string.
- Continue heating the water and thermostat to check the full-open valve lift distance.

**NOTE:**

The full-open lift amount standard temperature for the thermostat (water control valve) is the reference value.

- After checking the full-open lift amount, lower the water temperature and check the valve closing temperature.

### Standard Values

Component	Thermostat	Water control valve
Valve opening temperature	80.5 - 83.5°C (177 - 182° F)	93.5 - 96.5°C (200 - 206°F)
Full-open lift amount	More than 8 mm/ 95°C (0.315 in/ 203 °F)	More than 8 mm/ 108°C (0.315 in/ 226 ° F)
Valve closing temperature	77°C (171°F)	90°C (194° F)

## INSTALLATION

- Installation is in the reverse order of removal.

### Thermostat and Water Control Valve

- Install the thermostat and water control valve with the whole circumference of each flange fitting securely inside the rubber ring. (The example in the figure shown is the thermostat.)

- Install the thermostat with the jiggle valve facing upwards. (The position deviation may be within the range of  $\pm 10^\circ$ .)
- Install the water control valve with the up-mark facing up and the frame center part facing upwards. The position deviation may be within the range of  $\pm 10^\circ$  of vertical.

### Heater Pipe

- Apply clean coolant to the heater pipe O-ring, and immediately install the heater pipe into the installation holes.

## RADIATOR

### Removal and Installation

- |                                      |                          |                         |
|--------------------------------------|--------------------------|-------------------------|
| 1. Radiator                          | 2. Bracket               | 3. Mounting rubber      |
| 4. A/T oil cooler hose (if equipped) | 5. Radiator hose (lower) | 6. Cooling fan assembly |
| 7. Reservoir tank                    | 8. Radiator hose (upper) | 9. Radiator cap         |

#### WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly push down and turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by pushing down and turning it three-quarters around.

#### REMOVAL

1. Drain the engine coolant. Refer to [MA-23, "DRAINING ENGINE COOLANT"](#).
2. Remove the air duct with air cleaner assembly.
3. Disconnect A/T oil cooler hoses (if equipped).
  - Install a blind plug to avoid leakage of A/T oil.
4. Disconnect the radiator upper hose, lower hose, and mounting bracket.
5. Remove the radiator and cooling fan assembly

#### CAUTION:

- Do not damage or scratch radiator core when removing.

#### INSTALLATION

Installation is in the reverse order of removal.

- After installation, run the engine until it reaches full operating temperature and check for any cooling system leaks. Repair any leaks as necessary.

# RADIATOR

[QR25DE]

EBS00CHO

## Disassembly and Assembly

### PREPARATION

1. Attach the spacer to the tip of the radiator plate pliers A. Spacer specification: 1.5 mm (0.059 in) thick x 18 mm (0.71 in) wide x 8.5 mm (0.335 in) long.
2. Make sure that when radiator plate pliers A are closed dimension H'' is approx. 7.6 mm (0.299 in).
3. Adjust dimension H'' with the spacer, if necessary.

### DISASSEMBLY

1. Remove tank with Tool.

- Grip the crimped edge and bend it upwards so that the Tool slips off.

**CAUTION:**

Do not bend excessively.

# RADIATOR

[QR25DE]

- In areas where Tool cannot be used, use a screwdriver to bend the edge up.

**CAUTION:**

**Be careful not to damage tank.**

2. Make sure the edge stands straight up.
3. Remove oil cooler from tank (A/T model only).

## ASSEMBLY

1. Install oil cooler (A/T model only).
  - Pay attention to direction of conical washer.

2. Clean contact portion of tank.

# RADIATOR

[QR25DE]

3. Install sealing rubber.
  - Push it in with fingers.
  - Be careful not to twist sealing rubber.

4. Crimp tank in specified sequence with Tool.

- Use pliers in the locations where Tool cannot be used.

5. Make sure that the rim is completely crimped down.
  - Standard height "H" : 8.0 - 8.4 mm (0.315 - 0.331 in)
6. Confirm that there is no leakage.
  - Refer to [CO-34, "Inspection"](#) .

## INSPECTION

1. Apply pressure with Tool.

**Specified pressure value** : 157 kPa (1.6 kg/cm<sup>2</sup> , 23 psi)

**WARNING:**

To prevent the risk of the hose coming undone while under pressure, securely fasten it down with a hose clamp. Attach a hose to the oil cooler as well (A/T model only).

2. Check for leaks in dip tank.

EBS00CHR

## Inspection

### CHECKING RADIATOR CAP

- Check that there is no dirt or damage on the valve seat of the radiator cap negative-pressure valve.
- Check that there are no abnormalities in the opening and closing conditions of the negative-pressure valve.
- Pull the negative pressure valve to open it.
- Check that it closes completely when released.

- Check radiator cap relief pressure.

**Standard** : 78 - 98 kPa (0.8 - 1.0 kg/cm<sup>2</sup> , 11 - 14 psi)

**Limit** : 59 kPa (0.6 kg/cm<sup>2</sup> , 9 psi)

- When connecting the radiator cap to the tester, apply water to the cap seal surface.
- Replace the radiator cap if there is an abnormality in the negative-pressure valve, or if the open-valve pressure is outside of the standard values.

### CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows:

- Be careful not to bend or damage the radiator fins.

# RADIATOR

[QR25DE]

- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.
- 1. Apply water by hose to the back side of the radiator core vertically downward.
- 2. Apply water again to all radiator core surfaces once per minute.
- 3. Stop washing when clear water is flowing off the radiator.
- 4. Blow air into the back side of radiator core vertically downward.
- Use compressed air lower than 490 kPa (5 kg/cm<sup>2</sup> , 71psi) and keep distance more than 30 cm (11.8 in).
- 5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.
- 6. Check for leakage.

COOLING FAN

Disassembly and Assembly

- 1. Cooling fan motor
- 2. Insulator
- 3. Cooling fan shroud
- 4. Cooling fan blade

**DISASSEMBLY**

1. Remove the radiator and cooling fan assembly. Refer to [CO-30, "REMOVAL"](#).
2. Remove the cooling fan shroud from the radiator.
3. Remove the cooling fan blades from the cooling fan motors.
4. Remove the insulator.
5. Remove the cooling fan motors from the fan shroud.

**ASSEMBLY**

- Assembly is in the reverse order of disassembly.

## System Description

### UNIFIED CONTROL METER

- Speedometer, odo/trip meter, tachometer (if equipped), fuel gauge and water temperature gauge are controlled totally by control unit built-in combination meter.
- Digital meter is adopted for odo/trip meter.\*  
\*The record of the odometer is kept even if the battery cable is disconnected. The record of the trip meter is erased when the battery cable is disconnected.
- Odo/trip meter segment can be checked in diagnosis mode.
- Meter/gauge can be checked in diagnosis mode.

### HOW TO CHANGE THE DISPLAY FOR ODO/TRIP METER

#### NOTE:

Turn ignition switch to the ON position to operate odo/trip meter.

### POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times:

- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to combination meter terminal 25 (without tachometer) or 42 (with tachometer).

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 30, located in the fuse block (J/B)]
- to combination meter terminal 26 (without tachometer), or
- to combination meter terminals 41 and 6 (with tachometer).

Ground is supplied:

- to combination meter terminal 27 (without tachometer) or 48 (with tachometer)
- through body grounds M28 and M54.

### WATER TEMPERATURE GAUGE

#### QG18DE

The water temperature gauge indicates the engine coolant temperature.

ECM provides a water temperature signal to combination meter for water temperature gauge with CAN communication line.

#### QR25DE

The water temperature gauge indicates the engine coolant temperature. The reading on the gauge is based on the signal from the ECM.

The water temperature gauge is regulated by a signal:

- from terminal 32 of the ECM

# METERS AND GAUGES

- to combination meter terminal 43 for the water temperature gauge.

## TACHOMETER

### QG18DE Models

The tachometer indicates engine speed in revolutions per minute (rpm).

ECM provides an engine speed signal to combination meter for tachometer with CAN communication line.

### QR25DE Models

The tachometer indicates engine speed in revolutions per minute (rpm).

The tachometer is regulated by a signal:

- from terminal 36 of the ECM
- to combination meter terminal 45 for the tachometer.

## FUEL GAUGE

The fuel gauge indicates the approximate fuel level in the fuel tank.

The fuel gauge is regulated by a variable ground signal supplied:

- to combination meter terminal 30 (without tachometer) or 44 (with tachometer) for the fuel gauge
- from terminal 2 of the fuel level sensor unit and fuel pump
- through terminal 5 of the fuel level sensor unit and fuel pump, and
- through body grounds B13 and B19.

## SPEEDOMETER

The combination meter receives a voltage signal from the vehicle speed sensor for the speedometer.

The voltage is supplied:

- to combination meter terminal 29 (without tachometer) or 47 (with tachometer) for the speedometer
- from terminal 1 (with QG18DE), or terminal + (with QR25DE) of the vehicle speed sensor.

The speedometer converts the voltage into the vehicle speed displayed.

## CAN Communication

EKS003LD

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

## Meter/Gauge Operation and Odo/Trip Meter Segment Check in Diagnosis Mode

EKS0039E

### DIAGNOSIS FUNCTION

- Odo/trip meter segment can be checked in diagnosis mode.
- Meters/gauges can be checked in diagnosis mode.

### HOW TO ALTERNATE DIAGNOSIS MODE

1. Turn ignition switch to ON and change odo/trip meter to "TRIP A" or "TRIP B".
2. Turn ignition switch to OFF.
3. Turn ignition switch to ON when pushing odo/trip meter switch.
4. Release odo/trip meter switch 1 second after ignition switch is turned ON.
5. Push odo/trip meter switch three times within 7 seconds.
6. All odo/trip meter segments should be turned on.

#### NOTE:

If some segments are not turned on, combination meter should be replaced.

At this point, the unified control meter is turned to diagnosis mode.

7. Push odo/trip meter switch. Indication of each meter/gauge should be as shown in figure during pushing odo/trip meter switch.

#### NOTE:

It takes a few seconds for indication of fuel gauge and water temperature gauge to become stable.

8. Turn ignition switch to OFF or start engine to cancel diagnosis mode.

## SYMPTOM CHART

Symptom	Possible causes	Repair order
One meter/gauge (speedometer/tachometer/fuel gauge/water temp. gauge) is malfunctioning.	1. Sensor signal <ul style="list-style-type: none"> <li>- Vehicle speed signal</li> <li>- Engine revolution signal</li> <li>- Fuel gauge</li> <li>- Water temp. gauge</li> </ul> 2. Unified meter control unit	1. Check the sensor for malfunctioning meter/gauge. <a href="#">DI-21. "INSPECTION/VEHICLE SPEED SENSOR"</a> <a href="#">DI-22. "INSPECTION/ENGINE REVOLUTION SIGNAL (QR25DE)"</a> <a href="#">DI-23. "INSPECTION/FUEL LEVEL SENSOR UNIT AND FUEL PUMP"</a> <a href="#">DI-24. "INSPECTION/WATER TEMPERATURE GAUGE (QG18DE MODELS)"</a> <a href="#">DI-25. "INSPECTION/WATER TEMPERATURE GAUGE (QR25DE MODELS)"</a>
Multiple meters/gauges (except odo/trip meter) are malfunctioning.		2. Replace combination meter assembly.

Before starting trouble diagnoses below, perform "PRELIMINARY CHECK", [DI-17. "PRELIMINARY CHECK"](#).

# METERS AND GAUGES

## POWER SUPPLY AND GROUND CIRCUIT CHECK

### Power Supply Circuit Check

#### WITHOUT TACHOMETER

Terminals			Ignition switch position		
(+)		(-)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M30	25 (R/B)	Ground	Battery voltage	Battery voltage	Battery voltage
M30	26 (Y)	Ground	0V	0V	Battery voltage

#### WITH TACHOMETER

Terminals			Ignition switch position		
(+)		(-)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M29	6 (Y)	Ground	0V	0V	Battery voltage
M30	41 (Y)	Ground	0V	0V	Battery voltage
M30	42 (R/B)	Ground	Battery voltage	Battery voltage	Battery voltage

If NG, check the following.

- 10A fuse [No. 12, located in fuse block (J/B)]
- 10A fuse [No. 30, located in fuse block (J/B)]
- Harness for open or short between fuse and combination meter

# METERS AND GAUGES

## INSPECTION/VEHICLE SPEED SENSOR

### 1. CHECK VEHICLE SPEED SENSOR OUTPUT

1. Remove vehicle speed sensor from transmission.
2. Check voltage between combination meter terminal 29 (without tachometer) or 47 (with tachometer) and ground while quickly turning speed sensor pinion.

OK or NG

- OK >> Vehicle speed sensor is OK.  
NG >> GO TO 2.

### 2. CHECK VEHICLE SPEED SENSOR

Check resistance between vehicle speed sensor connector F43 terminals 1 and 2 (with QG18DE), or connector F36 terminals + and - (with QR25DE).

**Resistance**      **Approx. 250Ω**

OK or NG

- OK >> Check the following.
- Harness between combination meter and vehicle speed sensor.
  - Vehicle speed sensor ground circuit.
- NG >> Replace vehicle speed sensor.

## INSPECTION/ENGINE REVOLUTION SIGNAL (QG18DE)

### 1. CHECK ECM SELF-DIAGNOSIS

Perform ECM self diagnosis. Refer to [EC-113](#) (ULEV Models), [EC-694](#) (SULEV Models).

OK or NG

- OK >> Replace combination meter.  
NG >> Go to ECM trouble diagnosis. Refer to [EC-113](#) (ULEV Models), [EC-694](#) (SULEV Models).

# METERS AND GAUGES

## INSPECTION/ENGINE REVOLUTION SIGNAL (QR25DE)

### 1. CHECK ECM OUTPUT

1. Start engine.
2. Check voltage between combination meter terminal 45 and ground at idle and 2,000 rpm.

#### OK or NG

- OK >> Engine revolution signal is OK.  
NG >> Harness for open or short between ECM and combination meter.

# METERS AND GAUGES

## INSPECTION/FUEL LEVEL SENSOR UNIT AND FUEL PUMP

### 1. CHECK GROUND CIRCUIT FOR FUEL LEVEL SENSOR UNIT

Check harness continuity between fuel level sensor unit and fuel pump connector terminal 5 and ground.

Terminals (+)		(-)	Continuity
Connector	Terminal (Wire color)		
MB25	5 (B/R)	Ground	Yes

OK or NG

- OK >> GO TO 2.
- NG >> Repair harness or connector.

### 2. CHECK FUEL LEVEL SENSOR UNIT

Refer to [DI-26, "FUEL LEVEL SENSOR UNIT CHECK"](#).

OK or NG

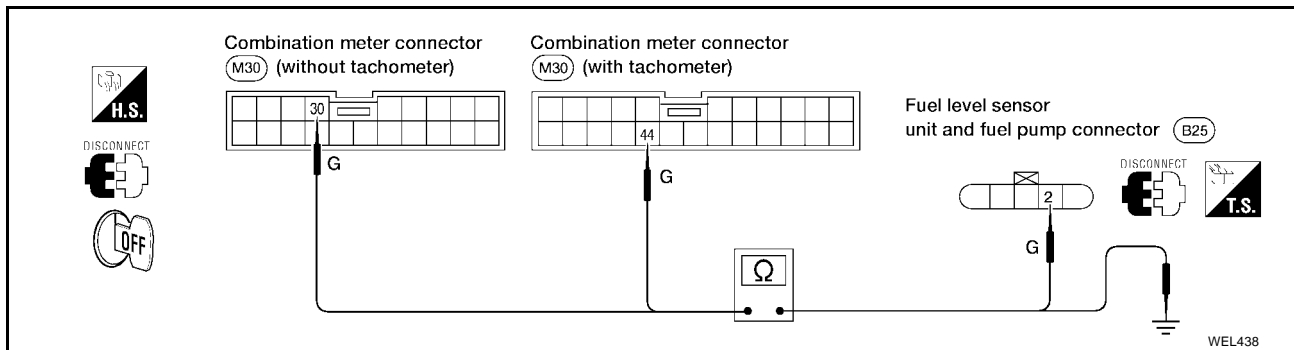

- OK >> GO TO 3.
- NG >> Replace fuel level sensor unit.

### 3. CHECK HARNESS FOR OPEN OR SHORT

1. Disconnect combination meter connector and fuel level sensor unit and fuel pump connector.
2. Check continuity between combination meter terminal 30 (without tachometer) or terminal 44 (with tachometer) and fuel level sensor unit and fuel pump connector terminal 2.

**Continuity should exist.**

3. Check continuity between combination meter terminal 30 (without tachometer) or terminal 44 (with tachometer) and ground.

**Continuity should not exist.**

OK or NG

- OK >> Fuel level sensor unit is OK.
- NG >> Repair harness or connector.

## METERS AND GAUGES

---

### INSPECTION/WATER TEMPERATURE GAUGE (QG18DE MODELS)

---

#### 1. CHECK ECM SELF-DIAGNOSIS

---

Perform ECM self diagnosis. Refer to [EC-113](#) (ULEV Models), [EC-694](#) (SULEV Models).

OK or NG

OK >> Replace combination meter.

NG >> Go to ECM trouble diagnosis. Refer to [EC-113](#) (ULEV Models), [EC-694](#) (SULEV Models).

# METERS AND GAUGES

## INSPECTION/WATER TEMPERATURE GAUGE (QR25DE MODELS)

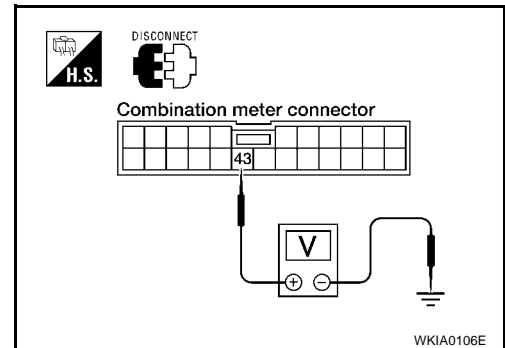

### 1. CHECK ECM OUTPUT

1. Disconnect combination meter.
2. Check voltage between combination meter harness connector M30 terminal 43 (PU/W) and ground.

**Battery voltage should exist.**

OK or NG

- OK >> GO TO 3.  
NG >> GO TO 2.

### 2. CHECK HARNESS FOR OPEN OR SHORT

1. Disconnect ECM connector.
2. Check continuity between combination meter harness connector M30 terminal 43 (PU/W) and ECM harness connector F54 terminal 32 (PU).

**Continuity should exist.**

3. Check continuity between combination meter harness connector M30 terminal 43 (PU/W) and ground.

**Continuity should not exist.**

OK or NG

- OK >> GO TO 3.  
NG >> Repair harness or connector.

### 3. CHECK WATER TEMPERATURE OUTPUT SIGNAL

1. Connect combination meter connector and ECM connector.
2. Start engine.
3. Check output signal between combination meter harness connector M30 terminal 43 (PU/W) and ground. (Use "SIMPLE OSCILLOSCOPE" in "SUB MODE" with CONSULT-II.)

**Reading should be as shown.**

OK or NG

- OK >> Replace combination meter.  
NG >> Check ECM.

# METERS AND GAUGES

EKS0039G

## Electrical Components Inspection FUEL LEVEL SENSOR UNIT CHECK

- For removal, refer to [FL-3, "Removal and Installation"](#) .  
Check the resistance between terminals 2 and 5.

Ohmmeter		Float position		mm (in)	Resistance (Approximate)
(+)	(-)				
2	5	*1	Full	136.1 (5.358)	4.5 - 5.5 Ω
		*2	1/2	89.8 (3.535)	31.5 - 33.5 Ω
		*3	Empty	31.3 (1.232)	80 - 83 Ω

\*1 and \*3: When float rod is in contact with stopper.

## VEHICLE SPEED SENSOR SIGNAL CHECK

- Remove vehicle speed sensor from transmission.
- Turn vehicle speed sensor pinion quickly and measure voltage across terminals 1 and 2 (with QG18DE), or terminals + and - (with QR25DE).

## Electrical Components Inspection FUEL WARNING LAMP OPERATION CHECK

1. Turn ignition switch OFF.
2. Disconnect fuel level sensor unit and fuel pump harness connector B25.
3. Connect a resistor (80Ω) between fuel level sensor unit and fuel pump harness connector terminal 2 (G) and 5 (B/R).
4. Turn ignition switch ON.

The fuel warning lamp should come on.

### NOTE:

ECM might store the 1st trip DTC P0180 and the 1st trip DTC P0464 during this inspection.

If the DTC is stored in ECM memory, erase the DTC after reconnecting fuel level sensor unit and fuel pump harness connector.

Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (ULEV Model)], [EC-651, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) [QG18DE (SULEV Model)], or [EC-1273, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) (QR25DE).

## OIL PRESSURE SWITCH CHECK

	Oil pressure kPa (kg/cm <sup>2</sup> , psi)	Continuity
Engine running	More than 10 - 20 (0.1 - 0.2, 1 - 3)	No
Engine not running	Less than 10 - 20 (0.1 - 0.2, 1 - 3)	Yes

Check the continuity between the terminals of oil pressure switch and body ground.

## DIODE CHECK

- Check continuity using an ohmmeter.
- Diode is functioning properly if test results are as shown in the figure.
- Check diodes at the combination meter harness connector instead of on the combination meter assembly. Refer to [DI-29, "Wiring Diagram — WARN —"](#).

### NOTE:

Specification may vary depending on the type of tester. Before performing this inspection, be sure to refer to the instruction manual for the tester to be used.

# WARNING CHIME

EKS0039L

## System Description WITHOUT POWER DOOR LOCKS

The warning chime is controlled by the time control unit.

The warning chime is located in the time control unit.

Power is supplied at all times:

- through 10A fuse [No. 13, located in fuse block (J/B)]
- to time control unit terminal 7
- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to key switch terminal 2, and
- through 10A fuse (No. 38, located in the fuse and fusible link box)
- to lighting switch terminal 11.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to time control unit terminal 9.

Ground is supplied to time control unit terminal 8 through body grounds M28 and M54.

When a signal, or combination of signals, is received by the time control unit, the warning chime will sound.

## Ignition Key Warning Chime

With the key in the ignition switch, the ignition switch in the OFF position, and the driver door open, the warning chime will sound.

Power is supplied:

- from key switch terminal 1
- to time control unit terminal 4.

Ground is supplied:

- from front door switch LH terminal 2
- to time control unit terminal 2.

Front door switch LH terminal 3 is grounded through body grounds B13 and B19.

## Light Warning Chime

With ignition switch OFF, driver door open, and lighting switch in parking lamp (1ST) or ON (2ND) position, warning chime will sound.

Power is supplied:

- from lighting switch terminal 12
- to time control unit terminal 5.

Ground is supplied:

- from front door switch LH terminal 2
- to time control unit terminal 2.

Front door switch LH terminal 3 is grounded through body grounds B13 and B19.

## Seat Belt Warning Chime

With ignition switch turned ON and seat belt unfastened (seat belt buckle switch LH ON), warning chime will sound for approximately 6 seconds.

Ground is supplied:

- from seat belt buckle switch LH terminal 1
- to time control unit terminal 1.

Seat belt buckle switch LH terminal 2 is grounded through body grounds B13 and B19.

## WITH POWER DOOR LOCKS

The warning chime is controlled by the smart entrance control unit.

The warning chime is located in the smart entrance control unit.

Power is supplied at all times:

- through 10A fuse (No. 37, located in fuse and fusible link box)
- to smart entrance control unit terminal 10,
- through 10A fuse [No. 12, located in the fuse block (J/B)]

# WARNING CHIME

- to key switch terminal 2, and
- through 10A fuse (No. 38, located in the fuse and fusible link box)
- to lighting switch terminal 11.

With the ignition switch in the ON or START position, power is supplied:

- through 10A fuse [No. 10, located in the fuse block (J/B)]
- to smart entrance control unit terminal 33.

Ground is supplied to smart entrance control unit terminal 16 through body grounds M28 and M54.

When a signal, or combination of signals, is received by the smart entrance control unit, the warning chime will sound.

## Ignition Key Warning Chime

With the key in the ignition switch, the ignition switch in the OFF position, and the driver door open, the warning chime will sound.

Power is supplied:

- from key switch terminal 1
- to smart entrance control unit terminal 32.

Ground is supplied:

- from front door switch LH terminal 2
- to smart entrance control unit terminal 29.

Front door switch LH terminal 3 is grounded through body grounds B13 and B19.

## Light Warning Chime

With ignition switch OFF, driver door open, and lighting switch in parking lamp (1ST) or ON (2ND) position, warning chime will sound.

Power is supplied:

- from lighting switch terminal 12
- to smart entrance control unit terminal 34.

Ground is supplied:

- from front door switch LH terminal 2
- to smart entrance control unit terminal 29.

Front door switch LH terminal 3 is grounded through body grounds B13 and B19.

## Seat Belt Warning Chime

With ignition switch turned ON and seat belt unfastened (seat belt switch ON), warning chime will sound for approximately 6 seconds.

Ground is supplied:

- from seat belt buckle switch LH terminal 1
- to smart entrance control unit terminal 22.

Seat belt buckle switch LH terminal 2 is grounded through body grounds B13 and B19.

## CONSULT-II Inspection Procedure (With Power Door Locks) “KEY WARN ALM”/“LIGHT WARN ALM”/“SEAT BELT ALM”

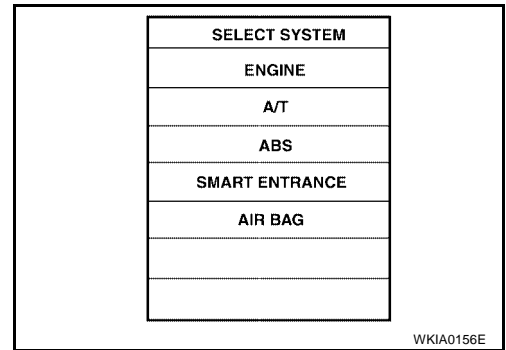

1. Turn ignition switch OFF.
2. Connect “CONSULT-II” to the data link connector.

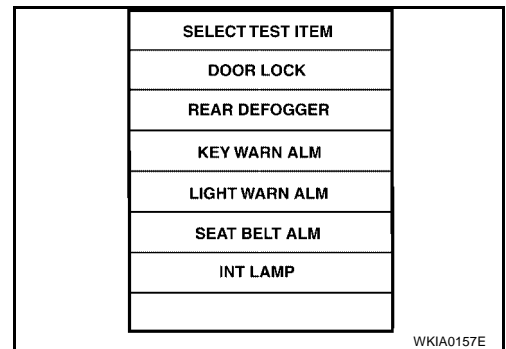

3. Turn ignition switch ON.
4. Touch “START”.

5. Touch “SMART ENTRANCE”.

6. Touch “KEY WARN ALM”, “LIGHT WARN ALM” or “SEAT BELT ALM”.

# WARNING CHIME

7. Select diagnosis mode. "DATA MONITOR" and "ACTIVE TEST" are available for the warning chime.

## CONSULT-II Application Items (With Power Door Locks) "KEY WARN ALARM"

EKS00390

### Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch LH.

### Active Test

Test Item	Description
CHIME	This test is able to check key warning chime operation. Key warning chime sounds after touching "ON" on CONSULT-II screen.

## "LIGHT WARN ALM"

### Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
HD/LMP 1ST SW	Indicates [ON/OFF] condition of lighting switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch LH.

### Active Test

Test Item	Description
CHIME	This test is able to check light warning chime operation. Light warning chime sounds after touching "ON" on CONSULT-II screen.

## "SEAT BELT ALM"

### Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
SEAT BELT SW	Indicates [ON/OFF] condition of seat belt buckle switch LH.

### Active Test

Test Item	Description
CHIME	This test is able to check seat belt warning chime operation. Seat belt warning chime sounds after touching "ON" on CONSULT-II screen.

## Ground Circuit Check

Terminals		(-)	Continuity
(+) Terminal (Wire color)			
Connector	Terminal (Wire color)		
M40	8 (B)	Ground	Yes

## DIAGNOSTIC PROCEDURE 1 (LIGHTING SWITCH INPUT SIGNAL CHECK)

### 1. CHECK LIGHTING SWITCH INPUT SIGNAL

Check voltage between time control unit terminal 5 and ground.

Terminals		(-)	Condition of lighting switch		
(+) Terminal (Wire color)			1st position	2nd position	OFF
Connector	Terminal (Wire color)				
M40	5 (R/G)	Ground	Battery voltage	Battery voltage	0V

OK or NG

OK >> Lighting switch is OK.

NG >> Check the following.

- 10A fuse (No. 38, located in the fuse and fusible link box)
- Harness for open or short between control unit and lighting switch

## DIAGNOSTIC PROCEDURE 2 (KEY SWITCH INSERT SIGNAL CHECK)

### 1. CHECK KEY SWITCH INPUT SIGNAL

Check voltage between time control unit terminal 4 and ground.

Terminals		(-)	Condition of key switch	
(+) Terminal (Wire color)			Key inserted	Key removed
Connector	Terminal (Wire color)			
M40	4 (L/W)	Ground	Battery voltage	0V

OK or NG

OK >> Key switch is OK.

NG >> GO TO 2.

# WARNING CHIME

## 2. CHECK KEY SWITCH

Check continuity between terminals 1 and 2.

OK or NG

OK >> Check the following.

- 10A fuse [No. 12, located in fuse block (J/B)]
- Harness for open or short between key switch and fuse
- Harness for open or short between time control unit and key switch

NG >> Replace key switch.

## DIAGNOSTIC PROCEDURE 3 (SEAT BELT BUCKLE SWITCH LH CHECK)

### 1. CHECK SEAT BELT BUCKLE SWITCH LH INPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between time control unit terminal 1 and ground.

Terminals		Condition of seat belt buckle switch LH		
(+)		(-)	Fastened	Unfastened
Connector	Terminal (Wire color)			
M40	1 (W/B)	Ground	Approx. 5V	0V

OK or NG

OK >> Seat belt buckle switch LH is OK.

NG >> GO TO 2.

# WARNING CHIME

## 2. CHECK SEAT BELT BUCKLE SWITCH LH

Check continuity between terminals 1 and 2 when seat belt is fastened and unfastened.

OK or NG

OK >> Check the following.

- Seat belt buckle switch LH ground circuit
- Harness for open or short between time control unit and seat belt buckle switch LH

NG >> Replace seat belt buckle switch LH.

## DIAGNOSTIC PROCEDURE 4

### 1. CHECK IGNITION ON SIGNAL

Check voltage between time control unit terminal 9 and ground.

Terminals		Ignition switch position		
(+)	(-)	OFF	ACC	ON
9 (G)	Ground	0V	0V	Battery voltage

OK or NG

OK >> GO TO 2.

NG >> Check the following.

- 10A fuse [No. 10, located in fuse block (J/B)]
- Harness for open or short between time control unit and fuse

### 2. CHECK FRONT DOOR SWITCH LH INPUT SIGNAL

With ignition switch OFF, check voltage between time control unit terminal 2 and ground.

Terminals		Condition of driver's door		
(+) Connector		(-)	Closed	Open
M40	Terminal (Wire color) 2 (R)	Ground	Approx. 5V	0V

OK or NG

OK >> System is OK.

NG >> GO TO 3.

## WARNING CHIME

### 3. CHECK FRONT DOOR SWITCH LH

Check continuity between terminals 2 and 3.

#### OK or NG

OK >> Check the following.

- Front door switch LH ground circuit and condition
- Harness for open or short between time control unit and front door switch LH

NG >> Replace front door switch LH.

H.S.

CONNECT

ON

Voltage [V]:  
Condition of seat belt buckle switch LH: Fastened  
Approx. 5  
Condition of seat belt buckle switch LH: Unfastened  
0

WEL470

#### OK or NG

- OK >> Seat belt buckle switch LH is OK.  
NG >> GO TO 2.

### 2. CHECK SEAT BELT BUCKLE SWITCH LH

Check continuity between terminals 1 and 2 when seat belt is fastened and unfastened.

Seat belt buckle switch LH connector (B8)

1

2

Ω

I.S.

DISCONNECT

Continuity:  
Seat belt is fastened.  
No  
Seat belt is unfastened.  
Yes

LEL462

#### OK or NG

- OK >> Check the following.
- Seat belt buckle switch LH ground circuit
  - Harness for open or short between smart entrance control unit and seat belt buckle switch LH
- NG >> Replace seat belt buckle switch LH.

# WARNING CHIME

## DIAGNOSTIC PROCEDURE 4

### 1. CHECK IGNITION ON SIGNAL

#### With CONSULT-II

Check ignition switch ON signal ("IGN ON SW") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
IGN ON SW	ON

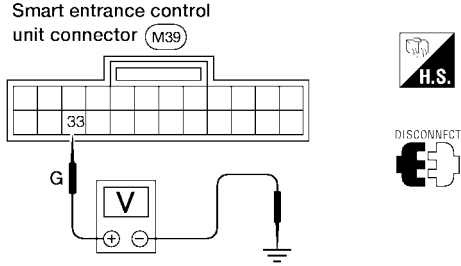

When ignition switch is ON:  
**IGN ON SW ON**

When ignition switch is OFF:  
**IGN ON SW OFF**

SEL318W

#### Without CONSULT-II

Check voltage between smart entrance control unit terminal 33 and ground.

Terminals		Ignition switch position		
(+)	(-)	OFF	ACC	ON
33	Ground	0V	0V	Battery voltage

WEL471

#### OK or NG

OK >> GO TO 2.

NG >> Check the following.

- 10A fuse [No. 10, located in fuse block (J/B)]
- Harness for open or short between smart entrance control unit and fuse

# WARNING CHIME

## 2. CHECK FRONT DOOR SWITCH LH INPUT SIGNAL

### With CONSULT-II

Check front door switch LH signal ("DOOR SW-DR") in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	
DOOR SW-DR	OFF

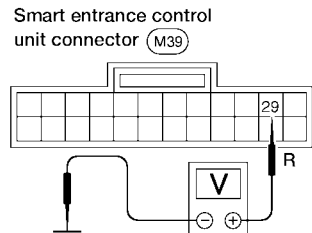

When driver's door is open:  
**DOOR SW-DR ON**

When driver's door is closed:  
**DOOR SW-DR OFF**

SEL319W

### Without CONSULT-II

Check voltage between smart entrance control unit terminal 29 and ground.

Smart entrance control unit connector (M39)

**H.S.**  
CONNECT

Voltage [V]:  
Condition of driver's door: **CLOSED**  
Approx. 5  
Condition of driver's door: **OPENED**  
0

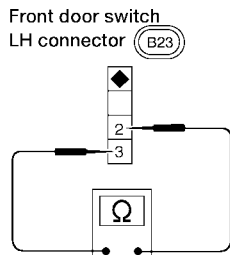

WEL472

OK or NG

- OK >> GO TO 4.  
NG >> GO TO 3.

## 3. CHECK FRONT DOOR SWITCH LH

Check continuity between terminals 2 and 3.

Front door switch LH connector (B23)

**T.S.**  
DISCONNECT

Continuity:  
Door switch is pushed.  
No  
Door switch is released.  
Yes

LEL465

OK or NG

- OK >> Check the following.
- Front door switch LH ground circuit and condition
  - Harness for open or short between smart entrance control unit and front door switch LH
- NG >> Replace front door switch LH.

# WARNING CHIME

## 4. CHECK WARNING CHIME

### With CONSULT-II

Perform "CHIME" in "ACTIVE TEST" mode with CONSULT-II.

### OK or NG

- OK >> System is OK.
- NG >> Replace smart entrance control unit.

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012.

\*3: Is Diagnostic Test Mode-II (self-diagnostic results), there numbers are controlled by NISSAN.

\*4: These DTCs are displayed with CONSULT-II only.

\*5: The MIL illuminates when both the "Revolution sensor signal" and the "Vehicle speed sensor signal" meet the fail-safe condition at the same time.

\*6: When engine is running.

## DTC No. Index

UBS001C2

### NOTE:

If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012.

\*3: Is Diagnostic Test Mode-II (self-diagnostic results), there numbers are controlled by NISSAN.

\*4: These DTCs are displayed with CONSULT-II only.

\*5: The MIL illuminates when both the "Revolution sensor signal" and the "Vehicle speed sensor signal" meet the fail-safe condition at the same time.

\*6: When engine is running.

PRECAUTIONS

PF0:00001

**Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”**

UBS001C3

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

**WARNING:**

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

**On Board Diagnostic (OBD) System of Engine and A/T**

UBS001C4

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

**CAUTION:**

- Be sure to turn the ignition switch “OFF” and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to [PG-46, "HARNES CONNECTOR"](#) .
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.

**Precautions**

UBS001C5

- Always use a 12 volt battery as power source.
- Do not attempt to disconnect battery cables while engine is running.
- Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect negative battery terminal. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned off.
- Before removing parts, turn off ignition switch and then disconnect battery ground cable.

# PRECAUTIONS

[QG18DE (ULEV)]

- Do not disassemble ECM.
- If a battery terminal is disconnected, the memory will return to the ECM value.  
The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a problem. Do not replace parts because of a slight variation.

- When connecting ECM harness connector, fasten it securely with a lever as far as it will go, as shown at left.

- When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).  
Make sure that there are not any bends or breaks on ECM pin terminals when connecting pin connectors.
- Securely connect ECM harness connectors.  
A Poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent a engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform Terminals and Reference Value inspection and make sure ECM functions properly. Refer to [EC-105. "ECM Terminals and Reference Value"](#).

# PRECAUTIONS

[QG18DE (ULEV)]

- After performing each TROUBLE DIAGNOSIS, perform “Overall Function Check” or “DTC Confirmation Procedure”.  
The DTC should not be displayed in the “DTC Confirmation Procedure” if the repair is completed. The “Overall Function Check” should be a good result if the repair is completed.

- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact. Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Handle mass air flow sensor carefully to avoid damage.
- Do not disassemble mass air flow sensor.
- Do not clean mass air flow sensor with any type of detergent.
- Even a slight leak in the air intake system can cause serious problems.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).

- Do not operate fuel pump when there is no fuel in lines.
- Tighten fuel hose clamps to the specified torque.

# PRECAUTIONS

[QG18DE (ULEV)]

- Do not depress accelerator pedal when starting.
- Immediately after starting, do not rev up engine unnecessarily.
- Do not rev up engine just prior to shutdown.

- When installing C.B., ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.
  - Keep the antenna as far as possible from the electronic control units.
  - Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.
  - Adjust the antenna and feeder line so that the standing-wave ratio can be kept smaller.
  - Be sure to ground the radio to vehicle body.

## Wiring Diagrams and Trouble Diagnosis

UBS001C6

When you read Wiring diagrams, refer to the following:

- [GI-13, "How to Read Wiring Diagrams"](#)
- [PG-2, "POWER SUPPLY ROUTING"](#) for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- [GI-10, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"](#)
- [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#)

\*1: These sensors are not used to control the engine system. They are used only for the on board diagnosis.

\*2: These input signals are sent to the ECM through CAN communication line.

\*3: This sensor is not used to control the engine system under normal conditions.

\*4: These output signals are sent form the ECM through CAN communication line.

## Multipoint Fuel Injection (MFI) System INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed* <sup>3</sup> and piston position	Fuel injection & mixture ratio control	Injector
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Heated oxygen sensor 1	Density of oxygen in exhaust gas		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
PNP switch	Gear position		
Vehicle speed signal* <sup>2</sup>	Vehicle speed		
Air conditioner switch	Air conditioner operation		
Knock sensor	Engine knocking condition		
Electrical load	Electrical load signal		
Battery	Battery voltage* <sup>3</sup>		
Power steering pressure sensor	Power steering operation		
Heated oxygen sensor 2* <sup>1</sup>	Density of oxygen in exhaust gas		

\*1: Under normal conditions, this sensor is not for engine control operation.

\*2: This signal is sent to the ECM through CAN communication line.

\*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

### SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the camshaft position sensor and the mass air flow sensor.

### VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from "N" to "D" (A/T models only)
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation
- During high vehicle speed operation
- Extremely high engine coolant temperature

**MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)**

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst can then better reduce CO, HC and NOx emissions. This system uses a heated oxygen sensor 1 in the exhaust manifold to monitor if the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about the heated oxygen sensor 1, refer to [EC-201](#). This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst. Even if the switching characteristics of the heated oxygen sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from the heated oxygen sensor 2.

**Open Loop Control**

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of heated oxygen sensor 1 or its circuit
- Insufficient activation of heated oxygen sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- When starting the engine

**MIXTURE RATIO SELF-LEARNING CONTROL**

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from the heated oxygen sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot film) and characteristic changes during operation (i.e., injector clogging) directly affect mixture ratio.

Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of "injection pulse duration" to automatically compensate for the difference between the two ratios.

"Fuel trim" refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.

"Short term fuel trim" is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from the heated oxygen sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long term fuel trim" is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

**FUEL INJECTION TIMING**

Two types of systems are used.

**Sequential Multiport Fuel Injection System**

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

**Simultaneous Multiport Fuel Injection System**

Fuel is injected simultaneously into all four cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.

The four injectors will then receive the signals two times for each engine cycle.

This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

**FUEL SHUT-OFF**

Fuel to each cylinder is cut off during deceleration or operation of the engine at excessively high speeds.

**Electronic Ignition (EI) System  
INPUT/OUTPUT SIGNAL CHART**

UBS001CD

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed*2 and piston position	Ignition timing control	Power transistor
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Vehicle speed signal*1	Vehicle speed		
Knock sensor	Engine knocking		
PNP switch	Gear position		
Battery	Battery voltage*2		

\*1: This signal is sent to the ECM through CAN communication line.

\*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

**SYSTEM DESCRIPTION**

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM. This data forms the map shown above.

The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.

e.g., N: 1,800 rpm, Tp: 1.50 msec  
A°BTDC

During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting
- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions.

If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

## Air Conditioning Cut Control INPUT/OUTPUT SIGNAL CHART

UBS001CE

Sensor	Input Signal to ECM	ECM function	Actuator
Power steering pressure sensor	Power steering operation	Air conditioner cut control	Air conditioner relay
Vehicle speed signal*2	Vehicle speed		
Air conditioner switch	Air conditioner "ON" signal		
PNP switch	Neutral position		
Throttle position sensor	Throttle position		
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed*1		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Refrigerant pressure sensor	Refrigerant pressure		

\*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

\*2: Signal is sent to the ECM through CAN communication line.

## SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used. Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When the refrigerant pressure is excessively high or low.

## Fuel Cut Control (at No Load and High Engine Speed) INPUT/OUTPUT SIGNAL CHART

UBS001CF

Sensor	Input Signal to ECM	ECM function	Actuator
Vehicle speed signal*1	Vehicle speed	Fuel cut control	Injectors
PNP switch	Neutral position		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		

\*1: This signal is sent to the ECM through CAN communication line.

## SYSTEM DESCRIPTION

If the engine speed is above 2,500 rpm with no load, (for example, in Neutral and engine speed over 2,500 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed. Fuel cut will operate until the engine speed reaches 2,000 rpm, then fuel cut is cancelled.

**NOTE:**

This function is different from deceleration control listed under [EC-36, "Multiport Fuel Injection \(MFI\) System"](#) .

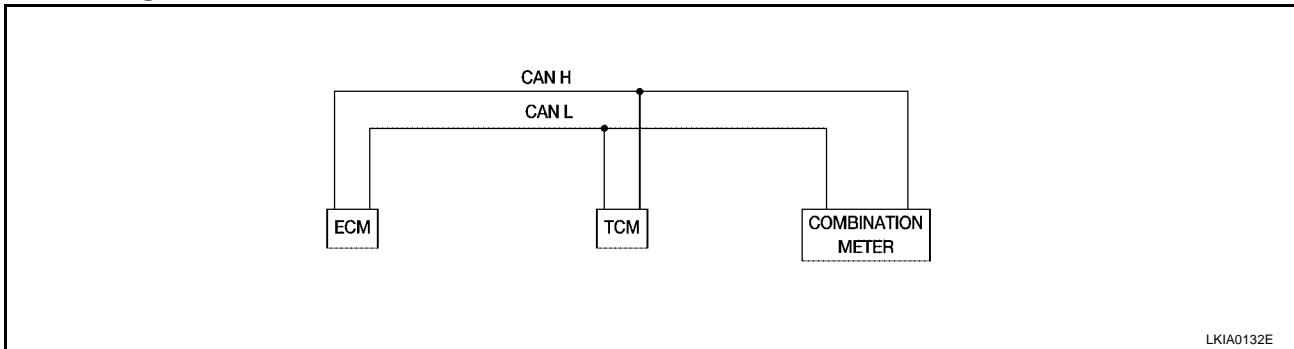

## CAN communication SYSTEM DESCRIPTION

UBS003PF

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

## BASIC SERVICE PROCEDURE

PFP:00018

### Idle Speed and Ignition Timing Check IDLE SPEED

UBS001CG

#### Using CONSULT-II

Check idle speed in "DATA MONITOR" mode with CONSULT-II.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

### IGNITION TIMING

Any of following two methods may be used.

#### Method A

1. Slide the harness protector off ignition coil No.1 to clear the wires.
2. Attach timing light to the wires as shown in the figure.
3. Check ignition timing.

#### Method B

1. Remove No. 1 ignition coil.

2. Connect No. 1 ignition coil and No. 1 spark plug with suitable high-tension wire as shown, and attach timing light clamp to this wire.

3. Check ignition timing.

### Idle Speed/Ignition Timing/Idle Mixture Ratio Adjustment PREPARATION

UBS006DO

1. Make sure that the following parts are in good order.
  - Battery
  - Ignition system
  - Engine oil and coolant levels
  - Fuses
  - ECM harness connector
  - Vacuum hoses
  - Air intake system  
(Oil filler cap, oil level gauge, etc.)
  - Fuel pressure
  - Engine compression
  - Throttle valve
  - Evaporative emission system
2. On air conditioner equipped models, checks should be carried out while the air conditioner is "OFF".
3. On automatic transmission equipped models, when checking idle rpm, ignition timing and mixture ratio, checks should be carried out while shift lever is in "N" position.
4. When measuring "CO" percentage, insert probe more than 40 cm (15.7 in) into tail pipe.
5. Turn off headlamp, heater blower, rear window defogger.
6. Keep front wheels pointed straight ahead.

## OVERALL INSPECTION SEQUENCE

**NOTE:**

If a vehicle contains a part which is operating outside of design specifications with no MIL illumination, the part shall not be replaced prior to emission testing unless it is determined that the part has been tampered with or abused in such a way that the diagnostic system cannot reasonably be expected to detect the resulting malfunction.

PBIB1054E

## INSPECTION PROCEDURE

### 1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

**3. CHECK TARGET IDLE SPEED**

**With CONSULT-II**

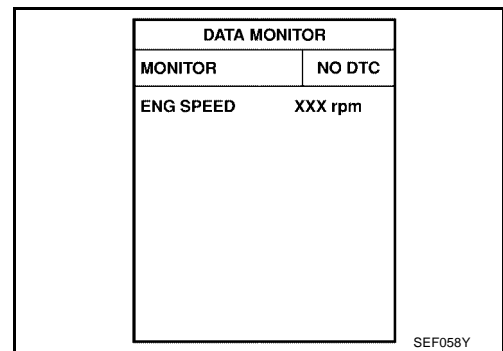

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**Without CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 4.

**4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Stop engine.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 5.

**5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 6.

## 6. PERFORM IDLE AIR VOLUME LEARNING

Perform [EC-53, "Idle Air Volume Learning"](#).

Is "Idle Air Volume Learning" carried out successfully?

Yes or No

- Yes >> GO TO 7.
- No >> 1. Follow the instruction of "Idle Air Volume Learning".  
2. GO TO 4.

## 7. CHECK TARGET IDLE SPEED AGAIN

### With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

### Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 10.
- NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-283](#).
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-277](#).

OK or NG

- OK >> GO TO 9.
- NG >> 1. Repair or replace.  
2. GO TO 4.

## 9. CHECK ECM FUNCTION

Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

## 10. CHECK IGNITION TIMING

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

- OK (With CONSULT-II)>>GO TO 19.
- OK (Without CONSULT-II)>>GO TO 20.
- NG >> GO TO 11.

**11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

---

1. Stop engine.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

**12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

---

Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

**13. PERFORM IDLE AIR VOLUME LEARNING**

---

Perform [EC-53, "Idle Air Volume Learning"](#) .

Is "Idle Air Volume Learning" carried out successfully?

Yes or No

- Yes >> GO TO 14.  
 No >> 1. Follow the instruction of "Idle Air Volume Learning".  
 2. GO TO 4.

**14. CHECK TARGET IDLE SPEED AGAIN**

---

** With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

** Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 17.

**15. CHECK IGNITION TIMING AGAIN**

---

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

- OK (With CONSULT-II)>>GO TO 19.  
 OK (Without CONSULT-II)>>GO TO 20.

## 16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to [EM-39, "TIMING CHAIN"](#) .

OK or NG

- OK >> GO TO 17.
- NG >> 1. Repair the timing chain installation.
- 2. GO TO 4.

## 17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-283](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-277](#) .

OK or NG

- OK >> GO TO 18.
- NG >> 1. Repair or replace.
- 2. GO TO 4.

## 18. CHECK ECM FUNCTION

Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

## 19. CHECK HEATED OXYGEN SENSOR 1 SIGNAL

 With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. See "HO2S1 MNTR (B1)" in "DATA MONITOR" mode.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the monitor fluctuates between LEAN and RICH more than 5 times during 10 seconds.

- 1 time: **RICH → LEAN → RICH**
- 2 times: **RICH → LEAN → RICH → LEAN → RICH**

OK or NG

- OK >> INSPECTION END
- NG (Monitor does not fluctuate.)>>GO TO 21.
- NG (Monitor fluctuates less than 5 times.)>>GO TO 28.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
HO2S1 MNTR (B1)	RICH

SEF820Y

## 20. CHECK HEATED OXYGEN SENSOR 1 (BANK 1) SIGNAL

 Without CONSULT-II

1. Stop engine and set ECM to Self-diagnostic mode II (Heated oxygen sensor 1 monitor). Refer to [EC-73, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .
2. Start engine and run it at about 2,000 rpm for about 2 minutes under no-load.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the MIL comes on more than 5 times during 10 seconds.

OK or NG

- OK >> INSPECTION END
- NG (MIL does not come on)>>GO TO 21.
- NG (MIL comes on less than 5 times)>>GO TO 28.

## 21. CHECK HEATED OXYGEN SENSOR 1 HARNESS

1. Turn ignition switch "OFF" and disconnect battery ground cable.
2. Disconnect ECM harness connector.
3. Disconnect heated oxygen sensor 1 harness connector.
4. Check harness continuity between ECM terminal 35 and heated oxygen sensor 1 terminal 1. Refer to Wiring Diagram, [EC-201](#).

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 22.

NG >> 1. Repair or replace harness between ECM and heated oxygen sensor 1.  
2. GO TO 4.

## 22. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Reconnect ECM harness connector.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#).

>> GO TO 23.

## 23. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform [EC-53, "Throttle Valve Closed Position Learning"](#).

>> GO TO 24.

## 24. PERFORM IDLE AIR VOLUME LEARNING

Refer to [EC-53, "Idle Air Volume Learning"](#).

**Is "Idle Air Volume Learning" carried out successfully?**

Yes or No

Yes (With CONSULT-II)>>GO TO 25.

Yes (Without CONSULT-II)>>GO TO 26.

No >> 1. Follow the instruction of "Idle Air Volume Learning".  
2. GO TO 4.

## 25. CHECK "CO"%

 **With CONSULT-II**

1. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
2. Turn ignition switch "OFF", wait at least 10 seconds and then turn "ON".
3. Select "ENG COOLANT TEMP" in "ACTIVE TEST" mode.
4. Set "ENG COOLANT TEMP" to 5°C (41°F) by touching "DWN" and "Qd".
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 3 – 11% and engine runs smoothly.**

OK or NG

OK >> GO TO 28.

NG >> GO TO 27.

ACTIVE TEST	
ENG COOLANT TEMP	XXX °C
MONITOR	
ENG SPEED	XXX rpm
INJ PULSE-B1	XXX msec

SEF172Y

**26. CHECK "CO"%****⊗ Without CONSULT-II**

1. Start engine and warm it up until engine coolant temperature indicator points to the middle of gauge.
2. Turn ignition switch "OFF".
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect a resistor (4.4 kΩ) between terminals of engine coolant temperature sensor harness connector.
5. Start engine and rev it (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed.
6. Check "CO"%.

**Idle CO: 3 – 11% and engine runs smoothly.**

7. After checking "CO"%, turn ignition switch "OFF", disconnect the resistor from the terminals of engine coolant temperature sensor harness connector, and then connect engine coolant temperature sensor harness connector to engine coolant temperature sensor.

**OK or NG**

- OK >> GO TO 28.  
NG >> GO TO 27.

**27. RECONNECT HEATED OXYGEN SENSOR 1 HARNESS CONNECTOR**

1. Turn ignition switch "OFF".
2. Reconnect heated oxygen sensor 1 harness connector.

>> GO TO 31.

**28. REPLACE HEATED OXYGEN SENSOR 1**

1. Stop engine.
2. Replace heated oxygen sensor 1 on the malfunctioning bank.

With CONSULT-II>>GO TO 29.  
Without CONSULT-II>>GO TO 30.

**29. CHECK HEATED OXYGEN SENSOR 1 SIGNAL****Ⓜ With CONSULT-II**

1. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
2. See "HO2S1 MNTR (B1)" in "DATA MONITOR" mode.
3. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the monitor fluctuates between LEAN and RICH more than 5 times during 10 seconds.

**1 time: RICH → LEAN → RICH**

**2 times: RICH → LEAN → RICH → LEAN → RICH**

**OK or NG**

- OK >> GO TO 4.  
NG >> GO TO 31.

## 30. CHECK HEATED OXYGEN SENSOR 1 SIGNAL

### ⊗ Without CONSULT-II

1. Set ECM to Self-diagnostic mode II (Heated oxygen sensor 1 monitor). Refer to [EC-73, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .
2. Running engine at 2,000 rpm under no-load (The engine is warmed up to normal operating temperature.), check that the MIL comes on more than 5 times during 10 seconds.

#### OK or NG

- OK >> GO TO 4.  
 NG >> GO TO 31.

## 31. DETECT MALFUNCTIONING PART

Check the following.

- Check fuel pressure regulator and repair or replace if necessary. Refer to [EC-56, "Fuel Pressure Check"](#) .
- Check mass air flow sensor and its circuit, and repair or replace if necessary. Refer to [EC-163](#) , [EC-171](#) and [EC-379](#) .
- Check injector and its circuit, and repair or replace if necessary. Refer to [EC-547](#) .
- Check engine coolant temperature sensor and its circuit, and repair or replace if necessary. Refer to [EC-181](#) and [EC-193](#) .

#### OK or NG

- OK >> GO TO 33.  
 NG >> 1. Repair or replace.  
 2. GO TO 32.

## 32. ERASE UNNECESSARY DTC

After this inspection, unnecessary DTC might be displayed.

Erase the stored memory in ECM and TCM. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#) and [AT-40, "HOW TO ERASE DTC"](#) .

>> GO TO 4.

## 33. CHECK ECM FUNCTION

Substitute another known-good ECM to check ECM function. (ECM may be the cause of a problem, but this is the rarely the case.)

>> GO TO 4.

## Accelerator Pedal Released Position Learning DESCRIPTION

UBS006E7

“Accelerator Pedal Released Position Learning” is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

### OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch “ON” and wait at least 2 seconds.
3. Turn ignition switch “OFF” wait at least 10 seconds.
4. Turn ignition switch “ON” and wait at least 2 seconds.
5. Turn ignition switch “OFF” wait at least 10 seconds.

## Throttle Valve Closed Position Learning

UBS006E8

### DESCRIPTION

“Throttle Valve Closed Position Learning” is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

### OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch “ON”.
3. Turn ignition switch “OFF” wait at least 10 seconds.  
Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

## Idle Air Volume Learning

UBS006E9

### DESCRIPTION

“Idle Air Volume Learning” is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

### PREPARATION

Before performing “Idle Air Volume Learning”, make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 100°C (158 - 212°F)
- PNP switch: ON
- Electric load switch: OFF  
(Air conditioner, headlamp, rear window defogger)  
**On models with daytime light systems, set lighting switch to the 1st position to light only small lamps.**
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up  
For models with CONSULT-II, drive vehicle until “FLUID TEMP SE” in “DATA MONITOR” mode of “A/T” system indicates less than 0.9V.  
For models without CONSULT-II, drive vehicle for 10 minutes.

### OPERATION PROCEDURE

#### Ⓟ With CONSULT-II

1. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic “PREPARATION” (previously mentioned) are in good order.
5. Select “IDLE AIR VOL LEARN” in “WORK SUPPORT” mode.

# BASIC SERVICE PROCEDURE

[QG18DE (ULEV)]

6. Touch "START" and wait 20 seconds.

7. Make sure that "CMPLT" is displayed on CONSULT-II screen. If "CMPLT" is not displayed, "Idle Air Volume Learning" will not be carried out successfully. In this case, find the cause of the incident by referring to the "Diagnostic Procedure" below.

8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	MT: 650±50 rpm AT: 800±50 rpm (in "P" or "N" position)
Ignition timing	MT: 7±5° BTDC AT: 18±5° BTDC (in "P" or "N" position)

## ⊗ Without CONSULT-II

### NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.

1. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .
2. Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic "PREPARATION" (previously mentioned) are in good order.
5. Turn ignition switch "OFF" and wait at least 10 seconds.
6. Confirm that accelerator pedal is fully released, turn ignition switch "ON" and wait 3 seconds.
7. Repeat the following procedure quickly five times within 5 seconds.
  - a. Fully depress the accelerator pedal.
  - b. Fully release the accelerator pedal.
8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MIL goes off.
10. Start engine and let it idle.
11. Wait 20 seconds.

12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	MT: 650±50 rpm AT: 800±50 rpm (in "P" or "N" position)
Ignition timing	MT: 7±5° BTDC AT: 18±5° BTDC (in "P" or "N" position)

13. If idle speed and ignition timing are not within the specification, the result will be incomplete. In this case, find the cause of the incident by referring to the "DIAGNOSTIC PROCEDURE" below.

## DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

1. Check that throttle valve is fully closed.
2. Check PCV valve operation.
3. Check that downstream of throttle valve is free from air leakage.
4. When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.  
It is useful to perform [EC-133. "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"](#) .
5. If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform "Idle air volume learning" all over again:
  - Engine stalls.
  - Erroneous idle.

## Fuel Pressure Check FUEL PRESSURE RELEASE

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.

### NOTE:

Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because B15 models do not have fuel return system.

#### ④ With CONSULT-II

1. Turn ignition switch "ON".
2. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode with CONSULT-II.
3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.

#### ⊗ Without CONSULT-II

1. Remove fuel pump fuse.
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.

## FUEL PRESSURE CHECK

### NOTE:

- When reconnecting fuel line, always use new clamps.
- Make sure that clamp screw does not contact adjacent parts.
- Use a torque driver to tighten clamps.
- Use Pressure Gauge to check fuel pressure.
- Do not perform fuel pressure check with electrical systems operating (i.e. lights, rear defogger, A/C switch, etc.). Fuel pressure gauge may indicate false readings due to varying engine loads and changes in manifold vacuum.

1. Release fuel pressure to zero. Refer to [EC-56](#).
2. Install the fuel pressure gauge into the fuel line as shown in the figure.
3. Turn ignition switch "ON", and check for fuel leakage.
4. Start engine and check for fuel leakage.
5. Read the indication of fuel pressure gauge.

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

6. If result is unsatisfactory, go to next step.
7. Check the following.
  - Fuel hoses and fuel tubes for clogging
  - Fuel filter for clogging

- 
- Fuel pump
  - Fuel pressure regulator for clogging
- If OK, replace fuel pressure regulator.  
If NG, repair or replace.

## ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

### Introduction

UBS001CK

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	SAE Mode
Diagnostic Trouble Code (DTC)	Mode 3 of SAE J1979
Freeze Frame data	Mode 2 of SAE J1979
System Readiness Test (SRT) code	Mode 1 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Mode 7 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Mode 6 of SAE J1979
Calibration ID	Mode 9 of SAE J1979

The above information can be checked using procedures listed in the table below.

X: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	Test value
CONSULT-II	X	X	X	X	X	—
GST	X	X*1	X	—	X	X
ECM	X	X*2	—	—	—	—

\*1: 1st trip DTCs for self-diagnoses concerning SRT items cannot be shown on the GST display.

\*2: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to [EC-87](#).)

### Two Trip Detection Logic

UBS001CL

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>

If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

X: Applicable —: Not applicable

Items	MIL				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip displaying	2nd trip displaying	1st trip displaying	2nd trip displaying
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	X	—	—	—	X	—	X	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 has been detected	—	—	X	—	—	X	—	—
One trip detection diagnoses (Refer to <a href="#">EC-21</a> .)	—	X	—	—	X	—	—	—
Except above	—	—	—	X	—	X	X	—

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting MIL up when there is NG on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5-trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (ULEV)]

The fail-safe function also operates when above diagnoses except MIL circuit and demands the driver to repair the trouble.

Engine operating in fail-safe mode

Engine speed will not rise more than 2,500 rpm due to the fuel cut.

\*1: 1st trip DTC No. is the same as DTC No.

\*2: These numbers are prescribed by SAE J2012

\*3: These are not displayed with GST.

\*4: SRT code will not be set if the self-diagnostic result is NG.

## DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.

If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.

Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).

For malfunctions in which 1st trip DTCs are displayed, refer to [EC-59](#) . These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.

1st trip DTC is specified in Mode 7 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.

When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in “Work Flow” procedure Step II, refer to [EC-82](#) . Then perform “DTC Confirmation Procedure” or “Overall Function Check” to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

## How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

 **With CONSULT-II**

 **With GST**

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P1148, P1706, etc.

These DTCs are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST does not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be “0”.

If a 1st trip DTC is stored in the ECM, the time data will be “[1t]”.

DTC display	SELF DIAG RESULTS		1st trip DTC display	SELF DIAG RESULTS	
	DTC RESULTS			DTC RESULTS	
	MAF SEN/CIRCUIT [P0101]	0		MAF SEN/CIRCUIT [P0101]	1t

SEC745C

## FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, throttle valve operating angle, base fuel schedule and intake air temperature at the moment a malfunction is detected.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see [EC-117](#) .

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).

### SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Mode 1 of SAE J1979.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.

If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating "INCMP", use the information in this Service Manual to set the SRT to "CMPLT".

In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate "CMPLT" for each application system. Once set as "CMPLT", the SRT status remains "CMPLT" until the self-diagnosis memory is erased.

Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate "INCMP" for these items.

#### NOTE:

The SRT will also indicate "INCMP" if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.

If, during the state emissions inspection, the SRT indicates "CMPLT" for all test items, the inspector will continue with the emissions test. However, if the SRT indicates "INCMP" for one or more of the SRT items the vehicle is returned to the customer untested.

#### NOTE:

If MIL is "ON" during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates "CMPLT" for all test items. Therefore, it is important to check SRT ("CMPLT") and DTC (No DTCs) before the inspection.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (ULEV)]

## SRT Item

The table below shows required self-diagnostic items to set the SRT to "CMPLT".

SRT item (CONSULT-II indication)	Performance Priority*	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420
EVAPORATIVE SYSTEM	1	EVAP control system	P0442
	2	EVAP control system	P0456
		EVAP control system purge flow monitoring	P0441
HO2S	2	Heated oxygen sensor 1	P0132
		Heated oxygen sensor 1	P0133
		Heated oxygen sensor 1	P0134
		Heated oxygen sensor 1	P1143
		Heated oxygen sensor 1	P1144
		Heated oxygen sensor 2	P0138
		Heated oxygen sensor 2	P0139
		Heated oxygen sensor 2	P1146
		Heated oxygen sensor 2	P1147
HO2S HTR	2	Heated oxygen sensor 1 heater	P0031, P0032
		Heated oxygen sensor 2 heater	P0037, P0038

\*: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-II.

## SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example						
		Diagnosis	Ignition cycle					
			← ON →	OFF	← ON →	OFF	← ON →	OFF
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)		
		P0402	OK (1)	— (1)	— (1)	OK (2)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"		
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)		
		P0402	— (0)	— (0)	OK (1)	— (1)		
		P1402	OK (1)	OK (2)	— (2)	— (2)		
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"		
NG exists	Case 3	P0400	OK	OK	—	—		
		P0402	—	—	—	—		
		P1402	NG	—	NG	NG (Consecutive NG)		
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL "ON")		
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"		

OK: Self-diagnosis is carried out and the result is OK.

NG: Self-diagnosis is carried out and the result is NG.

—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above

When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above

If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above

The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary of each self-diagnosis to be executed twice (Case 3) for the following reasons:

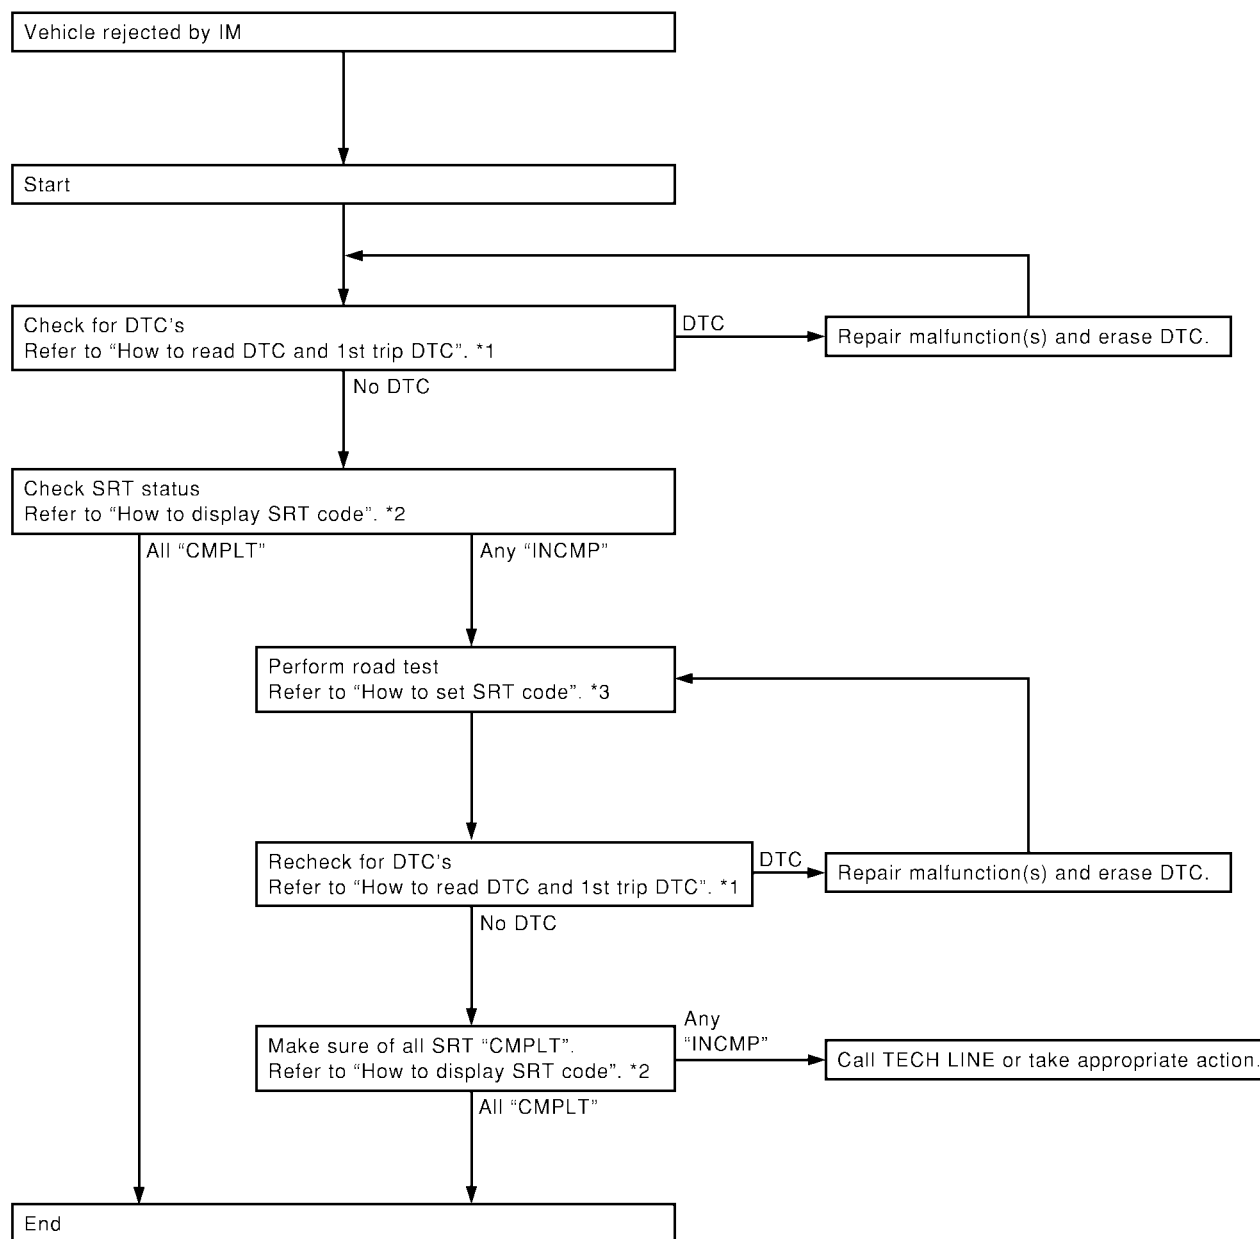

- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to "CMPLT" of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate "INCMP".

**NOTE:**

SRT can be set as "CMPLT" together with the DTC (s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates "CMPLT".

## SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating "INCMP", review the flowchart diagnostic sequence on the next page.

\*1 [EC-62](#)

\*2 [EC-66](#)

\*3 [EC-67](#)

SEF170Z

## How to Display SRT Code

### With CONSULT-II

Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

SRT STATUS	
CATALYST	CMPLT
EVAP SYSTEM	INCMP
HO2S HTR	CMPLT
HO2S	CMPLT

SEF935Z

 **With GST**

Selecting Mode 1 with GST (Generic Scan Tool)

A sample of CONSULT-II display for SRT code is shown below.

“INCMP” means the self-diagnosis is incomplete and SRT is not set. “CMPLT” means the self-diagnosis is complete and SRT is set.

**How to Set SRT Code**

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

 **With CONSULT-II**

Perform corresponding DTC Confirmation Procedure one by one based on “Performance Priority” in the table on [EC-64](#).

 **Without CONSULT-II**

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

## Driving Pattern

**Note: Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws. Refer to next page for more information and explanation of chart.**

PBIB1053E

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (ULEV)]

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.  
Zone A refers to the range where the time required, for the diagnosis under normal conditions\*, is the shortest.  
Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

\*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.  
Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:

- **The engine is started at the engine coolant temperature of -10 to 35°C (14 to 95°F) (where the voltage between the ECM terminals 73 and ground is 3.0 - 4.3V).**
- **The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminals 73 and ground is lower than 1.4V).**
- **The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 107 and ground is less than 4.1V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- The driving pattern outlined in \*2 must be repeated at least 3 times.

Pattern 4:

- Tests are performed after the engine has been operated for at least 17 minutes.
- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

\*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.

\*2: Operate the vehicle in the following driving pattern.

1. Decelerate vehicle to 0 km/h (0 MPH) and let engine idle.
2. Repeat driving pattern shown below at least 10 times.  
- **During acceleration, hold the accelerator pedal as steady as possible.**

\*3: Checking the vehicle speed with GST is advised.

## Suggested Transmission Gear Position for A/T Models

Set the selector lever in the "D" position with the overdrive switch turned ON.

## Suggested upshift speeds for M/T models

Shown below are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (ULEV)]

	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:	For quick acceleration in low altitude areas and high altitude areas [over 1,219 m (4,000 ft)]:
Gear change	ACCEL shift point km/h (MPH)	km/h (MPH)
1st to 2nd	24 (15)	25 (15)
2nd to 3rd	40 (25)	40 (25)
3rd to 4th	65 (40)	65 (40)
4th to 5th	75 (45)	75 (45)

### Suggested Maximum Speed in Each Gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.

Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits and drive according to the road conditions to ensure safe operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

Gear	km/h (MPH)
1st	48 (30)
2nd	84 (52)
3rd	128 (80)
4th	—
5th	—

### TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Mode 6 of SAE J1979.

The test value is a parameter used to determine whether a system/circuit diagnostic test is “OK” or “NG” while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.

Items for which these data (test value and test limit) are displayed are the same as SRT code items (13 test items).

These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

X: Applicable —: Not applicable

SRT item	Self-diagnostic test item	Test value (GST display)		Test limit	Application
		TID	CID		
CATALYST	Three way catalyst function	02H	81H	Min.	X
EVAP SYSTEM	EVAP control system (Small leak)	05H	03H	Max.	X
	EVAP control system purge flow monitoring	06H	83H	Min.	X
HO2S	Heated oxygen sensor 1	09H	04H	Max.	X
		0AH	84H	Min.	X
		0BH	04H	Max.	X
		0CH	04H	Max.	X
	Heated oxygen sensor 2	0DH	04H	Max.	X
		19H	86H	Min.	X
		1AH	86H	Min.	X
		1BH	06H	Max.	X
HO2S HTR	Heated oxygen sensor 1 heater	1CH	06H	Max.	X
		29H	08H	Max.	X
	Heated oxygen sensor 2 heater	2AH	88H	Min.	X
		2DH	0AH	Max.	X
		2EH	8AH	Min.	X

## HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

### How to Erase DTC ( With CONSULT-II)

**NOTE:**

If the DTC is not for A/T related items (see [EC-21](#) ), skip steps 2 through 4.

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
  2. Turn CONSULT-II "ON" and touch "A/T".
  3. Touch "SELF-DIAG RESULTS".
  4. Touch "ERASE". [The DTC in the TCM (Transmission control module) will be erased.] Then touch "BACK" twice.
  5. Touch "ENGINE".
  6. Touch "SELF-DIAG RESULTS".
  7. Touch "ERASE". (The DTC in the ECM will be erased.)
- If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

### How to Erase DTC ( With GST)

**NOTE:**

If the DTC is not for A/T related items (see [EC-21](#) ), skip step 2.

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
2. Perform "SELF-DIAGNOSTIC PROCEDURE (Without CONSULT-II)" in AT section titled "TROUBLE DIAGNOSIS", "Self-diagnosis". (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)

3. Select Mode 4 with GST (Generic Scan Tool).

**NO TOOLS** **How to Erase DTC ( No Tools)**

1. If the ignition switch stays "ON" after repair work, be sure to turn ignition switch "OFF" once.
  2. Wait at least 10 seconds and then turn it "ON" (engine stopped) again.
  3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to [EC-73. "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .
- **If the battery is disconnected, the emission-related diagnostic information will be lost after approx. 24 hours.**
  - **The following data are cleared when the ECM memory is erased.**
    - Diagnostic trouble codes
    - 1st trip diagnostic trouble codes
    - Freeze frame data
    - 1st trip freeze frame data
    - System readiness test (SRT) codes
    - Test values
    - Others

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

**Malfunction Indicator Lamp (MIL)**  
**DESCRIPTION**

UBS006C3

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check.
- If the MIL does not light up, refer to [DI-27. "WARNING LAMPS"](#) .
2. When the engine is started, the MIL should go off.  
If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

**ON BOARD DIAGNOSTIC SYSTEM FUNCTION**

The on board diagnostic system has the following four functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in "ON" position  Engine stopped 	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running 	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. <ul style="list-style-type: none"> <li>● "Misfire (Possible three way catalyst damage)"</li> <li>● "One trip detection diagnoses"</li> </ul>

# ON BOARD DIAGNOSTIC (OBD) SYSTEM

[QG18DE (ULEV)]

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode II	Ignition switch in "ON" position  Engine stopped 	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.
	Engine running 	HEATED OXYGEN SENSOR 1 MONITOR	This function allows the fuel mixture condition (lean or rich), monitored by heated oxygen sensor 1, to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting MIL up when there is NG on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.

The fail-safe function also operates when above diagnoses except MIL circuit and demands the driver to repair the trouble.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut
--	--

## MIL Flashing without DTC

If the ECM is in Diagnostic Test Mode II, MIL may flash when engine is running. In this case, check ECM diagnostic test mode, [EC-73, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#).

How to switch the diagnostic test (function) modes, and details of the above functions are described later, [EC-73, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#).

The following emission-related diagnostic information is cleared when the ECM memory is erased.

1. Diagnostic trouble codes
2. 1st trip diagnostic trouble codes
3. Freeze frame data
4. 1st trip freeze frame data
5. System readiness test (SRT) codes
6. Test values
7. Others

## HOW TO SWITCH DIAGNOSTIC TEST MODE

### NOTE:

- It is better to count the time accurately with a clock.
- It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.
- Always ECM returns to Diagnostic Test Mode I after ignition switch is turned "OFF".

### How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch "ON" and wait 3 seconds.
2. Repeat the following procedure quickly five times within 5 seconds.
  - a. Fully depress the accelerator pedal.
  - b. Fully release the accelerator pedal.
3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.
4. Fully release the accelerator pedal.

ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

### How to Set Diagnostic Test Mode II (Heated Oxygen Sensor 1 Monitor)

1. Set the ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to [EC-73, "How to Set Diagnostic Test Mode II \(Self-diagnostic Results\)"](#) .
2. Start Engine.  
ECM has entered to Diagnostic Test Mode II (Heated oxygen sensor 1 monitor).

### How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to [EC-73, "How to Set Diagnostic Test Mode II \(Self-diagnostic Results\)"](#) .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.  
The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

### DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to [DI-27, "WARNING LAMPS"](#) .

### DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

MIL	Condition
ON	When the malfunction is detected.
OFF	No malfunction.

- These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

### DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These uniden-

tified codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes. The “zero” is indicated by the number of ten flashes. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.

The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle.

A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

A change from one trouble code to another occurs at an interval of 1.8-second OFF.

In this way, all the detected malfunctions are classified by their DTC numbers. The DTC “0000” refers to no malfunction. (See [EC-21, "INDEX FOR DTC"](#) )

### How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to [EC-73, "HOW TO SWITCH DIAGNOSTIC TEST MODE"](#) .

- If the battery is disconnected, the DTC will be lost from the backup memory after approx 24 hours.
- Be careful not to erase the stored memory before starting trouble diagnoses.

### DIAGNOSTIC TEST MODE II — HEATED OXYGEN SENSOR 1 MONITOR

In this mode, the MIL displays the condition of the fuel mixture (lean or rich) which is monitored by the heated oxygen sensor 1.

MIL	Fuel mixture condition in the exhaust gas	Air fuel ratio feedback control condition
ON	Lean	Closed loop system
OFF	Rich	
*Remains ON or OFF	Any condition	Open loop system

\*: Maintains conditions just before switching to open loop.

To check the heated oxygen sensor 1 function, start engine in the Diagnostic Test Mode II and warm it up until engine coolant temperature indicator points to the middle of the gauge.

Next run engine at about 2,000 rpm for about 2 minutes under no-load conditions. Then make sure that the MIL comes ON more than 5 times within 10 seconds with engine running at 2,000 rpm under no-load.

## OBD System Operation Chart

UBS001CO

### RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to [EC-58, "Two Trip Detection Logic"](#).
- The MIL will go off after the vehicle is driven 3 times with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The "TIME" in "SELF-DIAGNOSTIC RESULTS" mode of CONSULT-II will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in "OK" for the 2nd trip.

### SUMMARY CHART

Items	Fuel Injection System	Misfire	Other
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)

For details about patterns "B" and "C" under "Fuel Injection System" and "Misfire", see [EC-78](#).

For details about patterns "A" and "B" under "Other", see [EC-80](#).

\*1: Clear timing is at the moment OK is detected.

\*2: Clear timing is when the same malfunction is detected in the 2nd trip.

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR "MIS-FIRE" <EXHAUST QUALITY DETERIORATION>, "FUEL INJECTION SYSTEM"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

\*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

## EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

### <Driving Pattern B>

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MIL will go off when the B counter reaches 3. (\*2 in “OBD SYSTEM OPERATION CHART”)

### <Driving Pattern C>

Driving pattern C means the vehicle operation as follows:

The following conditions should be satisfied at the same time:

Engine speed: (Engine speed in the freeze frame data)  $\pm 375$  rpm

Calculated load value: (Calculated load value in the freeze frame data)  $\times (1 \pm 0.1)$  [%]

Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), “T” should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), “T” should be higher than or equal to 70°C (158°F).

Example:

If the stored freeze frame data is as follows:

Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)

To be satisfied with driving pattern C, the vehicle should run under the following conditions:

Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.
- The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

## RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

\*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

\*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

\*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

\*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

\*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

\*6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

\*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

## EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

### <Driving Pattern A>

- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.

### <Driving Pattern B>

Driving pattern B means the vehicle operation as follows:

All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (\*2 in "OBD SYSTEM OPERATION CHART").

**TROUBLE DIAGNOSIS**

PFP:00004

UBS001CP

**Trouble Diagnosis Introduction**  
**INTRODUCTION**

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.

It is much more difficult to diagnose a incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the "Work Flow" on [EC-82](#).

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "Diagnostic Worksheet" like the example on next page should be used.

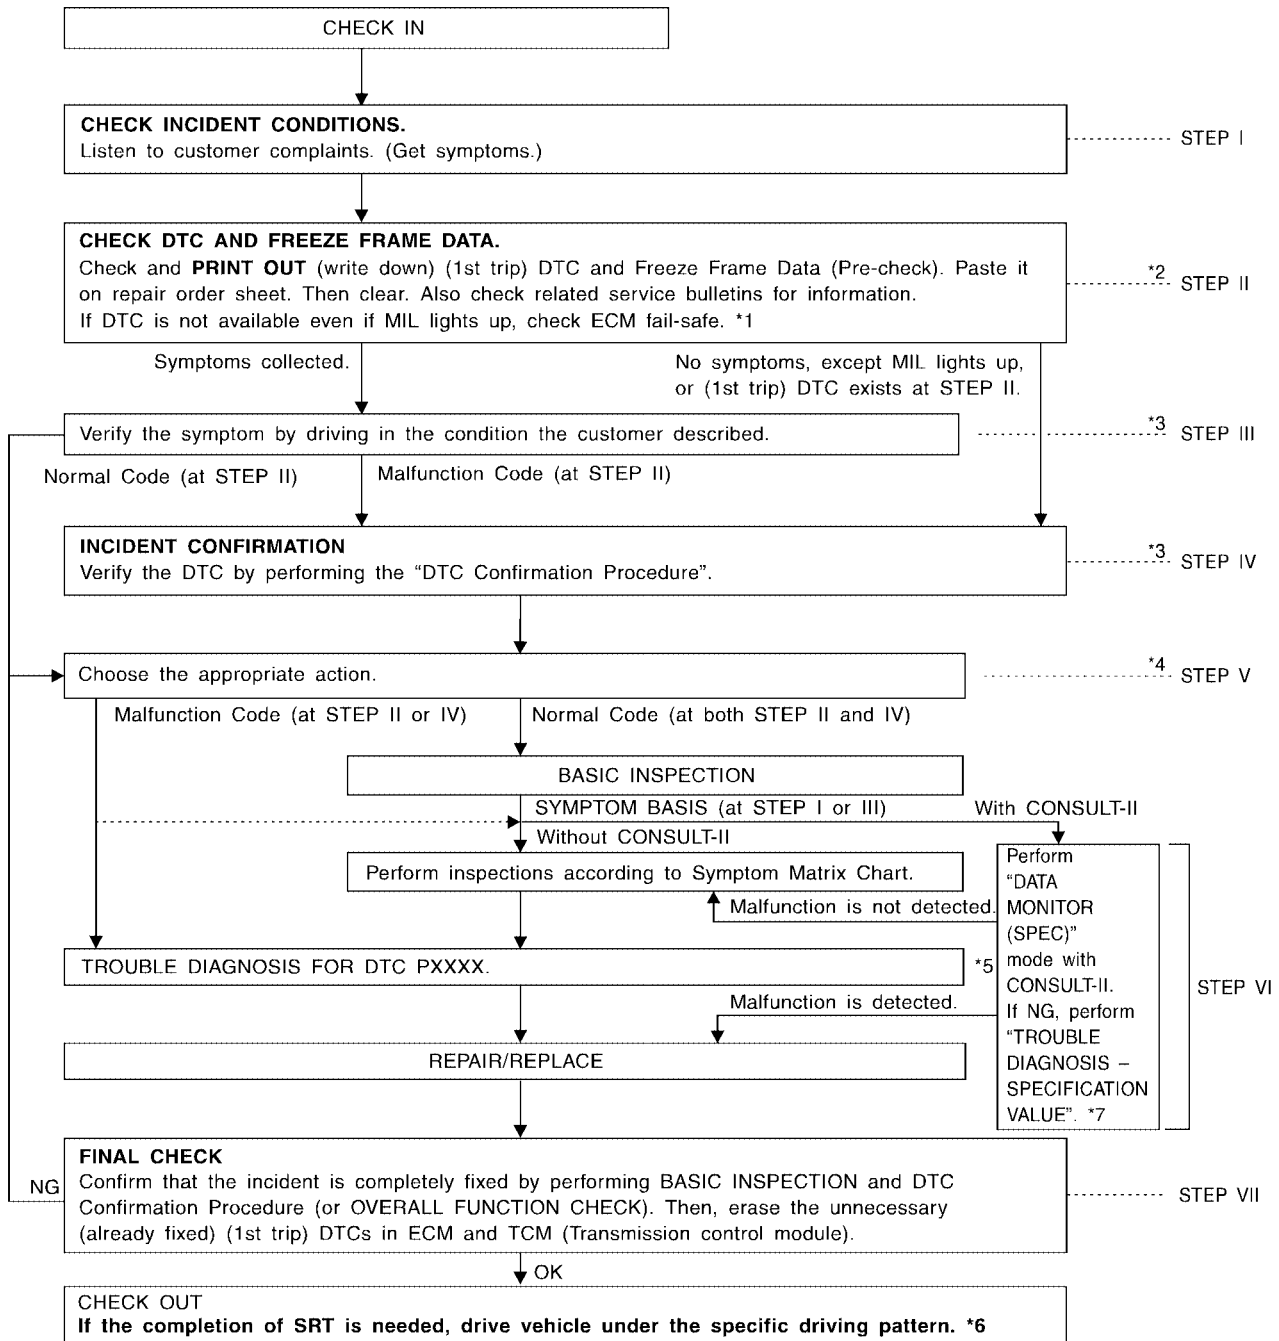

Start your diagnosis by looking for "conventional" malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

\*7: [EC-133](#)

# TROUBLE DIAGNOSIS

[QG18DE (ULEV)]

## Description for Work Flow

STEP	DESCRIPTION	A
STEP I	Get detailed information about the conditions and the environment when the incident/symptom occurred using the <a href="#">EC-84. "DIAGNOSTIC WORKSHEET"</a> .	EC
STEP II	Before confirming the concern, check and write down (print out using CONSULT-II or Generic Scan Tool) the (1st trip) Diagnostic Trouble Code (DTC) and the (1st trip) freeze frame data, then erase the code and the data. (Refer to <a href="#">EC-71</a> .) The (1st trip) DTC and the (1st trip) freeze frame data can be used when duplicating the incident at STEP III & IV. If the incident cannot verified, perform <a href="#">EC-137. "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . Study the relationship between the cause, specified by (1st trip) DTC, and the symptom described by the customer. (The "Symptom Matrix Chart" will be useful. See <a href="#">EC-93</a> .) Also check related service bulletins for information.	C
STEP III	Try to confirm the symptom and under what conditions the incident occurs. The "DIAGNOSTIC WORK SHEET" and the freeze frame data are useful to verify the incident. Connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot verified, perform <a href="#">EC-137. "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . If the malfunction code is detected, skip STEP IV and perform STEP V.	D
STEP IV	Try to detect the (1st trip) Diagnostic Trouble Code by driving in (or performing) the "DTC Confirmation Procedure". Check and read the (1st trip) DTC and (1st trip) freeze frame data by using CONSULT-II or GST. During the (1st trip) DTC verification, be sure to connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot verified, perform <a href="#">EC-137. "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> . In case the "DTC Confirmation Procedure" is not available, perform the "Overall Function Check" instead. The (1st trip) DTC cannot be displayed by this check, however, this simplified "check" is an effective alternative. The "NG" result of the "Overall function check" is the same as the (1st trip) DTC detection.	E
STEP V	Take the appropriate action based on the results of STEP I through IV. If the malfunction code is indicated, proceed to trouble diagnosis for DTC PXXXX. If the normal code is indicated, proceed to the BASIC INSPECTION. (Refer to <a href="#">EC-88</a> .) If CONSULT-II is available, perform "DATA MONITOR (SPEC)" mode with CONSULT-II and proceed to the "TROUBLE DIAGNOSIS — SPECIFICATION VALUE". (If malfunction is detected, proceed to "REPAIR/REPLACE".) Then perform inspections according to the Symptom Matrix Chart. (Refer to <a href="#">EC-93</a> .)	F
STEP VI	Identify where to begin diagnosis based on the relationship study between symptom and possible causes. Inspect the system for mechanical binding, loose connectors or wiring damage using (tracing) "Harness Layouts". Gently shake the related connectors, components or wiring harness with CONSULT-II set in "DATA MONITOR (AUTO TRIG)" mode. Check the voltage of the related ECM terminals or monitor the output data from the related sensors with CONSULT-II. Refer to <a href="#">EC-105</a> , <a href="#">EC-126</a> . The "Diagnostic Procedure" in EC section contains a description based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to <a href="#">GI-26. "How to Perform Efficient Diagnosis for an Electrical Incident"</a> . Repair or replace the malfunction parts. If malfunctioning part cannot be detected, perform <a href="#">EC-137. "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"</a> .	G
STEP VII	Once you have repaired the circuit or replaced a component, you need to run the engine in the same conditions and circumstances which resulted in the customer's initial complaint. Perform the "DTC Confirmation Procedure" and confirm the normal code [DTC No. P0000] is detected. If the incident is still detected in the final check, perform STEP VI by using a different method from the previous one. Before returning the vehicle to the customer, be sure to erase the unnecessary (already fixed) (1st trip) DTC in ECM and TCM (Transmission control module). (Refer to <a href="#">EC-71. "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"</a> and <a href="#">AT-40. "HOW TO ERASE DTC"</a> .)	H

**DIAGNOSTIC WORKSHEET****Description**

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.

In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.

Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

Some conditions may cause the malfunction indicator lamp to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

**KEY POINTS**

**WHAT** ..... Vehicle & engine model  
**WHEN** ..... Date, Frequencies  
**WHERE**..... Road conditions  
**HOW** ..... Operating conditions,  
Weather conditions,  
Symptoms

SEF907L

## DTC Inspection Priority Chart

**NOTE:**

If DTC U1000 and/or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to [EC-145, "DTC U1000, U1001 CAN COMMUNICATION LINE"](#).

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

Priority	Detected items (DTC)
1	<ul style="list-style-type: none"> <li>● U1000, U1001 CAN communication</li> <li>● P0101, P0102, P0103, P1102 Mass air flow sensor</li> <li>● P0112, P0113, P0127 Intake air temperature sensor</li> <li>● P0117, P0118, P0125 Engine coolant temperature sensor</li> <li>● P0122, P0123, P0222, P0223, P1225, P1226, P2135 Throttle position sensor</li> <li>● P0128 Thermostat function</li> <li>● P0181, P0182, P0183 Fuel tank temperature sensor</li> <li>● P0327, P0328 Knock sensor</li> <li>● P0335 Crankshaft position sensor (POS)</li> <li>● P0340 Camshaft position sensor (PHASE)</li> <li>● P0460, P0461, P0462, P0463 Fuel level sensor</li> <li>● P0500 Vehicle speed sensor</li> <li>● P0605 ECM</li> <li>● P0705 Park/Neutral position (PNP) switch</li> <li>● P1229 Sensor power supply</li> <li>● P1706 Park/Neutral position (PNP) switch</li> <li>● P2122, P2123, P2127, P2128, P2138 Accelerator pedal position sensor</li> </ul>
2	<ul style="list-style-type: none"> <li>● P0031, P0032 Heated oxygen sensor 1 heater</li> <li>● P0037, P0038 Heated oxygen sensor 2 heater</li> <li>● P0132, P0133, P0134, P1143, P1144 Heated oxygen sensor 1</li> <li>● P0138, P0139, P1146, P1147 Heated oxygen sensor 2</li> <li>● P0441 EVAP control system purge flow monitoring</li> <li>● P0444, P0445, P1444 EVAP canister purge volume control solenoid valve</li> <li>● P0447, P1446, P1448 EVAP canister vent control valve</li> <li>● P0452, P0453 EVAP system pressure sensor</li> <li>● P0550 Power steering pressure sensor</li> <li>● P0710-P0725, P0740-P0755, P1705, P1760 A/T related sensors and solenoid valves</li> <li>● P1065 ECM power supply</li> <li>● P112 Electric throttle control function</li> <li>● P1124, P1126, P1128 Electric throttle control actuator</li> <li>● P1805 Brake switch</li> </ul>

# TROUBLE DIAGNOSIS

[QG18DE (ULEV)]

UBS006C4

## Fail-safe Chart

- When the DTC listed below is detected, the ECM enters fail-safe mode and the MIL lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode								
P0102 P0103 P1102	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.								
P0117 P0118	Engine coolant temperature sensor circuit	<p>Engine coolant temperature will be determined by ECM based on the time after turning ignition switch "ON" or "START". CONSULT-II displays the engine coolant temperature decided by ECM.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Condition</th> <th style="width: 50%;">Engine coolant temperature decided (CONSULT-II display)</th> </tr> </thead> <tbody> <tr> <td>Just as ignition switch is turned ON or Start</td> <td style="text-align: center;">40°C (104°F)</td> </tr> <tr> <td>More than approx. 4 minutes after ignition ON or Start</td> <td style="text-align: center;">80°C (176°F)</td> </tr> <tr> <td>Except as shown above</td> <td style="text-align: center;">40 - 80°C (104 - 176°F) (Depends on the time)</td> </tr> </tbody> </table> <p>When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.</p>	Condition	Engine coolant temperature decided (CONSULT-II display)	Just as ignition switch is turned ON or Start	40°C (104°F)	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
Condition	Engine coolant temperature decided (CONSULT-II display)									
Just as ignition switch is turned ON or Start	40°C (104°F)									
More than approx. 4 minutes after ignition ON or Start	80°C (176°F)									
Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)									
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	<p>The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.</p>								
P1121	Electric throttle control actuator (ECM detect the throttle valve is stuck open.)	<p>While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in "N" or "P" position, and engine speed will not exceed 1,000 rpm or more.</p>								
P1122	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1124 P1126	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P1128	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring								
P1229	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.								
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	<p>The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.</p>								

- When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting MIL up when there is NG on engine control system.  
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.  
The fail-safe function also operates when above diagnoses except MIL circuit and demands the driver to repair the trouble.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut
--	--

## Basic Inspection

### 1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
  - Harness connectors for improper connections
  - Wiring harness for improper connections, pinches and cut
  - Vacuum hoses for splits, kinks and improper connections
  - Hoses and ducts for leaks
  - Air cleaner clogging
  - Gasket
3. Confirm that electrical or mechanical loads are not applied.
  - Headlamp switch is OFF.
  - Air conditioner switch is OFF.
  - Rear window defogger switch is OFF.
  - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge. Ensure engine stays below 1,000 rpm.

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

**OK or NG**

- OK >> GO TO 3.
- NG >> GO TO 2.

### 2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding "Diagnostic Procedure".

>> GO TO 3.

**3. CHECK TARGET IDLE SPEED****Ⓟ With CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.

3. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

**ⓧ Without CONSULT-II**

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

OK >> GO TO 10.

NG >> GO TO 4.

**4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Stop engine.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#).

>> GO TO 5.

**5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-53, "Throttle Valve Closed Position Learning"](#).

>> GO TO 6.

## 6. PERFORM IDLE AIR VOLUME LEARNING

---

Refer to [EC-53, "Idle Air Volume Learning"](#) .

**Is "Idle Air Volume Learning" carried out successfully?**

Yes or No

- Yes >> GO TO 7.  
 No >> 1. Follow the instruction of "Idle Air Volume Learning".  
 2. GO TO 4.

## 7. CHECK TARGET IDLE SPEED AGAIN

---

 **With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 10.  
 NG >> GO TO 8.

## 8. DETECT MALFUNCTIONING PART

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-283](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-277](#) .

OK or NG

- OK >> GO TO 9.  
 NG >> 1. Repair or replace.  
 2. GO TO 4.

## 9. CHECK ECM FUNCTION

---

Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

>> GO TO 4.

## 10. CHECK IGNITION TIMING

---

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 11.

**11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING**

1. Stop engine.
2. Perform [EC-52, "Accelerator Pedal Released Position Learning"](#) .

>> GO TO 12.

**12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING**

Perform [EC-53, "Throttle Valve Closed Position Learning"](#) .

>> GO TO 13.

**13. PERFORM IDLE AIR VOLUME LEARNING**

Refer to [EC-53, "Idle Air Volume Learning"](#) .

**Is "Idle Air Volume Learning" carried out successfully?**

Yes or No

- Yes >> GO TO 14.  
 No >> 1. Follow the instruction of "Idle Air Volume Learning".  
 2. GO TO 4.

**14. CHECK TARGET IDLE SPEED AGAIN**

 **With CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in "DATA MONITOR" mode with CONSULT-II.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

 **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

**M/T: 650 ± 50 rpm**

**A/T: 800 ± 50 rpm (in "P" or "N" position)**

OK or NG

- OK >> GO TO 15.  
 NG >> GO TO 17.

**15. CHECK IGNITION TIMING AGAIN**

1. Run engine at idle.
2. Check ignition timing with a timing light.

**M/T: 7 ± 5° BTDC**

**A/T: 18 ± 5° BTDC (in "P" or "N" position)**

OK or NG

- OK >> **INSPECTION END**  
 NG >> GO TO 16.

---

## 16. CHECK TIMING CHAIN INSTALLATION

---

Check timing chain installation. Refer to [EM-39, "TIMING CHAIN"](#) .

OK or NG

- OK >> GO TO 17.  
NG >> 1. Repair the timing chain installation.  
2. GO TO 4.

---

## 17. DETECT MALFUNCTIONING PART

---

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to [EC-283](#) .
- Check crankshaft position sensor (POS) and circuit. Refer to [EC-277](#) .

OK or NG

- OK >> GO TO 18.  
NG >> 1. Repair or replace.  
2. GO TO 4.

---

## 18. CHECK ECM FUNCTION

---

Substitute another known-good ECM to check ECM function. (ECM may be the cause of a incident, but this is the rarely the case.)

- >> GO TO 4.

ECM Harness Connector Terminal Layout

UBS001CW

MBIB0045E

ECM Terminals and Reference Value  
PREPARATION

UBS001CX

1. ECM is located in the right side of the cowl top (behind the strut tower).
2. Remove ECM harness connector.

BBAI0191E

3. When disconnecting ECM harness connector, loosen it with levers as far as they will go as shown at right.
4. Connect a bread-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
  - Use extreme care not to touch 2 pins at one time.
  - Data is for comparison and may not be exact.

BBAI0138E

ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground. Pulse signal is measured by CONSULT-II.

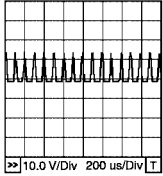

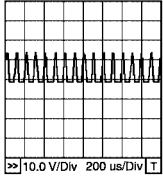

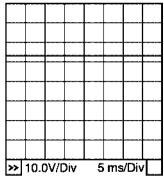

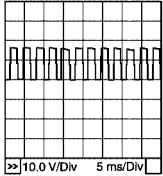

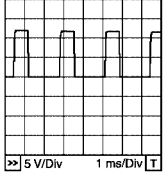

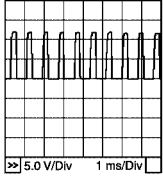

**CAUTION:**

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

UBS001CY

## CONSULT-II Function FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*1
Data monitor	Input/Output data in the ECM can be read.
Data monitor (SPEC)	Input/Output specification of the Basic fuel schedule, AFM, A/F feedback control value and the other data monitor items can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
Function test	This mode is used to inform customers of their vehicle condition of periodic maintenance.
ECM part number	ECM part number can be read.

\*1 The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

X: Applicable

\*1: This item includes 1st trip DTCs.

\*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to [EC-62. "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"](#).

### CONSULT-II INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect "CONSULT-II" to data link connector, which is located under LH dash panel near the fuse box cover.
3. Turn ignition switch ON.

4. Touch "START (NISSAN BASED VHCL)".

5. Touch "ENGINE".

6. Perform each diagnostic test mode according to each service procedure.

**For further information, see the CONSULT-II Operation Manual.**

[QG18DE (ULEV)]

## DATA MONITOR (SPEC) MODE

### Monitored Item

X: Applicable

Monitored item [Unit]	ECM input signals	Main signals	Description	Remarks
ENG SPEED [rpm]	×	×	<ul style="list-style-type: none"> <li>Indicates the engine speed computed from the signal of the camshaft position sensor (PHASE).</li> </ul>	
MAS A/F SE-B1 [V]	×	×	<ul style="list-style-type: none"> <li>The signal voltage of the mass air flow sensor specification is displayed.</li> </ul>	<ul style="list-style-type: none"> <li>When engine is running, specification range is indicated.</li> </ul>
B/FUEL SCHDL [msec]			<ul style="list-style-type: none"> <li>"Base fuel schedule" indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.</li> </ul>	<ul style="list-style-type: none"> <li>When engine is running, specification range is indicated.</li> </ul>
A/F ALPHA-B1 [%]		×	<ul style="list-style-type: none"> <li>The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.</li> </ul>	<ul style="list-style-type: none"> <li>When engine is running, specification range is indicated.</li> <li>This data also includes the data for the air-fuel ratio learning control.</li> </ul>

## ACTIVE TEST MODE

### Test Item

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
FUEL INJECTION	<ul style="list-style-type: none"> <li>Engine: Return to the original trouble condition</li> <li>Change the amount of fuel injection using CONSULT-II.</li> </ul>	If trouble symptom disappears, see CHECK ITEM.	<ul style="list-style-type: none"> <li>Harness and connector</li> <li>Fuel injectors</li> <li>Heated oxygen sensor 1</li> </ul>
IGNITION TIMING	<ul style="list-style-type: none"> <li>Engine: Return to the original trouble condition</li> <li>Timing light: Set</li> <li>Retard the ignition timing using CONSULT-II.</li> </ul>	If trouble symptom disappears, see CHECK ITEM.	<ul style="list-style-type: none"> <li>Adjust initial ignition timing</li> </ul>
POWER BALANCE	<ul style="list-style-type: none"> <li>Engine: After warming up, idle the engine.</li> <li>A/C switch "OFF"</li> <li>Shift lever: N (A/T models) Neutral (M/T models)</li> <li>Cut off each injector signal one at a time using CONSULT-II.</li> </ul>	Engine runs rough or dies.	<ul style="list-style-type: none"> <li>Harness and connector</li> <li>Compression</li> <li>Injectors</li> <li>Power transistor</li> <li>Spark plugs</li> <li>Ignition coils</li> </ul>
COOLING FAN*	<ul style="list-style-type: none"> <li>Ignition switch: ON</li> <li>Turn the cooling fan "ON" and "OFF" using CONSULT-II.</li> </ul>	Cooling fan moves and stops.	<ul style="list-style-type: none"> <li>Harness and connector</li> <li>Cooling fan motor</li> <li>Cooling fan relay</li> </ul>
ENG COOLANT TEMP	<ul style="list-style-type: none"> <li>Engine: Return to the original trouble condition</li> <li>Change the engine coolant temperature using CONSULT-II.</li> </ul>	If trouble symptom disappears, see CHECK ITEM.	<ul style="list-style-type: none"> <li>Harness and connector</li> <li>Engine coolant temperature sensor</li> <li>Fuel injectors</li> </ul>
FUEL PUMP RELAY	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> <li>Turn the fuel pump relay "ON" and "OFF" using CONSULT-II and listen to operating sound.</li> </ul>	Fuel pump relay makes the operating sound.	<ul style="list-style-type: none"> <li>Harness and connector</li> <li>Fuel pump relay</li> </ul>

# TROUBLE DIAGNOSIS

[QG18DE (ULEV)]

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
PURG VOL CONT/V	<ul style="list-style-type: none"> <li>● Engine: After warming up, run engine at 1,500 rpm.</li> <li>● Change the EVAP canister purge volume control solenoid valve opening percent using CONSULT-II.</li> </ul>	Engine speed changes according to the opening percent.	<ul style="list-style-type: none"> <li>● Harness and connector</li> <li>● Solenoid valve</li> </ul>
FUEL/T TEMP SEN	<ul style="list-style-type: none"> <li>● Change the fuel tank temperature using CONSULT-II.</li> </ul>		
VENT CONTROL/V	<ul style="list-style-type: none"> <li>● Ignition switch: ON (Engine stopped)</li> <li>● Turn solenoid valve "ON" and "OFF" with the CONSULT-II and listen to operating sound.</li> </ul>	Solenoid valve makes an operating sound.	<ul style="list-style-type: none"> <li>● Harness and connector</li> <li>● Solenoid valve</li> </ul>
V/T ASSIGN ANGLE	<ul style="list-style-type: none"> <li>● Engine: Return to the original trouble condition</li> <li>● Change intake valve timing using CONSULT-II.</li> </ul>	If trouble symptom disappears, see CHECK ITEM.	<ul style="list-style-type: none"> <li>● Harness and connectors</li> <li>● Intake valve timing control solenoid valve</li> </ul>

\*: Leaving cooling fan "OFF" with CONSULT-II while engine is running may cause the engine to overheat.

## DTC & SRT CONFIRMATION MODE

### SRT Status Mode

For details, refer to [EC-63, "SYSTEM READINESS TEST \(SRT\) CODE"](#) .

### SRT Work Support Mode

This mode enables a technician to drive a vehicle to set the SRT while monitoring the SRT status.

### DTC Work Support Mode

Test mode	Test item	Condition	Reference page
EVAPORATIVE SYSTEM	PURG FLOW P0441	Refer to corresponding trouble diagnosis for DTC.	<a href="#">EC-294</a>
	EVAP SML LEAK P0442		<a href="#">EC-301</a>
	EVAP V/S LEAK P0456		<a href="#">EC-346</a>

## REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA)

### Description

CONSULT-II has two kinds of triggers and they can be selected by touching "SETTING" in "DATA MONITOR" mode.

#### 1. "AUTO TRIG" (Automatic trigger):

- The malfunction will be identified on the CONSULT-II screen in real time.

In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.

At the moment a malfunction is detected by ECM, "MONITOR" in "DATA MONITOR" screen is changed to "Recording Data ... xx%" as shown at left, and the data after the malfunction detection is recorded. Then when the percentage reached 100%,

# TROUBLE DIAGNOSIS

[QG18DE (ULEV)]

“REAL-TIME DIAG” screen is displayed. If “STOP” is touched on the screen during “Recording Data ... xx%”, “REAL-TIME DIAG” screen is also displayed.

The recording time after the malfunction detection and the recording speed can be changed by “TRIGGER POINT” and “Recording Speed”. Refer to CONSULT-II OPERATION MANUAL.

## 2. “MANU TRIG” (Manual trigger):

- DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.  
DATA MONITOR can be performed continuously even though a malfunction is detected.

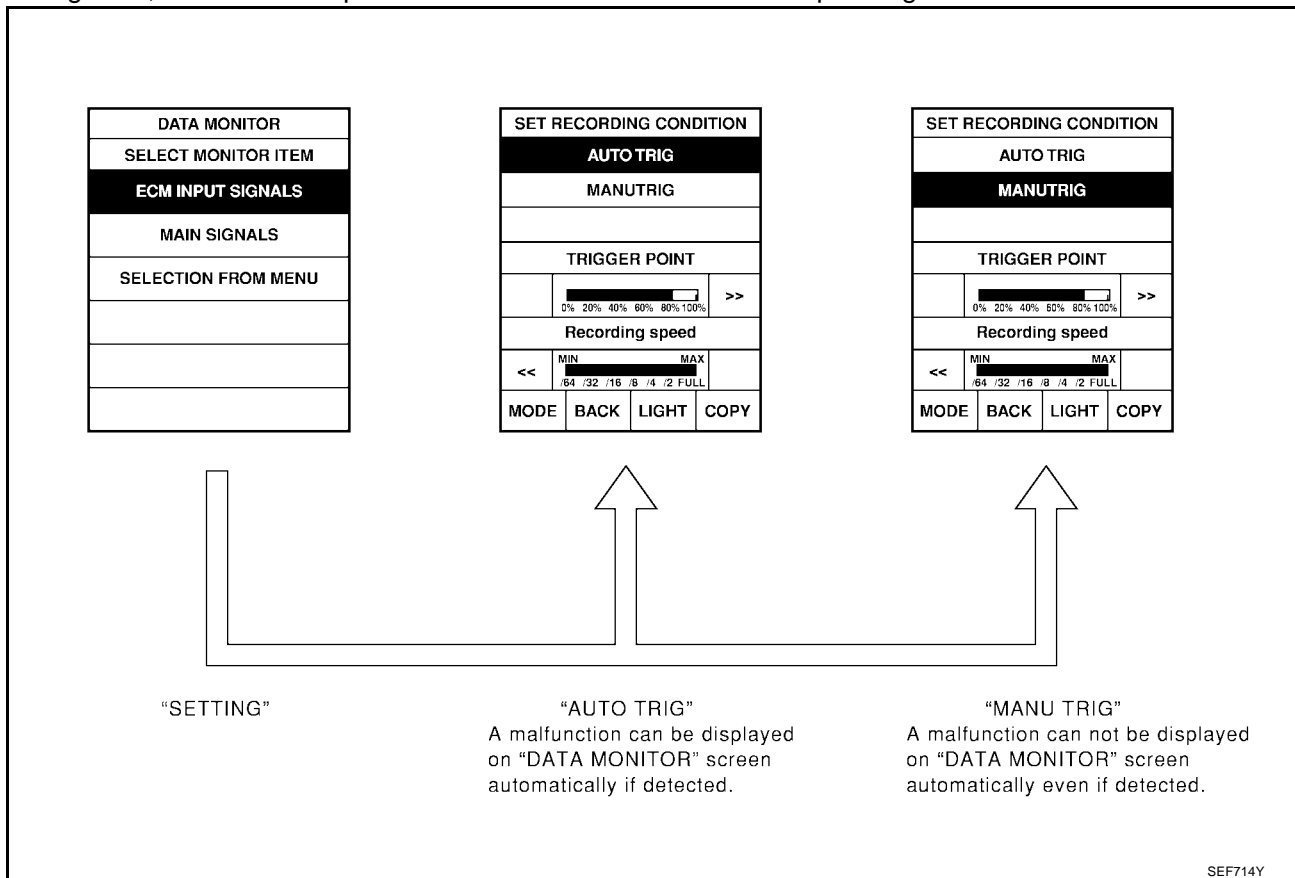

## Operation

### 1. “AUTO TRIG”

- While trying to detect the DTC/1st trip DTC by performing the “DTC Confirmation Procedure”, be sure to select “DATA MONITOR (AUTO TRIG)” mode. You can confirm the malfunction at the moment it is detected.
- While narrowing down the possible causes, CONSULT-II should be set in “DATA MONITOR (AUTO TRIG)” mode, especially in case the incident is intermittent.  
When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the “DTC Confirmation Procedure”, the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), “Incident Simulation Tests”.)

### 2. “MANU TRIG”

- If the malfunction is displayed as soon as “DATA MONITOR” is selected, reset CONSULT-II to “MANU TRIG”. By selecting “MANU TRIG” you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

## Generic Scan Tool (GST) Function DESCRIPTION

Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained on the next page. ISO9141 is used as the protocol. The name "GST" or "Generic Scan Tool" is used in this service manual.

## FUNCTION

Diagnostic test mode		Function
MODE 1	READINESS TESTS	This mode gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
MODE 2	(FREEZE DATA)	This mode gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to <a href="#">EC-62, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA"</a> .
MODE 3	DTCs	This mode gains access to emission-related power train trouble codes which were stored by ECM.
MODE 4	CLEAR DIAG INFO	This mode can clear all emission-related diagnostic information. This includes: <ul style="list-style-type: none"> <li>● Clear number of diagnostic trouble codes (MODE 1)</li> <li>● Clear diagnostic trouble codes (MODE 3)</li> <li>● Clear trouble code for freeze frame data (MODE 1)</li> <li>● Clear freeze frame data (MODE 2)</li> <li>● Reset status of system monitoring test (MODE 1)</li> <li>● Clear on board monitoring test results (MODE 6 and 7)</li> </ul>
MODE 6	(ON BOARD TESTS)	This mode accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
MODE 7	(ON BOARD TESTS)	This mode enables the off board test drive to obtain test results for emission-related powertrain components/systems that are continuously monitored during normal driving conditions.
MODE 8	—	This mode can close EVAP system in ignition switch "ON" position (Engine stopped). When this mode is performed, following parts can be opened or closed. <ul style="list-style-type: none"> <li>● EVAP canister vent control valve open</li> </ul> In the following conditions, this mode cannot function. <ul style="list-style-type: none"> <li>● Low ambient temperature</li> <li>● Low battery voltage</li> <li>● Engine running</li> <li>● Ignition switch "OFF"</li> <li>● Low fuel temperature</li> <li>● Too much pressure is applied to EVAP system</li> </ul>
MODE 9	(CALIBRATION ID)	This mode enables the off-board test device to request specific vehicle information such as Vehicle Identification Number (VIN) and Calibration IDs.

## GST INSPECTION PROCEDURE

1. Turn ignition switch OFF.

# TROUBLE DIAGNOSIS

[QG18DE (ULEV)]

- Connect "GST" to data link connector. (Data link connector is located under LH dash panel near the fuse box cover.)

- Turn ignition switch ON.
  - Enter the program according to instruction on the screen or in the operation manual.
- (\*: Regarding GST screens in this section, sample screens are shown.)

- Perform each diagnostic mode according to each service procedure.
- For further information, see the GST Operation Manual of the tool maker.**

## CONSULT-II Reference Value in Data Monitor Mode

UBS001D0

Remarks:

- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
- \* Specification data may not be directly related to their components signals/values/operations. (i.e., Adjust ignition timing with a timing light before monitoring IGN TIMING. Specification data might be displayed even when ignition timing is not adjusted to specification. This IGN TIMING monitors the data calculated by the ECM according to the input signals from the camshaft position sensor and other ignition timing related sensors.)
- If the real-time diagnosis results are NG, and the on board diagnostic system results are OK, when diagnosing the mass air flow sensor, first check to see if the fuel pump control circuit is normal.

MONITOR ITEM	CONDITION		SPECIFICATION
ENG SPEED	<ul style="list-style-type: none"> <li>● Tachometer: Connect</li> <li>● Run engine and compare tachometer indication with the CONSULT-II value.</li> </ul>		Almost the same speed as the CONSULT-II value.

# TROUBLE DIAGNOSIS

**[QG18DE (ULEV)]**

MONITOR ITEM	CONDITION		SPECIFICATION
SET SW	● Ignition switch: ON	COAST/SET switch: Depressed	ON
		COAST/SET switch: Released	OFF
BRAKE SW1	● Ignition switch: ON	Brake pedal and clutch pedal (M/T): Fully released	ON
		Brake pedal and/or clutch pedal (M/T): Slightly depressed	OFF
BRAKE SW2	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON
CRUISE LAMP	● Ignition switch: ON	CRUISE lamp: Illuminated	ON
		CRUISE lamp: Not illuminated	OFF
SET LAMP	● Ignition switch: ON	SET lamp: Illuminated	ON
		SET lamp: Not illuminated	OFF

\*: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

**Major Sensor Reference Graph in Data Monitor Mode**

The following are the major sensor reference graphs in "DATA MONITOR" mode.

**CLSD THL POS, ACCEL SEN1, THRTL SEN1-**

Below is the data for "CLSD THL POS", "ACCEL SEN1", and "THRTL SEN1" when depressing the accelerator pedal with the ignition switch "ON" and with selector lever in "D" position (A/T models) or with shift lever in "1st" position (M/T models).

The signal of "ACCEL SEN1" and "THRTL SEN1" should rise gradually without any intermittent drop or rise after "CLSD THL/P SW" is changed from "ON" to "OFF".

**ENG SPEED, MAS A/F SE-B1, THRTL POS SEN, HO2S2 (B1), HO2S1 (B1), INJ PULSE-B1**

Below is the data for "ENG SPEED", "MAS A/F SE-B1", "THRTL POS SEN", "HO2S2 (B1)", "HO2S1 (B1)" and "INJ PULSE-B1" when revving engine quickly up to 4,800 rpm under no load after warming up engine to normal operating temperature.

Each value is for reference, the exact value may vary.

- "THRTL SEN 1" should increase while depressing the accelerator pedal and should decrease while releasing it.

- "HO2S2 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.

- "HO2S1 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.

- "INJ PULSE-B1" should increase when depressing the accelerator pedal and should decrease when the pedal is released.

TRUBLE DIAGNOSIS - SPECIFICATION VALUE

PFP:00031

Description

UBS001D2

The specification (SP) value indicates the tolerance of the value that is displayed in "DATA MONITOR (SPEC)" mode of CONSULT-II during normal operation of engine control system. When the value in "DATA MONITOR (SPEC)" mode is within the SP value, the engine control system is confirmed OK. When the value in "DATA MONITOR (SPEC)" mode is NOT within the SP value, the engine control system may have one or more malfunctions.

The SP value is used to detect malfunctions that may affect the engine control system, but will not light the MIL.

The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction.)
- A/F ALPHA-B1 (The mean value of air/fuel ratio feedback correction factor per cycle.)
- MAS A/F SE-B1 (The signal voltage of the mass air flow sensor.)

Testing Condition

UBS001D3

- Vehicle driven distance: More than 5,000 km (3,107 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm<sup>2</sup> , 14.25 - 15.12 psi)
- Atmosphere temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up \*1
- Electrical load: Not applied \*2
- Engine speed: Idle

\*1: For A/T models, after the engine is warmed-up to normal operating temperature, drive vehicle until "FLUID TEMP SE" (A/T fluid temperature sensor signal) indicates less than 0.9V. For M/T models, drive vehicle for 5 minutes after the engine is warmed-up to normal operating temperature.

\*2: Rear window defogger switch, air conditioner switch, and lighting switch are "OFF". Cooling fans are not operating. Steering wheel straight ahead.

Inspection Procedure

UBS001D4

NOTE:

Perform "DATA MONITOR (SPEC)" mode in maximum scale display.

1. Perform "Basic Inspection". Refer to [EC-88](#) .
2. Confirm that the testing conditions indicated above are met.
3. Select "B/FUEL SCHDL", "A/F ALPHA-B1", and "MAS A/F SE-B1" in "DATA MONITOR (SPEC)" mode with CONSULT-II.
4. Make sure that monitor items are within the SP value.
5. If NG, go to [EC-134, "Diagnostic Procedure"](#) .

# TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

[QG18DE (ULEV)]

## TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

PFP:00006

### Description

UBS001D6

Intermittent incidents (I/I) may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on DTC (1st trip) visits. Realize also that the most frequent cause of I/I occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

#### COMMON I/I REPORT SITUATIONS

STEP in Work Flow	Situation
II	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than "0" or "1t".
III	The symptom described by the customer does not recur.
IV	(1st trip) DTC data does not appear during the DTC CONFIRMATION PROCEDURE.
VI	The TROUBLE DIAGNOSIS for PXXXX does not indicate the malfunctioning area.

### Diagnostic Procedure

UBS001D7

#### 1. INSPECTION START

Erase (1st trip) DTCs. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).

>> GO TO 2.

#### 2. CHECK GROUND TERMINALS

Check ground terminals for corroding or loose connection. Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "CIRCUIT INSPECTION", "Ground Inspection".

OK or NG

OK >> GO TO 3.

NG >> Repair or replace.

#### 3. SEARCH FOR ELECTRICAL INCIDENT

Refer to [GI-26, "How to Perform Efficient Diagnosis for an Electrical Incident"](#), "INCIDENT SIMULATION TEST".

OK or NG

OK >> GO TO 4.

NG >> Repair or replace.

#### 4. CHECK CONNECTOR TERMINALS

Refer to [GI-23, "How to Check Terminal"](#), "HOW TO PROBE CONNECTORS", "How to Check Enlarged Contact Spring of Terminal".

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace connector.

# POWER SUPPLY CIRCUIT FOR ECM

[QG18DE (ULEV)]

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	B	ECM ground	[Engine is running] ● Idle speed	Engine ground
109	B/R	Ignition switch	[Ignition switch "OFF"]	0V
			[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)
111	W/G	ECM relay (Self shut-off)	[Engine is running] [Ignition switch "OFF"] ● For 5 seconds after turning ignition switch "OFF"	0 - 1.0V
			[Ignition switch "OFF"] ● 5 seconds passed after turning ignition switch "OFF"	BATTERY VOLTAGE (11 - 14V)
115 116	B B	ECM ground	[Engine is running] ● Idle speed	Engine ground
119 120	W W	Power supply for ECM	[Ignition switch "ON"]	BATTERY VOLTAGE (11 - 14V)
121	W/L	Power supply for ECM (Back-up)	[Ignition switch "OFF"]	BATTERY VOLTAGE (11 - 14V)

## Diagnostic Procedure

UBS006GB

### 1. INSPECTION START

Start engine.

**Is engine running?**

Yes or No

Yes >> GO TO 9.

No >> GO TO 2.

### 2. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Turn ignition switch "OFF" and then "ON".
2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

OK >> GO TO 4.

NG >> GO TO 3.

---

## 3. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M19, E108
- Harness connectors E9, F47
- Fuse block (J/B) connector M1
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.

NG >> GO TO 5.

---

## 5. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors F26, M58
- Joint connector-1
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

**6. CHECK ECM POWER SUPPLY CIRCUIT-II**

1. Disconnect ECM relay.

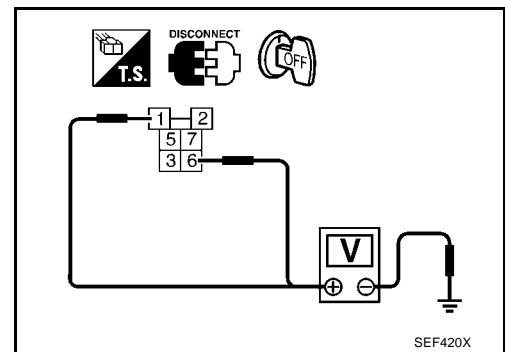

2. Check voltage between ECM relay terminals 1 and 6 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 8.
- NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- 10A fuse
- 15A fuse
- Harness for open or short between ECM relay and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between ECM terminal 111 and ECM relay terminal 2. Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> Go to [EC-535, "IGNITION SIGNAL"](#) .
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

A  
EC  
C  
D  
E  
F  
G  
H  
I  
J  
K  
L  
M

**9. CHECK ECM POWER SUPPLY CIRCUIT-III**

1. Stop engine and wait at least 10 seconds.
2. Turn ignition switch "ON" and then "OFF".
3. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

**Voltage:** After turning ignition switch "OFF", battery voltage will exist for a few seconds, then drop approximately 0V.

OK or NG

OK >> GO TO 14.

NG (Battery voltage does not exist.)>>GO TO 10.

NG (Battery voltage exists for more than a few seconds.)>>GO TO 12.

**10. CHECK ECM POWER SUPPLY CIRCUIT-IV**

1. Disconnect ECM relay.

2. Check voltage between ECM relay terminal 3 and ground with CONSULT-II or tester.

**Voltage:** Battery voltage

OK or NG

OK >> GO TO 12.

NG >> GO TO 11.

**11. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors E9, F47
- Harness for open or short between ECM relay and

>> Repair open circuit or short to ground or short to power in harness or connectors.

**12. CHECK ECM POWER SUPPLY CIRCUIT-V**

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 119, 120 and ECM relay terminal 5.  
Refer to Wiring Diagram.

**Continuity should exist.**

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 13.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**13. CHECK ECM RELAY**

Refer to [EC-144, "Component Inspection"](#) .

OK or NG

OK >> GO TO 14.

NG >> Replace ECM relay.

**14. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 16.

NG >> GO TO 15.

**15. DETECT MALFUNCTIONING PART**

Check the following.

- Harness connectors F26, M58
- Joint connector-1
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

**16. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

OK or NG

OK >> **INSPECTION END**

**Component Inspection**  
**ECM RELAY**

1. Apply 12V direct current between ECM relay terminals 1 and 2.
2. Check continuity between ECM relay terminals 3 and 5, 6 and 7.

Condition	Continuity
12V direct current supply between terminals 1 and 2	Yes
OFF	No

# DTC U1000, U1001 CAN COMMUNICATION LINE

[QG18DE (ULEV)]

## DTC U1000, U1001 CAN COMMUNICATION LINE

PF:23710

### Description

UBS003PG

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

### On Board Diagnosis Logic

UBS003PH

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000*1 1000*1	CAN communication line	<ul style="list-style-type: none"><li>● ECM can not communicate to other control units.</li><li>● ECM can not communicate for more than the specified time.</li></ul>	<ul style="list-style-type: none"><li>● Harness or connectors (CAN communication line is open or shorted).</li></ul>
U1001*2 1001*2			

\*1: This self-diagnosis has the one trip detection logic.

\*2: The MIL will not light up for this diagnosis.

### DTC Confirmation Procedure

UBS003PI

1. Turn ignition switch "ON" and wait at least 3 seconds.
2. Select "DATA MONITOR" mode with CONSULT-II.
3. If 1st trip DTC is detected, go to [EC-147, "Diagnostic Procedure"](#).

DTC P0011 IVT CONTROL

Description  
SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

\*: This signal is sent to the ECM through CAN communication line.

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION	
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No-load	Idle When revving engine up to 2,000 rpm quickly	-5° - 5°CA Approx. 0° - 30°CA
	INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No-load	Idle When revving engine up to 2,000 rpm quickly

## On Board Diagnosis Logic

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0011 0011	Intake valve timing control performance	There is a gap between angle of target and phase-control angle.	<ul style="list-style-type: none"> <li>● Crankshaft position sensor (POS)</li> <li>● Camshaft position sensor (PHASE)</li> <li>● Accumulation of debris to the signal pick-up portion of the camshaft</li> </ul>

### FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function

### DTC Confirmation Procedure

**CAUTION:**

Always drive at a safe speed.

**NOTE:**

- If DTC P0011 is displayed with DTC P1111, first perform trouble diagnosis for "DTC P1111". See [EC-385, "DTC P1111 IVT CONTROL SOLENOID VALVE"](#) .
- If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

**WITH CONSULT-II**

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds.  
Hold the accelerator pedal as steady as possible.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

PBIB0164E

VHCL SPEED SE	100 - 120 km/h (63 - 75 MPH)
ENG SPEED	2,000 - 4,000 rpm
COOLAN TEMP/S	60 - 120°C (140 - 248°F)
B/FUEL SCHDL	More than 3.38 msec
Selector lever	A/T models: D position M/T models: 5th position

4. Stop vehicle with engine running and let engine idle for 10 seconds.
5. If 1st trip DTC is detected, go to [EC-150, "Diagnostic Procedure"](#) .  
If 1st trip DTC is not detected, go to next step.
6. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLAN TEMP/S	70 - 105°C (176 - 194°F)
Selector lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

7. If 1st trip DTC is detected, go to [EC-150, "Diagnostic Procedure"](#) .

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

## Diagnostic Procedure

### 1. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to [EC-282, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 2.
- NG >> Replace crankshaft position sensor (POS).

### 2. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to [EC-287, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 3.
- NG >> Replace camshaft position sensor (PHASE).

### 3. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

- OK >> GO TO 4.
- NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

### 4. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

For wiring diagram refer to [EC-279, "Wiring Diagram"](#) for CKP sensor (POS) and [EC-284, "Wiring Diagram"](#) for CMP sensor (PHASE).

>> INSPECTION END

DTC P0031, P0032 HO2S1 HEATER

PF2:22690

Description  
SYSTEM DESCRIPTION

UBS0037A

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Heated oxygen sensor 1 heater control	Heated oxygen sensor 1 heater
Engine coolant temperature sensor	Engine coolant temperature		

The ECM performs ON/OFF duty control of the heated oxygen sensor 1 heater corresponding to the engine speed and engine coolant temperature. The duty percent varies with engine coolant temperature when engine is started.

OPERATION

Engine speed rpm	Heated oxygen sensor 1 heater
Above 3,600	OFF
Below 3,600	ON

CONSULT-II Reference Value in Data Monitor Mode

UBS0037B

DTC Confirmation Procedure

UBS0037D

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

Ⓟ WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0031, P0032 HO2S1 HEATER

[QG18DE (ULEV)]

3. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
4. Start engine and run it for at least 6 seconds at idle speed.
5. If 1st trip DTC is detected, go to [EC-154, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

### WITH GST

1. Start engine and warm it up to normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and run it for at least 6 seconds at idle speed.
  4. Turn ignition switch "OFF" and wait at least 10 seconds.
  5. Start engine and run it for at least 6 seconds at idle speed.
  6. Select "MODE 3" with GST.
  7. If DTC is detected, go to [EC-154, "Diagnostic Procedure"](#).
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

## Diagnostic Procedure

UBS003TF

### 1. CHECK HO2S1 POWER SUPPLY CIRCUIT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 harness connector.
3. Turn ignition switch "ON".

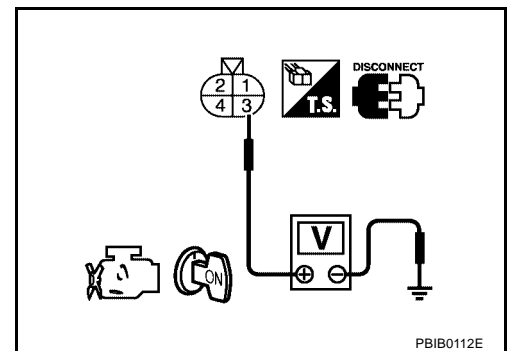

4. Check voltage between HO2S1 terminal 3 and ground with CONSULT-II or tester.

**Voltage: Battery voltage**

OK or NG

- OK >> GO TO 3.
- NG >> GO TO 2.

---

## 2. DETECT MALFUNCTIONING PART

---

Check the following.

- Harness connectors M19, E108
- Harness connectors E9, F47
- Fuse block (J/B) connector M1
- 15A fuse
- Harness for open or short between heated oxygen sensor 1 and fuse

>> Repair harness or connectors.

---

## 3. CHECK HO2S1 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

---

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 24 and HO2S1 terminal 2.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK HEATED OXYGEN SENSOR 1 HEATER

---

Refer to [EC-156, "Component Inspection"](#) .

OK or NG

OK >> GO TO 5.

NG >> Replace heated oxygen sensor 1.

---

## 5. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection

### HEATED OXYGEN SENSOR 1 HEATER

1. Check resistance between HO2S1 terminals as follows.

Terminal No.	Resistance
2 and 3	2.3 - 4.3 $\Omega$ at 25°C (77°F)
1 and 2, 3, 4	$\infty \Omega$
4 and 1, 2, 3	(Continuity should not exist)

2. If NG, replace heated oxygen sensor 1.

#### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

## Removal and Installation

### HEATED OXYGEN SENSOR 1

Refer to [EM-12, "Removal and Installation"](#).

**DTC P0037, P0038 HO2S2 HEATER**

PF:226A0

**Description  
SYSTEM DESCRIPTION**

UBS006C5

Sensor	Input Signal to ECM	ECM Function	Actuator
Camshaft position sensor (PHASE)	Engine speed	Heated oxygen sensor 2 heater control	Heated oxygen sensor 2 heater
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF control of the heated oxygen sensor 2 heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

**OPERATION**

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600	OFF
<ul style="list-style-type: none"> <li>Below 3,600 rpm after the following conditions are met.</li> <li>Engine: After warming up</li> <li>Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	ON

**CONSULT-II Reference Value in Data Monitor Mode**

UBS006C6

Specification data are reference values.

**DTC Confirmation Procedure**

UBS006C8

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

**WITH CONSULT-II**

- Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
- Start engine and warm it up to the normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0037, P0038 HO2S2 HEATER

[QG18DE (ULEV)]

4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minute.
6. If 1st trip DTC is detected, go to [EC-160, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEP174Y

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  4. Let engine idle for one minute.
  5. Turn ignition switch "OFF" and wait at least 10 seconds.
  6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  7. Let engine idle for one minute.
  8. Select "MODE 3" with GST.
  9. If DTC is detected, go to [EC-160, "Diagnostic Procedure"](#).
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

## 5. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection

### HEATED OXYGEN SENSOR 2 HEATER

1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
2 and 3	2.3 - 4.3 $\Omega$ at 25°C (77°F)
1 and 2, 3, 4	$\infty \Omega$
4 and 1, 2, 3	(Continuity should not exist)

2. If NG, replace heated oxygen sensor 2.

#### CAUTION:

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

## Removal and Installation

### HEATED OXYGEN SENSOR 2

Refer to [EX-3, "EXHAUST SYSTEM"](#) .

DTC P0101 MAF SENSOR

PFP:22680

Component Description

UBS003PL

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

SEC266C

CONSULT-II Reference Value in Data Monitor Mode

UBS003PM

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.0 - 1.7V
		2,500 rpm 1.5 - 2.4V
CAL/LD VALUE	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 20.0 - 35.5%
		2,500 rpm 12.0 - 27.0%
MASS AIRFLOW	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.4 - 4.0 g-m/s
		2,500 rpm 5.0 - 10.0 g-m/s

On Board Diagnosis Logic

UBS003PN

This self-diagnosis has the one trip detection logic.

NOTE:

If DTC P0101 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455, "DTC P1229 SENSOR POWER SUPPLY"](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0101 0101	Mass air flow sensor circuit range/performance problem	A) A high voltage from the sensor is sent to ECM under light load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Mass air flow sensor</li> </ul>
		B) A low voltage from the sensor is sent to ECM under heavy load driving condition.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air leaks</li> <li>● Mass air flow sensor</li> </ul>

DTC Confirmation Procedure

UBS003PO

Perform "PROCEDURE FOR MALFUNCTION A" first.

If the 1st trip DTC cannot be confirmed, perform “PROCEDURE FOR MALFUNCTION B”.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**PROCEDURE FOR MALFUNCTION A**

**NOTE:**

If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch “ON”) instead of running engine at idle speed.

**With CONSULT-II**

1. Turn ignition switch “ON”.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and warm it up to normal operating temperature.
4. Run engine for at least 10 seconds at idle speed.
5. If 1st trip DTC is detected, go to [EC-167, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLANT TEMP/S	XXX °C

SEF174Y

**With GST**

Follow the procedure “With CONSULT-II” above.

**PROCEDURE FOR MALFUNCTION B**

**CAUTION:**

**Always drive vehicle at a safe speed.**

**With CONSULT-II**

1. Turn ignition switch “ON”.
2. Start engine and warm it up to normal operating temperature.  
**If engine cannot be started, go to [EC-167, "Diagnostic Procedure"](#) .**
3. Select “DATA MONITOR” mode with CONSULT-II.
4. Check the voltage of “MAS A/F SE-B1” with “DATA MONITOR”.
5. Increases engine speed to about 4,000 rpm.
6. Monitor the linear voltage rise in response to engine speed increases.  
If NG, go to [EC-167, "Diagnostic Procedure"](#) .  
If OK, go to following step.

# DTC P0101 MAF SENSOR

[QG18DE (ULEV)]

7. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	More than 2,000 rpm
THRTL SEN 1	More than 3V
THRTL SEN 2	More than 3V
Selector lever	Suitable position
Driving location	Driving vehicle uphill (Increased engine load) will help maintain the driving conditions required for this test.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
VHCL SPEED SE	XXX km/h
THRTL SEN 1	XXX V
THRTL SEN 2	XXX V

PBIB0199E

8. If 1st trip DTC is detected, go to [EC-167, "Diagnostic Procedure"](#)

## Overall Function Check PROCEDURE FOR MALFUNCTION B

UBS003PP

Use this procedure to check the overall function of the mass air flow sensor circuit. During this check, a 1st trip DTC might not be confirmed.

### With GST

1. Start engine and warm it up to normal operating temperature.
2. Select "MODE 1" with GST.
3. Check the mass air flow sensor signal with "MODE 1".
4. Check for linear mass air flow sensor signal value rise in response to increases to about 4,000 rpm in engine speed.
5. If NG, go to [EC-167, "Diagnostic Procedure"](#) .

## Diagnostic Procedure

UBS003PR

### 1. INSPECTION START

Which malfunction (A or B) is duplicated?

A or B

- A >> GO TO 3.
- B >> GO TO 2.

### 2. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and intake manifold

OK or NG

- OK >> GO TO 3.
- NG >> Reconnect the parts.

### 3. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 4.

### 4. CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect mass air flow (MAF) sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

OK or NG

- OK >> GO TO 6.
- NG >> GO TO 5.

### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and ECM relay

>> Repair harness or connectors.

**6. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT**

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and engine ground.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 8.  
NG >> GO TO 7.

**7. DETECT MALFUNCTIONING PART**

Check the following.

- Joint connector-1
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 51.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

- OK >> GO TO 9.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK MASS AIR FLOW SENSOR**

Refer to [EC-170, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 10.  
NG >> Replace mass air flow sensor.

**10. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

## Component Inspection MASS AIR FLOW SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.1
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.
  - Turn ignition switch "OFF".
  - Disconnect mass air flow sensor harness connector and reconnect it again.
  - Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

PBIB1059E

DTC P0102, P0103 MAF SENSOR

PF2:22680

Component Description

UBS003PU

The mass air flow sensor is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. It consists of a hot film that is supplied with electric current from the ECM. The temperature of the hot film is controlled by the ECM a certain amount. The heat generated by the hot film is reduced as the intake air flows around it. The more air, the greater the heat loss. Therefore, the ECM must supply more electric current to maintain the temperature of the hot film as air flow increases. The ECM detects the air flow by means of this current change.

CONSULT-II Reference Value in Data Monitor Mode

UBS003PV

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
MAS A/F SE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.0 - 1.7V
		2,500 rpm 1.5 - 2.4V
CAL/LD VALUE	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 20.0 - 35.5%
		2,500 rpm 12.0 - 27.0%
MASS AIRFLOW	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No-load	Idle 1.4 - 4.0 g-m/s
		2,500 rpm 5.0 - 10.0 g-m/s

On Board Diagnosis Logic

UBS003PW

These self-diagnoses have the one trip detection logic.

NOTE:

If DTC P0101 is displayed with DTC P1229, first perform the trouble diagnosis for DTC P1229. Refer to [EC-455, "DTC P1229 SENSOR POWER SUPPLY"](#).

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0102 0102	Mass air flow sensor circuit low input	An excessively low voltage from the sensor is sent to ECM when engine is running.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air leaks</li> <li>● Mass air flow sensor</li> </ul>

### 2. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct to intake manifold

OK or NG

OK >> GO TO 3.

NG >> Reconnect the parts.

### 3. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 4.

#### 4. CHECK MAF SENSOR POWER SUPPLY CIRCUIT

1. Disconnect MAF sensor harness connector.
2. Turn ignition switch "ON".

3. Check voltage between MAF sensor terminals 2, 4 and ground with CONSULT-II or tester.

Terminal	Voltage
2	Approximately 5V
4	Battery voltage

**OK or NG**

- OK >> GO TO 6.
- NG >> GO TO 5.

#### 5. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and ECM relay

>> Repair open circuit or short to ground or short to power in harness or connectors.

#### 6. CHECK MAF SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect ECM harness connector.
3. Check harness continuity between MAF sensor terminal 3 and engine ground. Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to ground and short to power.

**OK or NG**

- OK >> GO TO 8.
- NG >> GO TO 7.

#### 7. DETECT MALFUNCTIONING PART

Check the following.

- Joint connector-1
- Harness for open or short between mass air flow sensor and ECM
- Harness for open or short between mass air flow sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

**8. CHECK MAF SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

1. Check harness continuity between MAF sensor terminal 1 and ECM terminal 51.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**9. CHECK MASS AIR FLOW SENSOR**

Refer to [EC-176, "Component Inspection"](#) .

OK or NG

OK >> GO TO 10.

NG >> Replace mass air flow sensor.

**10. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> **INSPECTION END**

**Component Inspection  
MASS AIR FLOW SENSOR**

UBS003Q0

1. Reconnect harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 51 (Mass air flow sensor signal) and ground.

Condition	Voltage V
Ignition switch "ON" (Engine stopped.)	Approx. 1.0
Idle (Engine is warmed-up to normal operating temperature.)	1.0 - 1.7
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.5 - 2.1
Idle to about 4,000 rpm*	1.0 - 1.7 to Approx. 4.0

\*: Check for liner voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.
  - a. Turn ignition switch "OFF".
  - b. Disconnect mass air flow sensor harness connector and reconnect it again.
  - c. Perform steps 2 and 3 again.
5. If NG, remove mass air flow sensor from air duct. Check hot film for damage or dust.
6. If NG, clean or replace mass air flow sensor.

DTC P0112, P0113 IAT SENSOR

PF2:22630

Component Description

UBS003Q2

The intake air temperature sensor is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

UBS003Q3

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0112 0112	Intake air temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Intake air temperature sensor</li> </ul>
P0113 0113	Intake air temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

DTC Confirmation Procedure

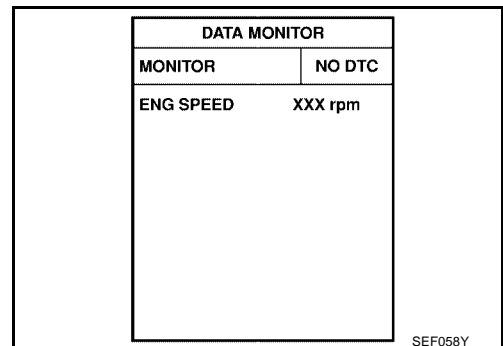

UBS003Q4

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to [EC-179, "Diagnostic Procedure"](#)

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

**Component Inspection  
INTAKE AIR TEMPERATURE SENSOR**

UBS003Q7

1. Check resistance between mass air flow sensor terminals 3 and 5 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1

2. If NG, replace mass air flow sensor (with intake air temperature sensor).

DTC P0117, P0118 ECT SENSOR

PF2:22630

UBS001EF

Component Description

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 73 (Engine coolant temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may lead to ECM's transistor damage. Use ground other than ECM, such as engine ground.

On Board Diagnosis Logic

UBS006GC

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Engine coolant temperature sensor</li> </ul>

DTC P0122, P0123 TP SENSOR

PF16119

Component Description

UBS003ZS

Electric Throttle Control Actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.

The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-II Reference Value in Data Monitor Mode

UBS003ZT

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	<ul style="list-style-type: none"> <li>Ignition switch: ON (Engine stopped)</li> <li>Shift lever: D (A/T), 1st (M/T)</li> </ul>	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

\*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

UBS003ZU

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	<ul style="list-style-type: none"> <li>Harness or connectors (The TP sensor 2 circuit is open or shorted.) (APP sensor 2 circuit is shorted.)</li> <li>Electric throttle control actuator (TP sensor 2)</li> <li>Accelerator pedal position sensor (APP sensor)</li> </ul>
P0123 0123	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode

The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees.

The ECM regulates the opening speed of the throttle valve to be slower than the normal condition.

So, the acceleration will be poor.

DTC Confirmation Procedure

UBS003ZV

NOTE:

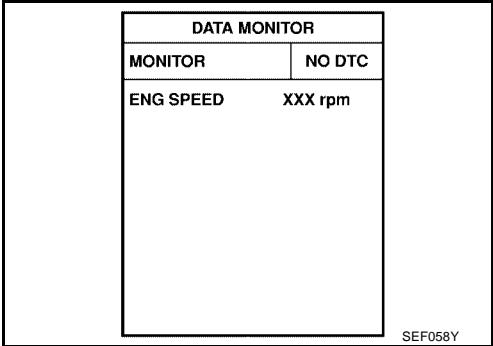

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to [EC-189, "Diagnostic Procedure"](#) .

Refer to [EM-12, "Removal and Installation"](#) .

DTC P0125 ECT SENSOR

PF2:22630

Component Description

UBS001EV

NOTE:

If DTC P0125 is displayed with P0117 or P0118, first perform trouble diagnosis for DTC P0117 or P0118, [EC-181](#).

The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

\*: These data are reference values and are measured between ECM terminal 73 (Engine coolant temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may lead to ECM's transistor damage. Use ground other than ECM, such as engine ground.

On Board Diagnosis Logic

UBS001EX

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0125 0125	Insufficient engine coolant temperature for closed loop fuel control	<ul style="list-style-type: none"> <li>● Voltage sent to ECM from the sensor is not practical, even when some time has passed after starting the engine.</li> <li>● Engine coolant temperature is insufficient for closed loop fuel control.</li> </ul>	<ul style="list-style-type: none"> <li>● Harness or connectors (High resistance in the circuit)</li> <li>● Engine coolant temperature sensor</li> <li>● Thermostat</li> </ul>

DTC Confirmation Procedure

UBS001EY

**CAUTION:**

Be careful not to overheat engine.

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Turn ignition switch "ON".

2. Select "DATA MONITOR" mode with CONSULT-II.
3. Check that "COOLAN TEMP/S" is above 10°C (50°F).  
**If it is above 10°C (50°F), the test result will be OK. If it is below 10°C (50°F), go to following step.**
4. Start engine and run it for 65 minutes at idle speed.  
**If "COOLAN TEMP/S" increases to more than 10°C (50°F) within 65 minutes, stop engine because the test result will be OK.**
5. If 1st trip DTC is detected, go to [EC-194, "Diagnostic Procedure"](#)

DTC P0127 IAT SENSOR

PF:P:22630

Component Description

UBS003QI

The intake air temperature sensor is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.

The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
-10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

\*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

UBS003QJ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0127 0127	Intake air temperature too high	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signal from engine coolant temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Intake air temperature sensor</li> </ul>

DTC Confirmation Procedure

UBS003QK

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**CAUTION:**

Always drive vehicle at a safe speed.

**TESTING CONDITION:**

This test may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

**WITH CONSULT-II**

1. Wait until engine coolant temperature is less than 90°C (194°F)
  - a. Turn ignition switch "ON".
  - b. Select "DATA MONITOR" mode with CONSULT-II.
  - c. Check the engine coolant temperature.
  - d. If the engine coolant temperature is not less than 90°C (194°F), turn ignition switch "OFF" and cool down engine.
    - Perform the following steps before engine coolant temperature is above 90°C (194°F).
2. Turn ignition switch "ON".
3. Select "DATA MONITOR" mode with CONSULT-II.
4. Start engine.
5. Hold vehicle speed at more than 70 km/h (43 MPH) for 100 consecutive seconds.
6. If 1st trip DTC is detected, go to [EC-197, "Diagnostic Procedure"](#) .

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm

SEF058Y

**WITH GST**

Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure**

**1. CHECK INTAKE AIR TEMPERATURE SENSOR**

Refer to [EC-197, "Component Inspection"](#) .

OK or NG

- OK >> GO TO 2.
- NG >> Replace mass air flow sensor (with intake air temperature sensor).

**2. CHECK INTERMITTENT INCIDENT**

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

**Component Inspection**  
**INTAKE AIR TEMPERATURE SENSOR**

1. Check resistance between intake air temperature sensor terminals 3 and 5 under the following conditions.

# DTC P0127 IAT SENSOR

[QG18DE (ULEV)]

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1

- If NG, replace mass air flow sensor (with intake air temperature sensor).

**DTC P0128 THERMOSTAT FUNCTION**

PF2:21200

**On Board Diagnosis Logic**

UBS006GD

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.

This is due to a leak in the seal or the thermostat stuck open.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0128 0128	Thermostat function	The engine coolant temperature does not reach to specified temperature even though the engine has run long enough.	<ul style="list-style-type: none"> <li>● Thermostat</li> <li>● Leakage from sealing portion of thermostat</li> <li>● Engine coolant temperature sensor</li> </ul>

**DTC Confirmation Procedure**

UBS001F5

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- For best results, perform at ambient temperature of  $-10^{\circ}\text{C}$  ( $14^{\circ}\text{F}$ ) or higher.
- For best results, perform at engine coolant temperature of  $-10^{\circ}\text{C}$  ( $14^{\circ}\text{F}$ ) to  $60^{\circ}\text{C}$  ( $140^{\circ}\text{F}$ ).

 **WITH CONSULT-II**

1. Replace thermostat with new one. Refer to [CO-11, "THERMOSTAT AND THERMOSTAT HOUSING"](#). Use only a genuine NISSAN thermostat as a replacement. If an incorrect thermostat is used, the MIL may come on.
2. Turn ignition switch "ON".
3. Select "COOLAN TEMP/S" in "DATA MONITOR" mode with CONSULT-II.
4. Check that the "COOLAN TEMP/S" is above  $60^{\circ}\text{C}$  ( $140^{\circ}\text{F}$ ).  
If it is below  $60^{\circ}\text{C}$  ( $140^{\circ}\text{F}$ ), go to following step.  
If it is above  $60^{\circ}\text{C}$  ( $140^{\circ}\text{F}$ ), stop engine and cool down the engine to less than  $60^{\circ}\text{C}$  ( $140^{\circ}\text{F}$ ), then retry from step 1.
5. Drive vehicle for 10 consecutive minutes under the following conditions.

VHCL SPEED SE	80 - 120 km/h (50 - 75 MPH)
---------------	-----------------------------

If 1st trip DTC is detected, go to [EC-199, "Diagnostic Procedure"](#).

 **WITH GST**

1. Follow the procedure "WITH CONSULT-II" above.

**Diagnostic Procedure**

UBS001F6

**1. CHECK ENGINE COOLANT TEMPERATURE SENSOR**

Refer to [EC-200, "Component Inspection"](#).

OK or NG

- OK >> **INSPECTION END**
- NG >> Replace engine coolant temperature sensor.

# DTC P0128 THERMOSTAT FUNCTION

[QG18DE (ULEV)]

UBS001F7

## Component Inspection ENGINE COOLANT TEMPERATURE SENSOR

Check resistance as shown in the figure.

### <Reference data>

Temperature °C (°F)	Resistance kΩ
20 (68)	2.1 - 2.9
50 (122)	0.68 - 1.0
90 (194)	0.236 - 0.260

If NG, replace engine coolant temperature sensor.

UBS001F8

## Removal and Installation ENGINE COOLANT TEMPERATURE SENSOR

Refer to [EM-12, "OUTER COMPONENT PARTS"](#).

**DTC P0132 HO2S1**

PFP:22690

**Component Description**

UBS003TQ

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003TR

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS003TS

To judge the malfunction, the diagnosis checks that the heated oxygen sensor 1 output is not inordinately high.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0132 0132	Heated oxygen sensor 1 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> </ul>

**DTC Confirmation Procedure****NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Turn ignition switch "ON".
4. Select "DATA MONITOR" mode with CONSULT-II.
5. Restart engine and let it idle for 2 minutes.
6. If 1st trip DTC is detected, go to [EC-204, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLANT TEMP/S	XXX °C

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**⊗ Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is below 0.3V at least one time.
- The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V  
 2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 1**

UBS003TX

Refer to [EM-12, "Removal and Installation"](#).

**DTC P0133 HO2S1**

PFP:22690

**Component Description**

UBS003TY

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003TZ

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS003U0

To judge the malfunction of heated oxygen sensor 1, this diagnosis measures response time of heated oxygen sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and heated oxygen sensor 1 temperature index. Judgment is based on whether the compensated time (heated oxygen sensor 1 cycling time index) is inordinately long or not.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0133 0133	Heated oxygen sensor 1 circuit slow response	The response of the voltage signal from the sensor takes more than the specified time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> <li>● Heated oxygen sensor 1 heater</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> <li>● Exhaust gas leaks</li> <li>● PCV valve</li> <li>● Mass air flow sensor</li> </ul>

**DTC Confirmation Procedure**

UBS003U1

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

- Always perform at a temperature above **-10°C (14°F)**.
- Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch “ON” and select “HO2S1 (B1) P0133” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.

SEF339Z

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS". If "NG" is displayed, refer to [EC-211, "Diagnostic Procedure"](#).

UBS003U2

## Overall Function Check

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

### WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1(B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
  - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.

**1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V**

**2 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V**

**times: → 0 - 0.3V**

4. If NG, go to [EC-211, "Diagnostic Procedure"](#).

MBIB0018E

Wiring Diagram

EC-HO2S1-01

— : DETECTABLE LINE FOR DTC  
 — : NON-DETECTABLE LINE FOR DTC

Specification data are reference values and are measured between each terminal and ground.

**CAUTION:**

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMI- NAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	G	Heated oxygen sensor 1	<p>[Engine is running]</p> <ul style="list-style-type: none"> <li>● Warm-up condition</li> <li>● Engine speed is 2,000 rpm.</li> </ul>	0 - Approximately 1.0V (Periodically change)

**Diagnostic Procedure**

UBS003U4

**1. RETIGHTEN GROUND SCREWS**

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

**2. RETIGHTEN HEATED OXYGEN SENSOR 1**

Loosen and retighten heated oxygen sensor 1.

**Tightening torque: 40 - 60 N·m (4.1 - 6.1 kg·m, 30 - 44 ft·lb)**

>> GO TO 3.

**3. CHECK FOR EXHAUST GAS LEAK**

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst (Manifold).

OK or NG

- OK >> GO TO 4.
- NG >> Repair or replace.

## 4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK >> GO TO 5.
- NG >> Repair or replace.

## 5. CLEAR THE SELF-LEARNING DATA

### With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?**  
**Is it difficult to start engine?**

### Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?**  
**Is it difficult to start engine?**

Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171 or DTC P0172 (Refer to [EC-238](#) or [EC-245](#)).
- No >> GO TO 6.

## 6. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect heated oxygen sensor 1 harness connector.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 78 HO2S1 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

4. Also check harness for short to power.

OK or NG

OK >> GO TO 7.

NG >> Repair open circuit or short to power in harness or connectors.

## 7. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 35 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 35 or HO2S1 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 8.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

## 8. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to [EC-156, "Component Inspection"](#).

OK or NG

OK >> GO TO 9.

NG >> Replace malfunctioning heated oxygen sensor 1.

## 9. CHECK MASS AIR FLOW SENSOR

Refer to [EC-170, "Component Inspection"](#).

OK or NG

OK >> GO TO 10.

NG >> Replace mass air flow sensor.

## 10. CHECK PCV VALVE

Refer to [EC-596, "Inspection"](#).

OK or NG

OK >> GO TO 11.

NG >> Replace PCV valve.

## 11. CHECK HEATED OXYGEN SENSOR 1

Refer to [EC-214, "Component Inspection"](#).

OK or NG

OK >> GO TO 12.

NG >> Replace heated oxygen sensor 1.

## 12. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 1

UBS003U5

#### With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "MANU TRIG" and adjust "TRIGGER POINT" to 100% in "DATA MONITOR" mode with CONSULT-II.
3. Select "HO2S1 (B1)" and "HO2S1 MNTR (B1)".
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch "RECORD" on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLANT TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

SEF646Y

6. Check the following.
  - "HO2S1 MNTR (B1)" in "DATA MONITOR" mode changes from "RICH" to "LEAN" to "RICH" 5 times in 10 seconds. 5 times (cycles) are counted as shown at right.
  - "HO2S1 (B1)" voltage goes above 0.6V at least once.
  - "HO2S1 (B1)" voltage goes below 0.3V at least once.
  - "HO2S1 (B1)" voltage never exceeds 1.0V.

cycle	1	2	3	4	5
HO2S1 MNTR (B1)	R	L	R	L	R

R means HO2S1 MNTR (B1) indicates RICH  
L means HO2S1 MNTR (B1) indicates LEAN

SEF217YA

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

#### Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.

3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is below 0.3V at least one time.
- The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V

2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

PFP:22690

**Component Description**

UBS003U7

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS003U8

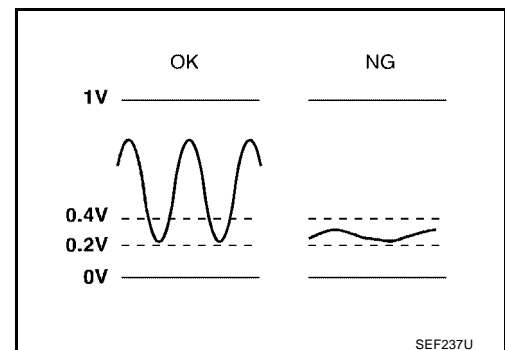

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ↔ 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ↔ RICH Changes more than 5 times during 10 seconds.

**On Board Diagnosis Logic**

UBS003U9

Under the condition in which the heated oxygen sensor 1 signal is not input, the ECM circuits will read a continuous approximately 0.3V. Therefore, for this diagnosis, the time that output voltage is within 200 to 400 mV range is monitored, and the diagnosis checks that this time is not inordinately long.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0134 0134	Heated oxygen sensor 1 circuit no activity detected	The voltage from the sensor is constantly approx. 0.3V.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Heated oxygen sensor 1</li> </ul>

**DTC Confirmation Procedure**

**CAUTION:**

Always drive vehicle at a safe speed.

**NOTE:**

If “DTC Confirmation Procedure” has been previously conducted, always turn ignition switch “OFF” and wait at least 10 seconds before conducting the next test.

**TESTING CONDITION:**

Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

**WITH CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Select “HO2S1 (B1) P0134” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
3. Touch “START”.
4. Let it idle for at least 3 minutes.

**NOTE:**

Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 4.

COMPLETED	

SEC750C

**Overall Function Check**

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.

## DTC P0134 HO2S1

[QG18DE (ULEV)]

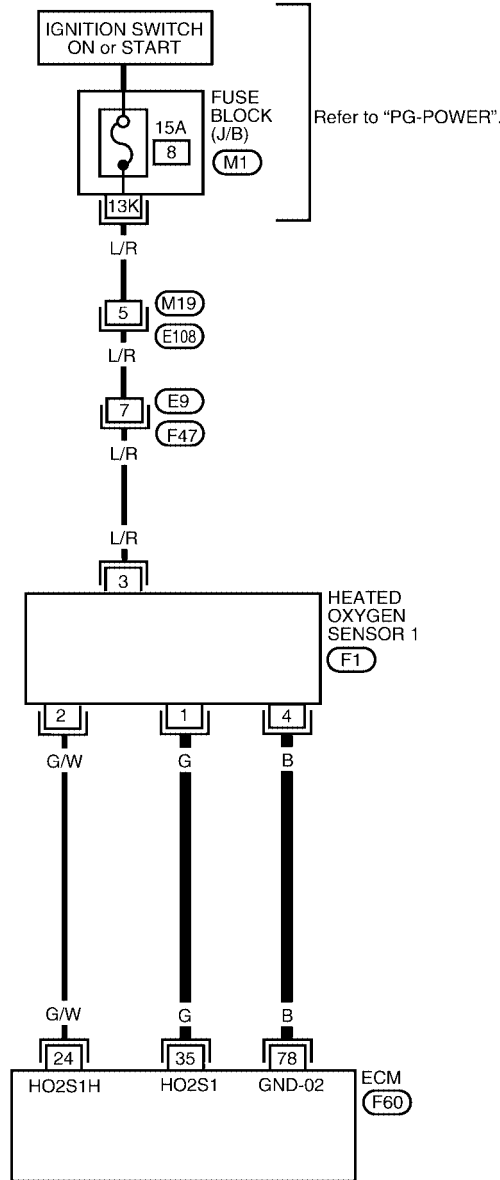

3. Check the following with engine speed held at 2,000 rpm constant under no load.
  - The voltage does not remain in the range of 0.2 to 0.4V.
4. If NG, go to [EC-220, "Diagnostic Procedure"](#) .

UBS003UE

#### With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "MANU TRIG" and adjust "TRIGGER POINT" to 100% in "DATA MONITOR" mode with CONSULT-II.
3. Select "HO2S1 (B1)" and "HO2S1 MNTR (B1)".
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch "RECORD" on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

SEF646Y

6. Check the following.
  - "HO2S1 MNTR (B1)" in "DATA MONITOR" mode changes from "RICH" to "LEAN" to "RICH" 5 times in 10 seconds.  
5 times (cycles) are counted as shown at right.
  - "HO2S1 (B1)" voltage goes above 0.6V at least once.
  - "HO2S1 (B1)" voltage goes below 0.3V at least once.
  - "HO2S1 (B1)" voltage never exceeds 1.0V.

cycle	1   2   3   4   5
HO2S1 MNTR (B1)	R-L-R-L-R-L-R-L-R-L-R
R means HO2S1 MNTR (B1) indicates RICH	
L means HO2S1 MNTR (B1) indicates LEAN	

SEF217YA

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is below 0.3V at least one time.
- The voltage never exceeds 1.0V.

1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V  
 2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation  
 HEATED OXYGEN SENSOR 1**

UBS003UF

Refer to [EM-12, "Removal and Installation"](#).

**DTC P0138 HO2S2**

PF2:226A0

**Component Description**

UBS006CD

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.

Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.

This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.

Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

SEF327R

**CONSULT-II Reference Value in Data Monitor Mode**

UBS006CE

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Revving engine from idle to 3,000 rpm quickly.	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS006CF

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0138 0138	Heated oxygen sensor 2 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> </ul>

## DTC Confirmation Procedure

### CAUTION:

Always drive vehicle at a safe speed.

### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

### WITH CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for two minutes.
6. If 1st trip DTC is detected, go to [EC-226, "Diagnostic Procedure"](#)

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

### WITH GST

1. Start engine and warm it up to the normal operating temperature.
  2. Turn ignition switch "OFF" and wait at least 10 seconds.
  3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  4. Let engine idle for two minutes.
  5. Turn ignition switch "OFF" and wait at least 10 seconds.
  6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
  7. Let engine idle for two minutes.
  8. Select "Mode 3" with GST.
  9. If NG, go to [EC-226, "Diagnostic Procedure"](#) .
- **When using GST, "DTC Confirmation Procedure" should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

UBS006CI

### 1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch "OFF".
2. Loosen and retighten engine ground screws.

>> GO TO 2.

## 2. CLEAR THE SELF-LEARNING DATA

### ④ With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching "CLEAR".
4. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0172. Refer to [EC-245](#) .  
No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.  
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

**4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT**

>> INSPECTION END

**Component Inspection  
HEATED OXYGEN SENSOR 2**

UBS006CJ

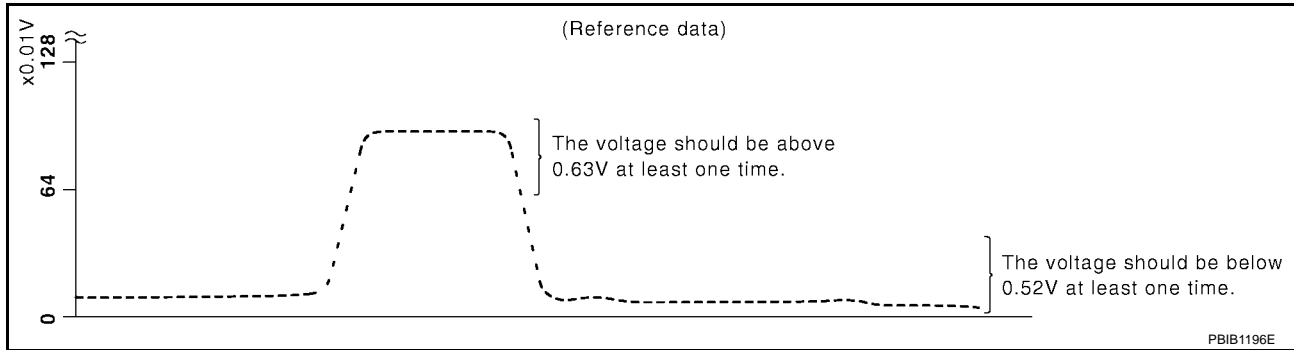

**With CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**  
**If the voltage is above 0.63V at step 6, step 7 is not necessary.**
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.52V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation**  
**HEATED OXYGEN SENSOR 2**

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

UBS006CK

**DTC P0139 HO2S2**

**Component Description**

UBS006CL

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas. Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2. This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

**CONSULT-II Reference Value in Data Monitor Mode**

UBS006CM

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Reving engine from idle to 3,000 rpm quickly	0 - 0.3V ↔ 0.6 - 1.0V
HO2S2 MNTR (B1)	<ul style="list-style-type: none"> <li>● Engine: After warming up</li> <li>● Keeping the engine speed between 3,500 and 4,000 rpm for one minute and at idle for one minute under no load</li> </ul>	Reving engine from idle to 3,000 rpm quickly.	LEAN ↔ RICH

**On Board Diagnosis Logic**

UBS006CN

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0139 0139	Heated oxygen sensor 2 circuit slow response	It takes more time for the sensor to respond between rich and lean than the specified time.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted.)</li> <li>● Heated oxygen sensor 2</li> <li>● Fuel pressure</li> <li>● Injectors</li> <li>● Intake air leaks</li> </ul>

**DTC Confirmation Procedure**

UBS006FL

**NOTE:**

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

**WITH CONSULT-II**

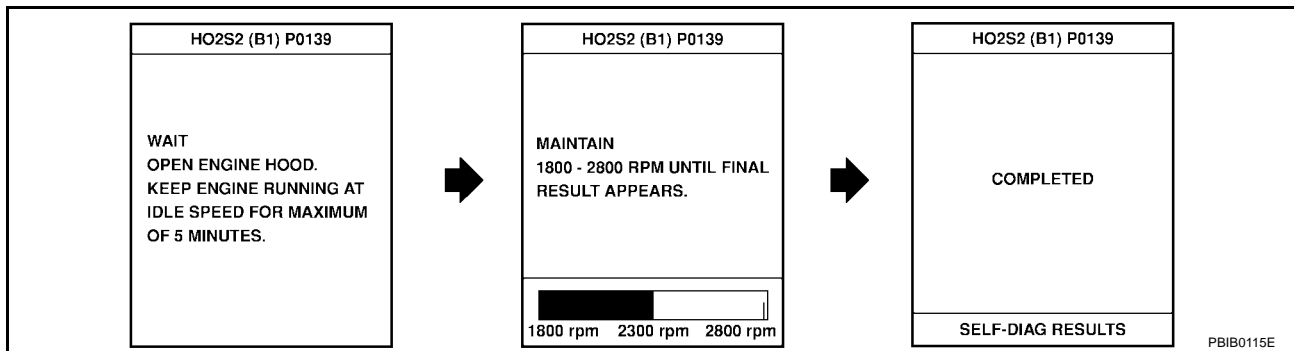

**TESTING CONDITION:**

For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).

1. Turn ignition switch "ON" and select "DATA MONITOR" mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch "OFF" and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
5. Let engine idle for one minutes.
6. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).  
If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).
7. Select "HO2S2 (B1) P0139" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
8. Start engine and following the instruction of CONSULT-II.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
VHCL SPEED SE	XXX km/h
B/FUEL SCHDL	XXX msec

SEF189Y

9. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".  
If "NG" is displayed, refer to [EC-234, "Diagnostic Procedure"](#).  
If "CAN NOT BE DIAGNOSED" is displayed, perform the following.
  - a. Turn ignition switch "OFF" and leave the vehicle in a cool place (soak the vehicle).
  - b. Return to step 1.

**Overall Function Check**

UBS006FM

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

**WITH GST**

1. Start engine and warm it up to the normal operating.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minutes.
5. Set voltmeter probes between ECM terminal 74 and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
(Depress and release accelerator pedal as soon as possible.)  
**A change of voltage should be more than 0.06V for 1 second during this procedure.**  
**If the voltage can be confirmed in step 6, step 7 is not necessary.**
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).

---

A change of voltage should be more than 0.06V for 1 second during this procedure.

8. If NG, go to [EC-234, "Diagnostic Procedure"](#) .

### ⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch "OFF".
3. Disconnect mass air flow sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Make sure that DTC P0102 is displayed.
6. Erase the DTC memory. Refer to [EC-71, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"](#).
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.  
**Is the 1st trip DTC P0171 or P0172 detected?  
Is it difficult to start engine?**

#### Yes or No

- Yes >> Perform trouble diagnosis for DTC P0171 or P0172. Refer to [EC-238](#) or [EC-245](#).
- No >> GO TO 3.

## 3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 78 and HO2S2 terminal 4.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Also check harness for short to ground and short to power.

#### OK or NG

- OK >> GO TO 4.
- NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 74 and HO2S2 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

2. Check harness continuity between ECM terminal 74 or HO2S2 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

#### 5. CHECK HEATED OXYGEN SENSOR 2

Refer to [EC-236, "Component Inspection"](#) .

OK or NG

OK >> GO TO 6.

NG >> Replace heated oxygen sensor 2.

#### 6. CHECK INTERMITTENT INCIDENT

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### Component Inspection HEATED OXYGEN SENSOR 2

UBS006CS

#### With CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Select "FUEL INJECTION" in "ACTIVE TEST" mode, and select "HO2S2 (B1)" as the monitor item with CONSULT-II.

ACTIVE TEST	
FUEL INJECTION	25 %
MONITOR	
ENG SPEED	XXX rpm
HO2S1 (B1)	XXX V
HO2S2 (B1)	XXX V
HO2S1 MNTR (B1)	RICH
HO2S2 MNTR (B1)	RICH

SEF662Y

6. Check "HO2S2 (B1)" at idle speed when adjusting "FUEL INJECTION" to  $\pm 25\%$ .

"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.  
 "HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is -25%.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

⊗ **Without CONSULT-II**

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch "OFF" and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least one minute under no load.
4. Let engine idle for one minute.
5. Set voltmeter probes between ECM terminal 74 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.  
 (Depress and release accelerator pedal as soon as possible.)  
**The voltage should be above 0.63V at least once during this procedure.**  
**If the voltage is above 0.63V at step 6, step 7 is not necessary.**
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in "D" position with "OD" OFF (A/T), 3rd gear position (M/T).  
**The voltage should be below 0.52V at least once during this procedure.**
8. If NG, replace heated oxygen sensor 2.

**CAUTION:**

- Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
- Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.

**Removal and Installation**  
**HEATED OXYGEN SENSOR 2**

Refer to [EX-3. "EXHAUST SYSTEM"](#) .

UBS006CT

# DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (ULEV)]

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

PF1:16600

### On Board Diagnosis Logic

UBS003UY

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0171 0171	Fuel injection system too lean	<ul style="list-style-type: none"> <li>Fuel injection system does not operate properly.</li> <li>The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.)</li> </ul>	<ul style="list-style-type: none"> <li>Intake air leaks</li> <li>Heated oxygen sensor 1</li> <li>Injectors</li> <li>Exhaust gas leaks</li> <li>Incorrect fuel pressure</li> <li>Lack of fuel</li> <li>Mass air flow sensor</li> <li>Incorrect PCV hose connection</li> </ul>

### DTC Confirmation Procedure

UBS003UZ

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- Clear the self-learning control coefficient by touching "CLEAR".
- Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-241, "Diagnostic Procedure"](#).
- If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
- Crank engine while depressing accelerator pedal. If engine starts, go to [EC-241, "Diagnostic Procedure"](#). If engine does not start, check exhaust and intake air leak visually.

#### WITH GST

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0171 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (ULEV)]

3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 3" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and let it idle for at least 10 minutes.
8. Select "MODE 7" with GST. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to [EC-241, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-241, "Diagnostic Procedure"](#). If engine does not start, check exhaust and intake air leak visually.

UBS003V0

## Wiring Diagram

EC-FUEL-01

### Diagnostic Procedure

#### 1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst (manifold).

#### OK or NG

- OK    >> GO TO 2.
- NG    >> Repair or replace.

#### 2. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Listen for an intake air leak after the mass air flow sensor.
2. Check PCV hose connection.

#### OK or NG

- OK    >> GO TO 3.
- NG    >> Repair or replace.

#### 3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 35 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Check harness continuity between ECM terminal 35 or HO2S1 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

6. Also check harness for short to power.

#### OK or NG

- OK    >> GO TO 4.
- NG    >> Repair open circuit or short to ground or short to power in harness or connectors.

---

## 4. CHECK FUEL PRESSURE

---

1. Release fuel pressure to zero. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#) .
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-56, "Fuel Pressure Check"](#) .

**At idling: Approximately 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK >> GO TO 5.  
NG >> Follow the construction of "FUEL PRESSURE CHECK".

---

## 5. CHECK MASS AIR FLOW SENSOR

---

 **With CONSULT-II**

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**1.4 - 4.0 g-m/sec: at idling**

**5.0 - 10 g-m/sec: at 2,500 rpm**

 **With GST**

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**1.4 - 4.0 g-m/sec: at idling**

**5.0 - 10 g-m/sec: at 2,500 rpm**

OK or NG

- OK >> GO TO 6.  
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-163, "DTC P0101 MAF SENSOR"](#) .

**6. CHECK FUNCTION OF INJECTORS**

**Ⓟ With CONSULT-II**

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

**ⓧ Without CONSULT-II**

1. Start engine.
2. Listen to each injector operating sound.

**Clicking noise should be heard.**

**OK or NG**

- OK >> GO TO 7.
- NG >> Perform trouble diagnosis for [EC-547, "INJECTOR"](#).

**7. CHECK INJECTOR**

1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
2. Turn ignition switch "OFF".
3. Disconnect injector harness connectors.
4. Remove injector gallery assembly. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#). Keep fuel hose and all injectors connected to injector gallery. The injector harness connectors should remain connected.
5. Disconnect all ignition coil harness connectors.
6. Prepare pans or saucers under each injector.
7. Crank engine for about 3 seconds. Make sure that fuel sprays out from injectors.

**Fuel should be sprayed evenly for each injector.**

**OK or NG**

- OK >> GO TO 8.
- NG >> Replace injectors from which fuel does not spray out. Always replace O-ring with new ones.

**8. CHECK INTERMITTENT INCIDENT**

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

[QG18DE (ULEV)]

## DTC P0172 FUEL INJECTION SYSTEM FUNCTION

PF16600

### On Board Diagnosis Logic

UBS003V2

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.

In case the amount of the compensation value is extremely large (The actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0172 0172	Fuel injection system too rich	<ul style="list-style-type: none"> <li>Fuel injection system does not operate properly.</li> <li>The amount of mixture ratio compensation is too large. (The mixture ratio is too rich.)</li> </ul>	<ul style="list-style-type: none"> <li>Heated oxygen sensor 1</li> <li>Injectors</li> <li>Exhaust gas leaks</li> <li>Incorrect fuel pressure</li> <li>Mass air flow sensor</li> </ul>

### DTC Confirmation Procedure

UBS003V3

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.
- Turn ignition switch "ON" and select "SELF-LEARNING CONT" in "WORK SUPPORT" mode with CONSULT-II.
- Clear the self-learning control coefficient by touching "CLEAR".
- Select "DATA MONITOR" mode with CONSULT-II.
- Start engine again and let it idle for at least 10 minutes. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-248, "Diagnostic Procedure"](#).
- If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
- Crank engine while depressing accelerator pedal. If engine starts, go to [EC-248, "Diagnostic Procedure"](#). If engine does not start, remove ignition plugs and check for fouling, etc.

#### WITH GST

- Start engine and warm it up to normal operating temperature.
- Turn ignition switch "OFF" and wait at least 10 seconds.

## DTC P0172 FUEL INJECTION SYSTEM FUNCTION

[QG18DE (ULEV)]

3. Disconnect mass air flow sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect mass air flow sensor harness connector.
5. Select "MODE 3" with GST. Make sure DTC P0102 is detected.
6. Select "MODE 4" with GST and erase the DTC P0102.
7. Start engine again and let it idle for at least 10 minutes.
8. Select "MODE 7" with GST. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to [EC-248, "Diagnostic Procedure"](#).
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal. If engine starts, go to [EC-248, "Diagnostic Procedure"](#). If engine does not start, check exhaust and intake air leak visually.

[QG18DE (ULEV)]

UBS003V4

## Wiring Diagram

EC-FUEL-01

Refer to the following.  
 (M1) - FUSE BLOCK - JUNCTION BOX (J/B)

BBWA0780E

## Diagnostic Procedure

### 1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst (manifold).

OK or NG

- OK    >> GO TO 2.
- NG    >> Repair or replace.

### 2. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

- OK    >> GO TO 3.
- NG    >> Repair or replace.

### 3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch "OFF".
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 35 and HO2S1 terminal 1.  
Refer to Wiring Diagram.

**Continuity should exist.**

5. Check harness continuity between ECM terminal 35 or HO2S1 terminal 1 and ground.  
Refer to Wiring Diagram.

**Continuity should not exist.**

6. Also check harness for short to power.

OK or NG

- OK    >> GO TO 4.
- NG    >> Repair open circuit or short to ground or short to power in harness or connectors.

### 4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to [EC-56, "FUEL PRESSURE RELEASE"](#).
2. Install fuel pressure gauge and check fuel pressure. Refer to [EC-56, "Fuel Pressure Check"](#).

**At idling: 350 kPa (3.57 kg/cm<sup>2</sup> , 51 psi)**

OK or NG

- OK    >> GO TO 5.
- NG    >> Follow the construction of "FUEL PRESSURE CHECK".

## 5. CHECK MASS AIR FLOW SENSOR

### With CONSULT-II

1. Install all removed parts.
2. Check "MASS AIR FLOW" in "DATA MONITOR" mode with CONSULT-II.

**1.4 - 4.0 g-m/sec:    at idling**  
**5.0 - 10 g-m/sec:    at 2,500 rpm**

### With GST

1. Install all removed parts.
2. Check mass air flow sensor signal in MODE 1 with GST.

**1.4 - 4.0 g-m/sec:    at idling**  
**5.0 - 10 g-m/sec:    at 2,500 rpm**

OK or NG

OK    >> GO TO 6.

NG    >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or engine grounds. Refer to [EC-163, "DTC P0101 MAF SENSOR"](#) .

## 6. CHECK FUNCTION OF INJECTORS

### With CONSULT-II

1. Start engine.
2. Perform "POWER BALANCE" in "ACTIVE TEST" mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.

ACTIVE TEST	
POWER BALANCE	
MONITOR	
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V

PBIB0133E

### Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.

**Clicking noise should be heard.**

OK or NG

OK    >> GO TO 7.

NG    >> Perform trouble diagnosis for [EC-547, "INJECTOR"](#) .

## 7. CHECK INJECTOR

---

1. Remove injector assembly. Refer to [EM-19, "FUEL INJECTOR AND FUEL TUBE"](#) .  
Keep fuel hose and all injectors connected to injector gallery.  
The injector harness connectors should remain connected.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect all ignition coil harness connectors.
4. Prepare pans or saucers under each injectors.
5. Crank engine for about 3 seconds.  
Make sure fuel does not drip from injector.

### OK or NG

OK (Does not drip.)>>GO TO 8.

NG (Drips.)>>Replace the injectors from which fuel is dripping. Always replace O-ring with new one.

## 8. CHECK INTERMITTENT INCIDENT

---

Refer to [EC-137, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT"](#) .

>> INSPECTION END

### DTC P0181 FTT SENSOR

PF2:22630

#### Component Description

UBS003QP

The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

#### <Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

\*: These data are reference values and are measured between ECM terminal 107 (Fuel tank temperature sensor) and ground.

#### CAUTION:

**Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**

#### On Board Diagnosis Logic

UBS003QQ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0181 0181	Fuel tank temperature sensor circuit range/performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.	<ul style="list-style-type: none"> <li>● Harness or connectors (The sensor circuit is open or shorted)</li> <li>● Fuel tank temperature sensor</li> </ul>

#### DTC Confirmation Procedure

UBS003QR

#### NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch "OFF" and wait at least 10 seconds before conducting the next test.

#### WITH CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode with CONSULT-II.
3. Wait at least 10 seconds.  
If the result is NG, go to [EC-254, "Diagnostic Procedure"](#).  
If the result is OK, go to following step.
4. Check "COOLAN TEMP/S" value.  
If "COOLAN TEMP/S" is less than 60°C (140°F), the result will be OK.  
If "COOLAN TEMP/S" is above 60°C (140°F), go to the following step.
5. Cool engine down until "COOLAN TEMP/S" is less than 60°C (140°F).
6. Wait at least 10 seconds.
7. If 1st trip DTC is detected, go to [EC-254, "Diagnostic Procedure"](#).

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C

SEF174Y

 **WITH GST**

Follow the procedure "WITH CONSULT-II" above.
