## INTRODUCTION

### 1 INTRODUCTION

The Carrier Transicold model 69NT40-511-310 units are of lightweight aluminum frame construction, designed to fit in the front of a container and serve as the container front wall.

### 2 CONFIGURATION IDENTIFICATION

Unit identification information is provided on a plate located near the compressor. The plate provides the unit model number, the unit serial number and the unit parts identification number (PID). The model number identifies the overall unit configuration while the PID provides information on specific optional equipment, factory provision to allow for field installation of optional equipment and differences in detailed parts.

Configuration identification for the models covered herein are provided in the Carrier Transicold Container Unit Matrix manual, publication T-300. Printed copies of the T-300 may be obtained from Carrier Transicold. Also, a weekly updated copy may be found at the Carrier Web site, [www.carrier.refrigeration.com](http://www.carrier.refrigeration.com).

### 3 OPTION DESCRIPTIONS

Various options may be factory or field fitted to the base unit. These options are listed in the tables and described in the following subparagraphs.

#### 3.1 Battery

The refrigeration controller may be fitted with standard replaceable batteries or rechargeable battery pack.

#### 3.2 Dehumidification

The unit may be fitted with a humidity sensor. This sensor allows setting of a humidity set point in the controller. In the dehumidification mode the controller will operate to reduce internal container moisture level.

#### 3.3 Control Box

The control box may be of aluminum or composite material and each type box may be fitted with a lockable door.

#### 3.4 Temperature Readout

The unit may be fitted with suction and discharge temperature sensors. The sensor readings may be viewed on the controller display.

#### 3.5 Pressure Readout

The unit may be fitted with suction and discharge pressure gauges or suction and discharge transducers or no pressure readout. The transducer readings may be viewed on the controller display.

#### 3.6 USDA

The unit may be supplied with fittings for additional temperature probes which allow recording of USDA Cold Treatment data by the integral DataCORDER function of the Micro-Link refrigeration controller.

#### 3.7 Interrogator

Units that use the DataCORDER function are fitted with interrogator receptacles for connection of equipment to download the recorded data. Two receptacles may be fitted, one accessible from the front of the container and the other mounted inside the container (with the USDA receptacles).

#### 3.8 Remote Monitoring

The unit may be fitted with a remote monitoring receptacle. This item allows connection of remote indicators for COOL, DEFROST and IN RANGE. Unless otherwise indicated, the receptacle is mounted at the control box location

#### 3.9 Communications.

The unit may be fitted with a communications interface module. The communications interface module is a slave module which allows communication with a master central monitoring station. The module will respond to communication and return information over the main power line. Refer to the ship master system technical manual for further information.

#### 3.10 Compressor

The unit is fitted with a single speed reciprocating compressor.

#### 3.11 Condenser Coil

The unit may be fitted with a 2 row or 4 row coil using nominal 3/8 inch tubing, or the unit may be fitted with a 3 row coil using 7mm tubing. The required refrigerant charge is different for each coil.

#### 3.12 Autotransformer

An autotransformer may be provided to allow operation on 190/230, 3phase, 50/60 hertz power. The autotransformer raises the supply voltage to the nominal 380/460 volt power required by the base unit. The autotransformer may also be fitted with an individual circuit breaker for the 230 volt power.

If the unit is fitted with an autotransformer and communications module, the autotransformer will be fitted with a transformer bridge unit (TBU) to assist in communications.

#### 3.13 Temperature Recorder

One of three temperature recording devices may be fitted to the unit. The devices include a mechanical recorder manufactured by Partlow Corporation, a mechanical recorder manufactured by Saginomiya Corporation, and an electronic recorder manufactured by Partlow Corporation.

#### 3.14 Gutters

Rain gutters may be fitted over the control box and recorder section to divert rain away from the controls. The different gutters include standard length bolted gutters, extended length gutters and riveted gutters.

### **3.15 Handles**

The unit may be fitted with handles to facilitate access to stacked containers. These handles may include fixed handles (located at the sides of the unit) and/or a hinged handle at the center (attached to the condenser coil cover).

### **3.16 Thermometer Port**

The unit may be fitted with ports in the front of the frame for insertion of a thermometer to measure supply and/or return air temperature. If fitted, the port(s) will require a cap and chain.

### **3.17 Water Cooling**

The refrigeration system may be fitted with a water cooled condenser. The condenser is constructed using copper-nickel tube for sea water applications. The water cooled condenser is in series with the air cooled condenser replaces the standard unit receiver. When operating on the water cooled condenser, the condenser fan is deactivated by either a water pressure switch or condenser fan switch.

### **3.18 Back Panels**

Back panel designs that may be fitted include panels of aluminum and stainless steel. Panels may be fitted with access doors and/or hinge mounting.

### **3.19 460 Volt Cable**

Various power cable and plug designs are available for the main 460 volt supply. The plug options tailor the cables to each customer's requirements.

### **3.20 230 Volt Cable**

Units equipped with an autotransformer require an additional power cable for connection to the 230 volt source. Various power cable and plug designs are available. The plug options tailor the cables to each customer's requirements.

### **3.21 Cable Restraint**

Various designs are available for storage of the power cables. These options are variations of the compressor section front cover.

### **3.22 Upper Air (Fresh Air Make Up)**

The unit may be fitted with an upper fresh air makeup assembly. The openings may also be fitted with screens.

### **3.23 Lower Air (Fresh Air Make Up)**

The unit may be fitted with a lower fresh air makeup assembly. These assemblies are supplied in two designs, the standard design and the macro design. The openings may also be fitted with screens.

### **3.24 Arctic Mode**

To improve operation in cold ambients, the unit may be fitted with a crankcase heater and/or a condensate drain line heater. The crankcase heater is operated, before start-up, to warm the compressor oil and boil off any liquid refrigerant that may be present in the crankcase. The drain line heater is operated to prevent freezing of the evaporator condensate drain system.

### **3.25 Humidification**

The unit may be equipped with the Carrier Transicold NatureFresh humidity management system. The system includes a water tank, water pump, water heater and atomizer along with various control and monitoring devices. It is designed to add additional moisture into the supply air for control of cargo moisture level. A separately bound manual covering operation and parts for the CTD NatureFresh System is available, see the following chart.

Manual Number	Equipment Covered	Type of Manual
T-297	Humidity Management System Option	Technical Supplement

### **3.26 Power Correction**

The unit may be fitted with a set of power factor correction capacitors to assist in correction of imbalance in current draw by the compressor.

### **3.27 Evaporator**

Evaporator section options include a hermetic thermal expansion valve and two sizes of heat exchangers.

### **3.28 Evaporator Fan Operation**

The units are fitted with Normal Evaporator Fan Operation, opening of an evaporator fan internal protector will shut down the unit.

### **3.29 Labels**

Operating Instruction and Function Code listing labels will differ depending on the options installed. For example, additional operating instructions are required to describe start-up of a unit equipped with an autotransformer. Where the labels are available with additional languages, they are listed in the parts list.

### 3.30 Plate Set

Each unit is equipped with a tethered set of wiring schematic and wiring diagram plates. The plate sets are ordered using a seven digit base part number and a two digit dash number. (See Unit Matrix Manual, T-300)

### 3.31 Controller

Replacement controllers may be ordered as a universal un-configured controller (without configuration software) or configured.

### 3.32 Stepper Drive

All the units covered by this manual have suction modulating valves which act to control system capacity. Units indicated as being fitted with "stepper drive" have digital control motors fitted to the suction modulating valve to open and close the valve in steps as required.

### 3.33 Condenser Grille

Two styles of condenser grilles are available, direct bolted grilles and hinged grilles.

### 3.34 Emergency Bypass

The unit may be equipped with switches to allow emergency bypass of the controller. The EMERGENCY BYPASS switch functions to bypass the controller in the event of controller failure. The EMERGENCY DEFROST switch functions to bypass the all controls and place the unit in the defrost mode.
