THANK YOU FOR PURCHASING THE T95Z PLUS ANDROID TV BOX! FOLLOW THIS GUIDE FOR INITIAL SETUP OF THE DEVICE, REGULAR UPDATING AND TO LEARN HOW TO RUN THE PROGRAM LIKE AN EXPERT! ENJOY!

Connecting to the Internet:

From the home page go to the **SETTINGS** ⚙ button in the top right corner of the screen. Then select the **NETWORK** 🛜 button. Next, choose the Wi-Fi button . Use the arrow keys to make your selection and press OK. If you select Ethernet, no further action is required.

If you select Wi-Fi, it will show the available wireless networks. Use the arrow keys to scroll down to your personal network and press OK. An onscreen keyboard will appear. Type in your password and the press return key on your remote. Then use the arrows to select the Next button. Once connected, it will show your network and say *Connected* underneath. Press the home key 🏠 to return to the home screen. You will notice that the date and time will appear in the top right corner. The time should be accurate, but the most important thing is the correct date. This is how you know you are connected to the internet correctly because the system gets its time and date from the internet. You can also run a speed test under Kodi (see Helpful Tips and Troubleshooting) to see what you download and upload speeds are. We recommend a download speed of at least 10Mbps for best performance.

First Run Operation and Installing the Media Player & Add-ons:

To access Kodi and the various add-ons, you will need to go into our updater to install the Media Player. Go to **APPS** 🖵 from the home screen and open the app called **A1 MEDIA UPDATE** . Press OK on the app and the press OK on the **INSTALL MEDIA PLAYER** button (it should be light pink when selected). Once you press OK it will say downloading file, it will go from 1% to 100%**.** It needs to progress through to each number at the same speed, the speed of progression will vary based on the speed of the internet. It is very important that it runs at roughly the same speed all the way to 100% **.** If it does not, we recommend rebooting the box and your internet to make sure this step progresses properly or the update may not work. Once at 100% it will prompt you to press OK on the **INSTALL** button. Then it will process again and ask you to press OK on **DONE**. Make sure you do not select Open or you will open Kodi with no add-ons.

Now you need to install your add -ons. Use the arrow keys to select the **MURDOC ADDON PACK** (the *Jaytech Add-on Pack* is only recommended for advanced users), the button will be light pink when selected. Press OK on your selection and allow to process to 100%. Then wait for the unzipping process to complete. Press the home key 🏠 once you see zip complete and then go into the app called **KDPLAYER** on the left side of the home screen or press the **KODI** button on your remote. It will load Kodi.

How To Access Entertainment & Add-on Section of Kodi:

From the home page go into **KODI** icon under the apps section or from the **KDPLAYER** button. Press OK and it will open up the Kodi. Then use the arrow keys to go to **VIDEOS** and select **ADDONS** below. This will open a screen that has over 30 add-ons. We recommend that you use this path to access add-ons, as all add-ons are accessible from this screen. Choose an add -on and pick the content you want to watch. There are different categories and ways to get to the content you desire. As you use the system, you will learn which add-ons you like the most and performs the best. We encourage you to explore different add-ons to see which ones best suit your individual needs.

There is a lot of redundancy in the Kodi add-ons. If one stream is not working, simply choose another or go into different add-on entirely. Some add-on are press & play add-ons like M4U or Covenant. Some add -ons may come and go as the developers change them or some streams may not work properly as they have been removed or are being updated by the developer. It is a good practice to do your updates every 4-6 weeks, so that version of the add-ons are always updated. The best way to run this device is to explore new add-ons so that you are always finding the content you want in the best add-ons.

BE PATIENT UNTIL YOU LEARN TO RUN IT LIKE A PRO!!

How to Access Movies:

➢ **Fantastic TV & Movies**– Select Movies, Select a category, Pick a movie, Select the desired streaming service.
➢ **Neptune Rising**–Select Movies, Select a category, Pick a movie, Select the desired streaming service.

➢ **Fantastic TV & Movies**– Select TV Shows. Pick a category. Select a show, season and episode. Pick the desired streaming service.
➢ **Rebirth** – Select TV Shows. Pick a category. Select a show, season and episode. Pick the desired definition and streaming service.

How To Access Sports:

- ➢ **Sports Devil** – Go to Live Sports. Select a server. Select the sport. Select the game/channel. Select a link.
- ➢ **Pure Sports –** Choose the desired sport or sports channel.

Updating Kodi:

We recommend you run an update every 4-6 weeks to provide you with up -to-date add-ons and maintain the best performance within Kodi. To run an update follow the same steps you to install the Media Player for the first time. However, when you go into the **A1 MEDIA** app, you will select the button that says **DELETE MEDIA PLAYER**. It will ask you if you are sure you want to uninstall. Press OK, wait for the process to complete and then you can install the Media Player, and then Add-ons through the Murdoch Add-on Pack.
(*See the First Run Operation and Installing the Media Player & Add-ons section for more information*)

If you ever try to install the Media Player or an add -on pack and you get an error message that says **APK NOT FOUND**, then you are not properly connected to the Internet and you must check the connection to try again. If it ever starts progressing through and then stalls then you are also experiencing Internet connection issues. You can try to unplug the Wi-Fi router, modem and the box and reconnecting after a few minutes. If the issue continues, we recommend contacting your internet service provider for further assistance with this issue.
How To Shutdown Kodi:

To prevent damaging the Kodi software, you need to shutdown Kodi properly when you are done using it. To do so, stop the stream you are watching and hold down or repeatedly tap the return key ↺ until you come back to the home screen of the Kodi. Use the arrow key to go down to the power button ⏻ (it is next to the favourites star in the bottom left corner). Press OK on the icon and then an exit sign will come up. Press OK again and the system will shut down on its own and return you to the main home screen. This process may take minute or two. This is normal because Kodi is closing all of your add-ons. When Kodi exits, press the power button on your remote to power off the box.

Weekly Maintenance of Kodi Add-Ons:

Kodi temporarily saves certain data to increase performance, but after a while that data becomes full. We recommend that you clear the cache, remove the thumbnails and purge the packages once a week to keep Kodi running smoothly. Go to the **PROGRAMS** link on the Kodi home page and the press OK when Programs link is blue. Then select **PROGRAM ADDONS**. Open the **RAW MAINTENENCE** add-on and select **MAINTENENCE.** You will see 3 icons. Select each icon and perform the required actions, you can delete everything it prompts you to delete. Then shutdown Kodi the proper way (see How To Shutdown Kodi) and go back into Kodi.

Helpful Tips and Troubleshooting:

- ✓ To go back or return to the previous screen, use the return key ↺ on the remote.
- ✓ To save a show or content to **FAVOURITES** in an add-on, highlight the show or content and press the menu key ▤ and then hit **ADD TO FAVORITES**. It will appear under the star icon ☆ on the Kodi Home screen, which is located next to the power button in the bottom-left corner. If the add-on has its own favourite section, it will appear in the favourites section of that add-on.
- ✓ To **REMOVE** an add-on that is not working or is unwanted, highlight the add-on and hit the menu key ▤. Then hit **ADDON INFORMATION**. From this menu, uninstall the add-on by clicking on the **UNINSTALL** button.
- ✓ To add more add-ons, go to the **GET MORE** category, which can be found on the page with all the different add-ons Press the left arrow key until the sidebar menu appears that says Confluence. At the bottom of that menu you will see the **GET MORE** category. Use the arrow key to navigate through the add-ons (they are listed in alphabetical order). Select the add-on and click on the **INSTALL** button. This will install the add-on and add it to Kodi. If the add-on is not working or you do not like it, refer to the above bullet point for steps to uninstall the add-on.
- ✓ More apps are available to download using the **A1 MEDIA** app from the **APPS** section on the home screen of your box.
- ✓ To do an INTERNET SPEED TEST go to the Apps section on your box home screen. Find the **SPEEDTEST** app and open it. This app will automatically test your internet speed or tell you if you are not connected. When you see the result, we recommend that you press return on your remote to close the app and open it again. Running the test multiple times will give you a better idea of how your internet speed varies. We recommend that you use a speed of 10mbps or higher for the ideal streaming experience.

Locations:

- ➢ 105 Talbot Street South Unit 3 in Essex – next to Capri Pizzeria *****SALES AND SERVICE LOCATION**
