

# Service Manual

Direct Drive Automatic Turntable System

**SL-V5**  
[M], [MC]

is the standard mark for the "P-mount" plug-in-connector system.

Products carrying this mark are inter-changeable and compatible  
with each other.

\* The cartridge shown here is an option.

#### Areas

- \* [M] is available in U.S.A.
- \* [MC] is available in Canada.

## Specifications

Specifications subject to change without notice.  
Weight and dimensions shown are approximate.

### ■ General

Power supply:	120V AC, 60 Hz
Power consumption:	13 W
Dimensions: (W x H x D)	31.5 x 37.2 x 18.5 cm (12-1/2" x 14-41/64" x 7-9/32")
Weight:	6.2 kg (13.7 lb.)

**Turntable speeds:** 33-1/3 r.p.m and 45 r.p.m.

**Wow and filter:** 0.012% WRMS\*

0.025% WRMS (JIS C5521)

± 0.035% peak

(IEC 98A Weighted)

\* Measured by obtaining signal from built-in frequency generator of motor assembly.

**Rumble:**

-56 dB (IEC 98A Unweighted)

-78 dB (IEC 98A Weighted)

### ■ Turntable section

Type:	Automatic turntable Auto start/Auto lead-in Auto return Auto stop Repeat play Auto speed select Manual speed selection possible Auto size select Record presence detection
Drive method:	Direct drive
Motor:	Brushless DC motor
Turntable platter:	Aluminum die-cast Diameter 30 cm (12")

### ■ Tonearm section

Type:	Dynamic balanced type Linear tracking tonearm 4-pivot gimbal suspension
Effective length:	10.5 cm (4-1/8")
Tracking error angle:	Within ± 0.1°
Effective mass:	9 g (including cartridge)
Resonance frequency:	12 Hz
Tonearm drive motor:	DC motor
Phone cable capacitance:	150 pF

## ■ LOCATION OF CONTROLS

## ■ SAFETY PRECAUTIONS

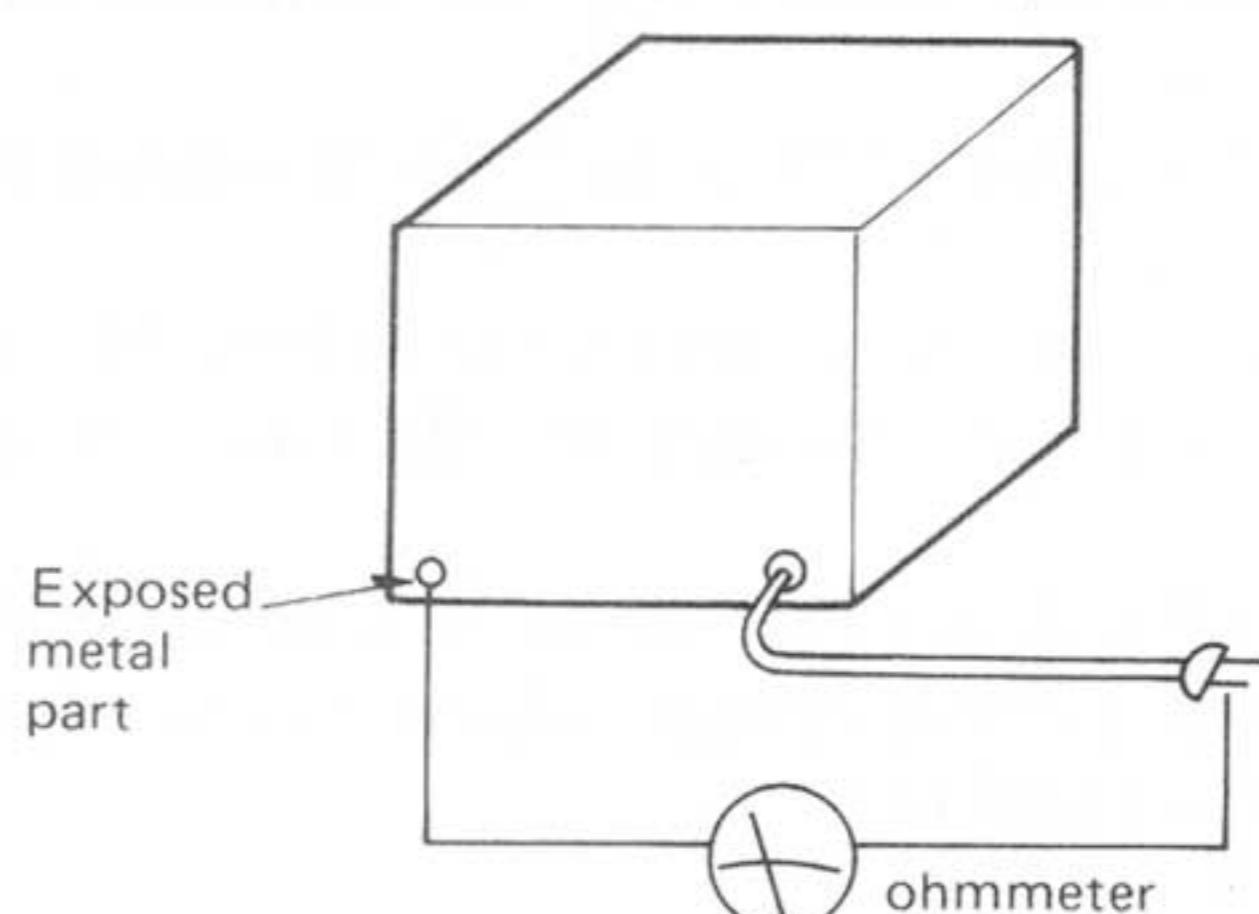

1. Before servicing (such as replacement of components), unplug the power supply cord to prevent an electric shock.
2. Use only manufacturer's recommended components for safety.  
Check condition of power supply cord and replace if wear or damage is evident.
3. After servicing, be sure to restore the following to the condition in which they were originally installed:  
(1) the lead dress and  
(2) insulation barriers, insulation papers, shields or the like.
4. Before returning a serviced apparatus to a customer, make the following insulation resistance test to prevent the customer from shock hazard.

### ● Insulation resistance test (See Fig. 1)

1. Unplug the power supply cord and connect a jumper wire between the two prongs on the plug.
2. Turn on the power switch of the apparatus.
3. Measure the resistance value (with an ohmmeter) between the jumpered AC plug and each exposed metalic cabinet part on the apparatus, such as screwheads, control shafts, handle brackets, etc.

The reading should be as shown in figure 1.

In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the apparatus should be repaired and rechecked before it is returned to a customer.

R = nearly  $\infty$

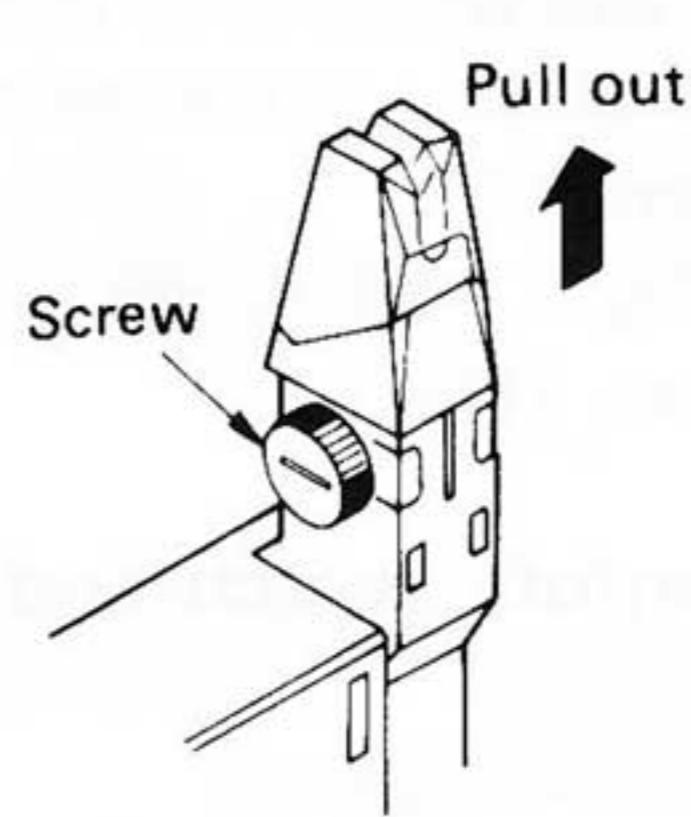

Where, R : resistance value

[Fig. 1]

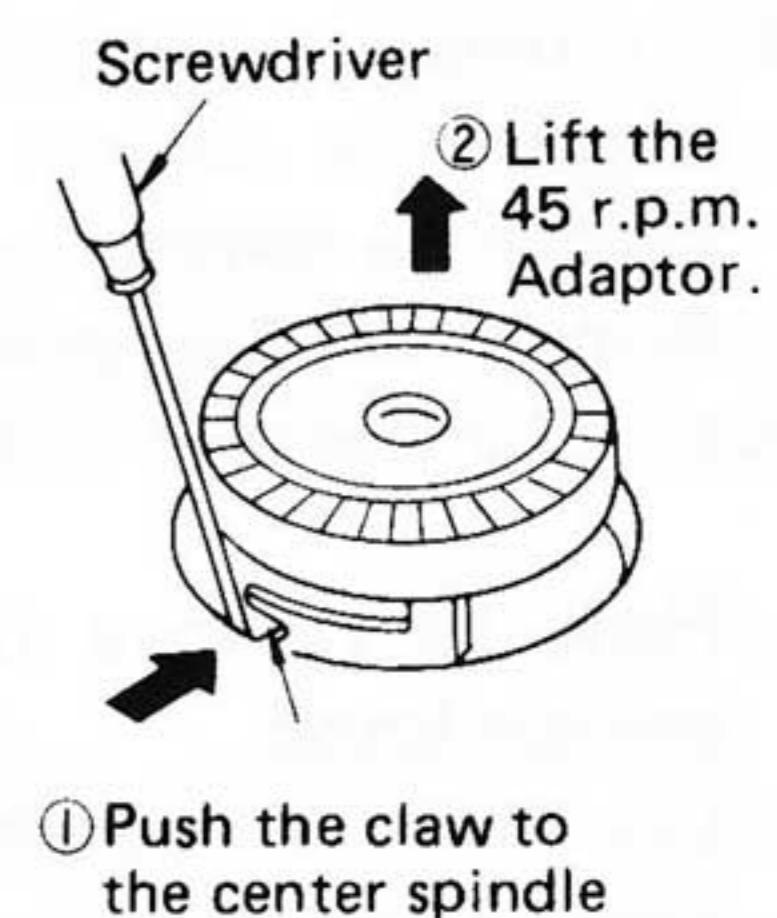

## ■ DISASSEMBLY INSTRUCTIONS

### ● How to remove the cartridge

1. Open the front cabinet.
2. Completely loosen the cartridge setscrew and then pull out the cartridge. (Fig. 2)

[Fig. 2]

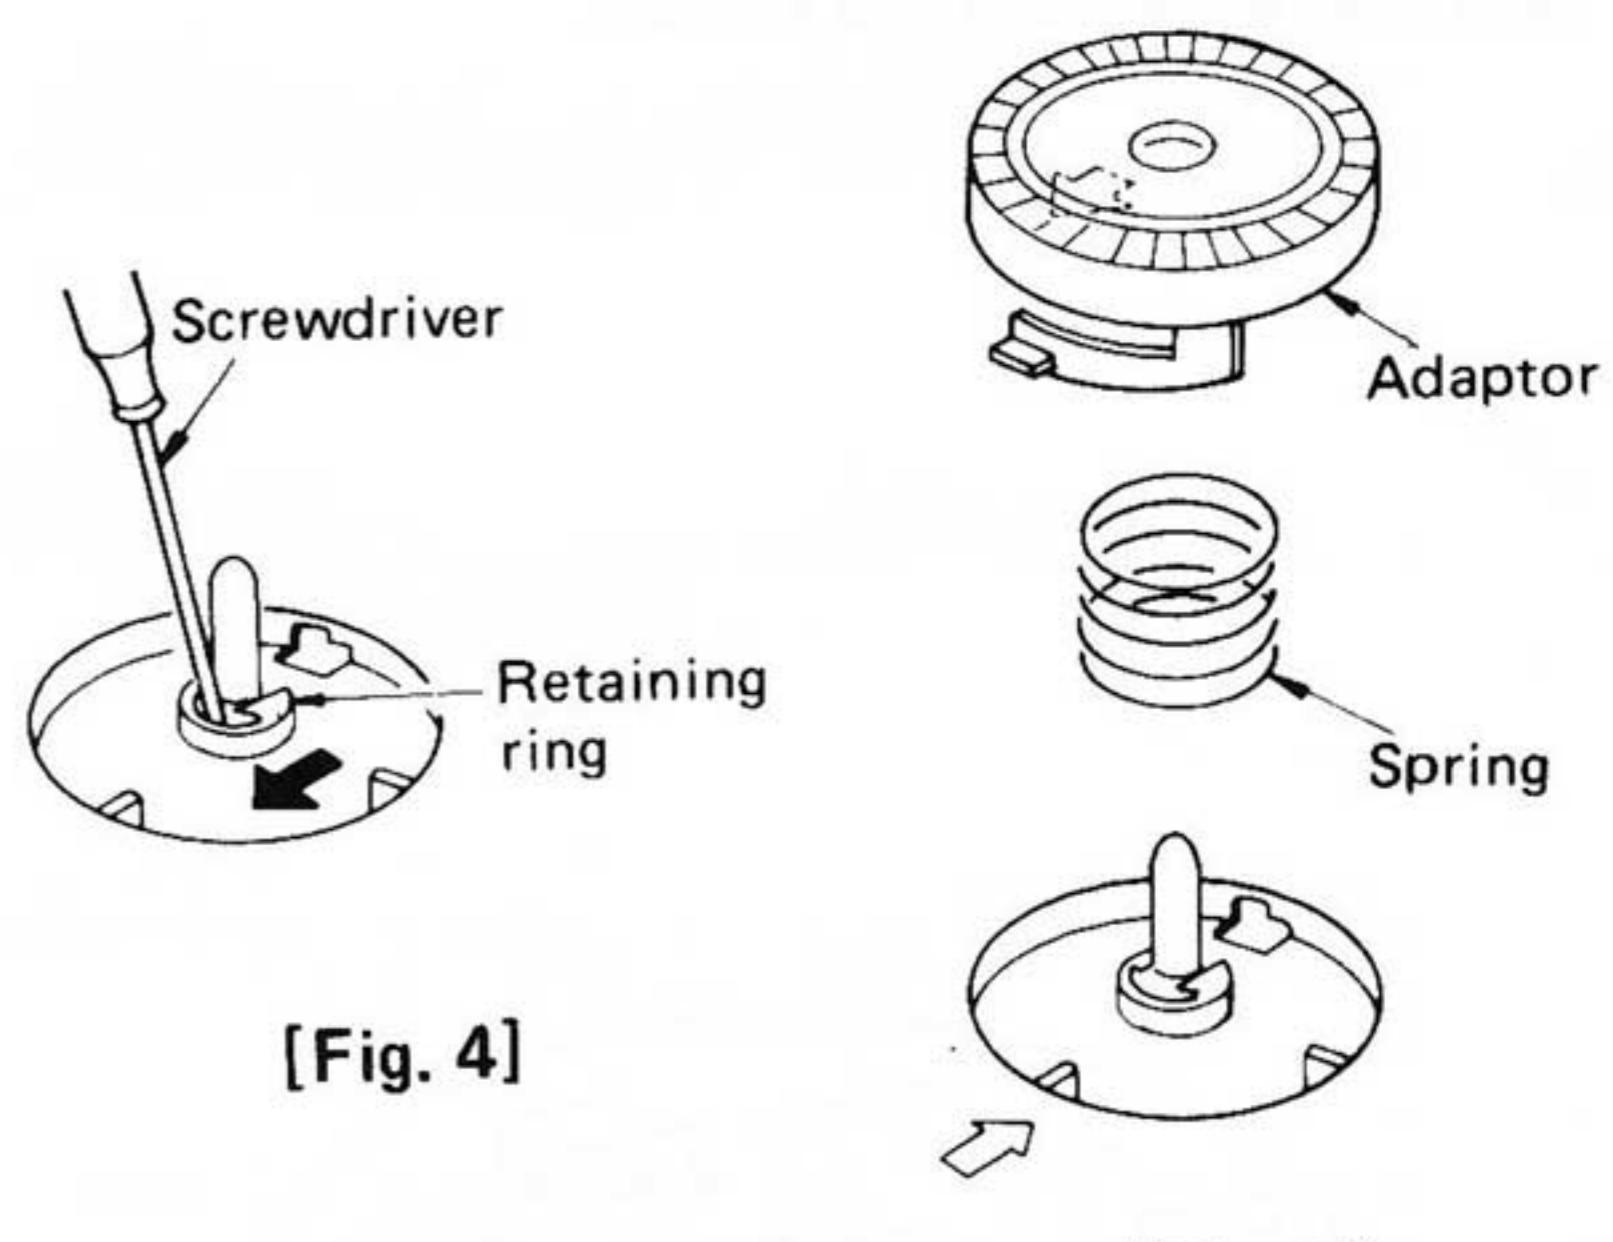

[Fig. 3]

### ● How to remove the turntable platter

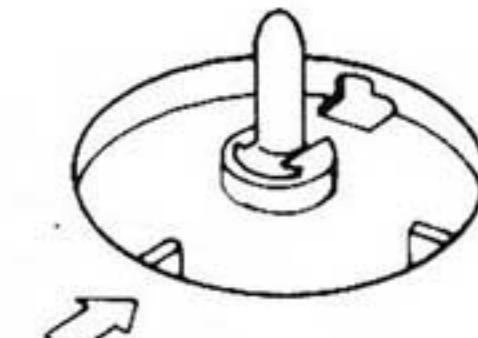

1. Open the front cabinet.
  2. Turn the 45 r.p.m. adaptor counterclockwise to raise it from the turntable platter.  
\* The turntable mat is glued to the turntable platter.
  3. Remove the turntable platter. (Fig. 3)
- Note:** Take care not to break the claw by pushing it excessively.
4. Remove the retaining ring from the center spindle. (Fig. 4)
  5. Hold up the turntable.

### \* To set the turntable platter

1. Put the turntable platter in place, and fit the cam and retaining ring onto the center spindle.
  2. Put on the spring and fit the 45 r.p.m. adaptor.
- Note:** Match the  $\Rightarrow$  on the back of 45 r.p.m. adaptor with the  $\Leftarrow$  of the turntable platter. (Fig. 5)

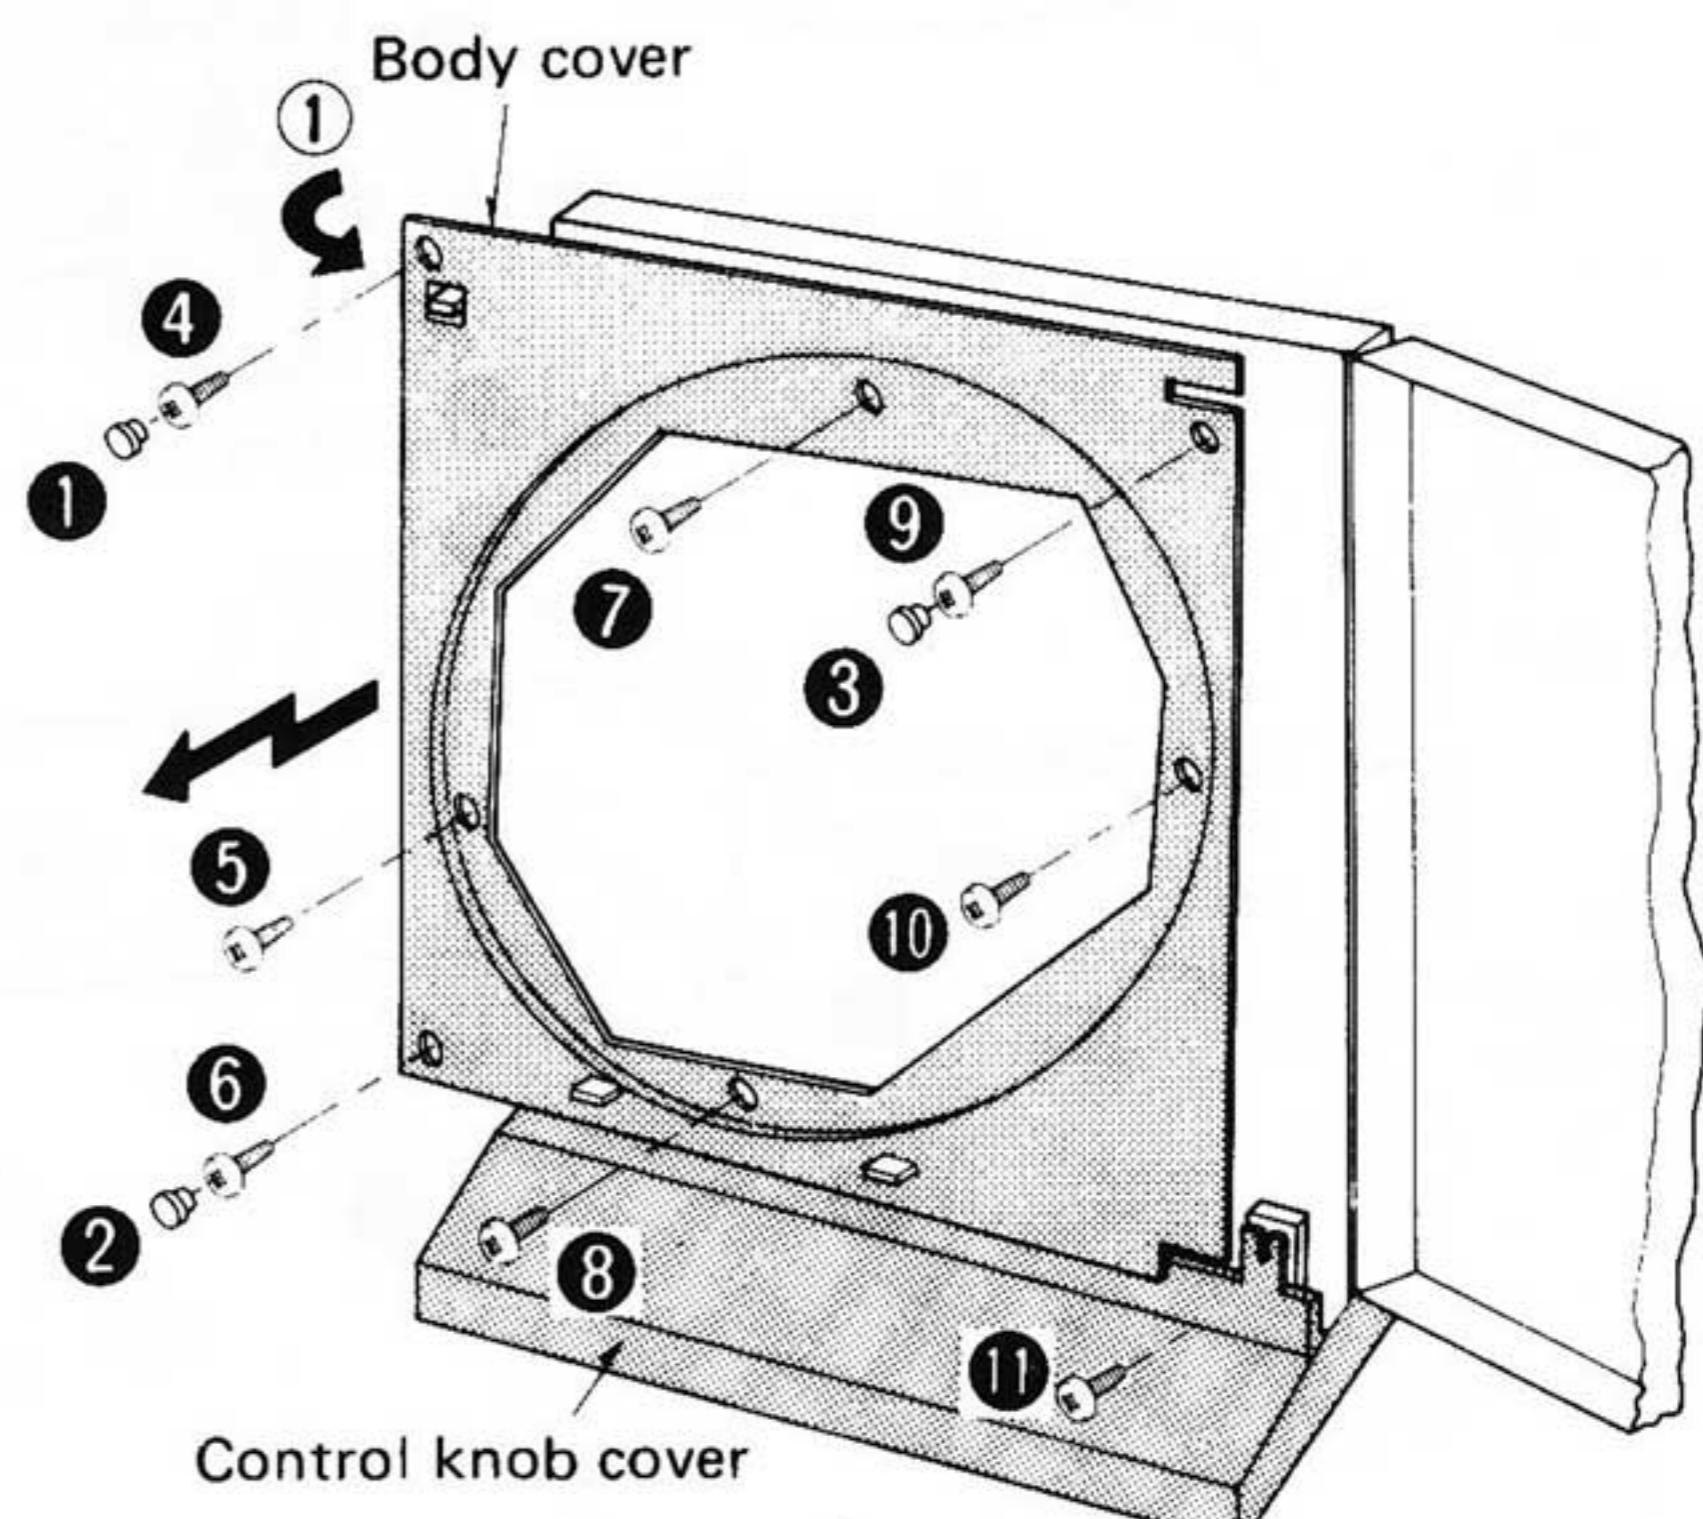

[Fig. 4]

### ● How to remove the control knob cover

1. Remove the body cover screw caps (Fig. 6 : ① ~ ③).
  2. Remove the 7 setscrews (Fig. 6 : ④ ~ ⑩) of the body cover.
  3. Remove the body cover in the direction of the arrow.
- Note:** Slightly turn the cover as shown by the arrow because the cover is engaged with the hinge.
4. Remove the cover setscrew (Fig. 6 : ⑪).
  5. Lay down the unit with the front side up as in Fig. 7.
  6. Remove the 6 setscrews (Fig. 7 : ⑫ ~ ⑯) of the bottom cover.
  7. Remove the bottom cover in the direction of the arrow. (Fig. 7)
  8. Remove the 4 setscrews (Fig. 7 : ⑰ ~ ㉑) which fasten the control knob cover to the cabinet. Then remove the 2 fitting plates.
  9. Remove the control knob cover in the direction of arrow. (Fig. 7-1)

[Fig. 6]

### ● How to remove the main circuit board

(Microcomputer, arm control and constant voltage circuit)

1. Remove the control knob cover. (Refer to "How to remove the control knob cover".)
2. Remove the 6 setscrews (Fig. 7 : ②2 ~ ②7) of P.C.B.

**Note:** Remove the P.C.B. cover. (Fig. 7-2)

### ● How to remove the on/off switch and on/off switch knob

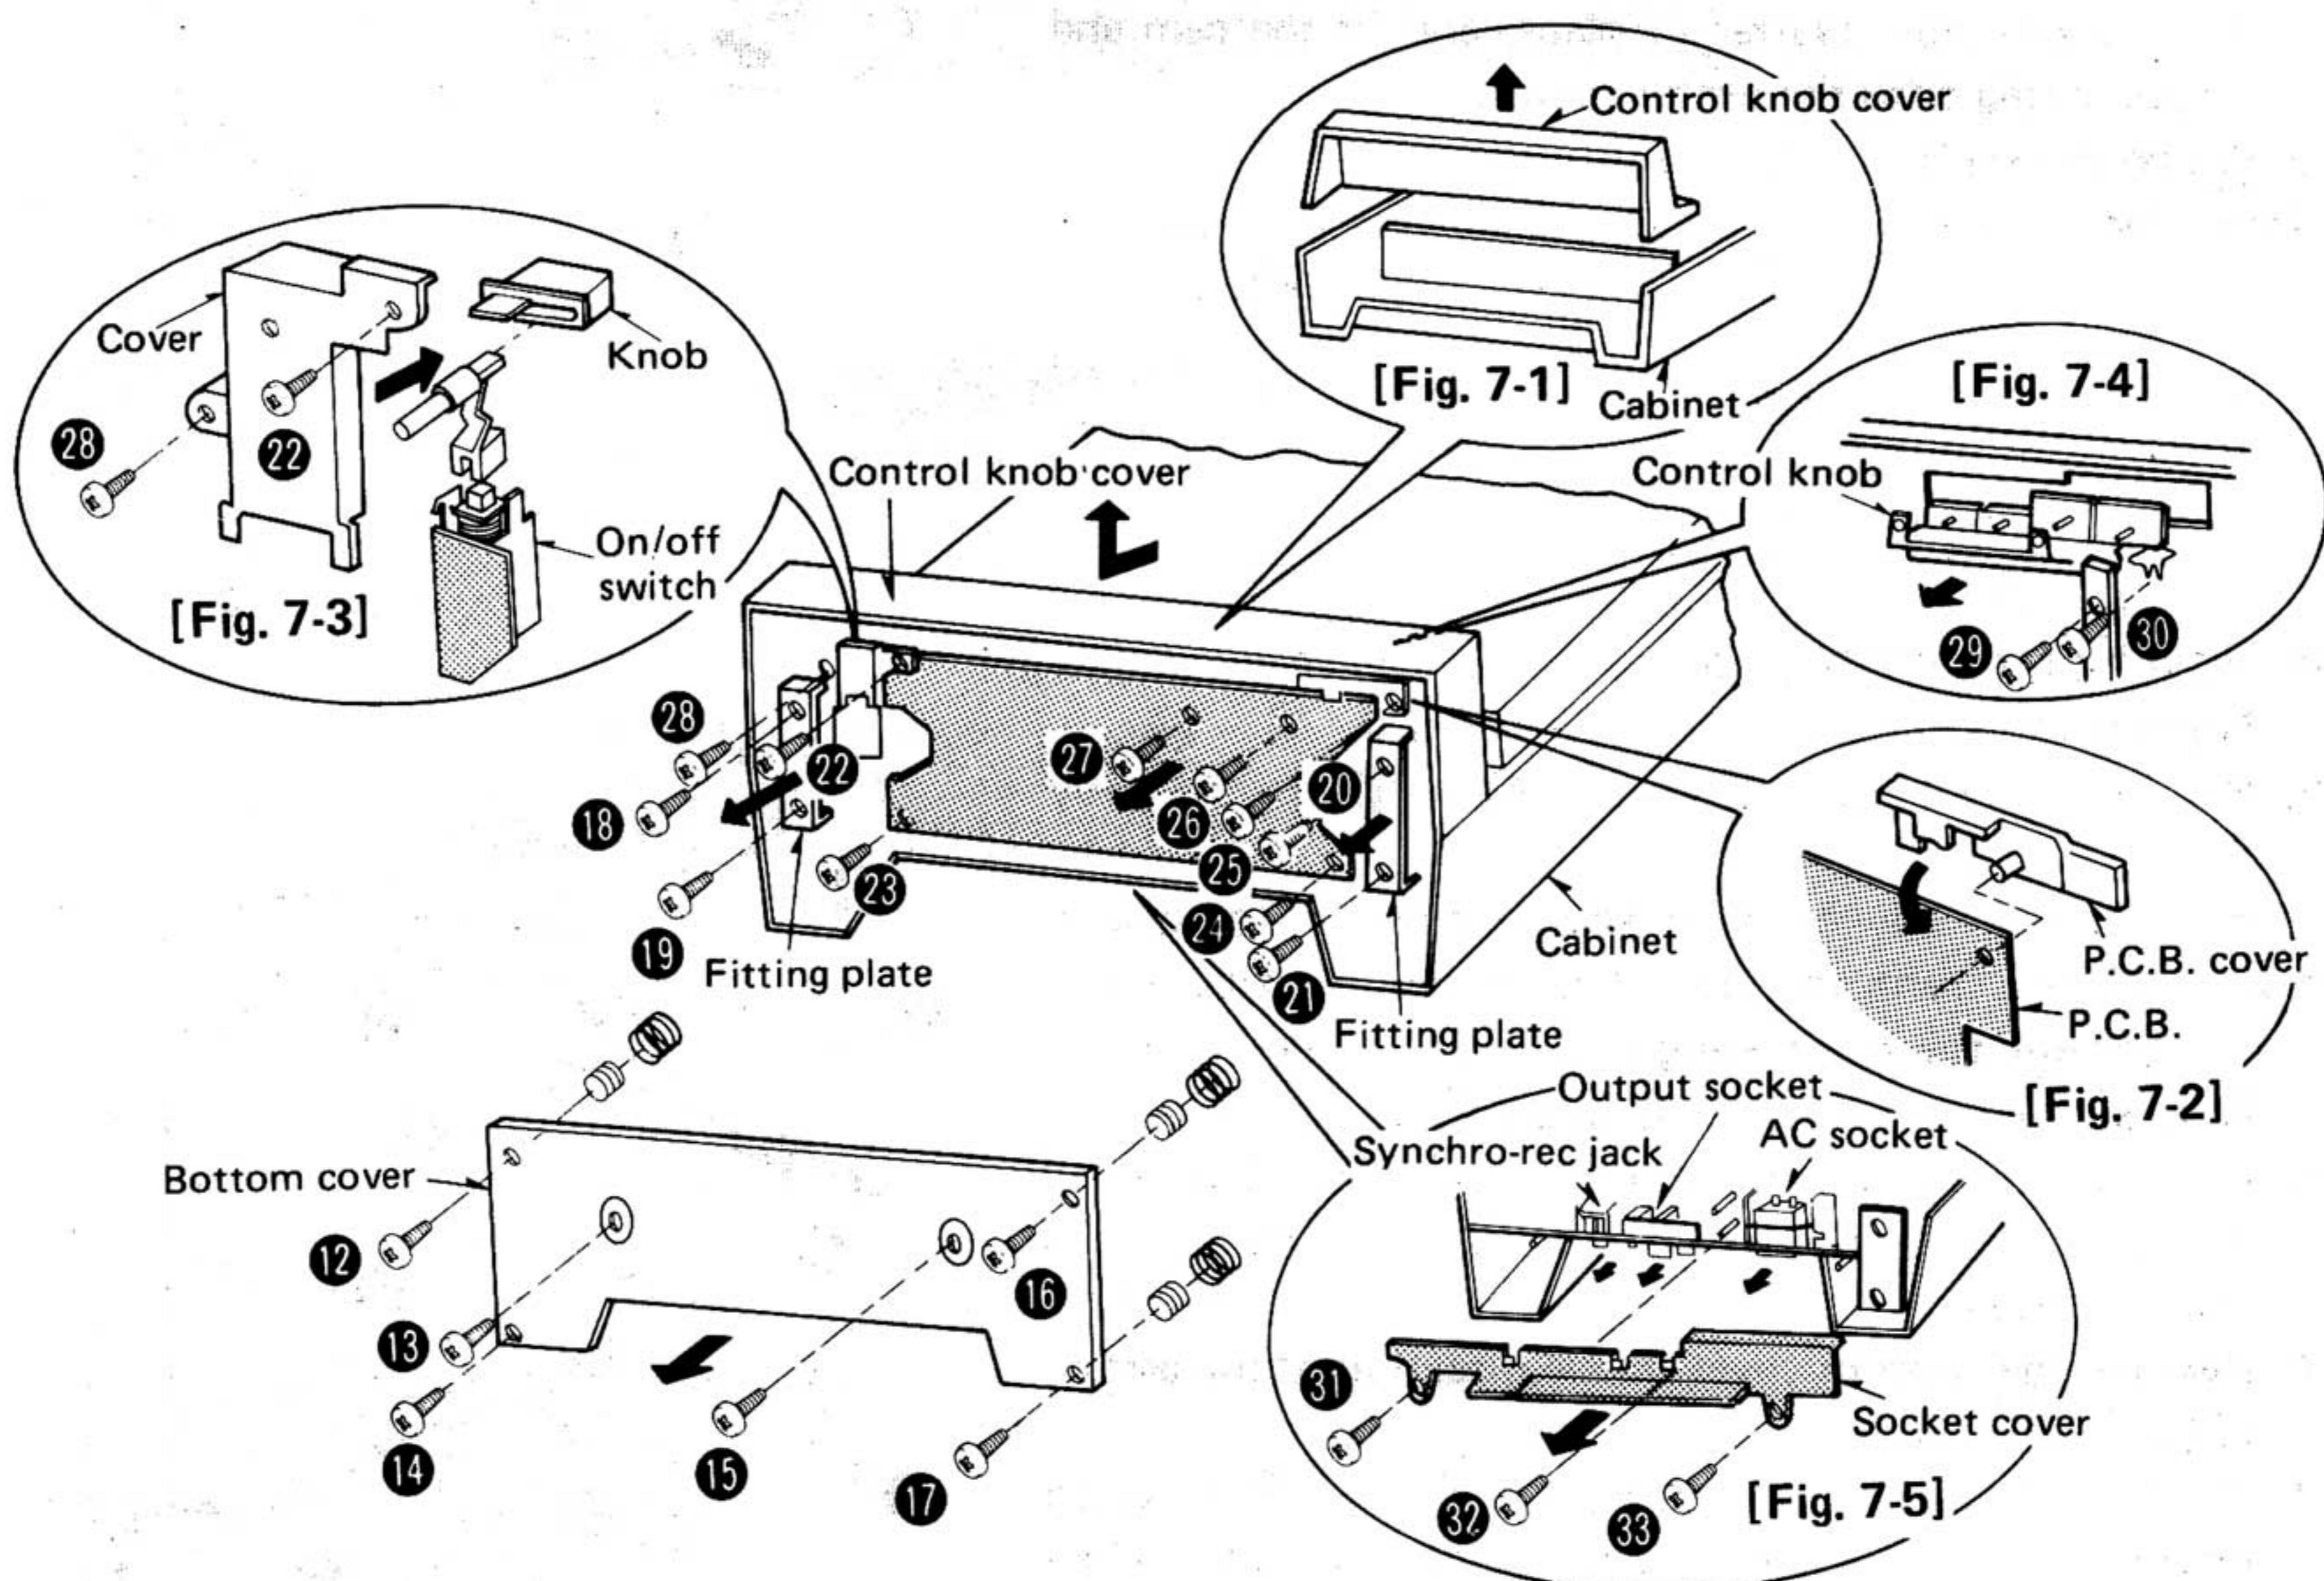

1. Lay down the unit with the front side up.
2. Remove the bottom cover. (Refer to "How to remove the control knob cover" item 6.)
3. Remove the 2 setscrews (Fig. 7-3 : ②2, ②8) which secure the on/off switch cover.
4. Take out the switch and unsolder the knob and switch terminal to remove the switch.

### ● How to remove the control knob

1. Remove the bottom cover. (Refer to "How to remove the control knob cover" item 6.)
2. Remove the main circuit board. (Refer to "How to remove the main circuit board".)
3. Remove the 2 setscrews (Fig. 7-4 : ②9, ③0) of the control knob.
4. Remove the knob in the direction of the arrow.

### ● How to remove the output socket, AC socket, and synchro-rec jack

1. Remove the bottom cover. (Refer to "How to remove the control knob cover item 6.")
2. Remove the 3 setscrews (Fig. 7-5 : ③1 ~ ③3) of the socket cover.
3. Remove the cover in the direction of the arrow.
4. Remove each socket in the direction of the arrow.

[Fig. 7]

### ● How to remove the drive circuit board and stator frame

1. Open the front of the unit.
2. Remove the turntable platter. (Refer to "How to remove the turntable platter".)
3. Remove the body cover. (Refer to "How to remove the control knob cover".)
4. Remove the 6 setscrews (Fig. 8 : ③⁴ ~ ③⁸) of the drive circuit board, and pull out the connector (CN201).
5. Remove the setscrews (Fig. 8-1 : ④⁰ ~ ④³) to separate the drive circuit board and the stator frame.

### ● How to remove the cabinet switch, speed selector switch knob and connection board

1. Open the front of the unit.
2. Remove the turntable platter. (Refer to "How to remove the turntable platter".)
3. Remove the body cover. (Refer to "How to remove the control knob cover".)
4. Remove the cabinet switch setscrew (Fig. 8 : ④⁴).
5. Release the switch cover claw from the board and then remove the switch cover. (Fig. 8-2)  
Unsolder the switch terminal to remove the switch.
6. Remove the 2 setscrews (Fig. 8 : ④⁵, ④⁶) of the speed selector switch knob, and remove the control knob cover. (Refer to "How to remove the control knob cover".)  
The knob can be removed in the direction of the arrow. (Fig. 8-3)
7. Remove the 2 setscrews (Fig. 8 : ④⁷, ④⁸), and then the connector board can be removed.

### ● How to remove the dust cover

1. Remove the 4 setscrews (Fig. 9 : ④⁹ ~ ⑤²) of the dust cover.
2. Remove the dust cover in the direction of the arrow.

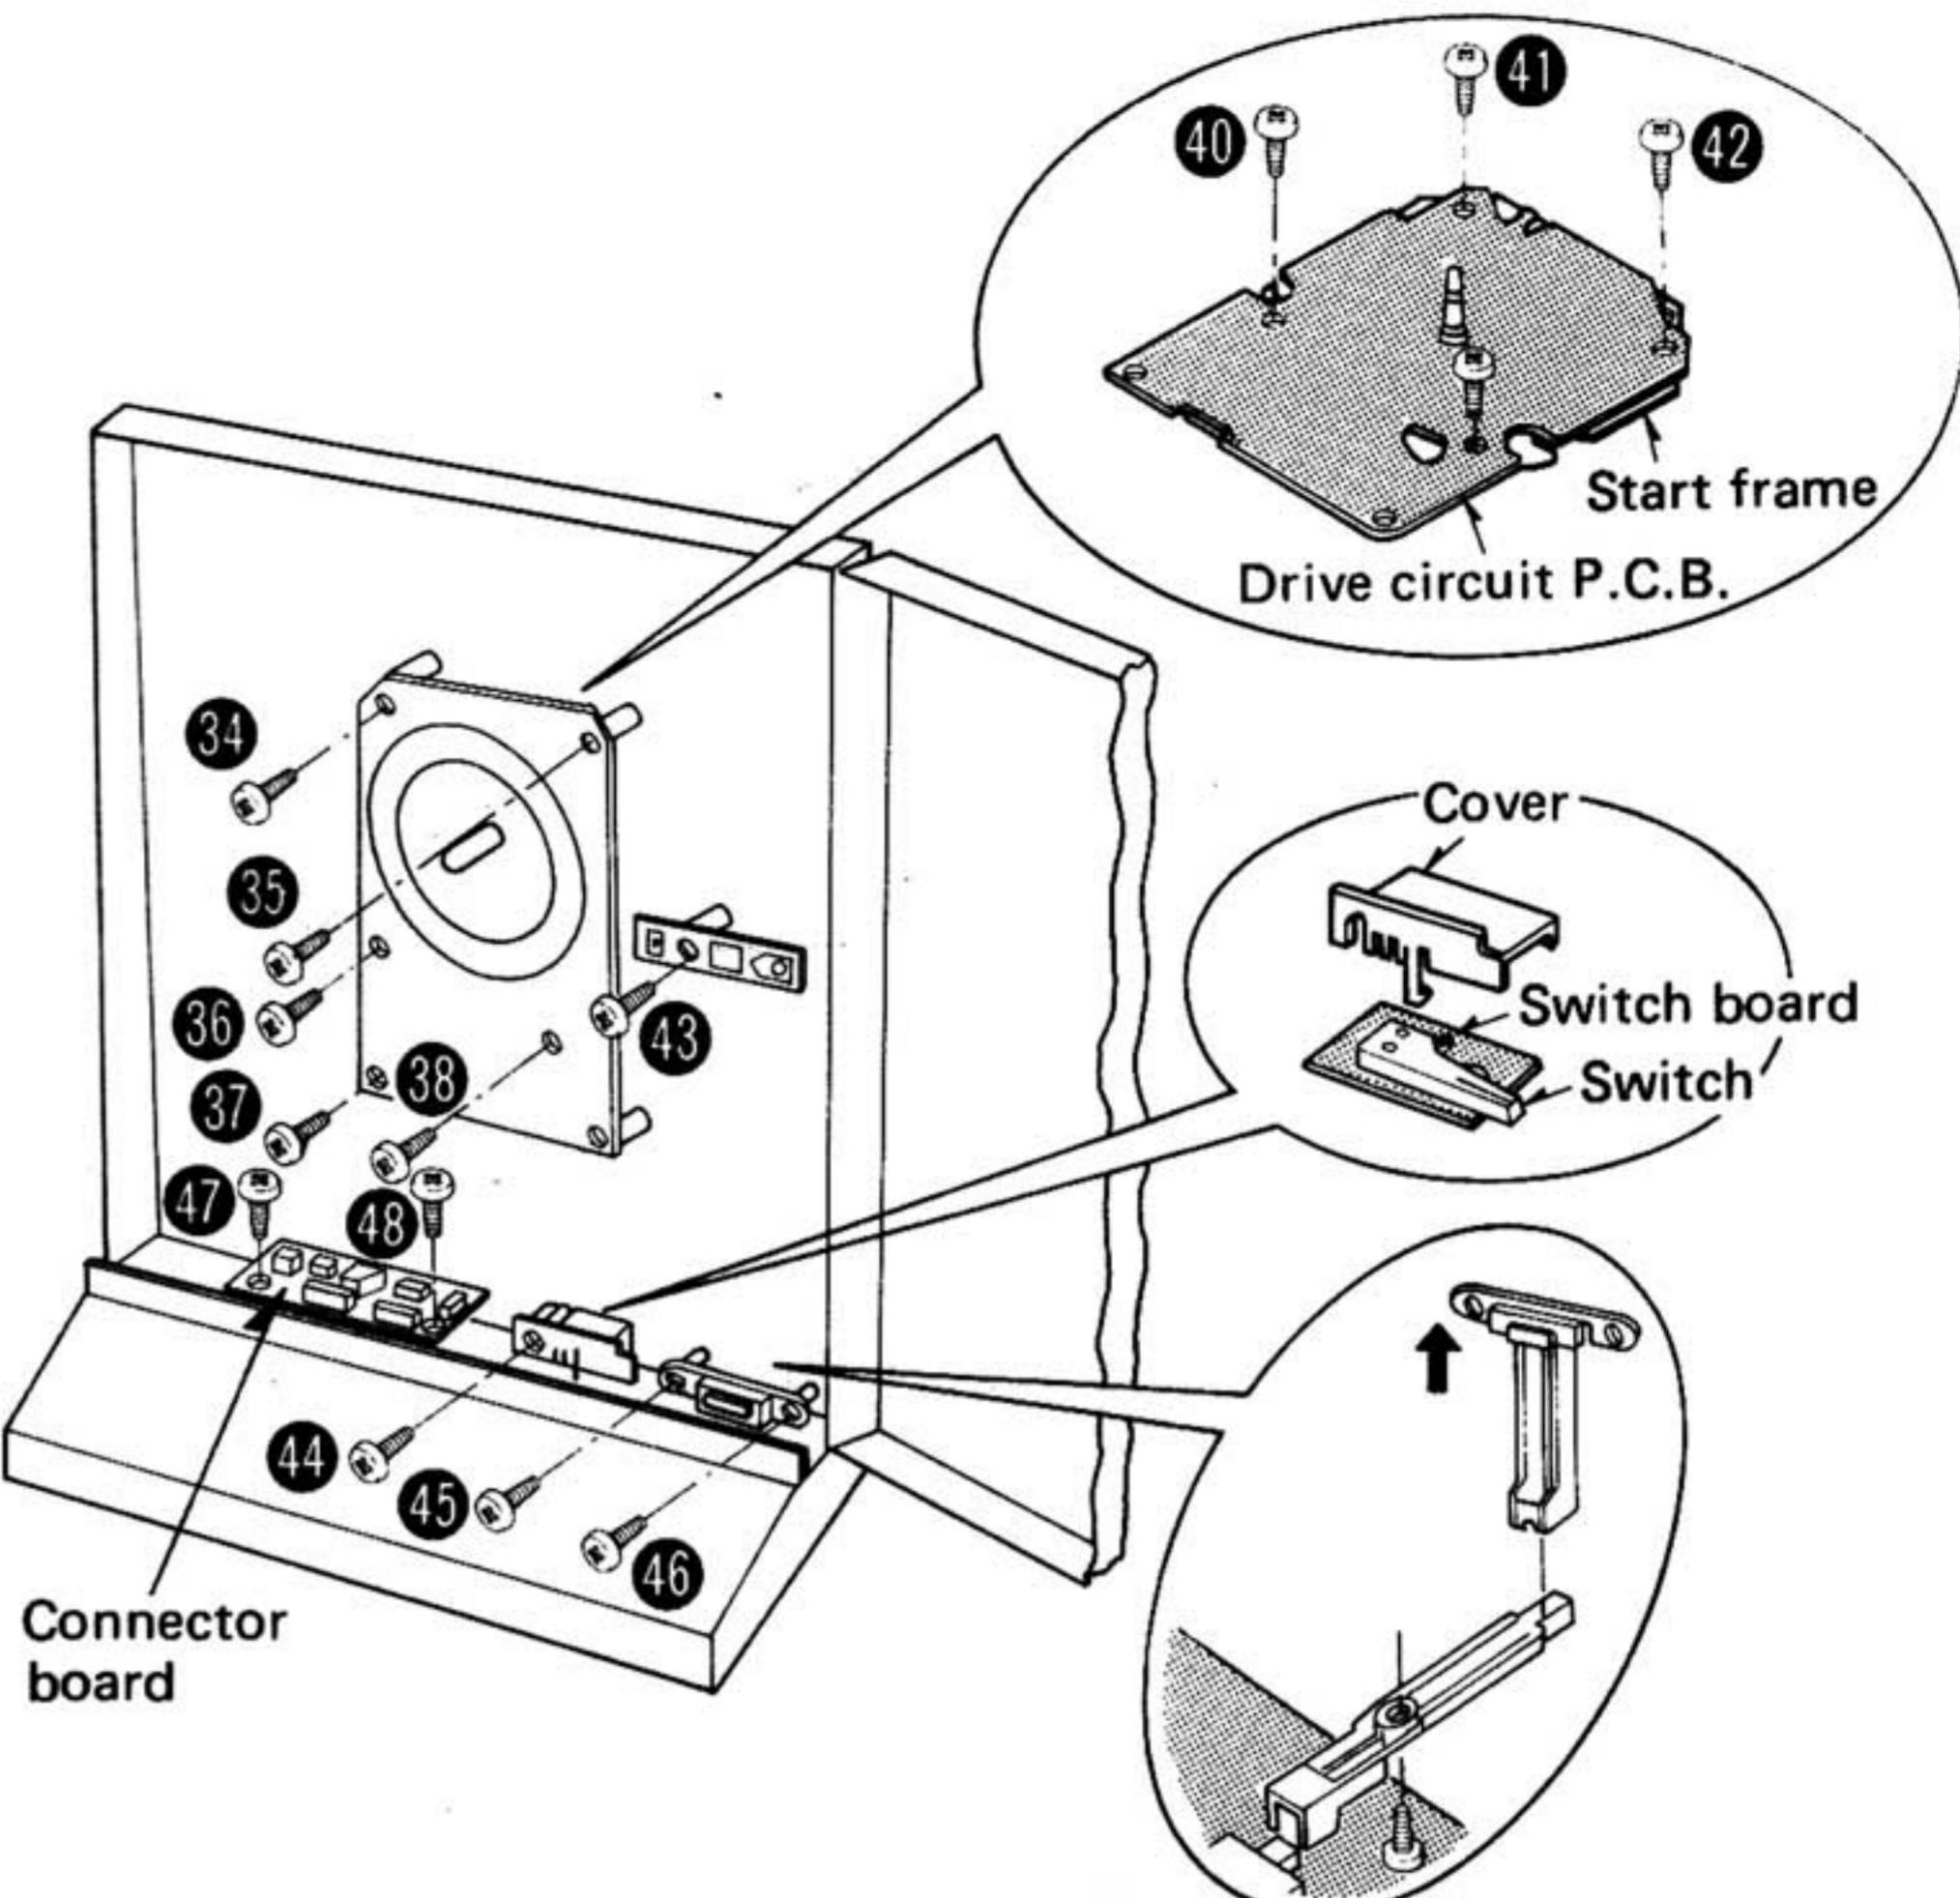

### ● How to remove the tonearm

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Turn the worm gear by hand and slightly shift the tonearm inward.
3. Remove the tonearm setscrew (Fig. 10 : ⑤³).
4. Disconnect the output lead wire from the connector board and then remove the tonearm in the direction of the arrow. (Fig. 10)

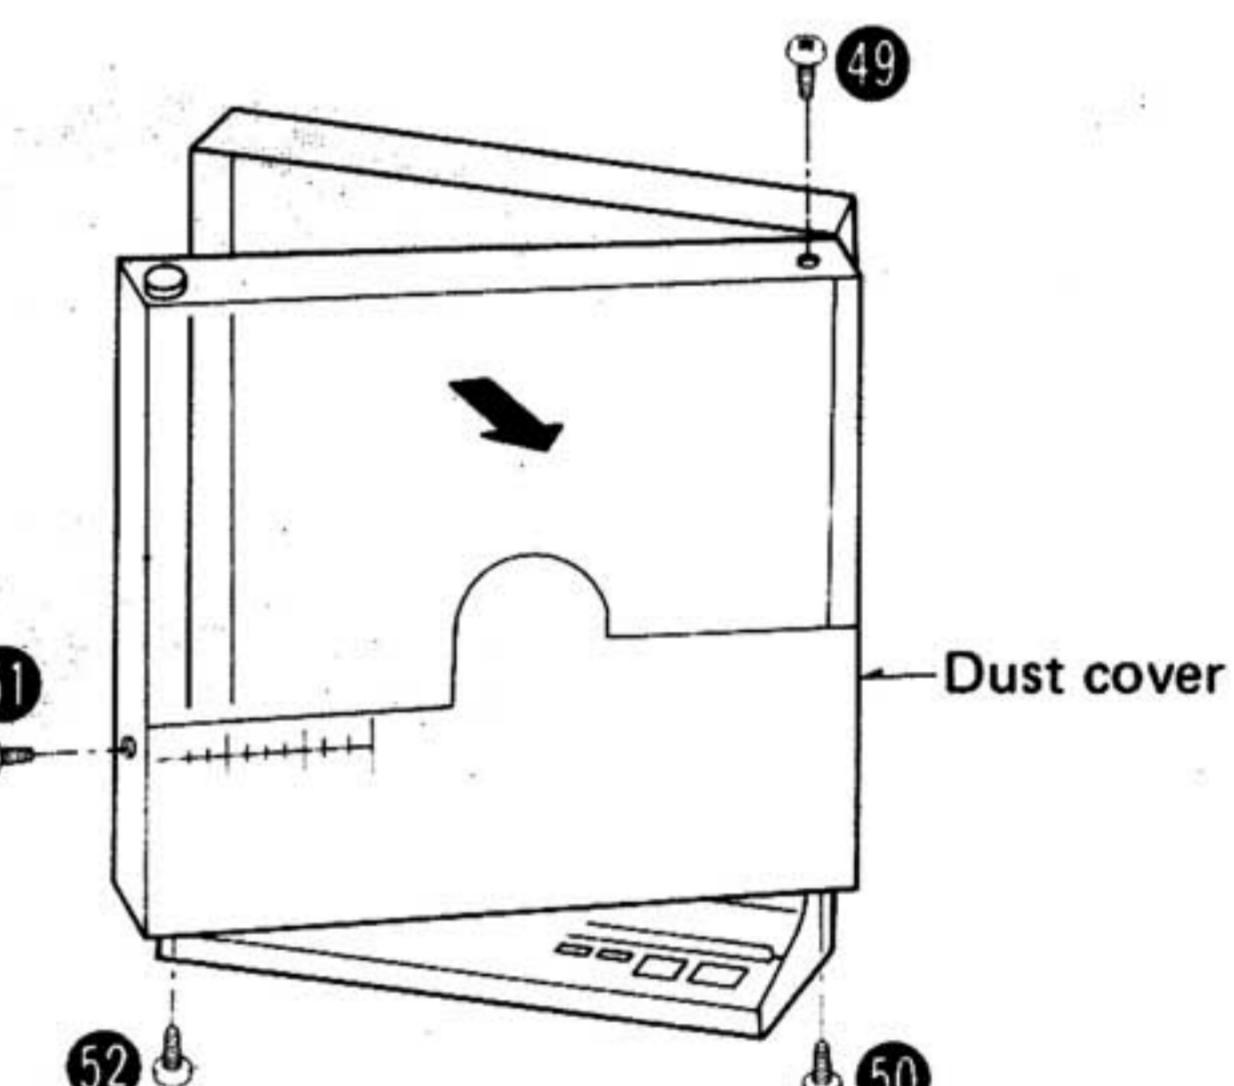

### ● How to remove the offset angle detection circuit board

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Remove the stylus indicator cover setscrew (Fig. 10 : ⑤⁴).
3. Loosen the P.C.B. setscrew (Fig. 10 : ⑤⁵) and lift the P.C.B.

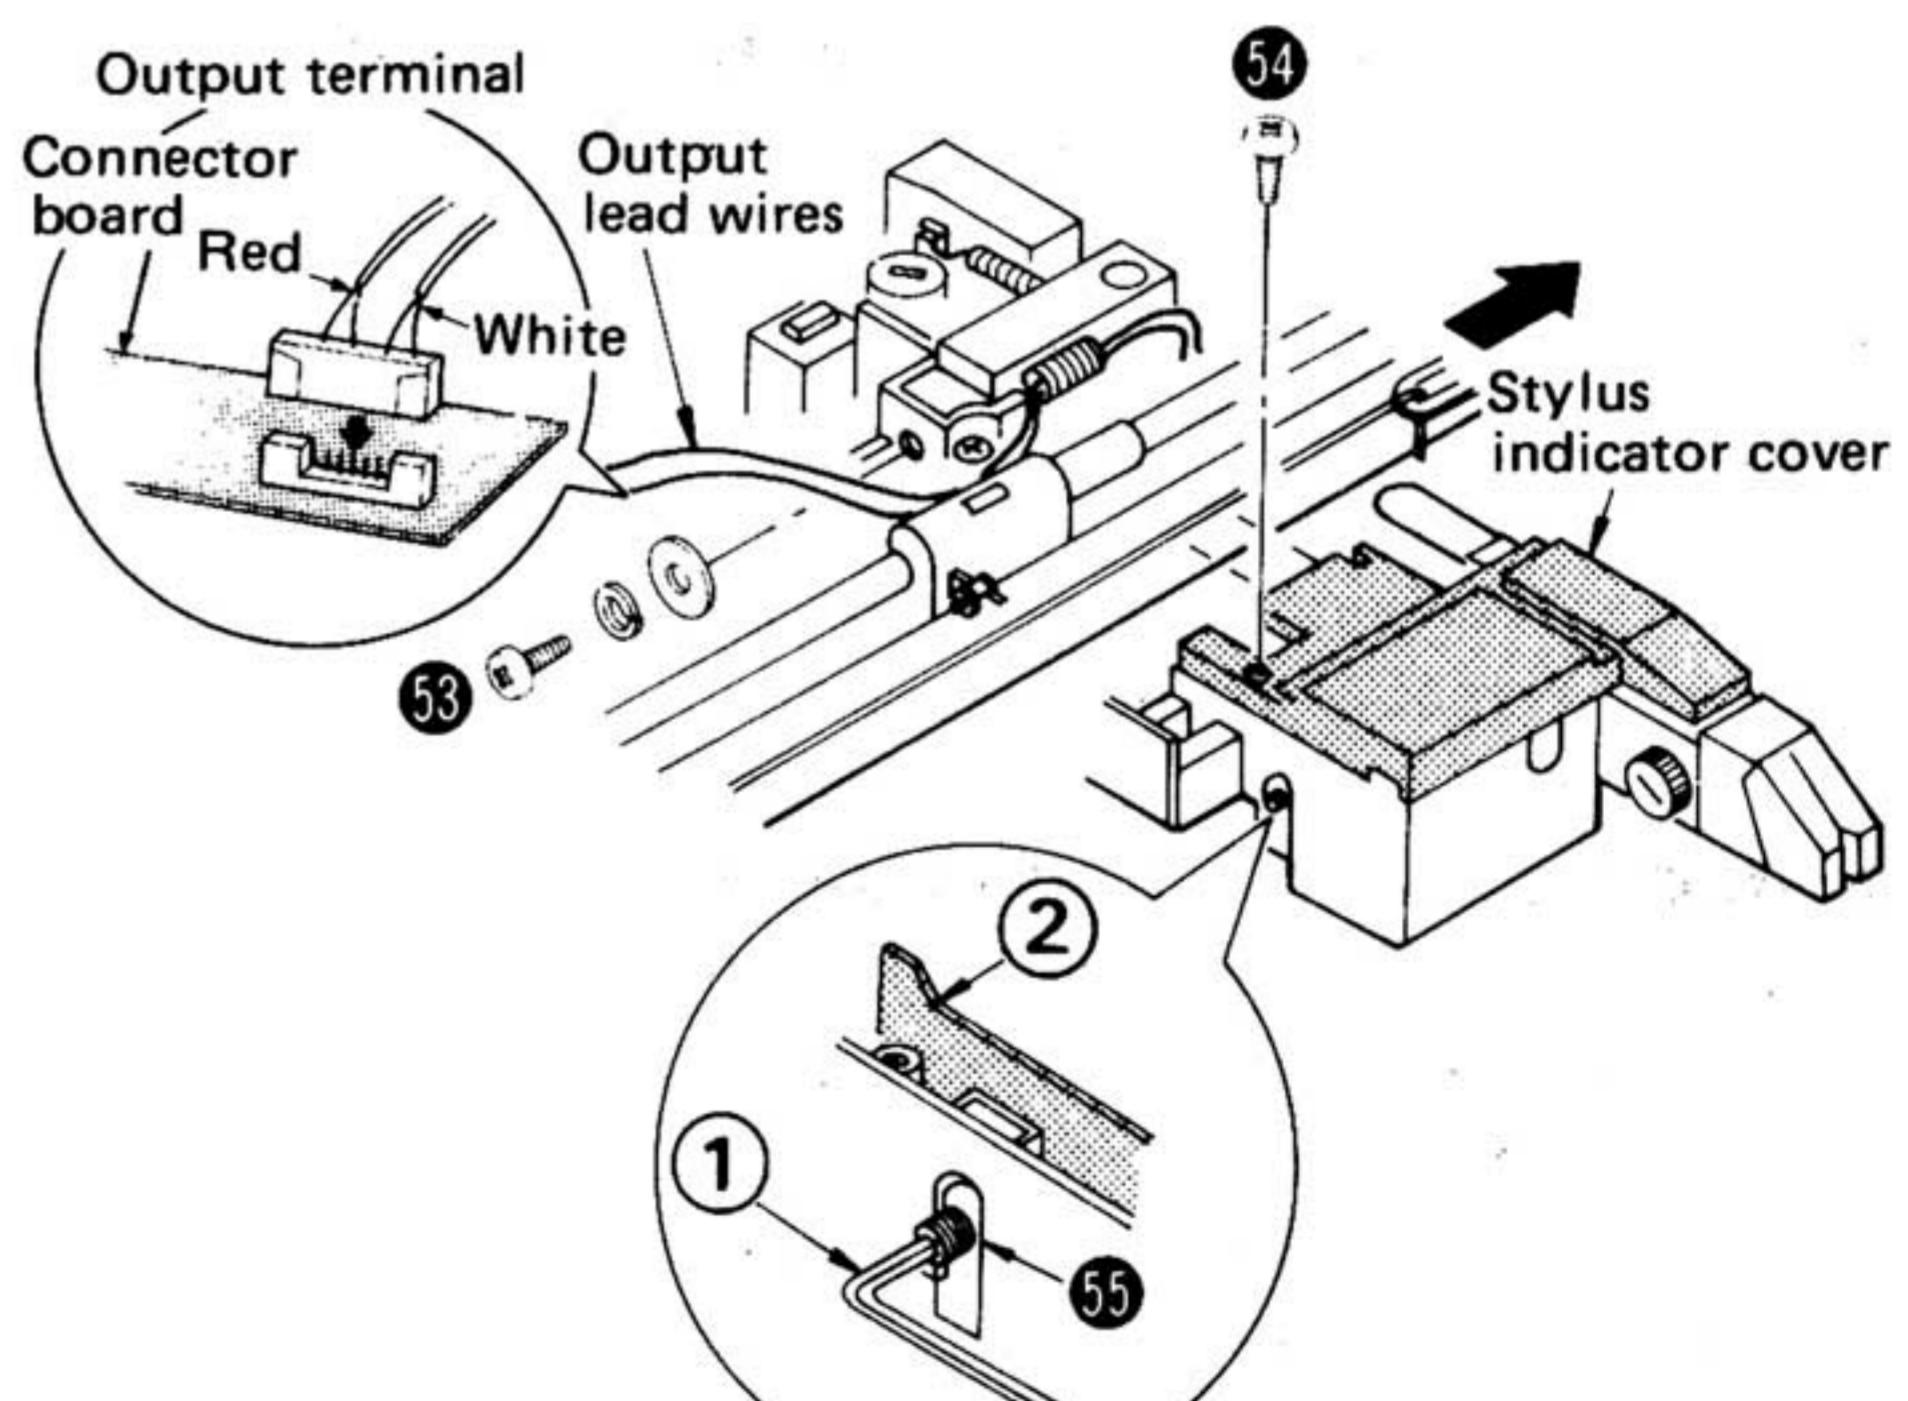

**Note:** When the P.C.B. is removed, be sure to adjust the servo gain and offset voltage. (Refer to the adjusting procedure on P13.)

[Fig. 8]

[Fig. 9]

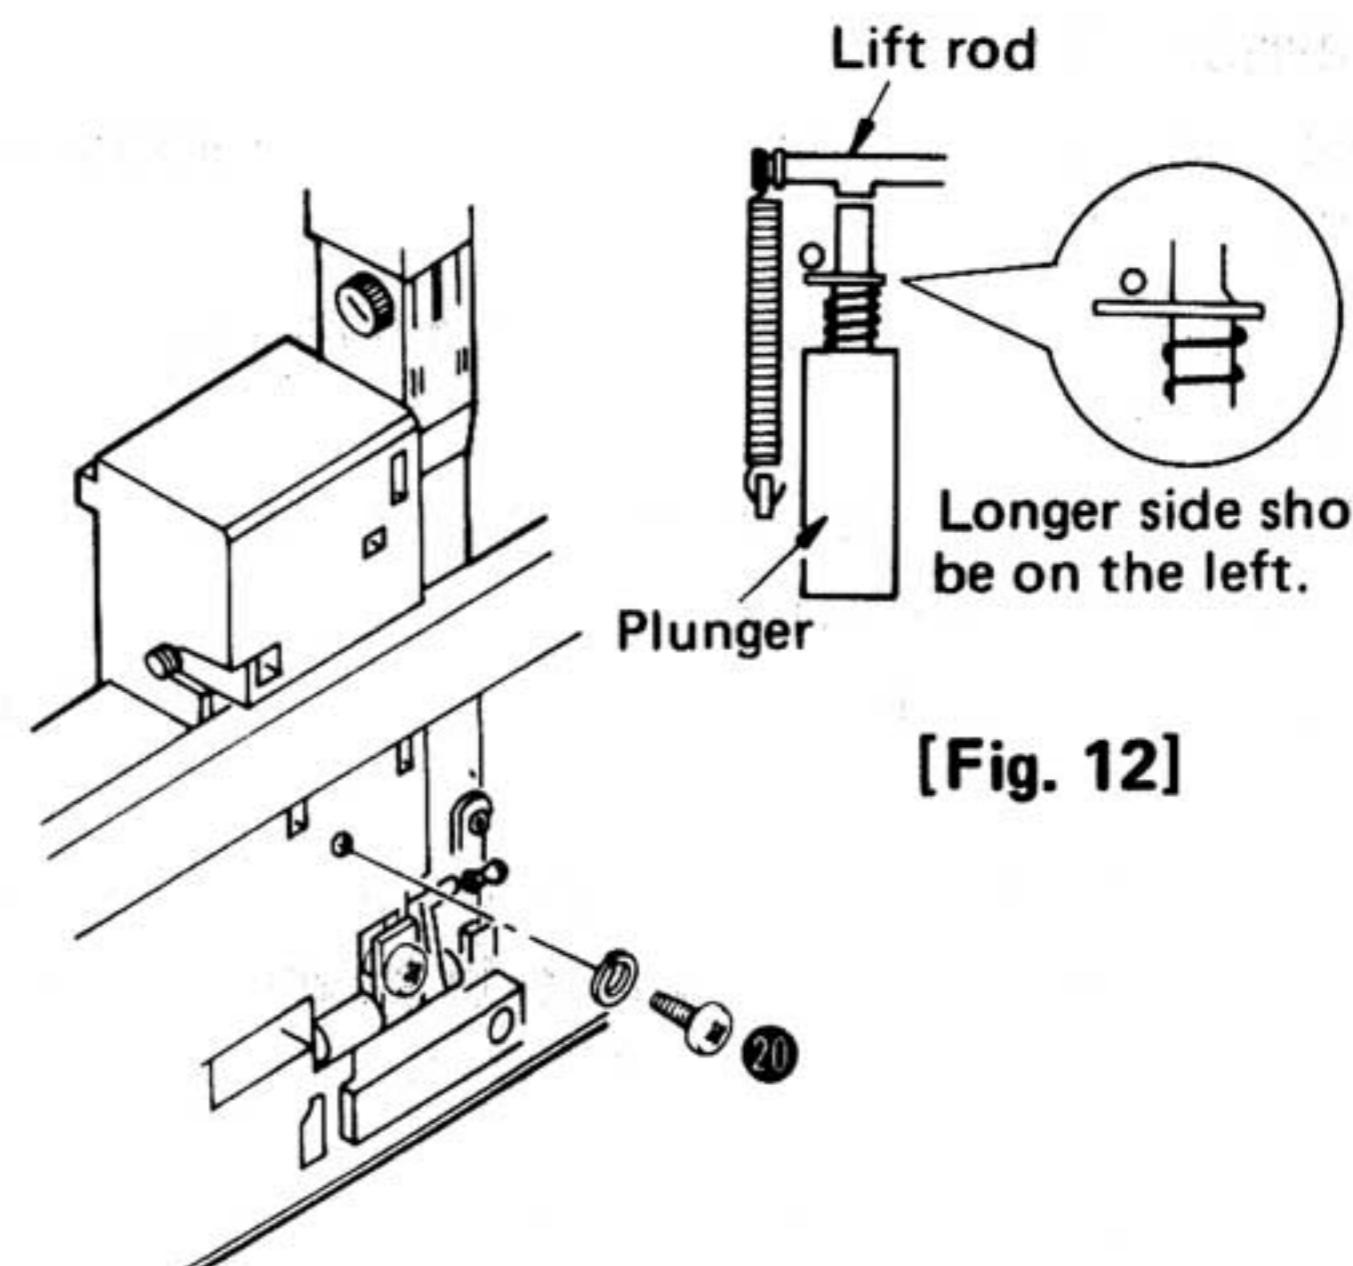

- ① Turn the hex. rod wrench (M3) to counterclockwise.
- ② Lift the P.C.B.

[Fig. 10]

### ● How to remove the cueing plunger

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
  2. Remove the plunger setscrew (Fig. 11 : 56).
  3. Remove the offset angle detection P.C.B. and unsolder the 2 leads of plunger. Then the plunger can be removed.
- Note:** The plunger should be fitted in the position as in Fig. 12.

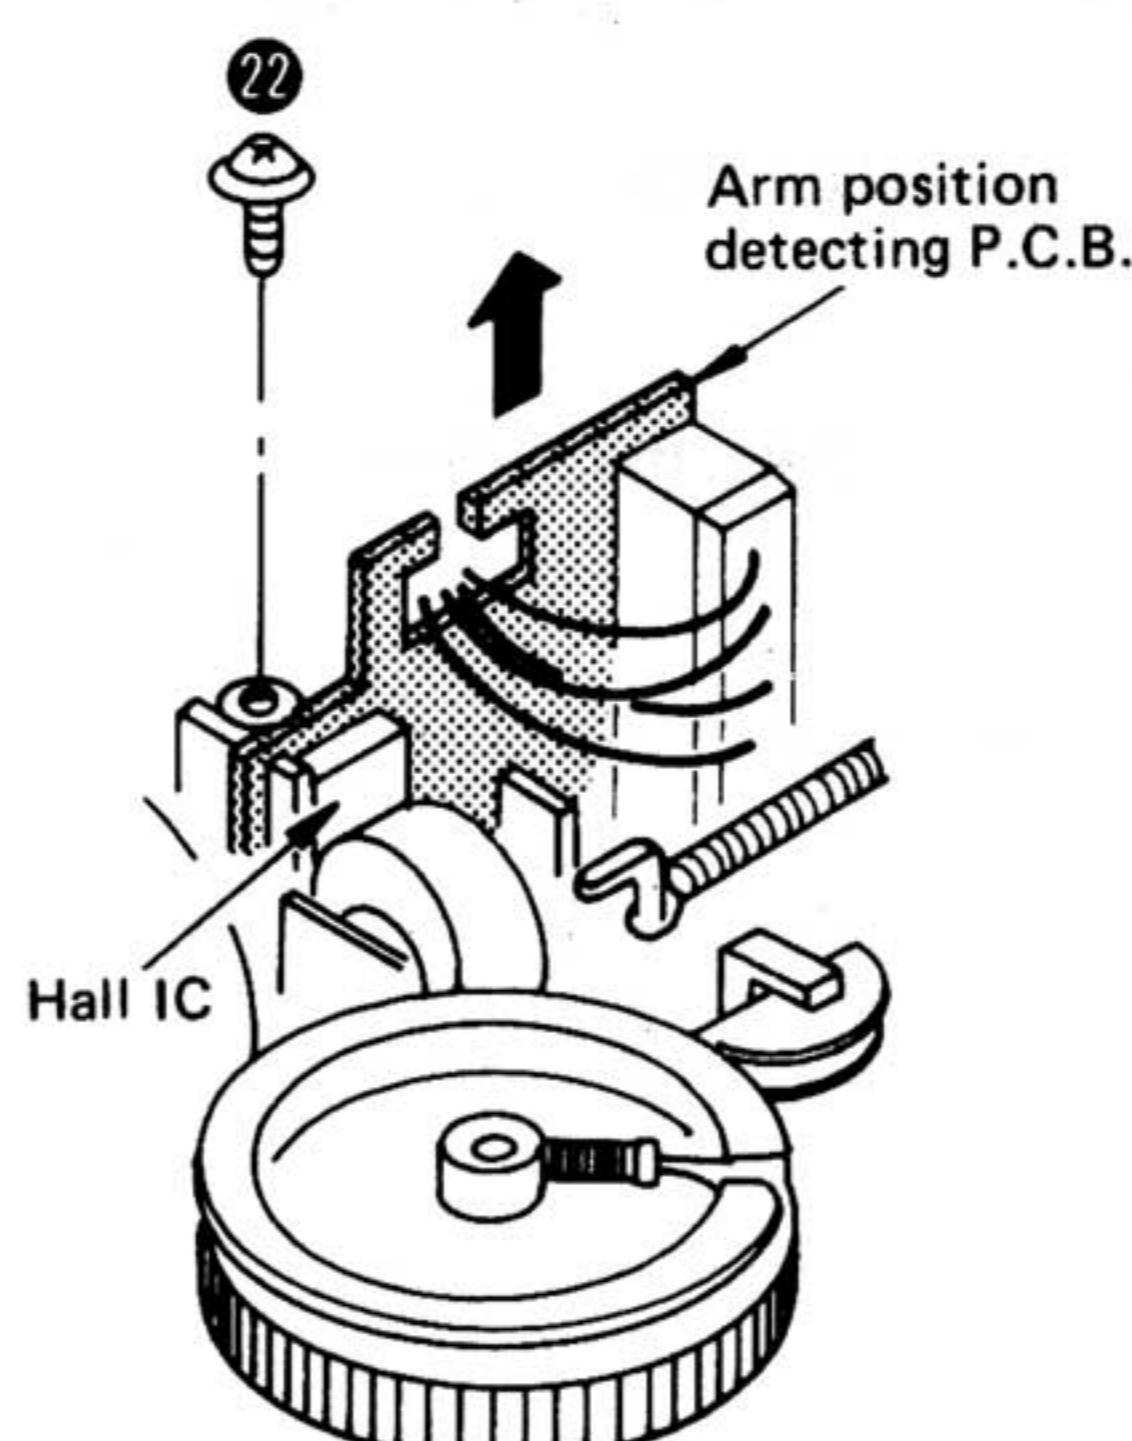

[Fig. 12]

[Fig. 11]

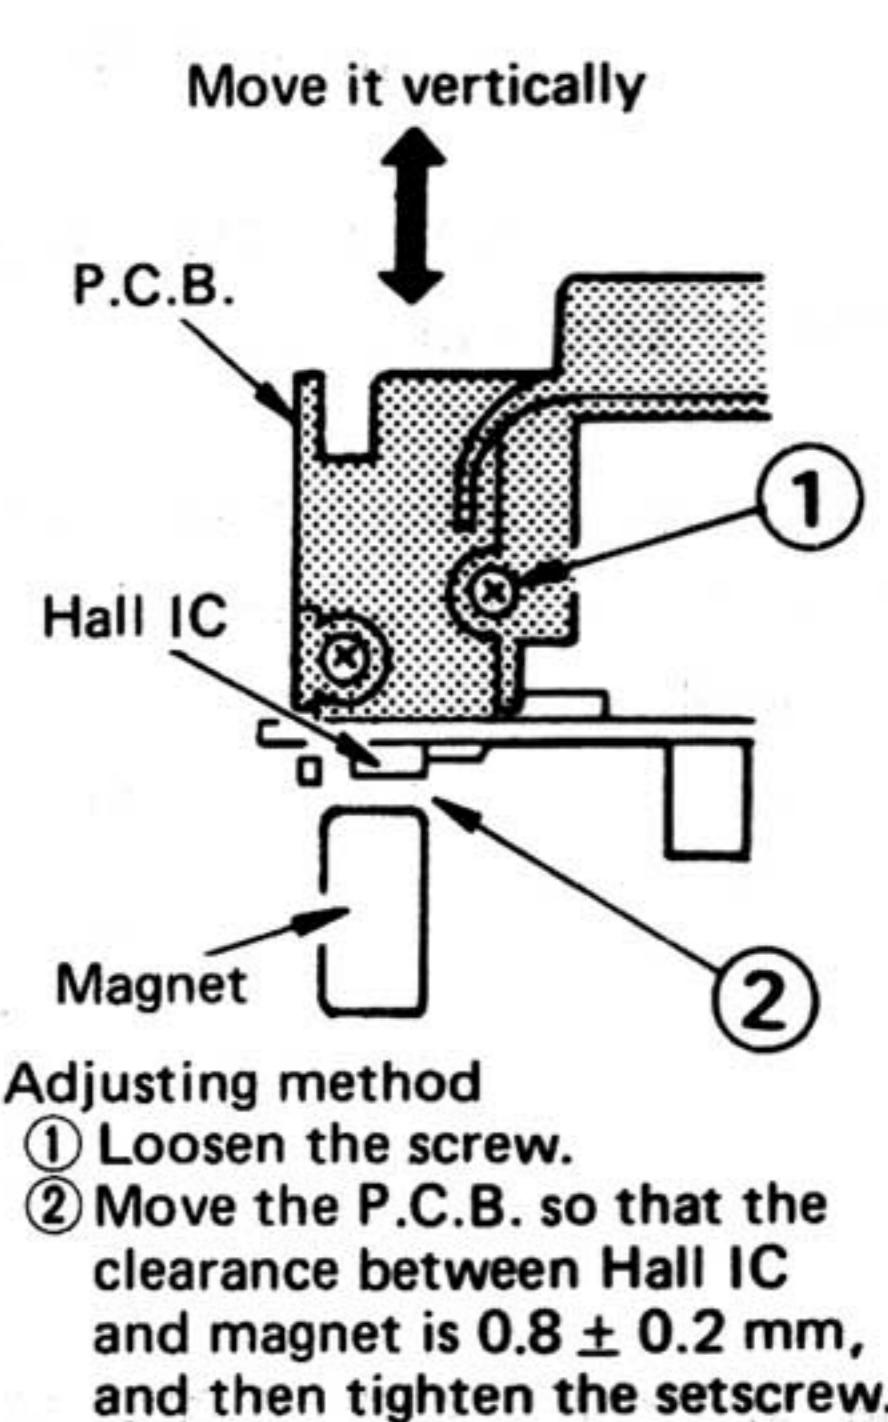

### ● How to remove the Arm position detecting P.C.B.

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Remove the P.C.B. setscrew (Fig. 13 : 57).

**Note:** The clearance between Hall IC and magnet should be  $0.8 \text{ mm} \pm 0.2 \text{ mm}$ . It can be adjusted as in Fig. 14.

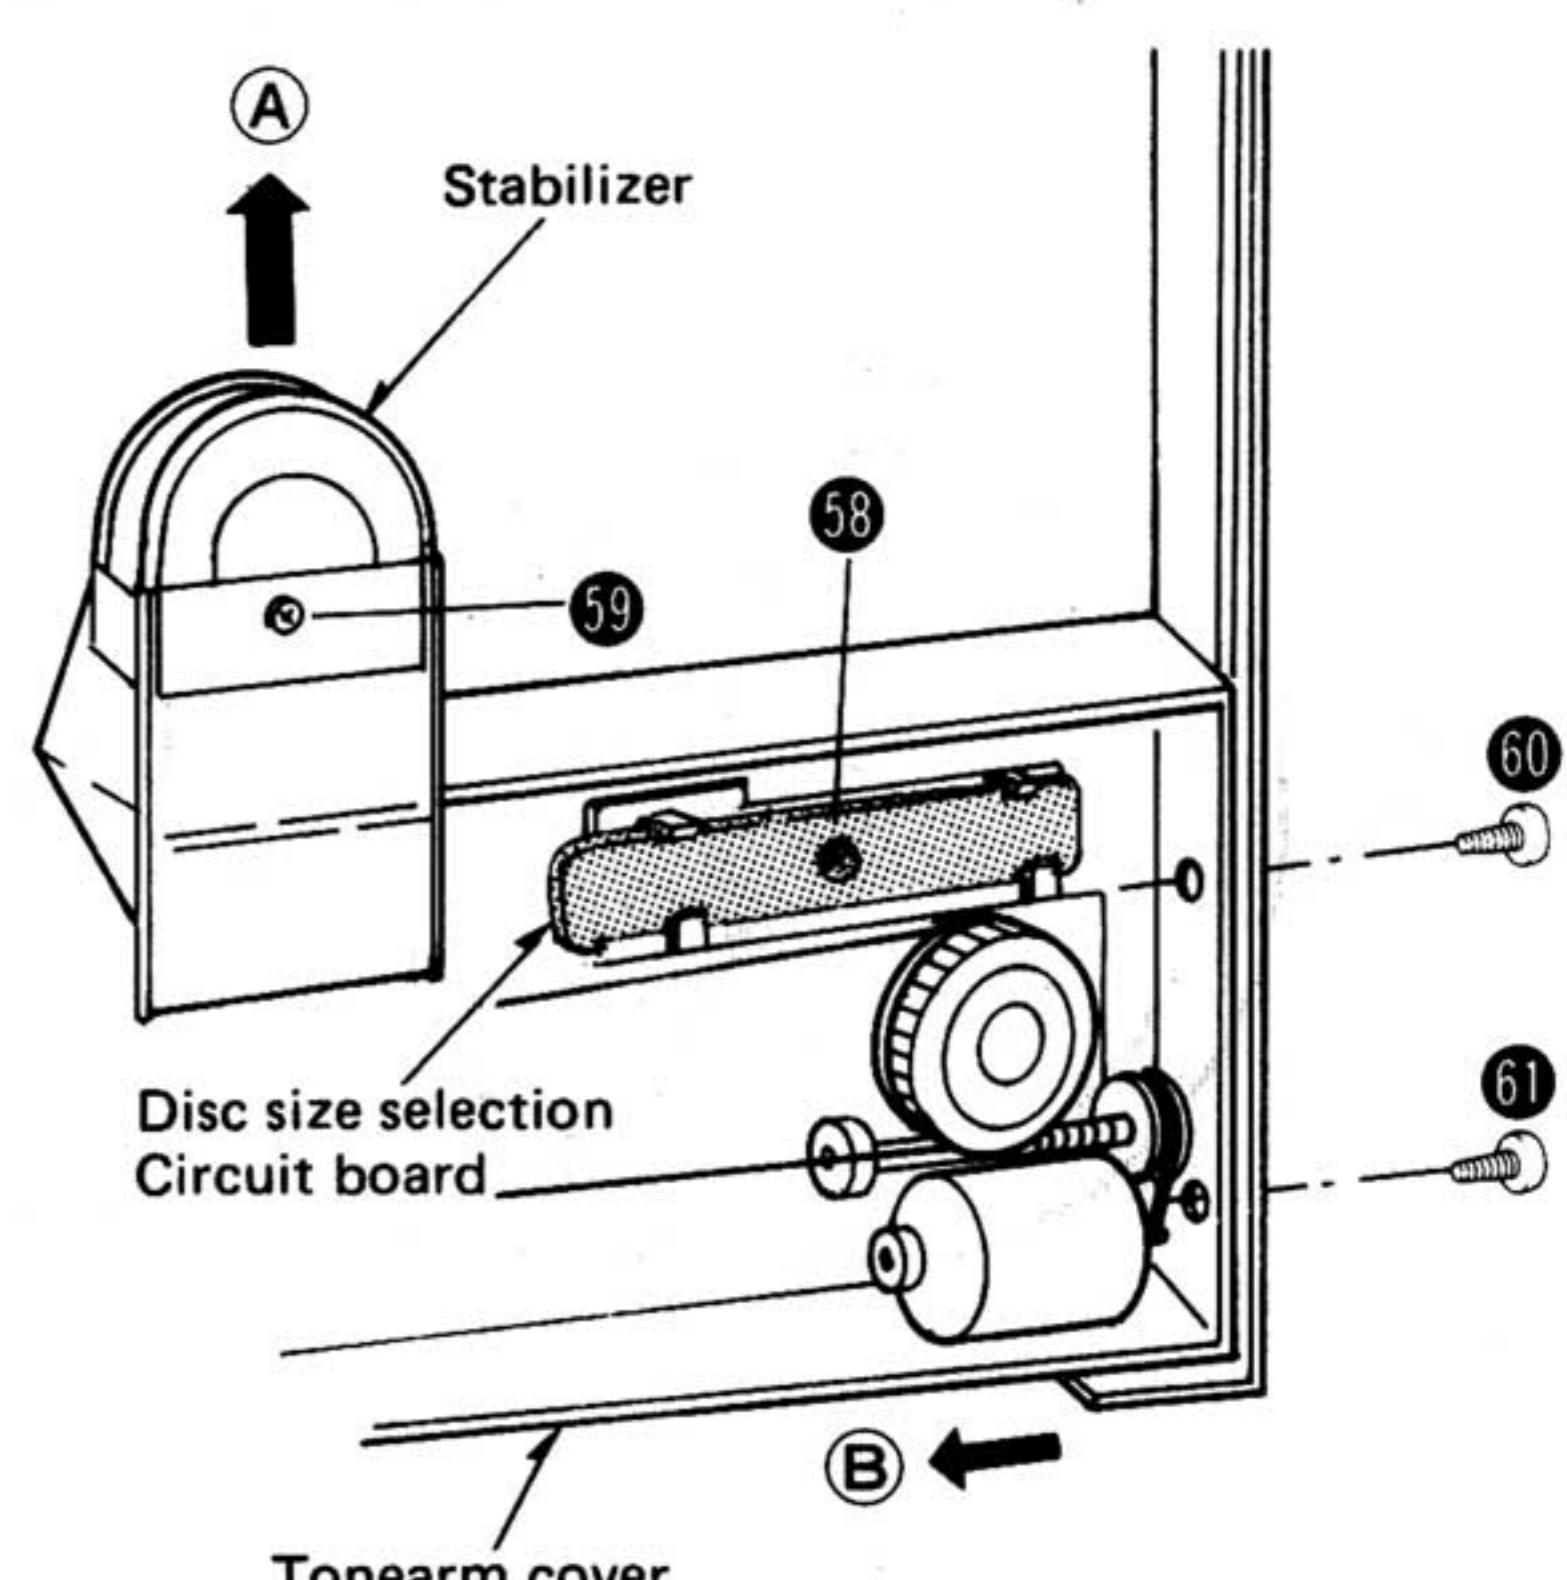

[Fig. 13]

[Fig. 14]

### ● How to remove the disc size selector (record size selection P.C.B.), stabilizer, and tonearm cover

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Remove the disc size selector setscrew (Fig. 15 : 58).
3. Remove the stabilizer setscrew (Fig. 15 : 59).
4. Remove the stabilizer in the direction of the arrow A.
5. Remove the tonearm cover setscrews (Fig. 15 : 60, 61).
6. Remove the tonearm in the direction of the arrow B.

[Fig. 15]

### ● How to remove the hinge

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Remove the body cover. (Refer to "How to remove the control knob cover".)
3. Remove the control knob cover. (Refer to "How to remove the control knob cover".)
4. Remove the hinge setscrews and stopper rings (Fig. 16 : ⑥② ~ ⑥⑥).
5. Remove the hinge in the direction of the arrow, and then remove the upper and lower side covers of hinge.

### \* To fit the hinge . . . .

1. Fit the upper side cover to the hinge. (Fig. 16 : A)

2. Fit the lower side cover to the hinge. (Fig. 16 : B)

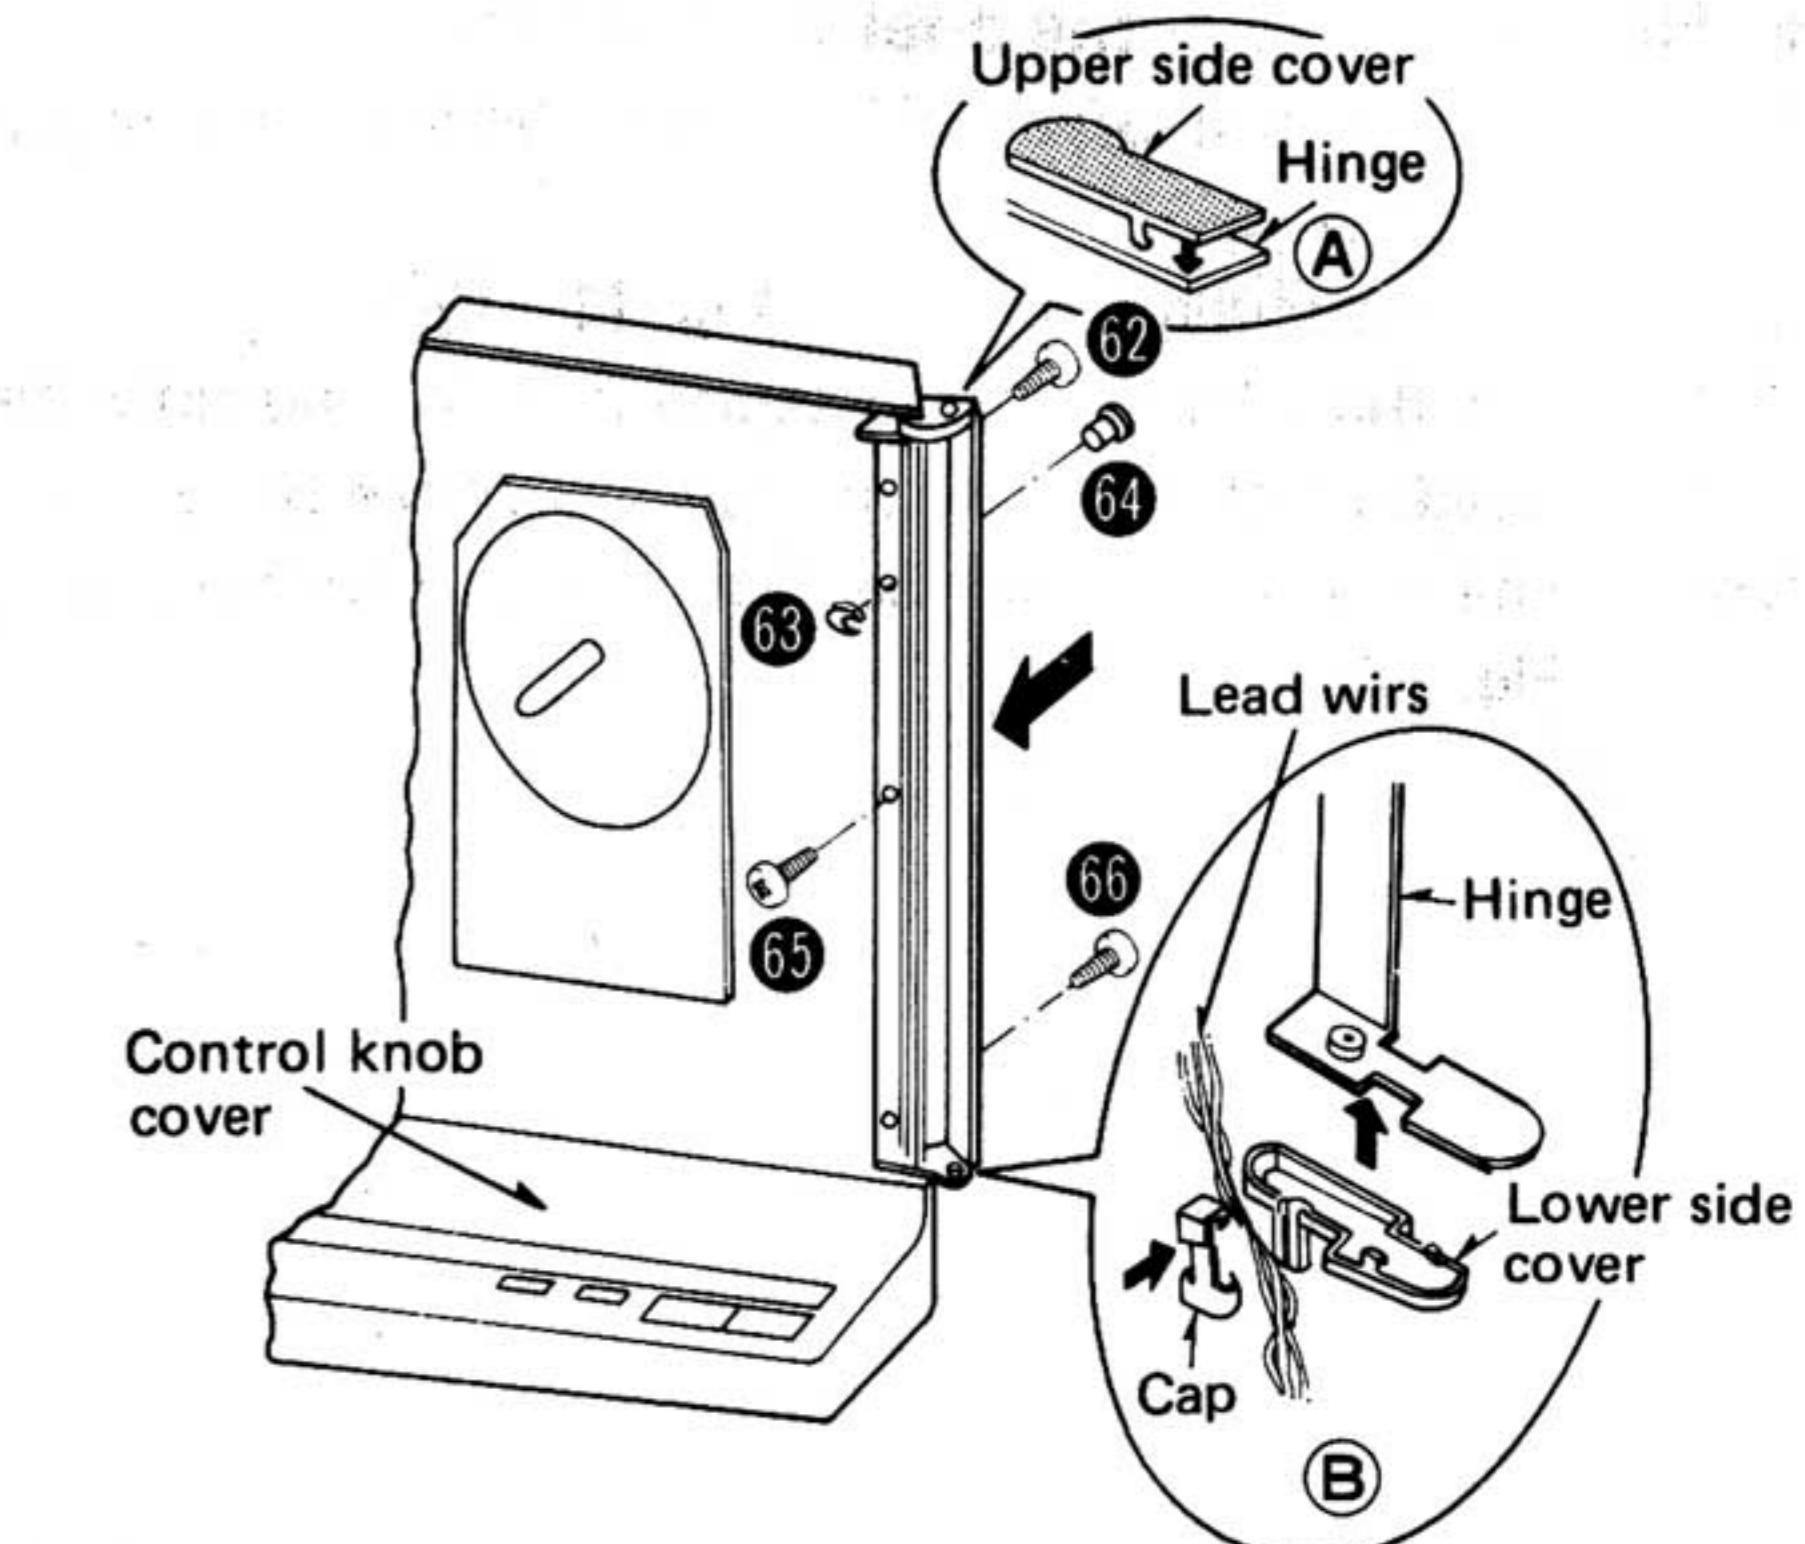

Note: Fit the leads in the lower side cover groove, and set with leads clammer.

3. Secure the hinge with setscrews (Fig. 16 : ⑥② ~ ⑥⑥).

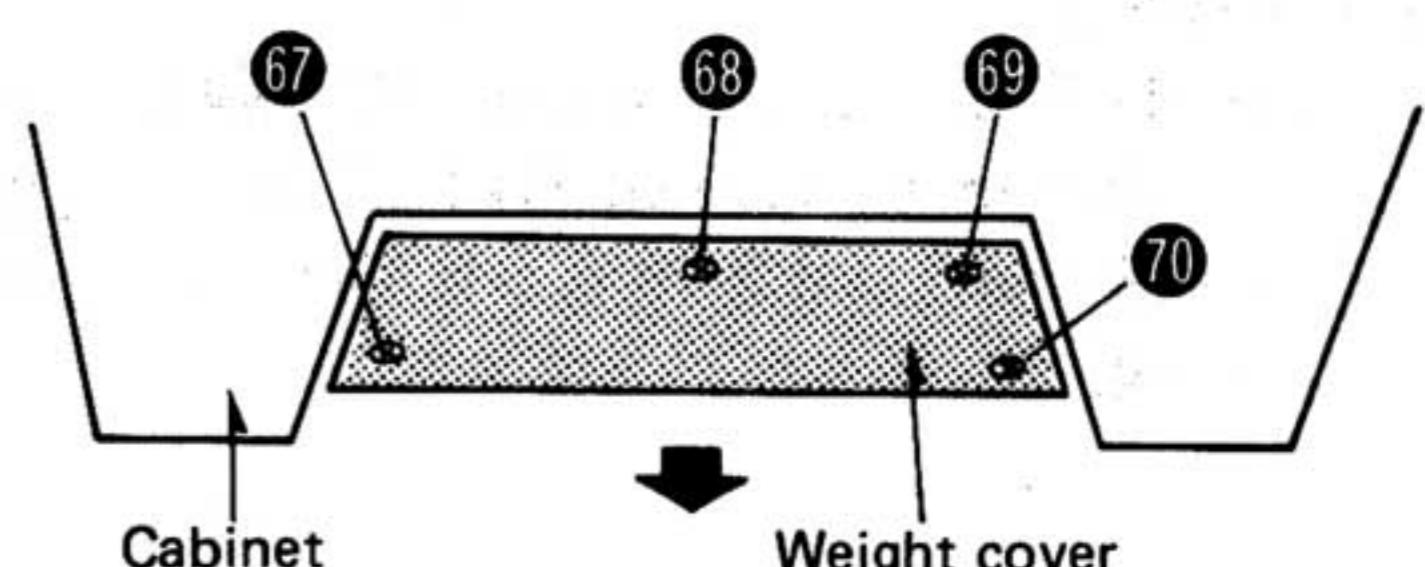

### ● How to remove the weight

Note: Remember to set the weight when the cabinet is replaced.

1. Lay down the unit with the front side up.
2. Remove the 4 setscrews (Fig. 17 : ⑥⑦ ~ ⑥⑩) of the weight cover.
3. Remove the cover in the direction of the arrow and take out the weight.

[Fig. 16]

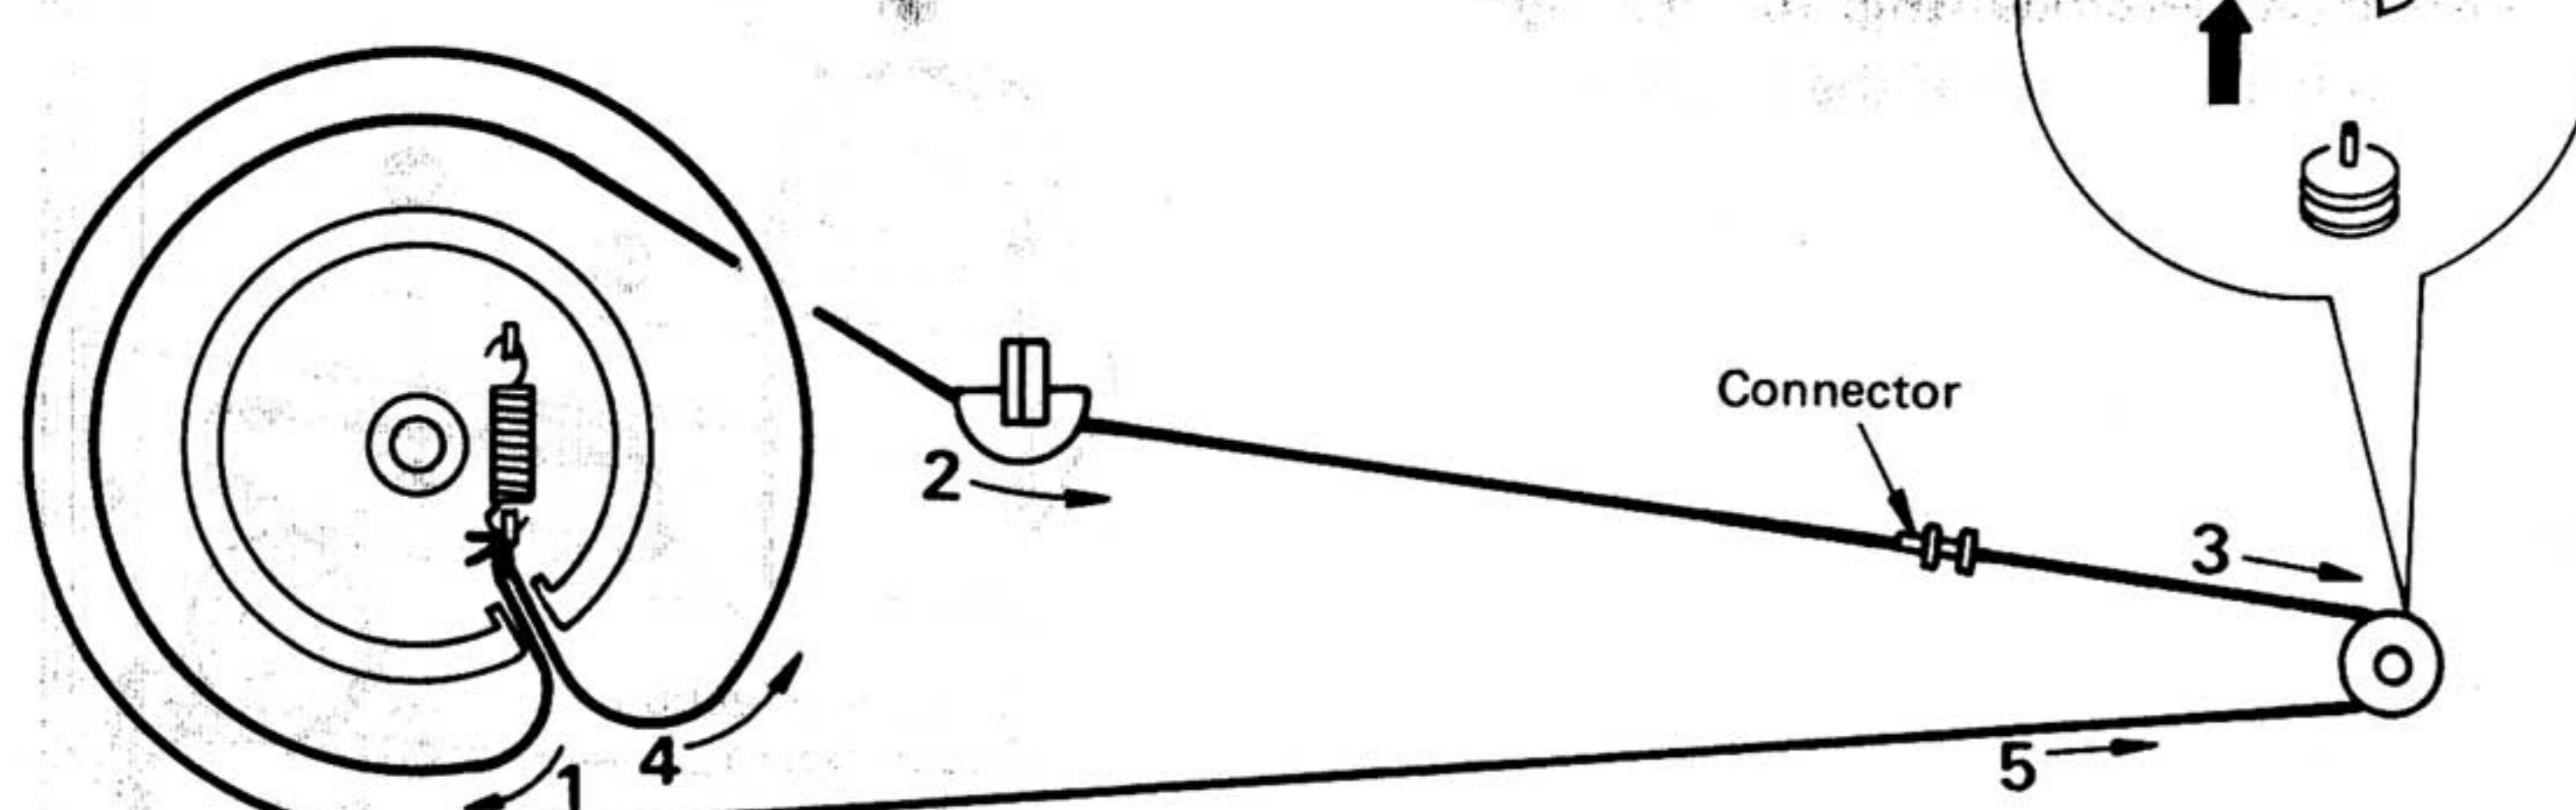

[Fig. 17]

## ■ HOW TO SET THE TONEARM DRIVE ROPE

Set the rope according to the following procedure.

1. Remove the dust cover. (Refer to "How to remove the dust cover".)
2. Remove the roller cover. (Fig. 18)
3. Set the rope in the order of 1 ~ 5. (Fig. 18)
4. Attach the rope connector to the tonearm.
5. Set the roller cover, and turn the worm gear by hand to see that the tonearm moves.

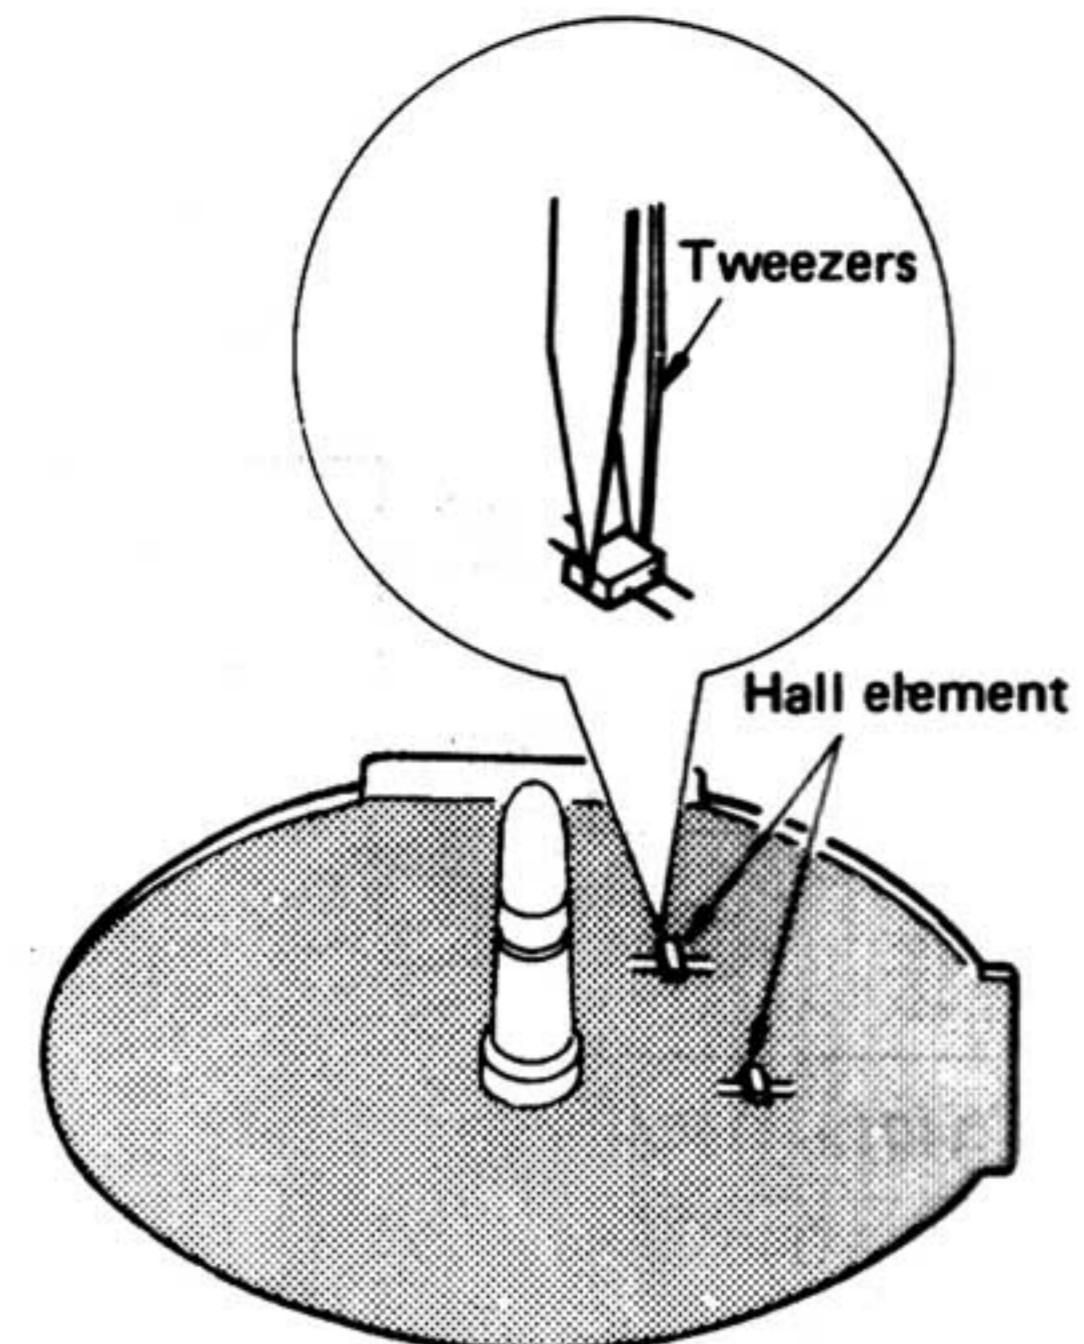

[Fig. 18]

### • How to remove Hall element

1. Remove the turntable platter.
2. Remove the terminal solder by use of solder sucker.
3. Hold the Hall element with a tweezers and remove it while touching the soldering iron to the terminal.

**Note:** Fit the Hall element with the part No. printed up. The reverse in terminal position is allowable provided that the printed side is up.

[Fig. 19]

## ■ HOW TO REPLACE CHIPS (RESISTORS)

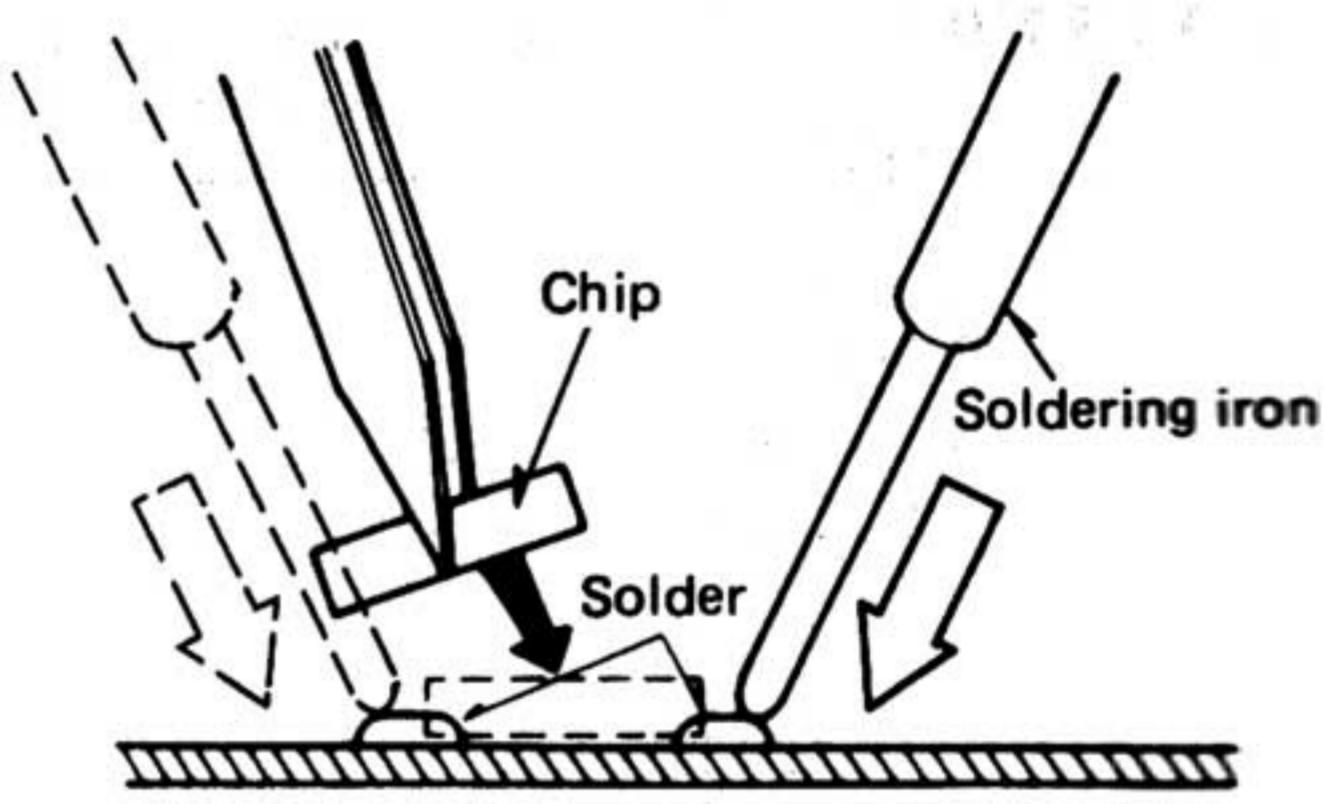

### • Replacing procedure

1. Put solder on the foil where the chip is fitted, and then solder the chip by touching the soldering iron to it as shown in Fig. 20.

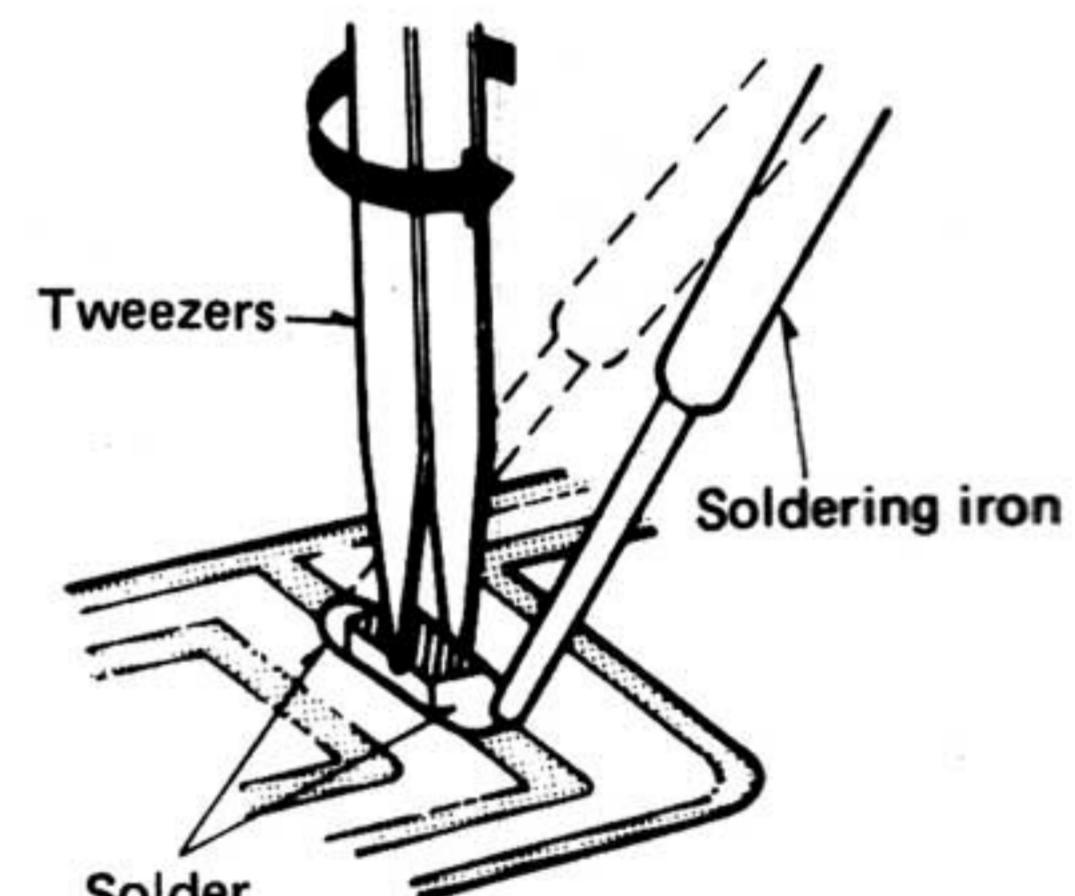

### • Removing procedure

1. Completely unsolder the both ends of the chip by use of solder sucker.
2. Remove chip with tweezers by rotating it while removing solder as shown in Fig. 21.

**Note:** Do not use chip again which is removed from P.C.B.

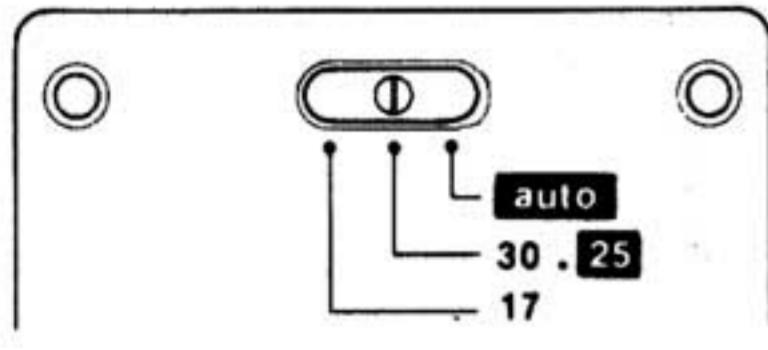

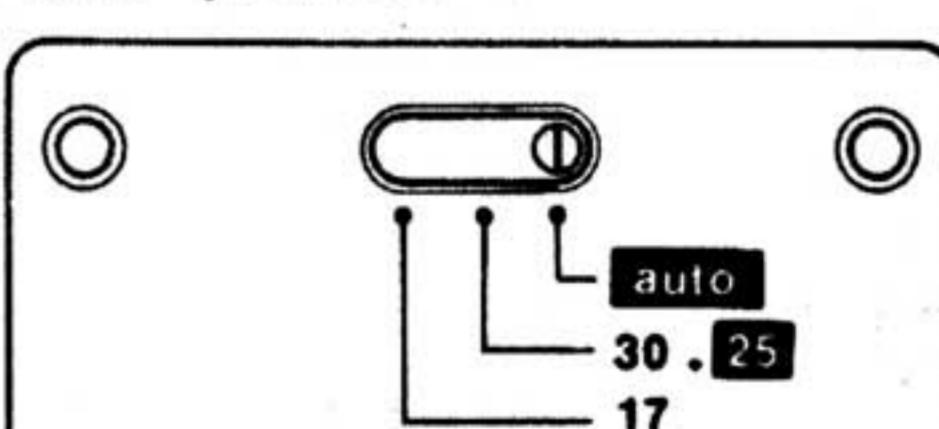

[Fig. 20]

[Fig. 21]

## ■ The turntable may not perform as expected when playing the following kinds of records.

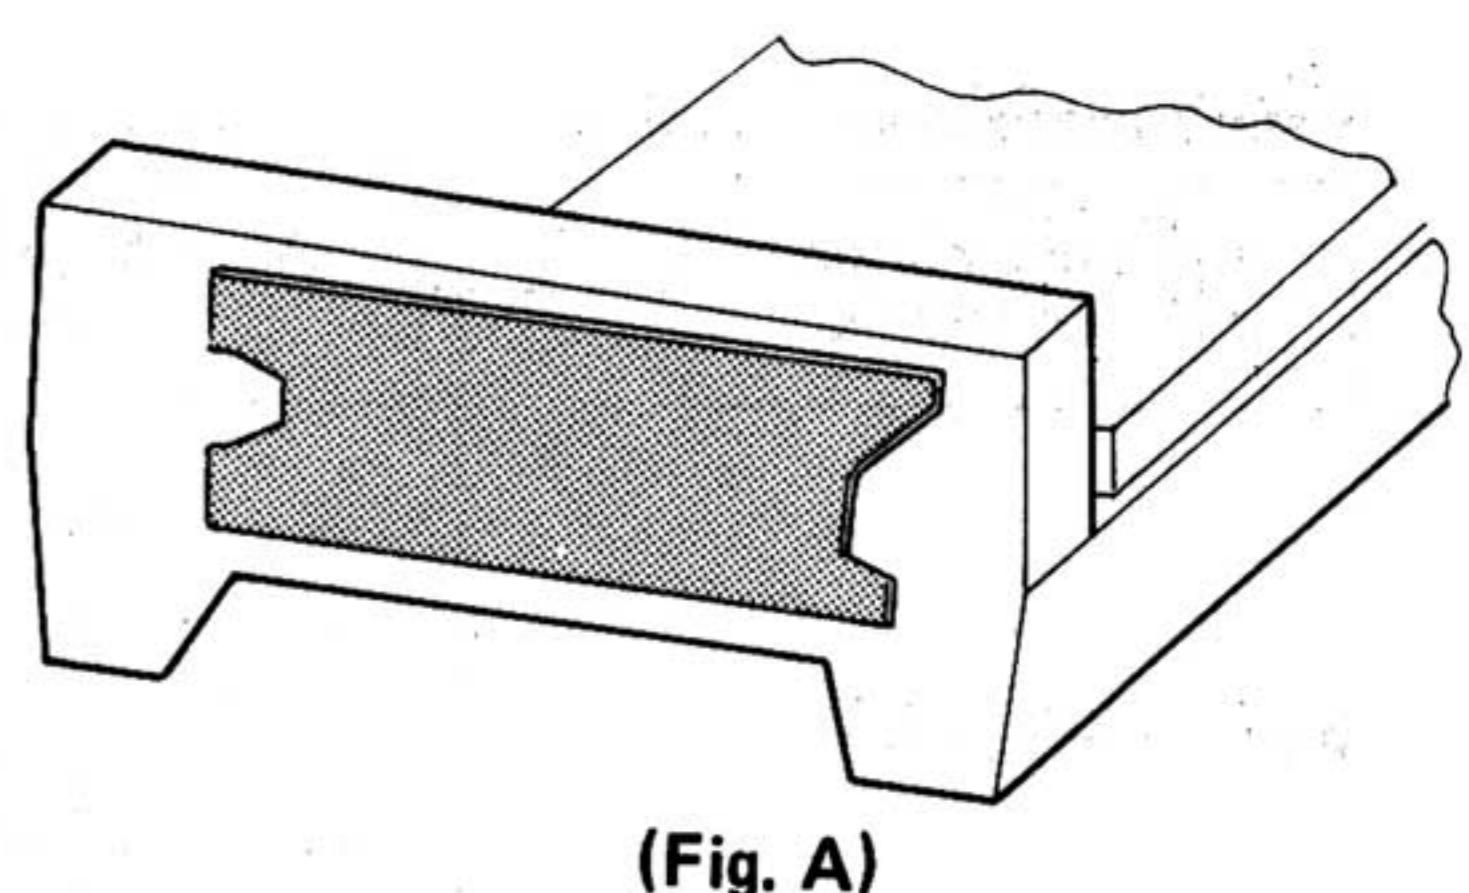

This does not mean that there is anything wrong with the turntable. In such cases, follow the directions below.

Record	Operation		Notes
■ 25 cm records.	 <ol style="list-style-type: none"> <li>1. Set the disc size selector at the "30. 25" position.</li> <li>2. Hold down the start switch so that the tonearm moves over to a position above the desired record's lead-in grooves.</li> <li>3. Push the cueing control.</li> </ol>		<ul style="list-style-type: none"> <li>Ordinarily, the disc size selector should be left at the "auto" position.</li> </ul> 
■ Records that are transparent, colored or translucent black-any record that does not completely block light.	30 cm record	<ol style="list-style-type: none"> <li>1. Set the disc size detector at the "30. 25" position.</li> <li>2. Use with the auto play or search play mode.</li> </ol>	<ul style="list-style-type: none"> <li>Repeat play is not possible for 25 cm records or records that do not meet the industry standard dimensions because size is not automatically detected.</li> <li>Set the speed selector to 33 or 45 depending on the correct speed for the record in question.</li> <li>In some cases it is not possible to play records that do not meet the industry standard dimensions.</li> </ul>
	17 cm record	<ol style="list-style-type: none"> <li>1. Set the disc size detector at the "17" position.</li> <li>2. Use with the auto play or search play mode.</li> </ol>	

## ■ CHECKING METHOD (Refer to "Disassembly Instructions")

### 1. Main P.C.B. checking method (Fig. A)

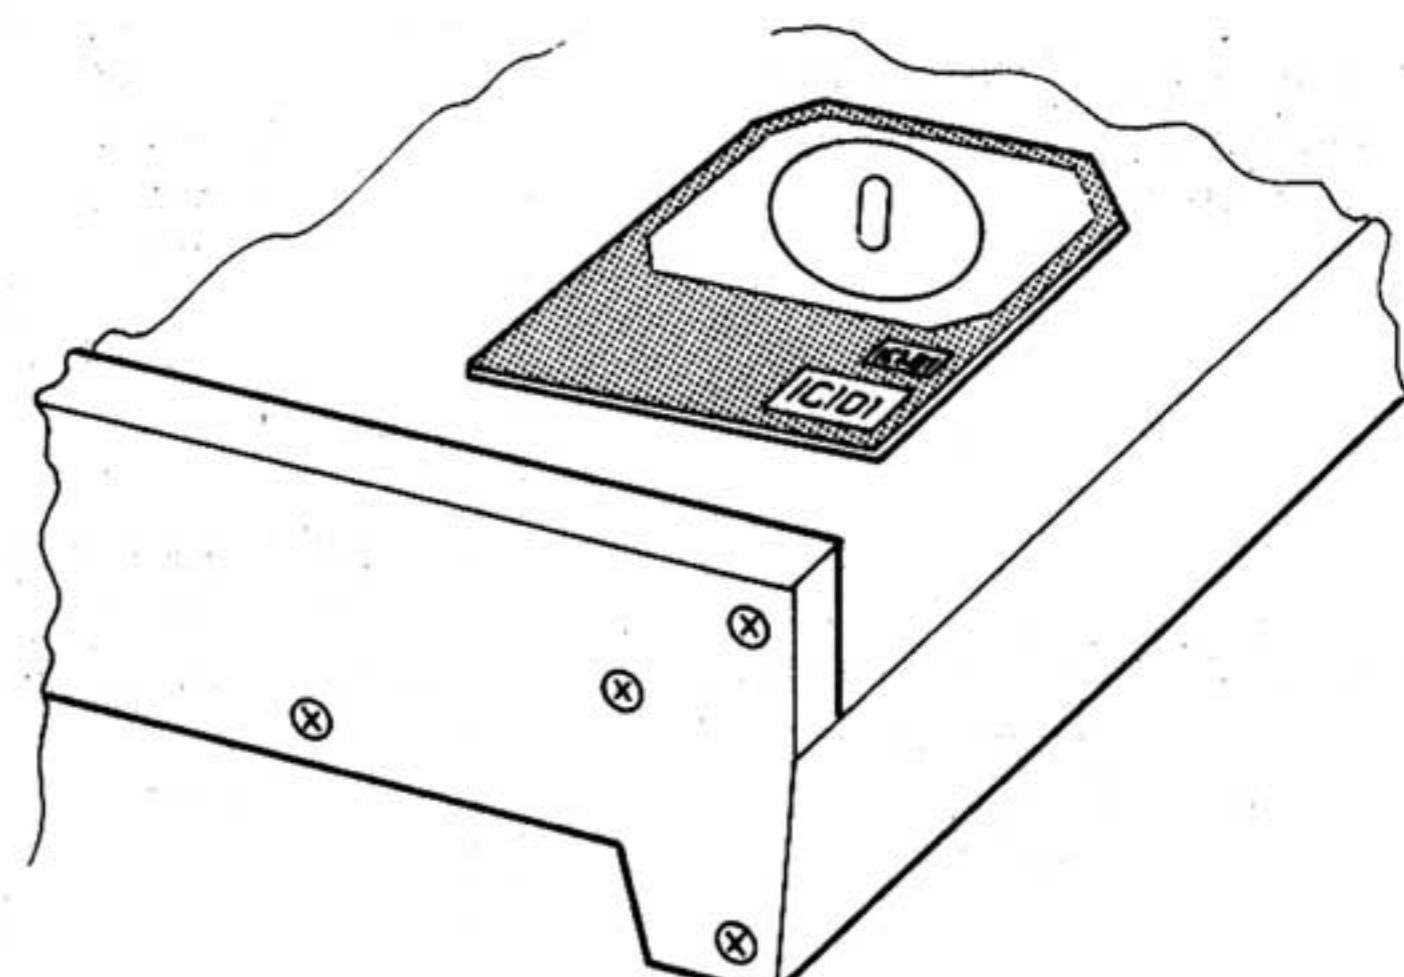

- 1) Lay down the unit.
- 2) Remove the bottom plate.
- 3) Put on the record and check each circuit from the bottom of the unit.

(Fig. A)

### 2. Turntable drive circuit checking method (in stop mode) (Fig. B).

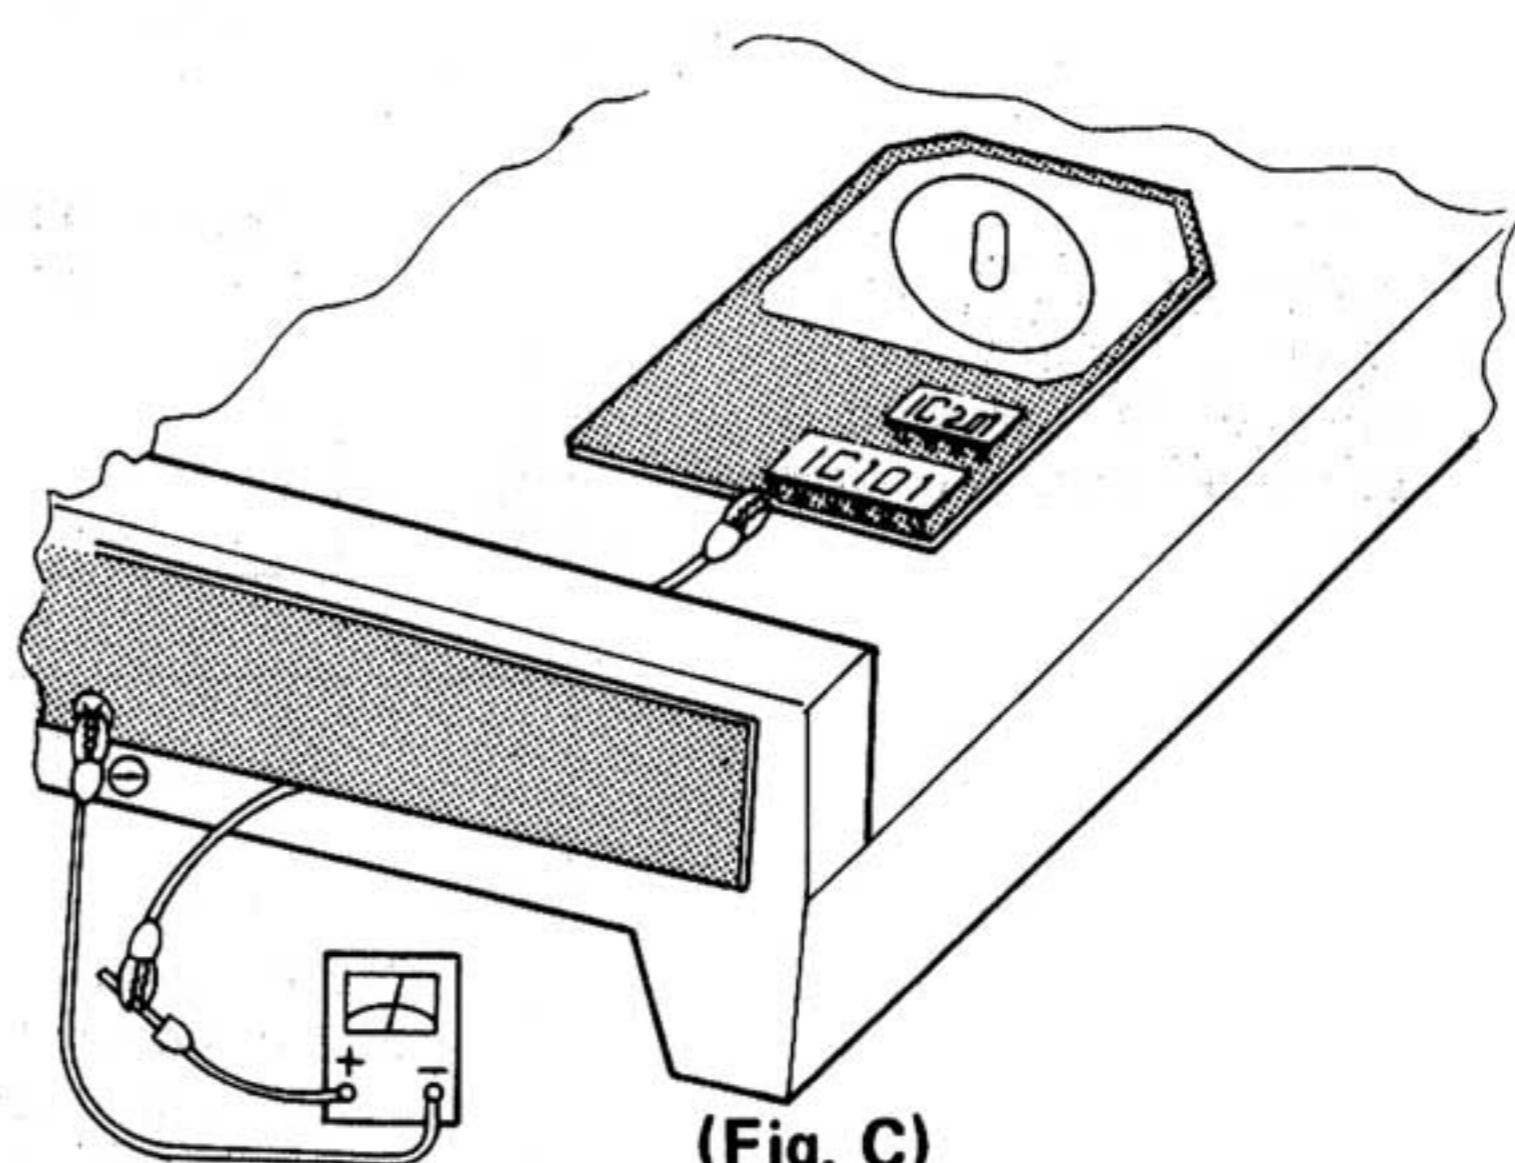

- 1) Lay down the unit.
- 2) Open the front cabinet.
- 3) Remove the turntable platter.
- 4) Turn on the on/off switch and check the drive circuit.

(Fig. B)

### 3. Turntable drive circuit checking method (in operation mode) (Fig. C)

- 1) Lay down the unit.
- 2) Remove the bottom plate.
- 3) Open the front cabinet and remove the turntable platter.
- 4) Insert the lead into the gap at the bottom and connect it to the probe. (When use oscilloscope and tester)
- 5) Set the turntable platter and turn on the power switch to start the turntable.
- 6) Check the circuit in turntable operation mode.

(Fig. C)

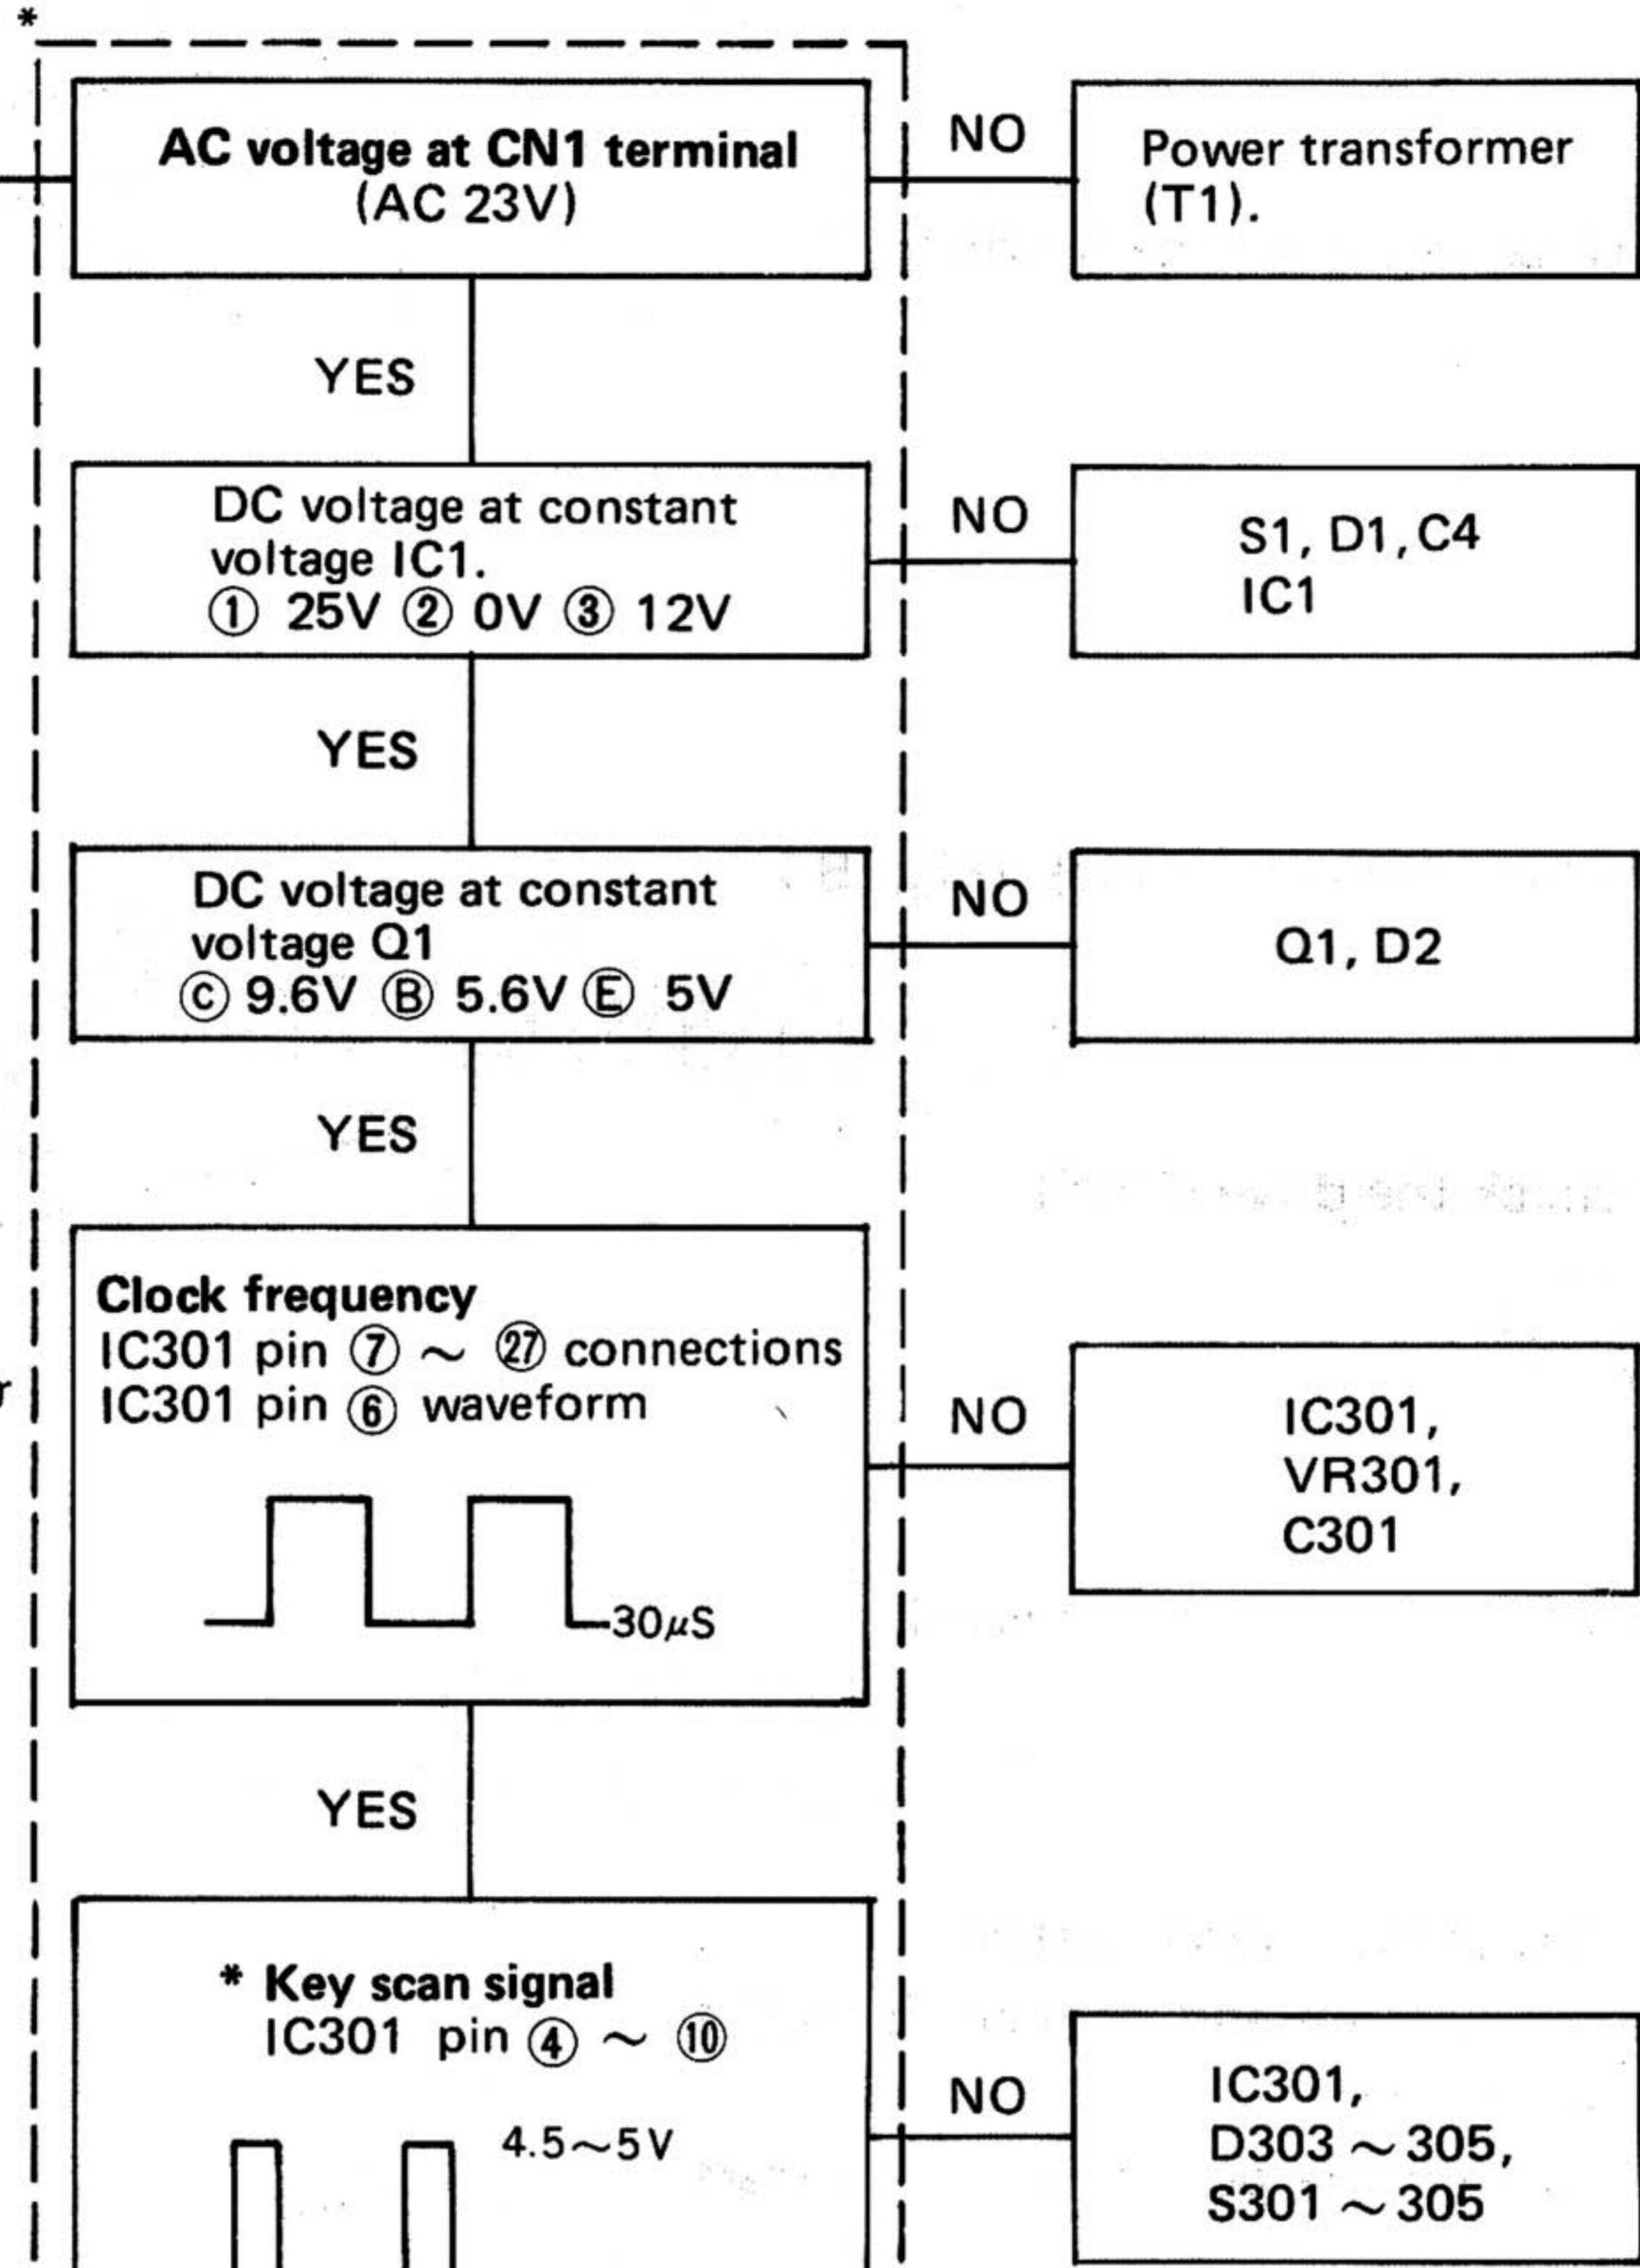

### 4. Offset angle detecting sensor and Arm position detecting Hall IC checking method

- 1) Remove the dust cover.
- 2) Check each circuit.

# ■ TROUBLE SHOOTING

Refer to checking method 1.

**Turntable platter does not rotate.**

\* C, B, E of transistor stand for

- (C) : Collector
- (B) : Base
- (E) : Emitter

\* IC301 pin ⑦, ⑧, and ⑯ emit signal when key switch is pushed or speed selector is operated.

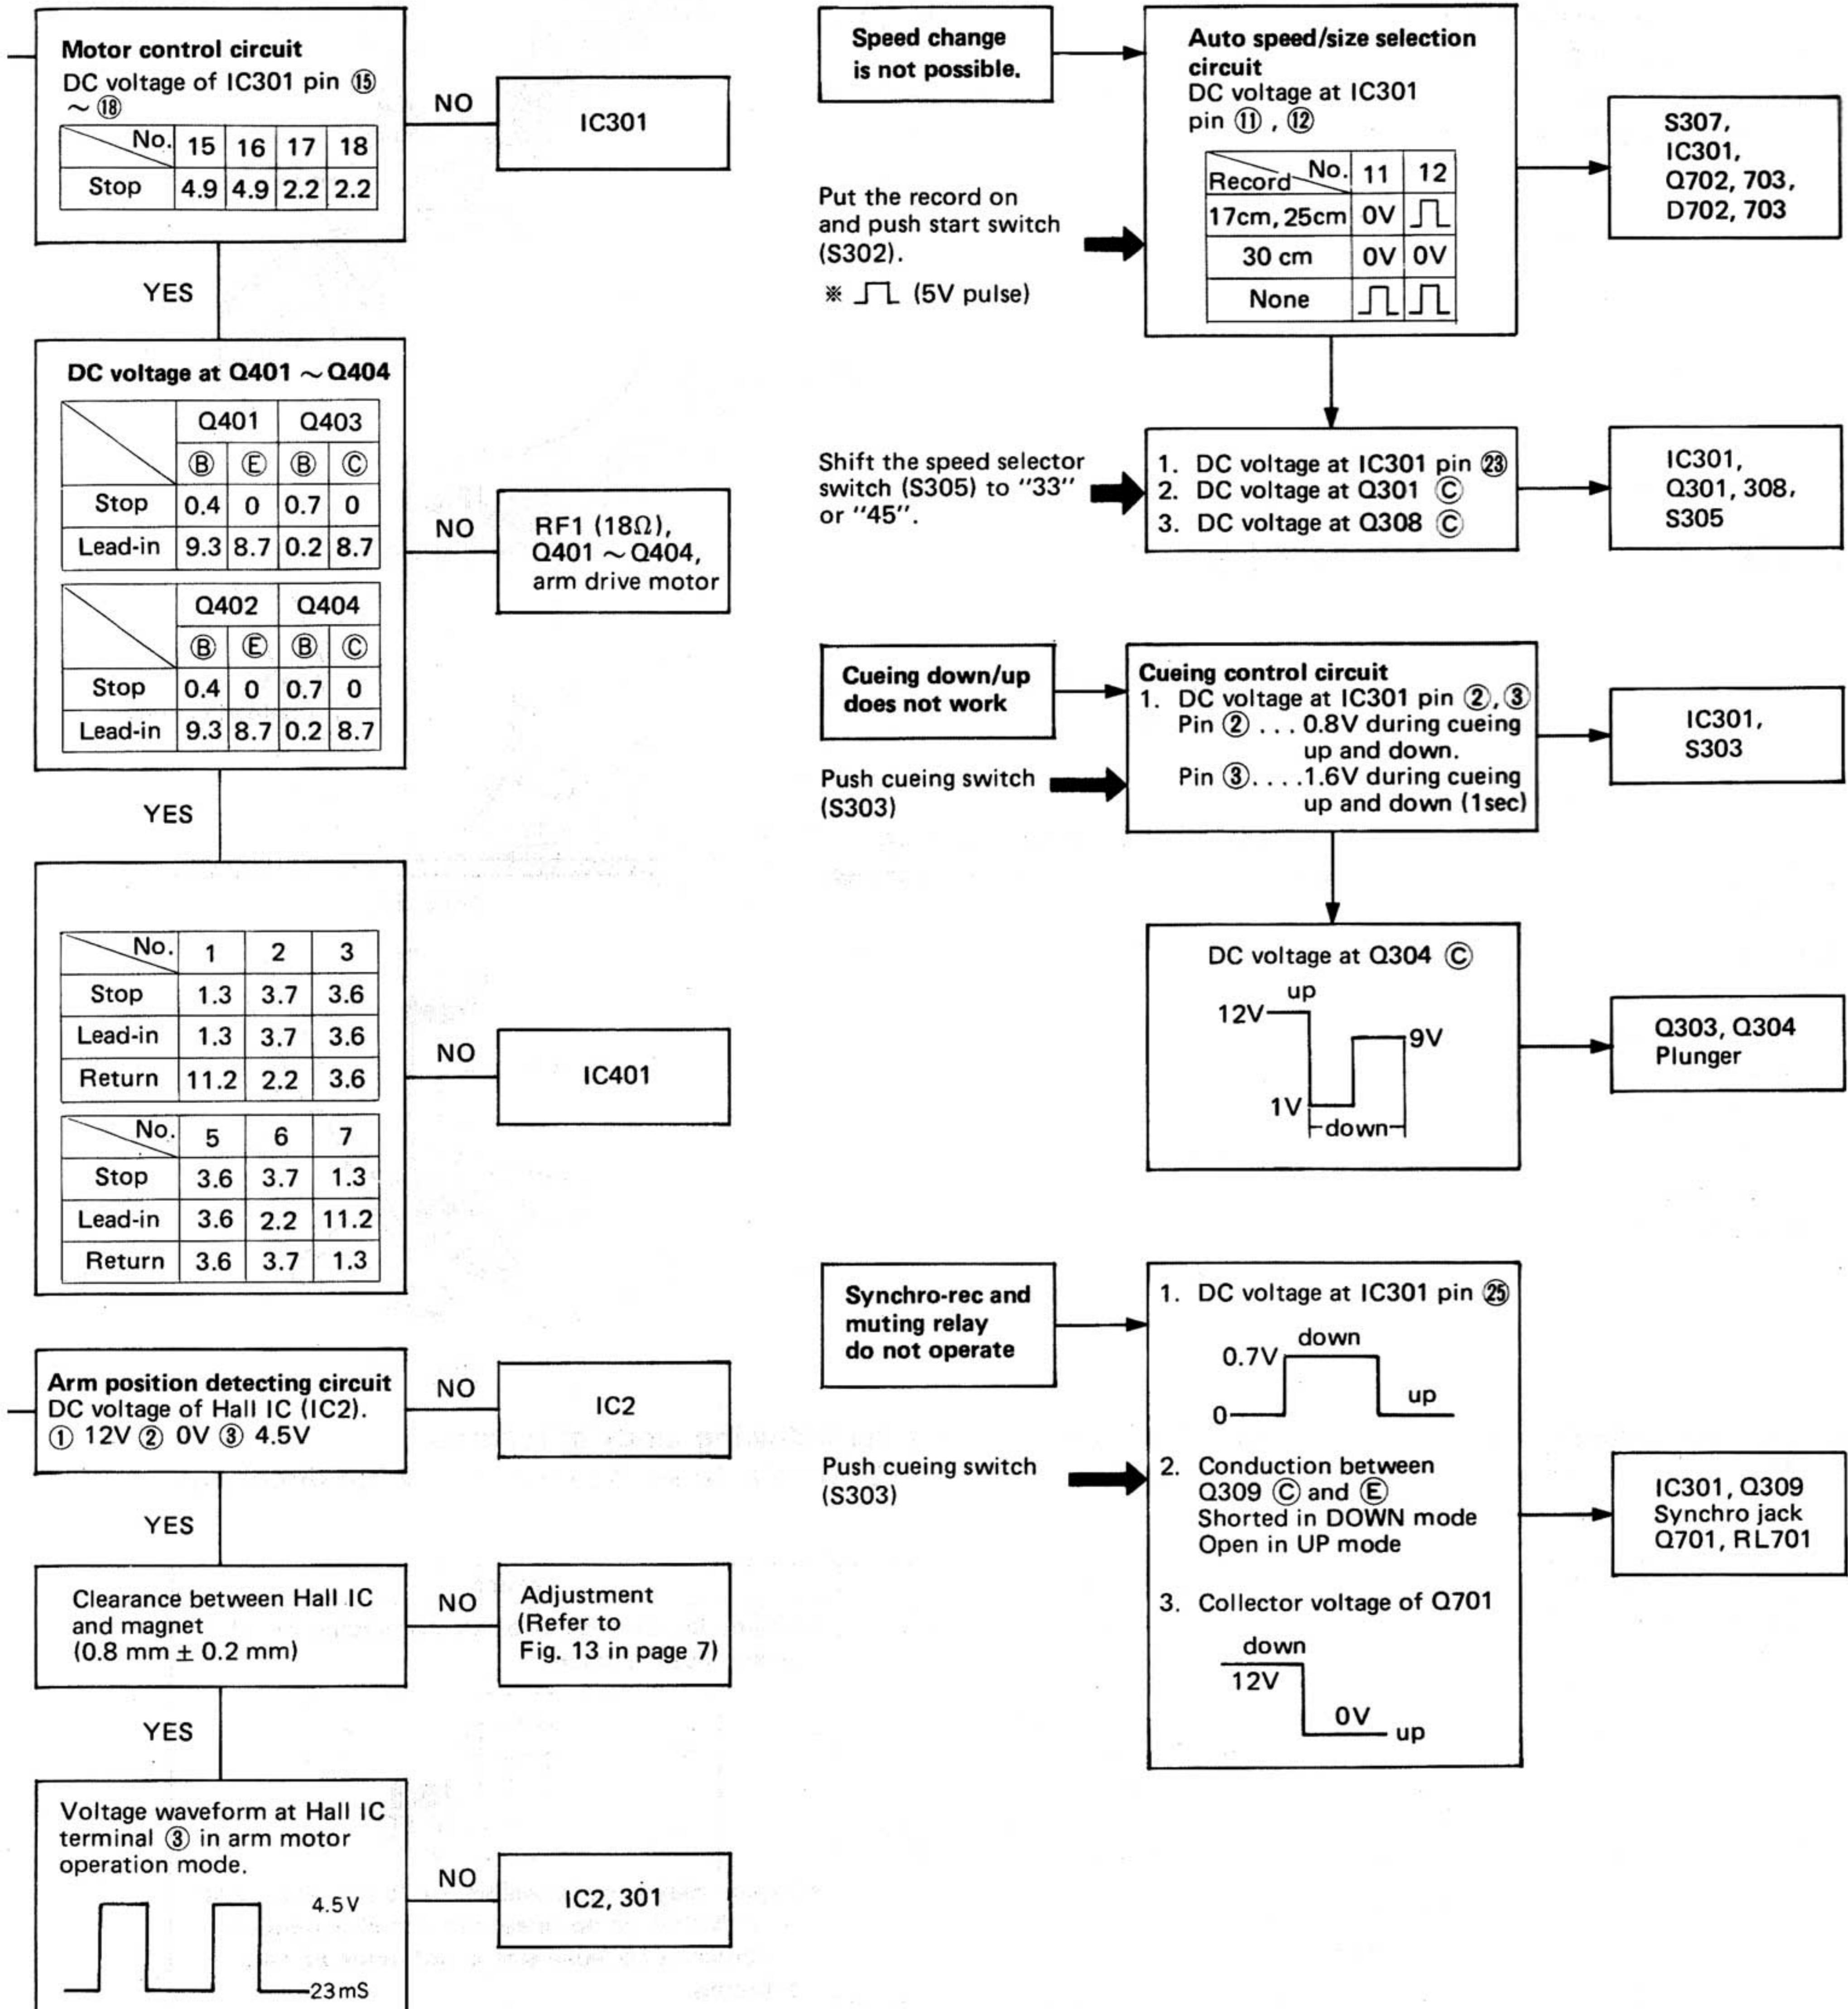

Push the start switch (S302)

Refer to checking method 2.

Refer to checking method 3.

1. Coil conduction check  
A1 ~ A1 .... 0Ω  
A3 ~ A4.... 0Ω
2. Hall element DC voltage check  
Voltage at pin ①, ③ of H1 and H2 is half of the voltage at pin ②.... Normal
3. Check DC voltage at IC101 and IC201.  
Refer to the voltage in circuit diagram.
4. FG coil conduction check  
..... 0Ω

1. Refer to the voltage and waveform in circuit diagram.

## ■ MEASUREMENTS AND ADJUSTMENT

### • Equipment used and condition of the set

- 1. Oscilloscope
- 2. DC voltmeter
- 3. 30 cm record
- 4. Screwdrivers +, -
- 5. Hex. rod wrench (M3)

Step	Item	Preparations	Portion	Procedure
1	Start position	1. Put 30 cm record on and close the front cabinet. 2. Turn on the on/off switch. 3. Push the start switch.	Start position screw (Fig. 22)	1. Open the front cabinet. 2. If the tonearm drops between tunes, adjust it by turning the screw counterclockwise. 3. If the tonearm drops to outside the record, adjust it by turning the screw clockwise.
2	Tonearm offset angle	1. Open the front cabinet, and hold the cabinet switch with tape. 2. Blind the 2 inside light guide slits with 2 black tapes. 3. Turn on the on/off switch. Push the start switch to shift the tonearm inward.	Offset angle adjustment screw (Fig. 24)	1. Turn the offset angle adjustment screw so that the tonearm center matches the V-groove of lift rod.
3	Servo gain	1. Connect the voltmeter to CN303 terminal 3 (+) and 2 (-) of main P.C.B. (Fig. 23) 2. Turn on the on/off switch.	VR501 (Fig. 25)	1. Completely shift the tonearm to the right. 2. Adjust the VR501 so that the output voltage is 3.6V.
4	Offset voltage	1. Connect DC voltmeter to CN303 terminal ③ (+) and ② (-) of main P.C.B. (Fig. 23) 2. Turn on the on/off switch.	Offset voltage adjustment screw (Fig. 25)	1. Shift the tonearm to the center. 2. Turn the adjustment screw so that the output voltage is 1.8V. (Use hex. rod wrench.)
5	Clock frequency	1. Connect Q1 emitter and IC301 pin ⑦ with a jumper. (Fig. 23) 2. Connect the oscilloscope to IC301 pin ⑥.	VR301 (Fig. 23)	1. Turn on the on/off switch. 2. Adjust VR301 so that the output waveform cycle is $30\mu s \pm 1\mu s$ .
6	Rotating speed	1. Open the front cabinet, and put the record on.. 2. Put the stroboscope on. 3. Close the front cabinet.	VR201 (45 r.p.m.) VR202 (33 r.p.m.)	1. Turn on the on/off switch. 2. Set the speed selector switch to 45 r.p.m. 3. Adjust VR201 so that the speed is at the rating speed (45 r.p.m.). 4. Set the speed selector switch to 33 r.p.m. 5. Adjust VR202 so that the speed is at the rating speed (33-1/3 r.p.m.). <b>Note:</b> Be sure to adjust the speed 45 r.p.m. first.

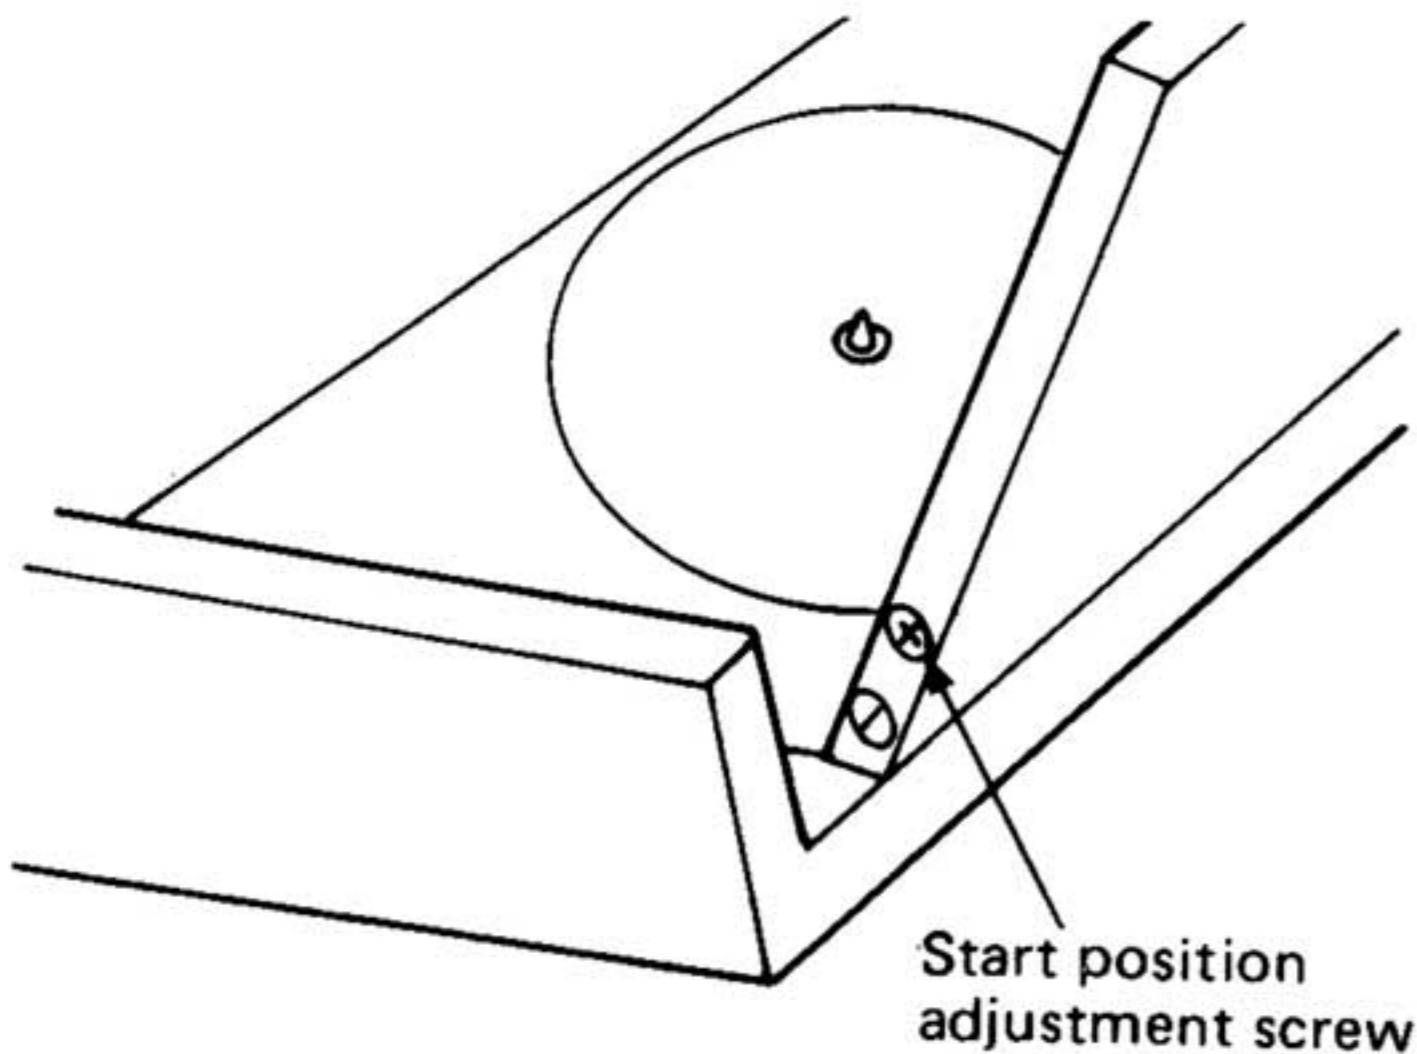

## ■ TERMINAL DESCRIPTION OF MN1421FPC

\* Mentioned here are the basic functions of the MN1421FPC.

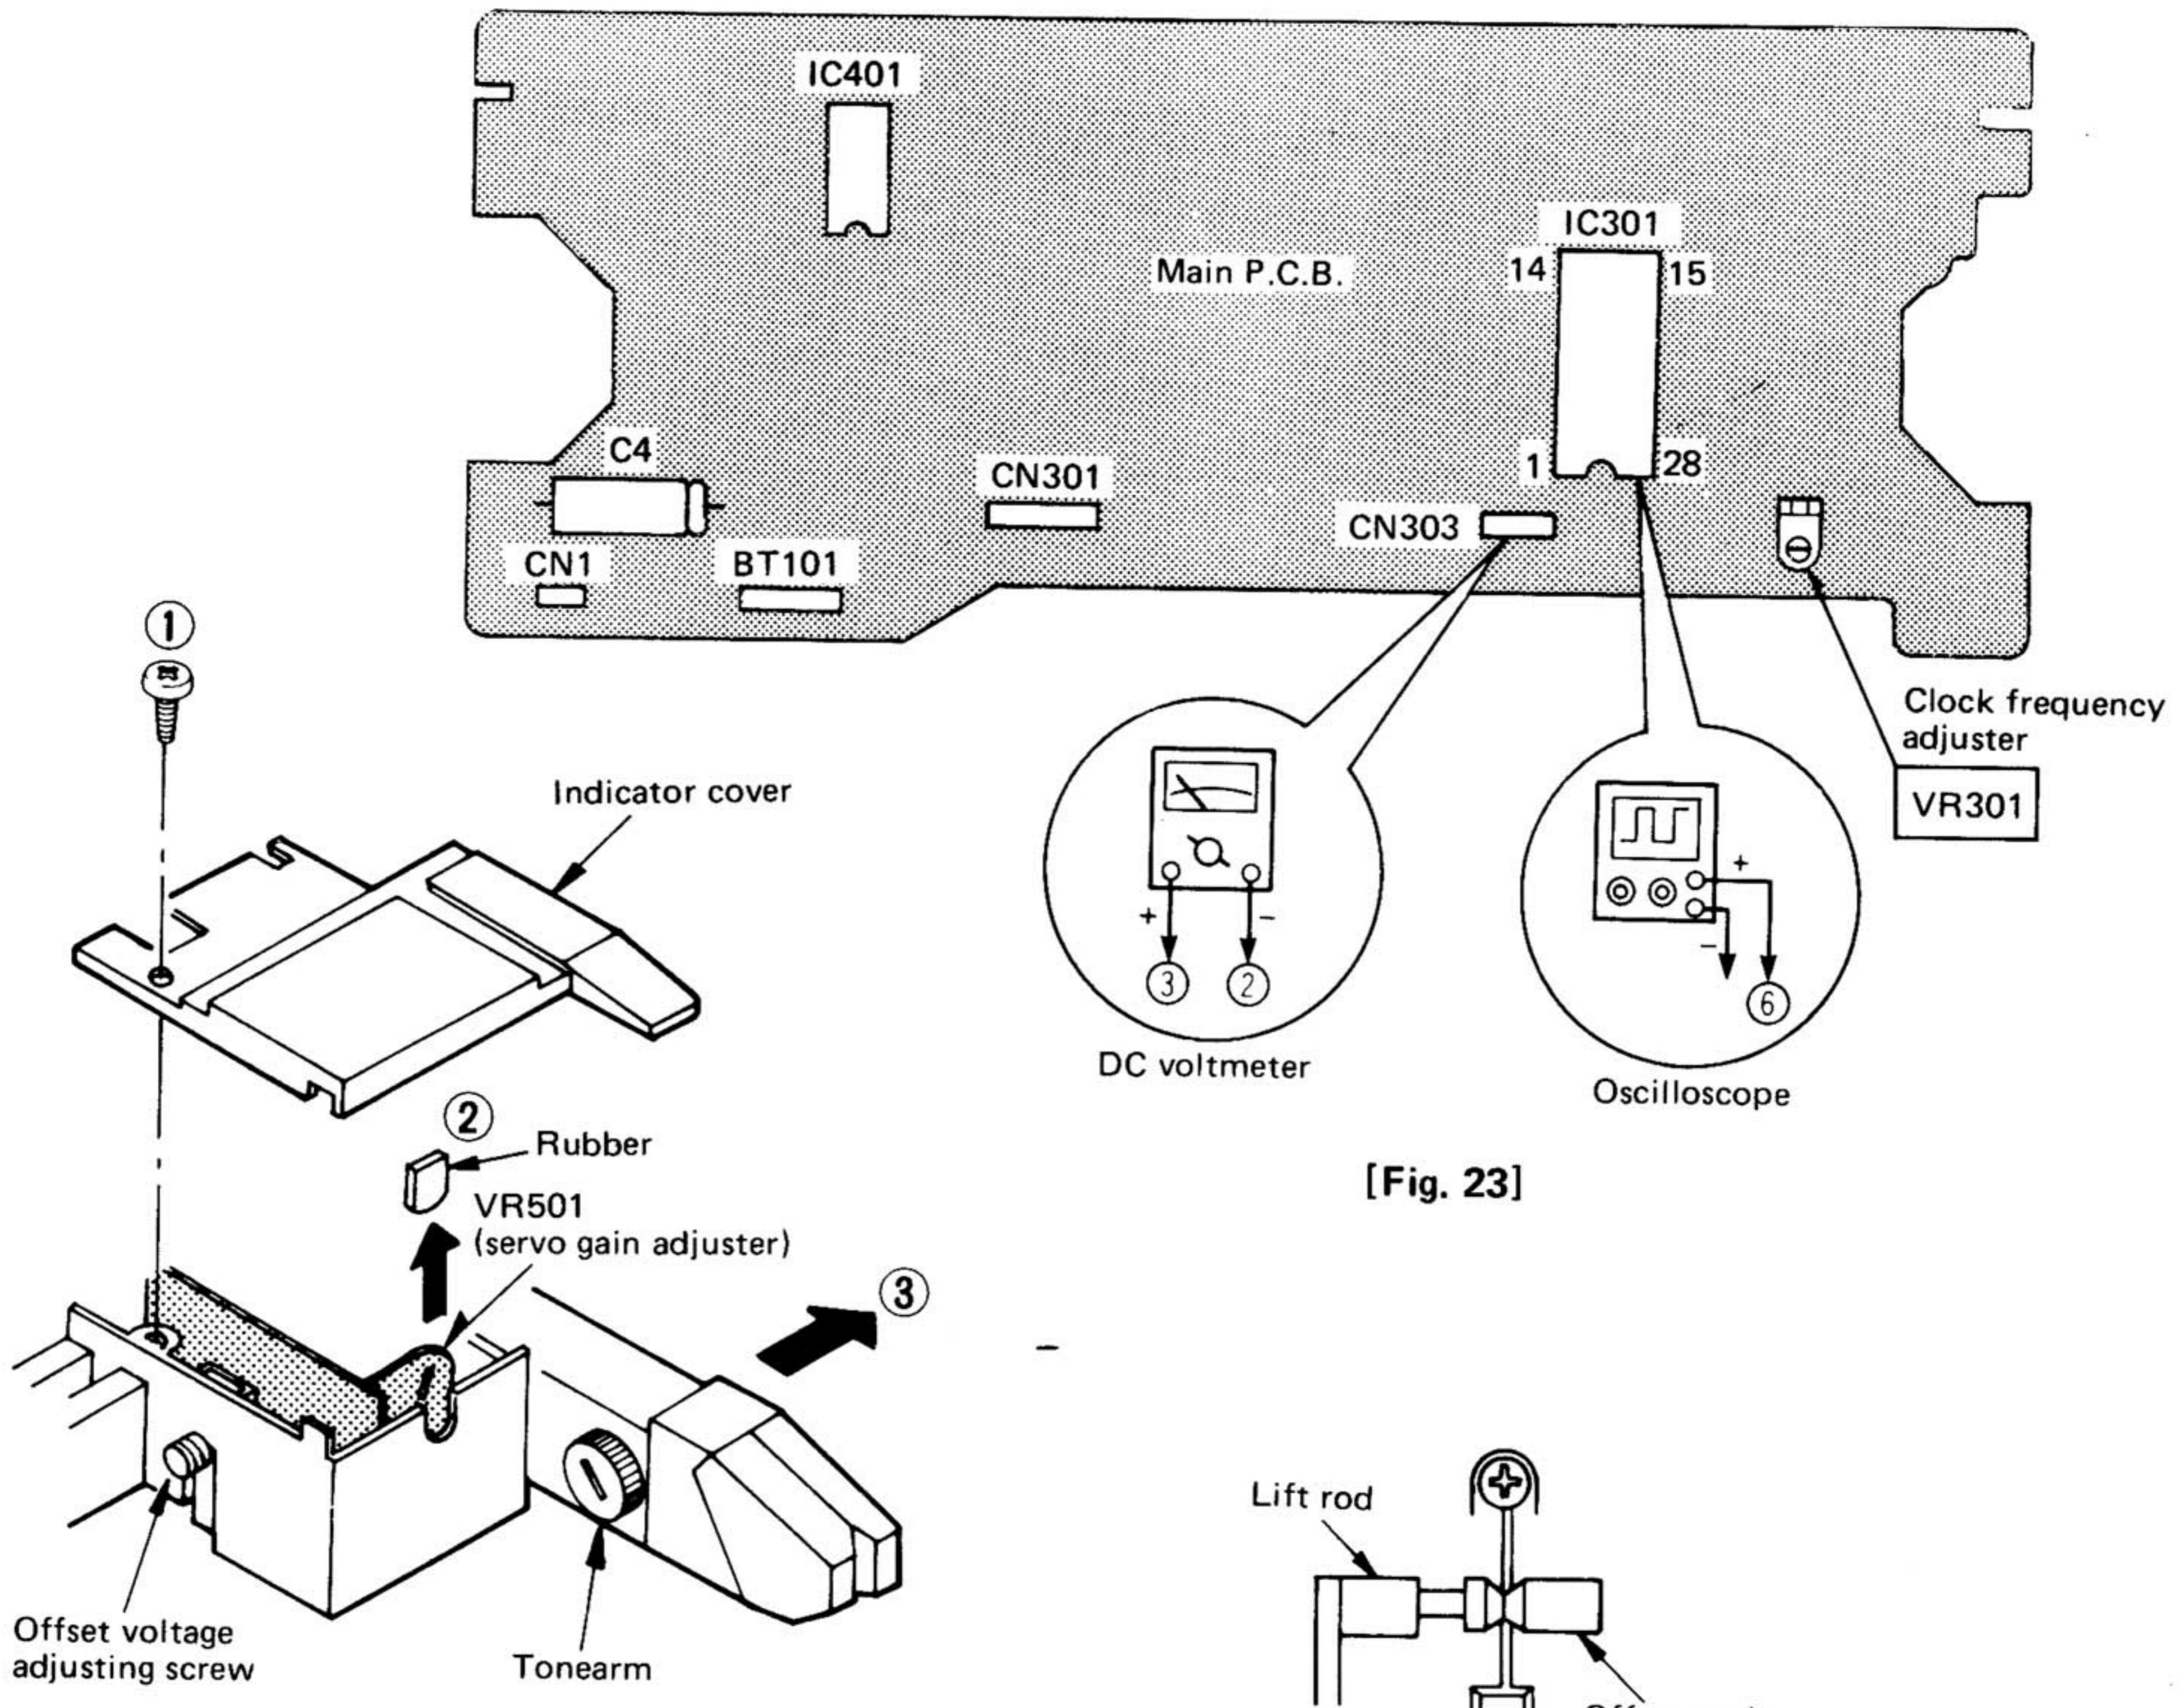

So, there may be terminals not needed or partial change in circuit function depending on the using method.

No.	Symbol	Description	No.	Symbol	Description
1	VSS	Grand terminal	11 12	Bi3 Bi2	Auto size and speed change terminals (Terminals ⑪, ⑫ at "L" → 30 cm record 33 r.p.m. ⑪ at "L", ⑫ at "H" → 17 cm record 45 r.p.m.)
2	CO9	Cueing control terminal ("H" during cueing up and down)			
3	CO8	Cueing control terminal ("H" only during cueing down for about 1 sec.)	13	Bi1	Rest position detecting terminal ("H" when tonearm is in rest position.)
4 5 6	CO7 CO6 CO5	Key scan output terminal	14	Bi0	Cabinet open/close detecting terminal
7 8 9 10	Ai3 Ai2 Ai1 Ai0	Key scan input terminal	15 16 17 18	EO0 EO1 EO2 EO3	Tonearm drive motor control terminal (arm servo)
			19	TEST	Test terminal (nut used, connected to grand)
			20	RST	Reset terminal (micon is reset at "L")

No.	Symbol	Description	No.	Symbol	Description
21	SNS1	Offset angle detecting output/input terminal	25	DO2	Synchro-rec on/off terminal ("L" at on; "H" at off)
22	SNS1	Arm position detecting input terminal	26	DO3	Turntable platter start/stop terminal ("L" at start; "H" at stop)
23	DO0	Turntable platter speed change terminal ("H" at 45 r.p.m.; "L" at 33 r.p.m.)	27	VDD	Power supply (+5V)
24	DO1	Repeat indicator terminal (ON at "L")	28	OSC	Oscillation terminal (clock frequency is adjusted to $30\mu s \pm 1\mu s$ )

[Fig. 22]

[Fig. 25]

[Fig. 24]

# ■ REPLACEMENT PARTS LIST...Electric Parts

- Notes:**
- Part numbers are indicated on most mechanical parts.
  - Important safety notice:  
Components identified by **▲** mark have special characteristics important for safety.  
When replacing any of these components, use only manufacturer's specified parts.
  - Bracketed indications in Ref. No. columns specify the area.  
Parts without these indications can be used for all areas.
  - The " **S** " mark is service standard parts and may differ from production parts.
  - The parenthesized numbers in the column of description stand for the quantity per set.

## Areas

\* [M] is available in U.S.A.  
\* [MC] is available in Canada.

Ref. No.	Part No.	Description
<b>INTEGRATED CIRCUITS</b>		
IC1	AN7812	Regulator
IC2	DN6838S	Arm Position Detector
IC101	AN6636	Drive
IC201	AN6552	F.G.Amplifier & Constant Voltage (Hall Element)
IC301	MN1421FPC	Micro Computer Operation
IC401	AN6554	Amplifier
<b>TRANSISTORS</b>

# ■ RESISTORS AND CAPACITORS

- Notes:**
- Part numbers are indicated on most mechanical parts.  
Please use this part number for parts orders.
  - Important safety notice:  
Components identified by **▲** mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
  - This " **S** " mark is service standard parts and may differ from production parts.
  - Unless otherwise specified.  
All resistors are in OHMS ( $\Omega$ ) K = 1000 $\Omega$ , M = 1000k $\Omega$   
All capacitors are in MICROFARADS ( $\mu F$ ) P =  $\mu\mu F$
  - Bracketed indications in Ref. No. columns specify the area  
Parts without these indications can be used for all areas.

## Numbering System of Resistor

Example

ERD	25	F	J	101	ECKD	1H	102	Z	F
Type	Wattage	Shape	Tolerance	Value	ECKD	Voltage	Value	Tolerance	Peculiarity

ERG	1	AN	J	2R2	ECEA	50	M	R47	R
Type	Wattage	Shape	Tolerance	Value	Type	Voltage	Peculiarity use	Value	Special use

Resistor Type	Wattage	Tolerance
ERD : Carbon	25 : 1/4W	J : ±5%
ERG : Metal Oxide	1 : 1W	G : ±2%

ERD2FCG□□□ → Fuse type carbon (1/4W)

## Numbering System of Capacitor

Example

ERD	25	F	J	101	ECKD	1H	102	Z	F
Type	Wattage	Shape	Tolerance	Value	ECKD	Voltage	Value	Tolerance	Peculiarity

ERG	1	AN	J	2R2	ECEA	50	M	R47	R
Type	Wattage	Shape	Tolerance	Value	Type	Voltage	Peculiarity use	Value	Special use

Capacitor Type	Voltage		Tolerance
	ECEA Type	Others	
ECEA : Electrolytic	1A : 10V	1H : 50V DC	J : ±5%
ECEA...N : Non Polar Electrolytic	1C : 16V	2H : 500V DC	K : ±10%
ECKD : Ceramic	1E : 25V		Z : +80%, -20%
ECQM : Polyester	1V : 35V		P : +100%, -0%
ECEB : Electrolytic	1H : 50V		M : ±20%
ECCD : Ceramic	50 : 50V

Ground (Earth) lines

## ■ SCHEMATIC DIAGRAM

**Notes:**

1. S1 : On/off (power) switch.
2. S301 : Stop switch
3. S302 : Start switch
4. S303 : Cueing control switch
5. S304 : Repeat switch
6. S305 : Speed selector switch in "auto" position.
7. S307 : Record detection switch.  
Presently a record is on turntable.
8. S601 : Rest switch. Presently tonearm is on rest.
9. The values in   are the standard voltages measured by DC electro-voltmeter (high impedance) on the basis of chassis when the unit is in stop. So, some error might be included depending on the internal impedance of the measuring instrument and the set measured.  
\* ( ): voltage in 33rpm. (Measured without turntable platter)  
\* ( ): voltage in 45pm. (Measured without turntable platter)  
\* ( ): voltage when tonearm is in lead-in.  
\* ( ): voltage when tonearm is in return.
10. Part No. with ★ mark are not identical between regular part No. and repair part No. supplied.  
So, when placing an order for repair parts, use the part No. in the replacement parts list of repair parts.

**IMPORTANT SAFETY NOTICE**  
The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards.  
When servicing it is essential that only manufacturer's specified parts be used for the critical components in the shaded areas of the schematic.

**• Terminal guide of transistors, photo interrupters and IC's.**

## ■ EXPLODED VIEW

# REPLACEMENT PARTS LIST...Cabinet & Chassis Parts

**Notes:** 1. Part numbers are indicated on most mechanical parts.

Please use this part number for parts orders.

2. Important safety notice:

Components identified by **▲** mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

3. The "**S**" mark is service standard parts and may differ from production parts.

4. Bracketed indications in Ref. No. columns specify the area.
5. The parenthesized number in the column of description stand for the quantity per set.

## Areas

\* [M] is available in U.S.A.

\* [MC] is available in Canada.

## ■ PACKINGS

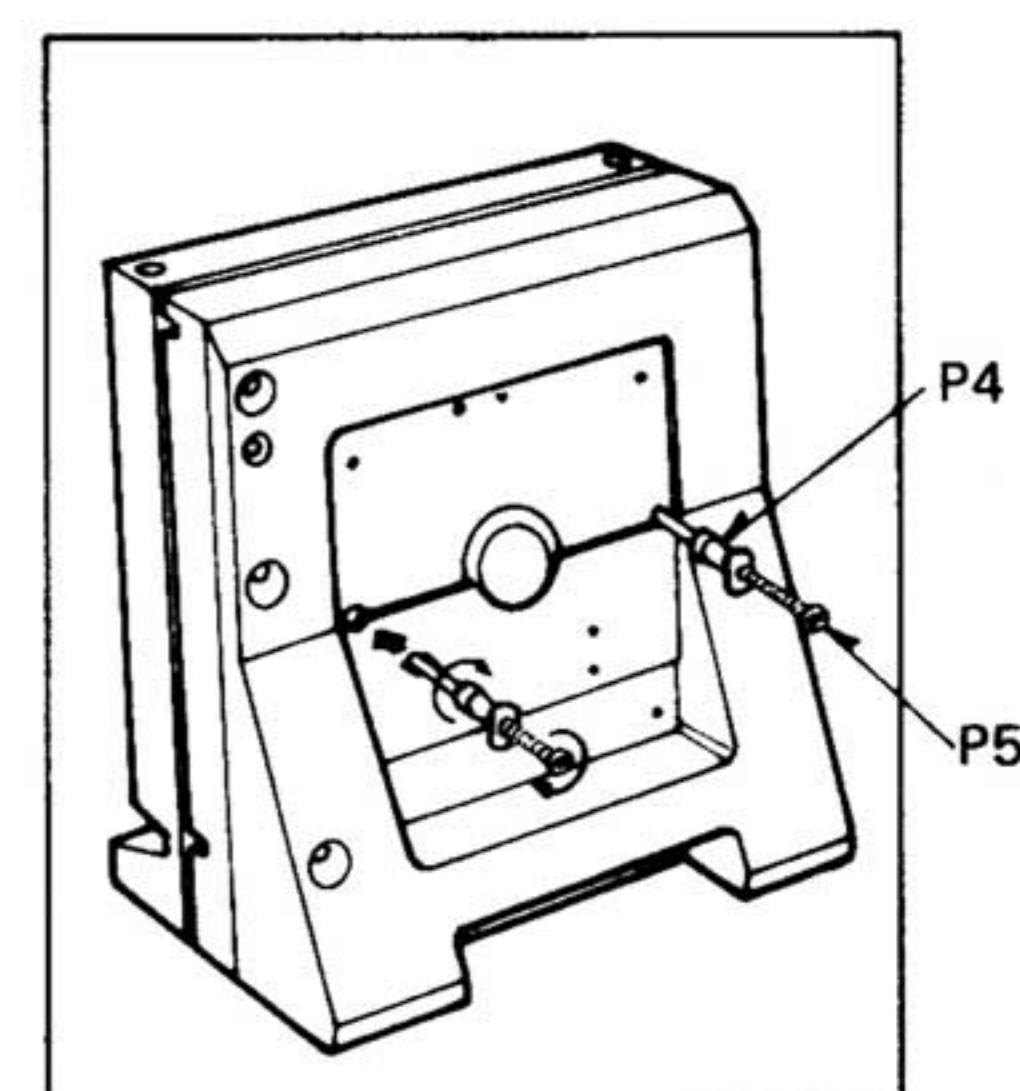

1. Open the cabinet and fit the spacer for tonearm protection in place.

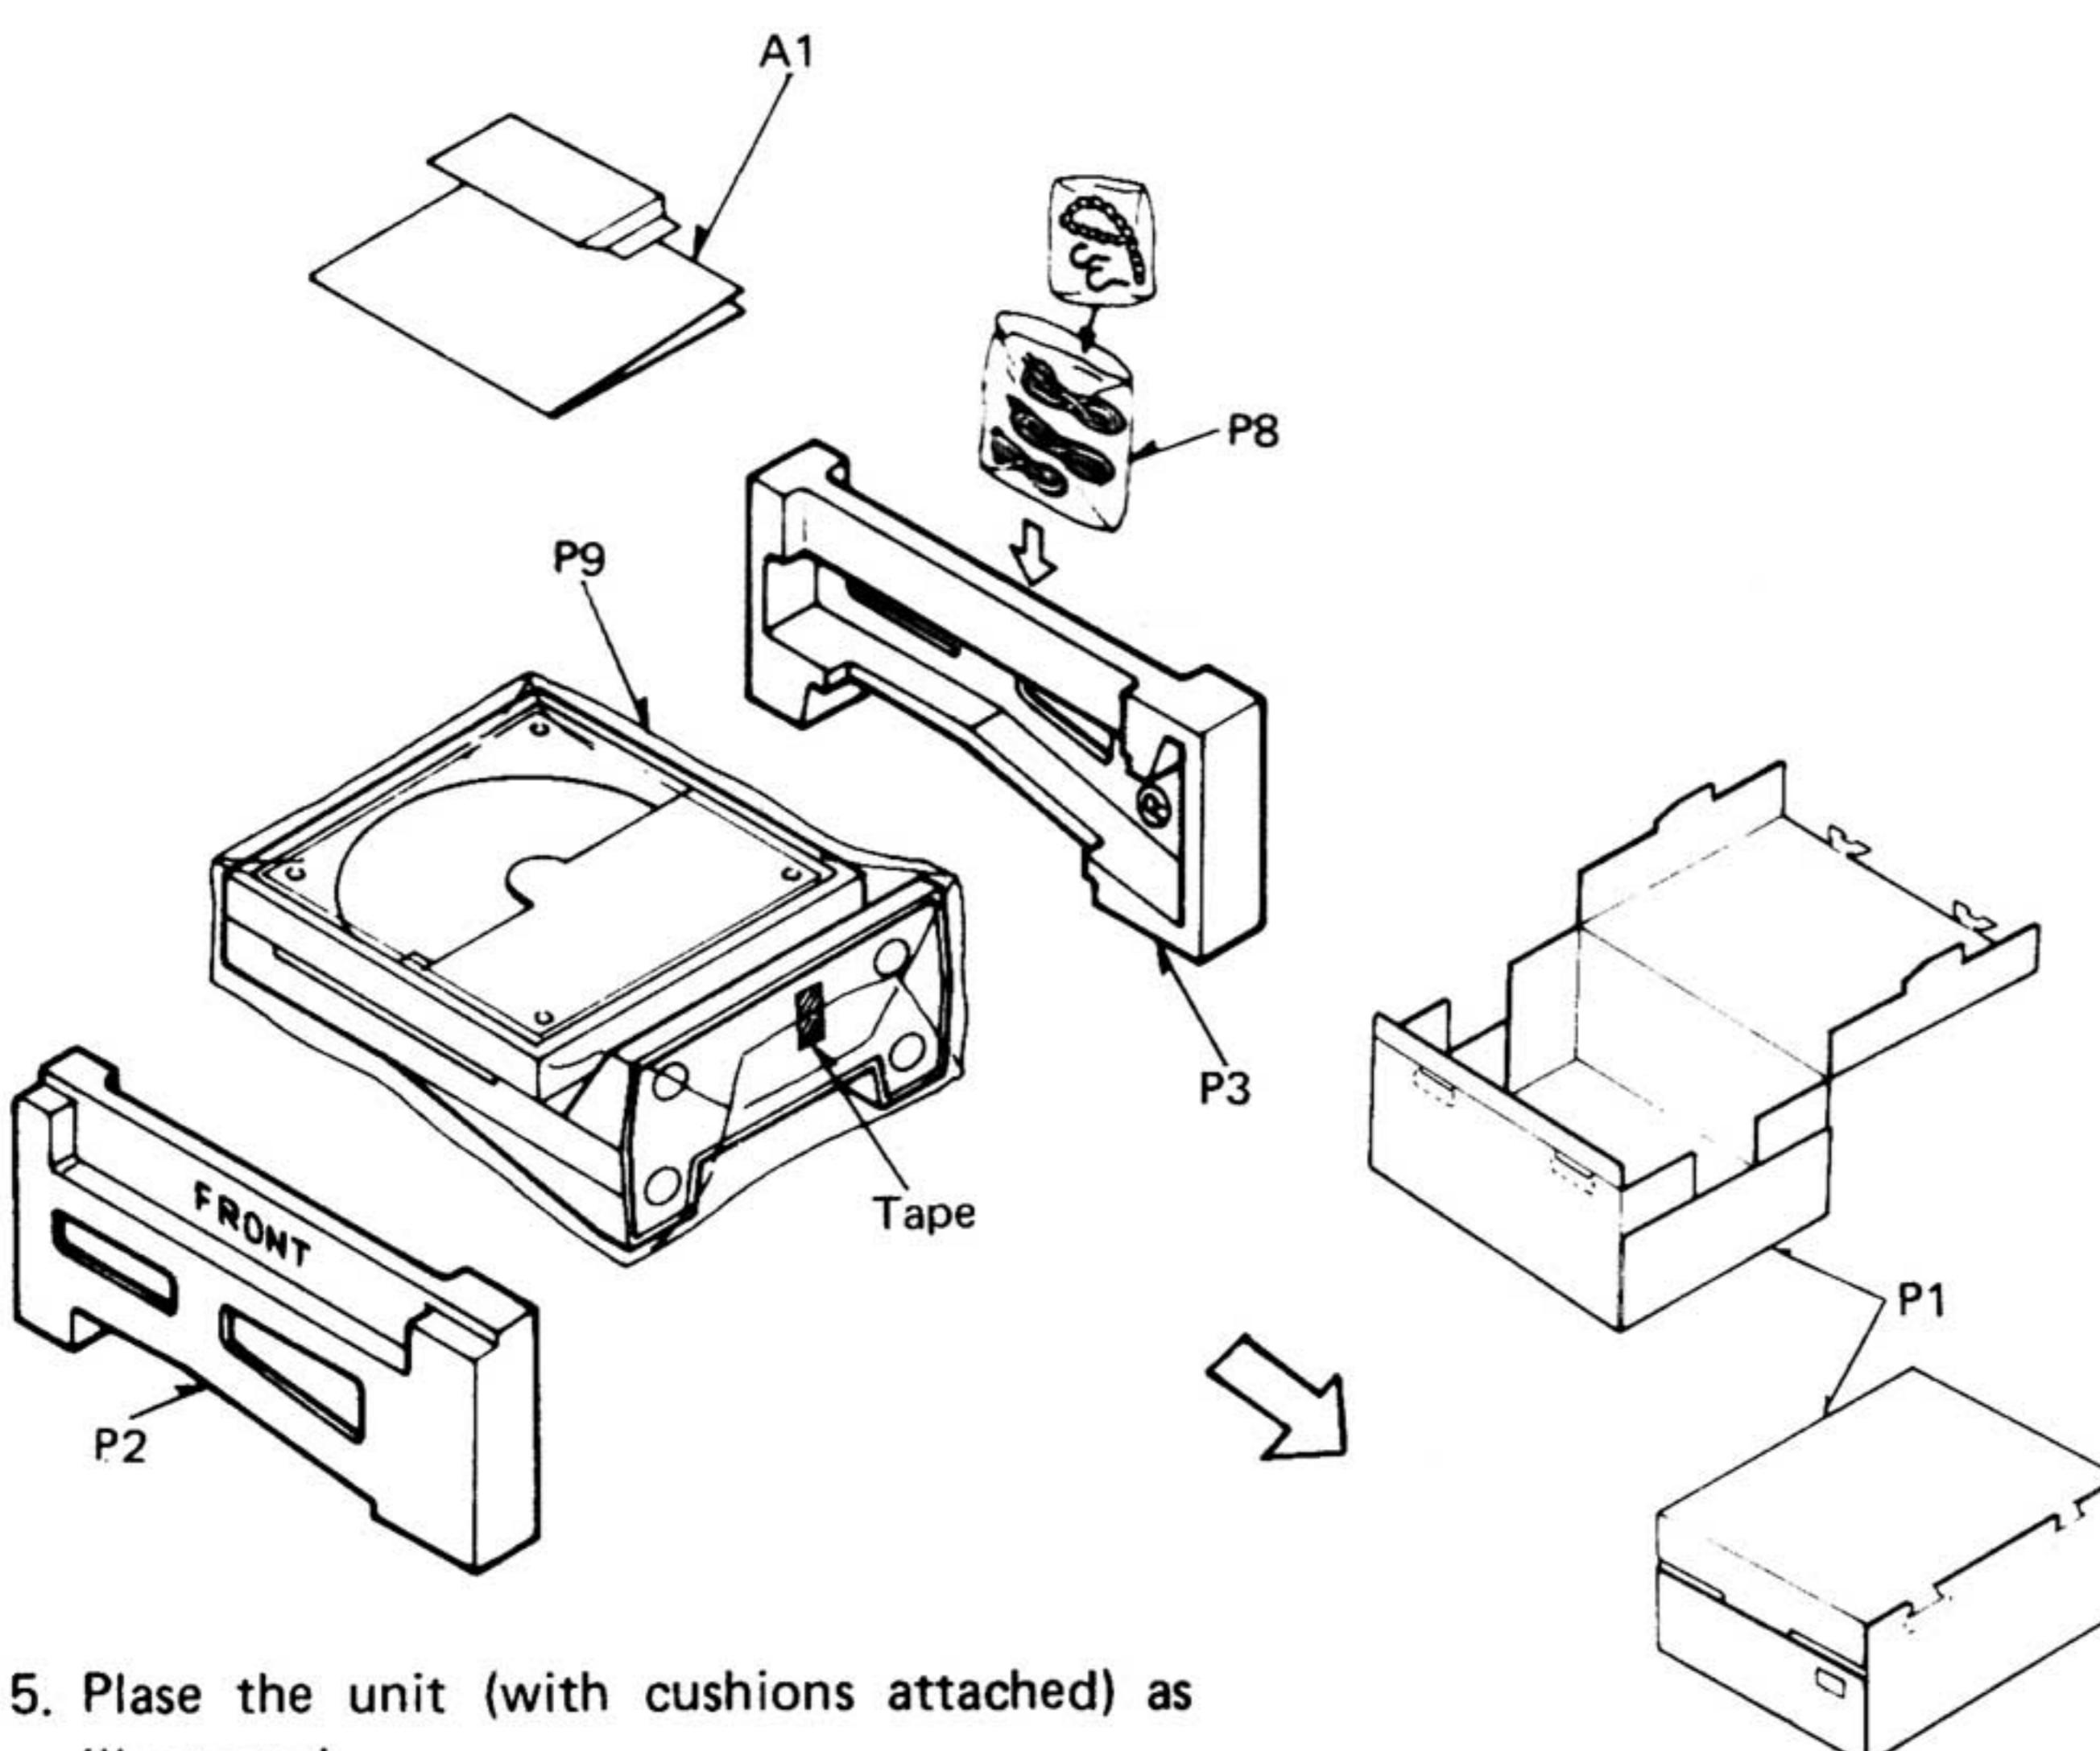

2. Fit the dust cover spacer.

3. Fit the turntable clamer.

4. Put the set into the polyethylene bag, then pack it as shown below.

Ref. No.	Part No.	Description
<b>ACCESSORIES</b>		
A1 (M)	SFNUV05M01	Instruction Book (1)
A1 (MC)	SFNUV05C01E	Instruction Book (1)
A2	SFDHC05N01	Phono Cord (1)
A3	SFDLC05N01	Ground Wire (1)
A4 S △	RJA22	AC Cord (1)
<b>PACKING PARTS</b>		
P1 (M)	SFHPV05M01	Carton Box (1)
P1 (MC)	SFHPV05C01	Carton Box (1)
P2	SFHHV05N01	Pad, Left (1)
P3	SFHHV05N02	Pad, Right (1)
P4	SFHKV05N02	Clamper, Turntable Platter (2)
P5	XSN4+70FYBS	Screw, Clamper (2)
P6	SFHSV05N01	Spacer, Dust Cover (1)
P7	SFHKV05N01	Spacer, Tonearm (1)
P8	SFYH52×60	Polyethylene Bag, Cord (1)
P9	SFYH17×16	Polyethylene Bag, Unit (1)

5. Place the unit (with cushions attached) as illustrated.

6. Fold the flaps according to the line marks.

7. Seal the top with adhesive tape.

\* Use gum tape or adhesive cloth tape of 50 mm wide at least.

8. For the edges, first fold the flap "a" and then flap "b", and staple. Remember to staple only flap "b".

(Use 15 or 16 mm staple)

\* Stapling positions are shown below.
