Window Cleaning

Expert Tips – How Professionals Scrape

- Check if glass is scratch-resistant and suitable for scraper use. Unsuitable glass surfaces include: plexiglass, crown glass, solar glass and safety glass (ESG).
- Always follow the manufacturer's instructions.
- Perform a scrape test in advance on a small section.
- Before starting, check the glass for any damage and report it, if necessary.
- Check the blade for damage and change it or reverse it.
- The surface to be scraped should always be wet.
- It is best to use a releasing agent, such as "EasyGlideGlassCleaner."

Waterfed Pole Cleaning DI Filtration Systems

HiFlo™ DC225 & DI225 Filtration Systems

The DC225 produces PureWater without any traces of soot or minerals that would leave spots or residue on cleaned surfaces.

- Clear housings on the DC225 allow the user to gauge the condition of the resin inside.
- The purple-tinted resin turns brown after full usage to indicate filter change.
- The color-changing feature lets the user know how much "good" resin they have before starting a job. Running out of resin halfway through a job could result in the windows not being cleaned streak-free with pure water.
- "Plug-and-Play": Just attach water hose and pole system, turn on, and start cleaning.
- Battery operated TDS meter (TDS01) monitors the water quality to indicate when to change resin.
- Wheeled cart makes moving and using the system strain free.

Food Service Hood Cleaning Process

Unger Hood Cleaning

Preparation:

Step 1 - Cover Equipment

- Cover all sensitive cooking equipment like fryers, ranges and griddles before applying liquid cleaner overhead.

Step 2 - Prepare Cleaning Solution

- Fill **SprayerOnABelt** with cleaning solution.
- Fill the 6-gallon **ProBucket** with clean water for rinsing (normal soil levels). Add cleaning solution for heavy cleaning.

Step 3 - Clean Corners/Tight Locations

- Attach **SwivelCornerBrush** to either a 4 ft. or 8 ft. **OptiLoc™** telescopic pole. For normal cleaning, spray solution directly onto bristles and scrub corners, cracks and crevices. For heavy cleaning, dip brush into bucket of solution prior to scrubbing.
- Hood filters can be scrubbed in place for light cleaning. It is recommended to remove and clean thoroughly for heavier grease and soot buildup.

Cleaning:

Step 4a - Normal Soilage Hood Surface Cleaning

- Slide **Micro StripWasher®** sleeve over **Swivel Strip T-Bar**, then attach to telescopic pole.
- Spray cleaning solution onto sleeve with the **SprayerOnABelt**.
- Clean stainless surfaces, outside and underneath with the **Micro StripWasher/Swivel Strip T-Bar**.
- Repeat use of **SprayerOnABelt** to dampen sleeve.

Step 4b - Heavy Soilage Hood Surface Cleaning

- Refill 6-gallon **ProBucket** with clean water and attach **Bucket Sieve**.
- After loosening soil, dip **Micro StripWasher/Swivel Strip T-Bar** into clean water, press excess water out using **Bucket Sieve** and flush stainless surfaces.

Step 5 - Hood Drying

- Remove cleaning solution from hood surfaces using **MicroWipe™ 500 MicroFiber Cloth** and **Klett StripWasher**.
- Dry and polish surfaces.
- Change cloth if wet.

Step 6 - Storage

- Rinse all tools in clean water after use.
- Hang tools to air dry.

Unger Griddle Cleaning

5 Steps for Cleaning

Step 1 - Loosen Food

- Loosen cooked-on foods and oils by scraping the griddle surface with the ErgoTec® Long Handle or Short Handle Grill Scraper.
- Scraping at a low angle will remove the greatest amount of cooked-on foods, and will protect the griddle surface from blade nicks and scratches.

Step 2 - Remove Loose Food

- Remove loose foods and oil from the griddle surface using the Griddle High Heat Squeegee.
- Scrape excess food and oil into the grease trap at the front corner of the griddle.

Step 3 - Clean Griddle

- Lower the griddle temperature, as recommended by the equipment manufacturer or cleaning chemical manufacturer.
- Apply grill cleaner or liquid degreaser to entire surface of griddle.
- Scrub surface of griddle using a woven abrasive pad. For safety and best results, use the Griddle High Heat Squeegee to firmly hold down the abrasive pad.

Step 4 - Remove Cleaner

- Squeegee excess food and oil into the grease trap.
- Use a clean, wet cloth to remove any remaining degreaser or oil from griddle surface.

Step 5 - Final Touch Up*

- Use the MicroWipe™ 500 Microfiber Cloth and spray or liquid degreaser to wipe off stainless steel front, edges and sides.
- Season clean griddle surface with light cooking oil. Spread oil with a clean Griddle High Heat Squeegee.

*Using microfiber on a hot surface may result in the microfiber melting.
