SAMSUNG

DIGITAL VIDEO CAMCORDER

Chassis : Dragon II

BASIC : VP-D363

Application Models

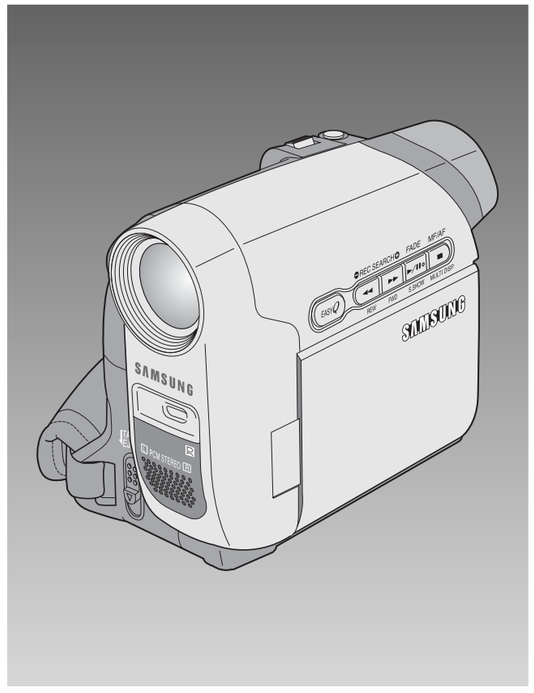
: VP-D361(i)/D361W(i)/D362(i)/
D363(i)/D364W(i)/D365W(i)

Application Area

: XEF, XEU, XEG, XET, XEV, XEC, XSA, CDM, XST, XEO, XEH, XEP, XEE, EAP, EUR, XEN, HACO, TAW, TIT, COL, SEO, XSS, SED, XSH, XSG, FES, XTL, CHN, ZAM, STS, SMR, XFA, ITN, KNT, XSE, FPT, RAD, AFR, AND, UMG MEA, SEA

SERVICE Manual

DIGITAL VIDEO CAMCORDER



Merit & Character regarding Product

1. Shooting & compact Design
2. Use Built-in Flash Memory
3. Multi Memory Card Slot
4. Direct Print System : PictBridge™
5. LED Light
6. High quality MPEG4
7. Still image Interpolation
8. Real Wide mode (16:9)/WIDE LCD
9. 33X ZOOM
10. USB 2.0 Streaming

14-1 Deck Operating Description (14-1)
14-2 PC INTERFACE (14-30)
14-3 Memory Card (14-34)
14-4 Camcorder Function Description (14-39)
14-5 Abbreviated word (14-44)

1. Precautions

1-1 Safety Precautions

1) Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:

(1) Be sure that no built-in protective devices are defective or have been defeated during servicing. (1)Protective shields are provided to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience.
(2)When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fish papers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning.

(2) Be sure that there are no cabinet openings through which adults or children might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, excessively wide cabinet ventilation slots, and an improperly fitted and/or incorrectly secured cabinet back cover.

(3) Leakage Current Hot Check-With the instrument completely reassembled, plug the AC line cord directly into a 230V(220V ~ 240V) AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards institute (ANSI) C101.1 Leakage Current for Appliances and Underwriters Laboratories (UL) 1270 (40.7). With the instrument's AC switch first in the ON position and then in the OFF position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinets, screwheads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis.
Any current measured must not exceed 0.5mA. Reverse the instrument power cord plug in the outlet and repeat the test. See Fig. 1-1.
Any measurements not within the limits specified herein indicate a potential shock hazard that must be eliminated before returning the instrument to the customer.

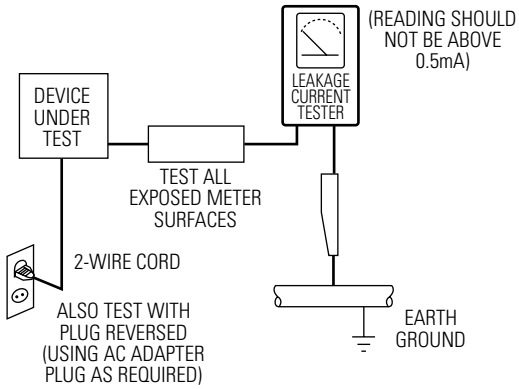

Fig. 1-1 AC Leakage Test

(4) Insulation Resistance Test Cold Check-(1) Unplug the power supply cord and connect a jumper wire between the two prongs of the plug. (2) Turn on the power switch of the instrument. (3) Measure the resistance with an ohmmeter between the jumpered AC plug and all exposed metallic cabinet parts on the instrument, such as screwheads, antenna, control shafts, handle brackets, etc. When an exposed metallic part has a return path to the chassis, the reading should be between 1 and 5.2 megohm. When there is no return path to the chassis, the reading must be infinite. If the reading is not within the limits specified, there is the possibility of a shock hazard, and the instrument must be repaired and rechecked before it is returned to the customer. See Fig. 1-2.

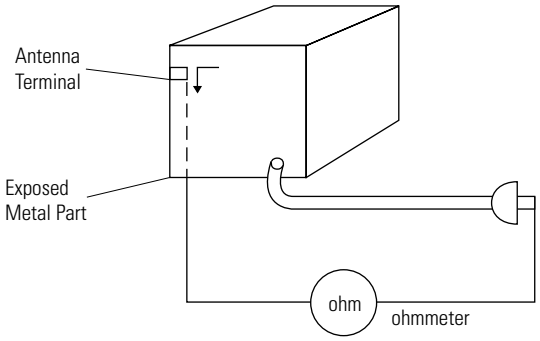

Fig. 1-2 Insulation Resistance Test

2) Read and comply with all caution and safety related notes on or inside the cabinet, or on the chassis.

3) Design Alteration Warning-Do not alter or add to the mechanical or electrical design of this instrument. Design alterations and additions, including but not limited to, circuit modifications and the addition of items such as auxiliary audio output connections, might alter the safety characteristics of this instrument and create a hazard to the user. Any design alterations or additions will make you, the servicer, responsible for personal injury or property damage resulting therefrom.

4) Observe original lead dress. Take extra care to assure correct lead dress in the following areas:
(1) near sharp edges, (2) near thermally hot parts (be sure that leads and components do not touch thermally hot parts), (3) the AC supply, (4) high voltage, and (5) antenna wiring. Always inspect in all areas for pinched, out-of-place, or frayed wiring, Do not change spacing between a component and the printed-circuit board. Check the AC power cord for damage.

5) Components, parts, and/or wiring that appear to have overheated or that are otherwise damaged should be replaced with components, parts and/ or wiring that meet original specifications.
Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.

6) Product Safety Notice-Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by shading, an (⚡)or a (⚠)on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

1-2 Servicing Precautions

CAUTION : Before servicing units covered by this service manual and its supplements, read and follow the Safety Precautions section of this manual.

Note : If unforseen circumstances create conflict between the following servicing precautions and any of the safety precautions, always follow the safety precautions. Remember: Safety First.

1-2-1 General Servicing Precautions

(1) a. Always unplug the instrument's AC power cord from the AC power source before (1) re-moving or reinstalling any component, circuit board, module or any other instrument assembly, (2) disconnecting any instrument electrical plug or other electrical connection, (3) connecting a test substitute in parallel with an electrolytic capacitor in the instrument.

b. Do not defeat any plug/socket B+ voltage interlocks with which instruments covered by this service manual might be equipped.

c. Do not apply AC power to this instrument and /or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.

d. Always connect a test instrument's ground lead to the instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.

Note : Refer to the Safety Precautions section ground lead last.

(2) The service precautions are indicated or printed on the cabinet, chassis or components. When servicing, follow the printed or indicated service precautions and service materials.

(3) The components used in the unit have a specified flame resistance and dielectric strength.
When replacing components, use components which have the same ratings. Components identified by shading, by(⚠) or by (⚠) in the circuit diagram are important for safety or for the characteristics of the unit. Always replace them with the exact replacement components.

(4) An insulation tube or tape is sometimes used and some components are raised above the printed wiring board for safety. The internal wiring is sometimes clamped to prevent contact with heating components. Install such elements as they were.

(5) After servicing, always check that the removed screws, components, and wiring have been installed correctly and that the portion around the serviced part has not been damaged and so on. Further, check the insulation between the blades of the attachment plug and accessible conductive parts.

1-2-2 Insulation Checking Procedure

Disconnect the attachment plug from the AC outlet and turn the power ON. Connect the insulation resistance meter (500V) to the blades of the attachment plug. The insulation resistance between each blade of the attachment plug and accessible conductive parts(see note) should be more than 1 Megohm.

Note : Accessible conductive parts include metal panels, input terminals, earphone jacks, etc.

1-3 ESD Precautions

Electrostatically Sensitive Devices (ESD)

Some semiconductor (solid state) devices can be damaged easily by static electricity.
Such components commonly are called Electrostatically Sensitive Devices(ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors and semiconductor chip components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

(1) Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.

(2) After removing an electrical assembly equipped with ESD devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.

(3) Use only a grounded-tip soldering iron to solder or unsolder ESD devices.

(4) Use only an anti-static solder removal devices. Some solder removal devices not classified as “anti-static” can generate electrical charges sufficient to damage ESD devices.

(5) Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESD devices.

(6) Do not remove a replacement ESD device from its protective package until immediately before your are ready to install it.(Most replacement ESD devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive materials).

(7) Immediately before removing the protective materials from the leads of a replacement ESD device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

(8) Minimize bodily motions when handling unpackaged replacement ESD devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ESD device).

2. Product Specification

2-1 Product Specification

System	Video Signal	PAL
	Video Recording	2 rotary heads, Helical scanning system
	Audio Recording	Rotary heads, PCM system
	Usable cassetts	Digital video tape(6.35mm width) : mini DV cassette
	Tape speed	SP : approx. 18.81mm/s LP : approx. 12.56mmm/s
	Tape recording time	SP : 60 minutes(when using DVM 60 tape)
	FF/REW time	Approx. 150sec.(Using DVM60 tape)
	Image device	CCD (Chage Coupled Device) (680k Pixels)
	Lens	F 1.6 1200 X(Digital) Electronic zoom lens
	Filter Diameter	ø 27
LCD Screen/Viewfinder	Size/dot number	2.5 inch 112K
	LCD Screen Method	TFT LCD
	Viewfinder	Color LCD
Connectors	Video output	1 Vp-p(75Ω terminated)
	S-video output	Y : 1Vp-p, 75Ω, C: 0.286Vp-p, 75Ω
	Audio output	-7.5dBs(600Ω terminated)
	DV input/output	4pin special in/out connector
	USB output	mini-B type connector
	External mic	ø 3.5 stereo
General	Power source	DC 8.4V lithium Ion Battery Pack 7.4V
	Power Source type	Lithium Ion Battery Pack, Power supply (110V~240V) 50/60Hz
	External dimension	Height 3.62 inches, Length 4.63 Inches, width 2.52 inches
	Weiht	0.904lb
	Internal MIC	Omni-directional stereo microphone

2-2 Chassis Product Specification

Model	VP-D353(Dragon-1)	VP-D363(Dragon-2)	Remark
Format	MiniDV	MinDV	
Resolution	520 line	520 line	
Zoom/Digital	30x / 1200X	30X / 1200x	
CCD	680K	680K	
LCD	2.5", 112K	2.5", 112K	
Viewfinder	Color	Color	
Audio	12/16b PCM	12/16b PCm	
Image Stabilizer	DIS	DIS	
IEEE1394	In/Out	In/OUt	
USB	USB 2.0	USB 2.0	
JPEG Recording	800 X 600	800 X 600	
Battery Pack	SB-LSM80	SB-LSm80	
Carrying Case / Tape	X/X	X/X	
S-Cable / Scart Jack	X/X	X/X	
UV Coating(Color)	UV Coating	UV Coating	

2-3 Option Product Specification

Description Fig	Description	Parts No	Remark
	Lithium Lon Battery Pack	AD43-00136A	Model Standard of VP-D363/XEG

3. Alignment and Adjustment

3-1 VCR Adjustment

3-1-1 Adjustment Preparation

1) Before you start

❶ Use the buttons on the CAMCORDER when adjusting VCR.
❷ When changing the adjustment item, please press the “EASY-Q” or “DISPLAY” buttons on the CAMCORDER.
❸ The adjustment value can be changed by moving the “MENU Selector” Up or Down.
❹ Press the “MENU Selector” to store each adjustment into EEPROM.
❺ The OSD shows “OK” after finishing each adjustment step.
❻ In order to exit the adjustment mode, disconnect the power source.

2) Function of each buttons on the Set Key

<Table 3-1>

Buttons	Description
PHOTO Button push (Confirm)	Stores changed value in the adjustment and auto adjustment mode.
ZOOM Lever Right (Data Up)	Changes data in the adjustment state.
ZOOM Lever Left (Data Down)	
EASY-Q (Mode Up)	Changes mode.
DISPLAY (Mode Down)	

3) How to get into the VCR adjust mode

[STEP 1]

❶ Connect the Power source.
❷ Set the Power Switch to “PLAY” position and Mode Switch to “TAPE” position.

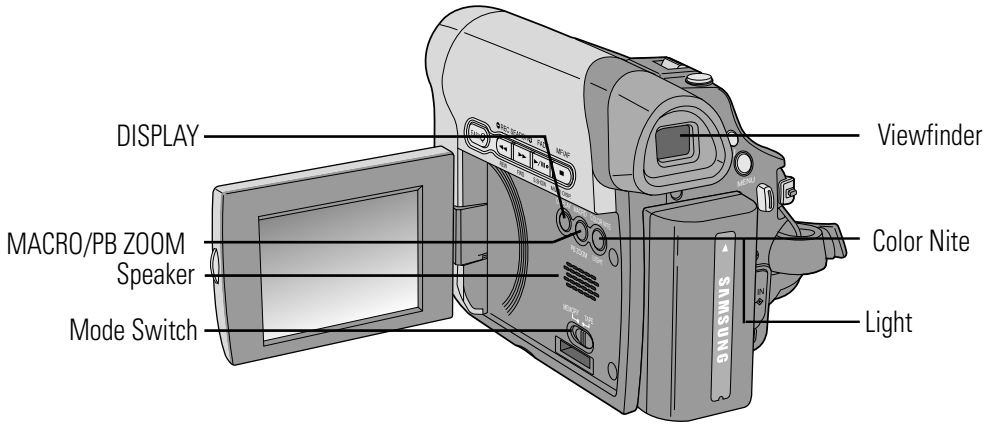

Fig. 3-1

[STEP 2]

❶ Press and hold the "STOP" and "PB ZOOM" buttons on the video camera at the same time for more than 5 seconds.
❷ When monitor OSD appears as shown Fig. 3-2, the adjustment mode has been activated successfully.
❸ Move the “ZOOM Lever” to highlight VCR ADJ and push the “PHOTO Button”.
❹ Monitor OSD shows Fig. 3-3.
Then VCR adjustment mode has been activated successfully.

[STEP 3]

In order to complete the adjustment the power must be reset.
This can be done by disconnecting and reconnecting the power source.

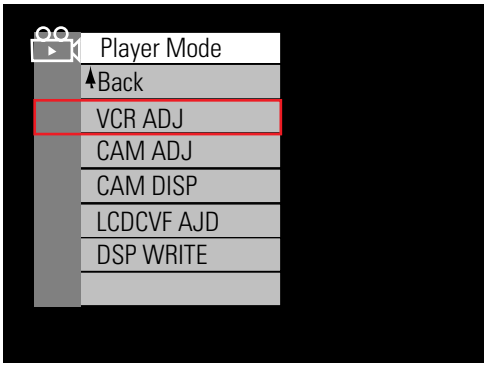

Fig. 3-2

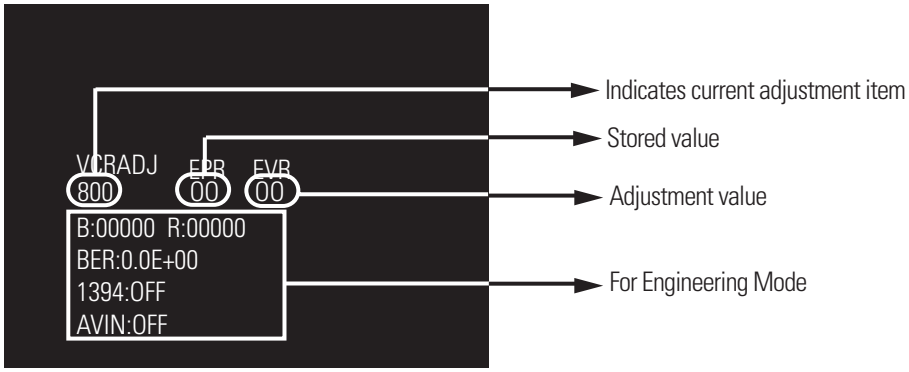

Fig. 3-3

3-1-2 VCR Adjustment

Note : This is the only electronic adjustment for the VCR.
Other addresses have already been assigned data during the manufacturing process.
We don’t need any adjustment for those addresses.

<Table 3-2>

Mode(Address)	Name	Value	Description
858	SWP Position	80	Head Switching Position Adjust

❶ Get into VCR ADJUST mode.
❷ Move to the VCR ADJUST address “858”.
❸ Play standard tape, and “Head Switching Position” will be adjusted automatically (within 5 Seconds).

3-2 Camera Adjustment

Note : How to adjust the camera system.

1) EEPROM stores confirmed adjustment value of each adjustment step.

2) DSP (Digital Signal Process : ICM01-Main PCB) digitalizes the camera signal.

3) When replacing the Main PCB or ICM15(EEPROM) data must be readjusted.
After changing LCD PCB and CVF PCB- always readjust the data for each part.
Once the adjusted valuse for each section has been confirmed the data must then be stored into the EEPROM.

4) Adjust the following items after changing LENS Ass'y.

❶ Lens Zoom Track
❷ Auto HALL
❸ Auto IRIS
❸ Auto White Balance(indoor)
❸ Auto White Balance(outdoor)

5) Adjust the following items after changing EEPROM and Camera Main PCB.

❶ Lens Zoom Track
❷ Zoom VR Center
❸ Auto HALL
❹ Auto IRIS
❺ Auto White Balance (indoor)
❻ Auto White Balance (outdoor)

3-2-1 Adjustment Preparation

1) Before you start

❶ Use the buttons on the CAMCORDER when adjusting Camera.
❷ When changing the adjustment item, please press the "EASY-Q" or "DISPLAY" buttons on the Set.
❸ You can chage the adjustment value to press macro button or c.nite button.
❹ Press the "PHOTO Button" when storing confirmed adjuistment value of each adjustment Step in EEPROM.
❺ The OSD shows "OK" after finishing each adjustment step.
❻ In order to exit the adjustment mode, disconnect the power source.

2) Function of each buttons on the Sst Key

<Table 3-3>

Buttons	Description
PHOTO button push (Confirm)	Stores changed value in the adjustment and auto adjustment mode.
COLOR NITE (Data Up)	Changes data in the adjustment state.
MACRO (Data Down)	
EASY-Q (Mode Up)	Changes mode.
DISPLAY (Mode Down)	

5) How to set up the camera adjustment mode

[STEP 1]

❶ Connect the Power source.
❷ Set the Power Switch to “CAM” position and Mode Switch to “TAPE” position.

[STEP 2]

❶ Press and hold the "STOP" and "PB ZOOM" buttons on the video camera at the same time for more than 5 seconds.
❷ When monitor OSD appears as shown Fig. 3-5, the adjustment mode has been activated successfully.
❸ Move the “Zoom Lever”to highlight CAM ADJ and push the “PHOTO Button”
❹ Monitor OSD shows Fig. 3-6.
Then Camera adjustment mode has been activated successfully.

[STEP 3]

In order to complete the adjustment the power must be reset.
This can be done by disconnecting and reconnecting the power source.

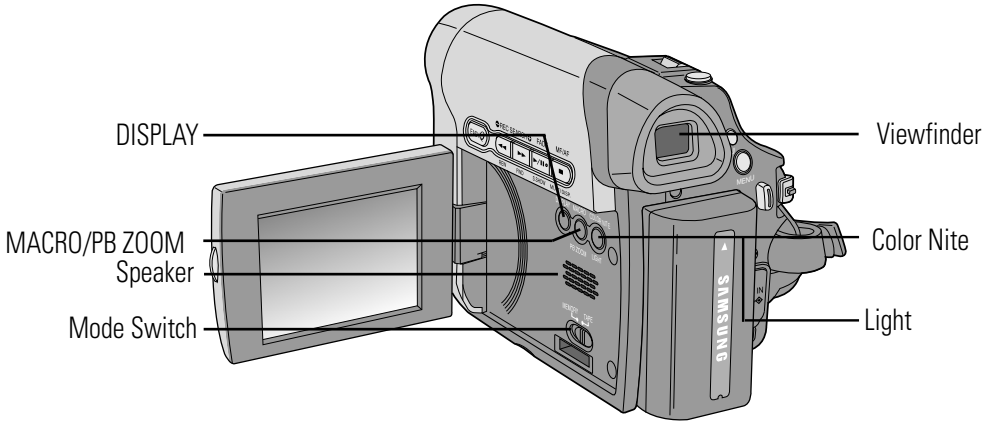

Fig. 3-4

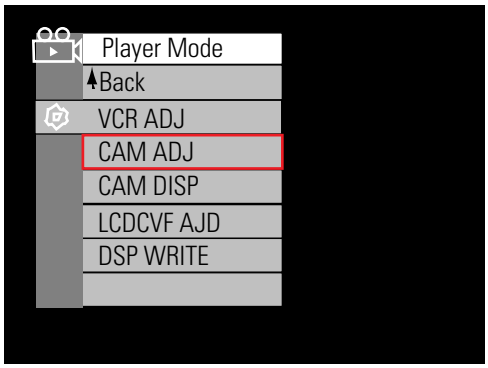

Fig. 3-5

3-2-2 Camera Adjustment

Note : "XX XX" indicate the previous preset value and adjusted value.
Press the “PHOTO Button” (Confirm) to store the adjusted value.

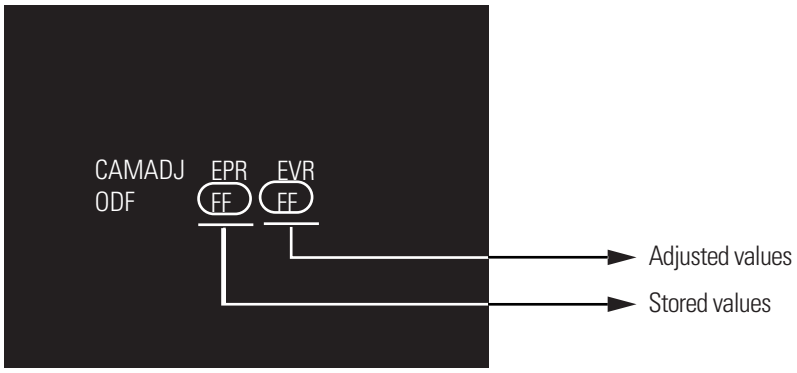

Fig. 3-6

1) EEPROM Data Initialize

Caution : These adjustments must be done when installing a new EEPROM (ICM15) in Main PCB.

❶ Press the “EASY-Q”(Mode Up)/”DISPLAY”(Mode Down) buttons until CAMADJ displays “0DF XX XX”.
❷ Press the “MACRO” or “ COLOR NITE”(Data Up/Down) so that display of EVR is “AA”
❸ Press the “PHOTO Button” (Confirm).
❹ The OSD shows “OK” after finishing the initalize.
(Show Fig. 3-8)

2) Lens Zoom Track

Caution : For whole zoom range, it shall be in focus.
The location of a focus lens is moving depending on the location of Zoom Lens.
During adjusting, micom measures the focus location from a near distance to a long.

❶ Camera is set to E-E mode.
❷ Set the Focus chart .
❸ Center the camera about 3m from a focus chart which, should be placed on a flat surfaced white or gray wall.
❹ Connect the video output terminal to a TV.
❺ Press the “EASY-Q” (Mode Up)/”DISPLAY” (Mode Down) buttons until OSD Shows “0DE XX XX”.
❻ Press the “PHOTO Button” (Confirm).
Never impact on the lens when adjusting zoom and focus Lens.
The OSD Show “OK” after finishing the adjustment
(Show Fig. 3-8)

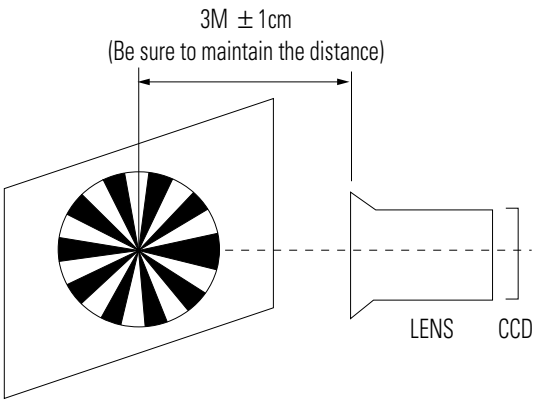

Fig. 3-7

3) Zoom VR Center

❶ Connect a video output terminal to a TV.
❷ Press the “EASY”(Mode Up)/”DISPLAY”(Mode Down) buttons so that OSD shows “0D6 XX XX”.
❸ Press the “PHOTO Button” (Confirm).
❹ Then Micom finds out Zoom VR center position.
Store Zoom VR center value in OB7.
(Show Fig. 3-8)

4) Auto HALL

❶ Connect a video output terminal to a TV.
❷ Press the “EASY-Q”(Mode Up)/”DISPLAY”(Mode Down) buttons so that OSD shows "0CD XX XX".
❸ Press the “PHOTO Button” (Confirm).
❹ Then micom finds out max. Hall value with an iris opened and min. Hall value with an iris closed.
Store max. and min. value of Hall in OAD and OAC respectively.
❺ The OSD shows “OK” after finishing the adjustment.
(Show Fig. 3-8)

5) Auto IRIS Level

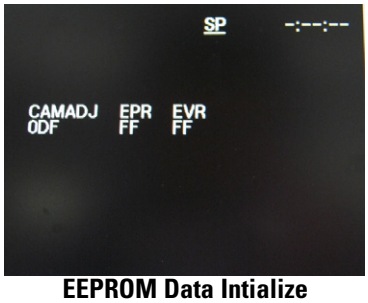
❶ Connect a video output terminal to a wave form monitor and a TV.
❷ Press the “EASY-Q”(Mode Up)/”DISPLAY”(Mode Down) buttons so that OSD shows "0CE XX XX".
❸ Press the “PHOTO Button” (Confirm).
❹ Then micom finds out max. Hall value with an iris opened and min.
Hall value with an iris closed. Store max. and min. value of in 00BC, 00BD and 00BB respectively.
❺ The OSD shows “OK” after finishing the adjustment.
(Show Fig. 3-8)

6) Auto White Balance (indoor)

❶ Camera mode & 3100˚ K gray scale chart.
❷ Connect a video output terminal to a vectorscope and a TV.
❸ Press the “EASY-Q”(Mode Up)/”DISPLAY”(Mode Down) buttons so that OSD shows "0D4 XX XX".
❹ Ensure that camera picks up image 40μs on 3100˚K gray scale chart precisely and the illumination is 1500~2000 Lux.
❺ Press the “MENU Selector” (Confirm) to ensure that white spot on a vectorscope is moving in the middle of screen.
❻ The OSD shows “OK” after finishing the adjustment.
(Show Fig. 3-8)

7) Auto White Balance (outdoor)

❶ Camera mode & 5100˚ K gray scale chart.
❷ Connect a video output terminal to a vectorscope and a TV.
❸ Press the “EASY-Q”(Mode Up)/”DISPLAY”(Mode Down) buttons so that OSD shows "0D5 XX XX".
❹ Ensure that camera picks up image 40 μs on 5100 gray scale chart (3100 gray scale chart + C16 filter) precisely and the illumination is 1500~2000 Lux.
❺ Press the “PHOTO Button” (Confirm) to ensure that white spot on a vectorscope is moving in the middle of screen.
❻ The OSD shows “OK” after finishing the adjustment.
(Show Fig. 3-8)



EEPROM Data Intialize

When #0DE is not adjusted, adjust by #0D0.

Fig. 3-8

3-3 Deck Adjustment

3-3-1 Operation Without Housing Assembly

1) Remove the Housing Ass'y from the Deck Ass'y.
2) Connect the Mechanical Chassis to the recorder circuit to supply voltage.
3) Set to Unload mode.
4) Press the S/W Push (Keep ON status)to start loading, and push the PLAY Key.
   (Cover the Top/End sensor with black tape, because they do not operate.)

Note : For the removal of the Housing Ass'y refer to 4-2-2 (page 4-6).

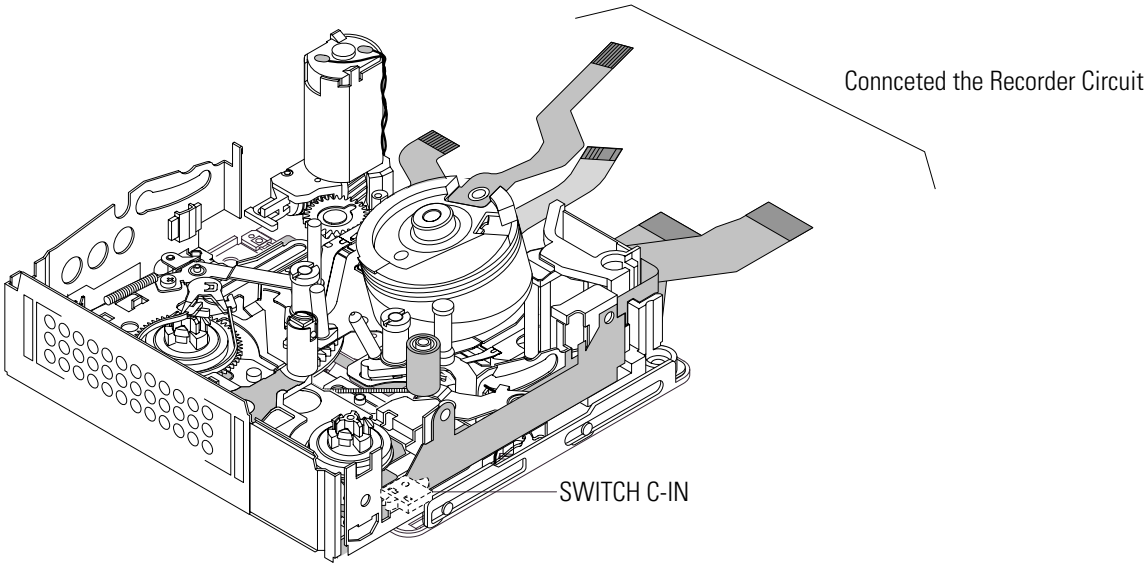

Fig. 3-9

3-3-2 Setting Mechanical Mode (Without Recorder Circuit)

1) Set the power-supply output to approx. 3V~5V.
2) Choose the polarity (depending on whether loading or unloading).
3) Supply the voltage to the Motor Loading, and set to the desired mode.

<Table 3-4>

Ⓐ	Ⓑ	Movement of Chassis
+	-	Unloading
-	+	Loading

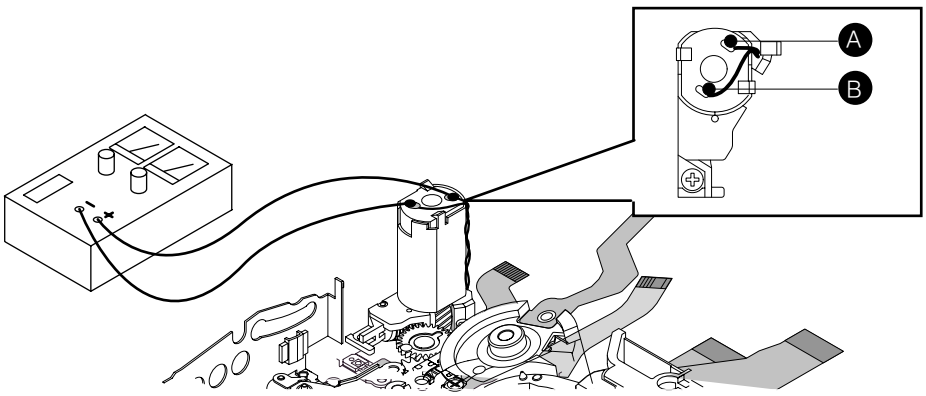

Fig. 3-10

3-3-3 Maintenance

Carry out the following periodic maintenance checks in order to fully exercise all functions, operations and tape. After repairing, service the set as follows:

1) Cleaning of Drum Assembly

❶ Gently apply lens tissue soaked in ethyl alcohol to the Drum assembly.
Clean the Upper Drum assembly while rotating it slowly counterclockwise(by hand).

Note : Do not rotate the motor by power or rotate the Upper Drum assembly clockwise.
Also, the Head tip will be damaged if the lens tissue is moved in a perpendicular direction.
Be sure to follow these instructions when cleaning the Drum Ass'y

2) Cleaning of Tape Path

❶ In EJECT mode, clean the tape path system(from Pole Tension P1 through Pole Review P8, Pinch Roller and Capstan Shaft) and the Lower Drum. Using the lens tissue soaked in ethyl alcohol.

Note : Make sure that no oil or grease adheres to the lens tissue.

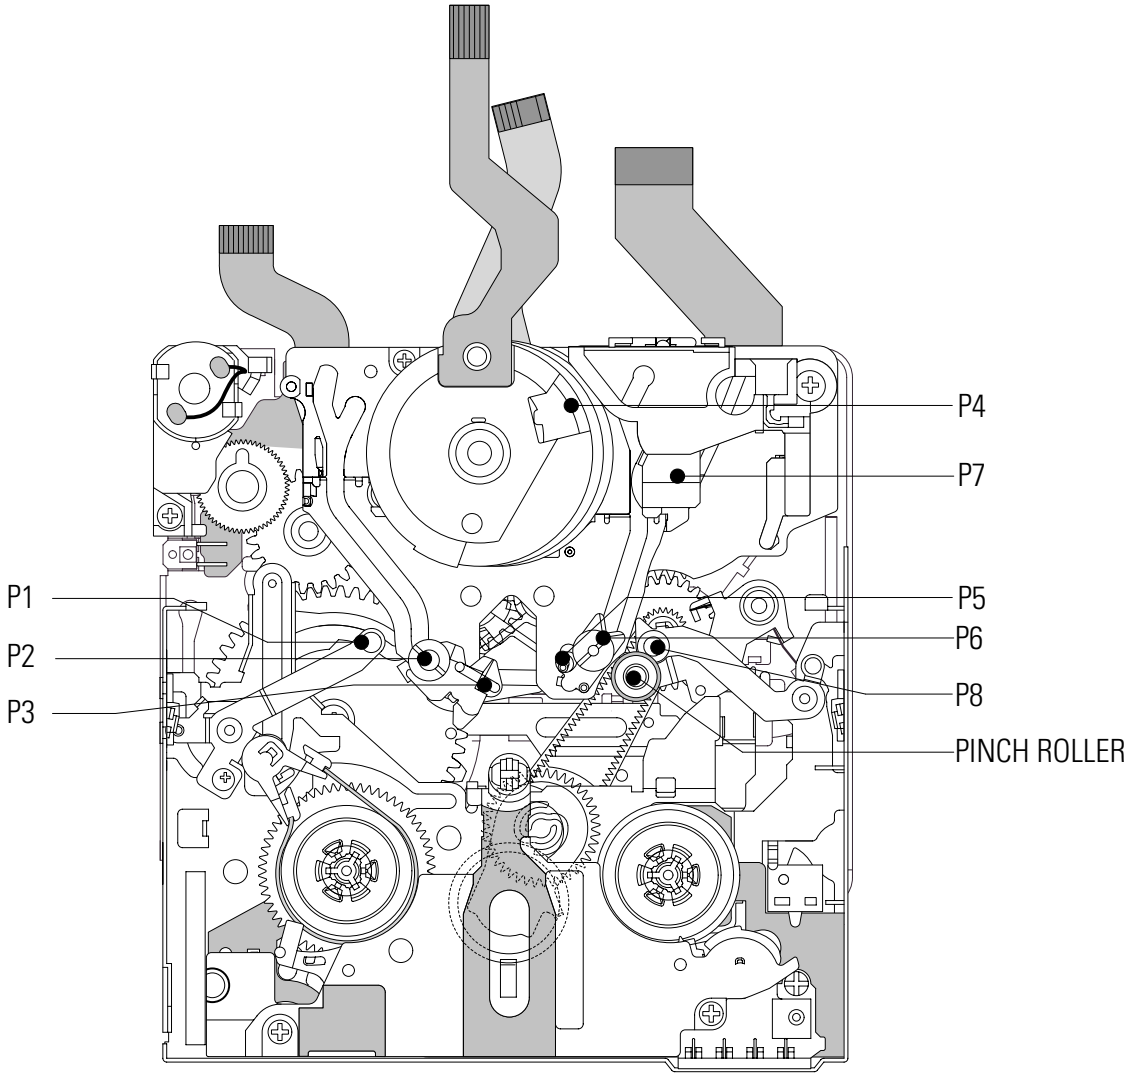

Fig. 3-11

3) Periodic Maintenance and Check List

When overhauling, refer to the following table.

<Table 3-5>

Maintenance checks		Hours of use (H)										Remark
		500	1000	1500	2000	2500	3000	3500	4000	4500	5000	
Tape path system	Cleaning of tape path	O	O	O	O	O	O	O	O	O	O	
	Cleaning and degaussing of drum ass'y	O	O	O	O	O	O	O	O	O	O	
DRIVING SYSTEM	Capstan Shaft		Δ		Δ		Δ		Δ		Δ	- Never let oil get on to the tape path surface.
	Gear Capstan		Δ		Δ		Δ		Δ		Δ	
	Gear Pully Shaft		Δ		Δ		Δ		Δ		Δ	
	Belt Timing		◆		◆		◆		◆		◆	
	Motor Loading		◆		◆		◆		◆		◆	
Perform-ance	Abnormal Noise		◆	◆	◆	◆	◆	◆	◆	◆	◆	
Confir-mation	Back Tension		◆		◆		◆		◆		◆	
	Brake System		◆		◆		◆		◆		◆	
	PB, REV Torque Measurement		◆		◆		◆		◆		◆	

O : Cleaning Δ : Oil ◆ : Confirmation

- When lubrication bearings, be sure to keep the oil free of dust. (Oil contaminated with dust might cause the bearings to wear out or seize.)
- A "drop"of oil is defined as the amount attached to the tip of a Ø 2mm stick as shown in Fig. 3-11.

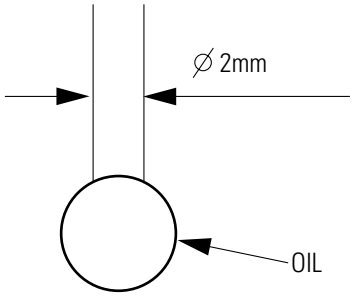

Fig. 3-12

3-3-4 Mechanical Check and Adjustment

3-3-4(a) Tension Regulator Adjustment

1) Disassembly

❶ For the removal of the Housing Ass'y refer to 4-2-2 (page 4-6).

2) Adjustment

❶ Set to PLAY mode (without cassette tape).

❷ Check that the distance between external surface of Holder Loading and extenal diamater of Arm Tension is 0.7±0.3mm. (Fig. 3-12)

❸ If necessary, proceed to step 4.

❹ If the Arm Tension ❶ is located inside (or right) the position specified, adjust the Cap Adjust ❶ toward arrow "A". (If it is located outside (or left), adjust toward arrow "B".)

Note : Check if the Arm Tension can be moved toward arrow "C" in PB mode.

3) Reassembly

❶ For the removal of the Housing Ass'y refer to 4-2-2 (page 4-6).

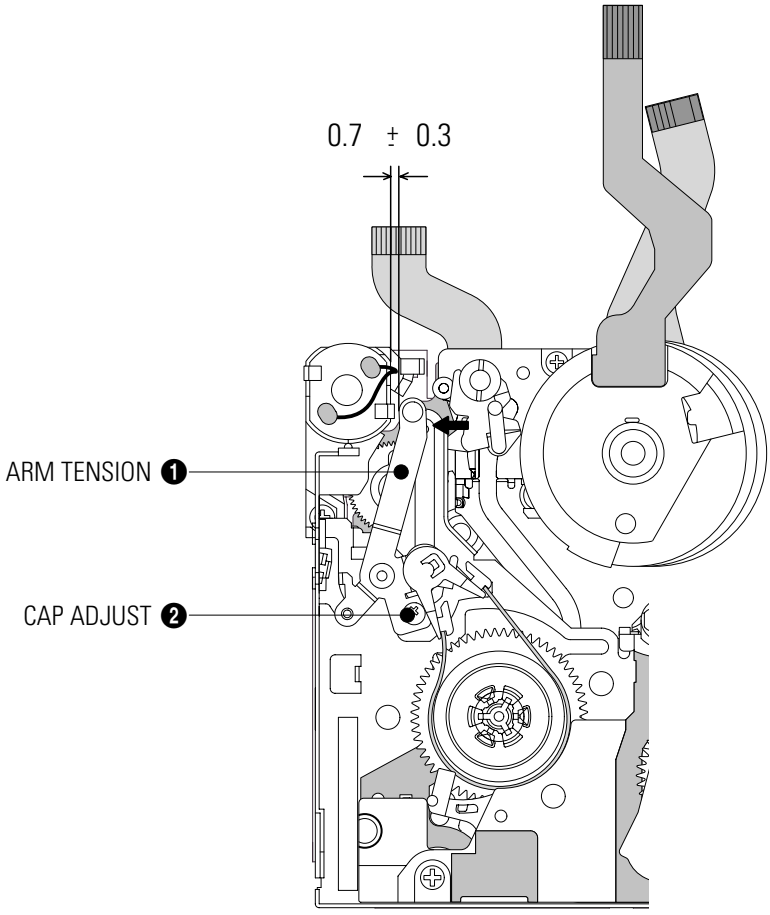

Fig. 3-13

3-3-4(b) Back Tension Confirmation

1) Set up the cassette-torque tape.
2) Set to CAMERA mode, push the EDIT(+) KEY and check that the torque value of Reel S is 5.5±1g.cm.
3) If necessary, proceed to step 4.
4) If the Tension value is Low specified, moved to toward “a”.
   If the Tension value is High specified, moved to toward “c”.

Reference : After changed, insert Cassette torque tape and confirm torque value.

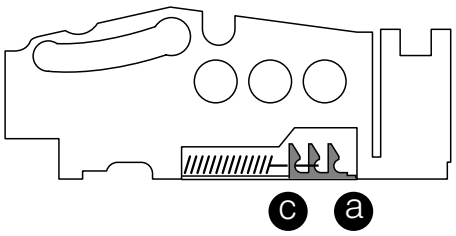

Fig. 3-14

3-3-4(c) PB/REV Torque check

1) Set up the cassette torque tape.
2) Set to CAMERA mode, Push the EDIT(+) button and check that the torque value of Reel T is 9±3g.cm.
3) Push the EDIT(-) button and check that the torque value of Reel S is 15±3g.cm.
4) If necessary, replace the defective Reel Disk S, T Ass’y.

3-3-4(d) Reel Table Height Check

1) Removal

❶ For the removal of the Housing Ass’y refer to 4-2-2 (page 4-6).
❷ For the removal of the Idler Ass’y refer to 4-2-3 (page 4-7).

2) Check

❶ Using vernier calipers, check the following distances : From the upper surface of the Sub Chassis to the resting surfaces of Reel S, T table should each be 3.9±0.1mm.

3) Mounting

❶ For the removal of the Idler Ass’y refer to 4-2-3 (page 4-7).
❷ For the removal of the Housing Ass’y refer to 4-2-2 (page 4-6).

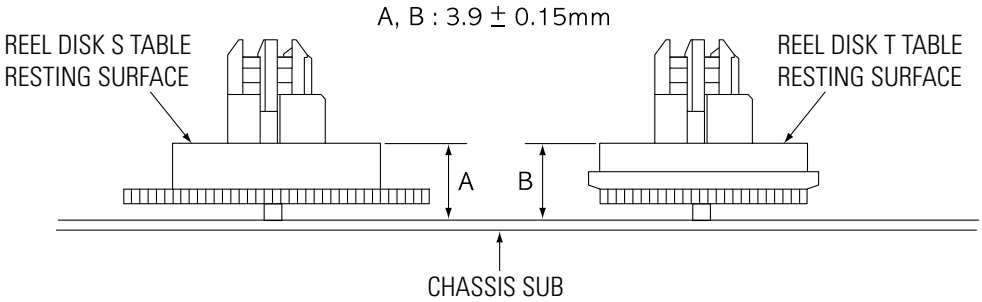

Fig. 3-15

3-3-5 Tape Path Adjustment

3-3-5(a) Preparation for Adjustment

❶ Clean the tape running surface (Poles, Drum, Capstan Shaft, Pinch Roller).
❷ Observe the PB RF signal and Head Switching Pulse on an oscilloscope.
❸ Play back the alignment tape.
❹ Check that the waveform of the RF signal is flat at both inlet and outlet(A in Fig. 3-15).
If not flat (B or C in Fig. 3-15), do adjustments 3-3-5(b) through 3-3-5(d).

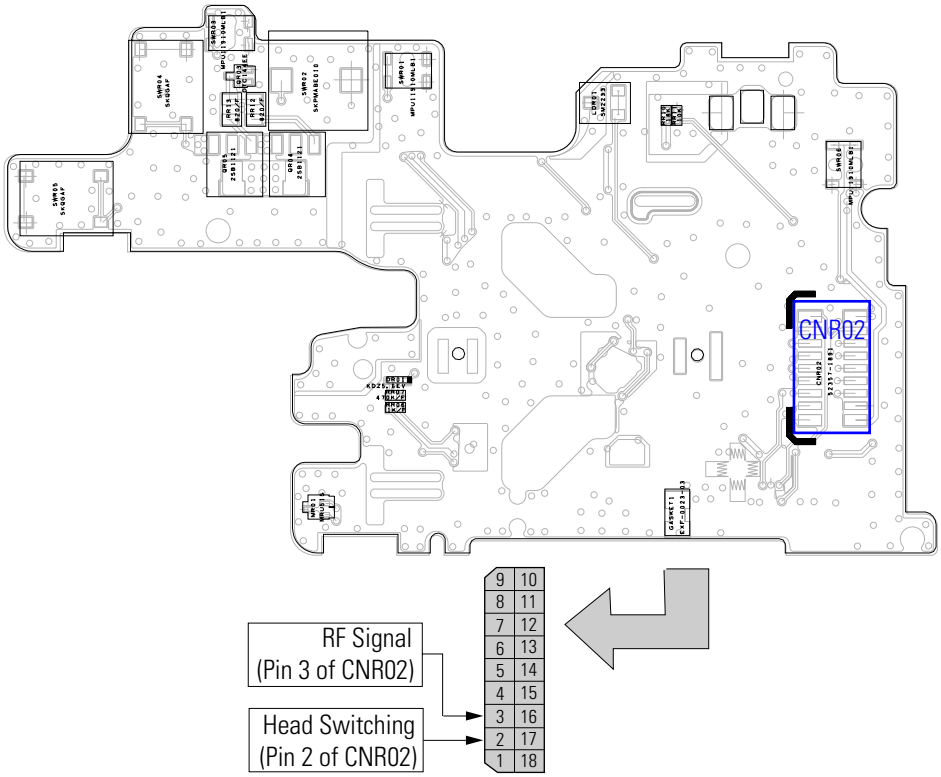

Fig. 3-16 Rear PCB (Top Side)

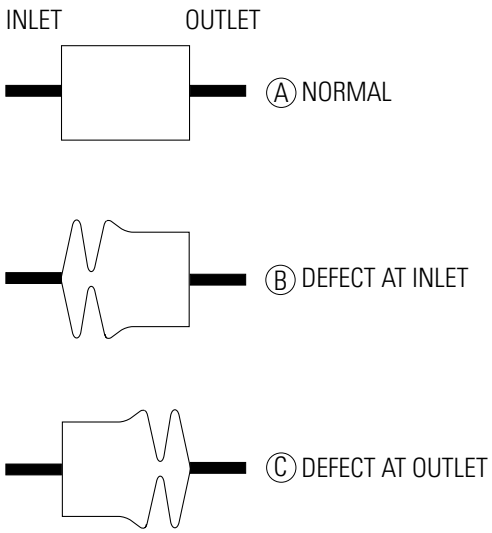

Fig. 3-17

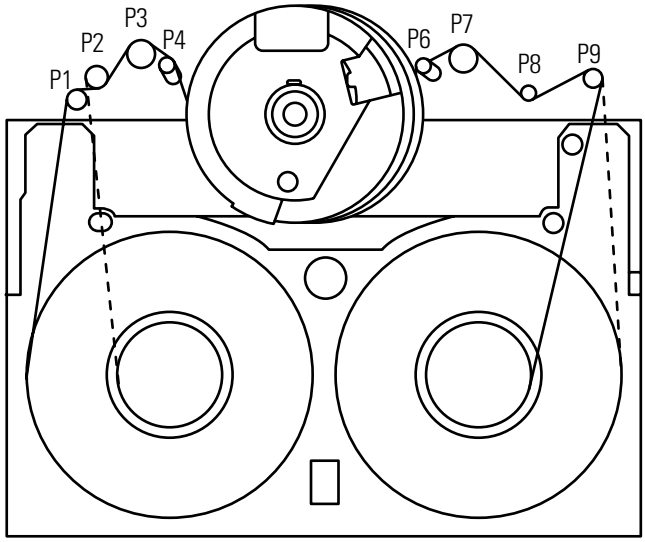

Fig. 3-18

3-3-5(b) Tracking adjustment

❶ Play Back the alignment tape.
❷ Turn P3 to flatten the waveform at the inlet.
❸ Turn P5 to flatten the waveform at the outlet.

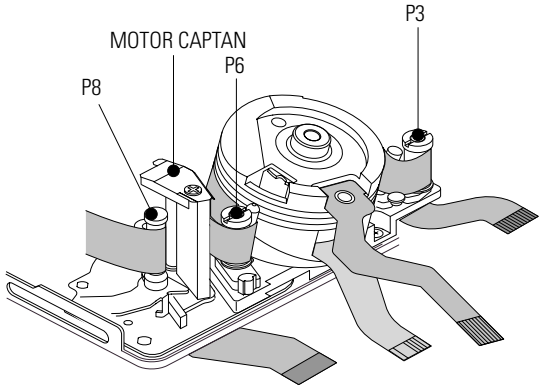

Fig. 3-19

3-3-5(c) Take Up Path Adjustment

❶ Play back the alignment tape, and confirm that the tape is not twisted between the Guide Roller T and Capstan. (If the tape is twisted, turn P8, Fig. 3-18)
❷ Set to REV mode and observe the outlet waveform of PB RF signal. (Fig. 3-19)
❸ If the outlet waveform is out-of-spec, turn P8 counterclockwise, and redo steps 1 and 2.

Fig. 3-20

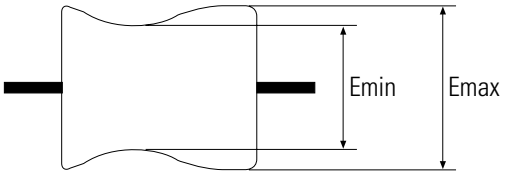
3-3-5(d) Check After Adjustment

1) Tracking Check

❶ Playback the alignment tape.

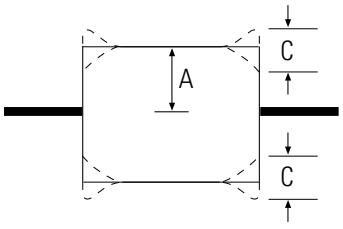
❷ Confirm that the minimum amplitude value(E min.)is 80% of the maximum value(E max.) or larger. (Fig. 3-20)

❸ Confirm that no large fluctuation occur on the waveform. (Fig. 3-21)



$$\frac{Emin}{Emax} \geqq 80(\%)$$

Fig. 3-21



$$C \leqq \frac{1}{8} A$$

Fig. 3-22

2) CUE and REV Check

❶ Playback the alignment tape, and set to REV mode.
Confirm that the waveform peaks have a uniform Pitch. (Fig. 3-22 A)
If the track pitch is not uniform, do section 3-3-5(b) (Tracking adjustment) and 3-3-5(c) (P8 adjustment).

❷ Set to CUE mode.
Confirm that the waveform peaks still have a uniform pitch. (Fig. 3-22 B)
If the track pitch is not uniform, do section 3-3-5(b) (Tracking Adjustment).

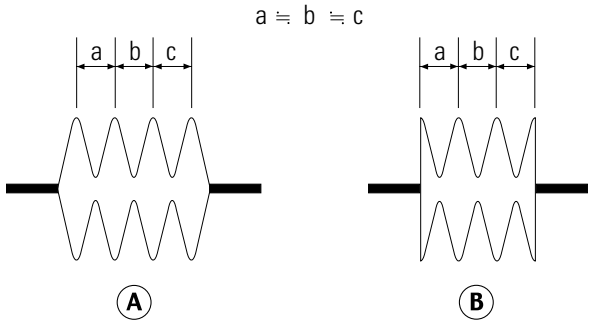


Fig. 3-23

3) Rise Time Check

❶ Playback the alignment tape.

❷ Set to playback mode, and confirm that the waveform of PB RF signal rises flat within 3 seconds. Also confirm that the tape is not twisted or curled around the Pinch Roller. (Fig. 3-23)

❸ Run the tape in CUE/REV and FF/REW modes, then playback. Confirm the waveform of PB RF signal rises flat within 3 seconds. Also confirm that the tape is not twisted or curled around the Pinch Roller.

❹ Repeat steps 2. and 3.

4) Tape Path Check

❶ In CUE and REV modes, check that the tape is not curled around the P3, P6 upper flange and P8 upper/Lower flanges.

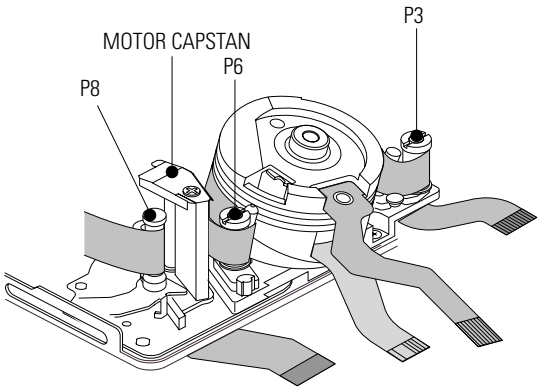

Fig. 3-24

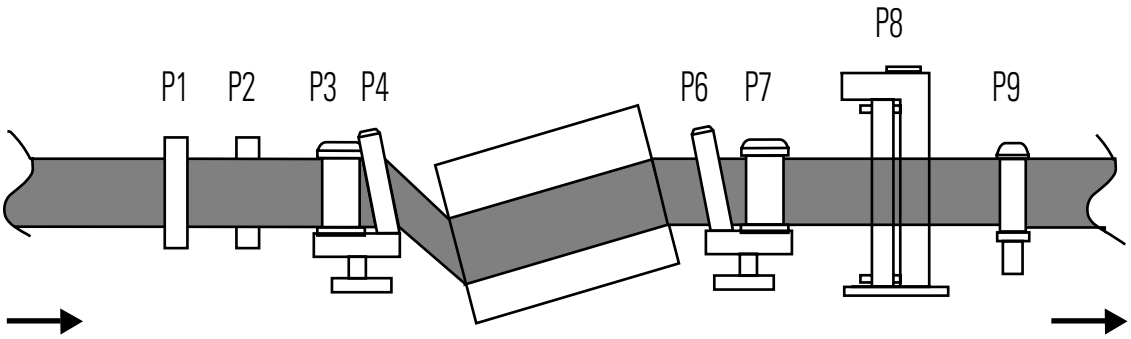

Fig. 3-25

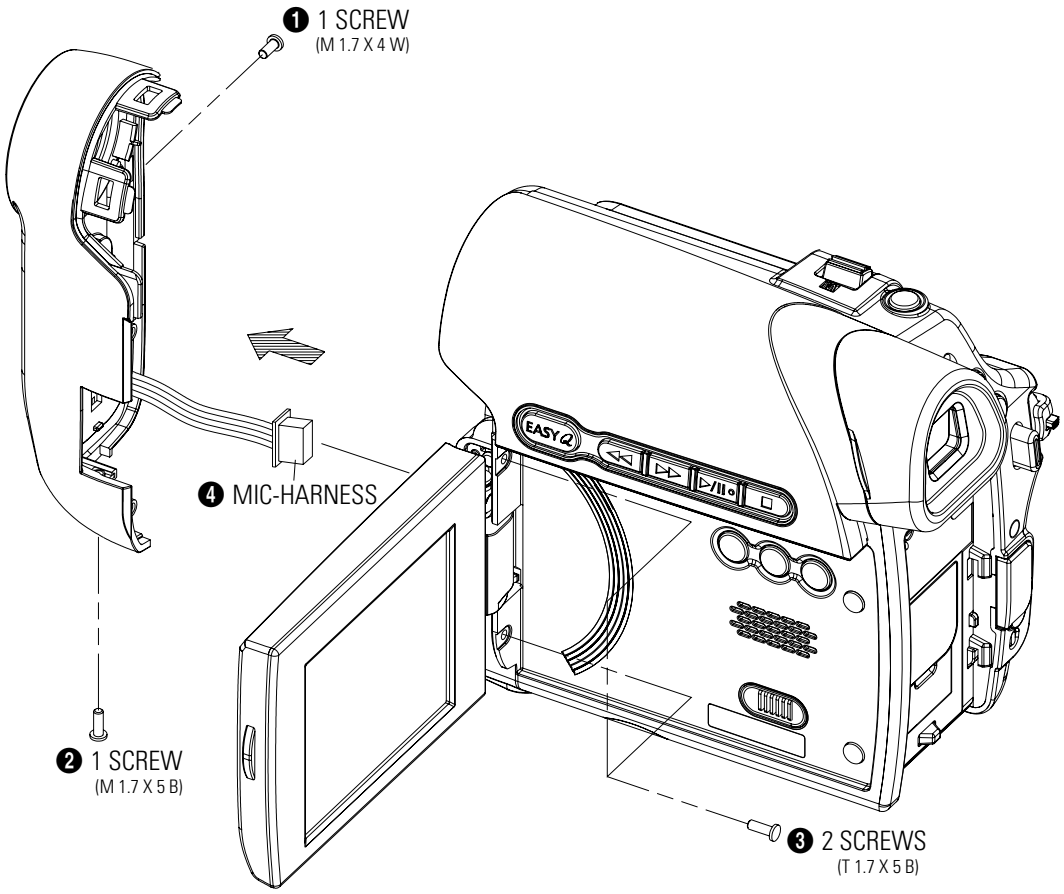
4. Disassembly and Reassembly

4-1 Cabinet and PCB

4-1-1 Ass'y Front Removal

1) Remove 4 Screws ❶, ❷, ❸.
2) Remove Mic-harness ❹.

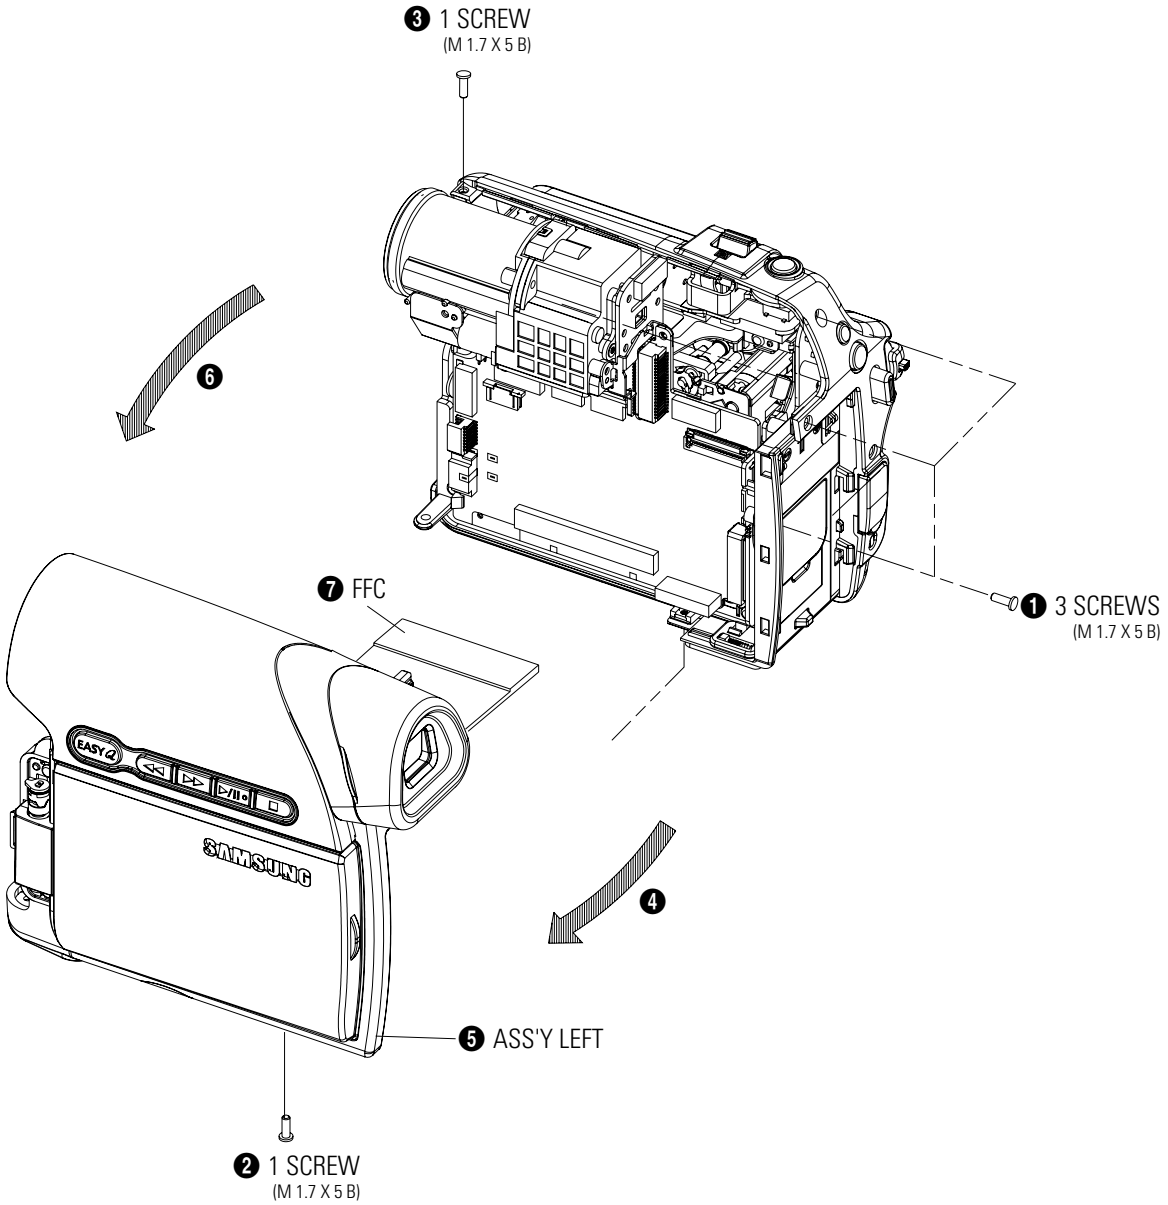


CAUTION : Be careful while pulling Mic-Harness.

Fig. 4-1 Ass'y Front Removal

4-1-2 Ass'y Left Removal

1) Remove 5 Screws ❶, ❷, ❸.
2) ❹ Pull bottom side of Ass'y left ❺ gently.
3) ❻ Pull top side of Ass'y left ❺ upward, separate from Ass'y-right.
   (Check screw ❸ is removed before pulling ❺ Ass'y left upward)
4) Remove FFC ❼ From Main PCB.



CAUTION : FPC Must be remove with care

Fig. 4-2 Ass'y Left Removal

4-1-3 Ass'y Rear Removal

1) Open Cover-li battery ❶.
2) Remove 2 Screws ❷.
3) Open Cover-DC jack ❸.
4) Disconnect Board to board connector ❹, Which is connecting PCB-Rear and Main-PCB.
5) Remove Ass'y-rear ❺ by indicated direction.

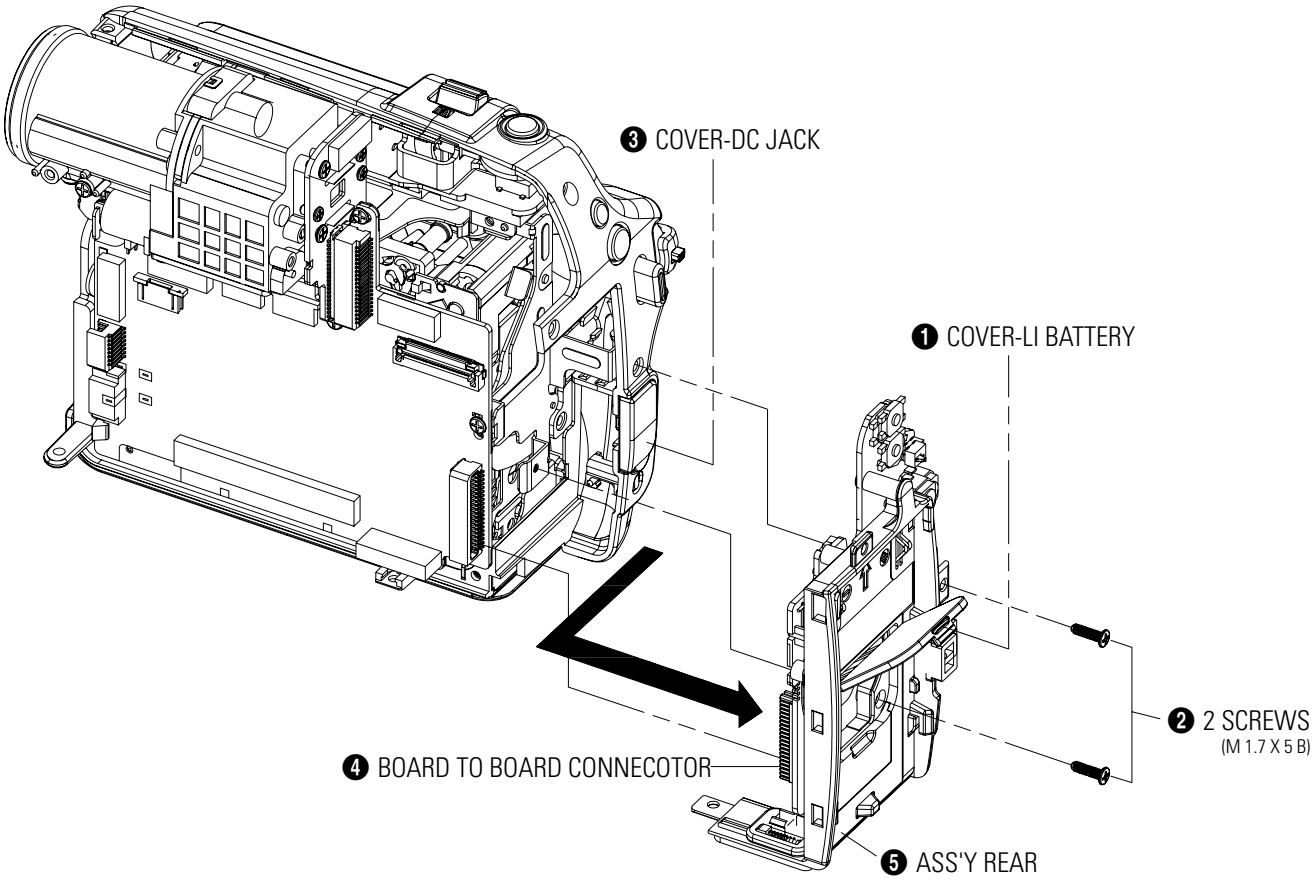


Fig. 4-3 Ass'y Rear Removal

4-1-4 Ass'y Lens Removal

1) Remove 2 Screws ❶.
2) Disconnect Board to Board Connector ❷, Which is connecting PCB-CCD and Main PCB.
3) Remove Ass'y-lens ❸ by Indicated direction.

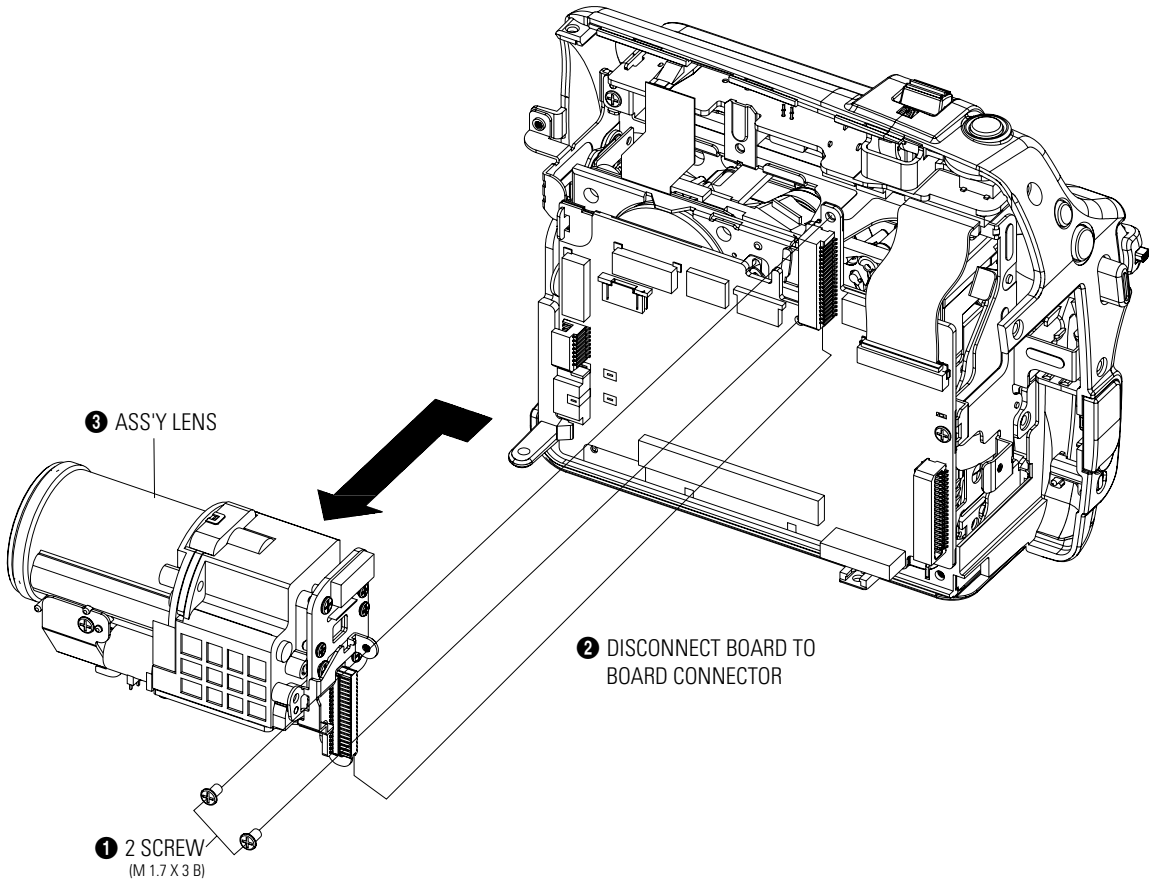

Fig. 4-4 Ass'y Lens Removal

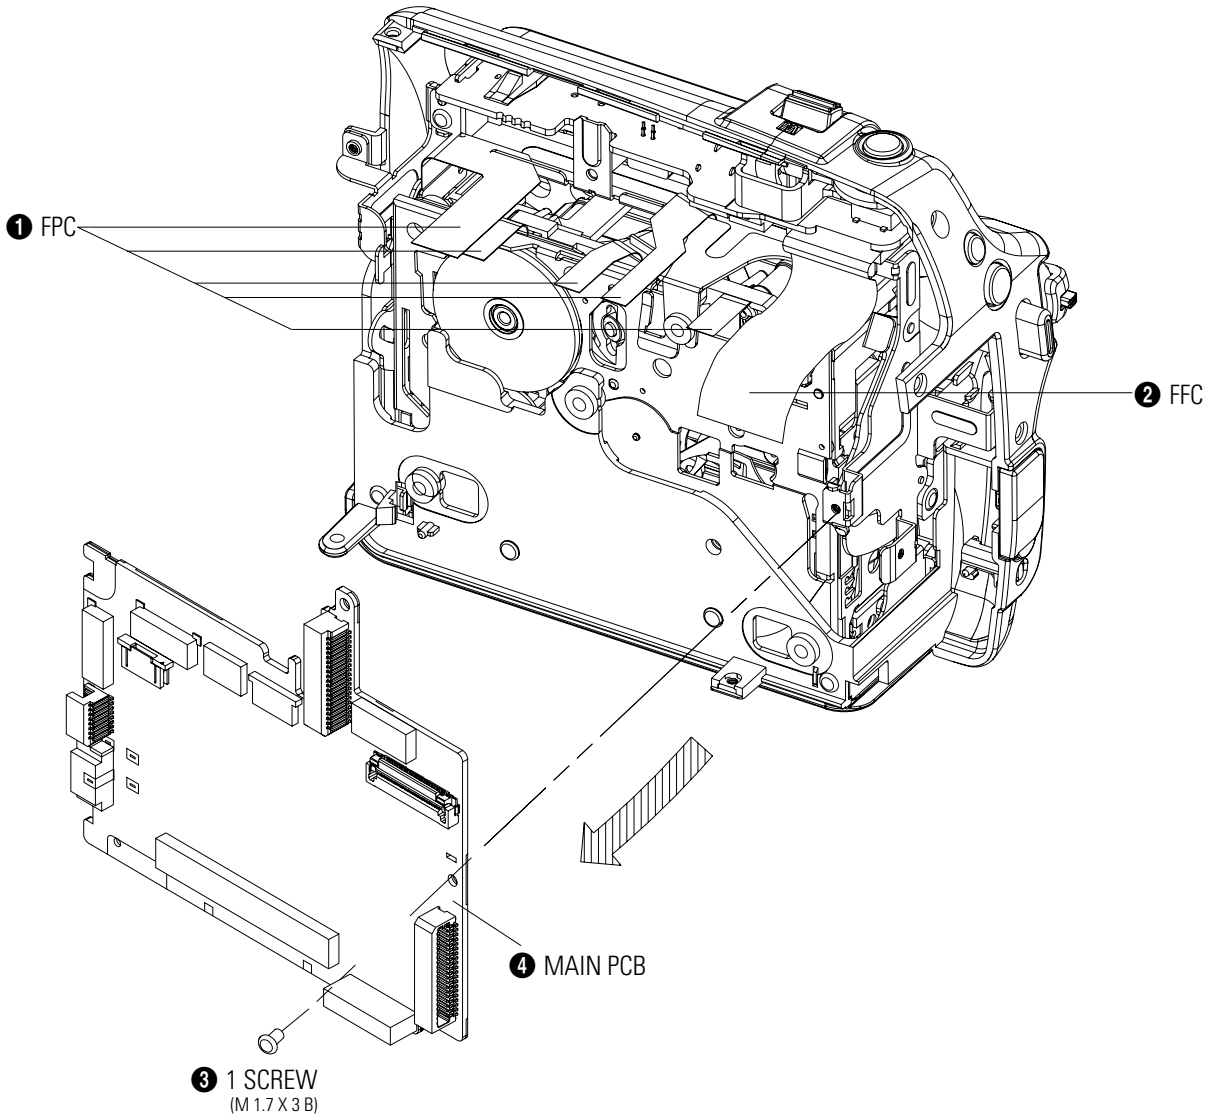
4-1-5 Main PCB Removal

1) Remove 1 FFC ❶, 5 FPC ❷.
2) Remove 4 screw ❸.
3) Remove Main PCB ❹ from Ass'y right by indicated dircection.



CAUTION : FPC, FFC Must be remove with care

Fig. 4-5 Main PCB Removal

4-1-6 Ass'y Main Deck Removal

1) Remove 4 Screw ❶.
2) Open Cover Housing ❷ indicated direction while pushing Knob-tape eject ❸ downward.
3) Pull Ass'y-main deck ❹ downward.

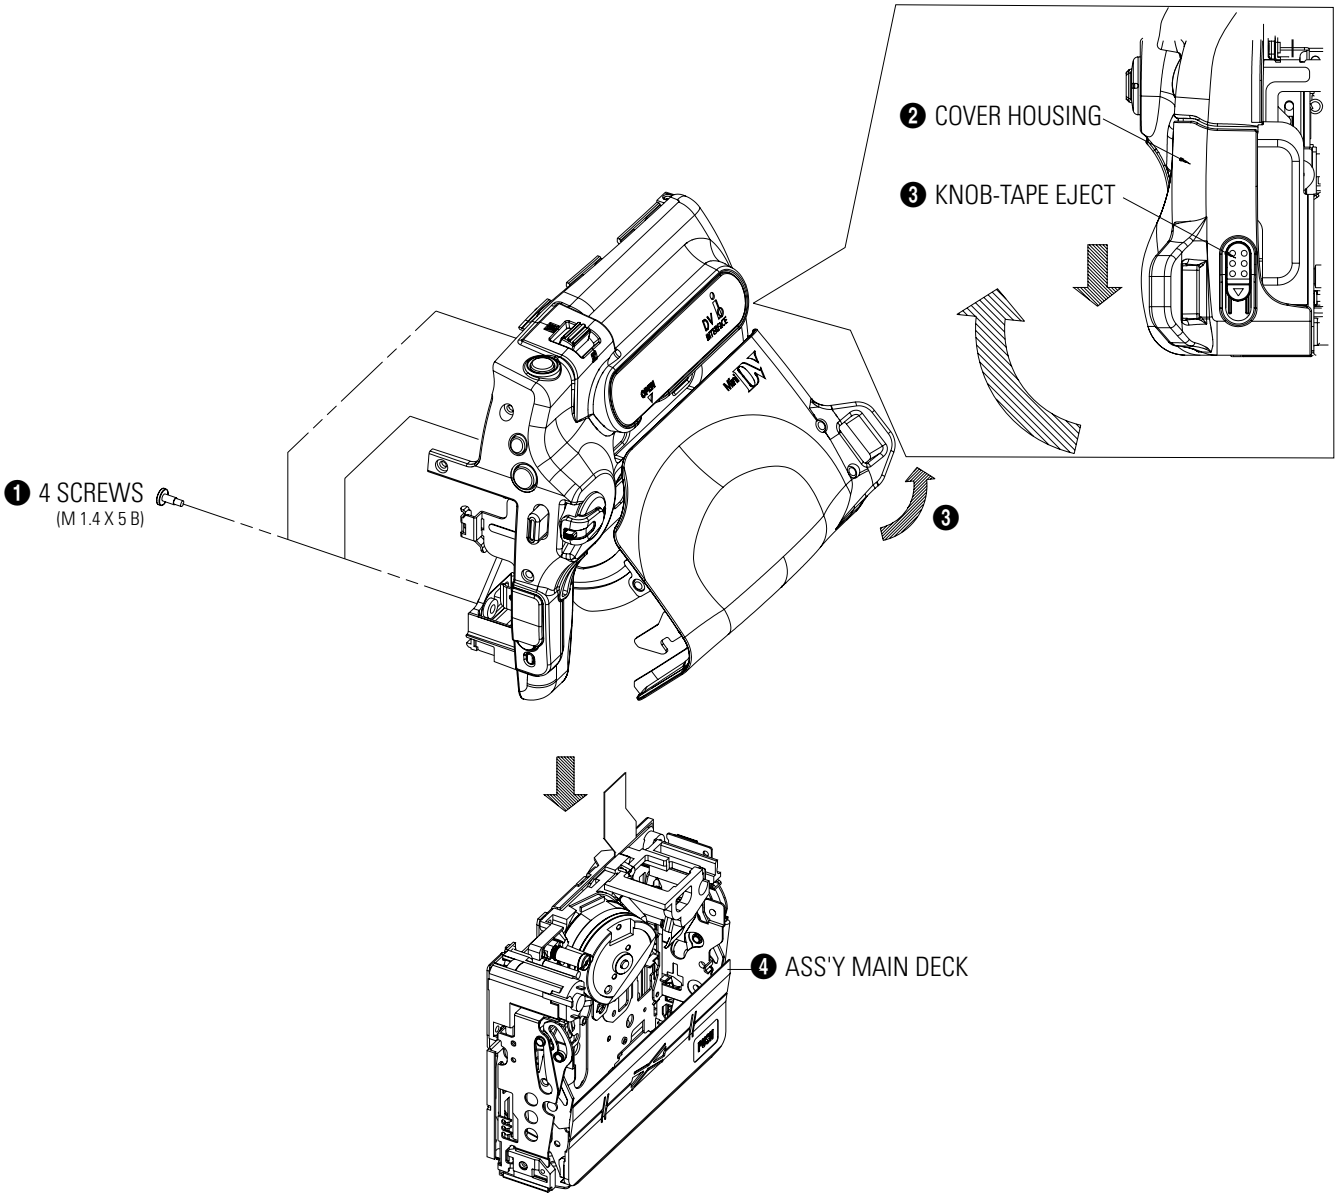


Fig. 4-6 Ass'y Main Deck Removal

4-2 Deck

4-2-1 How to Load and Unload (Setting the Mechanical Modes)

1) Set the power-supply output to approximately 3V~5V, and connect it to the Motor Loading.
2) Choose the polarity depending on whether loading or unloading. (See Table 4-1)
3) Supply the voltage to the Motor Loading.

<Table 4-1>

Ⓐ	Ⓑ	Movement of Chassis
+	–	Loading
–	+	Unloading

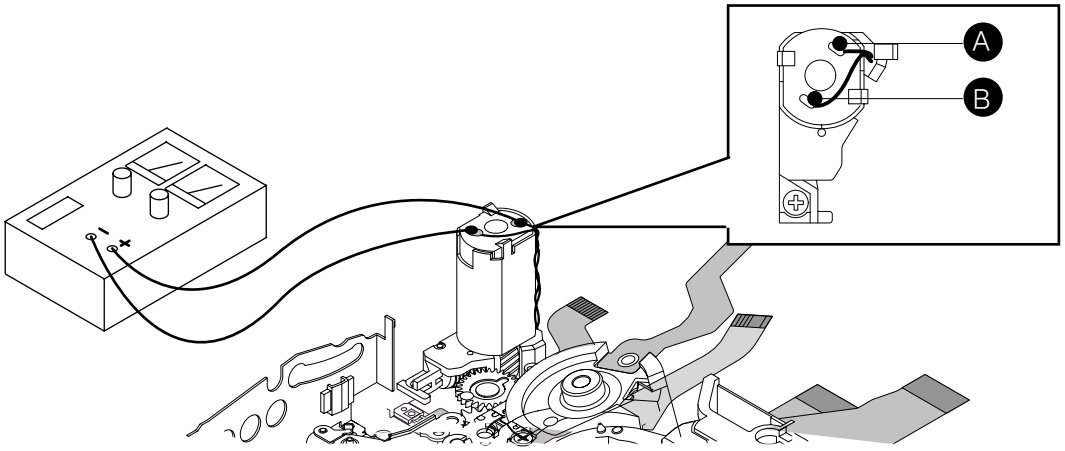

Fig. 4-7 Loading and Unloading

4-2-2 Housing Ass'y

4-2-2(a) Disassembly

Note : Do disassembled and reassembly in the unloading.

1) Push the Lever(see arrow "A", Detail A) turn the Lever Lock ❶ in the direction of arrow "B", and open the Housing Ass'y.
2) Separate the Hook L and Hook R and then lift it.
3) Separate the Shape of Pin L and R ❺ from Cam Parts ❻, ❼ of Sub Chassis and then lift the Housing Ass'y ❽.

4-2-2(b) Reassembly

1) Mount the Shape of Pin L and R ❺ to Cam Parts ❻, ❼ of Sub Chassis.
2) Mount Shape ⓫, ⓬ of Arm L ❾, ❿ pushing them in the direction of "C" and then to right and left hole of Sub Chassis.
3) Mount Housing Lock L ❷, R ❸ to right and left, and then locked.

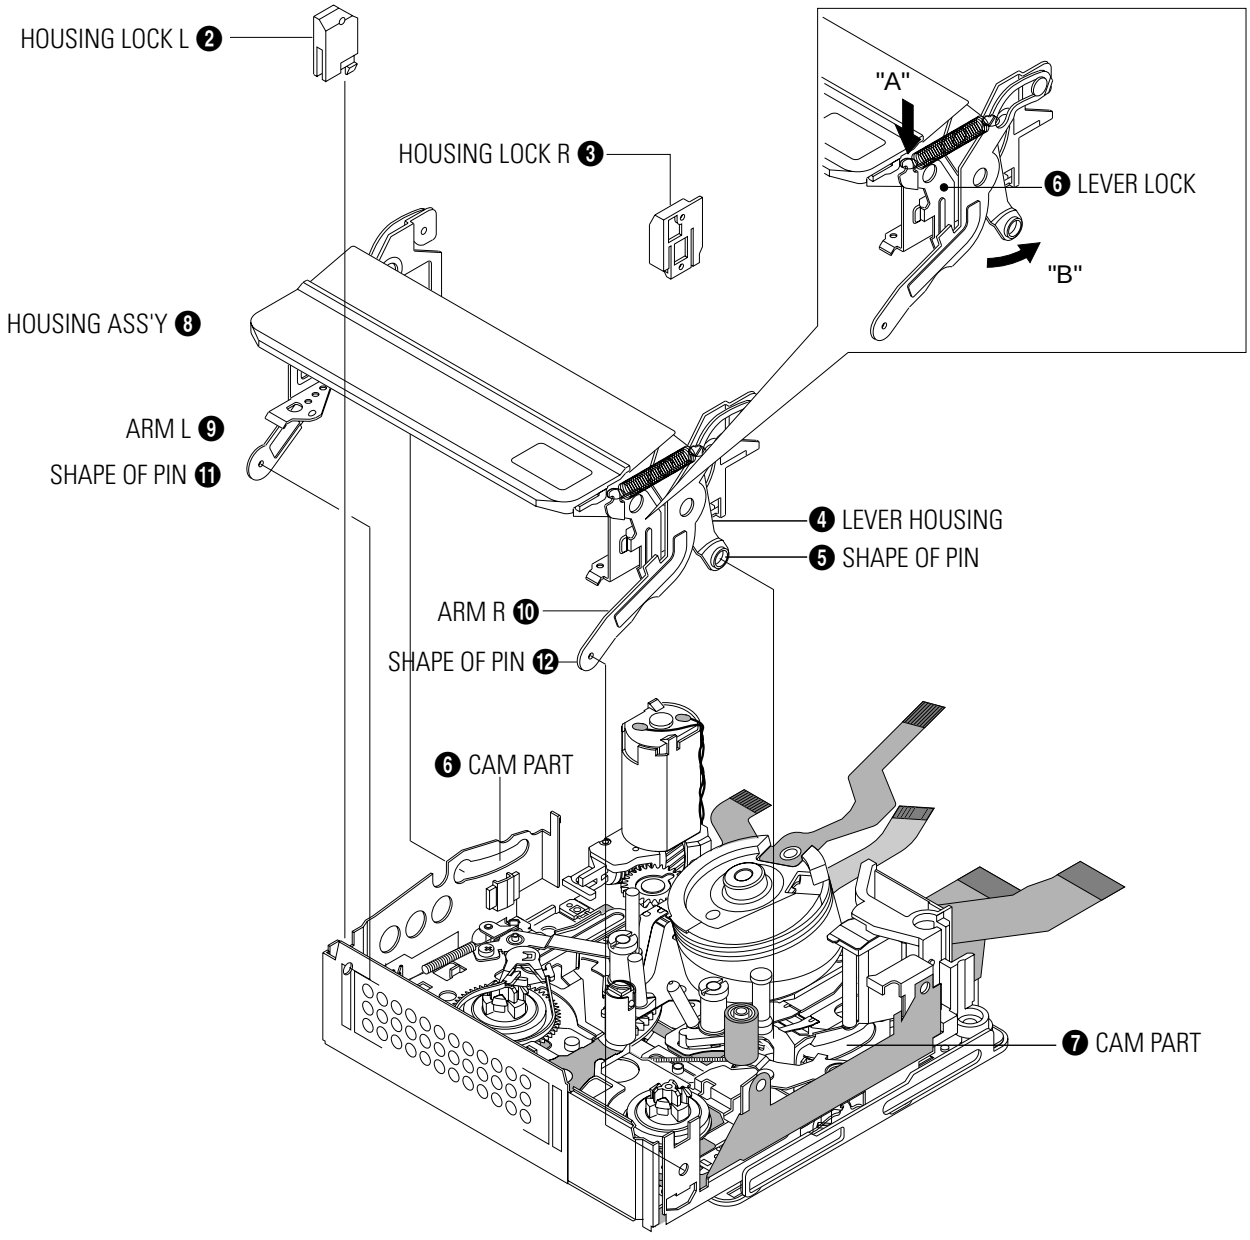

Fig. 4-8 Housing Ass'y

4-2-3 Cover Reel Ass'y, Idler Ass'y

4-2-3(a) Disassembly

1) Remove the 2 Screws ❶, then lift the Cover Reel Ass'y ❷.
2) Then lift the Idler Ass'y ❸.

4-2-3(b) Reassembly

1) Fit the Idler Ass'y ❸ into the Pin.
2) Mount the Cover Reel Ass'y ❷ to the Sub Chassis in the reverse direction of arrow.
3) Secure the 2 Screws ❶.

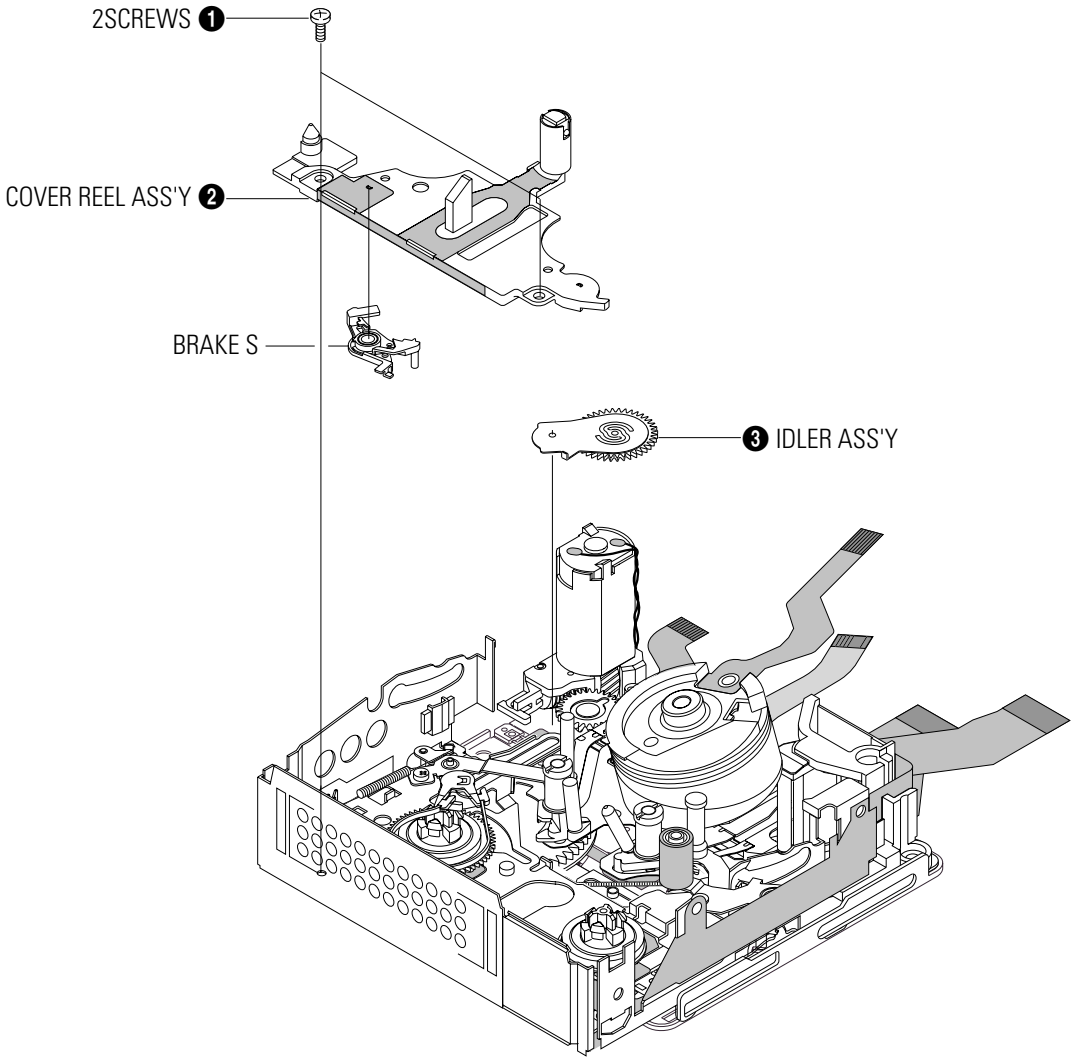

Fig. 4-9 Cover Reel Ass'y, Idler Ass'y

4-2-4 Arm Tension Ass'y, Reel Disk S

4-2-4(a) Disassembly

Note 1 : When disassembling, take care not to deform the part. Do not stain the post.

1) Separate the Spring Tension ❶ from Hook of Sub Chassis.
2) Remove the Washer Slit ❸, and then lift up the Arm Tension ❹.
3) Lift up the Reel Disk S ❺.

4-2-4(b) Reassembly

1) Mount the Reel Disk S ❺.
2) After pushed Arm Tension Ass'y ❹ in the direction "A", and then insert into the Pin ❻.
3) Insert the Washer Slit ❸, and then hang the Spring Tension ❶ to Sub Chassis Hook ❷ and Arm Tension Hook ❼.

Note 1 : When reassembling or dsiassembling, position of Spring Tension ❶ is same.
Note 2 : When moving inspecting, must be inspect Back Tension.
Note 3 : When reassembling, confirm that pin of Arm Tension insert into the Guide Cam.

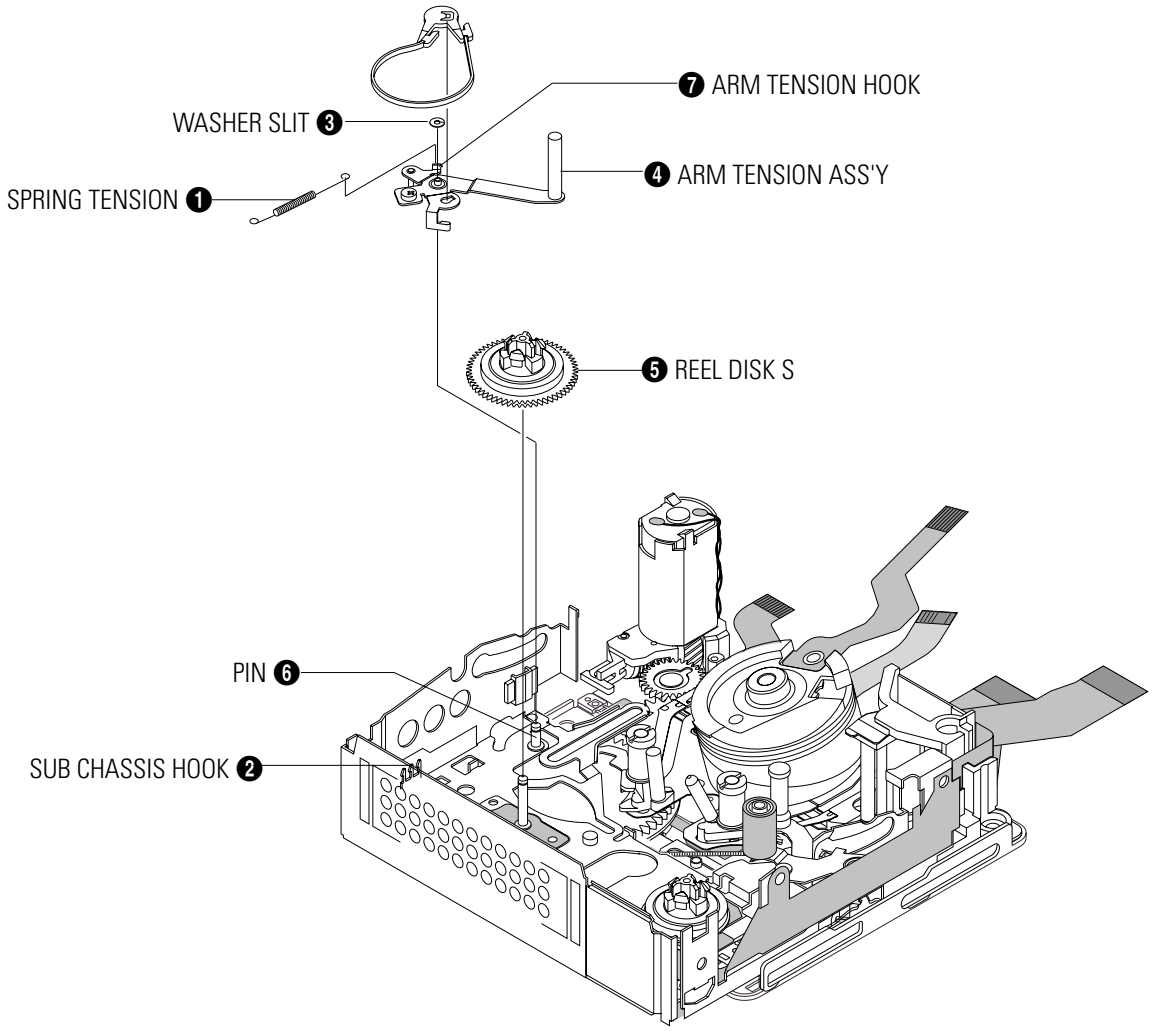

Fig. 4-10 Arm Tension Ass'y, Reel Disk S

4-2-5 Sub Chassis

Note 1 : When disassembling, take care not to damage any part. Do not stain the Rollers and Poles with oil or grease.
Note 2 : Always remove the Sub Chassis Ass'y when the Deck Ass'y is in unload mode.

4-2-5(a) Disassembly

1) Release Sub FPC.
2) Remove 2 Screws ❶.
3) Lift up Sub Chassis Ass'y ❷ from Main Chassis ❸.

4-2-5(b) Reassembly

1) Insert PinPart ❹ of Sub Chassis Ass'y ❷ to Main Chassis Rail ❺, and then fit the reassembly part of two place to Secure Hole ❻ of Main Chassis Ass'y ❸.
2) Secure 2 Screws ❶.

Note 1 : After assembling ❷ with ❸ make sure that Sub Chassis Ass'y ❷ loads and unloads correctly by applying 3V~5V to the Motor Loading.
Note 2 : When reassembling, confirm that pin of Arm Review insert into the Guide Cam.

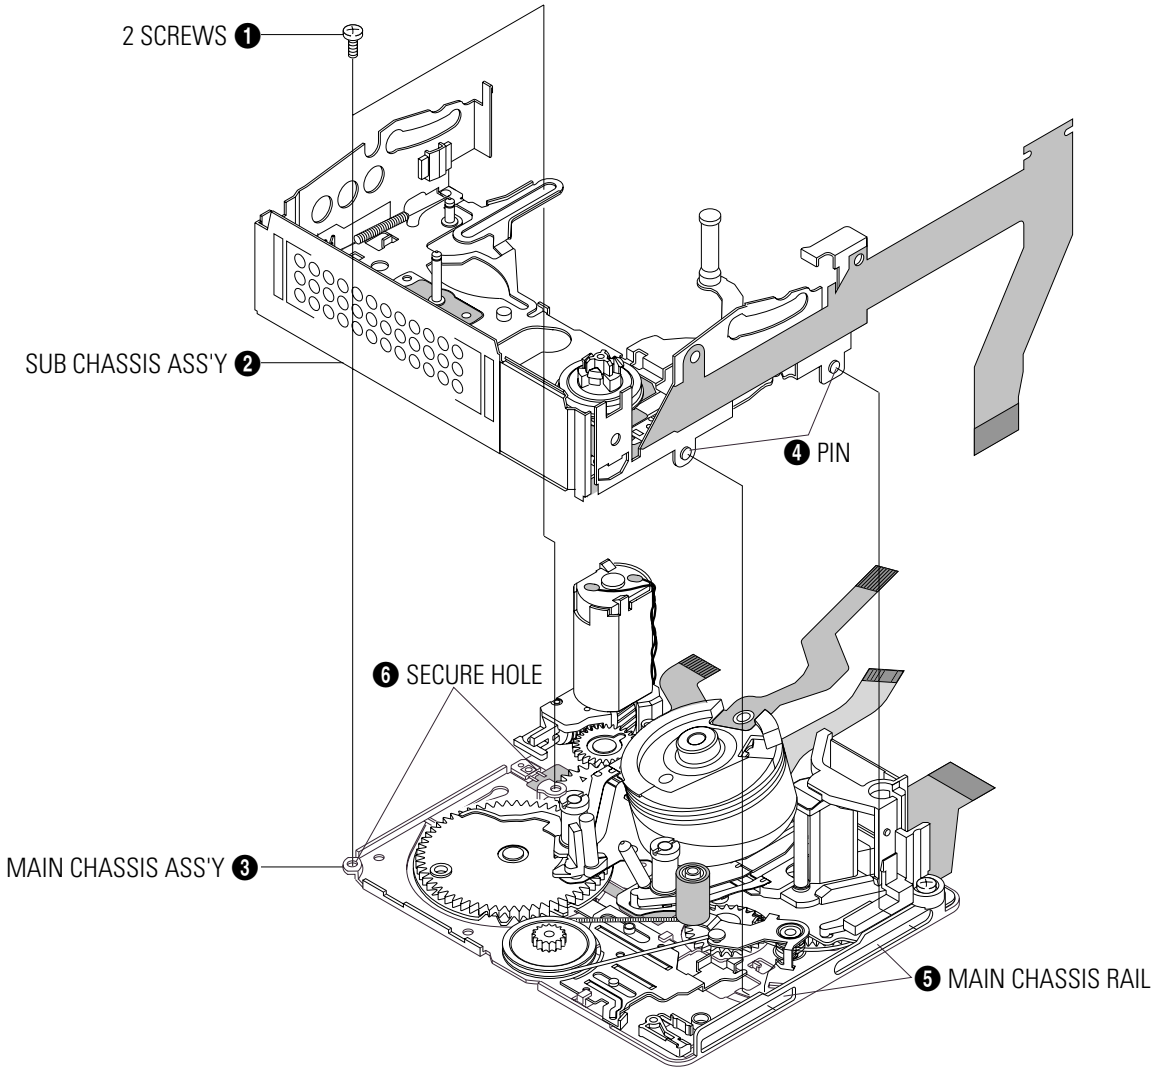

Fig. 4-11 Sub Chassis

4-2-6 Arm Review, Reel Disk T, Brake T

Note : When disassembling or reassembly, take care not to deform the part. Do not stain the post.

4-2-6(a) Disassembly

1) After turned Arm Review ❶ in the direction of arrow “A”, and then lift up.
2) Lift up the Reel Disk T ❷.
3) Lift up the Brake T ❸.

4-2-6(b) Reassembly

1) Insert Brake T ❸ to Pin ❻.
2) Insert Reel Disk T ❷ to Pin ❺.
3) Insert Arm Review ❶ to Pin ❹ state of turning in the direction of arrow “A”.

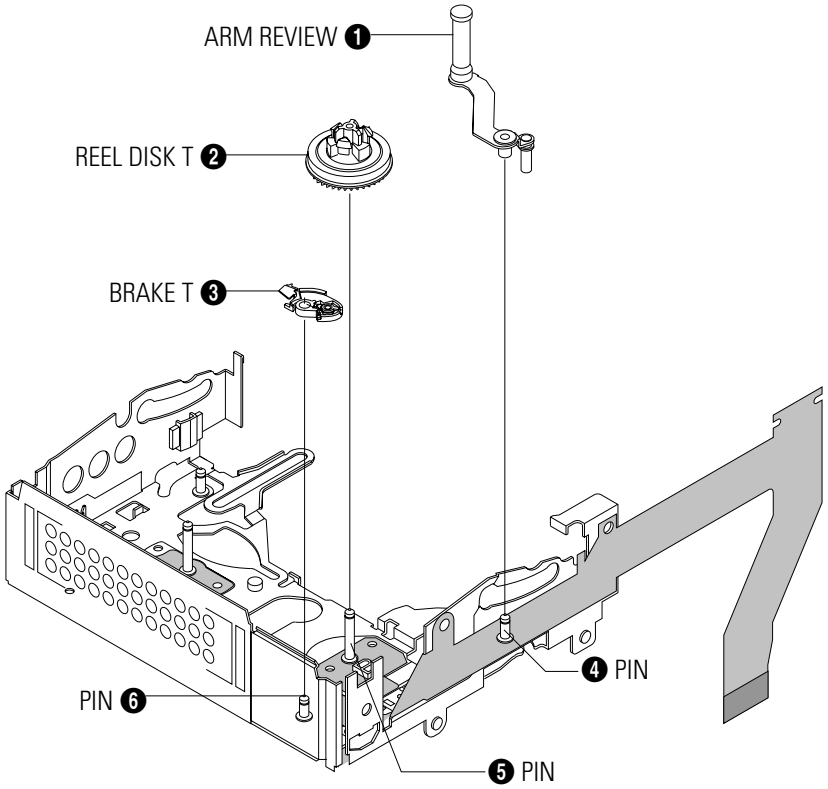

Fig. 4-12 Arm Review, Reel Disk T, Brake T

4-2-7 Drum, Holder FPC

4-2-7(a) Disassembly

Note1 : Do not touch the Head tip ❷ when removing or reassembling the Drum ❶.
Note2 : Do not touch the Roller S ❼, T ❽ when removing or reassembling the Drum ❶.

1) Remove 1 Screw ❶ and then remove the Spring Plate Drum ❷.
2) Lift up the Drum ❸.
3) Remove 1 Screw ❹ and then lift up the Holder FPC ❺.

4-2-7(b) Reassembly

1) Mount and insert the Drum ❸ to the Bosses of base-Drum ❻.
2) Insert the Spring Plate Drum ❷, and secure the 1 Screw ❶.
3) Insert the Holder FPC ❺, and secure the 1 Screw ❹.

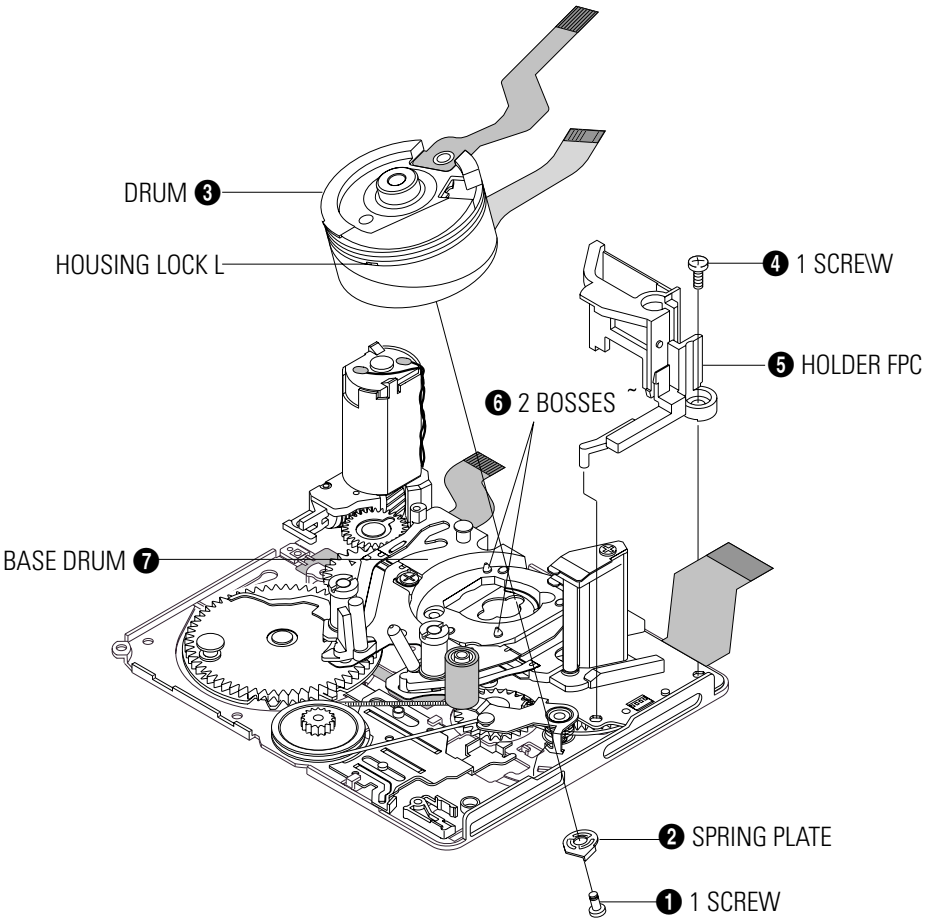

Fig. 4-13 Drum, Holder FPC

4-2-8 Guide Rail Ass'y

4-2-8(a) Disassembly

Note1 : When removing or reassembly, do not touch Guide Roller S ❸ and Roller T ❹. (Protection Stein)
Note2 : When removing or reassembly,the Guide Roller S ❸ and T ❹, be careful not to deform the Guide Rail Ass'y ❷.(pushing the cautious)

1) Remove the 3 Screws ❶, and then lift up Guide Rail Ass'y ❷.
2) Separate it and turn to countclock wise the Guider Roller S ❸ and T ❹.

4-2-8(b) Reassembly

1) Assembly the Guide Roller S ❸ and T ❹ as turn to countclock wise to the Pole Base S ❺ and T ❻.
2) After Pole Base S ❺ and T ❻ unloading mode and then assemble Guide Rail Ass'y ❷ to the Main Chassis ❼ and secure the 3 Screws ❶.

Note 1 : When removing and reassembling Guide Rail Ass'y, be careful not to assemble point.
Note 2 : Disassemble and reassemble in unload mode.
Note 3 : After assembling, make sure that loading and unloading work correctly by applying 3V~5V to the Motor Loading.

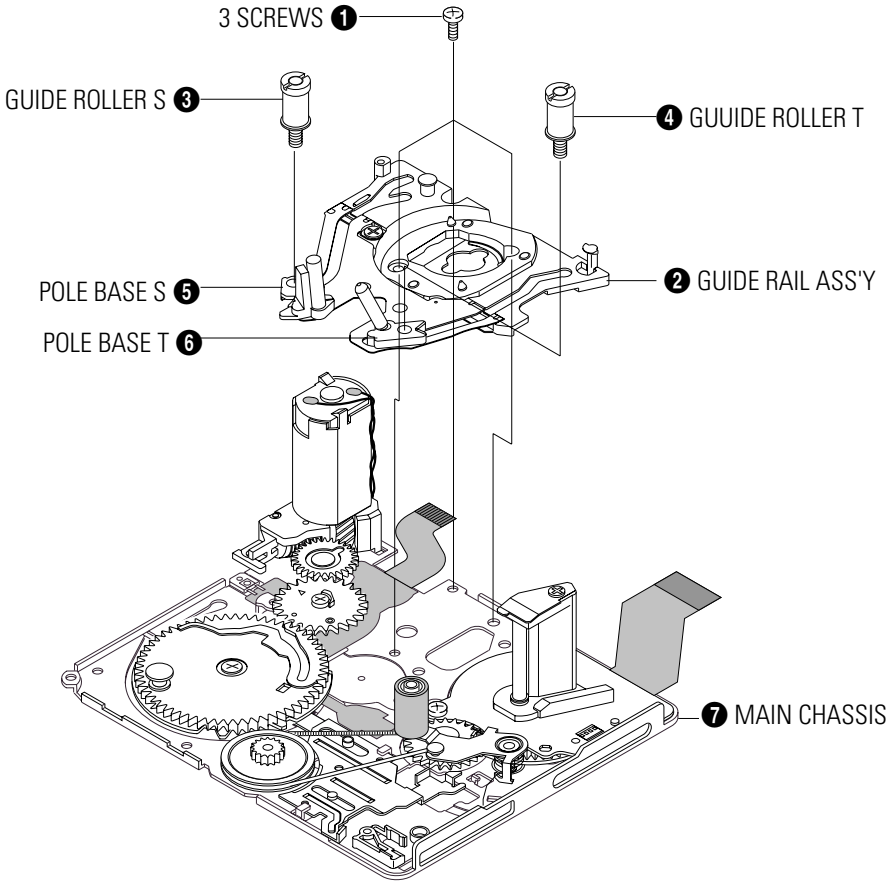

Fig 4-13 Guide Rail Ass'y

4-2-9 Motor Loading, Gear Tension, Gear Cam Main

4-2-9(a) Disassembly

1) Eliminate pt welding 2 part ❶.
2) Remove the 1 Screw ❷ and the 1 Hook ❸, and then lift up the Motor Loading Ass'y ❹.
3) Remove the 2 Screws ❺, and then lift up the Guide Tension ❻, Gear Cam Main ❼.

4-2-9(b) Reassembly

1) After assemble and fit Gear Tension ❻, Gear Cam Main ❼ to assemble point, and then secure the 2 Screws ❺.
2) Insert Hook of Motor Loading Ass'y ❹ to assemble point of Main Chassis, and then secure the 1 Screw ❷.
3) After assemble FPC to Motor, and then weld pt welding 2 parts ❶.

Note 1 : When reassembling, confirm that pin of Slide Main insert into Cam of Gear Cam Main.

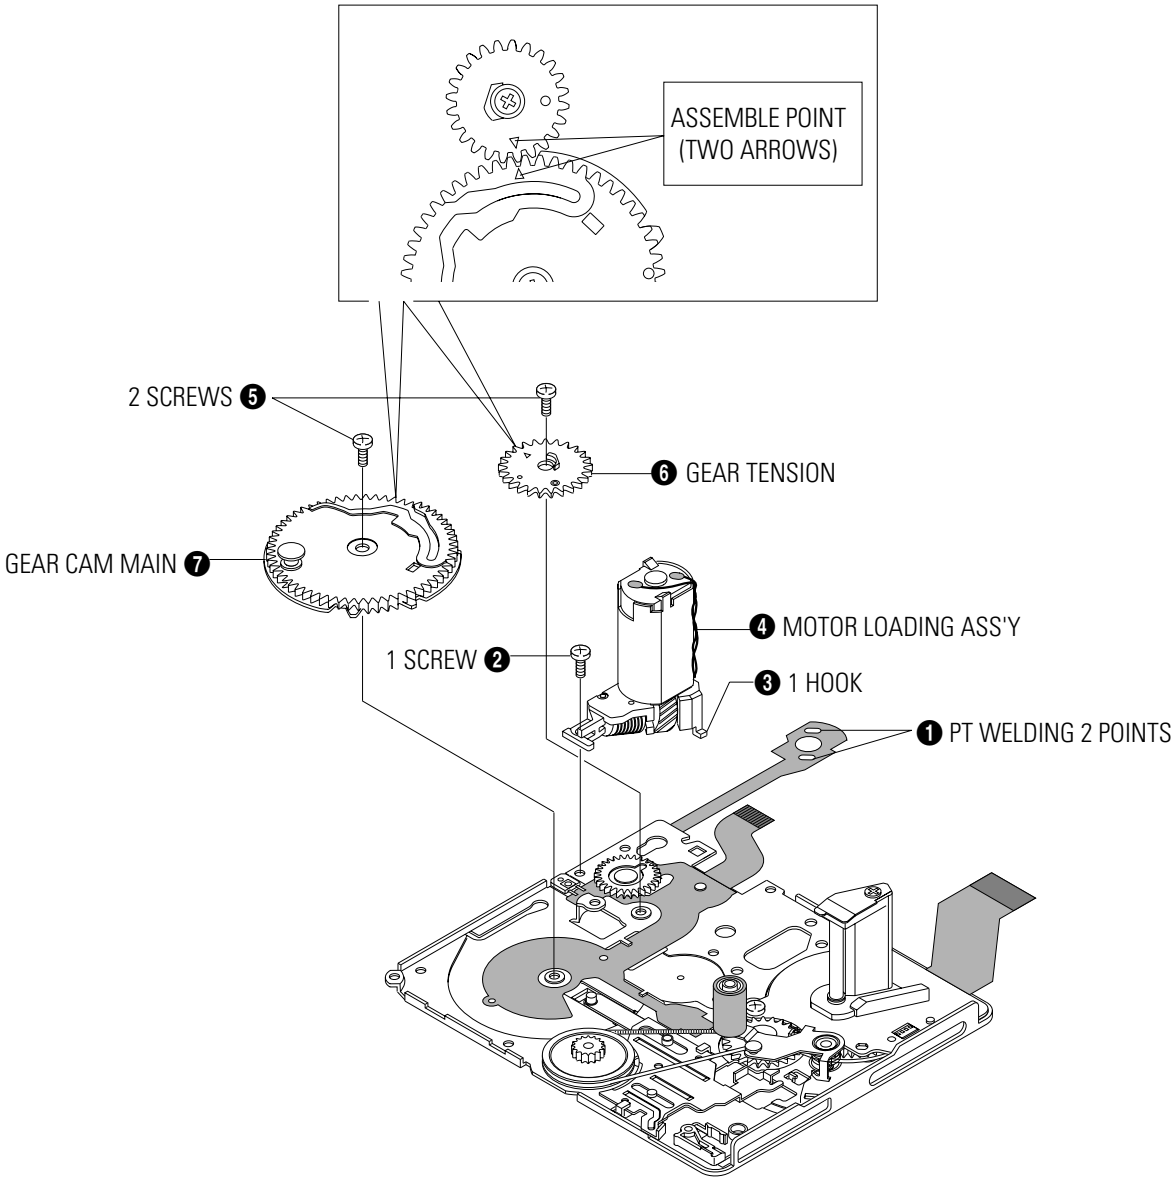

Fig. 4-14 Motor Loading, Gear Tension, Gear Cam Main

4-2-10 Motor Capstan, Arm Pinch roller, Slide main, Lever Eject

4-2-10(a) Disassembly

Note 1 : When removing and reassembling, be careful not to giss the Gear Part.
Note 2 : When removing and reassembling, be careful not to touch the hand in the pinch Roller. (Protection contamination)

1) Remove the 2 Screws ❶ and lift up the Motor Capstan ❷.
2) Eliminate the Washer Slit ❸ and separate Spring Lever Pinch ❹ from the Hook of Main Chassis ❺.
3) Lift up the Arm Pinch Roller ❻.
5) Lift up the Slide Main ❼.
6) Lift up the Lever Eject ❽.

4-2-10(b) Reassembly

1) Assemble the Lever Eject ❽.
2) Assemble the Slide Main ❼.
3) After assemble Arm Pinch Roller ❻ to Main Chassis, and then hang the Spring Lever Pinch ❹ to Hook of Main Chassis ❺. (Reference : Detail Part)
4) Secure the Washer Slit ❸.
5) Assemble the Motor Capstan ❷ and secure the 2 Screws ❶.

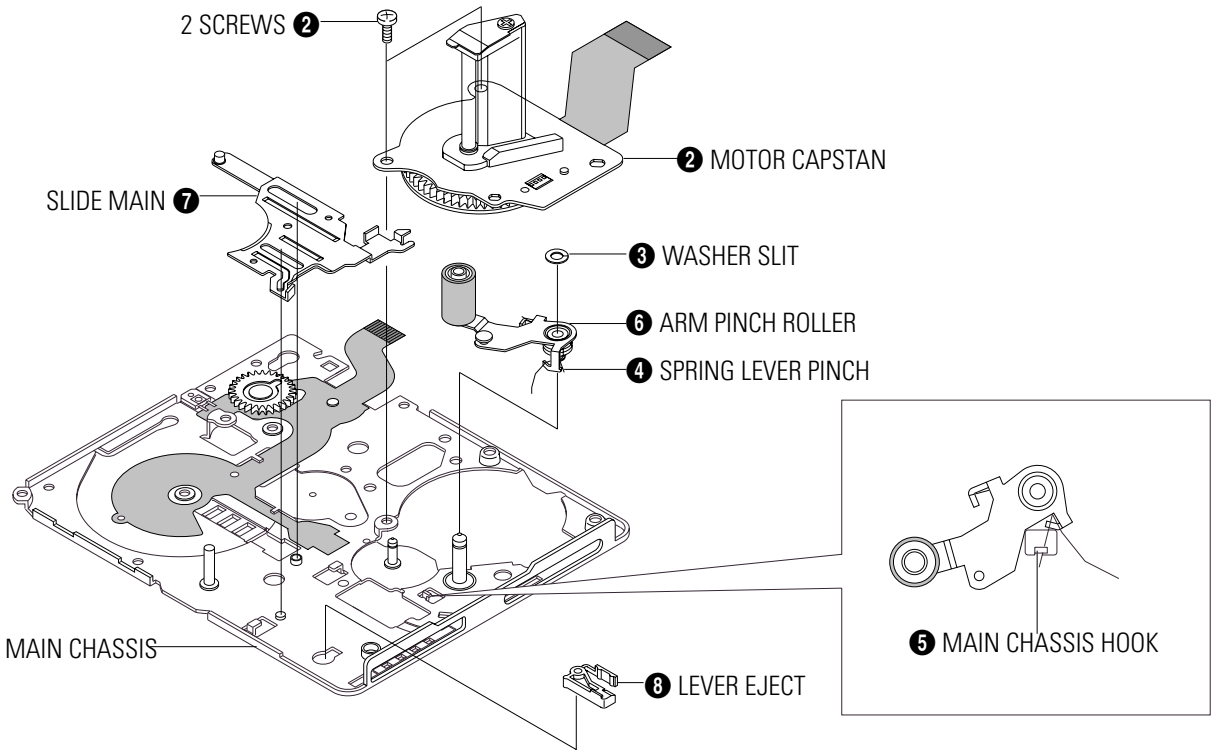

Fig. 4-15 Motor Capstan, Arm Pinch Roller, Slide Main, LeverEject

4-2-11 Gear Pully, Belt Timming, Gear Capstan

4-2-11(a) Disassembly

1) Remove the Washer Slit ❶, lift the Gear Capstan ❷.
2) Separate the Timing Belt ❸, lift the Gear Pully ❹.

4-2-11(b) Reassembly

1) Mount the Gear Pully ❹ and hang the Belt Timming ❸ on the Gear Pully ❹.
2) Hang the Timing Belt ❸ to the upper gear of the Gear Capstan ❷ and mount the Gear Capstan ❷.
3) Assemble the Washer Slit ❶.

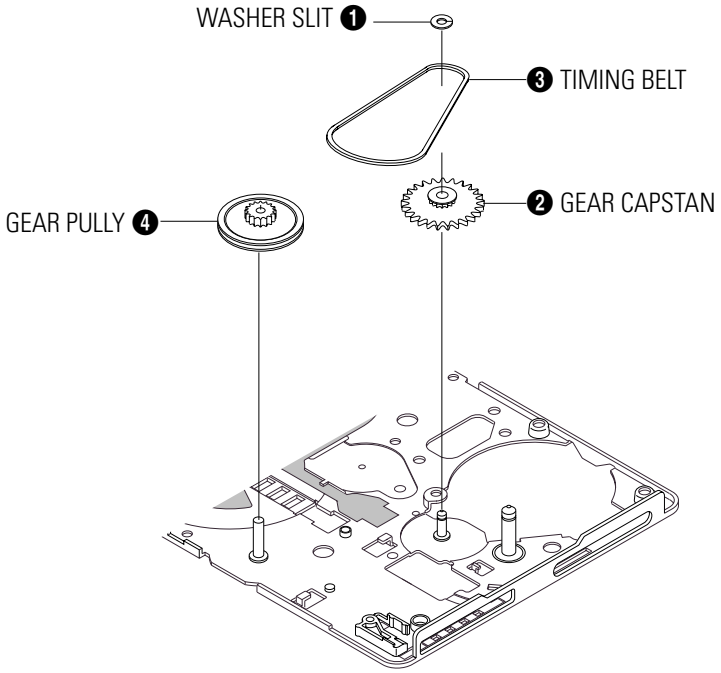

Fig. 4-16 Gear Pully, Timing Belt, Gear Capstan

Note

For schematic Diagram
- Resistors are in ohms, 1/8W unless otherwise noted.

Special note :
Most semiconductor devices are electrostatically sensitive and therefore require the special handling techniques described under the "electrostatically sensitive (ES) devices" section of this service manual.

Note :
Do not use the part number shown on this drawing for ordering. The correct part number is shown in the parts list (may be slightly different or amended since this drawing was prepared).

Important safety notices :
Components identified with the mark ⚠ have the special characteristics for safety. When replacing any of these components.
Use only the same type.

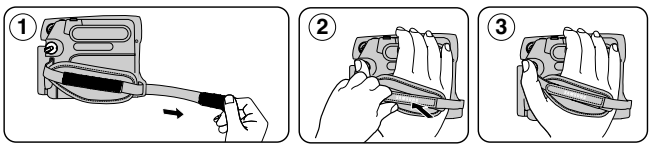
Preparation

Using the Hand Strap & Lens Cover

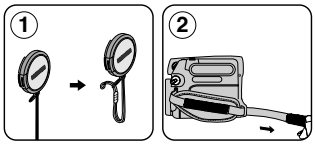
It is very important to ensure that the Hand Strap has been correctly adjusted before you begin your recording.
The Hand Strap enables you to:
- Hold the Camcorder in a stable, comfortable position.
- Press the [Zoom] and [Start/Stop] button without having to change the position of your hand.

Hand Strap

Adjusting the Hand Strap



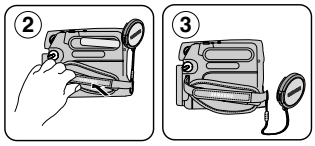
1. Insert the Hand Strap into the Hand Strap Hook on the front side of the Camcorder and pull its end through the hook.
2. Insert your hand into the Hand Strap and adjust its length for your convenience.
3. Close the Hand Strap.



Lens Cover

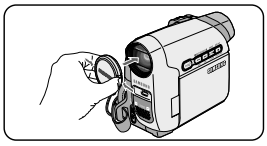
Attaching the Lens Cover

1. Hook up the Lens Cover with the Lens Cover Strap as illustrated.
2. Hook up the Lens Cover Strap to the Hand Strap, and adjust it following the steps as described for the Hand Strap.
3. Close the Hand Strap.



Installing the Lens Cover after Operation

Press buttons on both sides of the Lens Cover, then insert it to the Camcorder Lens.

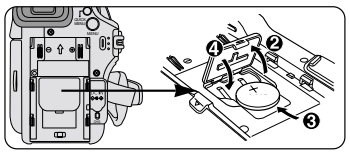


ENGLISH

Preparation

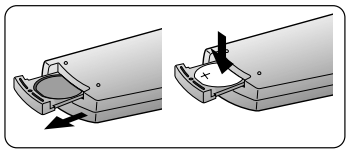
Lithium Battery Installation

Lithium Battery Installation for the Internal Clock



1. Remove the Battery Pack from the rear of the Camcorder.
2. Open the Lithium Battery Cover on the rear of the Camcorder.
3. Position the Lithium Battery in the Lithium Battery Holder, with the positive (⊕) terminal face up.
   Be careful not to reverse the polarity of the Battery.
4. Close the Lithium Battery Cover.

Lithium Battery Installation for the Remote Control (VP-D363(i)/D364W(i)/D365W(i) only)



1. Pull out the Lithium Battery Holder toward the direction of the arrow using instruments such as a pair of tweezers.
2. Position the Lithium Battery in the Lithium Battery Holder, with the positive (⊕) terminal face up.
3. Reinsert the Lithium Battery Holder.

Precaution regarding the Lithium Battery

1. The Lithium Battery maintains the clock function and preset contents of the memory; even if the Battery Pack or AC Power adapter is removed.
2. The Lithium Battery for the Camcorder lasts about 6 months under normal operation from time of installation.
3. When the Lithium Battery becomes weak or dead, the date/time indicator will display **<00:00 1.JAN.2006>** when you set the **<Date/Time>** to **<On>**.
   When this occurs, replace the Lithium Battery with a new one (type CR2025).
4. There is a danger of explosion if Battery is incorrectly replaced.
   Replace only with the same or equivalent type.

Warning: Keep the Lithium Battery out of reach of children. Should a battery be swallowed, consult a doctor immediately.

ENGLISH

Preparation

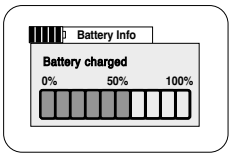
Using the Lithium Ion Battery Pack

✤ Use SB-LSM80 or SB-LSM160 Battery Pack only.
✤ The Battery Pack may be charged a little at the time of purchase.

Charging the Lithium Ion Battery Pack

Blinking time	Charging rate
Once per second	Less than 50%
Twice per second	50% ~ 75%
Three times per second	75% ~ 90%
Blinking stops and stays on	90% ~ 100%
On for a second and off for a second	Error - Reset the Battery Pack and the DC Cable

1. Turn the **[Power]** switch to **[Off]**.
2. Attach the Battery Pack to the Camcorder.
3. Connect the AC Power Adapter to an AC Cord and connect the AC Cord to a wall socket.
4. Connect the DC cable to the DC jack on the Camcorder. The charging indicator will start to blink, showing that the Battery is charging.
5. Press and hold the DISPLAY button while charging and the charging status will be displayed on the LCD for 7 seconds.
   - As indicated the battery level is given as reference data for the user, it is the approximate estimation. It may differ from Battery capacity and temperature.



6. When the Battery is fully charged, disconnect the Battery Pack and the AC Power Adapter from the Camcorder.
   Even with the Power switched Off, the Battery Pack will still discharge.

Charging, Recording Times based on Model and Battery Type.

Time / Battery	Charging time	Recording time	
		LCD On	Viewfinder On
SB-LSM80	Approx. 1hr 20min	Approx. 1hr 20min	Approx. 1hr 30min
SB-LSM160 (Option)	Approx. 3hr	Approx. 2hr 40min	Approx. 3hr

✤ If you close the LCD Screen, it switches off and the Viewfinder switches on automatically.
✤ The continuous recording times given in the table to the right are approximations.
   Actual recording time depends on usage.
✤ The continuous recording times in the operating instructions are measured using a fully charged Battery Pack at 77 °F (25 °C).
✤ Even when the Power switched Off, the Battery Pack will still discharge if it is left attached to the device.

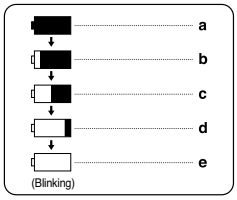
ENGLISH

Preparation

The amount of continuous recording time available depends on;
- The type and capacity of the Battery Pack you are using.
- Ambient temperature.
- How often the Zoom function is used.
- Type of use (Camcorder/Camera/With LCD Screen etc.).
  It is recommended that you have several batteries available.

Battery Level Display

The battery level display indicates the amount of power remaining in the Battery Pack.
a. Fully charged b. 20~40% used
c. 40~80% used d. 80~95% used
e. Completely used (Blinking)
(The Camcorder will turn off soon, change the battery as soon as possible.)



Battery Pack Management

- The Battery Pack should be recharged in an environment between 32 °F (0 °C) and 104 °F (40 °C).
- The life and capacity of the Battery Pack will be reduced if it is used in temperatures below 32 °F (0 °C) or left in temperatures above 104 °F (40 °C) for a long period of time, even when it is fully recharged.
- Do not put the Battery Pack near any heat source (i.e. fire or a heater).
- Do not disassemble, apply pressure to or heat the Battery Pack.
- Do not allow the + and – terminals of the Battery Pack to be short-circuited. It may cause leakage, heat generation, induce overheating or fire.

ENGLISH

Preparation

Notes regarding the Battery Pack

- Please refer to the Table on page 16 for approximate continuous recording time.
- The recording time is affected by temperature and environmental conditions.
- The recording time shortens dramatically in a cold environment. As the environmental temperature and conditions vary.
- The continuous recording times in the operating instructions are measured using a fully charged Battery Pack at 77 °F (25 °C). The remaining battery time may differ from the approximate continuous recording times given in the instructions.
- It is recommended to use original Battery Pack that is available at SAMSUNG service centre.
  When the Battery reaches the end of its life, please contact your local dealer.
  The batteries have to be dealt with as chemical waste.
- Make sure that the Battery Pack is fully charged before starting to record.
- A brand new Battery Pack is not charged. Before using the Battery Pack, you need to charge it completely.
- Fully discharging a Lithium Ion Battery damages the internal cells.
  The Battery Pack may be prone to leakage when fully discharged.
- To preserve battery power, keep your Camcorder turned off when you are not operating it.
- If your Camcorder is in **<Camera>** mode, and it is left in **<STBY>** mode without being operated for more than 5 minutes with a tape inserted, it will automatically turn itself off to protect against unnecessary battery discharge.
- Make sure that the Battery Pack is fitted firmly into place.
  Do not drop the Battery Pack. Dropping the Battery Pack may damage it.

ENGLISH

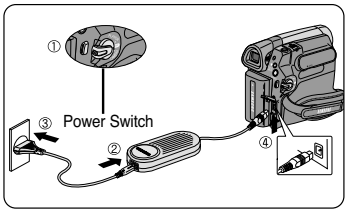
Preparation

Connecting a Power Source

✤ There are two types of power source that can be connected to your Camcorder.
- The AC Power adapter and AC Cord: used for indoor recording.
- The Battery Pack: used for outdoor recording.

Using a Household Power Source

Connect to a house hold power source to use the Camcorder without worrying about the battery power. You can keep the Battery Pack attached; the battery power will not be consumed.



1. Turn the **[Power]** switch to **[OFF]**.
2. Connect the AC Power adapter (AA-E8 Type) to the AC Cord.
3. Connect the AC Cord to a wall socket.
   The plug and wall socket type may differ according to your resident country.
4. Connect the DC cable to the DC jack of the Camcorder.
5. Set the Camcorder to each mode by holding down the tab on the **[Power]** switch and turning it to the **[CAMERA]** or **[PLAYER]** mode.

About the Operating Modes

✤ The operating modes are determined by the position of the **[Power]** switch and the **[Mode]** switch.
✤ Set the Operation Mode by adjusting **[Power]** switch and **[Mode]** switch before operating any functions.

Mode Name	<Camera Mode>	<Player Mode>	<M.Cam Mode>	<M.Player Mode>
[Power] Switch				
[Mode] Switch (VP-D363(i)/D364W(i) /D365W(i) only)				

[Note]
- The <M.Cam> and the <M.Player> Modes are only enabled on VP-D363(i)/ D364W(i)/ D365W(i).

Preparation

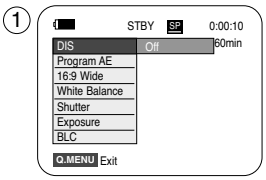
Using the QUICK MENU

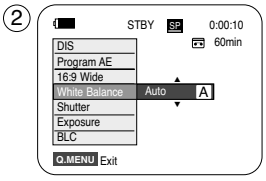
✤ QUICK MENU is used to access Camcorder functions by using the **[QUICK MENU]** button.
✤ QUICK MENU provides easier access to frequently used menus without using the **[MENU]** button.
✤ Functions available using the QUICK MENU are as below:

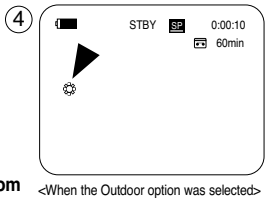
Camera Mode
- Setting the Digital Image Stabilizer (DIS) ➥page 55
- Programmed Automatic Exposure Modes (Program AE) ➥page 49
- Setting the 16:9 Wide ➥page 54
- Setting the White Balance (White Balance) ➥page 51
- Setting the Shutter Speed (Shutter)- Only can be operated by using the QUICK MENU ➥page 47
- Setting the Exposure (Exposure)- Only can be operated by using the QUICK MENU ➥page 47
- Setting the Back Light Compensation (BLC) ➥page 41

M.Cam Mode
- Setting the Memory Type (Memory Type) ➥page 70
- Setting the White Balance (White Balance) ➥page 51
- Setting the Photo Quality (Photo Quality) ➥page 71
- Setting the Exposure (Exposure)- Only can be operated by using the QUICK MENU ➥page 47
- Setting the Back Light Compensation (BLC) ➥page 41

M.Player Mode
- Setting the Memory Type (Memory Type) ➥page 70
- Playing Moving Images (MPEG) on the Memory Card (M. Play Select) ➥page 80
- Deleting Photo Images and Moving Images (Delete) ➥page 76
- Protection from accidental Erasure (Protect) ➥page 75
- Marking Images for Printing (Print Mark) ➥page 84







<When the Outdoor option was selected>

For example: Setting the White Balance

1. Press the **[QUICK MENU]** button.
   The quick menu list will appear.
2. Move the **[Zoom]** lever up or down to select **<White Balance>**, then press the **[OK]** button.
3. Move the **[Zoom]** lever up or down to select desired mode (**Auto, Indoor, Outdoor** or **Custom WB**), then press the **[OK]** button.
4. To exit, press the **[QUICK MENU]** button.

PictBridge™ (VP-D363(i)/D364W(i)/D365W(i) only)

Printing Your Pictures – Using the PictBridge™

✤ PictBridge™ function works only in **<M.Player>** mode. ➥page 19
✤ By connecting the Camcorder to printers with PictBridge support (sold separately), you can send images from the Memory Card directly to the printer with a few simple operations.
✤ With the PictBridge Support, you can control the printer directly through your Camcorder in order to print out stored pictures. For direct printing of your stored pictures using the PictBridge function, you must connect your Camcorder to a PictBridge printer using a USB cable.

Connecting To a Printer

1. Turn your printer power off.
   - Turn your Camcorder on by setting the **[Power]** switch to **[PLAYER]**.

2. Set the **[Mode]** switch to **[MEMORY]**.

3. Press the **[MENU]** button.
   - The menu list will appear.

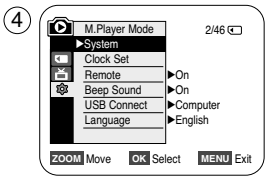
4. Move the **[Zoom]** lever up or down to select **<System>**, then press the **[OK]** button.

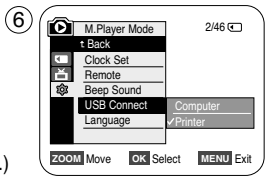
5. Move the **[Zoom]** lever up or down to select **<USB Connect>**, then press the **[OK]** button.

6. Move the **[Zoom]** lever up or down to select **<Printer>**, then press the **[OK]** button.
   - **<Computer>** : Connect to a computer.
   - **<Printer>** : Connect to a printer. (To use the PictBridge function, connect to a printer.)

7. Connect your Camcorder to the printer using the provided USB cable.

8. Turn your printer power on.
   - The PictBridge menu screen appears automatically after a short period.
   - The cursor highlights **<Print>**.



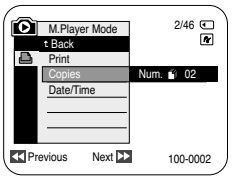


ENGLISH

PictBridge™ (VP-D363(i)/D364W(i)/D365W(i) only)

Selecting Images

1. In the **<PictBridge>** settings menu, press the **[◀◀/▶▶ (REV/FWD)]** buttons to select an image to print.

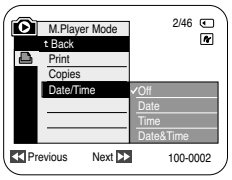


Setting the Number of Prints

2. Move the **[Zoom]** lever up or down to select **<Copies>**, then press the **[OK]** button.
3. Move the **[Zoom]** lever up or down to set the number of prints, then press the **[OK]** button.

Setting the Date/Time Imprint Option

4. Move the **[Zoom]** lever up or down to select **<Date/Time>**, then press the **[OK]** button.
5. Move the **[Zoom]** lever up or down to select the Date/Time display type, then press the **[OK]** button.
   - Date/Time display type: **<Off>**, **<Date>**, **<Time>**, **<Date&Time>**

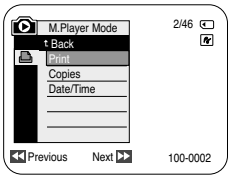


Printing Images

Move the **[Zoom]** lever up or down to select **<Print>**, then press the **[OK]** button, and selected image files will be printed.

Canceling the Printing

To cancel the image printing, press [OK] button again.
The message “Cancel” appears and the image printing will be canceled.



[Notes]

- The Date/Time Imprint Option may not supported by all printers. Check with your printer manufacturer. The **<Date/Time>** menu cannot be setup if the printer does not support this option.
- The PictBridge™ is a registered trademark of CIPA (Camera & Imaging Products Association), an image transfer standard developed by Canon, Fuji, HP, Olympus, Seiko Epson, and Sony.
- PictBridge supporting printers are commercially available.
- Use the USB cable provided with the Camcorder.
- Use the AC power adapter for your Camcorder during PictBridge Direct Printing. Turning your Camcorder off during the printing might damage data on the Memory Card.
- Printing photo images is supported. Moving images are not available for printing.
- You can set various printing options depending on the printer.
- Please refer to the user’s manual of the printer for details.

ENGLISH

IEEE 1394 Data Transfer

Transferring IEEE1394 (i.LINK)-DV Standard Data Connections (VP-D361i/D361Wi/D362i/D363i/D364Wi/D365Wi only)

Connecting to a DV Device (DVD Recorder, Camcorder, etc.)

- Connecting to other DV standard products.
  - A standard DV connection is quite simple.
  - If a product has a DV jack, you can transfer data by connecting to the DV jack using the correct cable. (not supplied)

  !!! Please be careful as there are two types of DV jacks (4pin, 6pin). This Camcorder has a 4pin jack.

- With a digital connection, video and audio signals are transmitted in digital format, allowing high quality images to be transferred.

Connecting to a PC

- If you want to transmit data to a PC, you must install an IEEE 1394 add-on card into the PC. (not supplied)
- The frame rate for moving image is dependent on the capacity of the PC.

System Requirements

- CPU : faster Intel® Pentium III™ 450MHz compatible.
- Operating system : Windows® 98SE, ME, XP, Mac OS (9.1~10.4)
- Main memory : more than 64 MB RAM
- IEEE1394 add-on card or built in IEEE1394 card

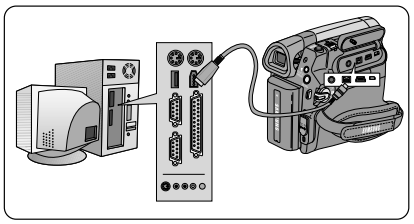
[Note]

- Operation is not guaranteed for all the recommended computer environments mentioned above.

ENGLISH

IEEE 1394 Data Transfer

Recording with a DV Connection Cable



1. Set the **[Power]** switch to **[PLAYER]**.
2. Set the **[Mode]** switch to **[TAPE]**. (VP-D363(i)/D364W(i)/D365W(i) only)
3. Connect the DV cable (not supplied) from the DV jack of the Camcorder to the DV jack of the other DV device.
   - Make sure that DV is displayed.
4. Press the **[Start/Stop]** button to begin REC PAUSE mode.
   - **<PAUSE>** is displayed.
5. Start playback on the other DV device while you monitor the picture.
6. Press the **[Start/Stop]** button to start recording.
   - If you want to pause recording momentarily, press the **[Start/Stop]** button again.
7. To stop recording, press the **[■ (STOP)]** button.

[Notes]

- When you transmit data from the Camcorder to another DV device, some functions may not work. If this occurs, please reconnect the DV cable or turn the power OFF and ON again.
- When you transmit data from the Camcorder to PC, PC function button is not available in **<M.Player>** mode.
- Do not use other DV device when using IEEE1394.
- Do not connect the Camcorder to a PC using both DV and USB cables. It may not operate properly.
- The IEEE1394 cable (DV cable)is sold separately.
- Moving image software is commercially available.
- Most DV enabled PCs have a 6 pin jack. In this case, a 6pin/4pin cable is required for the connection.
- Most DV enabled Notebooks and Laptops have a 4 pin socket. Use a 4pin/4pin cable for the connection.
- DIS and COLOR NITE are not available when in DV (IEEE1394) mode. If DV (IEEE1394) mode is set, DIS and COLOR NITE modes will be released.
- When using this Camcorder as a recorder, the pictures that appear on a monitor may seem uneven, however recorded pictures will not be affected.

ENGLISH

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Using USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Transferring a Digital Image through a USB Connection

❖ The Camcorder supports both USB 1.1 and 2.0 standards. (Depends on the PC specification)
❖ You can transfer a recorded file in Memory Card to a PC via a USB connection. (VP-D363(i)/D364W(i)/D365W(i) only)
❖ If you transfer data to a PC, you need to install the software (DV Driver, Video Codec, DirectX 9.0) supplied with the Camcorder.

USB Connection Speed depending on the System

High speed USB connection is supported by Microsoft (Windows) device drivers only.

- Windows 98SE/ME - Full Speed USB
- Windows 2000 - High speed USB on a system with Service Pack 4 or later installed.
- Windows XP - High speed USB on a system with Service Pack 1 or later installed.

System Requirements

	Windows System	
	Minimum	Recommended
CPU	Intel® Pentium III™, 600MHz	Intel® Pentium 4™ , 2GHz
OS(Operating System)	Windows® 98SE/ME	Windows® 2000/XP
Memory	128MB	512MB
HDD capacity	1GB or more	2GB or more
Resolution	1024 x 768 dots 24bit Colour	1024 x 768 dots 24bit Colour
USB	USB1.1	USB2.0 High Speed

- It is not available for Macintosh systems.

[Notes]

- USB 2.0 works for removable disk and USB streaming functions.
- On a slower PC than recommended, movie playback may not be smooth or video editing may take a long time.
- On a slower PC than recommended, movie playback may skip frames or operate unexpectedly.
- Intel® Pentium III™ or Pentium 4™ is a trademark of the Intel Corporation.
- Windows® is a registered trademark of the Microsoft® Corporation.
- All other brands and names are property of their respective owners.
- Operations are not guaranteed for all of the recommended computer environments mentioned above.
- Do not connect the Camcorder to a PC using both DV and USB cables. It may not operate properly.
- In **<M.Cam>** or **<M.Player>** mode, be sure that the Memory Card is inserted into Camcorder before connecting USB cable. If no Memory Card or an unformatted Memory Card is inserted, PC will not recognize your Camcorder as a removable disk. (VP-D363(i)/D364W(i)/D365W(i) only)
- USB Streaming requires Video Codec, DV Driver and DirectX 9.0.
- If you disconnect the USB cable from the PC or the Camcorder during the data transfer, the data transfer will stop and the data may be damaged.
- If you connect the USB cable to a PC using a USB HUB or with other devices at the same time, it may cause conflict and may not work properly. If this occurs, remove all other USB devices and try the connection again.

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Selecting the USB Device (USB Connect) (VP-D363(i)/D364W(i)/D365W(i) only)

✤ USB Connect function works only in **<M.Player>** mode. ➥page 19
✤ Using the USB cable, you can connect your Camcorder to a computer to copy your moving images and photo images from the Memory Card (or built-in memory; VP-D365W(i)), or to a printer to print your images.

1. Set the **[Power]** switch to **[PLAYER]**.
2. Set the **[Mode]** switch to **[MEMORY]**.
3. Press the **[MENU]** button.
   - The menu list will appear.
4. Move the **[Zoom]** lever up or down to select **<System>**, then press the **[OK]** button.
5. Move the **[Zoom]** lever up or down to select **<USB Connect>**, then press the **[OK]** button.
6. Move the **[Zoom]** lever up or down to select **<Computer>** or **<Printer>**, then press the **[OK]** button.
   - You can select **<Computer>** to use the Camcorder as a PC Camera, USB Stream or removable disk.
   - You can select **<Printer>** to use the Pictbridge feature. ➥page 84
7. To exit, press the **[MENU]** button.

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Installing DV Media PRO Program

✤ To play back moving images recorded by the Camcorder or streaming data transferred through the USB connection on a PC, the Video Codec program should be installed.
✤ Do not connect the Camcorder to PC before installing the program.
✤ If another Camcorder or scanner is connected, please disconnect it in advance.
✤ This explanation is based on Windows® 98SE OS.
✤ DV Media Pro User's Manual is included on the accompanying CD(D:/help/) in Adobe's Portable Document Format (PDF) The user's manual can be viewed using Acrobat Reader software, which is also included on the CD (D:/Support/AcrobatReader/AcroReader51_ENU_full.exe).
(The Acrobat Reader is a freeware product of AdobeSystems,Inc.)
✤ DV Media Pro User's Manual is in English.

Program Installation

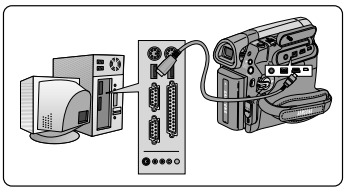
1. Insert the software CD into the CD-ROM drive of your computer.
   - Installation selection screen appears.
2. If the installation selection screen does not appear after inserting the CD, click "Run" in the Windows "Start" menu and execute Autorun.exe file to begin installation. When CD-ROM drive is set to "D:drive", type "D:/autorun.exe" and press Enter.
3. Click the icons listed below to install the selected software.
   - DV Driver Click
     - USB removable Disk Driver (Windows® 98SE only) (VP-D363(i)/D364W(i)/D365W(i) only)
     - USB PC CAMERA & STREAMING Driver (CAPTURE DRIVER)
     - Connect a Camcorder to your PC to complete the DV Driver installation.
       1) This function works only in Camera mode.
       2) Connect the camcorder to the PC using the USB cable.
       3) The SAMSUNG A/V Capture driver installation begins on the PC.
   - DirectX 9.0 Click
   - Video Codec Click
     The Video Codec needs to be installed in order to play the moving images (stored in the Memory Card) on a PC or to use the USB Streaming/PC Camera functions.

ENGLISH

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Connecting to a PC

1. Connect a USB cable to the USB jack on the PC.
   - If a USB cable is connected to the Camcorder's USB jack, the Multi Cable is disabled.
2. Connect the other end of the USB cable into the USB jack on the Camcorder. (USB jack)
   - If PC is connected with the USB to the Camcorder, only the **[Power]** switch, **[Mode]** switch, **[Zoom]** lever can be operated.



Disconnecting the USB Cable

✤ After completing the data transmission, you must disconnect the cable in the following way:

1. Select the removable disc icon and click the right mouse button to select <Eject>.
2. Select <Confirm> and disconnect the USB cable when the Windows Splash screen appears.

[Notes]

- If you disconnect the USB cable from the PC or the Camcorder while transferring, the data transmission will stop and the data may be damaged.
- If you connect the USB cable to a PC via a USB HUB or simultaneously connect the USB cable along with other USB devices, the Camcorder may not work properly. If this occurs, remove all USB devices from the PC and reconnect the Camcorder.

ENGLISH

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Using the PC Camera Function

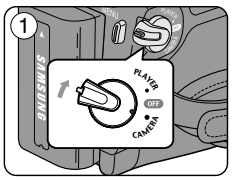
✤ This function works only in **<Camera>** mode. ➥page 19
✤ To use the PC Camera function, DV Driver, Video Codec and DirectX 9.0 programs must be installed in the PC.
✤ You can use this Camcorder as a PC Camera.
✤ When you connect to a Web site that provides video chatting functions, you can use your Camcorder for such functions.
✤ When using this camcorder for video conferencing (such as Net Meeting), voice communication may not be supported depending on the video conferencing software. In this case, connect an external microphone to the soundcard of the PC to enable voice communication.
✤ Using the Camcorder with PC Net Meeting program installed, you can participate in video conference.
✤ The PC Camera's screen size (Transferred video frame rate for the PC Camera function is max 12.5 fps.)
- 640X480 (VGA) pixels for USB 2.0 connection.

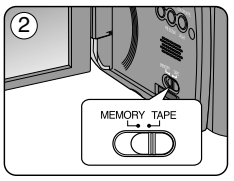
✤ If PC is connected with the USB to the Camcorder, only the **[Power]** switch, **[Mode]** switch, **[Zoom]** lever can be operated.

1. Set the **[Power]** switch to **[CAMERA]**.

2. Set the **[Mode]** switch to **[TAPE]**. (VP-D363(i)/D364W(i)/D365W(i) only)

3. Connect one end of the USB cable to the USB jack on the Camcorder and the other end to the USB connector on your computer.





ENGLISH

USB Interface (VP-D362(i)/D363(i)/D364W(i)/D365W(i) only)

Using the USB Streaming Function

✤ This function works in both **<Camera>** and **<Player>** modes. ➥page 19
✤ To use USB streaming, the DV Driver, Video Codec and DirectX 9.0. programs must be installed in the PC.
✤ You can view Camcorder video on your PC using USB streaming.
✤ You can also store it as a moving image in the "avi" file format, or as a photo image in the "jpg" file format on a PC.

1. Set the **[Power]** switch to **[CAMERA]** or **[PLAYER]**, set the **[MODE]** switch to **[TAPE]** (VP-D363(i)/D364W(i)/D365W(i) only).

2. Connect one end of the USB cable to the USB jack on the Camcorder and the other end to the USB jack on your computer.

3. Setup and execute Windows Movie Maker or the Ulead VIDEO Studio Software application provided on the CD.
   - For detailed instructions for Ulead VIDEO Studio use, refer to the program's Help function.
   - Windows Movie Maker is used for WINDOWS ME and XP users. (C:/program files/Movie maker/moviemk.exe)

Using the removable Disk Function (VP-D363(i)/D364W(i)/D365W(i) only)

✤ You can easily transfer data from a Memory Card to a PC without additional cards via a USB connection.

1. Set the **[Power]** switch to **[CAMERA]** or **[PLAYER],** set the **[Mode]** switch to **[MEMORY]**.

2. Connect one end of the USB cable to the USB jack on the Camcorder and the other end to the USB jack on your computer.

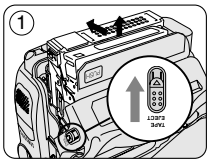
3. To verify whether the removable disk has been properly recognised, open Windows Explorer and locate the removable disk.

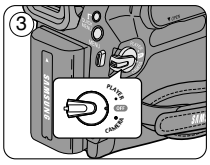
ENGLISH

Maintenance

After Finishing a Recording

✤ At the end of a recording you must remove the power source.
✤ When recording with a Battery Pack, leaving the pack on the Camcorder can reduce the life span of the battery.

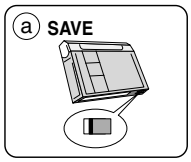


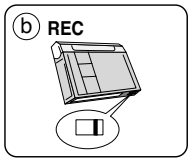


The Battery Pack should be release after recording is completed.
1. Open the Casstte door while sliding the **[TAPE EJECT]** switch in the direction or the arrow.
   - Pull the cassette compartment out automatically.
   - Please wait while the tape is completely ejected.
2. After removing the tape, close the door and store the Camcorder in a dust free environment. Dust and other foreign materials can cause square-shaped noise or jerky images.
3. Set the **[Power]** switch to the **[Off]**.
4. Disconnect the power source or remove the Battery Pack.
   Press the **[BATTERY RELEASE]** button located on the bottom of the Camcorder and slide the Battery Pack in the direction of the arrow.

Usable Cassette Tapes

When you have recorded something that you wish to keep, you can protect it so that it will not be accidentally erased.
a. Protecting a tape: Push the safety tab on the cassette so that the hole is uncovered.
b. Removing the tape protection:
   If you no longer wish to keep the recording on the cassette, push the safety tab back so that it covers the hole.





How to store a tape
a. Avoid places with magnets or magnetic interference.
b. Avoid humidity and dust prone places.
c. Keep the tape in an upright position and avoid storing it in direct sunlight.
d. Avoid dropping or knocking your tapes.

13. Circuit Operating Description

13-1 Summary

13-1-1 Purpose

The document which sees with System Design specification of Digital Camcorder “VP-D361 System“, it was hereafter maked for setting the direction of business propulsion by standardizing the system structure and Hard ware and the Soft ware plan specification.

13-1-2 Range

The low rank system which constitutes VP-D361 is classified by Main PCB, Camera Lens Ass’y, Left Function Ass’y, Front Ass’y, Deck Ass’y, Rear Ass’y, etc..

13-2 Digital Camcorder Summary

13-2-1 Digital Camcorder Definition

Digital Camcorder is SAMPLING FREQUENCY 13.5MHZ (CHROMA 6.75MHZ) and 8Bit.
Adopted-child-ized VIDEO SIGNAL, SAMPLING FREQUENCY 48KHZ 16BIT and SAMPLING FREQUENCY DV FORMAT EWI of AUDIO SIGNAL of 32KHZ 12BIT is carried out. About 1/carries out DATA compression by 5. 6.35mm the thing which carry out record reproduction at TAPE and on which it crawls — the high definition of the level resolution of about 520 LINE(s), and reason tone quality of a PCM system PROTOCOL like IEEE1394, USB, or RS232C — PC or other DIGITAL equipments, and DATA transmission It is an equipment with the possible feature.

- High Resolution Picture Quality : About 520 LINE holigental
- High Sound Quality by PCM Method : Sampling Frequency 48khz 16bits
  Sampling Frequency 32khz 12bits
- EASY EDIT & EASY CONNECTION WITH PC& OTHER DV EQUIPMENT

13-2-2 Set System practical use

- Other A/V equipments and connection edits.
- DATA transmitting edit using PC and other DIGITAL equipments, IEEE1394, USB, and Protocol.
- They are JPEG / MPEG4 preservation DISPLAY to MEMORY STICK.

13-4 H/W demand matter

13-4-1 Main PCB H/W demand matter

Main PCB carries out record reproduction of the input of the signal into which the optical signal was electrically changed from CCD of CAMERA LENS ASS'Y, and an AUDIO signal by DV FORMAT at 6.35mm Tape.
It consists of circuits PCB which save or DISPLAY by JEPG and MPEG4 to MEMORY STICK. It constitutes from the CAMERA circuit BLOCK, SYSCON / SERVO BLOCK, DV_1_CHIP BLOCK, DC / DCBLOCK, PREAMP BLOCK, PRML BLOCK, and AUDIO / VIDEO I / F BLOCK.

13-4-2 Camera circuit Block H/W requirement

The CAMERA circuit BLOCK carries out CDS->AGC->10 Bits A / D conversion of Ccd_out Signal by which electronic conversion was carried out from Camera Lens Ass'y.
LUMINANCE and CHROMINANCE are transformed by ITU-R 656 Format.
It is made to output by DV-1 CHIP.
It was inputted into ITU-R 656 FORMAT from DV-1 CHIP. A DIGITAL EFFECT function (PB ZOOM, PB MOSAIC, PB MIRROR) is carried out for a VIDEO signal.
Signal inputted from CAMERA LENS or DV-1 CHIP MEMORY STICK preservation / DISPLAY is carried out by JPEG and MPEG4 FORMAT.

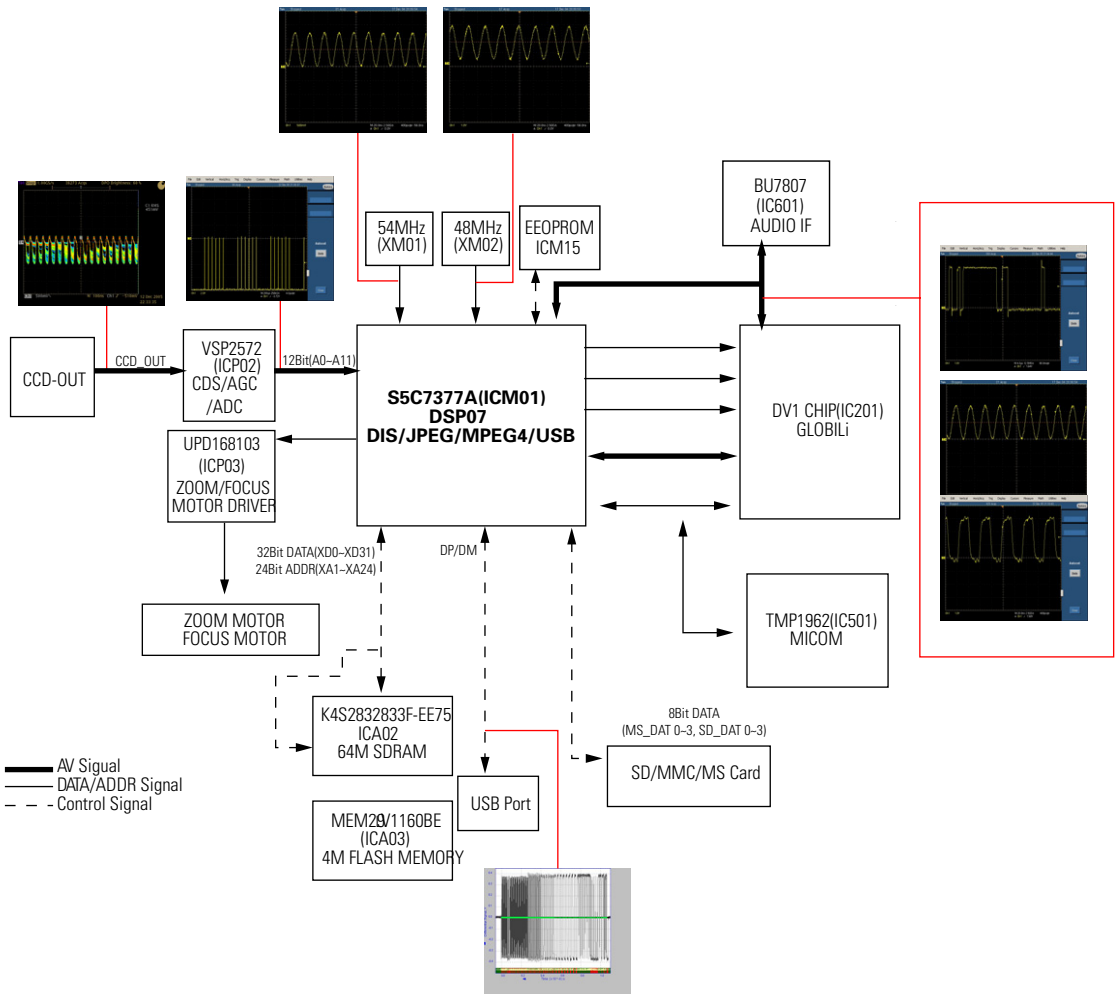

Fig. 13-5 Camera Circuit Block Diagram

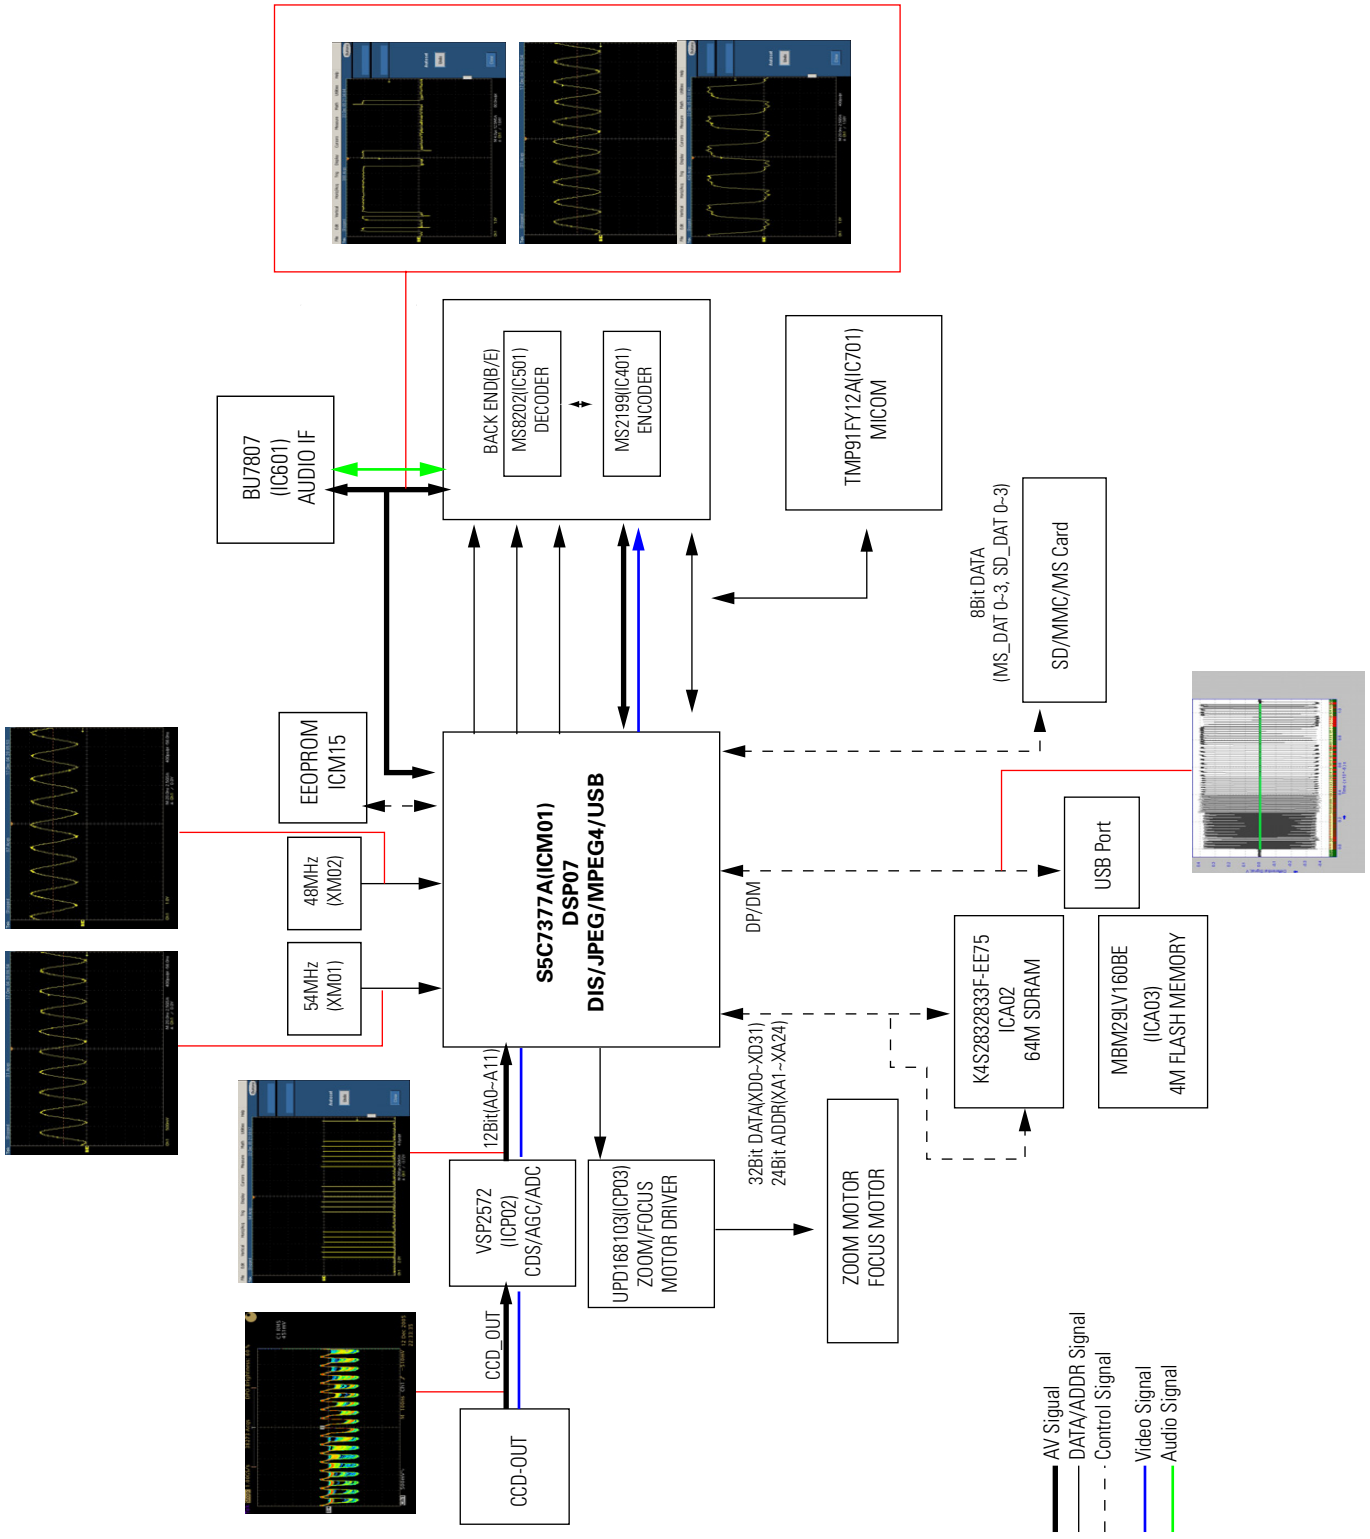

Fig. 13-6 Tape Recording(CAM E/E)Path

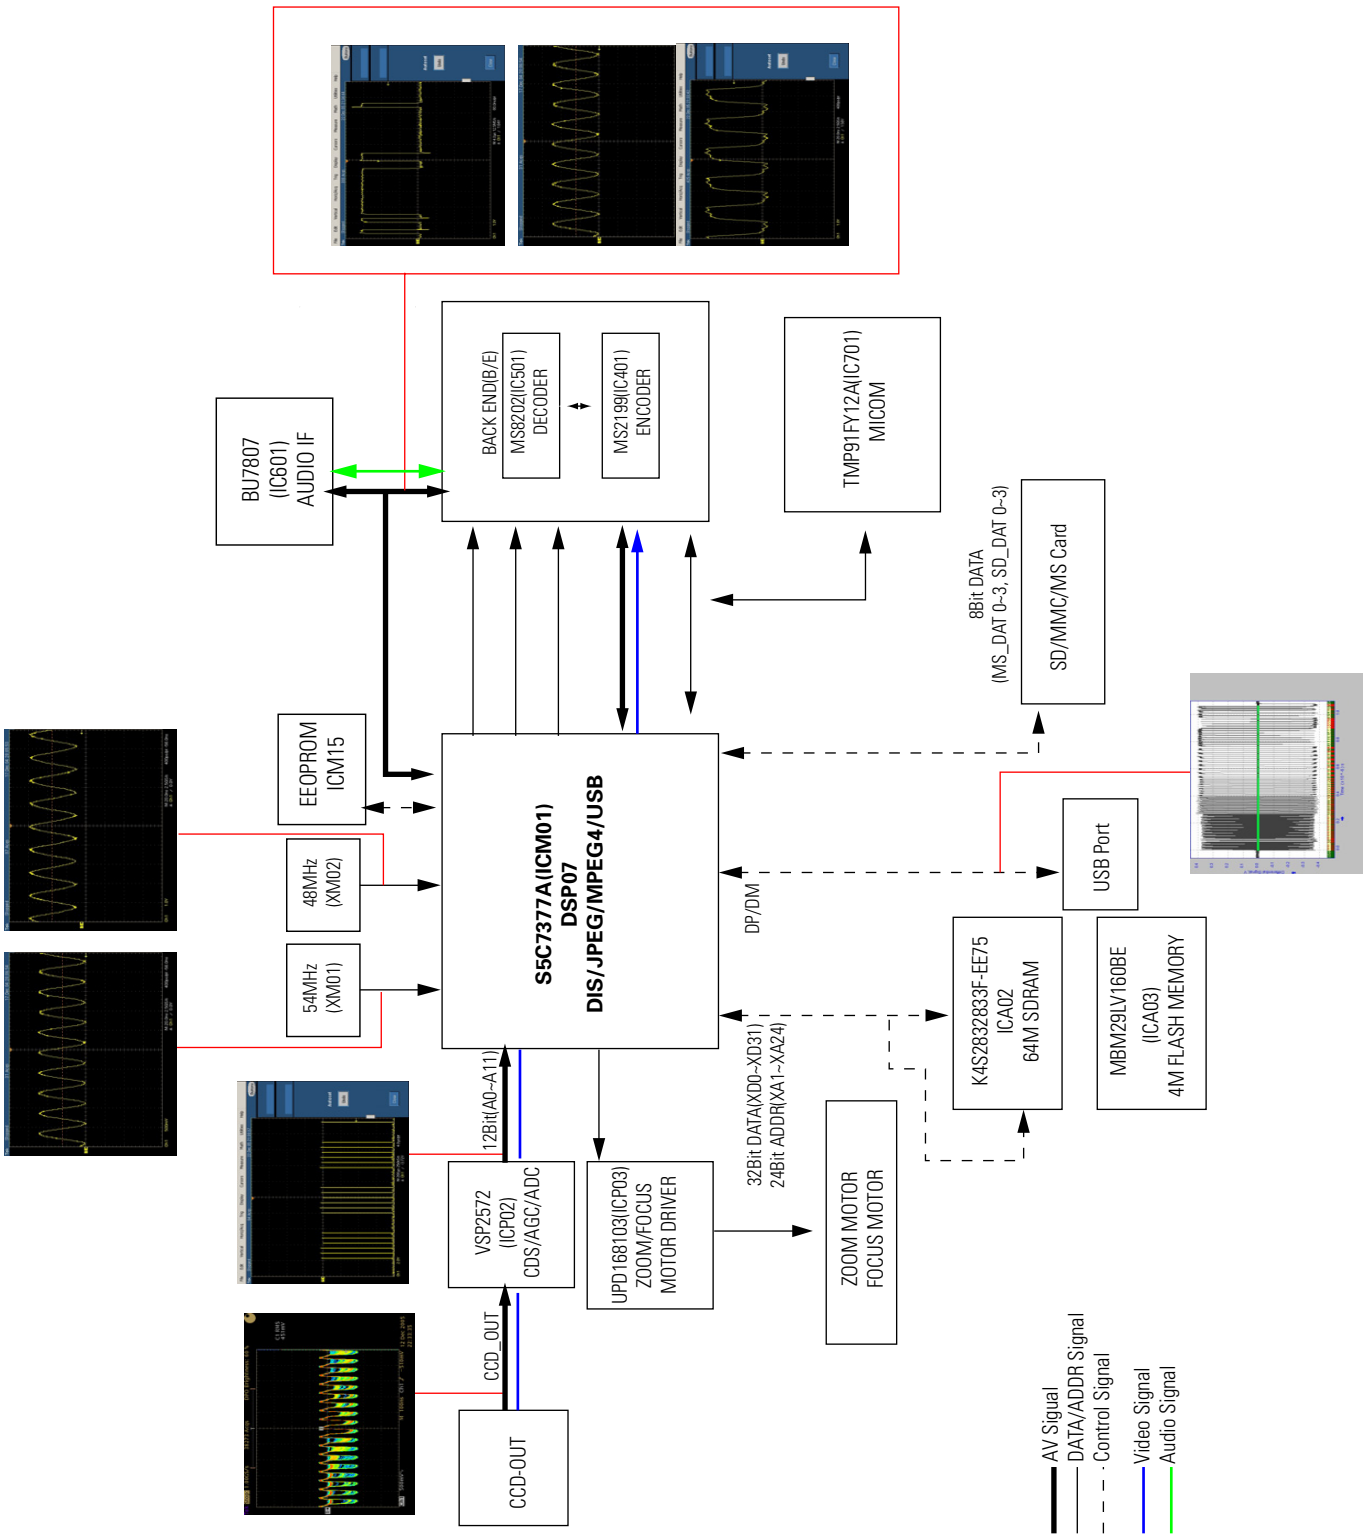

Fig. 13-7 MPEG Recording(Memory Card Recording) Path

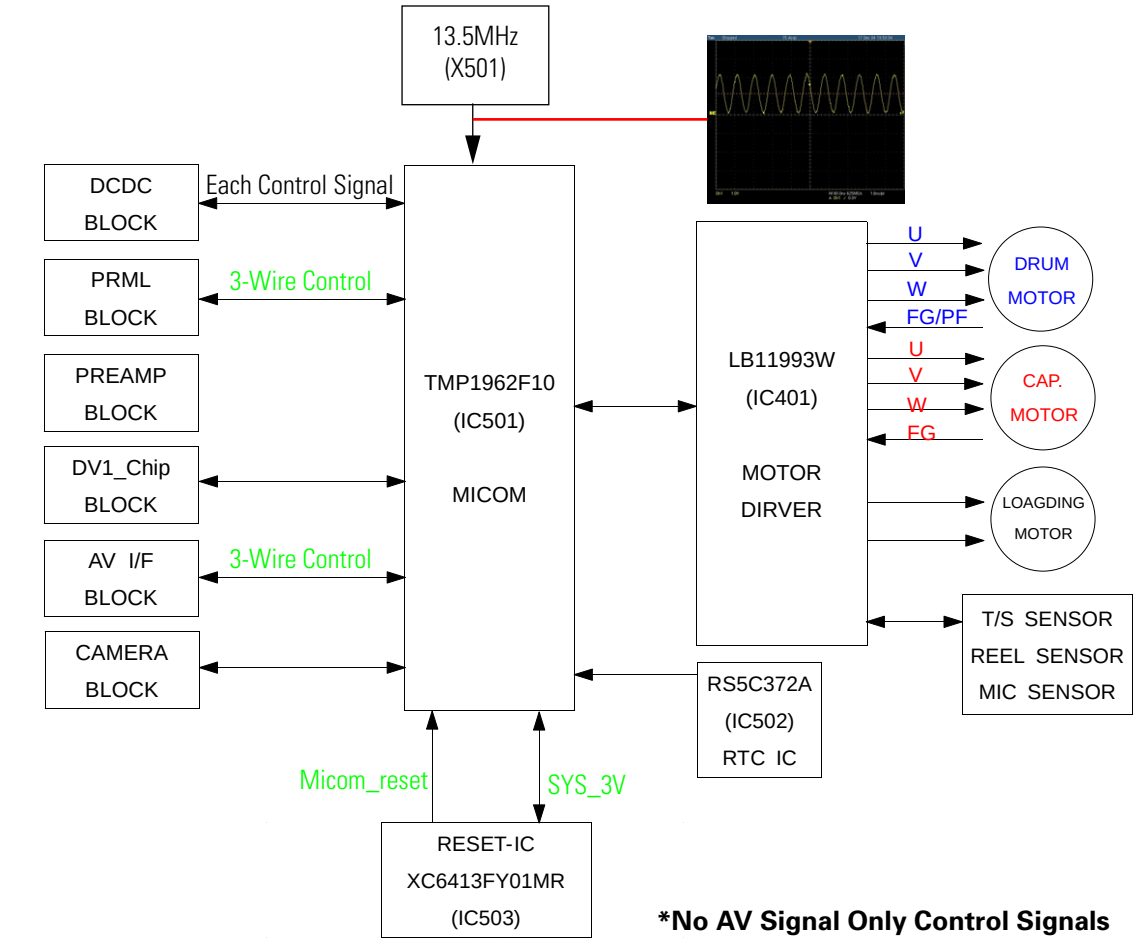
13-4-3 SYSCON/SERVO Block H/W demand matter

At SYSTEM/SERVO BLOCK, it is TMP1962. It is each BLOCK at 32BIT 1MByte MICRO PROCESSOR.CONTROL(ing) IC and a circuit, MAIN CLOCK uses 13.5Mhz(es).
RTC use of the exception way for SUB CLOCK LITHIUM BATTERY 3V BACK UP functional execution is carried out. MICOM to PWM PULSE for MOTOR control and an ON/OFF CONTROL signal are inputted, and the phase and speed of DRUM of DD-10 DECK and CAPSTAN MOTOR are controlled by SERVO Block.
Moreover, input of the various kinds SENSOR of DECK (TOP/END, T/S REEL, Media Interface Connector SW, RECPROOF, CC LOCK Etc) is carried out, and micom is made to print out.
Made to REGULATION LOADING MOTOR 4.7V VS.



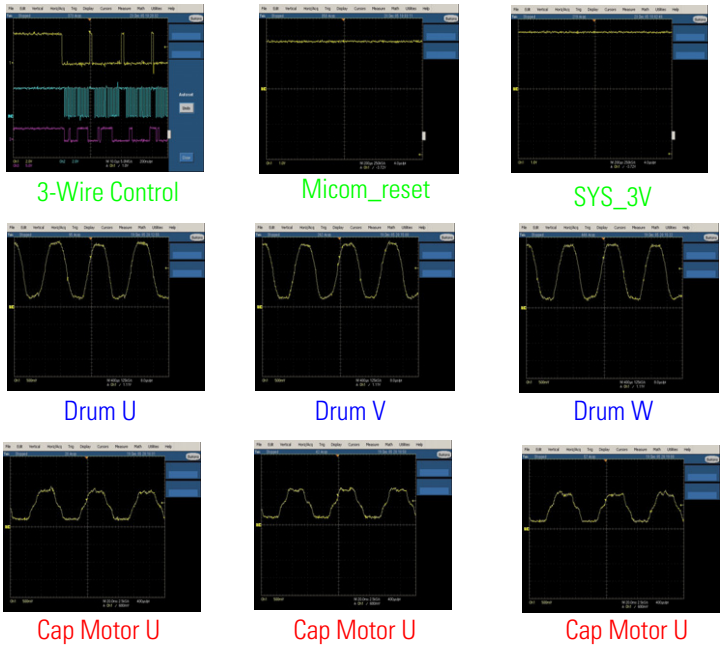


Fig. 13-8 VCR Circuit Block Diagram

13-4-4 DV-1 Chip Block H/W demand matter

DV_1 CHIP BLOCK is AV I/F BLOCK to a CAMERA circuit or a VIDEO signal at the time of Record MODE. Function . which inputs by ITU-R 656 FORMAT, SHUFFLING(s), and sends RECODING DATA by PREAMP Block.

At the time of TAPE reproduction, PRML BLOCK to 41.5 Mhz PB_CLK and PB_DATA are inputted, and ECC DECODING, DECOMPRESSION, and a DESHUFFLE function are carried out, and it is again inputted into the CAMERA circuit BLOCK after output VIDEO DATA by ITU-R 656 FORMAT, and is with VIDEO Y/C SIGNAL to AV I/F BLOCK. You have to carry out the DATA communication function which sent and carried out IEEE1394 PROTOCOL EWI of AUDIO CLOCK/DATA.

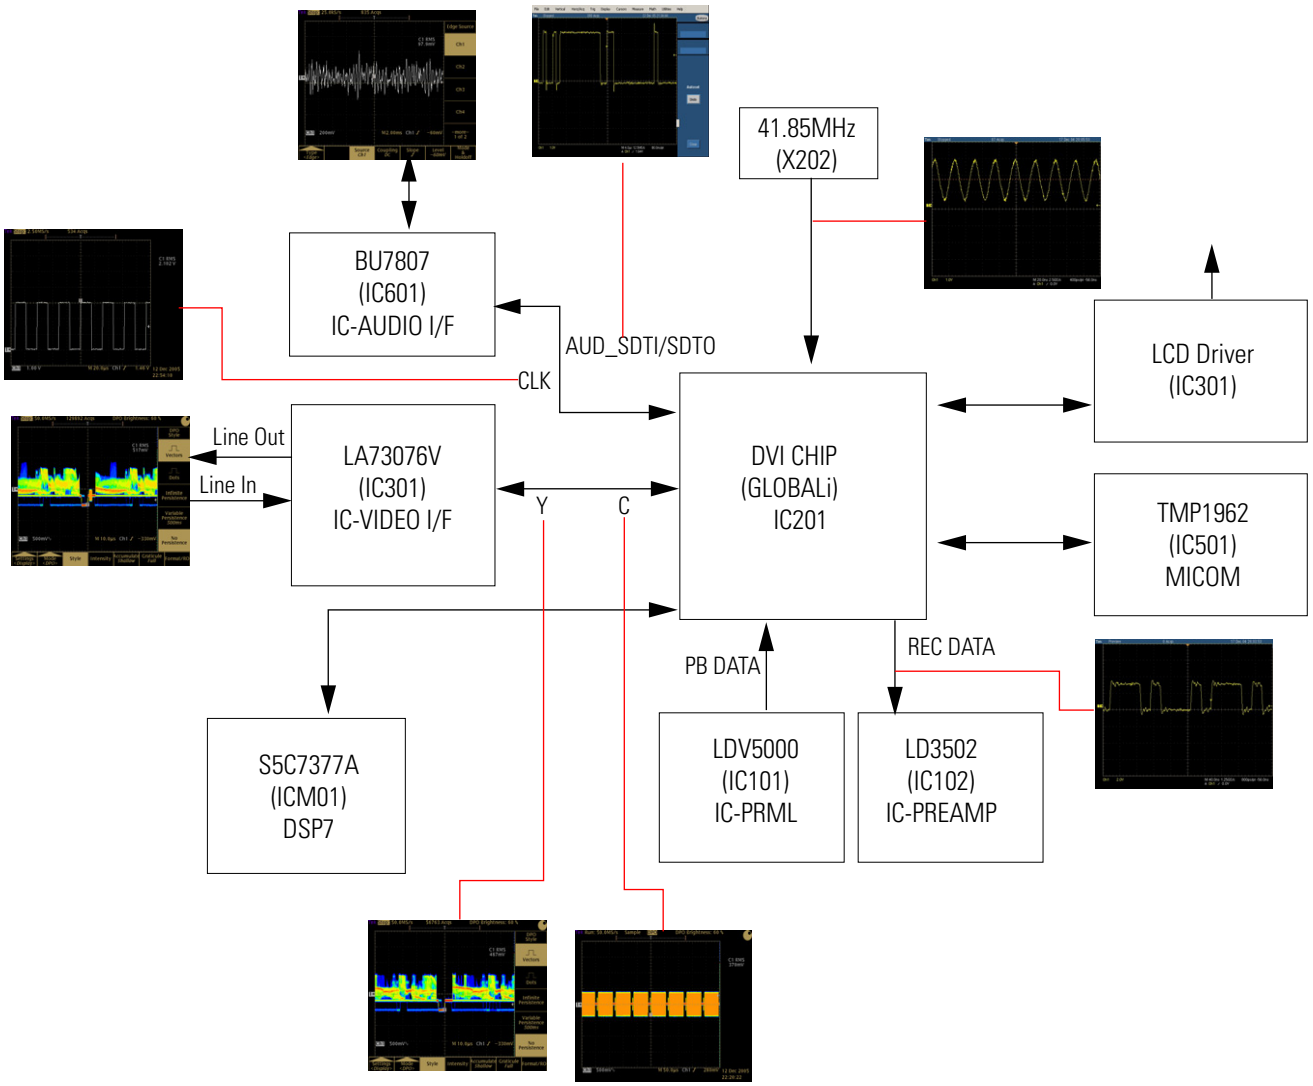

Fig. 13-9 DV-1 Chip Block Diagram

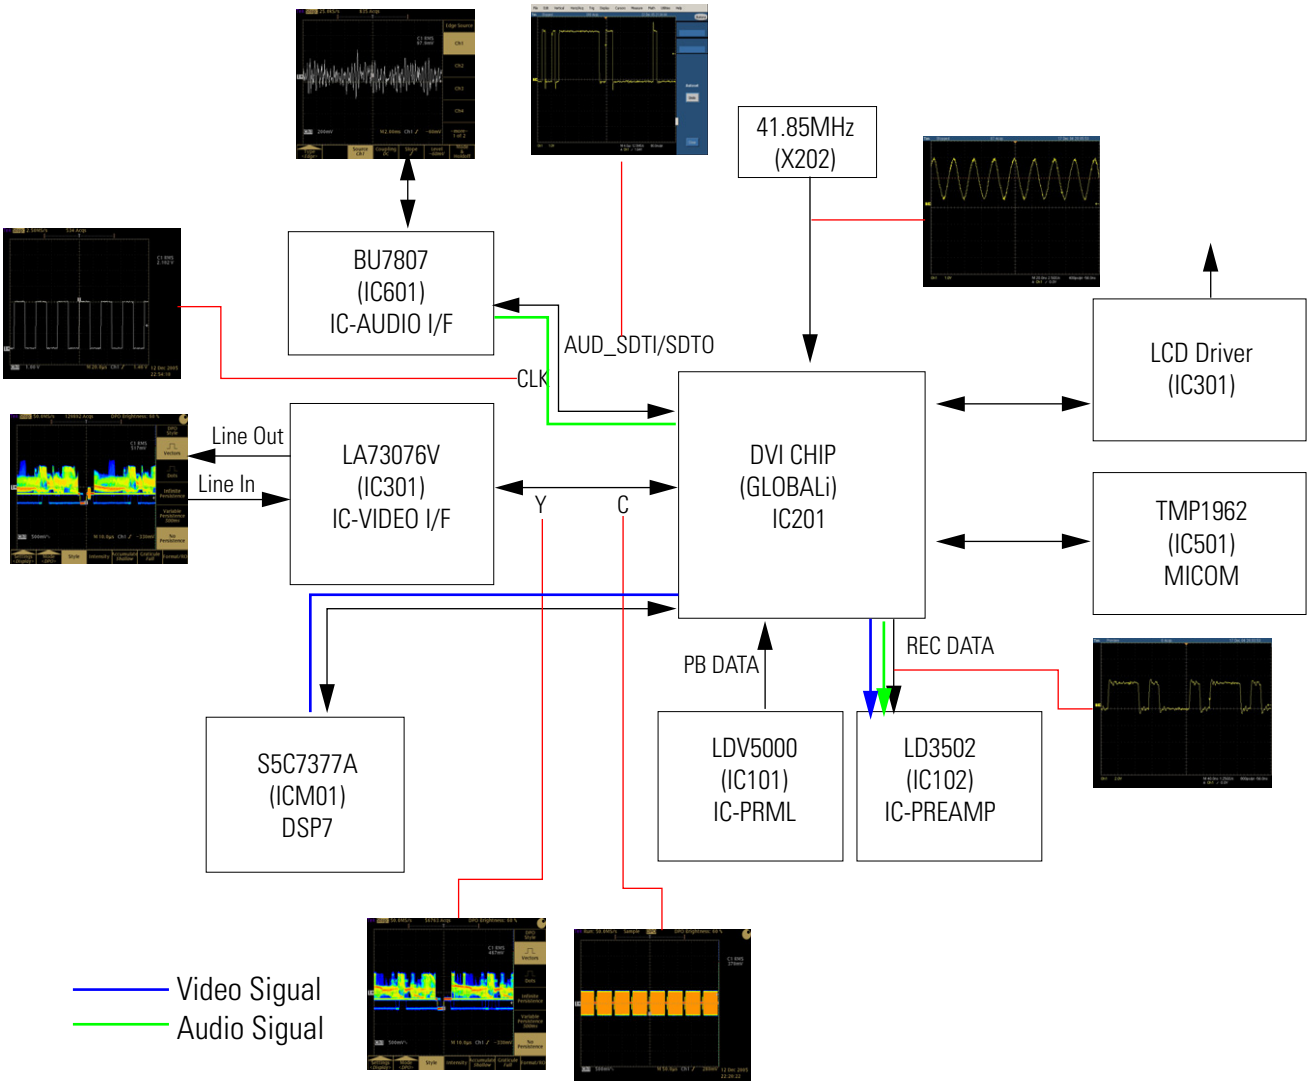

Fig. 13-10 Tape Recording Path

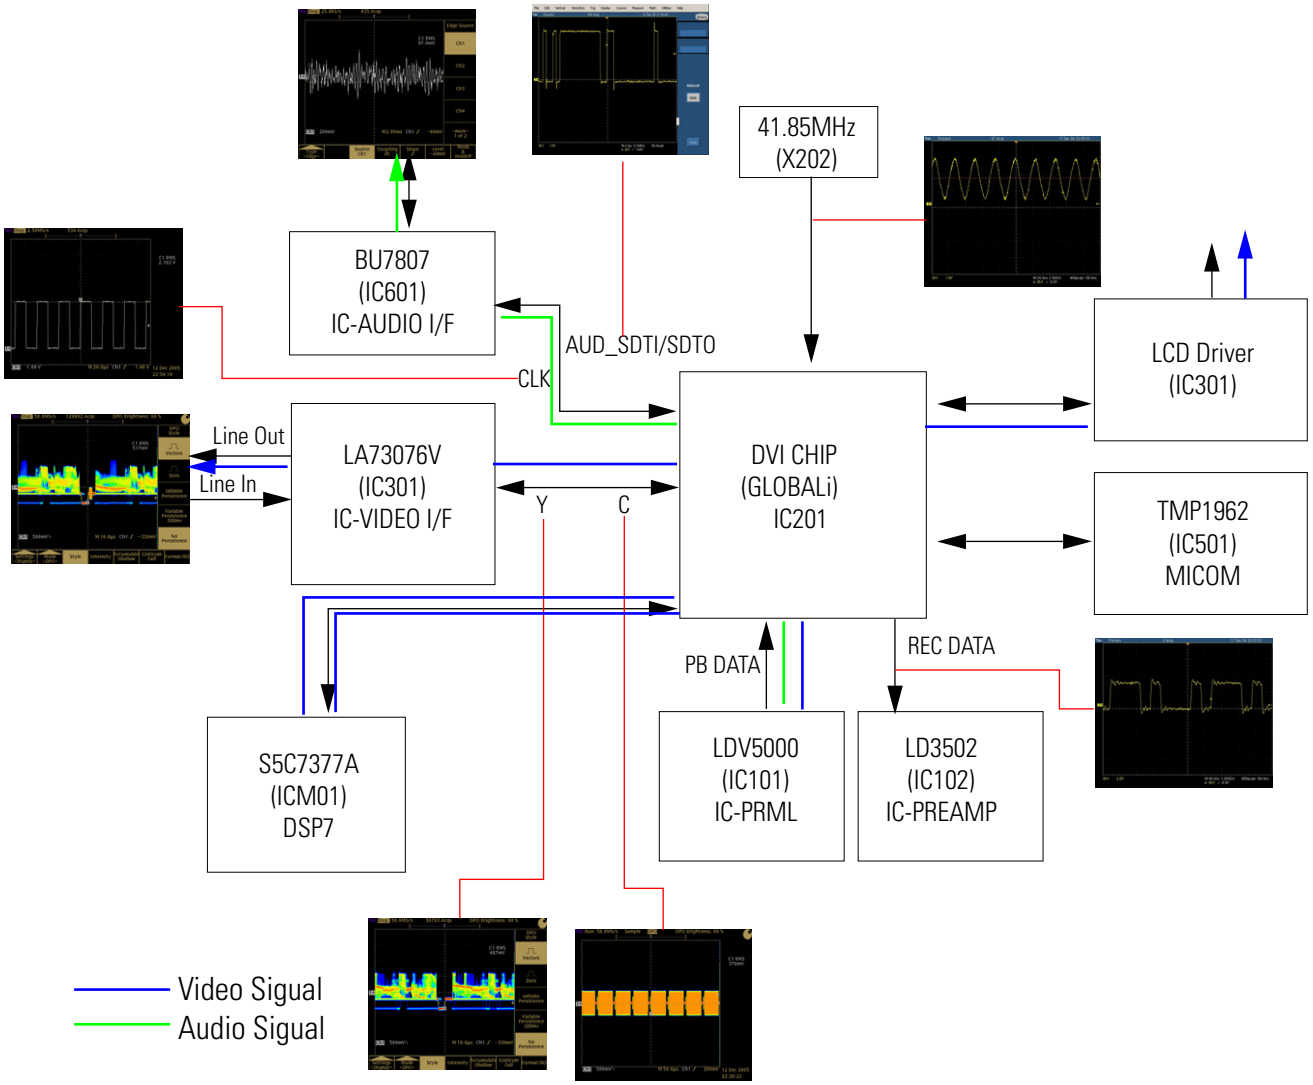

Fig. 13-11 Tape PlayBack Path

13-4-5 PRML Block H/W Demand matter

At PRML BLOCK, it is Control Signal of Micro Processor to Serial Enable / Data / Clock. In each mode star (SP-PB, LP gas-PB, SP-Forward / Reverse Search, LP gas-Search, SP-Slow, LP gas-slow etc) You must be made to carry out data control. moreover, Head S / W Pulse is inputted, the signal of the High section of an incoming signal (Envelope Output) and the Low section is divided at the time of reproduction, and signal processing is realized continuously as You have to become Control. In response to the control signal of Power Down from DV-1chip (Channel Block), PB-High, and Adaptive High, operation is stopped between Recording Time (Power Down), and normal signal processing operation is control(ed) between Playback Time. You have to perform Playback operation by making and supplying 41.85MHz PB Clock and PB Data by DV-1chip (Channel Block). When the unstable incoming signal by the 41.85MHz signal is inputted from a PREAMP way from DV-1chip (Channel Block) (Search Mode or tape damage etc), this signal and it is made to perform stable in reproduction operation. PREAMP to Differential Function(s), such as the supply receptacle AGC, Dropout, Analog qualizer, Digital Equalizer, 1+D, and Viterbi, are carried out for the reproduction print-out signal of input (DIP, DIN). PB data of 41.85Mbps(es) is supplied by DV-1chip (Channel Block). X2 process must be performed for 20.925MHz which is the highest frequency of a reproduction signal to a reproduction signal, and 41.85MHz PB clock must be supplied by DV-1chip (Channel Block). ATF Signal Processor is performed from a reproduction print-out signal, and it is ATF of F0 / F1 (465kHz) / F2 (697.5kHz).ATF Error Signal for coltrol is made.It supplies by Micro Processor and must be made to have to use by the object for Capstan Control.A two-sort power supply (3.3Vdc and 1.8Vdc) is supplied from DC / DC.
It uses with a power supply of operation and the standard power supply of block required for control of the signal for control with the exterior. Internal 1.8V regulator can be operated by Exterior option (pull up or pull down). At this time, the external country can be used in the 3.3V single country.

13-4-6 PREAMP Block H/W Demand matter

With PREAMP Block Amp_cs from DV-1chip (Channel Block) and a PB-High signal perform Recording and Playback operation.

In response to Recording Data of 3 Vp-p, after DRUM performing amplification operation, each signal must be printed out in Head S/W High and the Low section, and you have to perform Recording operation. Micro Processor to Head S/W Pulse is used, and it is Head S/W at the time of recording and playback operation. You have to divide and output each signal in the High and Low section.

From DRUM After performing operation which amplifies 51dB of signals which became pick up, you have to output Differential signal output in PRML Block.

13-4-7 AV I/F Block H/W Demand matter

AUDIO/VIDEO I/F BLOCK carries out a 16 BITS AD/DA input-and-output INTERFACE function for an AUDIO signal. You have to form BEEP SOUND and a SPEAKER output signal at the time of KEY INPUT. COLOR OSD and a MENU DISPLAY function are carried out by the function.

Y/C SIGNAL is MIXING(ed) with an input OSD signal by DV-1 CHIP BLOCK, and VIDEO COMPOSITE SINGAL must be output by FRONT Block.

It is at ITU-R 656 about the VIDEO input SIGNAL inputted from VIDEO JACK or SUPER JACK. DV-1 CHIP It output by Block.

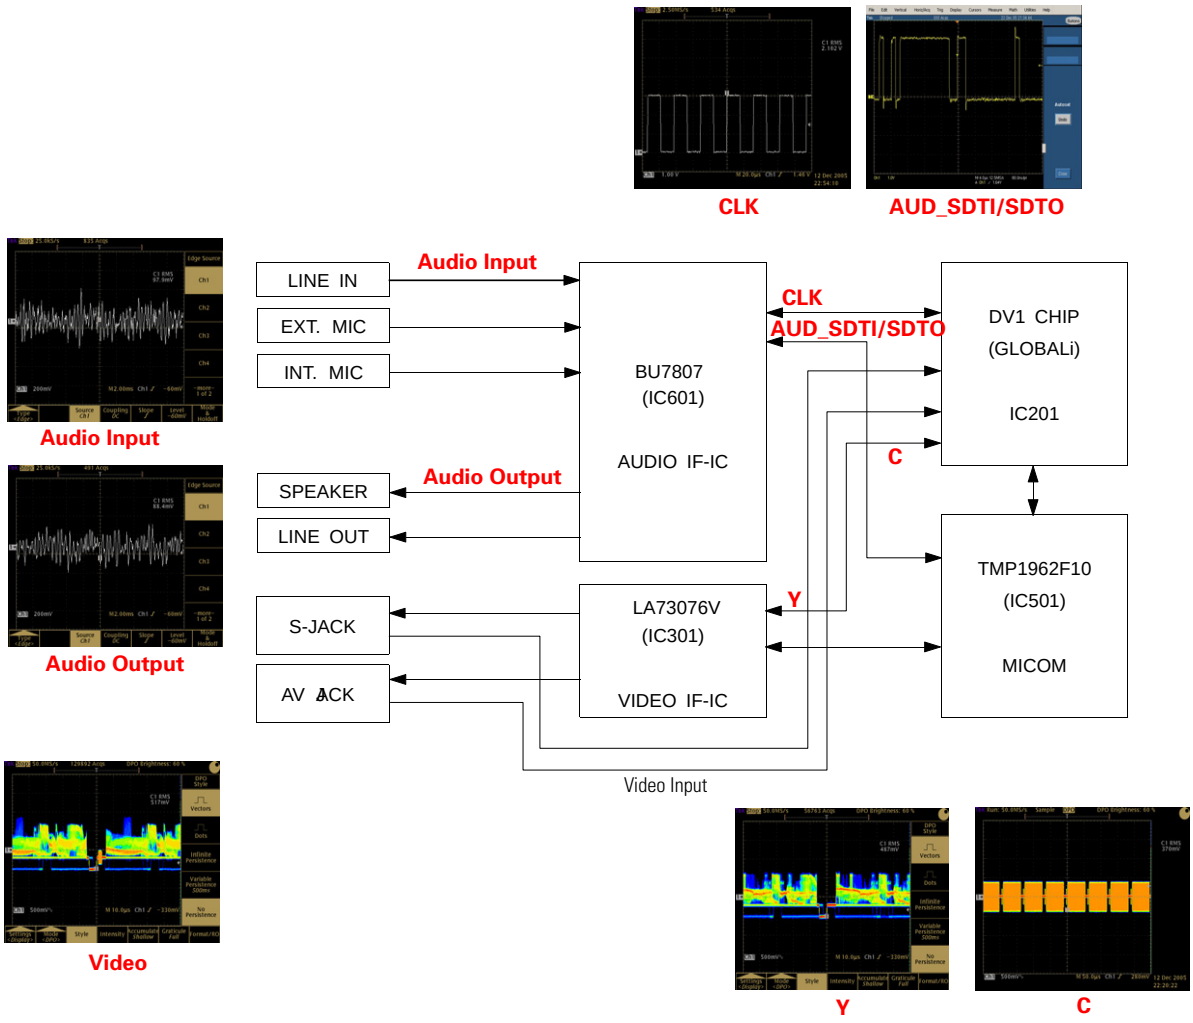

Fig. 13-12 AV Interface Block Diagram

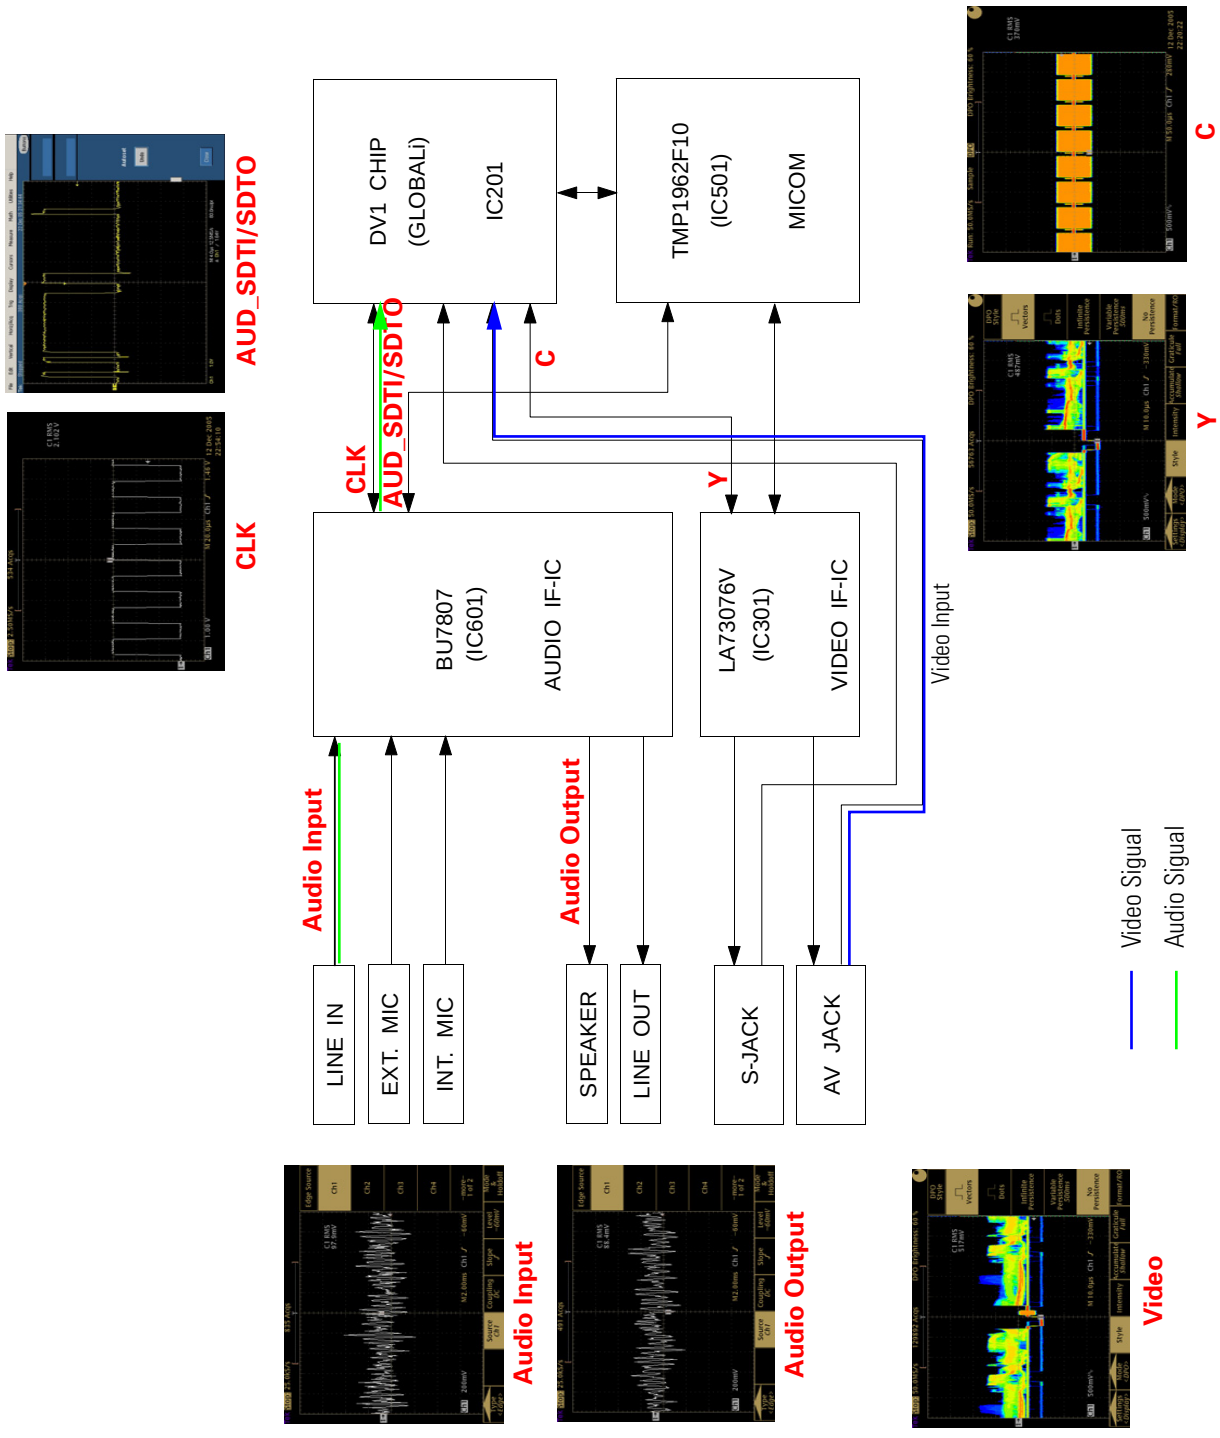

Fig. 13-13 Line-In Path(AV-Jack)

13-4-8 DC/DC Block H/W Demand matter

DC / DC BLOCK receives BATTERY 7.4V or ADAPTER 8.4V, and is the use country according to BLOCK.The function supplied stably is carried out.

BLOCK another use power supply CAM5V, CAM15V, CAM-7.5V, and DIG3V, DIG1.8V, SS3.0V, SS5.0V, and SS1.8V LCD BL5V it carries V.LIGHT 5.0V

In response to DRUM ERROR and a CAPSTAN ERROR signal, you have to supply DRUM VS and CAPSTAN VS to a SERVO circuit from MICOM BLOCK.

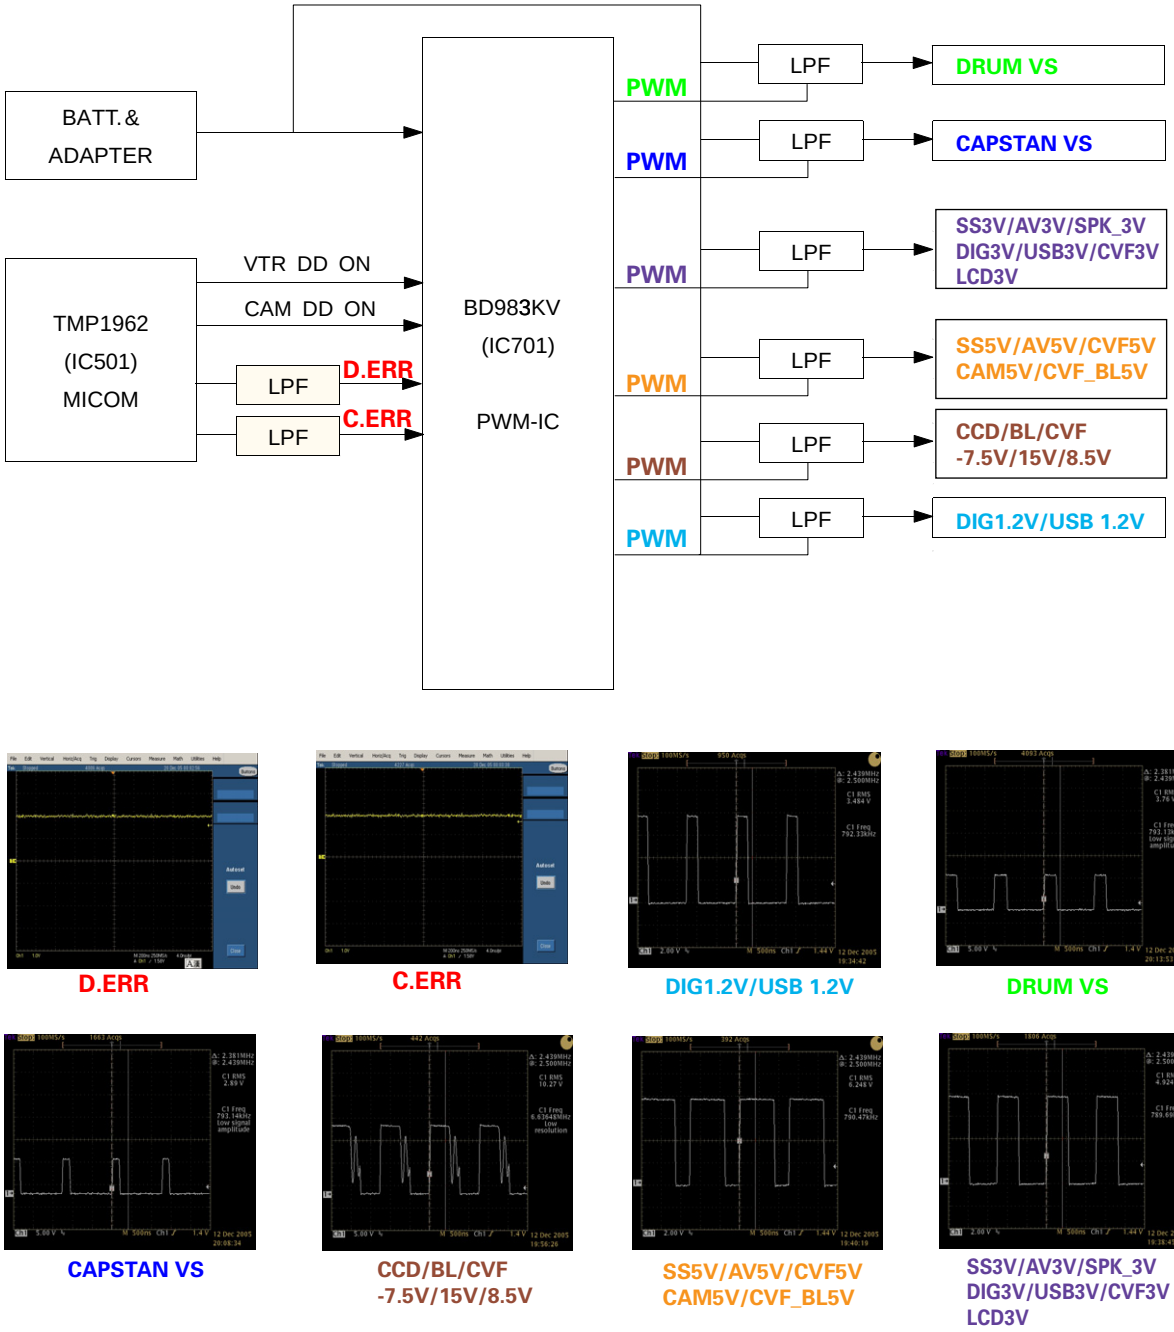

Fig. 13-14 DC/DC Block Diagram

13-4-9 CAMERA LENS ASS'Y H/W Demand matter

CAMEAR LENS ASS'Y is a function which makes an image for the light (Data) emitted with a photographic subject to a focal side (CCD). It carries out.

LENS It consists of 4part(s), such as Zoom, Relay, and Focus.

Although Front and Relay LENS are being fixed, Zoom and Focus Part must carry out the use drive of Zooming and the Auto Focusing harm Stepping Motor. It is automatic and light is made to adjust. Auto Iris is used for a sake.

It is generated for the regularity of Ccd, and a photographic subject's regularity.noise ingredient It loses.In order to intercept White Balance and infrared rays, you have to adopt Optical Low Pass Filter.

14-2 PC INTERFACE

14-2-1 What is "USB"?

USB is the acronym for UNIVERSAL SERIAL BUS.

The objective of a USB is to make it universally applicable to all peripherals, and data is transmitted in series. The USB, which a compact and simple interface as well as a thin cable can resolve everything, has two wires for the electricity and two for the transmission inside the cable. Since there are only four wires passing through it, the cable is thin and the terminal is small.

14-2-2 Advantages of USB

1) A USB peripheral can be connected easily, and the device can be automatically recognized once it is plugged after the drive is installed. It is possible to connect or remove the device while using Windows, and save the system resource such as insufficient IRQ or address.
2) Plug & Play and Hot-plugging: Because Plug & Play is supported, turning the PC off and on is not necessary when changing peripherals. And hot-plugging is also supported. Plug & Play means when connecting a peripheral to a PC, it automatically recognizes the device.
   Hot-plugging means that it's always possible to connect or remove the device while a PC is running.
3) USB and Windows: USB is only compatible with Windows. As for Windows 95 version OSR2.1 or higher is required for a normal operation. It is preferable to at least have Windows 98.
   If the OS is Linux or Windows 95 version OSR 2 or lower, USB peripherals, USB LAN cards, USB Internet link cables, etc. cannot be used. When two PCs are connected and one of them has Windows 95 or lower or Linux as the operating system, it is not possible to use USB devices.
4) Effective Use of Resource: Currently, the number of IRQ (Interrupt ReQuest) in a PC is restricted to 16. However there are only 9 that are actually usable. Among them, 2 are reserved for IDE (Integrated Drive Electronics), 2 for serial ports, and 1 for a parallel port. That leaves only 4 usable IRQs. Nonetheless, a USB can connect 127 peripherals for use at one IRQ. It connects the mouse with the keyboard, the keyboard with the printer, etc. as if to link them altogether, so things like not having enough ports or entangled cables do not happen.
5) Fast Data Transmission: USB can transmit data up to 1.5MB (12 Mbps) per second, but the actual transmission speed is about 0.8 - 1.2 MB/s. It is because a peripheral can only use 40 - 60% of the resource so that the resource is not exclusively occupied by a certain device when there are several ones.
   The maximum data transmission speed of a serial port is 20KB/s, and it is 400 - 600KB/s for a parallel port. USB is twice faster than a serial or parallel port.
   CPU possession rate also affects the transmission speed. A zip drive that uses a parallel port needs a lot of CPU power when writing a file on a drive and it is so slow to make the movement of the mouse slow.
   Compared to a parallel port, using a USB reduces the CPU possession rate, and the speed is astonishingly faster.
6) Peripherals: There are increasing numbers of peripherals that use USB as a basic interface.
   More and more internal devices, such as a modem, are changing to an external USB devices.
   Almost all the devices that are connected to the external of a PC have a USB port.
   Printer, scanner, keyboard, mouse, joystick, game pad, video camera, still image camera, modem, internet adapter, external storage device, etc. are among them. There are also connectors to connect existing peripherals that are in a different connection mode to a USB. For example, using connectors such as USB to IDE, USB to PS/2, USB to printer, USB to serial port makes it possible to use peripherals as if they were USB devices.

14-2-3 Disadvantages of USB

It can only be used in the Windows environment, and the electricity is restricted to 5V, 500mA.

The standardization of connectors is yet to be done. Therefore, different connector manufacturers produce connectors with different looks, which makes it difficult to have connecter compatibility.

14-2-4 Other Interfaces

1) USB2.0: This mode was added when USB version 2.0 was released in April 2000.
Computers and motherboards that are currently produced have ports for USB 1.1, and the maximum transmission speed supported is 12Mbps (1.5MB/s). This speed is appropriate for peripherals that run at a medium to low speed. Therefore, it is proper for input devices such as a mouse, or output devices such as a printer to use the interface. However, it is not proper for use in devices such as an external drive where a high transmission speed is required. To solve the issue, the maximum transmission speed was amended to support a 480Mbps (60 MB/s) speed in USB 2.0. To be more accurate, a high transmission speed (480Mbps) is added to the low (1.5Mbps) and standard (12Mbps) speed defined in USB 1.1. USB 2.0 and 1.1 are compatible.

2) IEEE 1394: It is a transmission technology between digital devices developed by Apple Computer.
It connects communication devices, computers, and electric products using a single network.
It is an interface that can exchange multimedia data with a speed as high as 100Mbps – 1Gbps.
- It's a serial bus standard for data transmission created by IEEE (Institute of Electrical and Electronics Engineers) for a use in AV devices. It is capable of a high data transmission speed (100/200/400Mbps) that is 10 times faster than USB. However, because the maximum transmission distance in 400Mbps is limited to 4.5M, its disadvantage is that it can only be used in home-networking.
- 1394 can have a TREE or DAISY CHAIN structure, but cannot have a LOOP structure. In most devices, the structures can be implemented with PHY (physical layer) and LINK (link layer) chips.
- Because it supports one of the most important characteristics of 1394, the isochronous transmission, it ensures the bandwidth and transmission of the real-time multimedia data or AV data. At the same time, it also supports the asynchronous transmission so the commands that control devices can be used. That is, not only does it handle the data transmission of the 1394 supported devices, but also the control signals.

14-2-5 Forecast on Next Generation Interfaces

Between USB and IEEE1394 that were started with similar technologies, which interface will play a leading role in the future? Many people may wonder. However, the two technologies have been recognized so far as complementary to each other.
USB version 1.1 had problems supporting peripherals that had maximum speed of 12Mbps, but it has reached the universality in terms of having made the USB port a standard for almost all the PCs that are produced nowadays. Also, quite a few peripherals are equipped with the USB interface. Not only printers and modems, but also mice and keyboards that used to primarily connect to the existing interface are now being developed for USB. At the early stage, it was noted that there was few operating systems that supported USB. However, this is no longer a problem for Windows 98, 2000, ME support it, and even Linux also supports it.

14-2-6 USB (Universal Serial Bus) specification

It is used as a transmission path to PC for the information (still shot, MPEG4 file) that is saved in the memory card (Memory Stick or Smart Media).
- Fully compliant to USB 1.1 specification
- Compatible with both OpenHcI and Intel UHCI standards
- Supports full-speed (12Mbps) functions
- Each Endpoint can be configured as: In or Out, In/Out programmable
- In-core Endpoint FIFOs
- Each can handle Bulk and/or Isochronous data transfers
- Endpoints interface to a microcontroller decode block
- Supports Suspend and Resume signaling

14-2-7 ENDPOINTS SPECIFICATIONS

<Table14-2 Endpoints Specifications>

	Packet size	FIFO size	mode	in/out/control
Endpoint 0	16 bytes	16 bytes	single	Control
Endpoint 1	32 bytes	64 bytes	dual	Interrupt (Reserve)
Endpoint 2	64 bytes	128 bytes	dual	Bulk in (device → PC)
Endpoint 3	64 bytes	128 bytes	dual	Bulk out (device PC)

14-2-8 BLOCK DIAGRAM

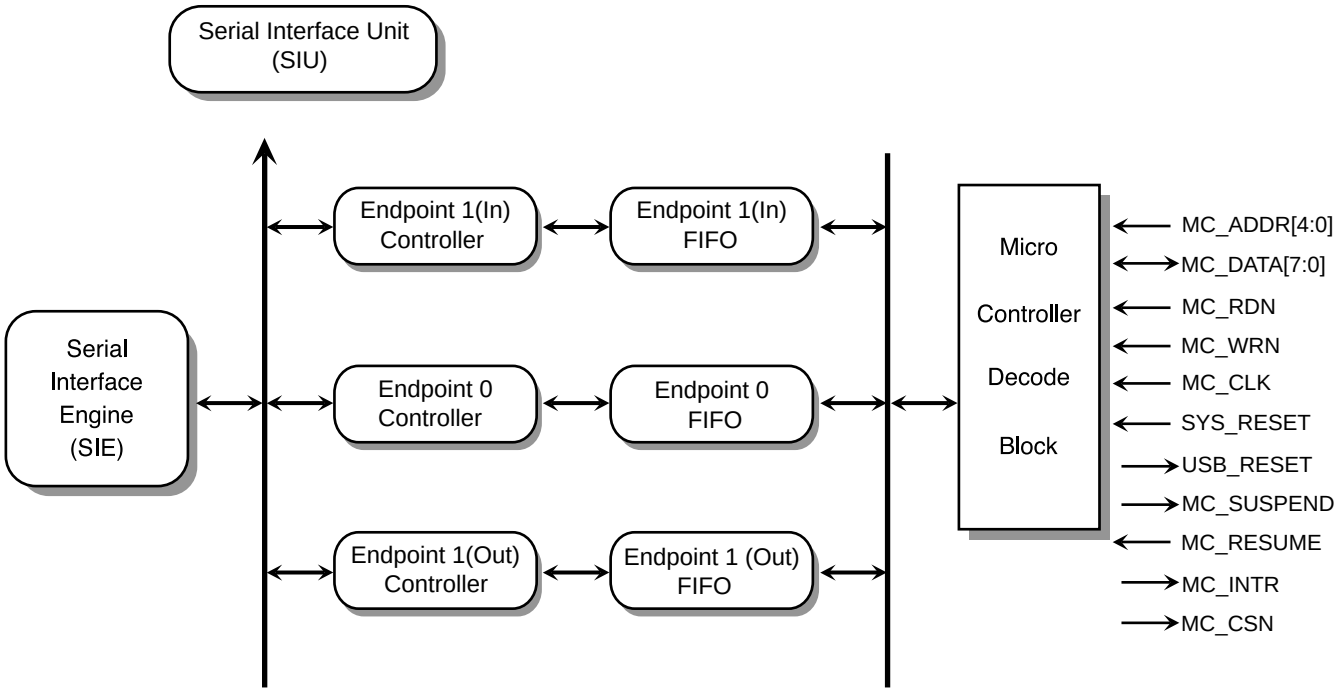

Fig. 14-23 Each endpoint has a FIFO and a controller

1) Serial Interface Engine (SIE)
SIE implements NRZI decoding / encoding, CRC generation and checking. It also provides an interface signal for the external USB transceiver.

2) Serial Interface Unit (SIU)
It implements an endpoint address decoding for the USB packet.

3) Endpoint Controls
Endpoint 0 controller only implements a control transfer. Other endpoints (1-3) can set up In / Out randomly using the setting of the In / Out programming bit. However, once the direction is set up, it cannot be changed. Also, aach endpoint can be set up as isochronous, bulk or interrupt type.

4) FIFO

Core has an Endpoint 0 FIFO that handles the standard descriptor and the class specific descriptor.
And that FIFO is connected to a microcontroller decode block.
The user can define the size of FIFO.
Except EPO FIFO, only FIFOs that have configurable direction control can support the unidirectional operation through a certain configuration. The maximum packet size for the In and Out tokens are set up through the register. All In / Out FIFOs are connected to the microcontroller decode block.

5) Microcontroller Decode Block

This block is composed of the internal register decoding block and the microcontroller interface block.
This microcontroller interface has addresses and data bus interfaces that are either synchronous or asynchronous.
This core improves the performance by reducing the microcontroller's burden via a data buffering.

6) Internet Register

Using of the indexing scheme by the internal register for the endpoint register is as follows:

- IN_CSR (IN Control Status Register)
- OUT_CSR (OUT Control Status Register)
- IN_MAXP (IN Maximum Packet Size Register)
- OUT WRITE COUNT

If the core does not include any OUT endpoint, OUT_CSR does not exist. However, OUT WRITE COUNT register exists to read WRITE, the count for the endpoint 0.
Interrupt (Status) and Interrupt Enable register are divided into two banks.

- Endpoint Interrupts
- USB Interrupts

If there is no endpoint that is larger than endpoint #8, ENDPOINT INTERRUP2 register and ENDPOINT INTERRUPT ENABLE register do not exist.
MAXP, ENDPOINT INTERRUPT, END POINT INTERRUPT ENABLE registers are used regardless of the direction of endpoints. For example, if an endpoint that has an OUT direction is chosen by the INDEX register, ENDPOINT INTERRUPT register would provide an endpoint along with the OUT interrupt information.
On the other hand, the CSR register that is connected for each endpoint must be indexed, and can be different according the certain endpoint direction.

14-3 Memory Card

14-3-1 Card Descriptions

<Table14-3 Card Descriptions>

Type / Description	Compact Flash
Developer	SanDisk (US)
Current Maximum Memory Capacity	1GB
Size (Width X Inside Diameter X Thickness. In mm)	36.4x42.8x3.3
Number of Terminal pins or electrodes	50
Copyright Protection Technology	N / A
Data Transfer Method	Parallel
Maximum read / write speed	3.5 MB / sec
Actual retail price*2	~7000 Yen (128MB)

Type / Description	SD Memory Card
Developer	SanDisk (US) Mathushita Electric Industrial, Toshiba
Current Maximum Memory Capacity	512MB
Size (Width X Inside Diameter X Thickness. In mm)	32x24x2.1
Number of Terminal pins or electrodes	9
Copyright Protection Technology	Present (CPRM)
Data Transfer Method	Parallel
Maximum read / write speed	10 MB / sec
Actual retail price*2	~9000 Yen (128MB)

- The Microdrive developer, IBM, sold their hard disc drive (HDD) operations to Hitachi Global Storage
- Technologies, U.S. The actual retail price in February 2003 in the mass retailing market in Akihabara.
- MagicGate substitute products are ~11000 Yen.

14-3-2 Early Standards

CompactFlash: Built-in ATA controller, recognized as a hard drive, easy upgradeable.
SmartMedia: 0.7mm super flat model, simple structure that doesn't have a built-in controller
MultiMedia-Card (MMC): Compact size that appeared a little later

❋ The three early standards are basically general purpose media

⇨ Recent standards have developed to meet the

Memory Stick (Sony)/SD Memory Card (Matsushita Electric Industrial, Toshiba, SanDisk America)
xD-Picture Card (Olympus and Fuji Film)

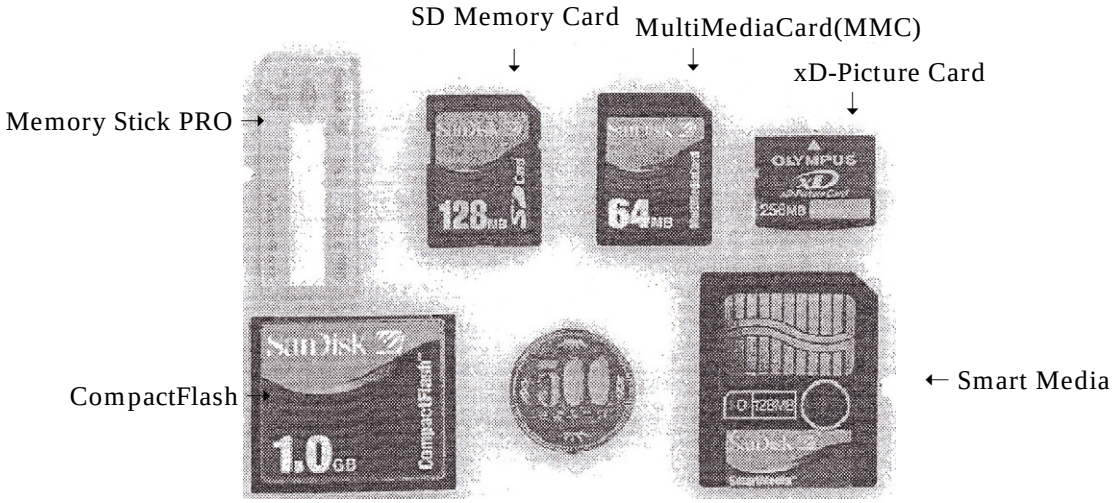

Fig. 14-24 Picture 1 The size of each leading memory card Compared to a 500Yen coin.

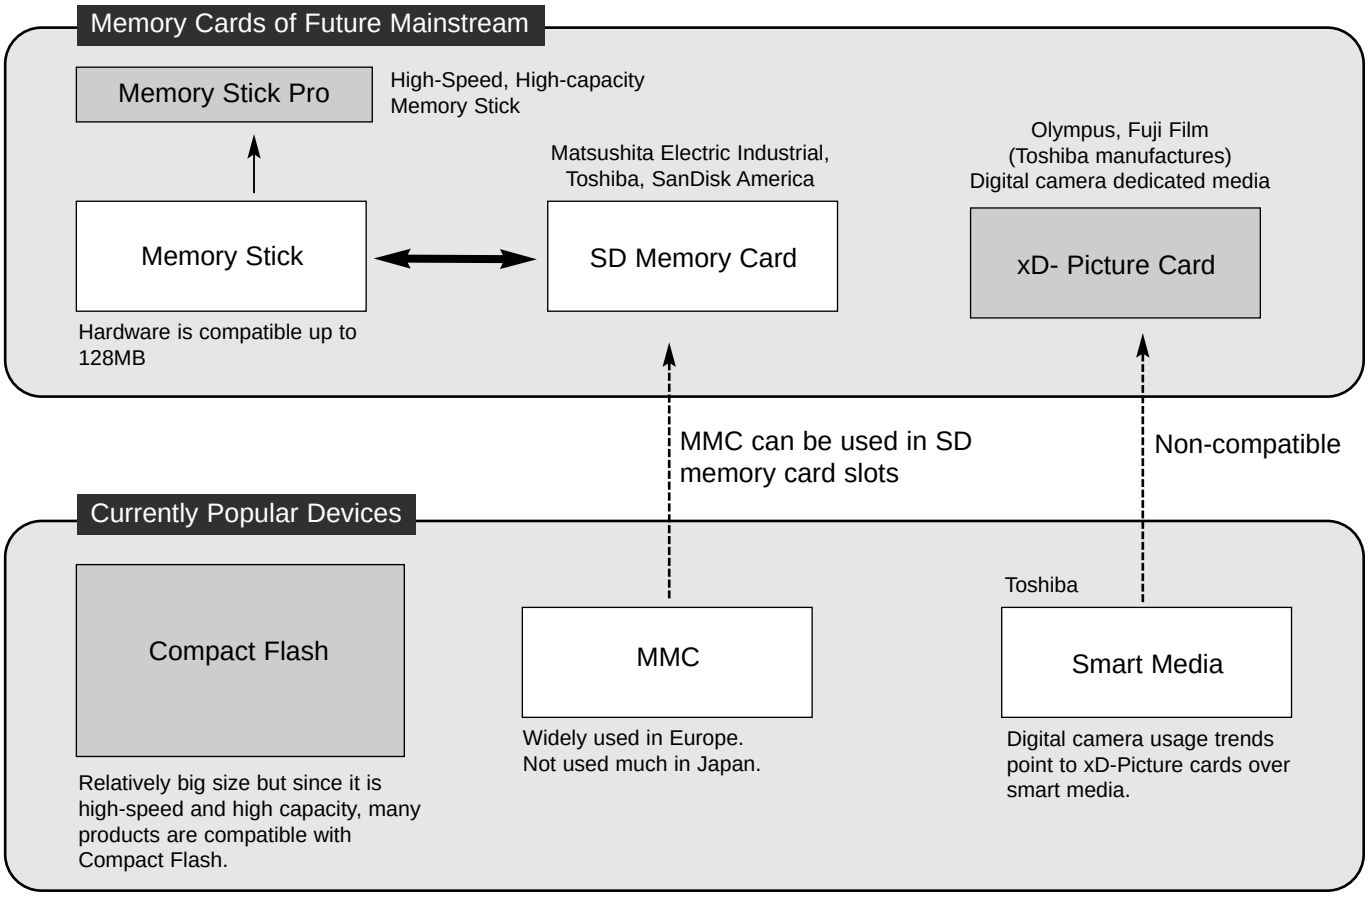

Fig. 14-25

1) Characterization of each card's size

The future mainstream will be Memory Stick (Memory Stick PRO), SD Memory Card, xD-Picture Card. Each brand is creating its own media card. CompactFlash is being widely used. MMC is mainly being used in Europe. SmartMedia usage will be reduced in the future.

14-3-3 Memory Stick – The new size that is compatible up to 32GB

The next generation high-capacity memory stick size, 'MemoryStick PRO' – comes standard with copyright protection technology, MagicGate, built-in. Compatible up to 32GB 256MB / 512MB / 1GB products will be on the market in March 2003. Another feature of Memory Stick is high-speed data transfer.
The transfer method will change from the existing serial transfer method to a parallel transfer method.
It has a transfer speed of 20MB / sec which is 4 times faster than the existing speed.

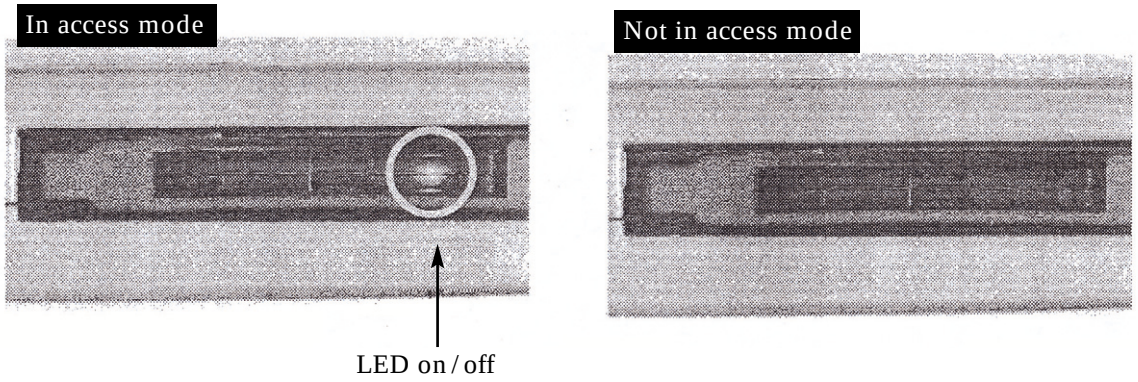

Fig. 14-26

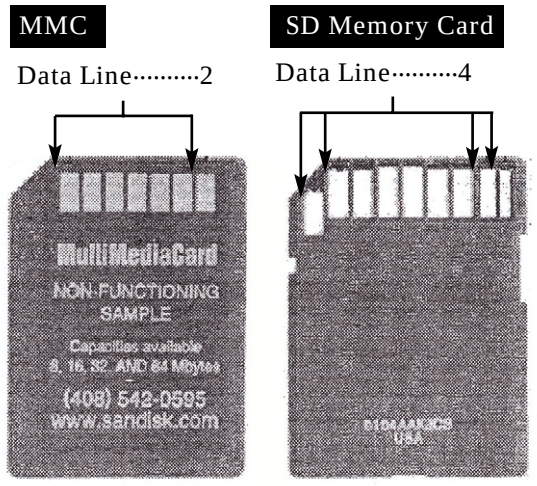
1)LED-type Memory Stick
Lexar Media Products During the data access process, the LED turns on and off.
Research on preventing damage due to dislodgment from the slot.

14-3-4 SD Card- Many compatible products.

As of January 2003, the products (total 393 models) of 59 companies are compatible with SD Memory Card. It features standard copyright protection technology. Adapted copyright protection technology is CPRM (Content Protection for Recordable Media) which is being used for DVD's.
SD Memory Card slots are compatible with MMC. SD Memory Card has the same length and width as MMC but with increased thickness. Thickness is increased so as to stack the chips for increased capacity. To increase speed, the number of discs were increased more than MMC and so the transfer method was changed from serial to parallel. There is no regulation on SD memory card speed capacity, therefore there are faster ones and slower ones on the market. Currently, Matsushita SD Card transfer speed is about 10MB / sec. It is predicted that in the latter half of 2003, improving the controller will increase the speed up to 20MB / sec.



1) Comparison of the number of MMC and SD Memory card discs
MMC had 7 discs. But SD now has 9 discs.
This is in order to increase speed by changing the transfer method from serial to parallel.

Fig. 14-27

14-3-5 xD-Picture Card-only used for digital cameras

Olympus and Fuji Film decided on the standard. Based on this, Toshiba didn't adapt any copyright protection technology so as not to burden users with redundant costs.
The thickness increased by about half the size of SmartMedia.
Its compact size meant that the connector could also be substantially downsized.
The thickness was increased to more easily increase capacity by stacking the chips in the same way as SD Memory cards.

14-3-6 CompactFlash- increased speed, increased capacity

Lexar Media researched the data transfer method of Compact Flash speedup technology and developed Write Acceleration (WA) technology. They are now producing substitute products for the market.
With this technology, the transfer speed can increase more than 40% over its previous speed.
However, to use WA technology, not only is Compact Flash necessary but the mechanical parts should also be compatible. There are Single Lens Reflex digital cameras from Nikon and Kodak that are compatible with WA.

General Compact Flash records data through the CPU. This method is called Programmed I/O (PIO).
PIO produces interrupts that require CPU processing for every 1 sector recording. (Picture2).
WA's recording is integrated on many sectors and so reduces the number of interrupts and overheads in the process.

For an even faster method, Direct Memory Access (DMA) adapted standard, which is a method of existing hard disk data transfer, is being researched. DMA method records data without bothering the CPU.
Therefore DMA can actualize even faster data transfer because it can reduce overhead during recording even more than the WA method.

Compact Flash can stack up many flash memory chips, therefore it is ahead of other sizes in increased capacity.
As of now (February, 2003), there are 1GB products in the market.

For high capacity products, there is microdrive, with a thickness increase from 3.3mm to 5mm, which has a built-in compact hard disk in Type II Compact Flash. IBM Japan developed it.
Currently, however, it is the product of Hitachi Global Storage Technologies America that merged with hard disk drive operations of IBM Japan. Microdrive will appear in the market in the fall of 2003 with 4GB and 2GB models. When its capacity was increased, it reduced the existing head size by 40% which is for reading and writing, therefore the head working area increased. Also, by using "Pixie Dust", which is disc coating technology, it substantially improved the recording density. Not only was the capacity improved but also data transfer speed improved by 50%.

The 4GB microdrive, however, needs to be in correspondence with the hardware.
Current hardware adapts FAT16 to their memory card file system.
Therefore, it only recognizes up to 2GB. To use the 4GB microdrive, the hardware should be compatible with FAT32.

14-3-7 Memory Stick Duo/RS-MMC-downsizing of the existing cards.

Memory stick Duo is half the size of memory stick. It is used on NTT Tokomo's 02511 camera phone, and it records the shot image. However, there is a limitation on the number of chips since it was downsized by half. Only 16MB capacity models are being sold. To use Memory Stick Duo as a conventional memory stick, the dedicated conversion adapter should be used together.

For MMC, which was already small, there is also the RS-MMC (Reduced Size-Multi Media Card) that is half the size of MMC. Developed by Hitachi, the purpose was for using them on mobile phones in Europe. There is, however, no existing application so far. Its shape is exactly half the size of MMC. The length is a little longer than half of MMC. (The length of MMC is 32mm. The length of RS-MMC is 18mm). It can be used as a conventional MMC when the dedicated adapter is attached to the rear part.

14-4 Camcorder Function Description

<Table14-4 Camcorder Function Description>

OSD Display	Function Description	Function Activation Condition
■ Printed Name	■ Function Name	
● View Finder	● Used when LCD is not in use	+ LCD Open/Close

● DIS ● Digial Zoom . Off . 100x . 200x . 400x . 900x	● Digital Image Stabilizer (Digitally compensates for shaking, which easily happes with moving cameras) ● Digital Zoom . Digitally magnifies the general optical zoom ratio. It canenlarge the object up to 900 times when shooting.	+ ON/OFF ✵ Can only be set up in tape camera mode + CAM MODE + Magnification(Zoom in) selection ✵ Can only be set up in tape camera mode
■ TAPE Mode ● Photo Search ● Photo Copy (Tape → memory stick) ● Audio Select .Sound[1] .Sound[2] .Mix[1+2] ■ Record Mode ● REC Mode ● Audio Mode ● Wind Cut ● AV In/Out .Out .AV In .S-video in	■ Tape Setup . ● Photo Search . Finds still images from the video on the tape ● Photo Copy (Tape → memory stick) . Can copy images on the video as still images ● Audio Select . Only the audio at the time of shooting is audible. . Only dubbed music and background music are audible . Audio from the time of shooting and dubbed music are both audible ● Recording mode (recording time control) . Based on DVM60 tape, possible shooting time is SP/~60min, LP/~90min ● Audio Mode . Inserts audio and background music when recording and editing 2-track stereo audio. When editing, 12bit has to be chosen for audio dubbing. . Audio and background music cannot be inserted when editing and recording on 1-track stereo audio of a high resolution image ● Wind cut function . When audio dubbing, setting up the wind cut function eliminates wind sound, background noise, and machinery sounds that occur during dubbing. ● Video In/Out select . Video Out (outputs video from the camcorder) . Standard video in (allows the camcorder to copy when connecting with other equipment (TV, VCR, etc.)) . High resolution image video in (allows the camcorder to copy when connecting with other equipment (TV, VCR, etc.)) ☞ Used when there is an S-video jack	+ CAM MODE/PLAYER MODE + TAPE PLAYER MODE + TAPE PLAYER MODE + TAPE PLAYER MODE - Sound[1] Sound[2] Mix[1+2] + SP/LP + CAM MODE/PLAYER MODE - (12bit/16bit) + CAM MODE/PLAYER MODE + This function can only be set up in tape player mode, and the user chooses which mode that he wants to use

■ Memory	■ Memory Setup	+ M. Player MODE
● Memory Play Select	● Plays back still images and video	+ M. Player MODE - PHOTO/MOVIE
● Photo Quality .Super Fine .Fine .Normal	● Photo Quality Select . SF(Super Fine)-highest quality (Based on an 8MB memory card, it can take up to 60 pictures) . F(Fine)-good quality(Based on an 8MB memory card, it can take up to 120 pictures) . N(Normal)-Normal quality(Based on an 8MB memory card, it can take up to 240 pictures)	+ M.Cam MODE - (SF/F/N)
● Print Mark .This File .All Files	● Can print out pictures from the memory card (only used with the printers that are compatible with memory cards)	+ M. Player MODE - No. of Copies (1~999)
● Photo Delete Protection	● Photo Delete Protection Setup . When it is set up, photos cannot be deleted	+ M. Player MODE - ON/OFF
● File number	● File Number (Series → Reset) . After formatting, the number continues from the number of the last photo taken. . After resetting, the photo number starts from number one	+ M. Player MODE Series/Reset
● File Delete .This File .All Files	● Photo Image Delete (one photo/all photos) . Deletes the currently selected photo . Deletes all photos ● Deletes all the photos saved on the memory card	+ M. Player MODE - cancel/execute
● Memory Format		+ M. Player MODE - No/Yes
■ Display	■ Display setup	+ CAM/PLAYER MODE
● LCD Bright ● LCD Colour	● LCD Adjust . LCD screen brightness adjust (0~35 steps) . LCD screen color adjust (0~35 steps)	
● Date/Time .OFF .DATE .TIME .DATE & TIME	● Setting up the date/time on the LCD screen . When setting up on OFF, the date and time don't display on the screen . When setting up on DATE, only the date is displayed on the screen . When setting up on TIME, only the time is displayed on the screen . When setting up on DATE/TIME, the date and time is displayed on the screen	+ Normal/Super + Select (0~35) + Select (0~35) + OFF/DATE/TIME Date & Time → select
● TV Display	● Displays on the TV Screen(OSD)	+ ON/OFF

OSD Display	Function Description	Function Activation Condition
■ Connecting to other equipment ● PC Connection (USB)	■ Connecting to other equipment ● PC Connection (USB) . CPU: Pentium II Compatible model that is over 400 MHz . OS: Windows 98,98se,ME,2000 (Professional),XP . Memory: Over 64MB RAM, CD-Rom: Over 4x driver	+ Can be used after installing the proper driver - WinMe, Windows 2000 Professional, and Windows XP auto recognition
● PC and Camcorder Connection (DV)	● PC and Camcorder Connection (DV) . CPU: Pentium III Compatible model that is over 450 MHz . OS: Windows 98,98se,ME,XP,Mac OS (9.1~10.2) . Memory: Over 64MB RAM . IEEE1394 card and PC that has a built-in IEEE1394 . Connection with other camcorders (by connecting DV jacks and DV's) . When connecting to other DV's, only image output is possible in camera mode, but both image input and output are possible in video mode	+ Auto recognition between camcorder and camcorder + Use IEEE1394 card and a PC that has a built-in IEEE1394 card after installing the driver
● TV/Video Connection	● Playback by connecting to the TV and Video . Connect audio and video cable to the matching colored jacks. Video input (yellow), Audio input (white, red) ● Recording the camcorder video on a video tape . Connect the audio/video cable to the matching colored jacks. Insert an empty tape into the VCR. Select video mode on the camcorder. Find the parts to be recorded, then start recording. ● Recording video tape on the camcorder . Connect the audio/video cable to the matching colored jacks. Insert an empty tape into the camcorder. Select video mode on the camcorder. Play the video. Then start recording after pushing the start recording button two times on the camcorder. ● Recording TV to the camcorder . Connect the audio/video cable to the matching colored jacks. Insert an empty tape into the camcorder. Select video mode on the camcorder. Turn on the TV to the desired program. Then start recording after pushing the start recording button two times on the camcorder. ☞ Used when there is an S-video jack	+ TV/Video Connection - Connect audio/video cable to the matching colored jacks.

Cable Type	Usage
● Multi CABLE (S, AV CABLE)	Connects the TV and camcorder
● USB CABLE	1) Connects to a PC to save the contents of the camcorder memory stick to the PC * From PC to camcorder, only the memory stick can be used to save the contents from a PC to the camcorder 2) Connects to the PC, allowing the camcorder to function as a PC Camera.
● DV CABLE (IEEE 1394) (not supplied)	1) Used for input/output by connecting a PC and camcorder (6pin-4pin cable) 2) used when connecting a camcorder to a camcorder (4pin-4pin cable)
